A NEW

DICTIONARY

OF

TRADE and COMMERCE,

COMPILED FROM

The Information of the moſt Eminent MERCHANTS,

AND FROM

The Works of the beſt WRITERS on Commercial Subjects,

IN ALL LANGUAGES.

Containing, among other Things,

I. An Account of all the natural Productions, which are conducive to Trade, throughout the World.

II. The different Manufactures eſtabliſhed in each particular Country.

III. Explanations of all the Terms uſed in Commerce.

IV. Explanations of the principal Terms of Geography, Aſtronomy, and Navigation, ſo far as they are connected with Trade.

V. An exact Account of the Coins, Weights, and Meaſures in uſe throughout the World, reduced to the Engliſh Standard.

VI. A Deſcription of the Eſtabliſhed Banks, Trading Companies, and Staple Commodities, of different Countries.

VII. The State of the Britiſh Trade, National Debt, Funds, Cuſtoms, Exciſe, and other Taxes.

VIII. The Laws relative to Trade and Commerce.

For the Uſe of the

MERCHANTS and TRADESMEN of GREAT BRITAIN,

as well as of private Gentlemen.

By Mr. ROLT,

With the Aſſiſtance of ſeveral eminent Merchants.

LONDON:

Printed for T. OSBORNE and J. SHIPTON; J. HODGES; J. NEWBERY; G. KEITH; and B. COLLINS.

MDCCLVI.

BRITISH MUSEUM

To the RIGHT HONOURABLE

GEORGE Lord ANSON,

First Lord Commiſſioner for executing the Office of Lord High Admiral of GREAT BRITAIN.

My LORD,

TRADE and Commerce always fly for protection to the Great and Good. And COLBERT, by giving them encouragement in FRANCE, obtained as much permanent honour and glory, as MÆCENAS by his patroniſing the Muſes in ROME.

IT is with the utmoſt gratitude that I make uſe of your LORDSHIP's permiſſion in prefixing your name to this work, which I hope will merit your LORDSHIP's approbation. The ſubject-matter of it certainly deſerves the public attention; more eſpecially at this time, when our moſt formidable and moſt inſidious enemy is endeavouring, by every method and artifice, to extend her commerce, and to encroach on our colonies, in defiance of the moſt ſolemn treaties.

FRANCE, it is well known, has long aſpired at univerſal monarchy. And of late we have ſeen her armed with potent fleets, audaciouſly bidding defiance even to the BRITISH flag. But we ſeem at length to be ſufficiently rouſed, and are become duly ſenſible of the growth of her power, and the extent of her commerce. Nor need we dread either her ſtrength or her ſtratagems, whilſt our naval force is ſo glorioufly exerted, for the honour of our moſt gracious Sovereign, and the protection of his people.

BUT though the FRENCH have, for ſeveral years paſt, been very aſſiduous in cultivating every branch of their commerce; whereby they have increaſed it to a degree, that ought to alarm us, and induce us to guard againſt their incroachments: yet it is very evident that Monſ. SAVARY, in his DICTIONARY, in order to animate his fellow-ſubjects to proſecute their commercial intereſts with the greater vigour, endeavours to perſuade them that their trade is already much more extenſive than it really is; and to impoſe upon the credulity of other nations alſo, by giving a very exaggerated repreſentation of the nature and extent of their exports and imports; many branches of which, though enumerated by him with great oſtentation, either never exiſted at all, or in a degree greatly inferior to what he would make us believe. But my buſineſs, as a BRITISH writer, was of a very different kind. And I have throughout the whole of this performance paid due deference to the inſtructions I was honoured with from your truly noble

noble and illuſtrious friend the Earl of GRANVILLE. Such inſtructions I ſhall ever be ambitious of purſuing, when they come from ſo diſtinguiſhed a perſonage, and are calculated for ſuch noble purpoſes.

Your LORDSHIP's love to your country, and your generous and unwearied endeavours to protect and extend her commerce, are univerſally acknowledged. Great reaſon have we therefore to adore the Divine Providence, which preſerved you, amidſt the moſt imminent dangers, and affords you an opportunity, at this critical conjuncture, of again exerting that valour, ſteadineſs, and conduct, which raiſed you to that high and important ſtation, the duties whereof you ſo worthily diſcharge.

MAY your LORDSHIP long remain the ornament of your country, and dignify thoſe honours the FATHER OF HIS PEOPLE has ſo deſervedly beſtowed on you! We may then reſt aſſured that our naval power will be properly ſupported, our foreign trade fully protected, and our enemies be obliged to tremble at the formidable appearance of the BRITISH flag.

I AM, with that veneration and eſteem, which your ſingular and exalted merit commands from every true BRITON,

My LORD,

Your LORDSHIP's much obliged

and moſt obedient humble ſervant,

1 JY 64

December 24. 1755.

RICHARD ROLT.

THE PREFACE.

NO expectation is more fallacious than that which authors form of the reception which their labours will find among mankind. Scarcely any man publiſhes a book, whatever it be, without believing that he has caught the moment when the publick attention is vacant to his call, and the world is diſpoſed in a particular manner to learn the art which he undertakes to teach.

THE writers of this volume are not ſo far exempt from epidemical prejudices, but that they likewiſe pleaſe themſelves with imagining, that they have reſerved their labours to a propitious conjuncture, and that this is the proper time for the publication of a DICTIONARY OF COMMERCE.

THE predictions of an author are very far from infallibility; but in juſtification of ſome degree of confidence it may be properly obſerved, that there was never from the earlieſt ages a time in which trade ſo much engaged the attention of mankind, or commercial gain was ſought with ſuch general emulation. Nations which have hitherto cultivated no art but that of war, nor conceived any means of encreaſing riches but by plunder, are awakened to more inoffenſive induſtry. Thoſe whom the poſſeſſion of ſubterraneous treaſures have long diſpoſed to accommodate themſelves by foreign induſtry, are at laſt convinced that idleneſs never will be rich. The merchant is now invited to every port, manufactures are eſtabliſhed in all cities, and princes who juſt can view the ſea from ſome ſingle corner of their dominions, are enlarging harbours, erecting mercantile companies, and preparing to traffick in the remoteſt countries.

NOR is the form of this work leſs popular than the ſubject. It has lately been the practice of the learned to range knowledge by the alphabet, and publiſh dictionaries of every kind of literature. This practice has perhaps been carried too far by the force of faſhion. Sciences, in themſelves ſyſtematical and coherent, are not very properly broken into ſuch fortuitous diſtributions. A dictionary of Arithmetick or Geometry can ſerve only to confound. But commerce, conſidered in its whole extent, ſeems to refuſe any other method of arrangement, as it compriſes innumerable particulars unconnected with each other, among which there is no reaſon why any ſhould be firſt or laſt, better than is furniſhed by the letters that compoſe their names.

WE cannot indeed boaſt ourſelves the inventors of a ſcheme ſo commodious and comprehenſive. The French, among innumerable projects for the promotion of traffick, have taken care to ſupply their merchants with a *Dictionaire de Commerce*, collected with great induſtry and exactneſs, but too large for common uſe, and adapted to their own trade. This book, as well as others, has been carefully conſulted, that our merchants may not be ignorant of any thing known by their enemies or rivals.

SUCH indeed is the extent of our undertaking, that it was neceſſary to ſolicite every information, to conſult the living and the dead. The great qualification of him that attempts a work thus general is diligence of enquiry. No man has opportunity or ability to acquaint himſelf with all the ſubjects of a commercial dictionary, ſo as to deſcribe from his own knowledge, or aſſert on his own experience. He muſt therefore often depend upon the veracity of others, as every man depends in common life, and have no other ſkill to boaſt than that of ſelecting judiciouſly, and arranging properly.

BUT to him who conſiders the extent of our ſubject, limited only by the bounds of nature and of art, the taſk of ſelection and method will appear ſufficient to overburthen induſtry and diſtract attention. Many branches of commerce are ſubdivided into ſmaller and ſmaller parts, till at laſt they become ſo minute as not eaſily to be noted by obſervation. Many intereſts are ſo woven among each other as not to be diſentangled without long enquiry; many arts are induſtriouſly kept ſecret, and many practices neceſſary to be known are carried on in parts too remote for intelligence.

BUT the knowledge of trade is of ſo much importance to a maritime nation, that no labour can be thought great by which information may be obtained; and therefore we hope the reader will not have reaſon to complain, that, of what he might juſtly expect to find, any thing is omited.

To give a detail or analyſis of our work is very difficult; a volume intended to contain whatever is requiſite to be known by every trader, neceſſarily becomes ſo miſcellaneous and unconnected as not to be eaſily reducible to heads; yet, ſince we pretend in ſome meaſure to treat of traffick as a ſcience, and to make that regular and ſyſtematical which has hitherto been to a great degree fortuitous and conjectural, and has often ſucceeded by chance rather than by conduct, it will be proper to ſhew that a diſtribution of parts has been attempted, which though rude and inadequate will at leaſt preſerve ſome order, and enable the mind to take a methodical and ſucceſſive view of this deſign.

IN the dictionary which we here offer to the publick we propoſe to exhibit the *materials*, the *places*, and the *means* of traffick.

THE materials or ſubjects of traffick are *whatever is bought and ſold*, and include therefore every manufacture of art, and almoſt every production of nature.

IN giving an account of the commodities of nature, whether thoſe which are to be uſed in their original ſtate, as drugs and ſpices, or thoſe which become uſeful when they receive a new form from human art, as flax, cotton, and metals, we ſhall ſhew the places of their production, the manner in which they grow, the art of cultivating or collecting them, their diſcriminations and varieties, by which the beſt ſorts are known from the worſe, and genuine from fictitious, the arts by which they are counterfeited, the caſualties by which they are impaired, and the practices by which the damage is palliated or concealed. We ſhall likewiſe ſhew their virtues and uſes, and trace them through all the changes which they undergo.

THE hiſtory of manufactures is likewiſe delivered. Of every artificial commodity the manner in which it is made is in ſome meaſure deſcribed, though it muſt be remembred, that manual operations are ſcarce to be conveyed by any words to him that has not ſeen them. Some general notions may however be afforded; it is eaſy to comprehend, that plates of iron are formed by the preſſure of rollers, and bars by the ſtrokes of a hammer, that a cannon is caſt, and that an anvil is forged. But as it is to moſt traders of more uſe to know when their goods are well wrought, than by what means, care has been taken to name the places where every manufacture has been carried furtheſt, and the marks by which its excellency may be aſcertained.

BY the *places of trade* are underſtood all ports, cities, or towns where ſtaples are eſtabliſhed, manufactures are wrought, or any commodities are bought and ſold advantageouſly. This part of our work includes an enumeration of almoſt all the remarkable places in the world, with ſuch an account of their ſituation, cuſtoms, and products, as the merchant would require who being to begin a new trade in any foreign country, was yet ignorant of the commodities of the place, and the manners of the inhabitants.

But the chief attention of the merchant, and conſequently of the author who writes for merchants, ought to be employed upon the *means* of trade, which include all the knowledge and practice neceſſary to the ſkilful and ſucceſsful conduct of commerce.

The firſt of the *means* of trade is proper education, which may confer a competent ſkill in numbers; to be afterwards completed in the counting-houſe, by obſervation of the manner of ſtating accompts, and regulating books, which is one of the few arts which having been ſtudied in proportion to its importance, is carried as far as life can require. The counting-houſe of an accompliſhed merchant is a ſchool of method, where the great ſcience may be learned of ranging particulars under generals, of bringing the different parts of a tranſaction together, and of ſhewing at one view a long ſeries of dealing and exchange. Let no man venture into large buſineſs while he is ignorant of the method of regulating books; never let him imagine that any degree of natural abilities will enable him to ſupply this deficience, or preſerve multiplicity of affairs from inextricable confuſion.

This is the ſtudy, without which all other ſtudies will be of little avail; but this alone is not ſufficient. It will be neceſſary to learn many other things, which however may be eaſily included in the preparatory inſtitutions, ſuch as an exact knowledge of the *Weights* and *Meaſures* of different countries, and ſome ſkill in geography and navigation, with which this book may perhaps ſufficiently ſupply him.

In navigation, conſidered as part of the ſkill of a merchant, is included not ſo much the art of ſteering a ſhip, as the knowledge of the ſea coaſt, and of the different parts to which his cargoes are ſent, the cuſtoms to be paid, the paſſes, permiſſions, or certificates, to be procured, the hazards of every voyage, and the true rate of inſurances. To this muſt be added, an acquaintance with the policies and arts of other nations, as well thoſe to whom the commodities are ſold, as of thoſe who carry goods of the ſame kind to the ſame market, and who are therefore to be watched as rivals endeavouring to take advantage of every error, miſcarriage, or debate.

The chief of the *means* of trade is *Money*, of which our late refinements in traffick have made the knowledge extremely difficult. The merchant muſt not only inform himſelf of the various denominations and value of foreign coins, together with their method of counting and reducing; ſuch as the millereis of Portugal, and the livres of France; but he muſt learn what is of more difficult attainment, the diſcount of exchanges, the nature of current paper, the principles upon which the ſeveral banks of Europe are eſtabliſhed, the real value of funds, the true credit of trading companies, with all the ſources of profit, and poſſibilities of loſs.

All this he muſt learn merely as a private dealer attentive only to his own advantage; but as every man ought to conſider himſelf as part of the community to which he belongs, and while he proſecutes his own intereſt to promote likewiſe that of his country, it is neceſſary for the trader to look abroad upon mankind, and ſtudy many queſtions which are perhaps more properly political than mercantile.

He ought therefore to conſider very accurately the balance of trade, or the proportion between things exported and imported; to examine what kinds of commerce are unlawful, either as being expreſsly prohibited, becauſe detrimental to the manufactures or other intereſt of his country, as the exportation of ſilver to the Eaſt Indies, and the introduction of French commodities; or unlawful in itſelf, as the traffick for Negroes. He ought to be able to ſtate with accuracy, the benefits and miſchiefs of monopolies, and excluſive companies; to enquire into the arts which have been practiſed by them to make themſelves neceſſary, or by their opponents to make them odious. He ſhould inform himſelf what trades are declining, and what are improveable; when the advantage is on our ſide, and when on that of our rivals.

PREFACE.

THE ſtate of our *Colonies* is always to be diligently ſurveyed, that no advantage may be loſt which they can afford, and that every opportunity may be improved of increaſing their wealth and power, or of making them uſeful to their mother country.

THERE is no knowledge of more frequent uſe than that of duties and impoſts, whether cuſtoms paid at the ports, or exciſes levied upon the manufacturer. Much of the proſperity of a trading nation depends upon duties properly apportioned; ſo that what is neceſſary may continue cheap, and what is of uſe only to luxury may in ſome meaſure attone to the publick for the miſchief done to individuals. Duties may often be ſo regulated as to become uſeful even to thoſe that pay them; and they may be likewiſe ſo unequally impoſed as to diſcourage honeſty, and depreſs induſtry, and give temptation to fraud and unlawful practices.

To teach all this is the deſign of the Commercial Dictionary, which though immediately and primarily written for the merchants, will be of uſe to every man of buſineſs or curioſity. There is no man who is not in ſome degree a merchant, who has not ſomething to buy and ſomething to ſell, and who does not therefore want ſuch inſtructions as may teach him the true value of poſſeſſions or commodities.

THE deſcriptions of the productions of the earth and water, which this volume will contain, may be equally pleaſing and uſeful to the ſpeculatiſt with any other natural hiſtory; and the accounts of various manufactures will conſtitute no contemptible body of experimental philoſophy. The deſcriptions of ports and cities may inſtruct the geographer as well as if they were found in books appropriated only to his own ſcience; and the doctrines of funds, inſurances, currency, monopolies, exchanges, and duties, is ſo neceſſary to the politician that without it he can be of no uſe either in the council or the ſenate, nor can ſpeak or think juſtly either on war or trade.

WE therefore hope that we ſhall not repent the labour of compiling this work, nor flatter ourſelves unreaſonably, in predicting a favourable reception to a book which no condition of life can render uſeleſs, which may contribute to the advantage of all that make or receive laws, of all that buy or ſell, of all that wiſh to keep or improve their poſſeſſions, of all that deſire to be rich, and all that deſire to be wiſe.

1 JY 64

A NEW ENGLISH DICTIONARY OF TRADE and COMMERCE.

A B A

A, The firſt letter of the Engliſh alphabet; as it is alſo in that of moſt other languages.

Merchants, bankers, and book-keepers, uſe it, either alone, or followed by ſome other initial letters, for abridging certain terms of trade, ſaving time, and rejecting ſuperfluous words in their journals, and other books of accompt.

A, B, C, and the other alphabetical letters, are diſtinguiſhing characteriſtics of mercantile ſetts of accompt; anſwering the end of the numbers 1, 2, 3, and the reſt of the numerical figures, that proper references may be made from the new ſetts to the old ones.

AA. A river of the French Netherlands, riſing in Picardy, and running N. E. acroſs Artois; then, paſſing by St. Omers, continues its courſe N. to Gravelin in Flanders; below which it falls into the Engliſh channel.

AAGI-DOGH. A Perſian word, ſignifying, in Engliſh, *a bitter mountain*; having this denomination, becauſe it is reputed a very dangerous paſſage for the caravans from Conſtantinople to Iſpahan; and is ſituated near Chaouqueu, about a day's journey from Louri.

As ſoon as the caravans arrive at the paſs of this mountain, all the camels and horſes are numbered: when the caravan-bachi exacts a duty for each of them; partly towards the payment of the ſoldiers who guard the caravan, and partly for the defraying of other ſmall charges; tho' not without a reſervation of the moſt conſiderable ſhare for himſelf.

AAM. See *Awm*.

ABACA. A kind of flax, or hemp, of the growth of ſome of the Philippine iſlands; of which there are two ſorts, the white, and the grey. It is ſuppoſed to be a ſpecies of Indian plantane, ſown annually; and, when gathered, ſteeped like real hemp. Very fine linen is made of the *white* abaca; but the *grey* is only uſed for cordage. See *Hemp*.

ABAGI. A coin current in Perſia, and in all the ſtates dependent on that monarchy.

The abagi is worth in Teflis, and all Georgia, about 1 s. 6 d. ſterling; 4 chaouris, called alſo ſains, make 1 abagi; an uſaltou is worth half an abagi, or 2 chaouris; 40 aſpers, or carbequis, make 1 abagi.

ABAFT, in the ſea-language, is uſed in ſpeaking of things placed or done toward the ſtern, or hinder-part of a veſſel; called alſo *aft*, and ſtands oppoſed to *fore*. Thus mariners ſay a thing is *abaft* the fore maſt, when it is behind it, or nearer the ſtern than the fore-maſt; and the poſt of the maſter, captain, and other officers, is *abaft* the main-maſt: for the ſtern, ſtrictly ſpeaking, is only the outſide; but *abaft* includes both inſide and out. See *Stern*.

ABAS. A Perſian weight for pearls, being one eighth part lighter than the European carat. See *Carat*.

ABASSI. A Perſian ſilver coin, deriving its name from

A B E

Shah-Abas II. who ordered its coinage; having the Mahommeddan profeſſion of faith, on the one ſide, for a legend; and, on the reverſe, the name *Abas*, with the town where it was coined. It has an extraordinary currency in Perſia; being worth 2 mamoudis, or about 1 s. 4½ d. ſterling.

There are alſo pieces of five, and of two abaſſis; but theſe are generally accounted a ſort of pocket-pieces, and of no conſequence in commerce. The traders at Iſpahan, and throughout the reſt of the Perſian dominions, paſs ſilver coins by weight, and not by tale; the bags being of 50 tomans, which make 2500 abaſſis, and are weighed by weights of 1 toman each, or 50 abaſſis: but if the abaſſis are ſuſpected to be light, or counterfeit, the fraud may be diſcovered by weighing 25 of them againſt 25, and ſo on.

ABATELEMENT. A term uſed among the French in the ports of the Levant, ſignifying a ſentence of the conſul, prohibiting all commerce to ſuch of the merchants of this nation, who either diſavow their bargains, or refuſe to pay their debts. And this prohibition is attended with ſuch ſeverity, that thoſe againſt whom it is pronounced, are not even allowed to ſue any perſon for the payment of their debts, till they have made ample ſatisfaction purſuant to the conſular ſentence, and annulled the abatelement, by paying and executing all therein contained.

ABATEMENT. See *Rebate*.

ABB, among clothiers, ſignifies the yarn of a weaver's warp; and abb-wool is alſo uſed in the ſame ſenſe.

ABBEVILLE. A large city of France, in the Lower Picardy, capital of the county of Ponthieu, and ſituated 15 miles E. of the Britiſh channel; being ſo conſiderable for its woollen trade, that the manufacture eſtabliſhed there is reputed to rival that of any town in England. See *France*.

ABEL-MOSC, or *Ambrette*, is the ſeed of a plant growing in Egypt and the Antilles iſlands; whoſe leaves are greeniſh, and velveted, much reſembling thoſe of marſh-mallows; and therefore called, by our modern botaniſts, the velvet marſh-mallows of the Indies.

This ſeed is ſcarce bigger than the head of a very large pin, in form like a little kidney; greyiſh, and, as it were, ſhagreened on the upper part, with a ſmell partaking both of amber and muſk. It is principally uſed as a compoſition in ſome perfumes, wherein none but experienced perſons know how to employ it. Italian perfumers make great uſe of it; and, in France, the nuns, and dealers in paternoſters, make beads of it.

That of Martinico is the moſt preferable of all; which ſhould be choſen new, plump, dry, clean, and of a good ſcent. See *Ambrette*.

ABENATIS. A people of Canada. See *Indian America*.

ABERDEEN. A city of Scotland, in the county of Mar or Aberdeen, ſituated in 1 deg. 45 min. of W. longi-

PREFACE.

THE ſtate of our *Colonies* is always to be diligently ſurveyed, that no advantage may be loſt which they can afford, and that every opportunity may be improved of increaſing their wealth and power, or of making them uſeful to their mother country.

This ſeed is ſcarce bigger than the head of a very large pin, in form like a little kidney; greyiſh, and, as it were, ſhagreened on the upper part, with a ſmell partaking both of amber and muſk. It is principally uſed as a compoſition in ſome perfumes, wherein none but experienced perſons know how to employ it. Italian perfumers make great uſe of it; and, in France, the nuns, and dealers in paternoſters, make beads of it.

That of Martinico is the moſt preferable of all; which ſhould be choſen new, plump, dry, clean, and of a good ſcent. See *Ambrette*.

ABENATIS. A people of Canada. See *Indian America*.

ABERDEEN. A city of Scotland, in the county of Mar or Aberdeen, ſituated in 1 deg. 45 min. of W. longi-

tude, and 57 deg. 12 min. of N. latitude; being divided into the new and old town; the old ſituated at the mouth of the river Don; and the new at the mouth of the river Dee, upon the German ocean, with a good harbour. See *Great Britain.*

ABEX. A country of Africa, S. of Egypt, lying along the weſt coaſt of the Red ſea, and ſubject to the Turks. See *Ethiopia.*

ABLAQUE. A ſilk; the ſame with the ardaſſine; being brought from Perſia, by the way of Smyrna. See *Ardaſſine.*

ABO. A city and port of Sweden, capital of the province of Finland, ſituated at the mouth of the river Aurojoki, on the Bothnic gulph, in 21 deg. 30 min. of E. longitude, and 60 deg. 30 min. of N. latitude, being 240 min. N. E. of Stockholm. See *Sweden.*

ABOUCOUCHOU. A kind of woollen cloth manufactured in France; particularly in Provence, Languedoc, and Dauphiné; whoſe deſtination is for Egypt.

ABRA. A Poliſh ſilver coin, worth 1 s. halfpenny ſterling, being current in Conſtantinople, and all the ſtates of the Grand Signior; where it is received upon the footing of one fourth of the aſlani, or Dutch dollar. See *Aſlani.*

ABROCHMENT, or *Abrocamentum*, formerly denoted the act of ingroſſing or buying up commodities by wholeſale, before they were publickly expoſed in the market-place, in order to be ſold by retail, which at preſent goes under the denomination of *foreſtalling*. See *Foreſtalling.*

ABROHANI, or *Mullmull.* A muſlin, or white, clear, fine cotton cloth, brought from the Eaſt Indies, eſpecially Bengal; the piece being from 20 to 21 yards long, and from four-fourths to ſix-fourths wide.

ABUCCO, *Abocco*, or *Abocchi.* A weight uſed in the kingdom of Pegu in India; one abucco being worth 12 teccalis and a half; 2 make an agiro, called alſo *giro*; 2 giri make a half biza; and the biza weighs 100 teccalis, or about 3 lb. 8 oz.

ABUKESB. The ſame with aſlani, or Dutch dollar; which is called in the Turkiſh language *aſlani*, from the lion it has impreſſed on each ſide, and to which the Arabs give the name of *abukesb*, by miſtaking the lion for a dog.

At Cairo it is worth from 33 to 38 meidins in exchange, and ſometimes more in ſpecie; the meidin being valued at $1\frac{1}{3}$ d. ſterling, or 3 aſpers Turkiſh money; and it is received upon the ſame footing, not only at Conſtantinople, but through all the reſt of the Turkiſh empire.

ABYSSINIA. See *Ethiopia.*

ACACIA *vera.* An inſpiſſated juice of a ſhrub of the thorn-kind, growing in Egypt and Arabia, of a tan colour, ſmooth, ſhining, and of a diſagreeable taſte; brought from the Levant in round balls of different ſizes, in fine bladders. But this juice is counterfeited by the German acacia; which is only the juice of immature ſloes, boiled to a ſolid conſiſtence, and put up in bladders like the former: tho' the counterfeit is eaſily diſtinguiſhed by its colour, which is equally black with the Spaniſh liquorice; nevertheleſs it is frequently ſubſtituted for the true acacia.

But, for the duties of importation in Great Britain, recourſe muſt be had to the general book of rates, under the article *Rate*; which is likewiſe to be particularly obſerved with regard to the duties, either on importation or exportation of any commodities into Great Britain.

ACADIA, or *Nova Scotia.* See *Britiſh and French America.*

ACADIA *company.* See *Hudſon's bay company.*

ACAJOU. The fruit, or rather ſeed, of a tree growing in the iſlands of the Antilles, and in ſeveral places on the ſouthern continent of America, eſpecially Braſil: of which there are three different kinds; but one only productive of the fruit, which has the form of a longiſh apple, covered with a ſkin of a fine lively red colour, crowned with an olive-coloured tuft, full of ſpongy filaments, yielding a juice of a complicated taſte of ſweet and acid, eſteemed an excellent ſtomachic; and, though a little binding, an admirable provocative of urine.

It ſhould be choſen new, plump, and of an olive colour. The oil extracted from it is uſed for extirpating corns, and embelliſhing the complexion. And from the tree of the acajou oozes, by inciſion, a clear tranſparent gum, not unlike the gum arabic.

ACANTHUS. A plant of the thiſtle kind, uſed in medicine, called by Latin botaniſts *branca urſina*, or *bear's breech*; of which there are two kinds; one growing wild, and full of prickles; the other growing in gardens without prickles, and is therefore called by Virgil *mollis*; this being the moſt dented, and much reſembling parſley or ſmallage.

ACAPALTI. A plant of Mexico, or New Spain, productive of the long pepper.

The fruit is two or three inches long, of a pretty red colour, as it borders upon maturity, which it cannot fully acquire on the plant; and therefore muſt be plucked as ſoon as it begins to redden, that the ripeneſs may be completed in the ſun.

This pepper is equally uſed green or dry; and both ways gives a high reliſh to meat. See *Pepper.*

ACAPULCO. A port-town of N. America, ſituated in the province of Mexico, in 102 deg. W. long. and 17 deg. 30 min. N. lat. on a fine bay of the South-ſea. See *Spaniſh America.*

ACCEPT. }
ACCEPTANCE. } See *Bill of Exchange.*
ACCEPTER. }

ACCEPTILATION. An acquittance given without receiving any money; or a declaration of the creditor in favour of the debtor, ſignifying that he is ſatisfied for his debt, and relinquiſhes all further claim or demand, tho' in reality no payment has been made.

ACCOMPT, or *Account.* A mercantile term for a collection of ſeveral particular ſums ready caſt up; whereby the profit or loſs upon any particular commodity, or the balance due from a perſon, may be evidently and truly diſcovered. The inhabitants of every commercial country have adapted different methods of accompt, for facilitating their complicated buſineſs, peculiar to their natural genius and diſpoſition; though the moſt excellent way of aſcertaining the property of merchants, was originally invented in Italy, which is now generally practiſed by the moſt eminent part of the European merchants; who, for expediting their tranſactions, have eſtabliſhed an imaginary ſort of ſpecies: but, for a more explicit relation of their values and denominations, ſee *Money of accompt.*

Three kinds of accompts are abſolutely neceſſary for cloſing books of double entries: ſuch are, the accompts of ſtock, of loſs and gain, and of ballance. The accompt of ſtock is, a particular accompt opened on the debtor and creditor ſide of the ledger, containing all the effects of a trader; that is, his ready money, his merchandiſe, bills, promiſſory notes, obligations, bonds, ſtipulated contracts, real and perſonal eſtate, and, generally ſpeaking, all that might peculiarly belong to him, free and clear of all debts and mortgages. This kind of accompt is ſometimes cloſed on the debit, and ſometimes on the credit part of the accompt of loſs and gain: on the debit, when the loſs exceeds the gain; and on the credit, when the gain is more than the loſs.

The accompt of loſs and gain is opened on the ledger, and conſiſts of all the gains and loſſes of a merchant in his trade; the loſſes being couched on the credit-ſide, and the gain on the debit. But this kind of accompt is ballanced annually, or when two things offer; the firſt, when the books are to be cloſed for new ones; the ſecond, when the trader deſigns to leave off buſineſs.

The accompt of ballance is only opened in the ledger for the cloſing of the books: and when the books are to be peremptorily cloſed, it is called *accompt of the final ballance:* but when new books are required, it is called *accompt of ballance of entry*, or *ballance carried over.*

Merchants who keep books by double entries, have one in particular, called *the book of current accompts*; wherein they write copies of all ſtated accompts, and ſend them to their correſpondents for recourſe, in caſe of difficulty.

M. Savary, in his *Parfait Negotiant*, or *Perfect Merchant, book* 3. *chap.* 2. *part* 2. lays down the following excellent rules for the apprentices, factors, or agents of merchants, or wholeſale dealers, with regard to the manner of ſtating accompts with retailers.

1. The clerks, factors, or agents of merchants, ſhould ſettle

ſettle accompts with retailers as ſoon as poſſible; that the difficulties ariſing about price and meaſure might be timely adjuſted.

2. In ſettling accompts, they ſhould take care not to allow tare on pieces of goods they have not meaſured themſelves; but ſhould examine whether they be right, and not wrong their maſters out of complaiſance to others.

3. To produce a regular accompt, they ſhould make an extract from the day-book of the number of pieces, containing the numbers, the meaſure, and the price of the goods ſold.

4. *Laſtly*, To execute the accompt properly, the extract ſhould be compared with the bill given upon the delivery of the goods, in order to ſee its conformity; and, upon each article, the tare, if any, and the amount of the ſum, ſhould be marked; and, upon returning to the warehouſe, it will not be amiſs to enter it in the book itſelf, that an exact agreement may appear between the maſter's book, and that of the perſon with whom the accompt is ſettled.

To open an accompt, is to enter it for the firſt time in the ledger; and merchants who are in open accompt, ſhould acquit the bills of exchange they draw upon each other.

To poſt a ſum to accompt, is to enter in the ledger, either on the credit or debit part, the ſeveral articles wherein perſons become debtors or creditors.

To point the parts of an accompt, is to place a point to the ſide of each article; which the book-keeper verifies, to ſhew that all is juſt.

Order of accompt, is its diviſion into the three principal articles of receipt, expence, and defalcation or deduction.

To examine an accompt, is to read it exactly, point the articles, and verify the calculation.

To ſettle an accompt, is to calculate, regulate, ſtate, and ballance it.

To place, or paſs an accompt, is to be accountable to a perſon for a ſum received, either for or from him.

Ballance of accompt, is the ſum wherein the debit exceeds the credit, or the credit the debit, when the accompt is well adjuſted, and the ballance made.

Accompt in bank, is a fund which merchants, traders, bankers, and ſome others, if they pleaſe, depoſite in the common caſh of a bank; to ſerve in the payment of bills of exchange, promiſſory notes, bonds, acquiſitions of funds, and other debts, either in trade, or otherwiſe contracted.

To affirm an accompt, is to declare, and make oath, that it is true.

To diſpute, or debate an accompt, is to make remarks upon the ſeveral articles of an accompt, either to augment the receipt, or diminiſh the expence.

To note an accompt, is to place in the margin of each article, certain terms which ſpecify that there is no exception made; or, if there be, the reaſons of the exceptions, and the conditions whereby they paſs.

Accompt in company or partnerſhip, is a kind of accompt ſtipulated between two merchants or traders, in conſequence of a kind of partnerſhip between them.

Accompt of ſales, is when a merchant or trader employs an agent or factor to ſell his goods; of which they give him an account as ſoon as poſſible after they are vended, with the parcels and perſons to whom ſold, the price, and the conditions; which are all entered upon the credit-ſide of the accompt; as all the charges, commiſſion for agency, or brokerage, premiums, proviſion, or allowance for the ſale, are on the debit-ſide.

Accompt current, is the clear, nett, running accompt of bills drawn, or caſh remitted between merchant and merchant.

Accompt of time and *ready money*, is frequently practiſed by merchants, who deal conſiderably by commiſſion, or are factors to other merchants: in which caſe the factor, when he diſburſes any ſums of money for his employer, or accepts and pays the bills drawn by him upon the factor before the goods are ſold, or the money received, charges his employer common intereſt for ſuch ſums, and for ſuch times, as the factor is in advance for the employer, and no longer; and this accompt may be credited by the accompt of ready money, as the factor receives it: all which charges, as well as intereſt, muſt be deducted before the proceed is carried to the accompt current.

Accompts concerning the royal revenue, for cuſtoms, exciſe, and other public branches, are entered in the remembrancer's office in the exchequer; from whence, as ſoon as they are paſſed, they are brought to the office belonging to the clerk of the pipe.

Impreſt, or the great accompts, are thoſe of the mint, wardrobe, army, navy, tenths, and other public accompts.

ACCOMPTANT. A perſon, or officer, appointed to keep or make the accompts of a company, merchant, office, or court.

ACCOMPTANTSHIP. The knowledge of figures, or arithmetic, whereby to regulate accompts.

ACCOMPTING-HOUSE, or *Compting-houſe*. A place which merchants, and other traders, particularly make uſe of, to tranſact their buſineſs, and keep their books of accompts.

ACHEN. A conſiderable port town, ſituated in 93 deg. 30 min. of E. lon. and 5 deg. 30 min. of N. lat. being the capital of the kingdom of Achen, and of the iſland of Sumatra, in the Eaſt Indies, in Aſia; lying on the north part of the iſland, 1000 m. S. E. of Fort St. George, in India, and 450 m. N. W. of the city of Malacca. See *Sunda iſlands*.

ACHIA. A ſort of cane produced in the Eaſt Indies, where it is pickled green by the natives, with ſtrong vinegar, pepper, ſpices, and other ingredients; after which it is vended to the Europeans; who introduce it into their reſpective countries, in earthen jars about a foot in height, and as much in thickneſs, the mouth being pretty narrow, and cloſely ſtopped. The pieces of cane are about an inch and half in diameter, and a little above two inches long; of a ſimilar conſiſtence to the ſmall cucumber pickled in England, eating as criſp, and cutting as firm. They have no pith; but are of a compacted texture of fibres, like that in the common cane, when the outſide is peeled: and the Dutch, who import the greateſt quantities, commonly eat it after dinner or ſupper to quicken the appetite.

ACHIOTL. A name given by the Braſilians to a dying ſtuff, more uſually denominated *rocou*. See *Rocu*.

ACHTENDEELEN, or *Aftheling*. A meaſure for grain, uſed in ſome parts of Holland, containing about 533 pounds.

ACICOCA. An herb growing in Peru, and ſometimes ſubſtituted for the herb *paraguay*, being reported to have all the properties of that herb.

Great quantities of it are annually tranſported from Lima, and the other ports of Peru, to the city of Avira; whence it is brought to Potoſi, eſpecially when the paraguay is ſcarce there, and conſequently dear. See *Paraguay*.

ACORI, or *Blue coral*. The genuine acori is exceeding ſcarce: however it is fiſhed for on ſome of the African coaſts, particularly from Rio-del-Re to the river of the Camarones; this being the coral which makes part of the commodities the Dutch trade for with the Camarones; and that of the kingdom of Benin is alſo much eſteemed, growing in the form of a tree, on a rocky bottom. See *Coral*.

ACORUS. A medicinal plant, of the ruſh or flag kind; the produce of Lithuania and Tartary; frequently confounded by apothecaries with the *calamus odoratus*. There are two ſpecies of the acorus, the *verus*, and the *falſe*; which are eaſily diſtinguiſhed, by obſerving, that from the middle of the *verus* there ariſes a longiſh cluſter of an infinity of ſmall flowers, the thickneſs of the little finger, and reſembling *macropiper*, or long pepper; whereas the *falſe* acorus is only the common ſword-graſs. It is only the root of the former that has any medicinal quality, and is uſually called the acorus; being knotty, reddiſh without, and white within, as thick as the little finger, and half a foot long; of which the moſt valuable ſort ſhould be new, well cleaned from its filaments, hard to break, of a four taſte, accompanied with an agreeable bitterneſs, and of a ſweet aromatic ſcent.

The acorus is of ſome uſe in medicine, being one of the ingredients that enter the compoſition of Venice treacle; and perfumers alſo make much uſe of it.

Among the acoruſſes are enranked the great and ſmall galanga; tho' perhaps improperly, as they are very different from the acorus.

The great galanga has leaves reſembling thoſe of the iris; and

and the ſmall is a reddiſh root, both inſide and out, of a very poignant and aromatic taſte. Theſe two galangas come from the Indies and China, eſpecially from the iſland of Java; both being of uſe in the making of vinegar; but chiefly the ſmall kind, which is likewiſe of ſome uſe in medicine.

ACQUITTANCE is a diſcharge, or releaſe, in writing, from a creditor to a debtor, commonly called a *receipt*; or it is an exoneration from any duty or obligation whatſoever.

ACRA. A town of Africa, on the coaſt of Guinea; where there is a Britiſh fort and factory. See *Guinea*.

ACRE. A port-town of Paleſtine, in Aſiatic Turkey, ſituated in 35 deg. of E. long. and 33 deg. 35 min. N. lat. on the Levant ſea, S. of Tyre, now a ſmall village, ſtanding on the ruins of the ancient Ptolemais.

ACRE. A money of accompt in ſome places of the Eaſt Indies, but more uſually called *lack*, or *lacre*. See *Lacre*.

ACRE, called more generally *Rotte*, is a weight uſed in ſeveral ports of the Levant. See *Rotte*.

ACRE, formerly an uncertain meaſure of land, but now fixed by the ſtatute of 31 Edward I. to be 40 poles or perches in length, and 4 in breadth, or 160 ſquare poles, containing 4840 ſquare yards, or 43,560 ſquare feet. England is computed to contain 39,038,500 ſquare ſtatute acres.

ACREMENS is a word uſed at Conſtantinople for a kind of ox-hides, brought there from the Black ſea.

ACTION, in commercial affairs, or action of a company, is a part or ſhare in the ſtock or capital of the company, conſiſting of a number of ſuch actions; which, in France, and the United Provinces, is only a different denomination for ſhares or ſubſcriptions in England: ſo that an action in the Miſſiſippi ſtock anſwers to a part of the South-ſea ſtock. See *Stock*.

ACTS *of parliament*. The ſtatute-laws of Great Britain.

ADAMANT. See *Diamond*.

ADARME. A ſmall Spaniſh weight; uſed alſo in Buenos-Ayres, and throughout all parts of Spaniſh America, being about the 16th part of an ounce.

ADATAYS. A muſlin, or cotton-cloth, which comes from ſeveral parts of the Eaſt Indies; but the fineſt ſort is made at Bengal, the piece being about 13 yards long, and 1 yard broad.

ADDA. A river of Italy, riſing in the province of Bormio; which, paſſing through the Valteline, runs through the lake De Como, and the Milaneſe, falling into the Po near Cremona. See *Po*.

ADEN. A port-town of Arabia Felix, in Aſia, ſituated in 16 deg. of E. lon. and in 12 deg. of N. lat. a little to the eaſtward to the Straits of Babel-Mandel; being 600 m. S. of Mecca, and 60 m. E. of Moco, ſubject to an Arabian prince. See *Arabia*.

ADENOS. A cotton, otherwiſe called *marine cotton*, which is brought from Aleppo, in Turky.

ADIGE. A great river in Italy, which riſes in Tyrol, runs S. by Trent, then E. by Verona, in the territory of Venice, and falls into the gulph of Venice N. of the mouth of the Po.

ADIT. A paſſage, or entry; a term principally uſed in mining; in which it ſignifies the ſough, or level, made to carry off the water.

ADMINISTRATION. A term whereby the Peruvian Spaniards call the ſtaple-warehouſe of Callao; which is a ſmall town on the South-ſea, ſerving Lima in quality of a port. It is at this adminiſtration that foreign ſhips, permitted to trade along theſe coaſts, are obliged to unload the European merchandiſe wherewith they are freighted; paying 13 *per cent.* of the price of the vent, if the cargo be entire, and 16 if not; beſides 3 *per* 1000 for conſulſhip, and other ſmall royal duties.

ADMIRAL. An eminent officer appointed to command the naval forces of a kingdom or ſtate, who takes cogniſance, by himſelf, or officers nominated by him, of all maritime cauſes. Authors are divided about the origin and denomination of this important officer; an officer eſtabliſhed with ſome variation in moſt of the principal maritime dominions. And it is certain that there are no inſtances of admirals in theſe European parts before the year 1284; when Philip of France, who attended St. Louis to the wars againſt the Saracens, created an admiral; which office was not introduced into England till the reign of Edward I. However, Du Cange aſſures us that the Sicilians were the firſt who gave the denomination of *admiral* to the commanders of their naval armaments; who took it from the Saracen or Arabic *amirr*, a general name for any commanding officer.

The office of great, high, or firſt admiral, has been always one of the moſt conſiderable and important poſts in all kingdoms and ſovereignties bordering upon the ſea; being ſeldom conferred on any but princes, or others of the moſt eminent ſubjects. In England, James Duke of York, afterwards James II. was inveſted with the dignity of Lord High Admiral during the war againſt the States-General; as alſo was Prince George of Denmark, conſort to Q. Anne, in that war againſt the French, which was productive of the treaty of Utrecht. But this office has been ſince held by commiſſion; becauſe the prerogatives and privileges annexed to it, are too extraordinary for the enjoyment and emolument of a private perſon; tho' theſe commiſſioners are ſtyled *Lords of the admiralty*, being ſeven in number, and the ſenior commiſſioner acting as a ſort of preſident.

In France the admiral is one of the principal officers of the crown, the chief of the marine, and of the naval forces of the kingdom. It is from him that the commanders of ſhips, having taken in their lading, muſt obtain permiſſion to ſail, with paſſports, ſafe conducts, and commiſſions. The tenths of all the prizes taken at ſea, or on the maritime coaſts, under the commiſſion and flag of France, belong to him, as well as the tenths of ranſoms, the whole of the fines within the particular juriſdiction of the admiralty, and half of thoſe ſpecified on the marble tables. He is alſo intitled to the duties for anchorage, tuns, and ſea-marks; likewiſe to a third part of the effects recovered from the bottom of the ſea, or which have been caſt on ſhore by the waves; the whole conformable to the ordinance of marine of 1681.

The admiralty of the States-General of the United Provinces is divided into the five colleges of Amſterdam, Rotterdam, Hoorn, Middleburg, and Harlingen; where each college has its peculiar officers, as a fiſcal, advocate, receiver-general, commiſſioner-general, ſeveral ſecretaries, regiſter, maſter of the houſhold, commiſſary of ſales, paymaſter, treaſurer, grand provoſt, and ſeveral commiſſaries, for the inſpection of paſſports, and the reception of duties. The college of Amſterdam conſiſts of twelve noblemen, who have the title of *counſellors of the admiralty*. One of theſe repreſents the nobility of Holland, one the city of Amſterdam, one that of Leyden, one of Harlem, one of Goude, and one of Edam, all theſe places being within the province of Holland; and the other ſix are repreſentatives of the ſix other provinces, where every thing is conducted in the ſame manner as in the admiralty of the province of Holland; from which courts paſſports muſt be taken, and where all the duties of importation and exportation are to be paid.

The Spaniards, Portugueſe, Danes, Swedes, and Ruſſians, have alſo their ſeveral departments for the regulation of their marine.

But there are ſeveral ſubordinations of admirals, or commanders of a maritime force, acting under the direction of the high admiral, or commiſſioner delegated for the execution of that important truſt; though theſe are more properly under the denomination of flag-officers: of which there are three different ranks, under three diſtinct diviſions, belonging to the crown of Great Britain; being the admiral, the vice-admiral, and rear-admiral of the white, blue, and red diviſions of the fleet.

The court of admiralty in England was firſt erected in 1357, by King Edward III. when a lord high admiral was appointed, who was judge or preſident of the court of admiralty. He took cogniſance, by himſelf, his lieutenants, and deputies, of all crimes committed on the ſea, or the coaſt adjacent, as well as of all the civil and marine tranſactions relating thereto, as alſo of what was tranſacted in all ſhips riding in any principal river beneath its bridges of the neareſt proximity to the ſea.

The

The proceedings in the Britiſh court of admiralty are principally according to the civil law; becauſe the ſea is extrajudicial of the common law, and under the juriſdiction of the admiral. To the civil law, firſt inſtituted by the founder, were afterwards added by his ſucceſſors, particularly Richard I. the laws of Oleron; together with the marine uſes and conſtitutions of ſeveral people; as thoſe of Genoa, Piſa, Marſeilles, Meſſina, &c. but more particularly the ancient laws of the Rhodians. Richard II. limited the juriſdiction of the admiralty court, by a ſtatute enacted in the 15th year of his reign; whereby it was declared, that the court of admiralty ſhould not have cogniſance of contracts or other things ariſing within the borders of counties, as well by ſea as by water, nor wreck of the ſea. That of the death of a man, and of a maim done in great ſhips hovering in the main ſtream of great rivers, beneath the ports, near the ſea, and in no other places of the ſame rivers, the admiral ſhould have cogniſance; as alſo to arreſt ſhips in great fleets for the great voyages of the king and kingdom; and ſhould alſo have juriſdiction in ſuch fleets during ſuch voyages; ſaving to the king his forfeitures, and to lords, cities, and boroughs, their liberties and franchiſes. Which ſtatute was confirmed by another enacted in the 2d year of the reign of Henry IV. with this addition, that the party grieved againſt the form of the former ſtatute, ſhould, by action upon his caſe, recover double damages againſt the proſecutor in the admiralty, and the proſecutor ſhould alſo forfeit ten pounds to the king.

By a ſtatute of 8th Eliſabeth, it was enacted, that a ſentence definitive in a civil and marine cauſe by delegates appointed by commiſſion, upon an appeal made in chancery, ſhould be final.

By a ſtatute 2d William and Mary, it is declared, that all juriſdictions and powers inveſted in the lord high admiral, have always appertained to commiſſioners of the admiralty, as if they were lord high admiral.

By a ſtatute 13th George II. proper methods are directed for the judge of any court of admiralty in Great Britain, or elſewhere, to expedite adjudging of captures taken from the enemy. See *Capture*, *Court-martial*, *Navy*, *Piracy*.

Between the courts of admiralty and common law, there ſeems to be a divided power; for the ſea, ſo far as the low-water mark, is accounted within the body of the county, and the cauſes thence ariſing are determinable by the common law; yet, when the ſea is full, the admiral has likewiſe juriſdictions there, during the continuance of the floods, over matters tranſacted between the low-water mark and the ſhore.

The principal court of admiralty belonging to the Britiſh crown, is at Doctors Commons, in the city of London; but there are courts of vice admiralty in Ireland, and all the principal colonies abroad; though I have been informed by the regiſter of the vice-admiralty court in Dublin, that the civilians there were of opinion their court was original, and acted by no ſort of deputation. All proceſſes and proceedings in the court of admiralty are not iſſuable under the royal direction, but run in the name of the lord high admiral, or commiſſioners, whoſe deputy is called *judge of the admiralty*, and is commonly an eminent civilian, to whom appeals may be made from any court of vice-admiralty, except from the cinque ports, where the lord warden hath an exempt juriſdiction from the admiralty of England: though the deciſion of the judge of the admiralty is not always concluſive; becauſe a court of delegates has been frequently appointed, particularly during the laſt war, conſiſting of ſeveral of the principal nobility, privy counſellors, and judges, whoſe delegation authoriſes them to redreſs any grievances, or revert any ſentence given in the admiralty court in ſuits, civil and marine, by order of the civil law.

Though the admiralty-court has a power to determine all maritime cauſes, or cauſes ariſing wholly upon the ſea, out of the juriſdiction of any country; yet this court is not allowed to be a court of record, becauſe the proceedings are by the civil law; and the judge hath no authority to take ſuch recogniſance as a court of record may; though he may puniſh thoſe by fine and impriſonment who reſiſt the proceſs of the admiralty-court. The admiralty hath

juriſdiction where the common law can give no remedy, and of all contracts made upon the high ſea. It has alſo been held, that this court hath juriſdiction in caſes of freight, mariners wages, or for breach of charter-parties, although made within the realm, ſo as the penalty is not demanded; as alſo in caſes of building, mending, ſaving, or victualing ſhips, if the ſuit be againſt the ſhip, and not againſt the parties. Beſides, this court has a juriſdiction to redreſs annoyances and obſtructions in rivers, which may hinder navigation to and from the ſea However, the admiralty can hold no plea of any contract but ſuch as ariſeth upon the ſea; not though it riſe upon any continent, or in any port or haven out of the Britiſh dominions, for the juriſdiction of the admiralty is limited to the ſeas only; the admiral being for the ſea, and the court for maritime cauſes.

It has alſo been agreed by the judges in England, that where ſentence is obtained in a foreign admiralty, a party may libel for execution thereof in England; becauſe all the courts of admiralty in Europe are governed by the civil law, and are to be aſſiſtant one to another, though the matter were not originally determinable in England.

ARDOUR. A river of France, riſing in the Pyrenean mountains, which runs north by Tarbes, through Gaſcony; then turning eaſt, paſſes by Dax, and falls into the bay of Biſcay below Bayonne.

ADRAGANTH. See *Tragacanth*.

ADRIANOPLE is the ſecond city of conſequence in the Turkiſh empire, ſituate in 26 deg. 30 min. of E. lon. and 42 deg. of S. lat.

ADRIATIC *Iſlands*. See *Italian* and *Turkiſh iſlands*.

ADRIATIC *ſea*, or *Gulph of Venice*, formerly called *Mare Ionium*, *Auſonium*, and *Siculum*, which ſeparates Dalmatia from Venice and the eaſtern coaſt of Italy. The Adriatic extends from Saint Maria de Leuca, the eaſtern boundary of Naples, to Trieſte in Iſtria; containing Venice, Cherſo, Vegia, Arle, Oſero, Pago, Zara, Braſſa, Leſina, Curzola, Raguſa, and ſome other inconſiderable iſlands appertaining to the ſigniory of the Venetians, who were formerly the moſt formidable maritime power in Europe; which character they glorioufly ſupported by their ſituation at the top of the Adriatic. See *Venice*.

ADVANCE, is an anticipation of time; for to pay off a bill by way of advance, is to pay it before the term of its date is expired, for which a diſcount is uſually taken. But *advance* alſo imports a loan of money, or a ſupplying with merchandiſe. With regard to bills of exchange, it is ſaid, *advance for the drawer*, when, upon a negotiated bill, he who has negotiated it receives more than the par, that is, more than the ſum ſpecified by the bill: but, on the contrary, it is ſaid, *advance for the payer*, and loſs for the drawer, when, by the negotiation, he to whom the bill belongs does not receive its entire value.

Advance, in another ſenſe, is to defray the expences of an enterpriſe before the time of reimburſement arrives.

ADVENTURE, or *Venture*. Any parcel of goods allowed for the officers and crew of a trading ſhip, to carry abroad for their own private advantage.

ADVENTURER, is applied to any veſſel that attempts to carry on a prohibited trade; but is now particularly applied to thoſe enterpriſing freebooters, who aſſociate themſelves together againſt the Spaniards in the Weſt Indies. See *Buccaneers*.

ADVENTURERS. The company of merchant-adventurers was the firſt ſociety of merchants in England, eſtabliſhed by letters patent granted by King Edward I. in the 13th year of his reign; whereby they became incorporated, and intitled to ſeveral excluſive privileges, for the maintenance, inlarging, and better carrying on of the moſt conſiderable trades to foreign parts. Theſe merchants were originally called *The Brotherhood of St. Thomas a Becket of Canterbury*, and obtained ſeveral privileges from John Duke of Brabant, which were confirmed by King Edward III. Henry IV. and their ſucceſſors, down to Henry VII. who gave them the name of *merchant-adventurers*. After him, theſe privileges were confirmed by Henry VIII. Edward VI. Queen Eliſabeth, and James I. though not without incurring many enemies; who charged them to be monopolies, and unprofitable to the kingdom, becauſe theſe merchants had

the ſole privilege of trading to the Netherlands; whereupon their patent had temporary ſuſpenſions, which was afterwards confirmed again by royal proclamation; but their excluſive privilege of trade was afterwards aboliſhed. See *Hamburg company*, and *North companies*.

In France thoſe perſons are denominated *adventurers*, who become ſubſcribers, or actionaries, in the companies formed for the eſtabliſhment of the American colonies; by which they are diſtinguiſhed from the planters, or thoſe inhabitants intitled only to plantations, who are employed in cultivating and planting the land; for which the former are adventuring their money, in expectation of receiving an adequate recompence from the profits ariſing by the dividends of the company. The charters granted in England for eſtabliſhing the colonies of America alſo make a ſimilar diſtinction between planters and adventurers.

ADVICE. See *Letters of advice*.

ADVOCATE. A term generally applied to ſuch counſel who plead and defend cauſes, in thoſe countries and courts where the civil law is predominant, and takes cogniſance of all maritime affairs.

ADULTERATION. This, in a general ſenſe, implies the act of corrupting or debaſing a thing that was pure, by improper admixture. The Britiſh laws are very provident againſt the adulteration of coffee, tea, tobacco, ſnuff, wine, wax, hair-powder, and other mercantile commodities; but more eſpecially againſt debaſing or adulterating the current coin, which, by a ſtatute made in the 3d year of the reign of Henry V. was adjudged reaſon. See *Coin*.

AEM, AM, AME. A liquid meaſure, uſed almoſt throughout all Germany, containing about 42 wine gallons.

ÆGYPTIACUM, is a name given to ſeveral medicinal unguents of the detergent or corroſive kind: but the *ſimple ægyptiacum* is the medicine generally found in our ſhops, which is a compoſition of verdigreaſe, vinegar, and honey, boiled to a conſiſtence, ſuppoſed to be denominated from its duſky colour, wherein it reſembles the native hue of the Ægyptians.

ÆRUGO. See *Verdigreaſe*.

ÆSTUARY. An arm of the ſea, running a conſiderable way into the land, like Briſtol channel, and ſeveral of the friths of Scotland.

ÆS-USTUM, or burnt copper. A chemical preparation extracted from thin plates of copper, by the force of a crucible, of a ſimilar quality to the ægyptiacum. The goodneſs of it lies in its conſiſtence, which muſt be middling, and in its colour, which muſt be of an iron grey on the ſurface, reddiſh towards the inward part, and of a cinnabar colour, when two pieces are rubbed againſt one another.

The beſt æs-uſtum comes from Holland; which phyſicians uſed in ſome of their remedies, but with great precaution, its greateſt uſe being for chirurgical operations, in which it is applied for the eating and conſuming of fleſh, and excreſcences in the cure of wounds.

ÆTHIOPIA. See *Ethiopia*.

ÆTHIOPS *mineral*. A preparation of crude mercury and flower of ſulphur, blended till they become incorporated into a black powder.

AFFA. A weight uſed on the gold coaſt of Guinea, equal to an ounce, the half whereof goes under the denomination of *eggeba*.

AFFREIGHTMENT. See *Freight*.

AFRICA, one of the four principal diviſions of the world, and the third in degree, is a peninſula joined to Aſia by the narrow iſthmus of Suez, which lies between the Mediterranean and the Red ſea. This country is ſituated between 18 deg. W. and 50 E. long. and between 37 N. and 35 S. lat. bounded by the Mediterranean ſea, which divides it from Europe, on the north; by the iſthmus of Suez, the Red ſea, and the Indian ocean, on the eaſt; by the ſouthern ocean, on the ſouth; and by the Atlantic ocean, on the weſt; being 4320 miles long, and 4200 broad. This ſituation occaſions it to have very extenſive coaſts, where the Europeans carry on a beneficial commerce; but the interior parts of the continent are little underſtood, by reaſon of the ſterility of the ſoil, the inſupportable heat of the climates, or the ferocity of the inhabitants. However, a ſufficient knowledge of the country has been acquired, to give us information of the grand diviſions and ſub-diviſions of this prodigious tract; the former having been thrown into the ten grand diviſions following. 1. Egypt, 2. Æthiopia ſuperior. 3. Zanquebar; all which form the eaſtern part of Africa. 4. Monoemugis, Monomotapa, and Caffaria, or Lower Æthiopia, which lie on the ſouth. 5. Congo, Angola, Guinea. 6. Nigritia, or Negroland, which lies in the middle of Africa, extending almoſt through the country from eaſt to weſt, on both ſides the river Niger. 7. Zaara, or the deſert, to the northward of Nigritia. 8. Biledulgerid, the ancient Numidia, to the northward of Zaara. 9. Morocco, and Fez, containing the N. W. part of Barbary. And, 10. The coaſt of Barbary, on the north, containing the countries of Algiers, Tunis, Tripoli, and Barca, all which are eaſtward of the African iſlands. But theſe ten diviſions are particularly deſcribed under the ſeveral articles of Egypt, Æthiopia ſuperior, and Æthiopia inferior, Zanquebar, Guinea, Nigritia, Zaara, Biledulgerid, Morocco, and Barbary. The African iſlands are alſo diſtinguiſhed by the names of Zocotora, Babelmandel, and the iſlands in the Red ſea, being the N. E. diviſion; Madagaſcar, Comora iſlands, Bourbon, and Mauritias, being the S. E. diviſion; St. Helena, St. Thomas, Aſcenſion, Anaboa, Prince's iſland, Fernandopo, and St. Matthew, being the S. W. diviſion; Cape Verd iſlands, Canary iſlands, Maderas, being the N. W. diviſion, and the Azores, or weſtern iſlands, which are particularly deſcribed under thoſe ſeveral articles.

This quarter of the world once contained ſeveral kingdoms and ſtates eminent for the liberal arts, for wealth, power, and the moſt extenſive commerce; though, at this day, there is ſcarce one ſingle nation left upon that continent worthy of notice. Africa could formerly boaſt the celebrated kingdoms of Egypt and Æthiopia, with the rich and formidable Carthaginian republic, to which the kingdoms of Numidia and Mauritania were ſubject. At that time almoſt all the northern parts of Africa were full of inhabitants, from the Red ſea to the Atlantic ocean; and Carthage extended her commerce to every part of the known world. Even the Britiſh ſhores were viſited by her fleets; until John, King of Mauritania, and tributary to Carthage, unhappily called in the Romans, who, by the aſſiſtance of the Mauritanians, ſubdued Carthage, and ſubjected all the kingdoms and ſtates in Africa to the dominion of Rome. After this ſubjection, the natives neglected their trade, and even the cultivation of the ſoil. They became provincial tributaries to Rome, liable to be plundered and impoveriſhed by rapacious viceroys and governors ſent from that capital: whereupon their traffic, in a ſhort time dwindled to nothing, and they cultivated no more of their lands than what might ſerve for their ſubſiſtence. Upon the declenſion of the Roman empire, in the 5th century, the north of Africa was over-run by the Vandals, who contributed ſtill more to the deſtruction of arts and ſciences; and, to add to their misfortune, the Saracens made a ſudden conqueſt of all the coaſts of Egypt and Barbary, in the ſeventh century. Theſe were afterwards ſucceeded by the Turks; and both being of the Mahomedan religion, whoſe diſciples carry ruin and devaſtation along with them where-ever they come, the ruin of that once flouriſhing part of the world was thereby completed; though the ſoil of the northern ſhore of Africa is ſtill the ſame, and capable of producing almoſt every thing deſireable in life, but poſſeſſed by a wretched abandoned people, entirely addicted to robbery and rapine, and chiefly ſubſiſting by their piracies at ſea on the European powers. See *Barbary*.

From the diſcoveries that have been made in Africa of late years, it is found to be a more fertil country than was formerly repreſented; for not only the northern part of it is generally fruitful where it is cultivated, but the ſouth alſo produces corn and wine. There numerous herds of fine cattle are to be ſeen; and, even between the tropics, there are multitudes of people, noble rivers, and a rich ſoil, capable of the greateſt improvements. The cinnamon-tree actually grows there, and it is apprehended that other ſpices might be raiſed in thoſe latitudes. Here is plenty of the beſt gold and ivory; and from hence the Europeans export upwards of 200,000 Negro ſlaves annually to America; which

which ſhews, that Africa, between the tropics, muſt be vaſtly populous, though the ancients held that the torrid zone was not habitable.

This continent is inhabited by three different people, Pagans, Mahomedans, and Chriſtians. The firſt are the moſt numerous, poſſeſſing the greateſt part of the country from the tropic of Cancer to the Cape of Good Hope; and theſe are generally black: the Mahomedans, who are of a tawny complexion, poſſeſs almoſt all the northern ſhores of Africa: the people of Abyſſinia, or Upper Æthiopia, are denominated Chriſtians, but retain abundance of rites belonging to Judaiſm and Paganiſm; and there are ſome Chriſtians on the ſea-coaſts on almoſt every ſide of Africa; but theſe are an inconſiderable number, compared either with the Pagans or Mahomedans. There are alſo ſome Jews in the north of Africa, who manage all the remaining trade of that country. But it is remarkable, that though the Carthaginians, who inhabited Barbary, had greater fleets, and a more extended commerce, than any other nation, or than all the people upon the face of the earth, when that republic flouriſhed, and that though Africa is better ſituated for a foreign trade, than any other quarter of the world, the natives have ſcarce a ſingle mercantile veſſel belonging to them, and no other warlike ſhips, than what Sallee, Algiers, Tunis, and Tripoli, ſet out for piracy, which are too inconſiderable to reſiſt any European ſquadron of force. Though it is pretended, that the ancients diſcovered the Canary iſland, whoſe ſituation is but little diſtant from the coaſt of Morocco; it is certain, that, before the 15th century, Africa was but very inconſiderably known, except the Egyptian territories, and the coaſts bordering upon the Mediterranean. The ſucceſsful voyage of the Portugueſe, who doubled Cape Eſperance, or the Cape of Good Hope, in 1487, and afterwards diſcovered all the African coaſt as far as the Red ſea, gave the Europeans an opportunity of augmenting their diſcoveries, by eſtabliſhing a commerce with the inhabitants, and erecting ſettlements in the country.

The Engliſh, French, Portugueſe, Danes, and Hollanders, have ſeveral ſettlements in different parts of the African coaſt; but the moſt conſiderable are on the coaſt of Guinea, where they proſecute their advantageous commerce for ivory, gold-duſt, and ſlaves. But, for a particular deſcription of the various kingdoms and ſtates, their reſpective commodities, as well as the different way of merchandiſing, and the ſeveral European ſettlements, throughout the African territories, both on the continent and in the iſlands, reference muſt be had to the ſeparate articles of the ten grand diviſions above mentioned, where they are particularly deſcribed.

AFRICA, is alſo a port-town of Tunis, ſituated on the coaſt of Barbary, in 8 deg 20 min. of E. lon. and 36. deg. of N. lat. being 70 m. S. of Tunis.

Britiſh AFRICAN *companies*. In the 14th year of King Charles II. the royal adventurers of England, trading into Africa, had their charter granted them, which was afterwards ſurrendered to the ſame monarch; who, in conſideration thereof, by his royal charter or letters-patent, dated the 27th of September, in the 24th year of his reign, granted the company, all the regions, countries, dominions, teritories, continents, coaſts, and places, lying between the port of Sally in South Barbary, incluſive; and extending from thence to Cape de bona Eſperanza, incluſive, with all the iſlands near adjoining to thoſe coaſts, and comprehended within thoſe limits, which had been heretofore called by the name of *South Barbary*, *Guinny*, *Binny*, or *Angola*; and all ports, harbours, creeks, iſlands, lakes, and places in the parts of Africa to any of them belonging, or being under the obedience of any king, ſtate, or potentate within thoſe limits, *to hold* for the term of 1000 years, ſubject to ſuch conditions and reſervations as therein mentioned, and incorporating the ſeveral perſons therein named by the name of *The Royal African Company of England.*

But the more particular eſtabliſhment of this company was made by an act of parliament paſſed in the 7th year of King William III. whereby it was enacted, That the leaſt ſubſcription ſhould be 100 l. and the greateſt 3000 l. that the company ſhould be impowered to equip, freight, and navigate their ſhips to any part of Africa; to plant colonies, build cities, towns, or forts, in or upon the places not inhabited, or in or upon any other place, by conſent of the natives and inhabitants thereof, and not poſſeſſed by any European power, and to provide magazines for defending ſuch places; as alſo to make repriſals, and to ſeek reparation for damage by ſea or land, and to conclude treaties of peace and commerce with the ſovereigns and proprietors of land in Africa; provided that ſuch ſhips employed by the company ſhould return to Great Britain with their effects, under pain of confiſcation: that all the reſt of the Britiſh ſubjects ſhould be precluded from trading to Africa, under forfeiture of the third part of the ſhip and cargo: that the company ſhould have the abſolute property of all their poſſeſſions to be made in Africa, to be held in ſovereignty from his Majeſty and his ſucceſſors, under an acknowledgment of one hogſhead of tobacco annually, with a right to impoſe ſuch cuſtoms and duties as they ſhould think proper for the maintenance of their poſſeſſions; and that all perſons concerned in the company ſhould be free denizens of Great Britain.

By the ſtatute 9th and 10th William III. it was enacted, That the Royal African company ſhould maintain and defend all the forts and caſtles in their poſſeſſion: that any of the ſubjects of Great Britain might trade from England, or any of the Britiſh plantations in America, to the coaſt of Africa, between Cape Mount and the Cape of Good Hope, the ſaid company, and all others, anſwering a duty of 10 *per cent.* for the goods and merchandiſes exported thither from England, or the plantations, for maintaining the caſtles and forts, and preſerving the African trade: that they might alſo trade between Cape Blanco and Cape Mount, paying the ſame duty, and a further ſum of 10 *per cent.* at the place of importation, except for redwood and negroes; the former of which was only to pay half the additional duty, and the latter to be entirely excluded from it; that ſuch perſons ſhould have the ſame protections as the company, might ſettle factories in any of the ſaid limits, and ſhould be free from all impoſitions from the company: and that all the duties ariſing by this act ſhould be appropriated wholly to the maintenance of the forts and caſtles belonging to the company.

By the ſtatute 10th Anne, it was enacted, That, in conſideration of the loſſes and diſappointments the company had ſuſtained, two third parts, or more, in number and value, of all their creditors, were to allow the company time for diſcharging their debts.

By ſeveral ſubſequent ſtatutes for appropriating the public money, 10,000 l. a-year was applied towards maintenance of the forts and ſettlements belonging to the company.

But as the company have been incapacitated from proſecuting the trade under their preſent circumſtances, another act for *extending* and *improving* their trade to Africa was paſſed 23d George II. reciting, that the trade to and from Africa being very advantageous to Great Britain, and neceſſary for the ſupplying the plantations, and colonies belonging thereto, with a ſufficient number of negroes at reaſonable rates, ought for that purpoſe to be free and open to all his Majeſty's ſubjects; it was therefore enacted, That it ſhould be lawful for all the Britiſh ſubjects to trade to and from any place in Africa, between the port of Sally in South Barbary, and the Cape of Good Hope, without any reſtraint whatſoever, ſave as therein after expreſſed: that ſuch perſons who ſhould trade to and from Africa, between Cape Blanco and the Cape of Good Hope, ſhould be deemed a body corporate and politic, by the name of *The Company of Merchants trading to Africa*: that all the Britiſh forts and poſſeſſions on the coaſt of Africa, claimed by or in poſſeſſion of *The Royal African Company of England*, ſhould, from the paſſing of an act for diveſting the African company of their charter, be abſolutely veſted in the new company, and their ſucceſſors, to the intent that ſuch forts and ſettlements ſhould be employed only for the protection, encouragement, and defence of the African trade: that the company eſtabliſhed by this act ſhould not trade to or from Africa in their corporate or joint capacity; nor ſhould they have any joint or transferable ſtock; nor ſhould they borrow money on their common ſeal: that the direction and management of the affairs of the new company ſhould be by a committee of nine perſons, to be choſen annually, who, or the

the majority, ſhould have full power to make orders for the governing and improving the forts and factories, and to appoint governors, and other officers, both civil and military, ſo as no orders or regulations made by the committee ſhould lay any reſtraint on the trade or traders, contrary to the intent of this act: that the traders, or perſons intending to trade to or from Africa, being inhabitants of London, Briſtol, or Liverpool, on paying 40s. each for their admittance into the freedom of the ſaid company, ſhould annually chuſe three perſons from each of the ſaid places for the committee; which election ſhould be on the 3d of July yearly; but, in caſe of an equality of votes at any election, the lord mayor of London, the mayor of Briſtol, and the mayor of Liverpool, reſpectively, ſhould determine which of ſuch perſons ſhould be the committee-man: that a chairman ſhould be choſen by the committee: that no perſon ſhould be capable of being choſen or acting as a committe-man above three years ſucceſſively: that the commiſſioners of trade and plantations might remove any of the committee-men, or officers or ſervants appointed by theſe, who ſhould be guilty of any miſbehaviour: that the committee ſhould render an account of their tranſactions once a-year to the commiſſioners for trade and plantations: that the committee, out of the monies they ſhould receive, might deduct annually 800 l. for expences of clerks, agents, and other contingencies; but the reſt of the monies ſhould be employed wholly to the maintenance and improvement of the forts and ſettlements; an account of which money the committee ſhould annually exhibit, upon oath, before the curſitor baron of the exchequer, who ſhould audite and paſs the ſame; and the committee ſhould lay before the parliament, every ſeſſion, a copy of ſuch annual account, and of all their orders and regulations: that the forts, warehouſes, and buildings belonging to the company, ſhould at all times be free and open to all his Majeſty's ſubjects, to be uſed as warehouſes for depoſiting gun-powder, gold, elephant's teeth, wax, gums, and drugs, but no other goods: that if the commander of any veſſel trading to Africa, ſhould, by any indirect practice, carry away any negro, or native of the country, or commit any violence on the natives, to the prejudice of the trade, he ſhould forfeit 100 l. that the accomptant-general, and two maſters of the court of chancery, ſhould be commiſſioners for examining into the claims of the creditors of the Royal African company; who were to lay an account of ſuch claims before the parliament with all convenient ſpeed.

In purſuance of this laſt mentioned act, another was paſſed in the 25th year of King George II. intitled, "An act for "the application of a ſum of money therein mentioned, "granted to his Majeſty, for making compenſation and "ſatisfaction to the Royal African company of England, "for their charter, lands, forts, caſtles, ſlaves, military "ſtores, and all other their effects whatſoever; and to "veſt the lands, forts, caſtles, ſlaves, and military ſtores, "and all other their effects, in the company of mer-"chants trading to Africa, and for other purpoſes in the "act mentioned;" wherein it was declared, That Capt. Thomas Pye, in purſuance of directions from the lords of the admiralty, in the year 1749, took a ſurvey of the forts and caſtles of the ſaid Royal African company of England on the coaſt of Africa, and of the quantity, number, and quality of cannon, and their military ſtores, canoe-men, caſtle-ſlaves, canoes, and veſſels, then at each reſpective port, belonging to the company; and that the company were willing to ſurrender the ſame, together with their charter, books of accompt, papers, contracts, and agreements for ſuch compenſation and ſatisfaction, and to be applied in ſuch manner as therein was expreſſed and directed. It was therefore enacted, That the Royal African company of England, after the 10th of April 1752, ſhould be diveſted of their ſaid charter, poſſeſſions, and effects whatſoever; which ſhould be veſted in the new corporation of *The Company of Merchants trading to Africa*, and their ſucceſſors, freed from all claims and demands of the ſaid *Royal African Company of England*, and their creditors: that the new company, with the conſent of the commiſſioners for trade and plantations, might impower proper perſons to raiſe and arm ſuch military forces as they ſhould think neceſſary, and ſubject them to their diſcipline; and to execute within their ſettlements ſuch regularities for their defence, and for the puniſhment of offences committed there, as ſhould be given them by the company, or their committee, with ſuch conſent and approbation as aforeſaid, ſo as ſuch puniſhment ſhould not extend to the loſs or deprivation of life or limb: that, for the more effectual encouragement of merchants trading or reſiding there, the company might, with the conſent and approbation of the commiſſioners for trade and plantations, eſtabliſh courts of judicature at ſuch places upon the coaſt as the company ſhould direct, for hearing and determining all cauſes ariſing there on account of mercantile or maritime bargains, buying, ſelling, or bartering of wares, or bills, bonds, or promiſe of payment of money, or mercantile or trading contracts, made upon the coaſt concerning any perſon reſiding there. But it was provided, that the crown might at pleaſure revoke any of the before mentioned powers, and eſtabliſh other regulations, and courts of juſtice: that all former contracts with any of the kings, princes, or natives of any countries on the coaſt, as alſo all deeds and accompts, ſhould be delivered over from the old to the new company: that 112,142 l. 3s. 3d. ſhould be applied out of the parliamentary ſupplies, as a full ſatisfaction to the old company for being diveſted of their charter and poſſeſſions; of which 1695 l. 3s. was to be paid to the three commiſſioners appointed by parliament to ſtate the claims of the creditors of the ſaid company; 84,652 l. 12s. 7 d. to the ſeveral creditors mentioned in the ſecond ſchedule; and 23,688 l. 15s. 5d. to the perſons named in the third ſchedule, theſe laſt being ſuch of the proprietors of African transferable ſtock as were poſſeſſed of the ſame on the 31ſt of December 1748, the ſame being computed at 10 *per cent.* on the ſaid ſtock ſo poſſeſſed by them at that time; and the remaining 2105 l. 12s. 3d. was to be paid the perſons named in the fourth ſchedule, being ſuch of the proprietors of African tranſferable ſtock as were poſſeſſed of the ſame ſince the ſaid 31ſt of December 1748, computed at 5 *per cent.* on the ſtock ſo poſſeſſed by them: that, after the 10th of April 1752, the old company ſhould ceaſe to be a corporation; and that the effects of the old company ſhould be ſold, and the amount of the ſales laid before parliament.

According to the ſurvey delivered in by Capt. Pye, it appears the company had ſeven forts in Africa: that at the firſt, being Cape Coaſt caſtle, they had 367 ſlaves, ſeveral pieces of artillery, ſome ammunition and military ſtores, with a ſchooner, a launch, and 5 canoes: that at Commenda, being the ſecond fort, they had 22 ſlaves, ſeveral cannon, ſome military ſtores, and 4 canoes: that at Succondee, the third fort, they had 10 ſlaves, ſeveral cannon, ſome military ſtores, and 2 canoes: that at Dick's Cove, being the fourth fort, they had 60 ſlaves, ſeveral cannon, ſome military ſtores, and 9 canoes: that at Tantumquerry, the fifth fort, they had 10 ſlaves, ſeveral cannon, and ſome military ſtores: that at Winnebah, the ſixth fort, they had 13 ſlaves, and ſeveral cannon: and that at Accra, the ſeventh fort, they had 32 ſlaves, ſeveral cannon, and 3 canoes.

Towards the end of the 17th century, an African company was formed in Scotland; which became very remarkable in 1699, upon account of the eſtabliſhment attempted in the iſthmus of Darien, that ſeparates South from North America: but the Engliſh government not judging it adviſable either to acknowledge or ſupport the firſt ſucceſs of this company, which had alarmed the jealouſy of Spain, the new Scots colony was diſtreſſed by the Spaniards in 1700; and one of the fineſt projects as yet formed for diſputing with the Spaniſh nation the entire poſſeſſion of theſe rich countries, proved abortive. But this company was alſo incorporated with the Engliſh company.

French AFRICAN *Companies.* — *Company of Senegal.* The company formed in France under this name, was at firſt only a ſimple aſſociation of ſome Dieppe merchants, who, without letters-patent from the King, undertook the trade of the African coaſts; where they eſtabliſhed themſelves in a ſmall iſle of the Niger, or river of Senegal, which they called *Iſlette St. Louis.*

They were ſucceeded by the Rouen merchants, who yielded, in 1644, their eſtabliſhment to the new Weſt

Indian company; which, among its conceſſions, had obtained the excluſive privilege of the whole African trade, from Cape Blanc to the Cape of Good Hope.

About ten years after, the revoking of the letters-patent of the great Weſt Indian company being judged neceſſary for the French trade, and this company being allowed to diſpoſe of its dependencies upon the African coaſt; a company was formed by the name of that of Senegal, which undertook the eſtabliſhing and ſupporting the trade of that immenſe conceſſion of the Weſt Indian company, purchaſed at 78,000 livres; this treaty being of the 8th November 1673, with a privilege of excluſive commerce during the term of thirty years, and all other exemptions and privileges of the Weſt Indian company.

This company having gone through ſeveral revolutions, at laſt gave up its privileges to a new company, formed by the moſt opulent merchants of Rouen, which was incorporated in 1718 with the great Indian company.

Guinea company. The French monarch having judged it neceſſary to divide into two companies the conceſſion he had made in favour of the company of Senegal, gave his letters-patent, towards the end of January 1685, for a company intitled *The Guinea company*, with the excluſive privilege of trading to the African coaſts, from the river Sierra Leon incluſively to the Cape of Good Hope.

This company was to enjoy all the exemptions and immunities granted the Weſt Indian company, and afterwards that of Senegal; under the obligation, notwithſtanding, of tranſporting yearly into the French American colonies 1000 Guinea negroes, and likewiſe 1200 marcs of gold-duſt into the kingdom of France.

The Guinea company ſubſiſted upon this footing till 1701; when, not ſatisfying their conditions, eight others were ſubſtituted in their place, with the ſame privileges, but bound to furniſh the American colonies with 3000 negroes. This company, which expired not till 1705, was the only one that made an advantage of the war commenced upon account of the Spaniſh ſucceſſion, becauſe it treated, with the royal permiſſion, for ſupplying the Spaniſh colonies with negroes, and continued to 1713 under the name of the *Aſſiento company*. The trade of the Guinea company was entirely the ſame with that of Senegal. But the peace of Utrecht between France and Spain put an end to this company, which continued to 1713; and, by a ſecret article, the tranſportation of negroes was given up to the Engliſh.

Lewis XV. in the firſt year of his reign, obſerving it to be more adviſable to allow all his ſubjects the liberty of commerce on the coaſts of Africa, according to the conceſſion of this company, than to conſent to the eſtabliſhment of a new one; accordingly the King granted, by his letters-patent of the 16th January 1716, a general leave to all his trading ſubjects to carry on the commerce of negroes and gold-duſt, from the river of Sierra-Leon incluſively to the Cape of Good Hope, upon condition of fitting out their ſhips in the ports of Rouen, Rochelle, Bourdeaux, and Nantes, except the merchants of St. Malo, who were at liberty to do what was neceſſary for this purpoſe in their own ports.

Cape-Verd company, is properly that of Senegal, under another denomination, being formed before the eſtabliſhment of the company of the Weſt, erected in 1664; but the coaſt of Africa being comprehended in the conceſſion of this laſt, there was no longer any mention made of that of the Cape, till, in 1673, it appeared under the title of that of Senegal.

Company of the Baſtion of France. Two merchants of Marſeilles, Thomas Linché and Carlin Didier, were the firſt who entered into an aſſociation, in the 15th century, for the coral fiſhery in the gulph of Stora Courcoury, upon the coaſts of Barbary, at the extremity of the kingdom of Algiers, and frontiers of that of Tunis.

Having obtained from the Port, towards the end of the reign of Solyman II. a conſent for eſtabliſhing themſelves therein, and having treated with the Checqs, or Mooriſh princes of the country, they began, in 1651, this little fortreſs called the *Baſtion of France*, whereof the French are yet in poſſeſſion.

The Sieur Moiſſac deſigning to continue this eſtabliſhment, which proved unſucceſsful with his two townſmen, obtained a conceſſion from Mahommed III. by the means of the French ambaſſador then reſiding at Conſtantinople; which M. Savary de Breves, who ſucceeded him, had likewiſe renewed by Achmet I. ſon and ſucceſſor of Mahommed.

Moiſſac and his company were ſcarce more happy than the firſt undertakers: ſo that it was to the Sieur Sanſon Napollon, who went there in 1628 in the name of the new aſſociates, that the baſtion owed its perfection, and the fiſhery and commerce the beſt ſtate they were ever in, either before or after.

This governor being killed at Tabarque, a town of the kingdom of Tunis, in the month of May 1633, his colony, which he had extended to upwards of 800 French inhabitants, was ſo diſſipated, that in leſs than a year afterwards, there remained not above one half.

Other companies ſtrove afterward, but to no purpoſe, to re-eſtabliſh the coral fiſhery. But there was one in 1673, which might have flattered itſelf with ſucceſs, if the war againſt the Dutch begun a year before, and thoſe which almoſt continued to the end of the reign of Lewis XIV. had not impeded this eſtabliſhment, and made the aſſociates ſuſtain ſeveral heavy loſſes.

The conceſſion of this company is not only for the coral fiſhery, carried on at the Baſtion of France, but alſo for all the commerce of this coaſt as far as Gigery, comprehending La Calle, Cape Roſe, Bonne, and Colle; whoſe commerce, excluſive of all others, is granted to this company by the royal letters-patent.

This commerce of the Baſtion of France is conſiderable, eſpecially for ox, cows, and goat ſkins; of which there are had, from all theſe places, 100,000 hides annually; and for wheat, and other grain, as alſo for legumes, imported to Italy, and even to France, in time of ſcarcity; beſides wax, wool, tallow, and ſome other commodities brought from thence.

Italian AFRICAN *company.—Company de Grilles.* An aſſociation of Genoeſe merchants for the traffic of negroes in Spaniſh America; which, for a conſiderable time, was the only company that carried on this commerce, furniſhing all thoſe that were neceſſary for Peru; where they were ſent from Porto-Bello. But at preſent the Genoeſe have entirely loſt this trade; the Engliſh and Dutch having engroſſed to themſelves the traffic of theſe ſlaves; the one at Porto-Bello, and Buenos-Ayres; the other at Carthagena, and Venuezella.

Portugueſe AFRICAN *company.* The Portugueſe have alſo an African company, for furniſhing of negroes to the colonies of Brazil; which was eſtabliſhed in 1724, by letters-patent granted by his Portugueſe Majeſty on the following reſtrictions. 1. That the new company ſhould build a fortreſs at the mouth of the river Angre, over againſt the iſland of Corſico, in 1 deg. 30 min. N. lat. 2. That it ſhall ſupply the Portugueſe plantations in America with as many negroes as ſhall be requiſite. 3. That no Portugueſe, nor even foreign ſhips, ſhall be permitted to trade upon that coaſt, under the penalty of confiſcation. After the publication of this grant, the new company advertiſed the conditions of intereſt, the funds, and the value of actions; whereby the fund was to conſiſt of one million of cruſades, and each action was declared to be worth 1000 cruſades, each cruſade being about 2 s. 8½ d. ſterling. The Portugueſe had alſo another African company, eſtabliſhed in 1696, for the commerce of Guinea, and the Indies, being formed at Liſbon, under the denomination of the *Carcheo company*; which treated with the King of Spain for the permiſſion of introducing, during the term of five years, 5000 negroes annually, into the ports of Spaniſh America upon diverſe conditions, equally advantageous to his Catholic Majeſty and this company.

The firſt ſubſcription amounted to upwards of 100,000 l. ſterling; and his Portugueſe Majeſty intereſted himſelf therein for two thirds of the capital fund. But the conceſſion having expired about the time of the war for the Spaniſh ſucceſſion, and the King of Portugal having declared againſt Philip V. the Portugueſe could not conve-

the majority, ſhould have full power to make orders for the governing and improving the forts and factories, and to appoint governors, and other officers, both civil and military, ſo as no orders or regulations made by the committee ſhould lay any reſtraint on the trade or traders, contrary to the intent of this act: that the traders, or perſons intending to trade to or from Africa, being inhabitants of London, Briſtol, or Liverpool, on paying 40s. each for their admittance into the freedom of the ſaid company, ſhould annually chuſe three perſons from each of the ſaid places for the committee; which election ſhould be on the 3d of July yearly; but, in caſe of an equality of votes at any election, the lord mayor of London, the mayor of Briſtol, and the mayor of Liverpool, reſpectively, ſhould determine which of ſuch perſons ſhould be the committee-man: that a chairman ſhould be choſen by the committee: that no perſon ſhould be capable of being choſen or acting as a committe-man above three years ſucceſſively: that the commiſſioners of trade and plantations might remove any of the committee-men, or officers or ſervants appointed by theſe, who ſhould be guilty of any miſbehaviour: that the committee ſhould render an account of their tranſactions once a-year to the commiſſioners for trade and plantations: that the committee, out of the monies they ſhould receive, might deduct annually 800 l. for expences of clerks, agents, and other contingencies; but the reſt of the monies ſhould be employed wholly to the maintenance and improvement of the forts and ſettlements; an account of which money the committee ſhould annually exhibit, upon oath, before the curſitor baron of the exchequer, who ſhould audite and paſs the ſame; and the committee ſhould lay before the parliament, every ſeſſion, a copy of ſuch annual account, and of all their orders and regulations: that the forts, warehouſes, and buildings belonging to the company, ſhould at all times be free and open to all his Majeſty's ſubjects, to be uſed as warehouſes for depoſiting gun-powder, gold, elephant's teeth, wax, gums, and drugs, but no other goods: that if the commander of any veſſel trading to Africa, ſhould, by any indirect practice, carry away any negro, or native of the country, or commit any violence on the natives, to the prejudice of the trade, he ſhould forfeit 100 l. that the accomptant-general, and two maſters of the court of chancery, ſhould be commiſſioners for examining into the claims of the creditors of the Royal African company; who were to lay an account of ſuch claims before the parliament with all convenient ſpeed.

In purſuance of this laſt mentioned act, another was paſſed in the 25th year of King George II. intitled, "An act for "the application of a ſum of money therein mentioned, "granted to his Majeſty, for making compenſation and "ſatisfaction to the Royal African company of England, "for their charter, lands, forts, caſtles, ſlaves, military "ſtores, and all other their effects whatſoever; and to "veſt the lands, forts, caſtles, ſlaves, and military ſtores, "and all other their effects, in the company of mer-"chants trading to Africa, and for other purpoſes in the "act mentioned;" wherein it was declared, That Capt. Thomas Pye, in purſuance of directions from the lords of the admiralty, in the year 1749, took a ſurvey of the forts and caſtles of the ſaid Royal African company of England on the coaſt of Africa, and of the quantity, number, and quality of cannon, and their military ſtores, canoe-men, caſtle-ſlaves, canoes, and veſſels, then at each reſpective port, belonging to the company; and that the company were willing to ſurrender the ſame, together with their charter, books of accompt, papers, contracts, and agreements for ſuch compenſation and ſatisfaction, and to be applied in ſuch manner as therein was expreſſed and directed. It was therefore enacted, That the Royal African company of England, after the 10th of April 1752, ſhould be diveſted of their ſaid charter, poſſeſſions, and effects whatſoever; which ſhould be veſted in the new corporation of *The Company of Merchants trading to Africa*, and their ſucceſſors, freed from all claims and demands of the ſaid *Royal African Company of England*, and their creditors: that the new company, with the conſent of the commiſſioners for trade and plantations, might impower proper perſons to raiſe and arm ſuch military forces as they ſhould think neceſſary, and ſubject them to their diſcipline; and to execute within their ſettlements ſuch regularities for their defence, and for the puniſhment of offences committed there, as ſhould be given them by the company, or their committee, with ſuch conſent and approbation as aforeſaid, ſo as ſuch puniſhment ſhould not extend to the loſs or deprivation of life or limb: that, for the more effectual encouragement of merchants trading or reſiding there, the company might, with the conſent and approbation of the commiſſioners for trade and plantations, eſtabliſh courts of judicature at ſuch places upon the coaſt as the company ſhould direct, for hearing and determining all cauſes ariſing there on account of mercantile or maritime bargains, buying, ſelling, or bartering of wares, or bills, bonds, or promiſe of payment of money, or mercantile or trading contracts, made upon the coaſt concerning any perſon reſiding there. But it was provided, that the crown might at pleaſure revoke any of the before mentioned powers, and eſtabliſh other regulations, and courts of juſtice: that all former contracts with any of the kings, princes, or natives of any countries on the coaſt, as alſo all deeds and accompts, ſhould be delivered over from the old to the new company: that 112,142 l. 3s. 3d. ſhould be applied out of the parliamentary ſupplies, as a full ſatisfaction to the old company for being diveſted of their charter and poſſeſſions; of which 1695 l. 3s. was to be paid to the three commiſſioners appointed by parliament to ſtate the claims of the creditors of the ſaid company; 84,652 l. 12s. 7d. to the ſeveral creditors mentioned in the ſecond ſchedule; and 23,688 l. 15s. 5d. to the perſons named in the third ſchedule, theſe laſt being ſuch of the proprietors of African transferable ſtock as were poſſeſſed of the ſame on the 31ſt of December 1748, the ſame being computed at 10 *per cent.* on the ſaid ſtock ſo poſſeſſed by them at that time; and the remaining 2105 l. 12s. 3d. was to be paid the perſons named in the fourth ſchedule, being ſuch of the proprietors of African transferable ſtock as were poſſeſſed of the ſame ſince the ſaid 31ſt of December 1748, computed at 5 *per cent.* on the ſtock ſo poſſeſſed by them: that, after the 10th of April 1752, the old company ſhould ceaſe to be a corporation; and that the effects of the old company ſhould be ſold, and the amount of the ſales laid before parliament.

According to the ſurvey delivered in by Capt. Pye, it appears the company had ſeven forts in Africa: that at the firſt, being Cape Coaſt caſtle, they had 367 ſlaves, ſeveral pieces of artillery, ſome ammunition and military ſtores, with a ſchooner, a launch, and 5 canoes: that at Commenda, being the ſecond fort, they had 22 ſlaves, ſeveral cannon, ſome military ſtores, and 4 canoes: that at Succondee, the third fort, they had 10 ſlaves, ſeveral cannon, ſome military ſtores, and 2 canoes: that at Dick's Cove, being the fourth fort, they had 60 ſlaves, ſeveral cannon, ſome military ſtores, and 9 canoes: that at Tantumquerry, the fifth fort, they had 10 ſlaves, ſeveral cannon, and ſome military ſtores: that at Winnebah, the ſixth fort, they had 13 ſlaves, and ſeveral cannon: and that at Accra, the ſeventh fort, they had 32 ſlaves, ſeveral cannon, and 3 canoes.

Towards the end of the 17th century, an African company was formed in Scotland; which became very remarkable in 1699, upon account of the eſtabliſhment attempted in the iſthmus of Darien, that ſeparates South from North America: but the Engliſh government not judging it adviſable either to acknowledge or ſupport the firſt ſucceſs of this company, which had alarmed the jealouſy of Spain, the new Scots colony was diſtreſſed by the Spaniards in 1700; and one of the fineſt projects as yet formed for diſputing with the Spaniſh nation the entire poſſeſſion of theſe rich countries, proved abortive. But this company was alſo incorporated with the Engliſh company.

French AFRICAN *Companies.* — *Company of Senegal.* The company formed in France under this name, was at firſt only a ſimple aſſociation of ſome Dieppe merchants, who, without letters-patent from the King, undertook the trade of the African coaſts; where they eſtabliſhed themſelves in a ſmall iſle of the Niger, or river of Senegal, which they called *Iſlette St. Louis.*

They were ſucceeded by the Rouen merchants, who yielded, in 1644, their eſtabliſhment to the new Weſt

Indian company; which, among its conceſſions, had obtained the excluſive privilege of the whole African trade, from Cape Blanc to the Cape of Good Hope.

About ten years after, the revoking of the letters-patent of the great Weſt Indian company being judged neceſſary for the French trade, and this company being allowed to diſpoſe of its dependencies upon the African coaſt; a company was formed by the name of that of Senegal, which undertook the eſtabliſhing and ſupporting the trade of that immenſe conceſſion of the Weſt Indian company, purchaſed at 78,000 livres; this treaty being of the 8th November 1673, with a privilege of excluſive commerce during the term of thirty years, and all other exemptions and privileges of the Weſt Indian company.

This company having gone through ſeveral revolutions, at laſt gave up its privileges to a new company, formed by the moſt opulent merchants of Rouen, which was incorporated in 1718 with the great Indian company.

Guinea company. The French monarch having judged it neceſſary to divide into two companies the conceſſion he had made in favour of the company of Senegal, gave his letters-patent, towards the end of January 1685, for a company intitled *The Guinea company*, with the excluſive privilege of trading to the African coaſts, from the river Sierra Leon incluſively to the Cape of Good Hope.

This company was to enjoy all the exemptions and immunities granted the Weſt Indian company, and afterwards that of Senegal; under the obligation, notwithſtanding, of tranſporting yearly into the French American colonies 1000 Guinea negroes, and likewiſe 1200 marcs of gold-duſt into the kingdom of France.

The Guinea company ſubſiſted upon this footing till 1701; when, not ſatisfying their conditions, eight others were ſubſtituted in their place, with the ſame privileges, but bound to furniſh the American colonies with 3000 negroes.

This company, which expired not till 1705, was the only one that made an advantage of the war commenced upon account of the Spaniſh ſucceſſion, becauſe it treated, with the royal permiſſion, for ſupplying the Spaniſh colonies with negroes, and continued to 1713 under the name of the *Aſſiento company*. The trade of the Guinea company was entirely the ſame with that of Senegal. But the peace of Utrecht between France and Spain put an end to this company, which continued to 1713; and, by a ſecret article, the tranſportation of negroes was given up to the Engliſh.

Lewis XV. in the firſt year of his reign, obſerving it to be more adviſable to allow all his ſubjects the liberty of commerce on the coaſts of Africa, according to the conceſſion of this company, than to conſent to the eſtabliſhment of a new one; accordingly the King granted, by his letters-patent of the 16th January 1716, a general leave to all his trading ſubjects to carry on the commerce of negroes and gold-duſt, from the river of Sierra-Leon incluſively to the Cape of Good Hope, upon condition of fitting out their ſhips in the ports of Rouen, Rochelle, Bourdeaux, and Nantes, except the merchants of St. Malo, who were at liberty to do what was neceſſary for this purpoſe in their own ports.

Cape-Verd company, is properly that of Senegal, under another denomination, being formed before the eſtabliſhment of the company of the Weſt, erected in 1664; but the coaſt of Africa being comprehended in the conceſſion of this laſt, there was no longer any mention made of that of the Cape, till, in 1673, it appeared under the title of that of Senegal.

Company of the Baſtion of France. Two merchants of Marſeilles, Thomas Linché and Carlin Didier, were the firſt who entered into an aſſociation, in the 15th century, for the coral fiſhery in the gulph of Stora Courcoury, upon the coaſts of Barbary, at the extremity of the kingdom of Algiers, and frontiers of that of Tunis.

Having obtained from the Port, towards the end of the reign of Solyman II. a conſent for eſtabliſhing themſelves therein, and having treated with the Checqs, or Mooriſh princes of the country, they began, in 1651, this little fortreſs called the *Baſtion of France*, whereof the French are yet in poſſeſſion.

The Sieur Moiſſac deſigning to continue this eſtabliſhment, which proved unſucceſsful with his two townſmen, obtained a conceſſion from Mahommed III. by the means of the French ambaſſador then reſiding at Conſtantinople; which M. Savary de Breves, who ſucceeded him, had likewiſe renewed by Achmet I. ſon and ſucceſſor of Mahommed.

Moiſſac and his company were ſcarce more happy than the firſt undertakers: ſo that it was to the Sieur Sanſon Napollon, who went there in 1628 in the name of the new aſſociates, that the baſtion owed its perfection, and the fiſhery and commerce the beſt ſtate they were ever in, either before or after.

This governor being killed at Tabarque, a town of the kingdom of Tunis, in the month of May 1633, his colony, which he had extended to upwards of 800 French inhabitants, was ſo diſſipated, that in leſs than a year afterwards, there remained not above one half.

Other companies ſtrove afterward, but to no purpoſe, to re-eſtabliſh the coral fiſhery. But there was one in 1673, which might have flattered itſelf with ſucceſs, if the war againſt the Dutch begun a year before, and thoſe which almoſt continued to the end of the reign of Lewis XIV. had not impeded this eſtabliſhment, and made the aſſociates ſuſtain ſeveral heavy loſſes.

The conceſſion of this company is not only for the coral fiſhery, carried on at the Baſtion of France, but alſo for all the commerce of this coaſt as far as Gigery, comprehending La Calle, Cape Roſe, Bonne, and Colle; whoſe commerce, excluſive of all others, is granted to this company by the royal letters-patent.

This commerce of the Baſtion of France is conſiderable, eſpecially for ox, cows, and goat ſkins; of which there are had, from all theſe places, 100,000 hides annually; and for wheat, and other grain, as alſo for legumes, imported to Italy, and even to France, in time of ſcarcity; beſides wax, wool, tallow, and ſome other commodities brought from thence.

Italian AFRICAN *company.—Company de Grilles.* An aſſociation of Genoeſe merchants for the traffic of negroes in Spaniſh America; which, for a conſiderable time, was the only company that carried on this commerce, furniſhing all thoſe that were neceſſary for Peru; where they were ſent from Porto-Bello. But at preſent the Genoeſe have entirely loſt this trade; the Engliſh and Dutch having engroſſed to themſelves the traffic of theſe ſlaves; the one at Porto-Bello, and Buenos-Ayres; the other at Carthagena, and Venuezella.

Portugueſe AFRICAN *company.* The Portugueſe have alſo an African company, for furniſhing of negroes to the colonies of Brazil; which was eſtabliſhed in 1724, by letters-patent granted by his Portugueſe Majeſty on the following reſtrictions. 1. That the new company ſhould build a fortreſs at the mouth of the river Angre, over againſt the iſland of Corſico, in 1 deg. 30 min. N. lat. 2. That it ſhall ſupply the Portugueſe plantations in America with as many negroes as ſhall be requiſite. 3. That no Portugueſe, nor even foreign ſhips, ſhall be permitted to trade upon that coaſt, under the penalty of confiſcation. After the publication of this grant, the new company advertiſed the conditions of intereſt, the funds, and the value of actions; whereby the fund was to conſiſt of one million of cruſades, and each action was declared to be worth 1000 cruſades, each cruſade being about 2 s. 8½ d. ſterling. The Portugueſe had alſo another African company, eſtabliſhed in 1696, for the commerce of Guinea, and the Indies, being formed at Liſbon, under the denomination of the *Carcheo company*; which treated with the King of Spain for the permiſſion of introducing, during the term of five years, 5000 negroes annually, into the ports of Spaniſh America upon diverſe conditions, equally advantageous to his Catholic Majeſty and this company.

The firſt ſubſcription amounted to upwards of 100,000 l. ſterling; and his Portugueſe Majeſty intereſted himſelf therein for two thirds of the capital fund. But the conceſſion having expired about the time of the war for the Spaniſh ſucceſſion, and the King of Portugal having declared againſt Philip V. the Portugueſe could not conve-

niently demand its continuation; whereby the ſupplying of negroes during the war came into the hands of the French; and, by the treaty of Utrecht, paſſed from them to the Engliſh.

AFT. The ſame with abaft. See *Abaft*.

AGAI. See *Agio*.

AGALLOCHIUM. A ſort of wood, brought from the Eaſt Indies, of the ſpecies of the aloes; having a thin tender bark, ſpotted with a variety of colours, of a tart taſte, and odoriferous ſcent; the juice of which is reckoned among the beſt cordials. See *Alces*.

AGARIC. A kind of fungous excreſcence, growing on the trunks and large branches of ſeveral trees, particularly the larch-tree, in Muſcovy and Tartary; though an inferior ſort alſo grows on the Alps, the mountains of Dauphine, and in the Trentine. Agaric was formerly eſteemed of great utility in pharmacy, and, among phyſicians, called *fungus agarici*, by way of contradiſtinction from the mineral agaric. It has alſo been denominated the *female agaric*; being white, light, tender, ſmooth, brittle, of a bitter taſte, pungent, and a little ſtyptic: becauſe there is another called the *male agaric*, generally uſed in dying; which is uſually rough, yelloviſh, and woody.

The mineral agaric is an earthy concretion, of the colour and conſiſtence of coagulated milk; which, by drying, forms a white, light, friable maſs, not unlike the vegetable agaric; and is found in the clefts of rocks in different parts of Germany.

AGATE. A precious ſtone; differently denominated, according to its different colours; ſome being tranſparent, ſome opaque, and ſome partly tranſparent and opaque.

The agates called *ſardian* are red; and the moſt valuable of that kind are the fleſh-coloured, mixed with brown; the leſs valuable are thoſe whoſe red borders upon a yellow.

The onyx is entirely opaque, and of a whitiſh and black colour.

The ſardonyx participates of the nature of the onyx and ſardian; and is the moſt precious of all kinds of agate.

There are likewiſe the Calcedonic agate, the Egyptian, and the Roman; as alſo the ſacred, or the Candian, which is as red as coral, and ſpotted with gold, mentioned by the ancients; but now no where to be met with.

The agate is uſed in making cups, rings, ſeals, handles for knives and forks, hilts for ſwords and hangers, ſnuff-boxes, and abundance of toys.

AGENT, in the common acceptation of the word, ſignifies a perſon intruſted with the management of the affairs of a corporation, or private perſon; in which ſenſe, the word coincides with deputy, procurator, commiſſioner, factor, and broker. See *Factor*, and *Broker*.

AGGA, or *Agonna*. A Britiſh ſettlement on the gold-coaſt of Guinea. See *Guinea*.

AGGOUED-BUND. The beſt of the ſix ſorts of ſilk gathered in the territories of the Great Mogul. See *Silk*.

AGGREGATE, is the total, or whole maſs of particulars, added or collected together: thus, in the Britiſh revenues, ſeveral duties are collected to form what is called the *aggregate* fund. See *Aggregate Fund*.

AGIO. An Italian word ſignifying eaſe, or conveniency, and adapted as a mercantile term in ſuch foreign cities of commerce, where publick banks are eſtabliſhed; in which caſe the word carries an implication of the exchange, or difference, between the money or ſtock of the bank, and the current money, or caſh; ſo that the agio, or advance in favour of the bank, is ſubſtituted as a ſynonymous term for premium, reward, or valuable conſideration; and is ſo variable, that, at Amſterdam, it is uſually between 3 and 4 *per cent*; at Rome, near 25 for 1500; at Venice, conſtantly 20 *per cent*. and at Genoa from 25 to 16 *per cent*.

AGIRO, called alſo *Giro*. A ſmall weight uſed in the kingdom of Pegu; 2 of which make a half biza, and the biza weighs 100 teccalis, or about 3 lb. 8 oz.

AGNES, St. One of the Scilly iſlands off the coaſt of Cornwall in England, otherwiſe called the *light-houſe iſland*, by whoſe light ſhips going out of, or coming into the Britiſh or Briſtol channels, avoid falling in with the rocks,

which lie thicker about St. Agnes than any other of the Scilly iſlands. See *Britiſh* iſlands.

AGNUS-CASTUS, called alſo by ſome *Vitex*. A plant or ſhrub, ſometimes riſing to the height of a middling tree, and delighting in the banks of rivers, rugged and rocky places, though it might likewiſe be cultivated in gardens. Its leaves reſemble thoſe of the olive-tree, but are much ſofter and longer; its bloſſoms are of a purple hue, and ſometimes white; its ſeed, or rather fruit, is firſt white, then reddens gradually, and is of a ſharp aromatic taſte; chiefly uſed for venereal injuries.

The beſt ſeed of the *agnus-caſtus*, is that which is new, large, plump, and comes from hot countries.

AGRA. A city of India, ſituated in 79 deg. of E. lon. and in 26 deg. 20 min. of N. lat. being the capital, and center of the commerce of the Moguliſtan empire. See *India*.

AGRA. A kind of ſweet-ſcented wood, found in the iſland of Haynan, belonging to China; of which there are three kinds: the fineſt is generally bought at 80 taels *per* foot in Haynan, and is ſold at Canton for 90; the ſecond kind is bought for 70 taels, and ſold for 80; the laſt for 45, and ſold for 60: a tael being about 6s. 8d. Sterling.

AGRA-CARAMBA. Another kind of ſweet-ſcented wood, brought alſo from the iſland of Haynan; which coſts there 60 taels the cati, and is ſold at Canton from 80 to 85. The cati is about 13 lb. 4$\frac{3}{4}$. oz. averdupois. This wood being eſteemed good for the purging of women, the Japaneſe ſet a great value upon it, and the Chineſe ſend it them in great quantities.

AGREEMENT, is the ſettling the conditions of a contract or bargain, a reconciling of diſputes, or arbitrating differences.

AGRICULTURE, or *Huſbandry*. The art of tilling, or cultivating the earth, in order to render it fertile, and make it bear plants, trees, and fruits.

The principal and moſt general operations in agriculture, are manuring, ploughing, fallowing, ſowing, harrowing, reaping, and mowing.

To theſe operations alſo belong the management of the productions of particular countries; as hops, hemp, vines, tobacco, ſaffron, liquorice, madder, and woad. To the ſame art belong planting, tranſplanting, pruning, ingrafting, the culture of foreſts, timber, and copſes.

Even gardening, or horticulture itſelf, is only a branch of agriculture; which was formerly of ſuch conſequence that it was cultivated by ſeveral perſons of the greateſt diſtinction among the ancients; as emperors, dictators, and conſuls; and has been treated of by ſome of their moſt celebrated authors.

Agriculture, in the primeval ages, was the common parent of traffic; as the opulence of mankind, at that time, conſiſted in cattle, and the product of tillage; which are now very eſſential for the promotion of trade in general, but more particularly ſo to ſuch nations as are moſt abundant in cattle, corn, and fruits; as beef, goats, ſheep, rabbits, horſes, and other animals, whoſe fleſh or ſkins are either of uſe for the ſupport of mankind, or neceſſary in their different manufactures. See *Butter*, *Cattle*, *Corn*, *Flax*, *Hemp*, *Hops*, *Linen*, *Saffron*, *Tobacco*, *Timber*, *Wines*, and *Wool*.

AGUILLES. Cotton-cloths of the manufacture of Aleppo.

AHUYS. A port-town of Sweden, ſituated in the 14 deg. of E. long. and 56 of N. lat. See *Sweden*.

AJAN. See *Anian*.

AJAZZO. A port town of the iſland of Corſica, in the Mediterranean, ſituated in 9 deg. of E. long. and 41 deg. 40 min. of N. lat. See *Italian* iſlands.

AJAZZO. A port town of the Leſſer Aſia, in the province of Caramania, ſituated on the coaſt of the Mediterranean, in 37 deg. of E. long. and 37 of N. lat. See *Turky*.

AIGRIS, is a greeniſh-blue coloured ſtone, found in the kingdom of Iſſonois, on the coaſt of Guinea in Africa; where it is cut in little pieces, called *beliquets*, which paſs as current coin, two of theſe *beliquets* being worth about 1d. ſterling.

AIRE, a port-town of Scotland, in Aireſhire or Kyle, ſituated at the mouth of the river Aire, near the Frith, or ſea of Clyde, in 4 deg. 40. min. of W. long. and 55 deg. 30 min. of N. lat. See *Great-Britain.*

AIX-LA-CHAPELLE, an imperial city of Germany, ſituated in 5 deg. 50 min. of E. long. and 50 deg. 45 min. of N. lat. See *Germany.*

AKOND. An officer of juſtice in Perſia, who takes cognizance of all mercantile contracts, and other civil concerns.

ALABASTER. A kind of ſtone ſofter than marble, yet harder than p'aiſter of Paris; uſed for the making of figures and other ornaments of ſculpture; the greateſt quantities of which are found in the neighbourhood of Coblentz in Germany, in ſome places of Lorrain, at Clugny in France, and about Rome in Italy; but the moſt valuable ſort is produced in the papal territories, eſpecially at Montaia, where the alabaſter is in the higheſt eſtimation for its beautiful whiteneſs and admirable magnitude; ſome quarries affording the ſtatuary an opportunity of exerting all the art of Phidias, in the repreſentation of a human figure, as big as the life, entirely formed from a ſingle block.

Alabaſter is found of all colours; ſome extremely white and ſhining; ſome red, like coral; others called *onyx* from its dark horny colour, reſembling that of the onyx; and another ſort of a yellowiſh colour, like honey, variegated with ſpecks and little veins; but the white is now generally uſed, though formerly in the leaſt eſteem.

ALAMODE, a thin, light, gloſſy, black ſilk, neither quilted nor croſſed; generally uſed for the hoods of women, and mourning ſcarves for men.

ALANA, or *Tripoli*, a kind of chalk, or ſoft ſtone, ſomewhat inclining to a reddiſh colour.

ALAND, one of the Swediſh iſlands in the Baltic ſea, ſituated at the entrance of the Bothnic gulph, between 18 and 20. deg. of E. long. and 50 and 61 of N. lat. See *Swediſh* iſlands.

ALAOU, one of the Dutch factories in the iſland of Sumatra. See *Sunda* iſlands.

ALATAMAHA, a large river of North America, riſing in the Apalachian mountains, which runs S. E. through the province of Georgia, and falls into the Atlantic ocean, below the new town of Frederica.

ALAUTA, a river of Tranſilvania, riſing in the N. E. part of that province; which, running S. forms part of the boundary between Chriſtendom and Turky; and, containing its courſe farther through Walachia, diſcharges itſelf into the Danube, almoſt oppoſite to Nicopolis in Bulgaria.

ALBANY, a town of North America, in the province of New York, ſituated on Hudſon's river, 150 miles N. of the city of New York, in 74 deg. of W. long. and 43 of N. lat.

ALBAZARIN, or *Albaroſin*, a kind of Spaniſh wool.

ALBENGA. A port-town of Italy, in the territory of Genoa, ſituated in 8 deg. 40 min. of E. long. and in 44 deg. 15. min of N. lat.

ALBERNUS, a kind of camblet, or barracan, brought from the Levant.

ALBERTUS. A gold coin ſtruck in Flanders, during the government of Albert, arch-duke of Auſtria, which weighs 4 penny-weights; its ſtandard being 21 carats $\frac{3}{4}$, and of the value of 14 s. 3d. ſterling.

ALBOURG. A port-town of Denmark, ſituated on the gulph of Limburg, in the province of Jutland, in 10 deg. of E. long. and 57 deg. of N. lat.

ALBREDA. A French ſettlement on the river Gambia, in Africa.

ALBE. A ſmall German coin, worth 8 fenins, or one penny ſterling.

ALBUS. A ſmall coin of Cologne, worth about $\frac{1}{2}$d. ſterling.

ALCAIDE, among the Moors, is the governor of a city, or caſtle, whoſe juriſdiction is ſovereign, both in civil and criminal concerns; particularly in the empire of Morocco.

ALCALDE, in the Spaniſh policy, is a judge, or miniſter of juſtice, anſwering to a provoſt among the French.

ALCANNA, by the Turks called *knah*, and by botaniſts *liguſtrum ægyptiacum*, is a coſmetic powder, generally

uſed in the Levant, extracted from the leaf of a ſpecies of liguſtrum, frequent in Barbary. The alcanna is red or yellow, according to its preparation; of the former colour when ſteeped in water, and of the latter by an infuſion with vinegar, lemon, or allum-water, with which the Turkiſh and Jewiſh women are accuſtomed to dye the nails of their fingers and toes, as alſo their hair; but Europeans uſe the drug only in the myſtery of dying.

An oil is extracted from the berries of the alcanna, of a very agreeable ſmell, and of uſe in ſome medicinal preparations, which frequently paſſes under the denomination of the oil of cyprus.

ALCMAER. A town of the United Provinces, remarkable for the great quantities of butter and cheeſe made there; ſituated in 4 deg. 30 min. of E. long. and 52 deg. 40 min. of N. lat.

ALDBOROUGH. A port-town of Suffolk, ſituated in 1 deg. 40 min. of E. long. and 52 deg. 28 min. of N. lat.

ALDER, a tall ſtraight tree, generally found in damp and marſhy places, which affords wood of great uſe among turners, for houſhold furniture, and its bark is alſo uſed by dyers.

ALDERNEY. An iſland in the Britiſh channel. See *Britiſh Iſlands.*

ALE, is a malt-liquor very common in England, and differs from Beer only by having a leſſer quantity of malt and hops, and by being drawn at a leſſer age. See *Beer.*

ALECONNERS. Four officers of the city of London, elected by the common-hall of the city, whoſe buſineſs is to inſpect the meaſures of the public houſes.

ALEGAR, ſour ale, uſed by the makers of white-lead, and dyers, inſtead of vinegar.

ALE-SILVER, a rent, or tribute, annually paid to the lord mayor of London, by retailers of ale, within the privileges of the city.

ALE-TASTER, is an officer appointed, and ſworn, in every court leet, to look that there are a due aſſe, and goodneſs, of bread, ale and beer, ſold within the juriſdiction of the leet.

ALEPPO. A city of Aſiatic Turky, ſituated in 37 deg. and 40 min. of E. long. and 36 deg. 30 min. of N. lat.

ALESSIO. A town of European Turky, ſituated in 20 deg. of E. long. and 42 of N. lat. See *Turky.*

ALEXANDRIA. A great city, and port-town of the Lower Egypt, in Africa, ſituated in 31 deg. 15 min. of E. long. and 30 deg. 40 min. of N. lat. being 14 miles W. of the moſt weſterly branch of the river Nile, and 120 miles N. W. of the city of Grand Cairo. See *Egypt.*

ALEXANDRETTA. See *Scanderoon.*

ALFANDIGA, is an appellation generally given to the cuſtom-houſe of Liſbon, the capital city in Portugal, where, as in all other cuſtom houſes, are paid the duties of imports and exports. But perhaps it will not be amiſs to obſerve, for the inſtruction of thoſe who may trade there, that all gold or ſilver lace, fringe, brocades, with gold and ſilver ribbons, are confiſcated as contraband goods; no one in Portugal being permitted to wear cloaths or furniture wove with gold or ſilver.

ALGATRANE. A kind of pitch found in the bay formed by the point of the Cape of St. Helena, on the S. of the iſland of Plata, in the Pacific ocean, which is a bituminous matter bubling out of a hole, four or five paces from the high-water mark, being firſt liquid like tar, but, by much boiling, receives the conſiſtence of pitch, and may be uſed in all caſes in which that is employed.

ALGIER. See *Barbary.*

ALLIBALLIES. A muſlin brought from the Eaſt Indies; the piece being about 20 yards in length, and one in breadth.

ALICANT. A large ſea-port town, in the province of Valencia, in Spain, ſituated in 30 deg. of W. long. and 38 deg. 35 min. of N. lat. See *Spain.*

ALICONDE. A tree growing in ſome parts of the Lower Ethiopia, whoſe fruit reſembles that of the cocoa nut, but not good for eating; though by breaking the rind, a kind of flax is produced, which makes a beautiful cloth, equal to that made of hemp.

ALIEN, in law, a ſtranger, or perſon born out of the allegiance of the king, or under the juriſdiction of ſome other ſovereign, and not naturalized, or made a deniſen; whereby he is incapable, according to the laws of England, to purchaſe, or inherit, lands, or freeholds; though they are permitted to buy houſes, or ware-houſes, as an accommodation for merchant ſtrangers. See *Naturalization*.

A man born out of the land, ſo it be within the limits of the King's obedience beyond the ſeas, or of Engliſh parents out of the King's obedience, ſo the parents at the time of the birth be of ſuch obedience, is no alien, but ordained to be a ſubject of the King, by a ſtatute of 25th Edward III. commonly called the ſtatute *de natis ultra mare*. Beſides, if a perſon, born out of the King's allegiance, come and dwell in England, his children, begotten here, are not aliens, but denizens; whereby they are enabled, in many reſpects, to act as native ſubjects; as in purchaſing and poſſeſſing of lands, as alſo in holding any office or dignity. However, denizenſhip is a right inferior to naturalization by parliament; for a ſtranger naturaliſed may inherit lands by deſcent, which a denizen is incapable of doing. See *Denizen*.

Scavage, package, and balli ge, payable to the city of London, are properly aliens duties: but for an information on what reſtrictions aliens are permitted to import foreign commodities into Great Britain, ſee *Navigation*.

By the ſtatutes of the 1ſt and 11th of Henry VII. and the 22d of Henry VIII. it was enacted, That aliens born, tho' made denizens, ſhould pay ſuch duties as they did before they were made denizens.

By the ſtatutes of the 9th of Henry III. and the 5th of Henry IV. it was enacted, That merchants ſtrangers ſhould be uſed in this realm, as merchant denizens were in other countries.

By the ſtatutes of the 4th and 5th of Henry IV. the 27th Henry VI. the 17th of Edward IV. and the 3d of Henry VII. it was enacted, That merchants ſtrangers bringing in goods, ſhould give ſecurity to the King's cuſtomer and comptroller, to employ the money upon the commodities of the realm, or to put it in due payment here, their reaſonable coſts excepted; and ſhould not export the money received for the ſame, upon forfeiture of all their goods, and to ſuffer a year's impriſonment.

By the ſtatutes of the 14th and 15th of Henry VIII. it was enacted, That a Britiſh man, ſworn to be ſubject to a foreign prince or ſtate, ſhould pay ſtrangers cuſtoms: but if he ſhould return to Great Britain, and there inhabit, he ſhould pay only Britiſh duties, and have a writ out of chancery for the ſame.

By the ſtatute of 7th of Jac. I. it was enacted, That the naturalizing of them ſhould be only to thoſe of the religion eſtabliſhed in England, and not, if of the age of eighteen years or above, till they had received the ſacrament, and taken the oaths of allegiance and ſupremacy.

By the ſtatute of the 12th of Car. II. it was enacted, That aliens and denizens coming into this kingdom, ſhould be well and honeſtly entreated with reſpect to the payment of duties: as alſo, that aliens and their ſons, unfreemen, ſhould pay the duties of ſcavage, &c. in the port of London.

By the ſtatute of the 13th and 14th of Car. II. it was enacted, That the children of aliens, under twenty-one years of age, ſhould not trade nor make entries.

By the ſtatute of the 13th of Geor. II. it was enacted, That foreign mariners, who had ſerved during the then preſent war, or that ſhould, in purſuance of his Majeſty's royal proclamation, in any future war, ſerve two years aboard Britiſh ſhips, ſhould be deemed natural-born ſubjects.—That foreigners who ſhould reſide ſeven years or more in any of his Majeſty's colonies in America, and ſhould not have been abſent more than two months at any one time during the ſaid ſeven years, and ſhould take and ſubſcribe the proper oaths before the judge of the colony, and, not being Jews or Quakers, receive the ſacrament in ſome proteſtant congregation in Great Britain, or ſome of the ſaid colonies in America, ſhould be deemed his Majeſty's natural-born ſubjects.

ALIPOW *Montis Cette*. A ſpecies of white turbith, of a powerful purgative quality, found in ſeveral places of Languedoc in France, particularly near Cette.

ALIZEES. A term for a particular wind in the Caribbee iſlands, ſetting from eaſt to weſt, very regular and periodical; which alſo blows at certain times of the year in different parts of the Atlantic, Ethiopic, Indian, and Pacific oceans.

ALKALI. A name originally given by the Arabians to a ſalt extracted from the aſhes of a plant by them called *kali*, and by us glaſſwort, or ſaltwort, which is one of the principal ingredients in making glaſs. See *Kali*.

ALKEKENGI. A medicinal fruit, produced by a plant of the ſame denomination, more properly called *winter-cherry*.

ALKERMES. An Arabian term in medicine, denoting a celebrated remedy, of the form and conſiſtence of a confection; whereof the kermes-berries are the baſis, incorporated with pippin-cyder, roſe-water, ſugar, amber-greaſe, muſk, cinnamon, aloes wood, pearls, and leaf-gold; but the ſweets are uſually omitted. See *Kermes*.

The *confectio alkermes* is chiefly made at Montpelier in France, from whence the greateſt part of Europe is ſupplied with this commodity.

ALLAY. See *Alloy*.

ALLEGEAS. A ſtuff manufactured in the Eaſt Indies; of which there are two kinds, ſome of cotton, and ſome of ſeveral kinds of herbs, ſpun like flax and hemp; their lengths and breadths being of eight ells by five, ſix, or ſeven eighths, and of twelve ells by three quarters, or five eighths.

ALLER. A river in Germany, riſing in the duchy of Magdeburg, and running N. W. through the duchy of Lunenburg in Lower Saxony, paſſes by the city of Zell; after which it continues its courſe N. till it falls into the river Weſer, a little below Verden.

ALLEUVRE. The ſmalleſt copper-coin ſtruck in Sweden, being worth about the twenty-fourth part of a penny.

ALLIGATION, in arithmetic, is a rule or operation whereby queſtions are reſolved, relating to the mixture of divers commodities or ingredients, together with the value and effect thereof; being of two kinds, medial, and alternate.

Alligation medial ſhews what the mean price of a pound, ounce, *&c.* is worth, when ſeveral quantities of ſeveral values are mixed together.

Alligation alternate ſhews how much of various kinds of ſimples may be taken to make up any aſſigned quantity of a compound, which ſhall be worth a price propoſed.

ALLOCATION. The admitting or allowing of an article in an accompt.

ALLOTTING, or *Allotment of goods*, is when ſeveral perſons purchaſe a cargo or quantity of goods jointly, which are divided into as many parcels or lots; then the names of all the purchaſers are wrote on a diſtinct piece of paper, and applied by any indifferent perſon to the ſeveral lots; by which means the lots, or ſeveral parcels of goods, are divided without any partiality, and every purchaſer has the lot where his name is affixed.

ALL SAINTS *bay*, or *Baiha de Todos Sanctos*, a ſpacious harbour, ſituated in 40 deg. of W. lon. and 12 deg. of S. lat. near St. Salvador in Braſil, in South America, on the Atlantic ocean.

ALLOWANCES, is a term uſed at the cuſtomhouſe; under which may be included the drawbacks, bounties, and premiums; but it is more particularly applied to the allowances of draught and tare to ſuch goods as are rated by weight, and alſo of meaſure to ſuch as are rated by meaſure.

All goods and merchandiſes imported into Great Britain pay duties, and are to be delivered either by tale, weight, meaſure, or gauge. At landing the goods, the weigher is to call out the full and true groſs weights in the ſcale, which the land-waiters are to enter in their books; and, from the total of the ſaid groſs weight, there is to be deducted an allowance in conſideration of draught, according to the following reſpective weights.

Goods weighing from	under 1 C.	1 lb.	allowances for draughts.
	1 to 2 C.	2	
	2 to 3	3	
	3 to 10	4	
	10 to 18	7	
	18 to 30 or upwards	9	

Except tobacco of the Britiſh plantations, which is to be allowed 8 lb. draught, only for every hogſhead of 350 lb. or upwards, purſuant to the 9th of Geo. II. but it is now the practice in the port of London, to give no allowance for draughts when the goods are leſs than a quarter of a hundred weight.

Theſe allowances for draughts, the land-waiters may, when they are very different, inſert in their books, oppoſite to each reſpective draught; or, when they are not very different, compute the ſame, by counting the number of the draughts at each ſeparate allowance, as is the practice in London.

The allowance for draught being deducted out of the remaining weight, there is, in moſt caſes, to be a further allowance called *tare*, being in conſideration of the outſide package that contains ſuch goods, which cannot be unpacked without detriment; or for the papers, threads, bands, and other things that bind or incloſe any goods which are imported looſe; or, though imported in caſks, cheſts, or the like, yet can be unpacked and weighed neat. Several ſorts of goods had their tares aſcertained by the farmers of the cuſtoms, in the year 1667, a table whereof was then publiſhed by their order, ſubſcribed with the hand of Samuel Whittell their ſecretary: which tares having been been approved, have continued in uſe ever ſince, and are not to be altered or deviated from in any caſe within the port of London, unleſs the merchant, thinking himſelf, or the officers of the crown, to be prejudiced by ſuch tares, ſhall deſire that the goods may be unpacked, and the neat weight taken; which may be done, either by weighing the goods in each reſpective caſk, or other packages; or, as is particularly practiſed in Eaſt India goods, by picking out ſeveral caſks, or other packages, of each ſize, and making an average, and ſo compute the reſt accordingly. But this muſt not be done without the conſent of two land-ſurveyors, atteſted by their hands in the land-waiters books, and in the out-ports not without the conſent of the collector and ſurveyor. And as to thoſe goods which have not their tares aſcertained, two land-ſurveyors in London, and the collector and ſurveyor in the out-ports, are to adjuſt and allow the ſame in the like manner. See *Tare*, and *Package*.

But it is to be obſerved, that ſometimes the caſks, or other packages, are weighed beyond ſea before the goods are put in, and the weight of each reſpective caſk, or other packages, marked thereon, as is uſual for moſt goods imported from the Britiſh plantations, or elſe inſerted in the invoice: in which caſe, if the real invoice be produced, and the officers have ſatisfied themſelves, by unpacking and weighing ſome of them, that thoſe weights are juſt and true, they then, after having reduced them to Britiſh weight, if not ſo before, eſteem them to be the real tares, and paſs them accordingly; tho' ſometimes the tares on the caſk, or other packages, are wholly diſregarded, and the real tares taken.

But the unpacking the goods, and taking the neat weight, being the moſt juſt method, as well for the crown as the merchant, it is uſually practiſed in the port of London, in all caſes where it can be done with conveniency, and without detriment to the merchants goods.

The tares being known, the following directions may be taken from the operation.

1. When the tare is ſo much *per* hundred weight, take the aliquot parts of an hundred weight; as,

For 24 *per cent.*	take $\frac{1}{4}$ of the groſs weight,	leſs $\frac{1}{7}$
21	$\frac{1}{4}$	leſs $\frac{1}{4}$
20	$\frac{1}{5}$	more $\frac{1}{4}$
18	$\frac{1}{5}$	more $\frac{1}{5}$
16	$\frac{1}{7}$	
14	$\frac{1}{8}$	
12	$\frac{1}{8}$	leſs $\frac{1}{7}$

For 10 *per cent.*	take $\frac{1}{14}$ of the groſs weight,	more $\frac{1}{4}$
8	$\frac{1}{14}$, or $\frac{1}{2}$ of $\frac{1}{7}$	
7	$\frac{1}{16}$, or $\frac{1}{2}$ of $\frac{1}{8}$	
6	$\frac{1}{16}$	leſs $\frac{1}{7}$
4	$\frac{1}{4}$ of $\frac{1}{7}$	
2	$\frac{2}{8}$ of $\frac{1}{7}$	

Or the hundreds weight may be multiplied by the tare *per cent.* adding to the product a proportionable part for the quarters and pounds, if any, and the total being divided by 112, will give the tare required.

2. When the tare is ſo much *per* hundred pounds, reduce the given weight into pounds, if not ſo before, and then take the aliquot parts of an hundred pounds; as,

For 24 lb. *per* 100 lb.	take $\frac{1}{5}$ of the groſs weight,	more $\frac{1}{5}$
21	$\frac{1}{5}$	more $\frac{1}{20}$
20	$\frac{1}{5}$	
18	$\frac{1}{5}$	leſs $\frac{1}{10}$
16	$\frac{1}{5}$	leſs $\frac{1}{5}$
14	$\frac{1}{10}$	more $\frac{2}{5}$
12	$\frac{1}{10}$	more $\frac{1}{5}$
11	$\frac{1}{10}$	more $\frac{1}{10}$
10	$\frac{1}{10}$	
8	$\frac{1}{10}$	leſs $\frac{1}{5}$
7	$\frac{1}{20}$	more $\frac{2}{5}$
6	$\frac{1}{20}$	more $\frac{1}{5}$
5	$\frac{1}{20}$	
4	$\frac{1}{20}$	leſs $\frac{1}{5}$
2	$\frac{1}{5}$ of $\frac{1}{10}$	

Or the ſuttle pounds may be multiplied by the tare *per* hundred pounds; and the two right-hand figures of the product being cut off, the remainder will be the tare required.

3. When the tare is by the bag, caſk, or other packages, multiply the number of bags, or other packages, and tare, together, and the product will be the total tare.

4. When the tare is not aſcertained, but marked on each caſk, or other packages, it muſt be ſet down oppoſite to the groſs weight; and, being added up, the total will be the tare allowed.

The ſeveral tares being found and deducted from the groſs weight, after the allowance for draught, the remainder is neat weight, for which his Majeſty's duties are to be paid; and if in hundreds weight, and the nature of goods requires it, may be reduced to pounds.

Goods delivered by meaſure, are under three different regulations.

1. Such as linens particularly, which are meaſured by running meaſure, being no more than taking the piece from one end to the other.

And as in Hollands, Flanders, and ſome ſorts of German linens, the contents in Britiſh ells are often annexed to, or marked on each piece, and likewiſe inſerted in the invoice; therefore there will not be any difficulty in making a perfect entry; ſo that no poſt-entry muſt be admitted of in this caſe.

Goods delivered by gauge, are wines, and exciſable liquors; whoſe quantity to be entered may be pretty nearly determined, by conſidering the ſize of the caſks, and what accidental leakage or other diminution may have happened during the voyage.

ALLOY, or *Allay*. A mixture of different metals, or of ſeveral portions of the ſame metal of different fineneſs. See *Coining*.

Gold and ſilver are never coined without alloy, which is of copper mixed with theſe two metals, purſuant to certain proportions regulated by the ſtates wherein they are coined; and braſs-coin has alſo an alloy of copper mixed with a few parts of fine ſilver.

Gold-ſmiths, gold-wire drawers, gold-beaters, and jewellers, are alſo obliged to uſe alloy in the gold and ſilver which they manufacture, but leſs in quantity than that of coin, to prevent their melting it, which is unlawful.

Braſs-founders have alſo their alloy of copper, pewter, and tin; yet different according to what they deſign to caſt, as ſtatues, cannons, or bells.

Laſtly, pewterers uſe an alloy of red copper, regulus of antimony, and ſome other minerals.

There are two ſorts of alloy uſed in the coinage of money; the one, when uncoined gold and ſilver are employed; the other, when different kinds of coin, or ingots of different fineneſs, are melted together to make a new coin.

The eſtimation, or rather the proportion, of the alloy with the finer metal, is eaſy in the firſt caſe; becauſe when the fineneſs of the metal is known by refining, the allowed quantity of copper alloy is only to be added, to reduce it to the legal ſtandard.

In the other caſe, the operation has more difficulty; yet the knowledge thereof is of vaſt importance to mint-maſters, and all workers of gold and ſilver, to prevent miſtakes in the alloy neceſſary for gold and ſilver of different fineneſs.

All the authors on coinage have given tables for this reduction; and arithmeticians have their rule of alligation, which may be alſo uſed; but the anonymous author of a ſmall treatiſe found annexed to that of M. Boiſard's edition in 1711, has given the eaſieſt method of putting this rule into practice.

As this method may be uſed indifferently for gold and ſilver coin, one example will ſuffice: yet it ſhould be obſerved, that the calculation for the alloy of gold is made by the 32 parts, which come ſhort of, or exceed the ſtandard in the metals to be uſed; and that, for ſilver, the calculation is by grains of fine metal.

When this kind of alloy is to be performed, or rather the eſtimation of the alloy, for adding or diminiſhing what is wanting, or too much, in the fineneſs, a table of the metals to be melted muſt be drawn forth, containing their quality, weight, and fineneſs; which table is divided afterwards into two other; whereof one comprehends all the metals that are above, and the other all that are below, the requiſite fineneſs.

Each table being calculated ſeparately, by the firſt is ſeen what metals exceeding the ſtandard, are above the ſtandard; and by the ſecond, in what thoſe coming ſhort of the ſtandard are deficient; ſo that the two products being compared, a ſubſtraction will make known what quantity of fine or alloy muſt be added, to reduce all the metals to the requiſite ſtandard for the new melting: and the following is the example given by the anonymous author.

Numb.	mks.	oz.		Carats.
1	1	4	Jacobuſſes at	21 19/32
2	2	6	Ingots at	20 1/2
3	1	4	Ingots at	18 3/4
4	3	6	Ducats at	23 21/32
5	1	4	Nobles at	23 1/4 1/2
6	1	4	Italian piſt. at	21 1/2
	12	4		

There are then 12 marks 4 ounces of gold of different fineneſs to be brought to the ſtandard of 21 carats 3-4ths. In the ſix articles compoſing the firſt table, there are three, which are the 1ſt, 4th, and 5th, above the requiſite ſtandard; and three others, the 2d, 3th, and 6th, which are below it: ſo that they muſt be ſeparated, and drawn out into two tables.

HIGH GOLD.

Numb.	mks.	oz.			
1	1	4	Good	9	32ds
4	3	6	Ditto	210	32ds
5	1	4	Ditto	96	32ds
Sum remaining good in theſe three articles				315	32ds

LOW GOLD.

Numb.	mks.	oz.			
2	2	6	Wanting	110	32ds
3	1	4	Ditto	144	32ds
6	1	4	Ditto	12	32ds
Sum of what is wanting in theſe three art.				266	32ds

The two products compared, Good 315
Wanting 266

Remains good 49-32ds; for which there muſt be 4 drams and an half of copper, and then the ſtandard will be 20 carats 3-4ths; the weight of the metals being conſequently augmented to 12 marks 4 ounces exactly, upon account of the augmentation of the alloy.

There remains only to know, how the proportion between 49-32ds of fine gold, and 4 drams and an half of copper, may be calculated; but the operation is eaſy to one acquainted with the firſt principles of arithmetic, and who is not ignorant that 696-32ds good, are equivalent to a mark of copper, that is, 64 drams; and that, upon this footing, 5-32ds, and 5-8ths, are worth a dram.

The example which is for the exceſs of the ſtandard, may alſo ſerve for its deficiency; but in ſuch caſe ſo many 32ds ſhould be added as are found wanting.

The principal reaſons alledged by authors for the alloy of coin, are, 1. The mixture of metals, which, as coming from the mine, are not perfectly pure; 2. The ſaving of the expence, in caſe of refinement; 3. The neceſſity of making them harder, by a portion of ſome other metal, to prevent the diminution of weight, which might enſue from their being rubbed and handled; 4. The melting of foreign coins which are alloyed; 5. The charges of coinage to be deducted from the money coined; and, 6. The duty belonging to the ſovereign, upon account of his power of cauſing money to be coined in his dominions.

The alloy of copper for ſtatues, guns, or bells, has alſo its proportions; but as they are arbitrary, and depend abſolutely on the taſte and experience of founders, it is ſcarce poſſible to lay down certain rules for it. But M. Feliban pretends, that the good alloy for braſs ſtatues ſhould be compoſed, the one half of roſe or red copper, and the other of yellow copper, or common braſs: tho' others, and particularly M. de St. Remy, ſay there ſhould be 4 pounds of tin, and 8 of braſs, for each 100 weight of red copper. And which of theſe two opinions is beſt, muſt be left to the deciſion of thoſe experienced in the art.

To make an alloy for cannon, mortars, and other pieces of braſs artillery, the beſt and ſofteſt tin of Cornwall ſhould be uſed: 6, 7, and 8 pounds *per* hundred of copper are alſo required, but more or leſs according as the copper is either of a good or bad quality.

The uſual alloy for bells, is 20 pounds of the hardeſt tin to 100 pounds of roſe copper; and the alloy for different kinds of pewter veſſels and utenſils, is red copper, regulus of antimony, biſmuth, or lead. See *Coin*, *Copper*, *Gold*, *Silver*, *Lead*, *Tin*, *Pewter*, and *Plate*.

ALLUM, *Allom*, or *Alom*, is a white mineral ſalt, dug out of the earth, calcined, and waſhed in ſeveral pits of water. It is afterwards boiled, when the impurities ſubſide, leaving a tranſparent liquor; which being removed into a cooler, and ſome urine added to it, begins to gather into a maſs, that is then taken out, waſhed, and melted over again, when it is fit for uſe.

England, Italy, Flanders, and Sweden, are the countries chiefly productive of allum, which occaſions the ſeveral appellations of Engliſh allum, otherwiſe called rock, white, or ice allum, Roman allum, or allum of Civita Vecchia, allum of Liege, and of Meziers, and Swediſh allum; though there is a conſiderable quantity made at Cypſella in Thrace.

The beſt Engliſh allum produced in the hills of Yorkſhire and Lancaſhire, is extremely white, clear, and tranſparent, of an acid taſte, leaving in the mouth a ſenſe of ſweetneſs, accompanied with a conſiderable degree of aſtringency. Roman allum is alſo of an acid; but diſagreeable taſte. Allum of Liege and Meziers is much of the ſame quality as that of England, only fatter, and conſequently leſs proper for dyers. Allum is of ſome uſe in medicine as an abſorbent: but its principal uſe is in dying and colouring; where it is ſo material an ingredient, that without it neither of theſe can be tolerably executed, the allum being as ſerviceable in binding the colour upon the ſtuffs, as gum-water and glutinous oil are in painting.

Beſides theſe mineral ſpecies of allum, there are the ſaccharine allum, burnt allum, and plumoſe allum, ſold by druggiſts and chymiſts; the two former being compoſitions of allum with other ingredients, and the latter being a mineral ſimilar to Venetian talc, except that, inſtead of ſcales,

ſcales, it riſes in threads or fibres, reſembling thoſe of a feather.

ALMACARRON. A port-town of Spain, ſituated in the province of Murcia, at the mouth of the river Guadalantin, near the Mediterranean, in 10 deg. 15 min. W. lon. and 37 deg. 40 min. N. lat. being 18 m. S. W. of Carthagena. See *Spain*.

ALMADY is a veſſel, or boat, of great uſe to the mercantile inhabitants of India, being frequently 80 feet long, and 6 or 7 wide; wherein the moſt opulent natives of the country carry on a very conſiderable trade, either on their own account, or by freighting theſe veſſels to Europeans. *Almady* is alſo a ſmall canoe, generally uſed by the African negroes.

ALMENE. A weight of two pounds, uſed for the weighing of ſaffron in ſeveral parts of the Eaſt Indies.

ALMENDINE, or *Albandine*. A ſpecies of ruby, but ſofter and lighter than the oriental ſtone, with a colour more like the granate than the red of the ruby. See *Ruby*.

ALMOND, or *Almuda*. A meaſure for oil among the Portugueſe, who ſell their oil of olives by almonds, the almond being 4½ gallons of Wincheſter meaſure.

ALMOND, or *Amydala*. A kind of medicinal fruit, incloſed in a thick ſtone, and under a thin ſkin, the whole being contained under a thick, pulpy, oily huſk. The almond is the produce of a pretty tall tree, reſembling a peach-tree, very common in France, particularly in Provence, Languedoc, Touraine, and the Venaiſin. It is alſo commonly produced in Italy and Spain; nor is it leſs frequently brought over as a commodity of Barbary.

Almonds are of two kinds, the ſweet and the bitter: the former are of a ſoft, grateful taſte, and are reputed cooling, emollient, and nutritive; the latter are held aperient, deterſive, and diuretic; both of which give the denomination to a great number of preparations in confectionary and cookery.

Almonds are a very conſiderable part of the French commerce, on account of the oils extracted from them, as alſo by the prodigious conſumption of this fruit in lent. The beſt almonds are thoſe of the Venaiſin, the worſt thoſe of Barbary and Touraine: but to diſtinguiſh the good from the bad, an examination ſhould be made whether they are every where even, this commodity being frequently pared, to give it a more extraordinary vent. See *Oil*.

Almonds is likewiſe a fruit, ſerving inſtead of ſmall money in ſeveral parts of the Eaſt Indies, eſpecially where the *couris*, or ſmall ſhells which come from the Maldives, are not current.

Theſe almonds grow in the deſerts of the kingdom of Lar, otherwiſe in Caramania deſerta; whence they are tranſported to Ormus, an iſland of the Perſian gulph formerly poſſeſſed by the Portugueſe, which the Perſians, aſſiſted by the Engliſh, took from them about the middle of the 17th century; and it is from Ormus that theſe almonds are diſperſed over a great part of the Indies.

The good or bad crop of this fruit, raiſes or lowers its value: but, one year with another, 40 or 44 are given for a pecha, a ſmall copper coin, which is worth about a farthing.

ALMOXARIFARGO, is a duty in ſome ports of Spaniſh America, eſpecially at Buenos Ayres, of 2½ *per cent.* on the real value of bulls hides, paid to the King of Spain for the exportation of hides on board European veſſels; and, beſides this duty, there is alſo another called *quint* or *quinto*, but only at 4 reals for each hide.

This is alſo an old duty paid upon the Britiſh woollen manufactures in Old Spain, being 11 *per cent.* on ſome, on others not above 5 *per cent.*

ALMUCANTARS, in aſtronomy, are circles parallel to the horizon, imagined to paſs through all the degrees of the meridian, ſerving to ſhew the altitude of the ſun and ſtars.

ALMUCANTAR's ſtaff, is an inſtrument uſually made of pear-tree or box, having an arch of 15 degrees; uſed to take obſervations in the ſun, about the time of its riſing and ſetting, in order to find the amplitude, and conſequently the variation of the compaſs.

ALMUDA. See *Almond*.

ALMUNECAR. A port-town of the province of Granada, in Spain, ſituated on the Mediterranean, in 30 deg. 45 min. of W. long. and 36 deg. 40 min. of N. lat. See *Spain*.

ALNAGE, or *Aulnage*, the meaſuring of woollen manufactures with an ell, and the other functions of the alnager.

ALNAGER. An officer formerly appointed under the Engliſh government, before the making of cloth in England, to meaſure and try the foreign cloths; to ſee all cloths of aſſize marked, and to take thoſe that were defective into his cuſtody, as a forfeiture to the King; for which the alnager had an allowance from the lord treaſurer, and barons of the exchequer.

Upon the introduction of the woollen manufacture among the Engliſh artizans, the office of alnager was occaſionally varied, who was ſworn, by himſelf or deputy, to look to the aſſize of woollen cloth made through the land, and to the ſeals ordained to be affixed to ſuch cloth as were found of ſufficient length, width, and work; beſides, he was collector of the duty impoſed on woollen cloths, and had the general direction of the whole. However, the alnager was afterwards abridged of his meaſuring and ſearching, whereby the office became ſeparated in three diviſions, having their particular names of ſearcher, meaſurer, and alnager; ſo that there is now a peculiar meaſurer, diſtinct from the alnager, or collector, for allowing the ſize of the length and breadth of every cloth made in England and Wales. But this office is ſo much degenerated from its original intention, of inſpecting the goodneſs of the commodity, and ſupporting the credit of the Engliſh manufactures, that the ingenious Sir Joſiah Child, in his diſcourſe on trade, has made an obſervation, "That all the attempts which our fore-fathers made, for regulating of manufactures, when left to the execution of any particular officer, in a ſhort time reſolved but into a tax on the commodity, without reſpect to the goodneſs thereof: as was moſt notorious in the caſe of alnage, which was intended for a proof of the goodneſs of the commodity; and to that purpoſe a ſeal was invented, as a ſignal that the commodity was made according to the ſtatute; which ſeals, it is ſaid, may now be bought by thouſands, and put on what the buyers pleaſe." See *Woollen* cloth.

ALOES, in medicine and pharmacy, is the inſpiſſated juice of a plant of the ſame name, much uſed as a purgative remedy. The aloe plant is produced in ſeveral parts of the Eaſt and Weſt Indies; and it is alſo found in ſome European countries, particularly the mountains of Sierra Morena, in the province of Andaluſia in Spain.

Ancient naturaliſts ſeem to have been acquainted with only one particular ſort of aloe, but the moderns have diſcovered above forty other kinds; however, among this number, there are not above twelve that yield the purgative juice, which is uſually diſtinguiſhed into three ſorts, the firſt being called *ſuccotrine*, becauſe it is the produce of Succotra, or Zocotora, an iſland in the Indian ocean; which is the pureſt and moſt tranſparent, being friable, of no ſmell, black in the lump, but of a beautiful yellow colour when broken; and this is brought in ſkins from the Levant and the Eaſt Indies. The ſecond is called *hepatic*, becauſe of its liver-colour, which is reſinous, ſmells like myrrh, has a yellow colour when pounded, and is chiefly brought from China; though it alſo grows in Perſia, Egypt, and Arabia, from whence it is brought in gourds of different weights, from 2 to 100 pounds. The third is called *caballine*, or horſe-aloes, being the moſt impure, the blackeſt, and the ſtrongeſt of all; it is prepared in Jamaica and Barbadoes, and brought over in large gourds from theſe iſlands, where the Americans formerly uſed to pitch their veſſels; but it is of little uſe among Europeans, excepting for horſes and cattle, from whence it is denominated; though ſome confound this with the hepatic, but, in effect, that and the *ſuccotrine*, are the only two ſorts commonly known in our ſhops; the former being preferable for internal uſes, the other for external, and both are extremely bitter.

Aloe roſata is a preparation of the aloes juice with roſe-water.

Aloes, alſo gives the denomination to a kind of Indian wood

wood of a delicate fragrancy, much uſed in the Eaſt as a perfume, and ſo called for its exceeding bitterneſs, which reſembles that of the aloes juice: the tree grows in China, and Cochinchina; it affords three different ſorts of wood, but the calambo is only known to Europeans, which is of a tan colour, light, and veiny, reſembling rotten wood; the beſt ſort is of a blackiſh purple colour, and ſo light as to ſwim on water; as it is hot and drying, it is eſteemed a great ſtrengthener of the nerves, and is brought over in ſmall flat bits of a very fragrant ſcent, eſpecially when caſt on the fire, where it melts like wax.

ALOFT, on high, far above reach, a word common with ſeamen, by whom it is principally uſed.

ALOOF, a ſea term, ſignifying as much as keep your luff; being a word of command from that him conns, to the man at the helm, to keep the ſhip near the wind, when ſhe ſails upon a quarter-wind.

ALOSE. A fiſh, reſembling the pilchard, but much larger, and is of the number of thoſe called ſeaſon, or paſſage-fiſhes, becauſe it never comes up rivers but in the ſpring.

The roes of the aloſe, are as much eſteemed in the Eaſt Indies, as thoſe of the ſturgeon in Muſcovy; and the commerce thereof is not leſs conſiderable, as ſeveral ſhip loads are uſually conſumed there.

ALOUCHI. A ſweet-ſcented gum, oozing from the tree that produces the white cinnamon.

ALOWAY. A port-town of Scotland, ſituated on the river Forth, in 3 deg. 45 min. of W. lon. and 56 deg. 10 min. N. lat. being 5 m. E. of Stirling, and remarkable for the coal mines adjacent to it.

ALPAGNA, an animal much reſembling the lamas, and vigognas, except that it has ſhorter legs, a flatter muzzle, and having ſome ſimilitude to the human viſage. The inhabitants of Peru reckon it among their beaſts of burden, and generally make it carry about a hundred weight: of its wool they make ſtuffs, cords, and bags; of its bones, inſtruments for weavers; and they even make an advantage of its dung, uſing it for fuel, both in their chambers and kitchen.

The wool of the alpagna paſſes eaſily for that of the vigogna; and is generally mixed with the latter, which comes from Peru into Spain.

ALPHABET, in a mercantile ſenſe, ſignifies the 24 letters, which ſerve either as an index to contain the names of correſpondents and cuſtomers, with references to the ledger, or to particularize the reſpective books of account.

ALPHÆNIX, white barley-ſugar, or twiſted-ſugar; to which this extraordinary name is given to make it the more valuable.

ALPISTE or *Alpia*, a ſort of ſeed, ſold by corn-chandlers, for feeding birds, eſpecially in the time of breeding; which is of an oval figure, of a pale-yellow, bordering upon the iſabel-colour, and ſomewhat bright and gloſſy.

ALQUIER. A liquid meaſure uſed in Portugal for oil, containing ſix cavadas, or 2 gallons $\frac{1}{4}$ Wincheſter meaſure.

ALQUIER, is alſo a meaſure for grain at Liſbon, 60 of which make a muid, or 3 Engliſh quarters; 2 $\frac{1}{2}$ alquiers being one Engliſh buſhel.

The alquier is alſo uſed in other ſtates of the kingdom of Portugal, particularly in the Azores and the iſland of St. Michaels, where it is the ſame as in Lisbon: but in Oporto it is 20 *per cent.* more.

ALQUIFOUX, or *Arquifou*. A kind of mineral lead, very heavy, eaſily reduced to powder, and hard to be melted; but when broke it appears in ſhining ſcales of a whitiſh colour, ſomewhat ſimilar to that of the needles of antimony; and, as potters uſe it to give their works a green varniſh, it is generally called potter's ore in England. Alquifoux is exported from England in pigs of different ſize and weight; which ſhould be choſen in large pieces, very heavy, the ſcales ſhining, and reſembling tin-glaſs.

ALSEN. An iſland in the Leſſer Belt, at the entrance of the Baltic ſea, ſituated in 10 deg. of E. long. and 55 deg. 12 min. of N. lat. between Sleſwic and Funen, 100 m. W. of Copenhagen. See *Denmark*.

ALTEA. A port-town of the province of Valencia, in Spain, ſituated on the Mediterranean, in 15 deg. of W. lon. and 30 deg. 40 min. of N. lat. See *Spain*.

ALTENA. A port-town of the dutchy of Holſtein, in Germany, ſituated on the river Elbe, in 10 deg of E. lon. and 53 deg. 51 min. N. lat. being a modern town, built by the Danes to rival Hamburgh in trade, and made the mart for the ſale of the merchandiſe brought from the Indies by the Dutch Eaſt-India company. See *Denmark*.

ALTIN. A Ruſſian money of accompt, worth 3 copees, 100 of which make a ruble, or 4s. 6d. ſterling.

ALTOM. A name given in ſeveral ſtates of the Grand ſignior, as alſo in Hungary, to what Europeans commonly call a *ſequin*; however this name is ſeldom given but to thoſe coins which have the ſtamp of the Turkiſh Emperor. See *Sequin*.

ALUM. See *Allum*.

AMADABAT. The capital of the province of Guzurat, or Cambay, in the Eaſt Indies, ſituated in 72 deg. of E. long. and 23 deg. 40 min of N. lat. where the Engliſh, and other Europeans, have their reſpective factors, and purchaſe fine chints, calicoes, and other Indian merchandize. See *India*.

AMADOW. A kind of black match, or tinder, brought from Germany, and made of the fungous excreſcencies growing uſually out of old trees, particularly oak, aſh, and fir: to which ſome ſome give the name of pyrotechnical ſpunge, upon account of its readineſs in taking fire.

AMADOWRIC, is a ſort of cotton generally brought from Alexandria, in Egypt.

AMAIN, in the ſea language, ſignifies yielding, ſubmitting, or ſtriking the top-ſail.

AMAK, or *Amaka*, a Daniſh iſland in the ſound, on the coaſt of Zealand, ſituated in 13 deg. 5 min. of E. long. and 55 deg. 29 min. of N. lat. See *Denmark*.

AMALGAMA, or *Amalgam*, is a chemical preparation, of a maſs of mercury incorporated with ſome metal; and, when united with lead, is of a ſoft, friable ſubſtance, of a ſilver colour.

AMAN, a Levantine cotton cloth, of a blueiſh colour, brought by the way of Aleppo.

AMANTEA. A port-town of Naples, ſituated near the bay of Euſemia, in 16 deg. 20 min. of E. long. and 39 deg. 15 min. of N. lat. See *Italy*.

AMAPALLA. A port-town of N. America, in the province of Guatimala, ſituated on the gulph of Amapalla, in the Pacific ocean, in 93 deg. of W. long. and 12 deg. 30 min. of N. lat. See *Spaniſh America*.

AMAZON, a river riſing in Peru, in S. America, which, running a courſe of 3000 miles and upwards, within 4 deg. of the equator, falls into the Atlantic ocean by ſeveral channels, giving the country through which it paſſes the name of Amazonia: it overflows annually, like others, between the tropics, when it is 150 miles broad at the mouth; and, conſidering the length of its courſe, or the depth of its water, appears to be the greateſt river in the world.

AMBAMARJAM, or *Ambara*, the capital of Abyſſinia, ſituated in 35 deg. of E. long. and 13 deg. of N. lat. on the E. ſide of a lake, out of which the river Nile riſes. See *Ethiopia*.

AMBASSADOR. See *Embaſſador*.

AMBER, *Succinum*, or *Carabe*, is a yellow tranſparent ſubſtance, of a gummy or bituminous form, or conſiſtence, but of a reſinous taſte like oil of turpentine, chiefly found in the Baltic ſea, particularly along the coaſt of Pruſſia; it is alſo found in Sileſia, Bohemia, Jutland, Holſtein, Denmark, and Samogitia, being of great utility in medicine and other arts.

Naturaliſts are infinitely divided as to the origin of amber, and what claſs of bodies it is appurtenant to; ſome referring it to the vegetable, others to the mineral, and ſome even to the animal oeconomy: but the moſt probable opinion is, that this gum is a vegetable, formed on the poplar and fir trees, of which there are extenſive foreſts on the coaſt of Sweden, from whence it is blown into the ſea by the impetuoſity of the ſtrong northern winds, where it is perfected by the ſaline quality of the ſea, and afterwards caſt upon the adjacent ſhores, by which the King of Pruſſia obtains a conſiderable revenue.

The moſt remarkable property of amber is, that, when rubbed, it attracts other bodies to it; by friction it is

brought to yield light pretty copiouſly in the dark, and is reputed of ſome medicinal efficacy.

Amber is diſtinguiſhed, with regard to its colours, into yellow, white, brown and black; the two latter are ſuppoſed of a different nature and denomination; the one called jet, and the other ambergreaſe; the yellow is generally prized by thoſe who work it into beads, and other toys, on account of its tranſparency; though it is now much degenerated in value; but the white is principally valued for medicinal uſes, as being beſt digeſted, of the moſt odoriferous ſmell, and containing the greateſt quantity of volatile ſalt.

Spirit of Amber, is an acid liquor, procured from the gum, by pulveriſing and diſtilling it in a ſand-heat.

Oil of amber, is a fine, tranſparent, ponderous, yellow oil, procured after the ſpirit, by increaſing the degree of fire.

Volatile ſalt of amber, is the principal chemical production of amber, being a peculiar white, tranſparent, acid ſalt, which riſes after the oil; but the great conſumption of this medicine, and the ſmall proportion that amber yields of it, occaſions it to be frequently adulterated with ſal armoniac, nitre, cream of tartar, ſalt of coral, and other ingredients.

Tincture of amber, is procured by digeſtion in ſpirit of wine, with a ſand heat.

Black amber, ſee *Jet*: and *powder of amber*, ſee *Carabe*.

Liquid amber, is a kind of balſam, or reſin, like turpentine, clear, reddiſh, or yellowiſh, of a pleaſant ſmell, almoſt like ambergreaſe; it flows liquid, from an inciſion made in the bark of a fine large tree in New Spain, called by the natives *oloſol*; but it hardens, as it grows older, into a ſolid form, and is brought to Europe in barrels, where it is reputed an excellent balſam againſt the ſciatica, and weakneſs of nerves.

AMBERADA, or *Ambreada* is the factitious amber-bead uſed in trading for ſlaves on ſome of the African coaſts, particularly at Senegal. There are ſome large and red pieces of it, whereof the thouſand, conſiſting of twenty ſtrings, weigh three pounds; and there are others of a ſmaller ſize, and alſo red, which weigh but two pounds and a half.

AMBERGREASE, *Ambergris*, or *Ambra griſia*, is a fragrant gum that melts almoſt like wax, uſed both as a perfume, and as a cordial; but with regard to its origin and production, there is a greater variety of opinions among naturaliſts, than there is colours of the drug, which is whitiſh, browniſh, blackiſh, and ſtreaked with yellow, though more commonly of a greyiſh or aſh-colour; however, the moſt probable account of its formation is held to be the honey-combs falling into the ſea from the rocks or trees where the wild bees build their apiaries.

It is found on the maritime coaſts of ſeveral countries, particularly along the ſouthern and eaſtern parts of Africa, Madagaſcar, the Maldives, ſome parts of the Mediterranean, and in the Weſt Indies, about the iſlands of Bermudas and Jamaica; as alſo on the coaſts of Carolina. The pieces frequently ſeem compoſed of ſeveral ſtrata, laid one over another, with ſtones and other bodies cloſed therein, and the ſtrata are ſometimes full of little ſhells of a ſimilar ſpecies to the *concha anatifera*; whence it may be conjectured, that the ambergreaſe has originally been in a fluid ſtate, or at leaſt that it has been melted and formed itſelf afreſh, inveloping ſuch bodies as happened to be in its way.

Ambergreaſe muſt be choſen in large pieces, of an agreeable odour, whoſe colour ſhould be entirely grey on the outſide, and of a grey with little black ſpots within: though the purchaſer ſhould be extremely cautious of a deceit, for ambergreaſe is eaſily counterfeited with gums and other drugs.

There are 9 ſorts of ambergreaſe; namely, 1ſt, Aſhcoulered; 2d, whitiſh; 3d, yellowiſh; 4th, blackiſh; 5th, ſleek or ſmooth, as though it was covered with a ſkin; 6th, all brown; 7th, ſtriped; 8th, marbled, and 9th all black.

There is ambergreaſe that never was ſwallowed by animals, and ſome that is, and afterwards caſt up into the ſea, or found in their bowels. This laſt ſort is the worſt of all,

and retains ſome bad ſmell from the place where it has been lodged; for which reaſon it is eaſily diſtinguiſhed from the pure. That which is either all black or all white, is alſo good for nothing; as likewiſe that which is ſmooth, uniform, and too pure, which is commonly falſified, or entirely factitious.

On the contrary, that which is of a grey aſh-colour, ſtriped and marbled with blackiſh, whitiſh, or yellowiſh ſpots, is the beſt.

It is even ſometimes covered with a cruſt, black on the outſide, wherein are found birds bills, bits of bones of cuttle-fiſh, and ſuch like things.

AMBER-*ſeed*, or *Muſk-ſeed*, is the ſeed of a plant, which grows in the Weſt Indies, and in Egypt, being ſomewhat like the millet, of a bitteriſh taſte, and brought dry into Europe, where it is uſed by perfumers.

AMBLETEUSE, is a little port-town of France, in Picardy, ſituated in 1 deg. 30 min. of E. lon. and 49 deg. of N. lat. See *France*.

AMBOINA. An Indian iſland, ſubject to the Dutch, ſituated in 126 deg. of E. lon. and 3 deg. 40 min. of S. lat. See *Molucca iſlands*.

AMBRETTE. See *Abel-moſc*.

AMELCORN. French rice, or grain, of which ſtarch is frequently made.

AMERICA, or the *Weſtern Continent*, frequently denominated the *New World*, is the largeſt of the four diviſions of the terreſtrial globe, and is ſituated between 35 and 145 deg. of W. lon. and between 80 deg. N. and 58 deg. of S. lat. bounded by the lands and ſeas about the Arctic pole, on the N.; by the Atlantic ocean, which ſeparates it from the Eaſtern continent, or old world, on the E.; by the vaſt Southern or Pacific ocean, which divides it from Aſia on the S. and W. being between 8 and 9000 miles in length, from N. to S. and its greateſt breadth about 3500 miles.

This extenſive continent is divided into two great parts, in the form of peninſulas, which are joined by an iſthmus about 60 miles over.

The ſituation of theſe two parts has given them their denomination; that to the north being called *North America*; and that to the ſouth *South America*; the latter being alſo called *Peruvian*, and the former *Mexican*; the one from Peru, the other from Mexico, the two greateſt empires conquered by the Spaniards in theſe new diſcovered countries.

North America comprehends Saguenai, Cacoucas, Canada, Etechemers, Acadia, New England, New York, Virginia, Florida, Louiſiana, or Miſſiſſipi, Old Mexico, or New Spain. This laſt, called alſo the kingdom of Mexico, comprehends all that lies between Florida, New Mexico, and the iſthmus of Panama, and is divided into ſeveral large provinces.

South America comprehends Panama, or the kingdom of Terra Firma, New Andaluſia, the new kingdom of Granada, Pepayan, Guiana, Peru, Chili, Paraguay, Braſil, and Magellanica.

America is almoſt entirely ſurrounded by the ocean, which is called either the *North* or *South ſea*, according as the coaſts it waſhes are ſituated towards one or other of theſe two points of the world; the South ſea being alſo called the *Pacific ocean*.

In both ſeas, which join by the Straits of Magellan, Le Maire, and Browerts, are ſeveral iſlands; but by far more numerous in the North, than in the South ſea, which has but one conſiderable iſland called California, and a few others along the coaſts.

The iſlands of the North ſea are, the Bermudas, the Lucayes, and the Antilles; the great iſlands, as Cuba, St. Domingo, or Hiſpaniola, Jamaica, Porto-Rico, Newfoundland, Cape Breton, or Louiſburg, and ſome others of leſs importance.

The diviſion of America between the ſeveral nations of Europe.

The Spaniards, who were the firſt conquerors of America, are the beſt eſtabliſhed there, both on the continent, and in the iſlands.

On the continent they poſſeſs all South America, except Brazil, upon the weſtern ocean, which belongs to the Portugueſe,

tu ueſe; and alſo except ſome parts of Chili, Magellanica, and the iſthmus of Darien, whoſe inhabitants they have not yet ſubjected to their yoke, and therefore call them *Indos bravos*, or brave Indians; as likewiſe except the great country of the Amazons, and almoſt the whole country of Guiana, where the French and Dutch have ſome ſettlements.

Spain is alſo in poſſeſſion of the richeſt and beſt part of North America, as far as Miſſiſſipi, California, and Florida. their dominions extending on the South ſea, from 40 deg. N. to 45 deg. S. latitude.

The iſlands belonging to the Spaniards are Hiſpaniola, otherwiſe called St. Domingo, enjoyed at preſent by the French, in conjunction with them; Cuba, Porto-Rico, St. Margaret, and ſome others leſs conſiderable, which the Spaniards ſometimes viſit, but where they have no colonies.

Next to the Spaniards, the Engliſh have the moſt flouriſhing colonies in America; whereof thoſe on the continent are New Britain, or Eſkimaux; Britiſh Canada, or the coaſt of Hudſon's bay; and Nova Scotia; which compoſe the north diviſion of the Britiſh territories: New England, New York, the Jerſeys, Penſylvania, and Maryland, which compoſe the middle diviſion: North Carolina, Virginia, South Carolina, and Georgia, which compoſe the ſouth diviſion.

The iſlands belonging to the crown of Great Britain, are St. Chriſtophers, Barbadoes, Barbuda, Anguilla, Antigua, Montſerat, Nevis, and Dominica, all of them being among the Antilles; Providence, and other places in the Lucayas, or Bahama iſlands. But their moſt remarkable iſlands, where they are beſt eſtabliſhed, Barbadoes excepted, are the Bermudas, and Jamaica; and, beſides theſe, they have the iſland of Newfoundland, remarkable for its cod-fiſhery on the grand bank not far from that iſland.

The French poſſeſſions on the continent are Canada, comprehending Quebec, Mount Real, Port Royal, Richelieu, and Frontenac; Miſſiſſipi, or Louiſiana, with Cayenne, and ſome lands upon the river of Surinam.

Their iſlands are Deſirada, Granada, Martinico, Mariagalante, Guardeloupe, St. Bartholomew, Santa Cruz, and St. Martin, where the Dutch have alſo ſome plantations, all theſe being among the Antilles.

The French are alſo in poſſeſſion of the ſouth part of St. Domingo, and the ſmall adjacent iſland of Tortuga, with Louiſburg, or Cape Breton, on the coaſt of Canada. Before the war for the ſucceſſion of Spain, the French alſo poſſeſſed Acadia on the continent, Placentia in Newfoundland, and part of St. Chriſtophers, one of the moſt conſiderable of the Antilles. But all theſe were ceded to the Britiſh crown by the treaty of Utrecht; and the right to the four neutral iſlands among the Caribbees is yet undetermined between the crowns of Great Britain and France.

The only poſſeſſion in America belonging to the Portugueſe, is the coaſt of Brazil, which extends from the river of the Amazons to that of St. Gabriel, near the river de la Plata; this coaſt having fourteen diviſions, whereof the moſt remarkable among the Europeans are Fernambuco, or Pernambuco, the Bay of Todos los Santos, or All Saints, and Rio-Janeiro.

The Dutch, ſo well ſettled in the Eaſt Indies, have but an inconſiderable acquiſition in the weſt, where all their colonies amount only to the iſlands of Saba, St. Euſtatia, and the half of St. Martins, which are the ſmalleſt, and leaſt conſiderable of the Antilles: but, by way of ſome equivalent, they have Bonaires, Aruba, and Curaſſo; which being ſituated at no great diſtance from Carthagena and Porto-Bello, afford the Dutch frequent occaſions of carrying on a rich contraband trade, under the very eyes of the Spaniſh governors, who uſually wink at their illicit proceedings.

Surinam, at the mouth of the river of the ſame name, upon the coaſts of Guiana, is a colony belonging to the Dutch, as alſo Bamron, Aprouvace, and Berbice; all which are on the continent, and are in a manner ſeparated by Cayenne, belonging to the French.

Laſtly, The Danes are eſtabliſhed in the little iſland of St. Thomas, where the Hamburghers have alſo a factory, which is not far from Porto-Rico; and the Danes have alſo another among the Virgin iſlands.

It is true, that the Duke of Courland, with his Germans, as alſo the Swedes, made ſome attempts to obtain acquiſitions in this new world of opulence, the former in ſome of the Antilles, and the latter in North America; but their projects being unſucceſsful, they cannot be numbered among the European nations, who diſpute the entire poſſeſſion of America with the Spaniards.

The ſame may be obſerved of the Scots; who having eſtabliſhed themſelves in the Iſthmus, and on the river of Darien, at the beginning of the 17th century, were ſoon expelled by the Spaniards, through a neglect of the new coloniſts by the Britiſh government.

But for a more particular deſcription of the reſpective countries in poſſeſſion of the ſeveral European powers, and of the territories ſtill uncultivated in America, ſee *Britiſh* America, *Daniſh* America, *Dutch* America, *French* America, *Portugueſe* America, *Spaniſh* America, and *Indian* America.

As the diſcovery of America was made in the year 1492 by Chriſtopher Columbus, a Genoeſe, at the expence of Ferdinand King of Caſtile and Arragon, the Spaniards, under that diſcovery, and a grant from the pope, have always pretended an excluſive right to this part of the world, in prejudice to all other nations. But the other Europeans have diſregarded ſuch frivolous pretenſions, and taken poſſeſſion of ſuch parts of America as were moſt ſuitable for carrying on a beneficial commerce: ſo that at preſent the Portugueſe have almoſt a moiety of South America; and the Engliſh, French, Dutch, and Danes, are in poſſeſſion of the greateſt part of the northern continent.

The principal commodities of the ſouthern part of America, are gold and ſilver: the gold is of three ſorts, ingots, grains, and duſt; and the ſilver of two kind, bars and piſtoles. The chief merchandiſe of the northern parts, are ſkins and furs, of caſtors, otters, elks, lynxes, deer, and ſome other beaſts. The pearls are either the produce of Margaretta in the north ſea, or the Iſlands de les Perlas in the ſouth ſea: and the emeralds are produced from a mine near Saint Foy de Bogotta, in New Granada. The other leſs valuable commodities are ſugar, tobacco, ginger, indigo, caſſia, maſtic, aloes, cotton, tortoiſe-ſhells, vigoanes wool, the hides of bulls, cows, and goats, thoſe of goats being tanned, the others undreſſed; quinquina, cacao, vanilla; various ſorts of wood, uſed in dying, inlaying, and in medicine, as campeachy or log-wood, yellow ſanders, ſaſſafras, brazil, guaiac, cinnamon, roſe-wood, fuſtic, Indian-wood, green ebony, ſaſſaparilla; three ſorts of balſams, Toku, Copa, and Peru; occidental bezoar, cochineal, roſin, ambergreaſe, gum copal, quickſilver, ſea-ſalt, ſal-gem, and ſalt of ſulphur; ananas, candied lemons and oranges, and ſyrups of the ſame; wax, honey, jalap, mecoacham, pitch, and tar; olives, oil of olives, and oil extracted from fiſh; rice, wheat, flower, and all ſorts of dried pulſe; brandy drawn from molaſſes, and other ſtrong waters; horſes, mules, and all ſorts of cattle; woollen cloths, flannel, and bags of Peru; beſides a fabrication of linen cloth, generally called *tocuyo*, and by the Spaniards Lienza de la Terra, to diſtinguiſh it from foreign linen. But thoſe commodities are not to be commonly found in all parts of America alike; ſome being the product of one place, others of another, according as the ſun or climates are proper for their production and culture; ſo that the mountains and rivers of Chili and Potoſi are more redundant in gold and ſilver, than any other parts of America. Sugar, tobacco, indigo, and ginger, are found in greater quantities in the Caribbee iſlands, and the greater iſlands adjacent, than any where elſe. The richeſt furs are the ſingular commodities of Canada, Acadia or Nova Scotia, Miſſiſſipi, and New England; while Buenos Ayres, Hiſpaniola, and Cuba, yield the moſt profitable hides, and the coaſt of Florida the moſt excellent tobacco; all of which drugs and merchandiſes are explicated under their reſpective heads.

AMERICAN *ocean.* See *Ocean.*

AMETHYST. A precious ſtone, of a violet colour, inclining to a purple, and found in ſeveral parts of the world.

The oriental *amethyſts* are the moſt eſteemed, thoſe of Madagaſcar the leaſt, and thoſe of Carthagena and Germany are a medium between both. There are alſo ſome in Auvergne in France; but they are as little prized as the factitious. The manner of cutting them adds to the beauty of the colour, and of conſequence to the value of the ſtone, which is counterfeited with glaſs.

AMIANTHUS. A ſtone ſcarce known but nominally; yet remarkable for the virtues aſcribed to it by Pliny, and ſeveral antients, who ſuppoſed it capable of being ſpun into an incombuſtible thread.

Some confound it with *plume-allum*, which has downy particles, but not reducible to thread, and otherwiſe conſumable by fire; others pretend that it is burnt plaſter, baked glaſs, or the ſpeculary ſtone, otherwiſe called *talc*; and others think that it is a tree, to the bark of which, when beaten, and ſpun, they attribute the ſame virtue as to the amianthus of the antients.

AMIENS. The capital city of the province of Picardy in France, remarkable for its woollen and linen manufactures; tho' not equal to thoſe of Abbeville. See *France*.

AMIERTIES. Cotton cloths brought from the Eaſt Indies.

AMMI, or *Semen Ammeos*. A kind of aromatic ſeed brought from the Levant, and uſed as a compoſition in Venice treacle, being the produce of a plant of the ſame name, called in Engliſh *Biſhops-weed*, whoſe ſeed is much like grains of ſand, round, ſmall, and of a greyiſh colour. It is alſo called *ammi Creticum*, or *Æthiopicum*, to diſtinguiſh it from the vulgar ammi, or common Biſhops-weed; and it is ſometimes alſo denominated *cuminum Æthiopicum*.

The ammi is reckoned inciſive and aperitive, and excellent againſt the bite of ſerpents: it ſhould be freſh, ſomewhat of a bitter taſte, and of an odoriferous ſmell.

AMMONIAC, or as it is ſometimes, though improperly, called *Armoniac*, is a kind of gum, of uſe in ſeveral medicinal compoſitions, brought from the Eaſt Indies, where it is ſuppoſed to ooze from an umbelliferous plant. It is alſo diſtilled in white drops, after an inciſion, from the branches and roots of a ſpecies of ferula growing frequently on the Lybian ſands, eſpecially about the places where it is imagined the temple of Jupiter Ammon formerly ſtood; whence it is pretended the name has its derivation.

This gum is brought to Europe in drops, or in great lumps: that in drops ought to be white within, and externally yellow, eaſily fuſible, reſinous, ſomewhat bitter, and of a very ſharp taſte and ſmell like garlic; that in lumps is loaded with drops, and free from any ſcrapings of wood, ſtone, or ſand, which is a denotation of the beſt quality.

Lac ammoniacum is a diſſolution of the gum in vinegar.

Sal Ammoniac is a kind of ſalt, more uſually wrote *armoniac*.

AMMUNITION, in general, ſignifies all ſorts of military ſtores and proviſions; but more eſpecially powder and ball; which, by the ſtatute of the 12th of Cha. II. might be prohibited to be exported at the royal pleaſure; and, by the 1ſt of James II. if imported without licence from his Majeſty, they are to be forfeited, with treble the value

AMOMI. A name given by the Dutch to Jamaica pepper.

AMOMUM, *Amomum vulgare*, or *Amomum officinarum*, is a fruit brought from the Eaſt Indies, of a hot, ſpicy taſte and ſmell, reſembling the muſcadine grape: it is about the bigneſs of a chick-pea, round, membraneous, and divided into three cells, which contain ſeveral brown angular grains, of great uſe in the compoſition of Venice treacle, and ſomewhat like the Engliſh baſtard ſtone-parſley. The neweſt amomum is always the beſt, eſpecially when the ſhells are round, light-coloured, heavy, and well filled; but that ſort whoſe pods are light, with black ſeeds, and ſhrivelled, is of no value: however, ſeveral people confound the amomum with the great cardamomum, tho' they have no manner of reſemblance.

AMORGO. An iſland of the Archipelago, ſituated in 26 deg. 15 min. of E. lon. and 37 deg. of N. lat. See *Turkiſh iſlands*.

AMOUNT. A term uſed in arithmetic and book-keeping, ſignifying the total, which ſeveral ſums added together produce.

AMOUR. A river whoſe ſource is in Siberia; it runs E. through Chineſian Tartary, and falls into the bay of Corea, in the Pacific ocean.

AMOUSES. Counterfeit gems, or artificial precious ſtones.

AMOY. An iſland belonging to China, ſituated in 118 deg. of E. lon. and 25 deg. of N. lat. See *China*.

AMPHORA. The largeſt liquid meaſure uſed at Venice, containing four bigorza's, each bigorza being four quarts, or an Engliſh gallon.

AMSTERDAM. The capital city of the province of Holland, ſituated in 4 deg. 30 min. of E. lon, and 52 deg. 20 min. of N. lat. See *United Provinces*.

ANABOA. or *Annabon*. See *Annaboa*.

ANACARDAS. A ſort of beans brought from the Eaſt Indies, reſembling the great beans produced in England. They are of ſome uſe in medicine; their goodneſs conſiſts in their magnitude, newneſs, and dryneſs, and the whiteneſs of the bean when peeled; from which anacardine honey is extracted.

ANACOSTE. A kind of woollen diaper ſtuff, manufactured at Leyden in Holland, and ſome towns of the Auſtrian and French Netherlands; which is uſually ſent black and white into Spain, where there is a great demand for it, the piece being about an ell broad, and 20 ells long.

ANAGROS. A meaſure for corn uſed in ſome towns of Spain, particularly at Seville, containing about ſix buſhels Wincheſter meaſure.

ANANAS, *Nanas*, *Jayama*, or the *Pine-apple*, is a fine fruit, of the produce of the Antilles iſlands in America, and alſo of the coaſt of Guinea in Africa, adorned on the top with a little crown, and a bunch of red leaves reſembling a fire. It is generally allowed, both for its delicious flavour, and beautiful colour, to be the king of fruits; for tho' the pulp is fibrous, it diſſolves in the mouth with the rich complicated taſte of the peach, the quince, and the muſcadine grape altogether.

This fruit is uſually about the ſize of an apple, and ſometimes as big as the melon; but there are three different ſorts, diſtinguiſhed by their colour, form, and taſte; being the white ananas, the pointed, and the pippin; all of which produce an excellent liquid confection, ſent from the Antilles iſlands; the ananas is alſo uſed in phyſic: but they are principally uſed in making the ananas wine, which is almoſt equal to malmſey ſack, and will intoxicate as ſpeedily. In about three weeks it generally turns, and three weeks afterwards becomes far ſuperior to what it was before, only it is more fumy and inebriating.

ANATA, *Anotto*, or *Attola*. A kind of red dye brought from the Weſt Indies, made of a red flower that grows on ſhrubs ſeven or eight feet high. It is caſt, like indigo, into ciſterns, or tubs, full of water, with this difference, that the flower is only uſed, whereof the leaves are taken aſunder; and, when rotten, they are reduced, by much ſtirring, into a thick and liquid ſubſtance, which is put to dry before the ſun, and afterwards formed into rolls or cakes.

The Spaniards are the only perſons who cultivate and prepare the anotto. the plantation which the Engliſh had at St Angelo in Jamaica being quite ruined. Engliſh dyers make more account of this drug than of indigo; for which reaſon the merchants of Jamaica, who have it from Porto Rico, purchaſe it one fourth dearer, giving about 1 s. 6 d. per lb. for indigo, and 2 s. for anotto. At preſent the Europeans, who trade in this drug, have the greateſt part from the bay of Honduras, where it ſells extremely well; and there is always between 50 and 60 *per cent.* profit, when bought at the firſt hand.

ANATOCISM, the uſe, intereſt, or increaſe of money, paid by a borrower to a lender; which is more properly applied to an accumulation of intereſt, extorſion, or uſury. See *Uſury*.

ANATRON, or *Natron*, is a kind of native ſalt-petre, or nitre, found in Egypt. See *Salt-petre*.

ANCHOR. A large, ſtrong, inſtrument of iron, crooked at one end, and formed into two barbs, reſembling a hook; faſtened at the other end by a cable, of the utmoſt utility at ſea, and in navigable rivers, to retain, and faſten veſſels of burden. Travellers tell us of people in the Indies, who make uſe of wooden anchors in their navigation; but the inhabitants in the iſle of Ceylon, in lieu of anchors, uſe ponderous round ſtones; and in ſome places a kind of wooden machinery is uſed, loaden with ſtones.

The parts of an anchor are, firſt, the ring, into which the cable is faſtened; 2d, the beam, or ſhank, which is the longeſt part of the inſtrument; 3d, the arm, which runs down into the ground; at the end of which is the 4th, the fluke, or palm, being that broad and picked part, with its barbs like an arrow head, which faſtens into the ground; 5th, the ſtock, a piece of wood faſtened to the beam, near the ring, ſerving to guide the fluke, ſo that it may fall right, and fix into the ground; though nothing in the whole inſtrument is moveable except the ring.

There are ſeveral kinds of anchors: 1. The largeſt is called the ſheet anchor, and is never uſed but in violent ſtorms, to prevent the ſhip from driving aſhore. 2. The two bow anchors, or bowers; called the firſt and ſecond bower, or beſt and ſmall bower, which are leſs than the ſheet anchor, being uſed for ſhips to ride in a road or harbour. 3. The kedger, or redger, which is a ſmall anchor, with a hauſer faſtened to it from the ſhip, dropped in the middle of the current of a river, by which means her head is winded about. 4. The grapnel, uſed for a ſmall ſhip, boat, or galley, without ſtocks, and having 4 hooks, or hold-faſts. 5. The ſtream-anchor, which is a ſmall one, faſtened to a ſtream-cable, for a ſhip to ride in gentle ſtreams, and in fair weather.

The goodneſs of the anchor is a point of the greateſt importance, the ſafety and conſervation of the veſſel depending principally upon its utility: the metal ſhould be neither too ſoft nor too brittle; for which reaſon, it is ſaid, that, to ſucceed in the fabrication, there ſhould be a compound of both kinds of iron; particularly the Spaniſh and Swediſh iron, becauſe the former is ſoft, and the latter brittle; but if the brittle is uſed alone, the anchor is liable to break, and the ſoft is too apt to ſtraiten.

The anchor of a large heavy ſhip ſhould be leſs, in proportion, than that of a ſmall light one, according to Aubin, in his dictionary of Marine, printed at Amſterdam in 1702; becauſe the ſmall veſſel, upon account of its levity, has not an equal ſtrength of reſiſtance with the large one; the defect whereof ought to be ſupplied by the weight of the anchor.

This author alſo exhibits a table, extracted from a Flemiſh writer, ſhewing how the weight and make of an anchor ſhould be regulated, according to the inner breadth of the ſhip; by which it is apparent, the beam or yard of an anchor ſhould be in length two fifths of the breadth of the veſſel; which he particulariſes from a ſhip 8 foot broad, proceeding, from foot to foot, to one 45 in breadth, according to the following table.

Breadth of the veſſel.	Length of the anchor.	Weight.
Feet.	Feet.	lb.
8	3 $\frac{1}{5}$	32
9	3 $\frac{3}{5}$	47
10	4	64
11	4 $\frac{2}{5}$	84
12	4 $\frac{4}{5}$	110
13	5 $\frac{1}{5}$	140
14	5 $\frac{3}{5}$	175
15	6	216
16	6 $\frac{2}{5}$	262
17	6 $\frac{4}{5}$	314
18	7 $\frac{2}{5}$	373
19	7 $\frac{3}{5}$	439
20	8	512
21	8 $\frac{2}{5}$	592
22	8 $\frac{4}{5}$	681
23	9 $\frac{1}{5}$	778
24	9 $\frac{3}{5}$	884
25	10	1000
26	10 $\frac{2}{5}$	1124
27	10 $\frac{4}{5}$	1259
28	11 $\frac{1}{5}$	1405
29	11 $\frac{3}{5}$	1562
30	12	1728
31	12 $\frac{2}{5}$	1906
32	12 $\frac{4}{5}$	2097
33	13 $\frac{1}{5}$	2300
34	13 $\frac{3}{5}$	2515
35	14	2742
36	14 $\frac{2}{5}$	2986
37	14 $\frac{4}{5}$	3242
38	15 $\frac{1}{5}$	3512
39	15 $\frac{3}{5}$	3796
40	16	4096
41	16 $\frac{2}{5}$	4426
42	16 $\frac{4}{5}$	4742
43	17 $\frac{1}{5}$	5088
44	17 $\frac{3}{5}$	5451
45	18	5832

Weighing ANCHOR, is the drawing up the anchor out of the ground it had been caſt into, in order to ſet ſail, or quit a port, road, or the like; which is uſually done by means of the capſtan, and ſometimes by a windlaſs.

ANCHORAGE, or anchoring ground, is a place fit to hold the anchor of a ſhip, ſo that ſhe may ride in ſecurity: the beſt ground for a ſhip to anchor in is ſtiff clay, or hard ſand; and the beſt riding at anchor is, when a ſhip is land-locked, and out of the tide.

Anchorage alſo denotes a duty taken of mercantile veſſels for the pool of the haven where they caſt anchor; becauſe, the ground in all ports and havens belonging to the ſovereign of the country, no man can let an anchor fall in any port without paying for it to the delegated officer. See *Port*.

This duty is paid in France by the captains, and maſters of merchant-ſhips, to the king, or admiral, for permiſſion to enter the ports and harbours of the coaſt of France; but this duty has no interference with average; nor is it binding to inſurers, being only to be paid by the maſter of the ſhip, purſuant to the ordonance of marine of 1681.

ANCHOVY, a little ſea-fiſh, generally uſed in ſauce. See *Anchovy Fiſhery*.

ANCIENT, or *Enſign*, is the flag, or ſtreamer, borne in the ſtern of a ſhip.

ANCOBER, or *Rio Cober*, a river on the coaſt of Guinea, in Africa.

ANCONA. A port-town in Italy, under the dominion of the Pope, ſituated in 15 deg. of E. lon. and 43 deg. 20 min. of N. lat. See *Italy*.

ANCONY, in the iron mines, a bloom wrought into the figure of a flat iron bar, about three foot long, with a ſquare rough knob at each end.

ANDAMAON, or *Andoman* iſlands, otherwiſe called the *Archipelago* of Andamaon, are Indian iſlands ſituated in the bay of Bengal, in E. lon. 94 deg. and between 10 and 15 deg. N. lat. comprehending the iſlands of Andamaon proper, Low iſland, Cocos, Marcondao, High iſland, Iſle de Torre, Crita iſle, Carnicular, and Poſſa, with ſeveral other inferior iſlands on the coaſts of Martaban and the Siameſe. Such places as are inhabited in this archipelago, are in the poſſeſſion of a harmleſs inoffenſive people, living principally on rice, fruits, roots, and herbs, with which they furniſh the European ſhipping; as alſo with ſome groceries, as ginger, pepper, benjoin, and other drugs; but theſe people have been fabulouſly repreſented, by voyage writers, as cannibals; and even Monſieur Savary, through this uncharitable credulity, does not ſcruple to call them a race of the Anthropophagi, terming them ſavages only becauſe they are unacquainted with the luxury and depravity of Europeans,

and taxing them with treachery who have little opportunity of exhibiting a breach of fiducial truſt. See *India*.

ANDERO, St. A port-town in the province of Biſcay, in Spain, ſituated in 4 deg. 30 min. of W. lon. and 43 deg. 20 min. of N. lat.

ANDES *mountains*, run almoſt the whole length of South America, through the countries of Peru and Chili; being parallel to, and but a little diſtance from the Pacific ocean, and eſteemed the higheſt land in the world. See *Spaniſh America*.

ANDROS. An iſland of the Turkiſh archipelago. See *Turkiſh Iſlands*.

ANEE, or *Aſnée*. A corn meaſure uſed in ſome provinces of France, particularly in the Lyonnois, and Macconnois; and contains ſix buſhels; 14 $1\frac{8}{1}$ aneés, being one laſt, or ten quarters Engliſh meaſure.

ANEGADA. One of the Caribbee iſlands in America, ſituated in 63 deg. 5 min. of W. lon. and 18 deg. of N. lat.

ANGEIOGRAPHIA, is the knowledge, or deſcription, of all kinds of ancient inſtruments, veſſels, and utenſils, both domeſtic, military, and nautical; as alſo the conſideration of the different coins, weights, and meaſures, of the ſeveral nations.

ANGEL. A gold coin formerly current in England for 10 s. but now out of uſe, having its name from an angel repreſented on it; being 23 carats $\frac{3}{4}$ fine, and weighing 4 penny weights; of which there were alſo ſome coined in France, while the Engliſh were in poſſeſſion of Paris, in the reigns of Ch. VI. and Ch. VII. of France.

ANGELICA, called alſo *archangelica*, and *radix ſiriaca*, a medicinal plant, and one of the ingredients in Venice treacle. It is moſt frequently found in the mountainous parts of Bohemia, and the root is in moſt eſtimation, though the leaves are often uſed, which are of a darkiſh green, long, and indented; and the angelica ſeed is alſo of uſe, which is flat, like a lentile ſeed. The beſt angelica roots are large, long, and white within; they ſhould not be worm-eaten, and ſhould have a little bitterneſs of taſte. The angelica ſeed is uſed to make ſugar-plumbs, and the roots and branches are generally candied by confectioners.

Angelica water, is a compound water extracted from angelica roots.

ANGELO, St. A port-town of Apulia, in Naples, ſituated on the gulph of Venice, in 16 deg. 25 min. of E. lon. and 41 deg. 20 min. of N. lat.

ANGLESEA. A county of N. Wales. See *Britiſh Iſlands*.

ANGOLA. See *Guinea*.

ANGOURA, or *Ancyra*, a city of Aſiatic Turky, in the province of Natolia, ſituated in 33 deg. of E. lon. and 41 deg. 5 min. of N. lat. 150 m. E. of Conſtantinople. See *Turky*.

ANGUILLA, one of the Caribbee iſlands, ſubject to his Britannic majeſty. See *Britiſh America*.

ANHOUT, one of the Daniſh iſlands. See *Denmark*.

ANIAN, or *Ajan*, a ſtreight, ſuppoſed to lie between the N. E. of Aſia, and N. W. of America.

ANIAN. A country on the eaſtern coaſt of Africa. See *Ethiopia Superior*.

ANIAN, is alſo an iſland belonging to China. See *Chineſe Iſlands*.

ANJENGO, or *Anjingo*, a ſmall town, and factory, on the Malabar coaſt, and hither peninſula of India, belonging to the Engliſh Eaſt India company, and ſubordinate to the government of Bombay; whence their merchandiſe conſiſts principally in pepper and callicoes; the town being ſituated in 76 deg. of E. lon. and 7 deg. of N. lat. See *India*.

ANIL. The ſhrub from whoſe leaves and ſtalks indigo is prepared. See *Indigo*.

ANIME, or *gum animæ*, is a kind of gum, or reſin, uſed in perfumes, diſtinguiſhed by the names of the eaſtern and the weſtern: the latter diſtils on an inciſion made in a tree called *courbat*, frequently found in the Spaniſh provinces of America, which is tranſparent, of a very agreeable ſmell, and of a colour like frankincenſe: the former has three diſtinctions, the white ſort, a blackiſh kind like myrrh, and a pale ſort, which is dry and reſinous. This gum is alſo of uſe in pharmacy, but the apothecaries uſually ſell bdellium for gum animæ. See *Bdellium*.

ANNINGA. A root growing in the iſlands of the Antilles, of uſe in refining ſugar.

ANISE, or *Anil*, a greyiſh wood brought from the Eaſt Indies in thick logs, and called *aniſe* upon account of its ſcent, which is like that of the plant of the ſame name.

The aniſe-wood is not only uſed in inlaid works and turnery ware, but druggiſts ſell the ſeed, which they diſguiſe under different names, calling it ſometimes aniſe of China, Siberia, the Philippine iſlands, and the Indies; and, to give it more reputation, they moſt commonly call it the ſeed of *badian*, or *zingi*. This ſeed, which is incloſed within a very hard and very thick ſmall pod, reſembles that of the coloquintida, except only that it is of a tanned and ſhining colour, and of a pretty good ſcent. See *Coloquintida*.

The Chineſe uſe it to prepare their tea; and the Dutch, in imitation of them, put ſome into that liquor; as alſo into their ſherbet, pretending that it gives a more agreeable flavour.

ANISEED, or *Aniſe-ſeed*, a medicinal ſeed, or grain, produced by an umbiliferous plant of the ſame name, common in gardens; where the good aniſe-ſeed ſhould be new, large, clean, of a good ſmell, a poignant and aromatic taſte, and without bitterneſs.

The ſeed yields by diſtillation a white cordial oil, called *eſſence of anniſeed*, of a very ſtrong penetrating ſmell; and by the ſame diſtillation is procured a limpid water called *aniſeed water*.

ANKER. A liquid meaſure chiefly uſed at Amſterdam, being the fourth part of the aem, and containing 2 ſtekans; and each ſtekan making 16 mingles; ſo that the anker contains about 32 gallons Wincheſter meaſure.

ANNABASSES. A kind of covering, made at Roan in France, and in Holland, of $\frac{3}{4}$ and $\frac{1}{2}$ in length, and $\frac{3}{4}$ in breadth, ſtriped equally with blue and white, about an inch in breadth; which is one of the beſt commodities for the French Guinea trade, eſpecially on the coaſt of Angola.

ANNABOA, or *Annabon*, is a mountainous iſland near the coaſt of Guinea, ſituated in 2 deg. of S. lat. and 200 m. to the weſtward of Congo; having a convenient road for ſhips on the lee-ſide of the iſland, which is about 10 leagues in circumference, and abounds in cattle, hogs, poultry, oranges, cocoa-nuts, and ſuch other fruits as are uſually found in hot countries, with Indian corn and rice. The name of *Annabon*, or happy year, was given it by the Portugueſe, who diſcovered it on new years-day 1571, and who have ſtill the government and propriety of the iſland; but moſt of the inhabitants are negroes, brought hither from the continent of Africa, and their deſcendents; though there are alſo a mixed breed of mulattoes, and ſome Portugueſe. See the iſland of *St. Matthew*.

ANNAMABOE, an Engliſh factory, on the gold coaſt of Guinea, in Africa. See *Guinea*.

ANNAPOLIS. The capital of Maryland, in N. America, ſituated in 78 deg. of W. lon. and 39 deg. 25 min. of N. lat. See *Britiſh America*.

ANNAPOLIS. A town of Nova Scotia, ſituated in 64 deg. of W. lon. and 45 deg. of N. lat. See *Britiſh America*.

ANNEALING, the art of painting, or ſtaining, glaſs.

ANNUITY, a yearly rent, or revenue, paid either for term of life, or of years, or in fee, or for ever: the computation of its value belonging to political arithmetic.

Dr. *Halley*, in his obſervations on the Breſlau bills of mortality, ſhews, that it is 80 to 1 a perſon of 25 years of age, does not die in a year; that it is 5 $\frac{1}{2}$ to 1, a man of 40 lives 7 years; and that one of 30 may reaſonably expect to live 27 or 28 years: ſo great a difference is there between the life of man at different ages, that it is 100 to 1, 1 of 20 lives out a year, and but 38 to 1, that 1 of 50 lives 10. Whence, and from ſome other obſervations, he conſtructed the following table, ſhewing the value of annuities for every 5th year of life to the 70th.

Age.	Years purchaſe.	Age.	Years purchaſe.
1 — —	10,28	40 — —	10,57
5 — —	13,40	45 — —	9,91
10 — —	13,44	50 — —	9,21
15 — —	13,33	55 — —	8,51
20 — —	12,78	60 — —	7,60
25 — —	12,27	65 — —	6,54
30 — —	11,72	70 — —	5,32
35 — —	11,12		

Annuities, at this time, compoſe a conſiderable part of the national debt, and are now carried on as a kind of trading buſineſs. The firſt introduction of annuities in Great Britain, was owing to the exigences of the war carried on againſt France, ſoon after the revolution; when the government, in 1692, returned again to the practice of raiſing money for the current ſervice of the year, by mortgaging the public revenue for a term of years; and in this way they went further than any ſeſſion had done before; for, by this act, they charged beer, ale, and other liquors, with an additional exciſe for a term of 99 years, from the 25th of January 1692, and mortgaged it as ſecurity for the payment of 10 l. *per cent. per annum*, until the year 1700, and 7 l. *per cent.* afterwards, with the benefit of ſurvivorſhip, for the lives of the nominees, or 14 l. *per cent. per ann.* for a ſingle life to any natives or foreigners, that ſhould become contributors towards advancing the ſum of one million to the government before the 1ſt day of May 1693. As intereſt may be called the price of ready money, and as that price muſt always be higher in time of war than in time of peace, becauſe of the increaſed demand, it is ſurpriſing how miniſters that had any conſideration, could think of ſuch a method as this for raiſing money; for let the intereſt be ever ſo high, if a power of redemption be reſerved, it may be reduced as ſoon as peace is reſtored; but, by this irredeemable method, a high price is fixed upon the nation for a long term of years. A nation ſelling annuities at ſuch a time, is, like a gentleman ſelling his eſtate for half price, rather than to pay a little more than common intereſt upon a mortgage for a few years; yet this method was more obſtinately inſiſted on than any other; and it has been ſince continued ſo far as to become the principal part of the national debt; for the capital ſum on which annuities were granted by the government for ſeveral loans, chargeable upon the different branches of the revenue, and transferable at the bank of England, amounted, in 1751, to 18,402,472 l. 10 d. the capital for the old and new ſouth ſea annuities amounted to 27,302,203 l. 5 s. 6 $\frac{1}{4}$ d. and the capital on annuities, payable at the exchequer, amounted to 312,000 l. but, on the reduction of the national intereſt, ſeveral of theſe annuities were paid off. See *Fund*, *Bank*, *Eaſt India Company*, *South Sea Company*, *National Debt*, *Exchequer*, and *Lottery*.

As there were ſubſiſting a great number of different funds for annuities, eſtabliſhed at different times, and by different acts, which made it neceſſary to keep many different accounts, and, conſequently, was both troubleſome and expenſive; an act was paſſed, in the year 1752, intitled, An act for converting the ſeveral annuities therein mentioned, into ſeveral joint ſtocks of annuities, transferable at the bank of England, to be charged on the ſinking fund, and for other purpoſes therein mentioned; by which act, eight different ſtocks of annuities, amounting in the whole to 9,137,821 l. 5 s. 1 $\frac{1}{4}$ d. principal money, at 3 l. *per cent.* were, by ſubſcription, to be erected into one joint ſtock, from the 24th of June in the ſame year, and the annuities made payable out of the ſinking fund, and tranſferable at the bank. And, moreover, by the ſaid act, other ſix different ſtocks of annuities, amounting to 17,701,323 l. 18 s. 9 d. principal money, at 3 l. 10 s. *per cent.* until the 5th of January 1756, or the 7th of January 1758, and 3 l. *per cent.* afterwards were by ſubſcription to be erected into two joint ſtocks of annuities from the 10th of October 1752, and the annuities made payable out of the ſinking fund, and transferable at the bank; which two joint ſtocks laſt mentioned, were, after the 5th of April 1758 to be conſolidated into one, and the annuities to be payable and transferable as before: and for anſwering the ſaid annuities, all the taxes, or funds, formerly appropriated to their payment, were, from the ſaid 25th of June 1752, and the 10th of October enſuing, appropriated to, and made part of, the ſinking fund, after reſerving ſufficient to pay the annuities for lives at the exchequer, and other charges and incumbrances charged on theſe funds.

And, by two clauſes at the end of this act, it was provided, that the firſt and laſt ſubſcribed old ſouth-ſea annuities ſhould, after the ſaid 5th of April 1758, be conſolidated into one joint ſtock; and that, after the ſaid day, the firſt and laſt ſubſcribed new ſouth-ſea annuities ſhould be conſolidated into another joint ſtock: ſo that, from henceforth, the parliament will not be ſo much troubled with providing for deficiencies of old funds; and it is to be hoped, this will be a foundation for uniting all the taxes appropriated to the payment of the public debts, or to the civil liſt, into one fund, and directing the ſeveral payments to be made out of the ſame, which would render the buſineſs of the exchequer much leſs expenſive, leſs myſterious, and conſequently leſs liable to frauds and miſtakes; but this cannot be expected, whilſt the crown has the ſurplus of the duties appropriated to the civil liſt, over and above 800,000 l. *per annum*; becauſe that ſurplus would then go towards paying off ſo much of the public debt yearly.

ANODYNE *mineral*, or *mineral anodyne*. See *Cryſtal mineral*.

ANSEL. See *Auncel*.

ANSLO. A port-town of Norway, ſituated in 10 deg. 12 min. of E. lon. and 59 deg. 30 min. of N. lat. on a bay of the ſea in the province of Aggerhuys, 100 m. N. of Gottenburg, ſubject to Denmark.

ANTALIUM. A ſhell, in the form of a tube, an inch and a half long, and of the thickneſs of a quill, hollow within, furrowed with ſmall lines, larger at one end than the other, ſometimes whitiſh, ſometimes greeniſh, and incloſing a ſmall ſea-worm: but there is another kind of antalium, compoſed of ſeveral ſmall tubes joined together. Both are of the number of alcalies; and as ſuch, apothecaries uſe them in ſeveral galenical compoſitions.

ANTARCTIC, denotes the ſouth; ſo that the antarctic pole, is the ſouthern pole.

ANTARCTIC *circle*, is one of the leſſer circles of the ſphere, parallel to the equator, at the diſtance of 23 deg. 30 min. from the ſouth pole.

ANTEDATE, a fictitious date of a writing, or inſtrument, prior to the true date.

ANTHORA, a medicinal plant of the aconite kind, growing chiefly on the mountainous parts of Switzerland and Savoy, the root of which is reputed a cardiac.

ANTIBES. A port-town of Provence, in France, ſituated on the Mediterranean, in 7 deg. of E. lon. and 43 deg. 40 min. of N. lat.

ANTICHREIS, a pledge, mortgage, or pawn: in the civil law it is a covenant between the debtor and creditor, relating to the intereſt or loan of money, upon a mortgage or pawn.

ANTICHTHONES, in geography, are thoſe people who inhabit countries diametrically oppoſite to each other, in which ſenſe it amounts to much the ſame as Antipodes.

ANTICIPATION, the doing a thing before the limited time, by which a debt is ſaid to be anticipated, if diſcharged before the time of payment.

ANTICOSTE, an iſland lying before the mouth of the river St. Lawrence, in N. America, in 64 deg. of W. lon. and between 49 deg. and 52 min. of N. lat. ſubject to the French, but a barren country. See *French America*.

ANTIGUA, one of the Caribbee iſlands. See *Britiſh America*, under *Great Britain*.

ANTILLES iſlands, are the ſame as the Caribbees. See *Caribbee Iſlands*.

ANTIMONY. A mineral ſubſtance, or a metalline quality, having all the apparent characters of a real metal, excepting malleability. It is found in mines of all metal, but principally thoſe of ſilver and lead; though when found in gold mines it is of the higheſt eſtimation: it has alſo its own mines, particularly in Hungary, Tranſylvania, Germany, and ſeveral provinces of France.

The texture of antimony is ſomewhat peculiar, being full of

of little ſhining veins, or threads, like needles, and brittle as glaſs; though ſometimes there are veins of a red or golden colour intermixed, which is called *male* antimony, that without them being denominated *female*: but both ſorts are of general uſe in the diſſolution of metals, eſpecially in caſting of cannon balls; and it has alſo many medicinal virtues.

The common, or crude, antimony of the ſhops, is extracted by large crucibles from the mineral as dug out of the earth. Butter of antimony, is a white, gummous liquor, otherwiſe called *icy oil of antimony*, which is uſually prepared of crude antimony, and corroſive ſublimate: this butter may be converted into an oil, called alſo *rectified butter of antimony*; it alſo produces a white, ponderous powder, called *mercurius vitæ*, and powder of algarot: of butter of antimony is alſo prepared the bezoar mineral. There are alſo ſeveral other ſorts of prepared antimony; as the ceruſs, or calx of antimony; cinnabar of antimony; clyſſus of antimony; crocus, or liver of antimony; diaphoretic antimony; diaphoretic nitre of antimony; flower of antimony; glaſs of antimony; magiſtry of antimony; regulus of antimony; golden ſulphur of antimony; prepared antimony; and revivified antimony; all of which are produced, by different proceſſes, from the mineral.

ANTIPAROS, an iſland of the Turkiſh archipelago. See *Turkiſh Iſlands*.

ANTIPATHES, a name given to black coral. See *Coral*.

ANTIPODES, in geography, a relative term, underſtood of ſuch inhabitants of the earth as live diametrically oppoſite to one another; being thoſe who live in parallels of latitude equally diſtant from the equator, the one toward the north, the other to the ſouth, and under the ſame meridian, though 180 degrees, or juſt half of that meridian, diſtant from one another: ſo that they have the ſame degree of heat and cold, the ſame length of night and day, but at contrary times; it being midnight with one, when it is noon with the other, and the longeſt day with one when ſhorteſt with the other.

ANTISCII, in geopraphy, the people who inhabit different ſides of the equator; and who, of conſequence, at noon, have their ſhadows projected oppoſite ways.

Thus the people of the north are antiſcii to thoſe of the ſouth; the one projecting their ſhadows at noon towards the north pole, and the other towards the ſouth pole.

Antiſcii are frequently confounded with antoeci, who inhabiting oppoſite ſides of the equator, have the ſame elevation of the pole; and the antiſcii alſo ſtand contradiſtinguiſhed from periſcii.

ANTIVARI. A port-town of Albania, ſituated on a rock near the gulph of Venice, in 19 deg. 40 min of E. lon. and 42 deg. 10 min. of N. lat. ſubject to the Turks. See *Turky*.

ANTOECI, in geography, thoſe inhabitants of the earth who live under the ſame meridian, and at the ſame diſtance from the equator; the one towards the north, and the other to the ſouth: they have the ſame latitude and longitude, only of a different denomination; and they live in the ſame ſemicircle of the meridian, but in oppoſite parallels: ſo that they have preciſely the ſame hours of the day and night, but oppoſite ſeaſons; for when it is noon in the longeſt ſummer day with one, it is alſo noon of the ſhorteſt winter's day with the other.

ANTOLFLE of cloves, are ſuch as remain by chance on the trees, after the cloves have been gathered. The fruit thus left on the tree continue to grow, and become an inch thick; and with them a hard and black gum is found of an agreeable ſcent, and very aromatic taſte; for which reaſon the Dutch call them the *matrix cloves*, or *mother of cloves*. They are pretty much uſed in medicine; but apothecaries frequently ſubſtitute in their place the ordinary cloves; tho' the virtues, and ſcent, are very different. See *Cloves*.

ANTONIO, one of the Cape Verd iſlands, ſituated in 26 deg. of E. lon. and 18 deg. of N. lat. See *Cape Verd Iſlands*.

ANTWERP. A city of the Auſtrian Netherlands, ſituated in 4 deg of E. lon. and 51 deg. 15 min. of N. lat. See *Auſtrian Netherlands*.

APENRADE. A town of Jutland, ſituated in a bay of the Baltic ſea, in 10 deg. of E. lon. and 55 of N. lat. ſubject to Denmark. See *Denmark*.

APHRONITRE. A kind of natural ſaltpetre, commonly called *rock ſaltpetre*. See *Saltpetre*.

APIARY, a place where bees are kept.

APOTHECARY, a perſon who profeſſes the practice of pharmacy; or that part of phyſic which conſiſts in the preparation and compoſition of medicines.

There are reputed to be about 1300 apothecaries in and about London; but theſe, as well as all the apothecaries in England, are obliged to make up their medicines according to the formulas preſcribed in the college diſpenſatory: beſides, their ſhops are ſubject to the viſitation of the collegiate cenſors, who are empowered to deſtroy ſuch medicines as they diſapprove.

Apothecaries company of London, was incorporated with that of the grocers, by James the Firſt, the 9th of April 1606; but, this not anſwering their expectation, they were ſeparated; and the apothecaries, by letters patent of the ſaid king, the 6th of December 1617, were incorporated by the appellation of *The maſter, wardens, and ſociety of the art or myſtery of apothecaries of the city of London*. At which time the maſters or ſhopkeepers of the trade, within the city and ſuburbs, only amounted to 104. The members of this company, who, by ſeveral acts of parliament, are exempt from ward and pariſh offices, are governed by a maſter, two wardens, and 21 aſſiſtants, with a livery of 144 members, whoſe fine is 16 l. and who have a beautiful hall in Black fryars, where they diſpatch their affairs. In this hall are contained two large laboratories; one for chemical, the other for galenical preparations. Here are likewiſe prepared vaſt quantities of the beſt medicines; not only for the uſe of the faculty, but likewiſe for others; eſpecially for ſurgeons of the navy, whoſe cheſts are furniſhed here with all uſeful and neceſſary medicines.

To this corporation belongs a ſpacious and beautiful phyſic garden at Chelſea, inriched with a great variety of plants, both domeſtic and exotic, which were firſt planted in the reign of King Charles the Second. For Charles Cheyne, eſq; then lord of the manor of that village, in the year 1673 demiſed to the company a ſpot of ground, containing 3 acres, one rood, and 35 perches, upon leaſe, for the term of 61 years, at the yearly rent of 5 l. which leaſe being to expire in 1734, Sir Hans Sloane, baronet, the lord of the manor, in the year 1721, granted the ſaid ſpot of ground for ever to the ſaid company, upon the conſiderations following: 1ſt, That the ſaid company ſhould pay a quit-rent of 5 l. *per annum* for the ſaid piece or parcel of ground, and for ever employ the ſame for a phyſic garden.

2dly, That the company ſhould annually deliver to the preſident and fellows of the royal ſociety, at one of their public meetings, 50 ſpecimens or ſamples of different ſorts of plants, well cured, and of the growth of the ſaid phyſic garden, till the number of ſuch ſpecimens amount to 2000. But, in caſe of non-performance, the ſaid parcel of ground or garden ſhould go to the preſident and fellows aforeſaid, to be held by them upon the ſame conditions; other than that the ſociety ſhould deliver the above-mentioned number of ſpecimens of plants, to the preſident and commonalty of the faculty of phyſic, of the city of London. And in caſe of non-performance of the ſaid conditions by the royal ſociety, then the ſaid ſpot of ground garden or ſhould devolve to the faculty of phyſic aforeſaid.

APPAREL. The habit or cloathing worn by any particular people or nation.

APPIOS, the ſeed of a plant brought from the Levant, particularly the iſland of Candia, whoſe ſtalks are very ſlender and reddiſh, and its bloſſoms are not unlike thoſe of rue; the ſeed, which is very ſmall, being of the number of the commodities ſold by wholeſale grocers.

APPLES, are ſeveral kinds of fruits, common in England, of which cyder is made. The cuſtom-houſe rate upon apples imported into Great Britain, are 4 d. the buſhel; 1 s. the barrel, containing 3 buſhels, and 3 s. the barrel for pippins or runnits. And, by the ſtatute of the 10th of Geo. II. an additional duty of 2 s. for every buſhel is to be paid by the importers before landing.

APPRAISER. A perſon who is a competent judge of appraiſing, or rating, valuing, and ſetting a price upon goods, for which they are properly authoriſed; and are ſometimes called ſworn-appraiſers, for their taking an oath to do juſtice between party and party.

APPRENTICE. One bound by covenant to ſerve a merchant, tradeſman, or artificer, a certain time, uſually ſeven years, upon condition of a ſufficient inſtruction from the maſter in the art or myſtery which he exerciſes.

Sir Thomas Smith ſays, that apprentices are a kind of bond-men, or ſlaves; differing only in this, that they are ſervants by covenant, and for a time.

By the ſtatute of 7th Ja. I. proper regulations are made for placing out apprentices by pariſh-officers.

By the ſtatute of the 2d and 3d of Q. Anne, it was enacted, That boys above ten years of age, chargeable to any pariſh, might, by the juſtices, mayors, and church-wardens, be bound apprentice to maſters of ſhips, till the age of twenty-one years; and that their ages ſhould be inſerted in their indentures. That the indentures ſhould be ſent to the collector of the cuſtoms at the port to which the maſter belonged, who ſhould regiſter and indorſe the ſame, on forfeiture of 5 l. and that the ſaid collector ſhould tranſmit certificates of their names, ages, and to what ſhip belonging, to the admiralty. That pariſh-boys bound apprentice, might, by conſent of the juſtices, be turned over to the ſea-ſervice for the remaining time; but that their indentures of aſſignment ſhould be regiſtered. That the counterpart of their indentures ſhould be ſealed and executed in the preſence of, and atteſted by, the collector and the officer who brought them; which officer ſhould tranſmit ſuch counterpart to the church-wardens. That ſuch boys ſhould not be impreſſed, nor liſted into her Majeſty's ſervice, till they were eighteen years of age. That ſhips from 30 to 50 tons ſhould take one ſuch apprentice, from 50 to 100 tons two ſuch, and one other for every 100 tons more. That the maſters refuſing to take them accordingly, ſhould forfeit 10 l. That the maſters, after their arrival, and before clearing, ſhould certify to the collector the number of ſuch apprentices aboard. That the collectors ſhould tranſmit an account of all ſuch apprentices to the quarter-ſeſſions, when required, on forfeiture of 5 l. That the collectors ſhould inſert at the bottom of the cocket, the number of men and boys on board each ſhip, deſcribing ſuch apprentices; particularly their names, ages, and dates of their indentures; and that perſons voluntarily binding themſelves to the ſea-ſervice, ſhould not be impreſſed for three years, and have protections accordingly.

By an act paſſed in the 8th year of Queen Anne, it was enacted, That there ſhall be paid the duty of 6 d. upon every pound of every ſum of 50 l. or under, and 12 d. for every 20 s. of every ſum more than 50 l. which for five years ſhall be paid or agreed for, in the putting out any clerk, apprentice, or ſervant, to learn any profeſſion, trade, or employment, and proportionally for greater or leſſer ſums, to be paid by the maſter or miſtreſs; which duties ſhall be tranſmitted into the hands of the receiver-general of the duties on ſtamps. That the full ſum given, or agreed to be given, with an apprentice, ſhall be written in words at length in the indenture, which muſt bear date on the day it was executed; upon pain that every maſter or miſtreſs offending in thoſe particulars, ſhall, for every offence, forfeit double the ſum given, or agreed to be given; one moiety to the crown; the other, with coſts, to ſuch perſon who will ſue within one year after the time limited for ſuch clerk or apprentice to ſerve his apprenticeſhip is expired. That, over and above the ſtamps requiſite for the indenture, another eighteen-penny ſtamp ſhall be provided; and all indentures executed within the bills of mortality, ſhall be brought to the ſtamp-office, where the duties are paid to the receiver-general; and, upon payment thereof, every indenture ſhall be ſtamped within a month after it is dated. But all ſuch indentures which ſhall be executed in any other part of Great Britain, are allowed two months for the ſtamp-duties; and, if the payment is made to a collector in the country, he ſhall endorſe a receipt of the money paid to him, and ſubſcribe his name; though every ſuch indenture ſo endorſed, if it be executed within fifty miles of London, ſhall, within three months after date, be brought to the head ſtamp-office, where it ſhall be ſtamped: but if it is executed at a greater diſtance from London, then ſix months are allowed for bringing it to the ſtamp-office. That indentures wherein the full ſum agreed on ſhall not be inſerted, or the duties not paid, or not ſtamped, or tendered to be ſtamped, ſhall be void; and the clerk, or apprentice, ſhall have no privilege of freedom, or uſing his trade. That money given to put out apprentices, either by pariſhes or public charities, ſhall not pay any duty. That forging theſe ſtamps, or any receipt for monies payable by this act, ſhall be felony without benefit of clergy. That where any thing ſhall be given to a maſter, not being money, the duty ſhall be paid for the full value thereof.

The above act was made perpetual by another paſſed the ſame year, and appropriated to the South Sea company as part of their fund: to which there was an additional clauſe, that if any maſter or miſtreſs ſhould neglect to pay the duties according to the rate impoſed on the apprentice-fee, ſuch perſon ſhould forfeit 50 l. one moiety to her Majeſty, and the other to the proſecutor. See *Stamp-duties*.

AQUA-*fortis*. A corroſive liquor, extracted from ſalt-petre, mixed with ſand, allom, or vitriol, which is uſed as a menſtruum to diſſolve ſilver, and is commonly held to have been invented about the year 1300; being of a variety of uſes among refiners, dyers, moſaic workers, colourers of ivory, book-binders, diamond-cutters, and engravers.

AQUA *marina*, a gem, or precious ſtone, of a ſea-green colour, from whence it has this denomination; which is found along the ſea-coaſts; is ſaid to vie with the amethyſt in hardneſs; and ſeveral of the lapidaries take it for the beryl. See *Amethyſt*, and *Beryl*.

AQUA *omnium florum*, in pharmacy, ſignifies the diſtilled water of cows-dung, when they are at graſs.

AQUA *regia*, or *aqua regalis*, an acid, corroſive ſpirit of water, ſerving as a menſtruum in the diſſolution of gold, from whence it is thus denominated, becauſe gold is vulgarly eſteemed the king of metals; but it is ſometimes called *aqua chryſulca*, and *ſtygia*. The baſis, or eſſential ingredient in *aqua regia*, is common or ſea ſalt, which is the only ſalt in nature that will operate on gold; and there are ſeveral ways of preparing it; for, in effect, the ſalt will not fail in its end, in what form ſoever applied: but the moſt general way is by mixing common ſalt, or ſal armoniac, or the ſpirit thereof with ſpirit of nitre, or with common aqua fortis, which is made of nitre and vitriol.

AQUA *vitæ* is commonly underſtood of what is otherwiſe called *brandy*, or ſpirit of wine, either ſimple, or prepared with aromatics, differently according to the different intentions: however, a diſtinction has been made between them, by appropriating the term brandy to what is procured from wine, or the grape, and aqua vitæ to that extracted after the ſame manner from malt.

ARABIA. That part of Aſia called *Arabia* is very extenſive, lying between 35 and 60 degrees of E. lon. and between 11 and 30 degrees of N. lat ſo that it lies between the 5th and the 14th N. climate, ſtretching itſelf from the N. W. to the S. E. and is ſaid to reſemble the head of an ax, being much broader on the S. E. than it is on the N. W.

This country is bounded by Paleſtine, Syria, and Diarbeck, or Meſopotamia, towards the north; by Eyrack Arabick, formerly Chaldea or Babylonia, and the gulph of Perſia, towards the eaſt; by the ocean towards the ſouth; and by the Red ſea, and the iſthmus which divides Aſia from Africa, towards the weſt; being 1200 miles long, and between 8 and 900 broad in the wideſt part, but ſcarce half ſo much in the narroweſt part towards the north. It is uſually divided into three parts, according to the nature of the reſpective ſoils: 1. Arabia Felix; 2. Arabia Deſerta; 3. Arabia Petrea. Arabia Felix, the S. E. part of it, contains at leaſt four parts in five of the whole; Arabia Deſerta, which lies to the northward, is the next in extent; and Arabia Petrea, which lies to the N. W.

N. W. on the iſthmus that divides Aſia from Africa, is much the leaſt. But the boundaries are very uncertain, or rather there are no bounds at all; becauſe the inland country is under the government of abundance of little emirs, or Arabian princes, who march from place to place, and encamp according as they find water and paſture for their cattle; nor is it eaſy to ſay which part of the country belongs to one of theſe diviſions, and which to another; tho', as to thoſe princes who live in maritime towns, their dominions may be ſet out with a greater degree of certainty.

There are but few ſprings, and ſcarce any conſiderable river in all Arabia, unleſs part of the Euphrates is included here, which divides Arabia Deſerta from Diarbeck or Meſopotamia; and the ſeas which encompaſs it on three ſides, are the Perſian gulph, the Indian or Ethiopic ocean, and the Red-ſea. As to the ocean which lies to the S. E. of Arabia, it is obſervable that there are no regular tides in it, and the current uſually ſets as the wind blows, except on the full or the change of the moon, and then for three or four days together it will ſet directly againſt the wind; and at thoſe times the water riſes eight feet perpendicularly upon the coaſt.

The wind blows on this coaſt from the S. W. and S.S.W. and ſo continues variable to the weſt, with hard guſts, and ſometimes rain, from the beginning of April to the middle or latter end of Auguſt; when it turns about to the eaſtward, blowing gently from that quarter until the latter end of March, with ſometimes land and ſea breezes, tho' very faint. But there is no bearing this coaſt from the beginning of April till the latter end of July; for then the wind blows hard from the S. S. W. to which all the harbours upon the coaſt are expoſed, and no ſoundings to be had ſix miles off the ſhore in many places.

The Red ſea lies to the weſtward of Arabia; at the entrance upon which from Egypt ſtands the town of Suez. Tor is the next port-town to the ſouthward, being about 140 miles diſtant from Cairo. Moubelen, Madian, Carzoka, and Aouz, are the next places to the ſouthward; but they are not ſo conſiderable as Jamboe, which lies in 25 deg. N. lat. in Arabia Deſerta, where there is a tolerable good harbour; but the entrance is very dangerous on account of the ſands; tho' it is now the port-town to Medina, being diſtant from it about four days journey.

Arabia Felix is almoſt as extenſive as the two others, and alſo equally ſurpaſſes them in opulence, the number of inhabitants, and degree of commerce, which is one of the moſt conſiderable in the eaſt. Its principal towns, and thoſe of greateſt repute for traffic in this diviſion, are Mocha, Aden, Chichiri, and Muſcat; together with Boſſora, at the head of this gulph: however, there are ſeveral other mercantile towns, to which may be added Mecca and Medina, places celebrated for their ſanctity by the Mahometans, and remarkable for their opulence; but the entrance of theſe two towns being prohibited to all profeſſors of Chriſtianity, under the penalty of death, of conſequence the Europeans are ignorant of their trade; it being proſecuted only by the Mahometan nations of India and Africa, by the way of Ziden, which is properly the port of Mecca, tho' 25 leagues diſtant from it; and by Mocha, which may be denominated *the Staple*.

Mocha, or Moco, is ſituated at the entrance of the Red ſea, in 45 deg. of E. lon. and 13 deg. 18 min. of N. lat. which is a town of the greateſt commerce in Arabia Felix, the trade of Aden being transferred hither about the middle of the 16th century, when the Turks made themſelves maſters of a conſiderable part of the coaſt adjacent to the Red ſea; an alteration which happened, as well upon account of the conveniency of the ſituation of Mocha, as upon account of the royal ſhip, which coming down annually from Suez, laden with valuable commodities for the Arabian traffic, ran too great a riſk in the Straits of Babel-mandel, through which there was a neceſſity of paſſing for Aden, formerly the port of its deſtination.

There is ſcarce a company of maritime commerce, either of Aſia, Europe, or Africa, but has ſome ſhipping at Mocha; from whence the general part of the coffee is brought for the conſumption of Europeans.

Beſides this maritime commerce, there is a very rich one carried on alſo by land with the caravans from Aleppo and Suez, which arrive there in the month of March. Theſe caravans, which are uſually two months on the road, and join at entering Arabia, make a part of thoſe that conduct the Mahometan pilgrims to Mecca and Medina; but then are compoſed only of merchants and merchandiſes. About a thouſand camels are employed for the carriage of theſe merchandiſes, with the proviſions and other neceſſaries of the merchants and troops, that march to defend them from the Arabians: but the riches of theſe caravans are not to be underſtood only of what the merchants make a declaration of at the cuſtom-houſe; becauſe almoſt as great a ſum is fraudulently concealed to avoid the duty, which is pretty conſiderable; for the merchandiſes of theſe caravans are velvets, ſatins, gold ſtuffs, woollen cloth, ſaffron, mercury, and vermilion.

The royal veſſel of Suez generally imports the ſame wares, beſides a conſiderable quantity of Ruſſia leathers: but as to its cargo in ſpecie, it has always a more conſiderable quantity of ſilver than what comes by land; tho' it is leſs rich in gold, bringing, one year with another, to the amount of 70,000 l. ſterling in ſilver, and only about 8000 l. in gold.

The merchandiſes which the caravans, the royal veſſel, and other foreign ſhips load at Mocha for their return, are partly the natural productions of Arabia, or the manufactures of the Arabs, and partly what came in ſhips from India, Africa, and Europe.

The Arabian manufactures afford but few conſiderable ſtuffs, and among them ſome cottons, for the moſt part pretty coarſe. Of the growth of Arabia, ſeveral perfumes are exported; as frank-incenſe, myrrh, and ambergreaſe; precious ſtones, eſpecially Baharan pearls, and cornelians; aloes, balſam, cinnamon, caſſia, dragon's blood, gum arabic, coral, ſeveral plants, either medicinal or odoriferous, and coffee, of which there is annually conſumed in India and Aſiatic Turky almoſt as great a quantity as is exported into Europe.

The coffee growing in the neighbourhood of Mecca is eſteemed ſome of the beſt in Arabia; and it is conveyed from thence to Mocha, by the port of Ziden; tho' there is an opinion, that the Arabs alter the ſeed of coffee by fire, to hinder its production in other places.

The commerce of Mocha, and other towns of Arabia, paſſes through the hands of the Jews and Banians, who are generally bankers, merchants, or at leaſt brokers.

The veſſels uſually ſeen in the harbour, are thoſe of India and the Perſian gulph; beſides a great number of European veſſels, from France, England, Holland, Denmark, and Portugal; as alſo merchants from Barbary, Egypt, Turky, and all Arabia.

The ſale of all kinds of merchandiſe is diſpatched there with great facility. The Europeans formerly paid *3 per cent.* for all they bought and ſold, and were privileged to ſtore them in private houſes without being obliged to carry them to the cuſtom-houſe. Other merchants paid *5 per cent.* beſides being ſubject to have their merchandiſe inſpected. But the immunities granted the Europeans turned afterwards to their prejudice; for perſons were appointed to make a report to the governor, of the quality of their merchandiſe, and to make them pay a duty according to their ſale.

The coins which are current at Mocha, are dollars of all kinds; but they abate *5 per cent.* on the pillar dollars, becauſe they are reckoned not to be of the pureſt ſilver; and the dollar-weight with them is 17 drams 14 grains. All their coins are taken by weight, and valued according to their fineneſs. The gold coins current here, are ducats of Venice, Germany, Turky, and Egypt. The comaſſees are a ſmall coin, which are taken at ſuch a price as the government ſets upon them; and they keep their accounts in an imaginary coin of cabeers, of which 20 are about 12 d. ſterling.

Their weights are the bahar, which is 420 lb. Engliſh; the faſſel, or 28 lb. whereof 15 go to a bahar; the maund, of which 10 go to a fraſſel; the fakea, of which 40 go to a maund; and the coffila, of which 10 go to a fakea.—Their dry meaſures are the madeeda, which is 3 pints

A R A

Engliſh; and they meaſure cloth and ſilk by the cubit, which is 24 inches.

The veſſels that go from Surat to the Red ſea, depart uſually about the month of March, and arrive at Mocha towards the end of April, or at leaſt before the 20th of the month of May; otherwiſe they cannot arrive there the ſame year, upon account of the high winds obſtructing the entrance of the ſea; when they muſt paſs the iſle of Socatora, and ſhelter themſelves at the Cape of Guardifeu, to avoid the impetuoſity of the currents all along the coaſts of Arabia.

Aden is ſituated in 46 deg. of E. long. and 12 deg. of N. lat. a little to the eaſtward of the Straits of Babelmandel, 600 miles S. of Mecca, and 60 miles E. of Mocha, having formerly all the advantages of commerce which Mocha enjoys at preſent. Both theſe towns belong to the Turks, who poſſeſſed themſelves of the firſt in 1538, ſome time after the great Albuquerque, ſo famous for the conqueſts the Portugueſe made under his command in India, had unſucceſsfully attacked it, tho' with a conſiderable army. It is the only port the Grand Signior has on the Arabian ſea, and the largeſt and beſt fortified town he poſſeſſes in Arabia; the ſituation being adjacent to the mouth of the Red ſea, makes it a common harbour to the two ſeas, which is what affords it a tolerable commerce, tho' much inferior to that of Mocha.

Chichiri, ſituated in 14 deg. 50 min. N. lat. and nearer the Perſian gulph than Aden, is the firſt town of Arabia Felix wherein the Dutch have carried on a trade, having viſited this place before they went to Aden. The town of Chichiri has an emir, or Arabian ſultan, for its ſovereign, who pays the Grand Signior a kind of annual tribute of about 700 l. ſterling, and 20 lb. of ambergreaſe.

This port is generally reſorted to by veſſels from India, Perſia, Ethiopia, the Comorra iſlands, Madagaſcar, and Melinda. The Portugueſe were alſo formerly eſteemed there, and carried on a good trade; tho' now they are ſcarcely known.

The commodities for this place are much the ſame as thoſe at Aden; tho' it ſhould be obſerved, in general, that ſpices are the moſt profitable commodities in the Arabian trade; becauſe the Arabs, who are extremely fond of them, ſeaſon every thing they eat very high.

The towns of Shahar, Haſwel, Dofar, Mirabat, Haſen, Harmin, and Coucreki, have ſome trade; but there is nothing conſiderable in the northern part of Arabia Felix, till you come to the Muſcat, or Maſcat, which is ſituated in the gulph of Ormus, under the tropic of cancer, and has the greateſt commerce of all the towns adjacent to the gulph; where the ſole fiſhery of pearls, in the months of June, July, and Auguſt, would be ſufficient to enrich it: beſides, it is the repoſitory of all the Arabian drugs and merchandiſe, which are tranſported from hence into Perſia, Egypt, Syria, India, and Europe. But no perſons are allowed to go aſhore, nor to paſs from one veſſel to another, after ſun ſet, and before ſun riſe, the better to prevent any clandeſtine traffic.

M. Lockhart, who was at Muſcat, ſays that the current coins were budgerooks and mamoodas; that the budgerooks are a mixed metal, not unlike iron, with a croſs on one ſide, and were coined by the Portugueſe when they were in poſſeſſion of Muſcat; tho' thirty of theſe budgerooks make but a ſilver mamooda of 8 d. value: Surat rupees go for three mamoodas and a half, and Spaniſh dollars at 7 mamoodas and a half: Venetians, Ibrahims, and other pieces of gold, are alſo current at Muſcat, where goods are commonly weighed by the maund, which is $8\frac{1}{2}$ lb. Engliſh weight; and the merchants in the town ſometimes weigh by the fraſſel and bahar, but moſt by the maund, which is different from that of Mocha; as are their weights for gold and ſilver, and fine goods.

Sor, or Sohar, is a town ſituated ſomewhat higher than Muſcat, on the gulph of Ormus, having a conſiderable trade; the inhabitants careſſing ſtrangers, and the harbour being very convenient; by which inducements ſeveral veſſels are ſeen there, eſpecially from Muſcat, Gombroon, Surat, and ſome places of the Ethiopian coaſt; the commodities being butter, myrrh, oliban, aloes, and all other Arabian drugs.

Julphar and Elcatif are places of ſome trade; but there is nothing remarkable on the gulph of Boſſora, till we come to the city of Boſſora, which is ſituated in 4 degrees of E. longitude, and 30 degrees of N. latitude, in the province of Eyraca Arabic, upon a river called by the Arabs Schat-el Arab, about 40 miles N. W. of the gulph of Perſia. This city is about 12 miles in circumference, and on account of its riches and commerce was for a long time diſputed by the Arabs, Perſians, and Turks; by which laſt it was conquered, in 1668, whilſt Perſia was engaged in a war with the Mogul: ſo that now it has a free port, governed by an Arabian prince, who is tributary to the Grand Signior. Boſſora has reaped an advantage, as well as Bander Abaſſi, from the deſtruction of Ormus, and at preſent ſhips from all the nations of Aſia and Europe are ſeen there, eſpecially of the latter, the Engliſh and Dutch having conſiderable factories there eſtabliſhed by their two India companies, either for their traffic, or for the more ſpeedy diſpatching letters by land to England and Holland, which they do by the way of Damaſcus and Aleppo, employing for this purpoſe Arabs, who are generally very light, and expeditious couriers on foot.

The Portugueſe have alſo a factory here, but with little or no buſineſs to tranſact; for the principal commerce paſſes almoſt entirely thro' the hands of the Indians, Perſians, and Armenians.

Beſides the trade of Boſſora with Bander-Abaſſi, and that with the Indians, Moors, and Europeans, it has a conſiderable one with Bagdat, not very far from it, which enjoys the conveniency of the Tigris for receiving the goods of Boſſora, as alſo with Aleppo, and the reſt of the Turkiſh Aſiatic empire, from whence caravans come, whereof a part is deſtined for Boſſora.

Among the things which make its commerce flouriſhing, may alſo be reckoned the paſſage of Perſian pilgrims to Mecca, who uſually take this route; wherein they not only pay great duties to the Turkiſh baſha, but alſo leave, either by exchange or ſale, ſeveral parcels of goods, wherewith their little caravans are moſt commonly loaded.

Laſtly, Boſſora is enriched, and receives no ſmall advantage from the frauds committed in Perſia with regard to foreign coins; which, being of a better alloy than thoſe ſtruck in the country, are ſent to Boſſora by the connivance of the ſultan or baſha of Gombroon, who has his ſhare in this contraband commerce.

The Arabs who live in towns, are a very inconſiderable number, compared with thoſe that live in tents, who are called *Bedouins*, being a people of no fixed habitation, but poſſeſſed of large flocks and herds of camels, ſheep, and goats, with which they rove from one part of the country to another, where they can find paſture and water for their cattle; and, when they have deſtroyed all the forage, they load their goods and baggage on their camels, with their wives and children, and march on in ſearch of freſh paſture.

Whether the Arabs are naturally inclined to that roving ſort of life they have always been remarkable for; or whether the nature of their country requiring frequent removals, on account of its ſterility, and the ſcarcity of water in the deſerts, puts them under a neceſſity of wandering from place to place, is not very material to inquire: but as they have lived in this manner for ſo many ages, it is probably as agreeable to them as a more ſettled life is to the reſt of the world. But theſe people are not more remarkable for rambling, than they are for thieving, both by ſea and land; and that not in ſmall parties, but by public authority, in a manner, with their princes at the head of them. They have taken ſeveral Engliſh veſſels which they found weakly manned at ſea. They have even cut them out of the very road at Gombroon, on the coaſt of Perſia, in the night-time; and have, more than once, defrauded and robbed the Engliſh merchants of their goods, who came to trade with them at Muſcat.

It is very rare that any caravan of merchants paſſes over the deſerts, but they loſe part of their goods: for the Arabian emirs, and princes themſelves, extort money from them; tho' they do not take all, and ſo may be deemed to have more juſtice than other robbers. And indeed there is ſomething to be ſaid for thoſe Arabian princes; becauſe

because the country belonging to them, they might refuse to let the caravans pass through their territories at all, and possibly take what they impose upon caravans, by way of duty or toll; which seems probable, as the sums are not very large; tho', if they were, it would discourage the caravans from coming that way; and as to private robberies, no country can be answerable for them. However, their depredations at sea seem most inexcusable, where nothing but a superior force can protect European merchants against them.

There are no roads laid out in Arabia; but the caravans travel over sandy deserts, where there is no manner of track, guiding themselves by a compass, as at sea, or else by the stars; for they travel chiefly in the night, on account of the heats; and people chuse to travel with the caravans, in which are frequently 2 or 300 men, and perhaps 1000 beasts of all kinds, in order to secure themselves from the thievish Arabs.

Before a caravan sets out, the merchants elect among themselves a caravan-basha, or captain; who appoints the order of the march, and the places they are to lodge at; and, with the principal men in the caravan, adjusts any differences that arise in the way. But it is an employment, it seems, that no honest man is fond of; for being impowered to pay and compound for several small duties in the countries through which they pass, their fidelity is generally suspected. The merchants usually ride upon horses or mules, and those who cannot be at that expence, on asses; it being very tiresome riding upon a camel when he goes a foot-pace, but pleasant enough when he is put into a trot, which is a pace the caravans seldom go, because the camels are heavy loaden.

The Arabians of the inland country are divided into tribes, and their tribes into families; every tribe having its sheik, and every family its sheik or captain. The sheik el kebir is the prince or monarch of the tribe, and invested with a supreme civil authority. The offices of the sheiks are hereditary; but when a sheik of a family dies without children, the family chuses another, with the leave of the sheik el kebir or sovereign.

The Arabian kingdoms which lie upon the coasts, some of whose boundaries appear to be of a very large extent, have their monarchs, styled xerifs, as the xerif of Mecca, others called iman; but both signify the office of a priest as well as king; as the caliphs of the Saracens, the successors of Mahomet, were, till conquered by the Turks.

As to the form of the Arabian government and laws, their monarchs are absolute, both in spirituals and temporals, and their succession hereditary; but they have no other laws than what are to be found in the alcoran, and the comments upon it.

They have no regular militia by land; but the kings command both the purses and persons of their subjects, whenever they see fit. The most potent monarch by sea, is the king of Oman or Muscat, who is become very formidable, not only to the Asiaticks, but to the Europeans themselves. They are always at war with the Portuguese and Danes; and if an English vessel comes in their way, if she is not a ship of force, they will not scruple making a prize of her. Mr. Lockhart informs us, there were no less than fourteen sail of men of war in the mole at Muscat when he was there, besides twenty merchantmen; that one of their men of war carried 70 guns, and none of them less than 20; but the biggest of them would not have made an English fourth rate, their ports being as close as they can well set their guns by one another. There were at the same time fifteen or sixteen sail of their men of war cruising abroad, which were expected home in the S. W. monson, when it usually blows hard; for tho' they are always full of men, they cannot endure bad weather. Their colours are red, which they display in streamers and pendants at every yard-arm and mast-head, and other remarkable parts of the ship, which make their fleets look exceeding fine. But they have scarce any timber of their own growth fit for shipping; so that their ships are built at Surat, or at the mouth of the river Indus; and many of them are prizes taken from other nations.

ARABIAN *gulph*. See *Red sea*.

ARABIC *gum*, or *Gum Arabic*, called also Thebaic, Saracenaic, Babylonic, and Acanthine, from the places or trees which produce it, is the juice of a little tree growing in Egypt, of the cassia kind, called in Latin *acacia vera*. It is very transparent, glutinous upon the tongue, almost insipid to the taste, and twisted somewhat in manner of a worm; being a gum of much estimation to stop the pores, blunt the points of too pungent medicines, and temper the acrimony of the trachea in coughs; but the druggists frequently sell gum senega for the gum arabic. See *Acacia*, and *Senega*.

ARACAN. The capital city of a small kingdom, situated in 93 deg. of E. lon. and 20 deg. 30 min. of N. lat. on the N. E. part of the bay of Bengal, in India, beyond the Ganges. See *India*.

ARACK, *Arrac*, or *Rack*. A spirituous liquor, imported from the East Indies, procured, by distillation, from a vegetable juice called *toddy*, which flows, by incision, out of the cocoa-nut tree.

Goa and Batavia are the principal places for arack. At Goa there are several kinds, single, double, and treble distilled. The double distilled, which is that commonly sent abroad, is but a weak spirit in comparison with Batavia arack; yet, on account of its peculiar and agreeable flavour, it is preferable to all the other aracks of India; and this is attributed to the earthen vessels used at Goa to draw the spirit; whereas they use copper-stills at Batavia.

The Parier arack made at Madras, as well as the Columbo and Quilone arack made at other places, being fiery hot spirits, are little valued by Europeans, and therefore seldom imported, tho' in much esteem among the natives.

There is another kind of arack made in Tartary, from the milk of mares, of an excessive inebriating quality. See *Spirituous Liquors*.

ARAINS. Striped or checked armorines, or taffetas, brought from the East Indies.

ARANNEA. A silver ore, found only in the mines of Potosi, or confined to that of Catamito. Its name is owing to the resemblance it bears to a spider's web, called in Latin *aranea*, and is composed of threads of pure silver, which appear to the sight as silver-lace burnt for separating the silk, being the richest of all silver ores.

ARARES. A name given by the Indians to that kind of fruit called in Europe *citrinæ mirobolans*; thought proper for purging the gall.

ARATE. A Portuguese weight, in use also at Goa and Brasil: but it is frequently called arobe, the name it bears in Spain; being much heavier than the Spanish arobe, which weighs but 25 lb. whereas this weighs 30 lb. See *Arobe*.

ARBE. An island in the gulph of Venice, situated in 16 deg. of E. lon. and 45 deg. of N. lat. subject to the Venetians. See *Italian islands*.

ARBITRATION, *Arbitrage*, or *Arbitrement*. The referring of a cause or quarrel to the decision of indifferent persons, under the quality and denomination of arbiters or arbitrators. This is a very laudable practice among the mercantile part of the British nation; for, in any dispute, two arbitrators are usually nominated by the contending parties; and, in case they cannot agree, a third is added, called an umpire, in whose decision both sides are obliged to acquiesce.

Such an amicable determination of mercantile controversies has been found so salutary in supporting the fiducial credit of this most valuable part of the community, that it has attracted the observation of the British legislature; and, by a statute 9th and 10th William III. it was enacted, That all merchants and others, desiring to end any controversy, for which there is no remedy but by personal action, or suit in equity, by arbitration, may agree that their submission of the suit to the award or umpirage of any persons shall be made a rule of any of the courts of record which the parties shall chuse; and a rule of court shall be thereupon made, that the parties shall submit to, and be finally concluded by, such arbitration or umpirage; and, in case of disobedience thereto, the party neglecting or refusing shall be subject to all the penalties of contemning a rule of court, and process shall issue accordingly; which shall not be stopped or delayed by any order of any other court, unless it appear on oath, that the arbitrators

or umpire misbehaved themselves, and that such award was corruptly or unjustly procured. That any arbitration, or umpirage, procured by corruption or under-means, shall be void, and set aside by any court of law or equity; so as such corruption or undue practice be complained of in the court where the rule is made for such arbitration, before the last day of the next term after such arbitration made and published to the parties.

ARBITRATION *of exchange.* See *Arbitration of Exchange.*

ARCADIA. A port-town of European Turky, situated on the W. coast of the Morea, in the Mediteranean, in 22 deg of E. lon. and 37 deg. 20 min. of N. lat. See *Turky.*

ARCANCON, or *dry tar*, a kind of resinous pitch, made of speckled incense, or liquor that issues from the pine-tree, by roasting it over a fire till it is almost burnt.

It should be dry, transparent, and deep in colour: black pitch is made with it; and some, but improperly, confound it with colophonia.

ARCANNE. A mineral, or kind of red chalk, called in Latin *rubrica fabrilles*, because carpenters use it to stain their lines for the marking of their timber: but there is a factitious arcanne made of burnt oker.

ARCANUM, literally signifies a secret; but there are standing officinal compositions in medicine, such as arcanum corallinum, which is a powder made from a preparation of red precipitate, by distilling it with spirit of nitre; arcanum duplicatum, which is extracted from the caput mortuum of aqua fortis; and the arcanum joviale, made of an amalgama of mercury and tin, digested in spirit of nitre.

ARCASSOUL. A medicinal drug found in China, and sent in great quantities to Batavia.

ARCHANGEL. A port-town of the province of Dwina, in Russia, situated in 40 deg. 12 min. of E. lon. and 64 deg. 30 min. of N. lat.

ARCHES, a name given by seamen to the Turkish Achipelago.

ARCHETYPE, coincides with original, or prototype; so, among minters, archetype is peculiarly used for the standard, or original weight, by which the other weights are to be adjusted and examined.

ARCHIPELAGO signifies a sea interrupted by a great num- of small islands; but is more commonly adapted to that part of the Mediterranean which formerly went by the denomination of the Egean sea, and is now generally called the *Arches* among mariners; though these islands of the Grecian archipelago are now in the possession of the Turks. See *Turkish Islands.*

The ancients were acquainted with no more than the archipelago of the Egean sea, which lies between Asia, Macedon, and Greece: but the voyages of the moderns to the East Indies, by the cape of Good Hope, and the discovery of America, gave them the knowledge of several others; as the archipelago of St. Lazarus, the Maldives, the Moluccas, the Philippine islands, the Marian islands, those of Mexico, and some others, which are treated of under their respective heads; as the archipelago of the Mediterranean is under the articles of *Turkish* and *Venetian Islands.*

ARCHITECT, a person skilled in architecture, or the art of building; who makes plans and designs of edifices, conducts the work, and directs the masons and other artificers employed therein.

The most celebrated architects are Vitruvius, Palladio, Scamozzi, Serlio, Vignola, Barbaro, Cataneo, Alberti, Viola, Inigo Jones, Bullant, and De Lorme.

Vitruvius reckons twelve qualities requisite to an architect; that he be docile and ingenious; literate; skilled in designing, geometry, optics, arithmetic, history, philosophy, music, medicine, law, and astrology.

ARCHITECTURE, the art of building, or of erecting edifices, proper either for habitation or defence; which is usually divided, with respect to its objects, into three branches, civil, military, and naval.

Civil architecture, called also absolutely, and by way of eminence, *architecture*, is the art of contriving and executing commodious buildings for the uses of civil life; as houses, temples, theatres, halls, bridges, colleges, portiicoes, and other buildings both of utility and ornament.

Architecture is scarce inferior to any of the arts in point of antiquity; for nature, and necessity, taught the primitive inhabitants of the earth to build themselves huts, tents, and cottages; from which, in course of time, they gradually advanced to more regular and stately habitations, with variety of ornaments.

The ancient writers represent the Tyrians as the first among whom architecture was carried to any considerable pitch, which they afterwards communicated to the Egyptians; these to the Grecians; and these again to the Romans; from whom, after several vicissitudes of fortune, in the declension of the arts, and the ravages of the Visigoths, it has, at last, descended to the politer part of the European nations, in all that beauty to which it arrived under the care of Vitruvius, in the reign of the emperor Augustus; and all that delicacy it received from the labours of Apollodorus, who erected the remarkable Trajan column, subsisting to this day: so that, by the improvement of the moderns, architecture is brought into the form of a mathematical art.

There are several arts subservient to architecture; as carpentry, masonry, paving, joinery, smithry, glaziery, plumbery, plastering, gilding, and painting; in which there are a great consumption of timber, stone, brick, tile, lime, lead, glass, iron, and other commodities.

Military architecture, or *fortification*, is the art of strengthening and fortifying places, to screen them from the insults of enemies, and the violence of arms; such as the erecting of forts, castles, and other fortresses, with ramparts, bastions, and other defensible compartments.

Naval architecture, or ship-building, is that which teaches the construction of ships, galleys, and other floating vessels for the water; with ports, moles, and docks, on the shore.

ARCTIC denotes the north; so that the arctic pole is the north pole.

ARDASSES, and *Ardassettes*, the coarsest of all Persian silks, being the refuse of each kind: in which sense are said the legis, the houssets, the chouss, and the payas ardassus, to denote the worst of these four sorts of Persian silks.

ARDASSINES, are very beautiful Persian silks, not inferior in fineness to the cherbaffis.

ARDRA, or *Ardres*, the capital of a country on the slave coast of Guinea, in Africa, situated in 4 deg. of E. lon. and 5 deg. of N. lat. near the river Lagos. See *Guinea.*

AREB, a money of accompt, used in the states of the Grand Mogul, especially at Amadabat, 4 of which make a crou; a crou is worth 100 lacs, and a lac 100000 rupees, or 12,500 l. sterl. so that the areb is about 5 s. sterling.

AREBON. A town situated in 5 deg. of E. lon. and 5 deg. of N. lat. on the slave coast, at the mouth of the river Formosa, in Guinea. See *Guinea.*

ARECA, or *Areck.* A remarkable fruit in the East Indies, whose trade and consumption is incredible; as being equally used by the rich and poor.

The tree that bears it is tall, straight, slender, and round; and the shell which incloses the fruit is smooth on the outside, but rough within, not unlike the shell of the coco: the kernel is about the bigness of a nutmeg, and when ripe is yellowish, and always very bitter, but never unpalatable.

The greatest use of the areca is to chew it with the leaves of beetle, mixed up with a red paste of sea-shells; for the juice of the areca is esteemed good for fortifying the stomach, and destroying the scurvy in the gums.

AREQUIPPA, a city of Peru, in S. America, situated in 73 deg. of W. lon. and 17 deg. of S. lat. See *Spanish America.*

ARGENTIERE. A small island in the Turkish archipelago, situated in 25 deg. of E. lon. and 37 deg. of N. lat. 60 m. E. of the Morea. See *Turkish Islands.*

ARGIL, or *Potters earth*, a fat viscous earth used by potters, sculptors, and silver-smiths; its colour being commonly grey, and sometimes red.

ARGOS. A port-town of European Turky, in the province of the Morea, situated on the bay of Napoli de Romania, in 23 deg. of E. lon. and 37 deg. 30 min. of N. lat. See *Turky.*

ARGOUDAN. A kind of cotton gathered in ſeveral parts of China, conſtituting part of the trade between the Chineſe of Canton, and the inhabitants of the iſland of Haynan.

ARGUN. A river of Tartary, in Aſia, which divides the Ruſſian and Chineſian empires.

ARICA. A port-town, ſituated in the province of Les Charcas in Peru, in 70 deg. 20 min. of W. lon. and 18 deg. 20 min. of N. lat. See *Spaniſh America*.

ARIDAS. A kind of taffety, manufactured in the E. Indies, from a kind of ſilk, or gloſſy thread, taken from ſome herbs, and plants, and therefore called *herb-aridas*.

ARINDRATO. A tree growing in ſeveral parts of the iſland of Madagaſcar, whoſe wood, when rotten, and put in the fire, exhales with a very agreeable ſmell.

ARISH. A Perſian long meaſure, containing 3197 Engliſh feet.

ARISTOLOCHIA, or *Birth-wort*, a plant whoſe root is of a medicinal quality, and is alſo uſed as an ingredient in Venice treacle. There are four kinds of ariſtolochia; the round, long, rampant or creeping, and the ſlender; but only the two former are uſed, which are both generally found in Languedoc in France, Spain, and Italy.

Beſides theſe, there are ſeveral other kinds of ariſtolochia in America, particularly one kind in Virginia, called *viperinum virginiæ* from its alexipharmachic quality, the roots of it being an antidote againſt the bites of venomous animals; though it is alſo uſed in malignant fevers, and the ſmall-pox.

Good ariſtolochium ſhould be dry and plump, without being wrinkled or withered, heavy, yellow within, and grey without.

ARITHMETIC, is the art of numeration, by which mercantile accompts are calculated with great exactneſs and facility.

The origin of this valuable art is very uncertain; hiſtory giving us no information of the author, or the period of its invention: but, in all probability, it muſt have taken its riſe from the introduction of commerce, and conſequently be invented among the Tyrians. Abraham, according to Joſephus, introduced the art of arithmetic from the Aſiatics among the Egyptians, who cultivated and improved it in ſo conſiderable a degree, that a great part of their philoſophy and theology ſeemed to have much dependence upon numbers. From Egypt arithmetic was tranſmitted to the Greeks, who handed it forwards, with great improvements, to the Romans, to whom the reſt of the Europeans are principally indebted for their information in this beautiful and beneficial art.

However excellent the ancient arithmetic may have been, it was much inferior to that of the moderns, for the ancients only conſidered the various diviſions of numbers; as is evident from the treatiſes of Nicomathus and Boethus; but arithmetic, under its preſent ſtate, is variouſly divided into different kinds, as theoretical, practical, inſtrumental, logarithmical, numerous, ſpecious, decimal, dynamical, tetractical, duodecimal, ſexageſimal, and others.

Political ARITHMETICK. See *Political Arithmetic*.

ARKLOW. A port-town of Ireland, in the county of Wicklow, and province of Leinſter, ſituated in 6 deg. 20 min. of W. lon. and 52 deg 55 min. of N. lat.

ARLET. A kind of cumin, which makes a pretty briſk trade in the Eaſt Indies, particularly at Surat, where it is of three kinds; the white, ſold for 8 mamoudis, the black for 3, and the ſmall arlet for the ſame price with the black; each mamoudi being 8 d. ſterling. See *Cumin*.

ARM, in geography, a branch of a ſea, or river; ſuch as the ſtraight of Meſſina, between Sicily and Naples; the Thracian Boſphorus, or ſtraight of Conſtantinople, which divides Europe from Aſia; and the Menai, which ſeparates the iſle of Angleſea from Carnarvonſhire. See *Æſtuary*.

ARM, in the ſea language, is underſtood of a ſhip that ſhe is armed, when fitted out and provided in all reſpects for war.

ARMADA, in Spain, ſignifies a fleet, or ſquadron, of capital ſhips of war; being a term given to the numerous, and ſtrong fleet, which, by the direction of Philip II, was fitted out in the ports of Spain, and, on the 19th of May 1588, ſet ſail from Liſbon to invade England: but though this naval armament conſiſted of 135 large ſhips, including as well the gallies and galleaſſes, as the ſquare built ſhips of the uſual burden, and galleons, four of which were larger than the reſt; and alſo comprehending forty ſmaller veſſels, for the moſt part tranſports and ſtoreſhips: on board of which were five regiments, containing 18857 ſoldiers, together with 7449 ſailors and other ſea-faring people, 220 Spaniſh noblemen, 350 volunteers with their ſervants, and 620 eccleſiaſticks, with attendants on the ſick, and other officers; the whole number of people on board this fleet, amounting to 28,293 men: yet, what the Spaniards oſtentatiouſly deemed invincible, was entirely ſubjugated and deſtroyed, by the bravery of Britiſh ſeamen.

ARMADILLA, is the denomination of a ſquadron of Spaniſh men of war in America, commonly conſiſting of 6 or 8 ſhips, mounting from 24 guns to 50, which are kept there by his moſt catholic majeſty, to prevent foreigners from negotiating with the Spaniards and Indians, both in time of peace and war: the commanders of theſe ſhips being not only empowered to take all the mercantile veſſels belonging to the ſubjects of Spain, as are found trading upon the coaſt without royal permiſſion, but alſo to ſeize and confiſcate ſuch veſſels belonging to the ſubjects of other powers, as ſhall be detected in carrying on the ſame illicit commerce. There is an armadilla in the ſouth-ſea as well as in the north-ſea; the former being generally ſtationed at Calao, the port of Lima, and the latter at Carthagena. See *Guarda Coſta*.

ARMAMENT, is ſometimes uſed for the place where arms and proviſions are laid up for a navy, and ſometimes for the navy itſelf.

ARMENIA, conſiſts of the modern Turcomania, and part of Perſia; having Georgia on the north; Curdiſtan, the ancient Aſſyria, on the ſouth; and Natolia, or the Leſſer Aſia, on the weſt, being ſubject to Turky and Perſia: but for its trade, ſee *Turky* and *Perſia*.

ARMENIAN *bole*, *Bolus Armenus*, or *Bole armoniac*, is a fatty medicinal earth, brought from Arabia, of a pale reddiſh colour. See *Bole*.

ARMENIANS, in reſpect of religion, a ſect, or diviſion, among the oriental chriſtians; thus called from Armenia, the country which they formerly inhabited.

The Armenians, ſince the ſubjugation of their country, by Schah Abas king of Perſia, have had no ſettled place of reſidence, but are diſperſed in ſeveral parts of Perſia, Turky, and Tartary; their migration has even extended through India, and in ſome parts of Europe, particularly Poland, where their principal employment is merchandize, in which they are more excellent negotiators than their fellow wanderers the Jews; and it is reported that Cardinal de Richlieu had a deſign to make an eſtabliſhment of them in France, for promoting the commerce of that country.

ARMENIAN *ſtone*, a kind of precious ſtone mingled with green, but without a gold vein, which is found in Tirol, Hungary, and Tranſilvania; where, on account of its colour, it is ſtiled *green of azure*, being uſed in inlaid work, and is ſuppoſed to be of ſome uſe in medicine.

ARMINGS, in a ſhip, are the ſame with waſte-clothes, being red clothes hung about the out-ſides of her upper-works, fore and aft, and before the cubbridge heads: there are ſome alſo hung round the tops, called the *top-armings*.

ARMIRO. A port-town of European Turky, in the province of Theſſaly, ſituated at the bottom of the gulph de Velo, in 23 deg. 30 min. of E. lon.

ARMOISIN. A kind of taffety, or ſilk ſtuff, of an indifferent quality, manufactured at Lyons in France, and ſeveral parts of Italy. There are half armoiſins made at Avignon, of a leſs price, and of an inferior quality, than the others: ſome are made of three threads; and ſome of all colours are brought from the Eaſt Indies, particularly from Caſſumbazar, by the way of Bengal.

'Tis pretended that the word has its derivation from the Italian *armerino*; or that the ſtuff has been ſo called, be-

cauſe coats of arms have been impreſſed upon the cloth in which they were folded.

ARMOISIN *of the Indies*, a taffety manufactured in the Eaſt Indies, but ſlighter, and of an inferior quality, than thoſe made in Europe: their colours, eſpecially the crimſon, and red, being uſually falſe, with little or no gloſs.

There are two ſorts of them; the arains, which are either ſtriped, or checked taffeties; and the damavars, which are flowered. Their length is from 7 ells to 24; the breadth being from ſeven ſixteenths to five ſixths.

ARMONIAC, or *Ammoniac*, a kind of volatile ſalt, of which there are two ſorts, the native and factitious; being of a different figure, but of ſimilar properties. The native ſal armoniac is ſubdivided into two other ſorts; but the beſt is only the urine of camels cryſtalized, and reduced into a white maſs, by the heat of the ſun on the burning ſands of Arabia, and ſeveral other dry and deſart places in Aſia and Africa, where theſe animals make their extenſive journies with caravans. It is white, and nearly reſembles common ſalt in taſte: it is very ſcarce; but when it is genuine ſome particles of the ſand, in which it was ſublimated by the heat of the ſun, may be diſtinguiſhed in it. The other ſal armoniac, which is not much more plentiful than the real ſort, is a kind of earth, or ſalt ſkum, prepared after the manner of ſalt-petre, and is found in ſome parts of the Eaſt Indies, particularly in old caverns and clefts of rocks, between Lahor and Trerbint.

Theſe two ſalts being ſo extremely ſcarce, and the neceſſity there is for them in many works, have occaſioned the chemiſts to counterfeit the native ſal armoniac; and it is of this artificial ſalt-petre that there is made ſo great a conſumption. This factitious kind is obtained from the urine of men and beaſts, by means of ſublimating veſſels, and is commonly brought from the Levant, Venice, and Holland, in pieces of different ſizes, and colours, but generally in form of the cover of a pot, weighing about 14 pounds; though the Engliſh chemiſts have ſeveral ways of preparing a ſal armoniac in imitation of this.

The beſt ſal armoniac is white, tranſparent, and free from filth. It has various uſes in medicine, and the diſſolution of metals; as alſo in dying: but there are ſeveral preparations of this ſalt in the modern pharmacy; as ſublimate of ſal armoniac, volatile ſal armoniac, flowers of ſal armoniac, martial flowers of ſal armoniac, and ſpirit of ſal armoniac, of ſeveral kinds.

ARMOURY, or *Armory*, a ſtore-houſe of arms, or a place wherein military habiliments are kept, to be ready for uſe. Of which there are armories in the tower of London, and all arſenals, citadels, and caſtles. See *Arms*.

ARMOURER. A manufacturer of military arms. See *Arms*.

ARMOURERS *company of the city of London*, were not only incorporated by Henry the Sixth, about the year 1423, by the ſtile or title of the maſter and wardens, brothers and ſiſters, of the fraternity or guild of St. George, of the men of the myſtery of armourers of the city of London; but he likewiſe greatly honoured them by becoming one of their members.

To this company is united that of the braſiers, who are jointly governed by a maſter, 2 wardens and 21 aſſiſtants; together with a livery of 80 members, whoſe fine is 15 l. and to whom belongs a convenient hall in Coleman-ſtreet, where they tranſact their affairs.

ARMS, are all manner of military weapons, offenſive and defenſive; the exportation of which are generally prohibited in trading countries, particularly in France: but the Dutch poſſeſs a conſiderable traffic from the purchaſe and ſale of arms, ammunition, and other warlike ſtores, which they import from Sweden, and ſell in vaſt quantities to moſt other nations; even to their neighbours, without any dread of their turning them againſt Holland; becauſe they are ſenſible, that were they not to receive them from Holland, they might be ſupplied elſewhere, and the Dutch diſappointed of the profits ariſing from this traffic.

ARMUYDEN. A port-town of the United Provinces, ſituated in the iſland of Zealand, at the mouth of the canal of Middleburg, in 3 deg. 35 min. of E. lon. and 51 deg. 30 min. of N. lat.

ARNO. A river riſing on the eaſtern confines of Tuſcany, which runs W. quite acroſs that duchy; and, having paſt by Florence, falls into the Tuſcan ſea, below Piſa.

AROMATIC, is underſtood of a drug, or plant, yielding a briſk, fragrant ſmell, and a warm ſpicy taſte; all of which have a tendency towards ſtrengthening the ſtomach and head.

ARON. A village of Perſia, remarkable for its ſilk ſtuffs. See *Perſia*.

ARRACAN. A ſmall kingdom of India. See *India*.

ARRAN. An iſland of Scotland, in the Firth of Clyde, between Cantyre and Cuningham.

ARRAS, formerly *Araxes*, a river which riſes in Georgia, in Aſia, and running S. E. joins the river Kur or Cyrus, the united ſtream diſcharging itſelf into the Caſpian ſea, between the province of Shirvan and Aderbeitzan in Perſia.

ARRAS. The beſt, or richeſt tapeſtry; ſo denominated from Arras, a town in Flanders, the place where it was originally made.

ARREST. The ſtopping or detaining of a perſon, by illegal proceſs, in order to make him pay, or be ſecurity for, a debt; in which ſenſe 'tis alſo applied to the detention of a ſhip.

ARRET. A proclamation, or law, which, among the French, is the ſame with an act of parliament in England.

ARRIVAL, the making of a port by a ſhip.

ARROBE, or *Arobe*, a weight uſed in Spain, Portugal, Goa, and in all parts of Spaniſh America. The Portugueſe uſe it alſo at Brazil, where, as well as at Goa, it is ſometimes called *arate:* but though all theſe arobes are alike in name, they are very different in weight.

The arrobe of Madrid, and of almoſt all the reſt of Spain, excepting Seville, and Cadiz, is 25 Spaniſh pounds; ſo that the common quintal of 4 arrobes, makes about 97 lb. Engliſh weight.

The arrobe of Peru, Chili, and other parts of Spaniſh America, is the ſame with the Spaniſh arrobe of 25 pounds, being uſed for weighing of the herb paraguay, whereof there is ſuch a conſumption, that Peru alone requires 75000 arrobes *per annum*.

The arrobe of Portugal is 32 pounds of Liſbon, and 4 arobes is a quintal, or about 98 lb. Engliſh weight.

ARROE. An iſland of Denmark, ſituated in the Baltic ſea, in 10 deg. 15 min. of E. lon. and 55 deg. 15 min. of N. lat. a little S. of the iſland of Funen. See *Denmark*.

ARROUGHCAN. An animal, found in Virginia, reſembling the caſtor, except that it feeds, and leaps on trees, like the ſquirrel.

The Engliſh ſet ſome value on its fur, which makes a part of their trade with the neighbouring Indians of this colony.

ARSCHIN. A long meaſure, uſed in China for ſtuffs; being 1 $\frac{5}{8}$ ell Engliſh.

ARSENAL, the public ſtore-houſe for arms and ammunition belonging to the crown, or government, of any fortified town, or city.

ARSENIC. A ponderous mineral ſubſtance, ranked in the claſs of ſulphurs, volatile and uninflammable; which gives a whiteneſs to metals in fuſion, and proves extremely cauſtic, or corroſive, to animals, ſo as to become a violent poiſon: of which there are divers kinds, as yellow or native; red; and cryſtalline or white.

Native, or yellow Arſenic, is of a yellow or orange colour, whence it is alſo denominated auripigmentum, or orpiment, chiefly found in copper mines, in a ſort of glebes, or ſtones, of different figures and ſizes; but the colour, though always yellow, admits of ſeveral ſhades and mixtures, as, a golden yellow, reddiſh yellow, and green yellow. See *Orpiment*.

Red Arſenic, is a preparation of the white, or cryſtalline, made by adding to it a mineral ſulphur, or ſulphurous ſcoria.

White, or cryſtalline Arſenic, is uſually drawn from the native yellow kind, by ſubliming it with a proportion of ſea-ſalt; being the ſpecies chiefly in uſe for real arſenic, which, according to report, is found native in ſome mines in Germany; but white and yellow arſenic are procurable from cobalt, and is practiſed in Hungary.

The

The ſmalleſt quantity of cryſtalline arſenic being mixed with any metal, renders it friable, and abſolutely deſtroys its malleability. Hence the refiners dread nothing ſo much as arſenic in metals; nor could any thing be ſo advantageous to them, were ſuch a thing to be had, as a menſtruum that would abſorb, or act on arſenic alone; for then their metals would be readily purified, without flying off or evaporating.

A ſingle grain of arſenic willl turn a pound of copper into a beautiful ſeeming ſilver; which hint many perſons have endeavoured to improve on for making of ſilver, but in vain, as it could never be brought to ſuſtain the hammer. The chemiſts furniſh ſeveral preparations of arſenic, which all turn, on repeated ablutions and ſublimations, to blunt the corroſive ſalts thereof, and change them into a ſafe medicine, after the manner of ſublimate: ſuch are ruby of arſenic, and the reſt; but it ſcarce appears worth the pains.

Regulus of arſenic is the moſt fixed and compact part thereof, prepared by mixing it with pot-aſhes and ſoap, diſſolving the whole, and caſting it into a mortar, upon which the heavieſt part falls to the bottom.

Cauſtic oil of arſenic is a liquor, like butter of antimony, prepared of arſenic, and corroſive ſublimate, which ſerves to eat off fungous fleſh, and cleanſe carious bones.

ARSENICAL *Magnet.* A preparation of antimony, with ſulphur and white arſenic.

ART. The ſkill or knowledge of doing or performing any thing regularly by proper inſtruments; and differs from a ſcience, which properly is the contemplation of the theory, or abſtracted relation that one thing bears to another; tho' theſe terms are frequently confounded.

ARTA, or *Larta.* A port-town of Epirus in European Turky, ſituated in 22 deg. of E. lon. and 39 deg. of N. lat. on a bay of the Mediterranean, 60 m. N. of Lepanto.

ARTIFICER. A worker at any handicraft-trade, or the practitioner of any mechanic buſineſs.

ARTILLERY. All ſorts of large fire arms, as mortars, cannons, bombs, petards, carbines, and muſquets, both for the military and naval ſervice. See *Ammunition*, *Arms*, and *Founder*.

ARTISAN, or *Artiſt.* One well ſkilled in any art, or a curious workman.

ARUBA. An iſland near the continent of Terra firma in America, ſituated in 69 deg. 30 min. of W. lon. and 12 deg. 30 min. of N. lat. ſubject to the Dutch. See *Dutch America*, under *United Provinces*.

ARZILLA. A port-town of the empire of Morocco, ſituated in 5 deg. 40 min. of W. lon. and 35 deg. 40 min. of N. lat. being 120 m. N. W. of Fez, and 15 m. S. of Tangier. See *Morocco*.

AS, at Amſterdam, denotes one of the diviſions of the pound advoirdupois weight; 32 aſes make 1 engel, 10 engels make 1 loot, and 32 loots 1 lb.; 100 lb. of Amſterdam being equal to 109½ lb. in London.

ASBESTINE. Aſbeſtine paper, or cloth, reſiſts the conſumption of fire, and receives a purification from it, being made out of the aſbeſtos, or lapis amianthus.

ASBESTOS, or *Lapis Amianthus.* An incombuſtible matter, ſuppoſed to be a kind of flax of the growth of the Pyreneans; which is alſo called *linum vivum*, *linum incombuſtibile.*

The aſbeſtos is, in reality, a kind of native foſſile, capable of being ſeparated into very fine filaments, brittle, yet ſomewhat ſupple; ſilky, and of a greyiſh ſilver colour, not unlike Venice talc; of which filaments may be had of different lengths, from one inch to ten. The ſtone is found within the incloſure of other hard ſtones, and is brought from the Archipelago, the Pyreneans, and Montauban in France; tho' it is alſo produced in Wales and Scotland.

Works of aſbeſtos were formerly highly prized, and of an equal value with thoſe of gold; none but ſovereign monarchs having napkins of this manufacture.

ASCENSION. An African iſland in the Atlantic ocean, ſituated in 17 deg. of W. lon. and 7 deg. of S. lat. lying almoſt in the mid-way between Africa, and Braſil in South

America, and, tho' uninhabited, is of great uſe to the Eaſt India traders that touch here; where they have a commodious harbour, and furniſh themſelves with tortoiſe or turtle on their return from India. See *St. Helena.*

ASCII. A geographical name given to thoſe people who live in the torrid zone, and, at certain times in the year, have no ſhadow, the ſun being vertical to them.

ASCLEPIAS, or white *Contrayerva*, is what botaniſts call hirundinaria, a plant very common in France; the root of it, to which are attributed the ſame virtues of the *contrayerva* of New Spain, is very ſmall, whitiſh, and ſomewhat reſembling that of the *azarum*; but that which is new and plump, with a poignant aromatic taſte, is beſt. See *Contrayerva.*

ASHES. The duſt or powder of wood, coals, or other combuſtible matter, which remains after the primary body is conſumed, by burning, or at leaſt diſſolved in its form, by violently looſening the coheſion of the parts together. They are properly the earth, and fixed ſalts of the fuel, which the fire cannot raiſe; all the other principles being evaporated in ſmoke, and are by the chemiſts denominated *calx.* But there are ſeveral ſorts of aſhes, as pot-aſhes, pearl-aſhes, wood or ſoap aſhes, weed-aſhes, and white-aſhes.

The aſhes of kali and fern are principal ingredients in making glaſs, and teſts for refiners. However, aſhes of other kinds are abundantly uſeful in phyſic, bleaching, and ſugar-works; but particularly in agriculture, making an excellent manure for cold and wet grounds.

Pot-aſhes are properly the lixivious aſhes of certain vegetables, uſed in the making of glaſs and ſoap; ſuch are the herb kali, called alſo ſalt-wort, or glaſs-weed, from its great uſe in glaſs-making. But pot-aſhes are alſo called cineres clavellati, making the baſis of ſalt of tartar, and moſt of the lixivial draughts, as chemiſts of late manage them for cheapneſs. Pot-aſhes is alſo a denomination popularly applied to all kinds of wood-aſhes, mixed together, for the manufacturing of green glaſs: but the beſt Engliſh pot-aſhes are thoſe made of the ſmaller common high-way thiſtle, tho' all thiſtles are good; and fern alſo makes excellent pot-aſhes. The aſhes of the Levant are generally uſed in making of ſoap and cryſtal, being produced from the burning of the rocket, an herb growing about St. John d'Acre and Tripoli in Syria; the former, which is in the greateſt eſtimation, is packed up in grey bags, and thoſe of Tripoli in blue.

The Engliſh and Dutch alſo make a conſiderable commerce of pot-aſhes, which they bring from about the Baltic ſea, uſing great quantities thereof in the preparation of their cloths, for the ſcouring of which thoſe aſhes are found very excellent; but aſhes are alſo reckoned among the commodities of Perſia, Barbary, and Italy.

By the ſtatute of the 2d and 3d of Edw. VI. white-aſhes are prohibited exportation from England, upon forfeiture of 6 s. 8 d. *per* buſhel, on account of their neceſſary uſe in the making of ſoap and ſalt-petre, and the dying and ſcouring of woollen cloth.

The quantity of foreign pot-aſhes annually conſumed in the making of ſoft ſoap in London is about 1400 tons, the value amounting to about 70,000 l. which is paid for in ſpecie; for which reaſon this ſhould have before awakened the attention of the Britiſh legiſlature, in encouraging the manufactory of pot-aſhes in the Britiſh plantations in America, where ſuch an undertaking may be effectually accompliſhed, provided there was no duty on the importation. And this ſeems the more reaſonable, when it is conſidered, that the clearing of lands in America will be a means of rendering it fitter for cultivation; employ a number of ſhips and ſeamen as carriers of this commodity; and it may be reaſonably expected, that, in return, the coloniſts will take off great quantities of the Britiſh manufactures; beſides, by this means Great Britain might reduce the ballance formed againſt her trade with the northern crowns.

For which purpoſe an act of parliament was paſſed in the year 1751, reciting, That the making of pot and pearl aſhes in the Britiſh plantations in America, would be advantageous to the trade of the nation, as great quantities

thereof

thereof were uſed in the making of ſoap, and other manufactures of the kingdom; which being chiefly furniſhed from foreign parts, the ſupply thereof was uncertain, and the price often exorbitant; it was therefore enacted, That the duties payable on pot or pearl aſhes made in and imported from the Britiſh colonies in America, into Great Britain, ſhould ceaſe. That if any perſon ſhould make an entry of any foreign pot or pearl aſhes, as of the product or manufacture of any of the Britiſh colonies or plantations in America, or ſhould mix any foreign pot or pearl aſhes with thoſe of the product or manufacture of the ſaid Britiſh colonies, with intent to evade the duties, he ſhould forfeit 5 l. for every ſuch offence, and all ſuch aſhes; and, in caſe of any mixture, the quantity mixed, both of foreign and Britiſh plantation product, or the value thereof, together with the caſks, or other packages, ſhould be forfeited, and might be ſeized and proſecuted, or the value thereof ſued for by any officer of the cuſtoms.

ASHLAR. A term among builders; by which they mean common or free ſtones, as they come out of the quarry, of different lengths and thickneſſes.

ASIA. One of the four principal diviſions of the terreſtrial globe, and the ſecond in eſtimation, is the moſt extenſive and moſt opulent of the three that compoſed the ancient continent; having its ſituation between 25 and 148 deg. of eaſtern lon. and between the equator and 72 deg. of N. lat. being 4800 miles long, and 4300 broad; bounded by the frozen ocean, or the ſea of Tartary, on the N.; by the Pacific ocean, on the E.; by the Indian ocean, on the S.; and on the W. by the Red ſea, the iſthmus of Suez, the Mediterranean, the Euxine ſea, the Palus Mæotis, the river Don, and a line drawn from that river to the river Tobol, and from thence to the river Oby, which falls into the frozen ocean.

The grand diviſions of Aſia, are, 1. Turky in Aſia; 2. Arabia; 3. Perſia, including part of Armenia, Circaſſia, Mengrelia, and Uſbec Tartary; 4. India within the Ganges, or the Mogulian empire; 5. India beyond the Ganges, comprehending the kingdoms of Acham, Ava, Arracan, Pegu, Siam, Malacca, Laos, Cambodia, Chiampa, Tonquin, and Cochin China; 6. China; 7. Tartary; 8. The Aſiatic iſlands, conſiſting of thoſe iſlands in the Archipelago and Levant, particularly deſcribed under the denomination of the Turkiſh and Venetian iſlands; beſides the oriental iſlands of the Indian ocean, of which the Marian or Ladrone, thoſe of Japan, Formoſa, the Philippines, Moluccos, Banda, Celebes, Sunda, Andoman, Nicobar, Maldivy, Ceylon, and Bombay, are the moſt remarkable; all of which are particularly deſcribed under their reſpective denominations.

Several of the inhabitants of this extenſive continent, eſpecially thoſe inhabiting the interior parts, and thoſe bordering upon the Tartarian ocean, are very imperfectly known to Europeans; the ſubjects of the Czarina being the only people, in theſe uncultivated tracks, acquainted with the nature of the commercial nations, and the advantages of a regulated ſociety; in which they have been receiving continual improvements, ſince the eſtabliſhment of the Ruſſian caravans from Peterſburg to China, by the great Czar Peter Alexowitz, who regulated the progreſs of theſe carriages ſo as to paſs regularly every year through a conſiderable part of thoſe dominions inhabited by a multitude of his rude, ignorant, and unciviliſed ſubjects.

The Europeans carry on a very opulent and advantageous commerce through the more civiliſed and frequented parts of the Aſiatic territories; which commerce was formerly engroſſed by the Venetians, Genoeſe, and other maritime powers in the Mediterranean, who purchaſed the merchandiſe of the eaſt at Alexandria, and the ports of Turky in the Levant, from whence they were diſperſed among the Europeans, by which thoſe maritime powers grew immenſely rich, and amazingly formidable. But the Portugueſe, in the year 1498, having diſcovered the way to India by the Cape of Good Hope, they immediately ſupplanted the commerce of the Venetians, and enjoyed this conſiderable traffic of the Indian continent till the year 1600, when the Engliſh and Dutch began their eſtabliſhments. Theſe three nations, the French, Spaniards, Danes, and Swedes, have ſeveral ſettlements and factories in different parts of the Aſiatic dominions; where they carry on ſuch a beneficial commerce, as ſerves to enrich all their private companies, and to convey many emoluments among the whole communities of their reſpective countries.

The principal commodities of Aſia are diamonds, and other precious ſtones, pearls, gold and ſilver, amber, gum, ſpices, drugs, fruits, grain, oil, arrack, opium, manufactures of ſilk and cotton, woollen and linen, wrought ſilk, gold and ſilver ſtuffs, raw ſilk, ſkins, and furs, China and Japan ware, carpets, camblets, muſlin, and calicoes. See *Eaſt India company*, and *Turky company*.

ASLANI, called alſo, but ſomewhat improperly, *aſſelani*, is the dollar, or Dutch piaſter, of great currency in all the ports of the Levant; for the Turks, who call a lion aſlani, give it this name upon account of its having a lion impreſſed on both ſides.

There are two ſorts of aſlani, that of Holland, and that ſtruck at Inſpruck. The Dutch piaſter is not only of a worſe ſtandard than that of Inſpruck, but if Sir John Chardin, ſo remarkable for his travels, and the agreeable and exact relations he has given of them is to be credited, the coin brought by the Dutch to the Levant has a conſiderable mixture of falſe pieces; and eſpecially their quarter-piaſters are wholly ſpurious, or have only one half of fine ſilver. But the Arabs, who take the lion for a dog, call them abukeſb; and the aſlani is worth about 120 aſpers, or 5 s. ſterling.

ASOPH. A city of Coban Tartary in Aſia, ſituated in 44 deg. of E. lon. and 47 deg. 15 min. of N. lat. near the mouth of the river Don.

ASPALATH, is the wood of a tree uſed in pharmacy; of which there are three ſorts; the firſt is blackiſh, and thought, with ſome foundation, to be nothing elſe than eagle-wood, whoſe ſcent is exceeding ſtrong. The ſecond is the wood of a ſmall thorny tree, heavy, and oleaginous; in taſte, ſharp and bitter; in ſmell, ſomewhat aromatic; in colour, purpled and variegated; it borders upon the virtues, ſmell, taſte, weight, and figure of aloes wood, and in the compoſition of medicaments they are frequently ſubſtituted for one another. The third is roſe-wood, which ſome confound with cypreſs.

Some naturaliſts add a fourth kind of aſpalath, whoſe bark is aſh-coloured, and the wood red: its ſcent, which is extremely ſtrong, affects the ſmell like caſtoreum; it ſhoots like the vine, and is ſomewhat prickly.

Several plants go under the ſame denomination, tho' they are a ſpecies of what is called *geniſta ſpartium*.

ASPER. A ſmall ſilver coin, current in all the ſtates of the Grand Signior, and worth about a halfpenny ſterling.

ASPHALTUM, or *Jewiſh Bitumen*, is ſo called from the lake Aſphaltites, or Dead ſea, in Judea; which riſes up in the nature of a liquid pitch, and floats upon the ſurface of the water like other oleaginous bodies, and is condenſed by degrees through the heat of the ſun, and its own ſalt.

The Jews formerly uſed it to embalm their dead; the Arabs gather it for pitching their ſhips; but Europeans uſe it in ſeveral medicinal compoſitions, eſpecially in Theriaca or Venice treacle; as alſo for a fine black varniſh, in imitation of that of China.

Aſphaltum is of a ſhining black, and ſo like the black pitch of Stockholm, that nothing but the bad ſmell of this pitch, and the hardneſs of aſphaltum, can ſhew the difference. It is adulterated ſometimes by a mixture of pitch, and this is what is called artificial piſaſphaltum: but it is alſo by the ſtench, and naſty blackneſs of this drug, that its cheat is diſcovered.

ASPHALTUM is likewiſe a kind of ſtone, or mineral matter, found in the valley of Lydim in Aſia, near the antient Babylon; and it has been lately diſcovered in the county of Neufchatel in Switzerland.

This mineral has ſeveral properties: mixed with other matters, it makes an excellent cement, incorruptible by air, and impenetrable by water; and from it an oil may be extracted, which preſerves ſhips from the detriment of water or worms, and much better than the ordinary compoſition.

ASPIC. A plant of the growth of Languedoc, Provence, and

and especially of the mountain of St. Baume in France, resembling garden lavender, and is called by botanists *lavendula mas*, *Spica nardi*, *Nardus Italica*, or *Pseudonardus*.

Oil of aspic extracted from the leaves and flowers of this plant, is inflammable, and chiefly in use among painters and farriers.

The true oil of aspics is white, and of an aromatic smell. It is the best dissolvent of sandarach; and thus it is easily distinguished from the counterfeit, which is only oil of turpentine, mixed with a small quantity of oil of petrol.

ASSA *dulcis*. A name sometimes given to benjoyn, or benzoin. See *Benzoin*.

ASSA-*fœtida*. A gum that filtrates, in the heat of summer, from a little shrub growing in India, Persia, Media, Assyria, and Arabia: tho' naturalists say, that the Persian distills from a tree which has leaves similar to those of a raddish.

This gum is first of a whitish colour, inclining to yellow, afterwards to red, and finally to violet. The offensive smell of it occasioned it to be called by the name of devil's dung. It is generally in lumps, and its goodness is discoverable from its colour and smell: a supportable smell and clear colour are the marks of its good qualities; but a black hue, and strong stench, denote the reverse.

Its chief use is amongst farriers; tho' it may likewise be of service in uterine disorders, and other medicinal cases.

ASSARABACCA. A plant whose leaves were formerly used as an emetic and cathartic; but its chief use is now to make snuff.

ASSAY. To examine, prove, or try a matter very exactly; as to assay silver or gold, is to melt a part of the whole mass or ingot in a very strong fire; which being weighed before put into the copple or melting-pot very exactly, and also after it comes out, the fineness of the whole is judged by this assay; for what is lost by this part so tried, is proportioned to the whole, which is accordingly pronounced more or less fine, as it loses more or less in the assay.

The assay of weights and measures is an examination of them by a proper officer called the *clerk of the market*, by weighing or measuring them with such as are very nicely adjusted, according to the custom of the place or standard appointed by statute. See *Coining*; as also *Gold* and *Silver*.

ASSAYER. An officer of the mint, established for the trial of gold and silver.

ASSESSMENT. A taxation, rating, or proportioning.

ASSETS. The effects of a deceased person, wherewith the heir or executor is to satisfy his debts.

ASSIENTIST. One that had a part in the stock of the Assiento company.

ASSIENTO. By this word is understood a company of commerce established for furnishing the Spanish dominions in America with negro-slaves, the word being originally Spanish, and signifying a farm. The first Assiento was a treaty, or contract, between the King of Spain, and the French Guinea company, whereby the latter were put in possession of this privilege, in consideration of a certain duty they were to pay his most Catholic Majesty for every negro thus furnished.

This contract of the French company, consisting of 34 articles, was signed the first of December 1702, and was to continue ten years; but with this clause, that the Assientists should be allowed two years more for the entire execution of what was stipulated for.

Among these articles, there were two principal ones; the first regarded the necessary complement of slaves, the second the duty to be paid to the King of Spain during the time of the Assiento; the complement of negroes was to be 3800 yearly, during the continuance of the war about the Spanish succession, and 4800 in time of peace; the duty was fixed at 33 piasters, and one third for every negro; of which the company previously advanced the greater part.

The peace of Utrecht, whereby Philip V. was acknowledged King of Spain, having terminated the war, and one of the articles of the treaty between France and England being the cession of the Assiento in favour of the latter, the Spaniards treated with the English for the furnishing of negroes.

This treaty, which was in several articles similar to that of the French company, but in several others much more to the advantage of the English Assientists, was to commence the 1st of May 1713, and terminate the 1st of May 1743.

The South Sea company undertook to supply Spanish America with negroes. The number the company was to send yearly was fixed to the amount of 4800, for which the same duty was to be paid as had been settled with the French, unless more than the stipulated number was imported, and then during the 25 first years, only half the duty was to be paid for the surplus.

The 42d article of this treaty, which was the last and most considerable of all, was not included in the treaty with the French; for this article permitted the English Assientists to send into the ports of Spanish America, every year the treaty was to subsist, a ship of 500 tons, laden with the same commodities the Spaniards usually send there, with a licence to vend the same conjointly with them at the fairs of Porto-Bello and Vera Cruz; which was a concession diametrically opposite to the antient policy, and usual jealousy, of the Spaniards, with regard to their American commerce.

Five new articles were afterwards added to this treaty of the English Assiento, for an explanation of some of the old ones. The first imported, that the execution of the treaty should not be reckoned to commence till the year 1714; the second, that the English should be allowed to send their ship yearly, though the Flota, or the Spanish galleons, should not sail for America; the third, that the ten first years this vessel might carry 650 tons; the two last, that the commodities that might remain after the sale of the negroes should be sent to Europe, after the slaves had been landed at Buenos Ayres; and, if their destination was for Porto-Bello, Vera Cruz, Carthagena, and other ports of Spanish America, they should be transmitted to the Antilles, and none of them to the South Sea.

However, on the commencement of the last war with Spain, the English Assientists were deprived of four years enjoyment of their trade, which was afterwards entirely relinquished, in prejudice of the company, by a convention between the two crowns subsequent to the definitive treaty of peace, on condition that the Spanish monarch should pay what was due to the Assientists on account of the detention of their ship in the year 1726. See *Treaty*.

ASSIGNEE. A person to whom any thing is transferred, which may be either by deed, or by law; by deed, when the lessee of a term sells, or assigns, by deed, his right or interest in an estate; and in law, an executor is called the assignee of the deceased. In cases of bankruptcy, assignees are persons chosen from among the principal creditors of the bankrupt, to take care of his estate, effects, and debts, and to see them disposed of to the best advantage, for the common interest of all concerned. See *Bankrupt*.

ASSIGNMENT. A transferring, or making over any thing that is the property of one person, to the use, benefit, and property of another.

ASSISTANT. One who aids, encourages, or any way promotes the doing of a thing. In civil affairs, particularly in the management of public companies, there are commonly a governor, deputy-governor, and more or less assistants, according to the charter of the company, who ordinarily have the whole power of managing all affairs belonging to the common concerns of the company; but are, for the most part, to lay all extraordinary matters before a general meeting of the proprietors, commonly called a general court, for their consent and approbation.

ASSISE. An ordinance, or statute, regulating the weight, size, or dimensions of certain commodities. Thus the antient statute of bread and ale, is termed the assize of bread and ale; but assise is further used for the scantling, or quantity, prescribed by the statute; as when wheat is of such or such a price, bread shall be of such an assise.

ASSISER of weights and measures, is an officer who inspects into these matters.

ASSOCIATION. A treaty, or contract, whereby two or more perſons unite together to act in common, and put themſelves in a condition to carry on a more extenſive commerce. See *Partnerſhip*.

ASSORA-BUND. One of the ſix ſorts of ſilks, manufactured in the ſtates of the Mogul.

ASSOROU, is the name whereby the Indians call the wood known in Europe by the name of Indian wood.

ASSOS. A port-town of Natolia in the Leſſer Aſia, ſituated on a bay of the Egean ſea, in 27 deg. 20 min. of E. lon. and 38 deg. 30 min. of N. lat. See *Turky*.

ASSUMPSIT, in law, a voluntary promiſe to do or pay a thing to or for another.

ASSURANCE. A ſecurity, or poſitive promiſe, or engagement. See *Inſurance*.

ASSYRIA. See *Perſia*, and *Aſiatic Turky*.

ASTRACAN. A good ſea-port, and capital of the kingdom of Aſtracan, ſituated in 52 deg. of E. lon. and 47 deg. of N. lat. on the eaſtern ſhore of the river Volga, 80 m. N. of the Caſpian ſea. See *Ruſſia*.

ASTROLABE. An inſtrument to take the altitude, or heighth of the ſun or ſtars.

ASTRONOMY. A ſcience that teaches the motions, diſtances, magnitudes, periods, and eclipſes, of the celeſtial bodies.

ATCHE. The ſmalleſt coin that is ſtruck and current in the ſtates of the Grand Signior, being of ſilver, and worth about $\frac{2}{7}$ of a farthing.

Theſe atches, or ſmall aſpers, as ſome call them, reſemble pretty much the ſpangles of tinſel, uſed formerly to ſet off gold, and ſilver embroidery; but they are ſomewhat ſtronger and longer, and are marked as the para with Arabian characters, three or four of them being uſually given for a para.

ATLANTIC, or *Weſtern Ocean*, is that which paſſes between Africa and America, dividing the eaſtern and weſtern continents, ſo denominated from Mount Atlas, and is 3000 miles wide. See *Ocean*.

ATLAS. A ſilk ſatin manufactured in the Eaſt Indies; whereof ſome are plain, ſtriped, and flowered; the flowers being either of gold, or ſilk only, and others of all ſorts of colours; but for the general part falſe, eſpecially the red and crimſon.

It muſt be confeſſed that the manufacture is admirable and ſingular, particularly in the flowered atlaſſes, the gold and ſilk being employed therein after a manner inimitable by Europeans, yet far ſhort of the fine gloſs and luſtre the Engliſh and French know to give their ſilk ſtuffs.

Among the different kinds of atlaſſes, the moſt conſiderable are the cotonis, the cancanias, the calquiers, the cotonis bouilles, and the bouilles chaſmay, or carmay. The cotonis atlaſſes are ſo called, becauſe the ground is cotton, and the reſt ſilk; the cancanias are ſtriped ſatins; thoſe that appear moſt ſilky are called quemkas; the calquiers are ſatins after the Turkiſh manner, or Hungary point; the bouilles cotonis, and bouilles charmay, are ſilk ſtuffs, like the partridge-eye-coloured grograms made at Tours.

There are atlaſſes of different lengths and breadths, being from 4 ells $\frac{1}{8}$ long and $\frac{2}{3}$ broad, to 14 ells long and $\frac{9}{16}$ broad: but thoſe that come near the half of the uſual lengths, are called half pieces.

ATTEST. To witneſs, vouch, or certify in writing to the due execution of any inſtrument in writing.

ATTORNEY. A perſon authoriſed by another to do ſome legal act in his ſtead; ſuch as to give ſeiſin of lands, receive debts, to ſue a third perſon, and ſeveral other particulars. See *Letter of attorney*.

ATTORNEY *at law*, is conſidered as a gentleman, whoſe buſineſs conſiſts in drawing and preparing all inſtruments and deeds in writing, regarding the ſecurity of private property; as alſo in tranſacting and conducting all proceedings in the ſeveral courts of judicature.

AVA. A kingdom of India, beyond the Ganges, ſituated on the N. E. part of the bay of Bengal. See *India*.

AVARIA, in the Turkiſh and Perſian dominions, is a ſum of money exacted from chriſtians or Europeans, to be quit of ſome falſe accuſation, framed on purpoſe for extortion.

AVAST. A ſea-term, ſignifying ſtay, or hold ſtill.

AUCTION. A public ſale, where goods are put up at a certain price, for which the purchaſers bid according to the conditions of ſale, and in which the higheſt bidder is the buyer.

AUCTIONEER. The manager of the ſale and goods at an auction.

AUDE. A river of France riſing in the Pyrennees; which running N. of Alet in Rouſſillon, viſits Carcaſſone; and running from thence W. through Languedoc, falls into the Mediterranean, a little N. E. of Narbonne.

AUDIT. A regular hearing and examining of an accompt by officers appointed for that purpoſe.

AUDITOR, in the above ſenſe, is a name given to ſeveral officers, appointed to audit accounts and pleadings: but anciently the word auditor was uſed for judge; it was even uſed for an inquiſitor, appointed by judges to examine and find out the truth of ſome matter in conteſt; and notaries are alſo frequently called auditors.

AUDITOR, in the Engliſh law, is an officer of the king, or ſome other great perſon, who yearly, by examining the accounts of under officers accountable, makes up a general book, with the difference between the receipts and charge, and their allowances or allocations.

AUDITORS *of the revenue*, or of the exchequer, are officers who take the accounts of ſuch as collect the revenues, and taxes, raiſed by parliament; as alſo of the ſheriffs, eſcheators, collectors, tenants, and cuſtomers, and ſet them down, and perfect them. See *Exchequer*.

AUDITORS *of the preſt*, or impreſt, are officers in the exchequer, who take and make up the great accounts of Ireland, Berwick, the mint, cuſtoms, wardrobe, firſt fruits, naval and military expences, and all monies impreſſed to any man for the king's ſervice.

AUDITOR *of the receipts*, is an officer of the exchequer, who files the tellers bills, and makes an entry of them, and gives the lords of the treaſury a certificate of the money received the week before, who preſent the eſtimate or balance to the king: he alſo makes debentures to every teller, before they receive any money, and takes their accompts; he keeps the black book of receipts, and the treaſurer's key of the treaſury, where the ancient leagues of the realm, and many records of the king's bench and common pleas are repoſited; and he ſees the money belonging to every teller locked up in the royal treaſury.

AVEIRO. A port-town of Portugal, ſituated at the mouth of the river Vouga, in 9 deg. 2 min of W. lon. and 40 deg. 32 min. of N. lat. See *Portugal*.

AVERAGE, or *Averidge*, a term in navigation and commerce, for the damage which ſhips or their cargoes ſuſtain, from the time of their departure to their return; as alſo for the charge, or contributions, raiſed on the proprietors towards defraying ſuch damages.

Average is either ſimple or private, and groſs or common: to the firſt, the particular things which ſuffer alone contribute; but to the ſecond, all, both ſhip and merchandizes, contribute in common. Of the firſt kind are all extraordinary and unforeſeen expences, befalling either the ſhip or goods, or both; the loſs, in which caſes, is to be totally defrayed by the thing or things which occaſioned it: ſuch as the loſs of cables, anchors, maſts, and ſails, by reaſon of ſtorms or other accidents; as alſo damages accruing to goods through their own defects, by waſting, rotting, ſtorms, pirates, or other contingencies; beſides the mariners wages while the ſhip is extraordinarily detained by embargoes, provided ſhe be hired for the whole voyage, and not by the month; all theſe being ſimple or private averages, and not to be charged to the common account. For groſs, or common average to have place, ſeveral things are requiſite; 1ſt, ſomething muſt have been caſt into the ſea out of abſolute neceſſity; 2d, the commanders muſt have had the conſent of the owners for ſo doing; 3d, it ſhould have only been done for the ſecurity of the whole ſhip, which muſt have been ſaved in conſequence thereof; for, in ſuch caſe, all thoſe for whoſe intereſt the thing was caſt into the ſea, are to contribute towards the indemnization of the perſon whoſe property it was; and every thing is to be taxed proportionably, ſo much as jewels, gold, or any other leſs portable commodity, notwithſtanding they are no way burdenſome to the ſhip: even

the veſſel itſelf is liable to this taxation; as alſo are the maſter and paſſengers, for ſuch things as they have in the ſhip; but the proviſions are excepted.

By the laws of Oleron, when there is an extreme neceſſity, in a ſtorm, the goods, wares, guns, or whatſoever elſe is on board a ſhip, may, by conſulting the mariners, be thrown overboard by the maſter, for the preſervation of the ſhip; and, if they diſſent, the maſter may notwithſtanding command the caſting overboard what goods or things he ſhall judge moſt neceſſary, for the ſecurity of the reſt, in caſe the ſtorm and danger continue: but, if there be a merchant, or ſuper-cargoe, aboard, he ſhould begin firſt to throw the things overboard, if requeſted; and then the mariners ſhall anſwer double for embezzling to their own uſe any part of that which ſhould be thrown over; and if the merchant refuſes, yet the maſter and mariners may proceed without them; though they muſt take care, that things of the leaſt value, and greateſt weight be flung overboard: but if the ſhip happens to out-weather the ſtorm, and makes a ſafe arrival at her port of diſcharge, the maſter, and the principal part of the crew, when they come to land, are to make oath that the goods were caſt over board for no other cauſe than the ſecurity of the ſhip; upon which the remainder of the goods that have obtained ſafety, whether they pay freight or not, muſt come into the average.

Many opinions have been held regarding the cuſtom of average; but the goods caſt over-board make no derelict, ſo as to be forſaken, or wilfully caſt away. If theſe goods are ſhipped aboard in England, and ſuch goods are taken up by another Engliſh ſhip at ſea, an action lies to recover the goods: ſo where any goods are thrown overboard, and afterwards recovered again, the average ceaſes; ſaving for ſo much as they ſhall be damnified, by reaſon of ſuch ejectment: but if, before the goods happen to be recovered, the owner hath an average, he ought to reſtore the money to thoſe who paid him, deducting for the loſs he may ſuſtain by his merchandiſe being damaged.

By the Rhodian laws, if a ſhip or veſſel, be indiſcreetly ſtowed with goods, or the lading is above the birth-mark, and an ejection happens, no contribution ſhall be made; but ſatisfaction is to be anſwered by the ſhip-maſter or owners. Where goods, or merchandiſes, are laden above the overlope of the ſhip, or prohibited goods are put on board, and ſuch goods occaſion any danger or damage, the maſter muſt bear the loſs: beſides, if the maſter having received his complement of goods, takes in things without permiſſion of the freighters, and a ſtorm ariſes at ſea, in which part of their goods are thrown overboard, the maſter only muſt anſwer it, and there will be no average: alſo for goods brought ſeverally into the ſhip, without the knowledge of the maſter or purſer, if they are ejected no contribution is to be had.

If a ſhip is taken at ſea, and the maſter, to obtain repoſſeſſion of the ſhip and lading out of the enemies hands, engages to pay a ſum of money for the ranſome; for the performance whereof he puts himſelf, as a ſecurity, into the cuſtody of the captor; the maſter muſt procure his redemption at the coſts and charges of the ſhip and lading, according to the intereſt of every man, by contribution: alſo if goods are taken by an enemy, or by letters of marque and repriſal, the remainder is liable to average and contribution.

If two ſhips happen to ſtrike againſt each other, whereby damage is received, and if there be no fault or miſcarriage in either, contribution is to be made by a juſt equality, as it happened accidentally; but if there be a fault or miſcarriage on either ſide, it is otherwiſe, for then a full ſatisfaction muſt be made the merchant injured; though if one ſhip periſhes the loſs cannot be proportioned; ſo that there can be no contribution: for if this were to be thrown into an average, it might be productive of fraudulent deſigns. However, this does not prevent the owners of a ſuffering ſhip, from bringing their action againſt the negligent maſter of the other, to recover damage.

As the common law looks upon the goods and cargoe of a ſhip to be a ſecurity for the freight due, ſo the maritime law adjudges them as a ſecurity for anſwering the average and contribution, and that the maſter ought not to deliver the goods till a contribution is ſettled; the ſame being tacitly obliged for the one as well as the other.

After a general ſhipwreck there is no average, but ſave who ſave can, as is vulgarly ſaid on this occaſion.

AVERAGE, is more particularly uſed for the quota, or proportion, which each merchant or proprietor in the ſhip, or loading, is adjudged, upon a reaſonable eſtimation, to contribute to a common average; which ſum is to be divided, among the ſeveral claimants, in proportion to their reſpective intereſts and demands.

AVERAGE, is alſo a ſmall duty which thoſe merchants, who ſend goods in the ſhips of another perſon, pay to the maſters thereof for their care of them, excluſive of the freight.

AVERANCE. A port-town of Normandy in France, ſituated in 1 deg. 20 min. of W. lon. and 48 deg. 40 min. of N. lat.

AVES. Some ſmall iſlands belonging to the Dutch, on the coaſt of Terra Firma, in S. America.

AUGUSTA, or *Auſta*. An iſland in the gulph of Venice, on the coaſt of Dalmatia. See *Italian Iſlands*.

AUGUSTIN, the capital of Spaniſh Florida, in America, ſituated near the frontier of Georgia, in 81 deg. of W. lon and 30 deg. of N. lat. See *Spaniſh America*.

AUGUSTIN *cape*, is ſituated in Brazil, in S America, on the Atlantic ocean, 300 m. E. of the Bay of All Saints.

AVIGNON *berry*, is the fruit of a ſhrub, by ſome authors called *Lycium*, growing plentifully near Avignon in France, being ſomewhat leſs than a pea, of a green colour, inclining to yellow, of an aſtringent and bitter taſte, and much uſed by dyers, who ſtain a yellow colour with it; as alſo by painters, who make out of it a fine golden yellow.

AVILES. A port-town of the province of Aſturia, in Spain, ſituated in 6 deg. 48 min. of W. lon. and 43 deg. 30 min. of N. lat.

AVISO, is an Italian word, uſed in mercantile affairs, for intelligence or advice; but is now generally applied to a ſmall ſhip, called the *aviſo*, diſpatched by the Spaniſh commanders from Vera Cruz, or other parts of S. America, to the miniſtry of Madrid, with letters of information of the departure of the galleons, or regiſter ſhips, on their voyage to Europe. See *Regiſter Ships*.

AUME. See *Awm*.

AUNCEL *weight*, an ancient kind of balance, now diſuſed upon account of the fraudulent practices commited by it.

AVON. A river in England that riſes in Wiltſhire, and running W. by Bath, where it becomes navigable, continues its courſe to Briſtol, falling into the Severn a little below that city.

AVON, is alſo another river in England, riſing in Leiceſterſhire, which runs S. W. of Warwick, continues the ſame courſe to Eveſham, and falls into the Severn at Tewksbury in Glouceſterſhire.

AVOIRDUPOIS *weight*. A certain method of weighing ſuch ſort of goods as are ſubject to droſs or waſte; and now the common weight generally uſed for moſt ſorts of large and coarſe commodities, in which 16 ounces are reckoned to a pound.

AURAY, or *Avray*. A port-town of Britanny in France, ſituated in 2 deg. 45 min. of W. lon. and 47 deg. 40 min. of N. lat.

AURICHALCUM, among modern writers, denotes a factitious metal, popularly called *braſs*, which is a mixture of copper and calamine ſtone, melted together by a very vehement fire, in furnaces made on purpoſe. See *Braſs*.

AURIPIGMENTUM. See *Arſenic and Orpiment*.

AURUM, in natural hiſtory, denotes gold, and is chiefly uſed to denote certain chemical preparations, whereof gold is the baſis or principal ingredient; ſuch as the aurum potabile, aurum fulminans, &c.

AURUM *fulminans*, is a preparation of gold, of ſome uſe in phyſic, being ſo called, becauſe, when caſt in the fire, it produces a noiſe like thunder. It conſiſts of gold diſſolved in aqua regia, and precipitated by oil of tartar *per deliquium*, or volatile ſalt of ſal ammoniac: the powder being waſhed in warm water, and dried to the conſiſtence of a paſte, is afterwards formed into little grains, of the bigneſs of hemp-ſeed, which have much more force, and take fire ſooner than gun-powder.

AURUM *moſaicam*, or *Muſicum*, a preparation in pharmacy, ſo called from its golden colour; being made of mercury, tin, ſal armoniac, and flowers of ſulphur, by grinding, mixing, and ſetting them three hours in a ſand heat; when the dirty ſublimate being taken off, the aurum moſaicum is found at the bottom of the matraſs, and is recommended in moſt chronical and nervous caſes.

AURUM *potabile*, potable gold, is a compoſition made of gold, by reducing it, without any corroſive, into a kind of glue, of the colour of blood; which being ſteeped in ſpirit of wine, acquires a ruby colour, and is called tincture of gold.

An ounce of this tincture, mixed with 16 ounces of another liquor, is called *aurum potabile*, becauſe of its gold colour, and is ſaid to be a ſovereign remedy againſt ſeveral diſeaſes.

AUSERON. A Perſian drug, which the Europeans bring from the Eaſt Indies by the way of Surat, being ſcarce and valuable.

AUSTRIA. A circle of Germany. See *Germany*.

AUSTRIAN *Netherlands*. See *Netherlands*.

AUTOUR. A kind of bark uſed in the compoſition of carmine, being ſomewhat like cinnamon, except that it is paler on the outſide, and within of a nutmeg colour, but variegated with ſhining particles: it is very light, ſpongy, of an almoſt inſipid taſte, without ſcent, and is brought from the Levant.

AWARD, the deciſion, or judgment, made by arbitrators, or their umpire, choſen or appointed, to ſettle a matter that was in diſpute. See *Arbitrator*.

AWM, *Aume*, *Aam*, or *Haam*, a Dutch meaſure of capacity for liquids, containing 8 ſtekans, or 20 verges or verteels, anſwering to what in Engliſh is called a *tierce*, or $\frac{1}{7}$ of an Engliſh ton.

AWNING. The covering of a boat, or part of a ſhip, eſpecially the window of the captain's cabin, to keep off the wind, ſun, or rain.

AXIM. A town on the gold coaſt of Guinea, ſituated in 4 deg. of W. lon. and 5 deg. of N. lat. where the Dutch have a fort, and factory, called St. Antony.

AXUNGIA, otherwiſe *Axongia*, a kind of fat, being the ſofteſt and moiſteſt found in animal bodies: the axungia of ducks, geeſe, vipers, and ſeveral other animals, is uſed in phyſic; but that of man is beſt, when well prepared with aromatic herbs, to diſſolve humours and eaſe rheumatick pains.

AXUNGIA, is alſo the gall, or ſalt of glaſs, or rather the ſcum that riſes upon glaſs before vitrification.

AYAMONTE'. A port-town of Andaluſia in Spain, ſituated in 8 deg. 5 min. of W. lon. and 37 deg. of N. lat. near the mouth of the river Guadiana.

AZARIA. A kind of coral brought from Smyrna. See *Coral*.

AZARIMST. A ſtone, having the ſame virtue with the terra ſigillata, and extracted from a mine in the kingdom of Cananor; being uſed as a remedy in the fever, the bloody flux, and to expel the malignity of ſerpents bites.

AZARINA. A kind of azarum, or wild ſpikenard.

AZARUM, vulgarly called wild *nardus*, is a root which grows in ſeveral parts of the Levant, Canada, and even of France, in the neighbourhood of Lyons, which was formerly but little known; though now it is much uſed, ſince farriers by experience have diſcovered, that it exceeds all other drugs in curing the farcy in horſes, when given them in powder from one ounce to two.

The true choice of the azarum ſhould be that of the Levant, if poſſible; the roots neither fibrous nor bruiſed; of a grey-colour within and without, and a briſk ſmell, with a bitteriſh taſte.

Some druggiſts have endeavoured to ſubſtitute azarina inſtead of the true azarum, but the counterfeit is eaſily diſcovered; for azarina is uſually brought from Burgundy in France; its roots being very ſmall, blackiſh, dry, and ſo abounding with filaments that the true roots can ſcarcely be diſtinguiſhed.

AZIMUTH *Compaſs*. See *Compaſs*.

AZOGUE *ſhips*, are properly two Spaniſh men of war of the line, and a frigate, employed in conveying the flota from Europe to New Spain, which are only permitted to carry quick-ſilver, fruits, ſpices, and iron, which produce his moſt catholic Majeſty the neat profits of 100,000 dollars, after payment of all the coſts and charges for equipping them out; proviſion, wages, and other charges, which has been calculated to amount to 345,544 piaſtres, or 77,997 l. 8 s. 6 d. ſterling.

AZORES *Iſlands*, called alſo the *Terceres*, and weſtern iſlands, are ſubject to the crown of Portugal, lying in the weſtern or Atlantic ocean, between 25 and 33 deg. of W. lon. and between 37 and 40 deg. of N. lat. 300 leagues W. of Portugal, and as many from Newfoundland; being almoſt in the mid-way between Europe and America.

Theſe iſlands are nine in number, as following; Flores, Corvo, Fayal, Pico, St. George, Graciоſa, St. Mary, St Michael, and Tercera; which were diſcovered in 1439, by the Portugueſe, who, finding them uninhabited, and fit for cultivation, immediately eſtabliſhed ſome colonies there; but more particularly on account of their commodious ſituation for their navigation to and from the Eaſt Indies and Brazil.

Tercera is eſteemed the principal of all the Azores, on account of its having a tolerable good harbour, and being the ſeat of the governor; though it is not ſo large as St. Michael, being no more than 18 or 20 leagues in circumference; however, it is more populous, containing about 20,000 inhabitants. It is pretty much encumbered with rocks and mountains, but affords plenty of good corn and paſture; an excellent breed of cattle, and a tolerable kind of wine: it alſo yields large quantities of citrons, oranges, and lemons; as alſo ſome confectionary goods, woad, and leather. The chief town is called Agra, which is ſituated on a bay of the ſea, that forms the harbour on the S. ſide of the iſland, being defended by a caſtle ſituated on a rock at the entrance of the bay. This town is a biſhop's ſee, where the Britiſh, French and Dutch nations have their reſpective conſuls.

St. Michael's is the largeſt of all theſe iſlands, being about 30 leagues in circumference. It produces corn, fruits, cattle, fiſh, and fowl; as alſo a thin wine: but it has no harbour, nor ſhelter for ſhips; though it has ſeveral towns and villages well inhabited, of which the principal is Punta del Gado.

St. Mary's is a ſmall iſland to the ſouthward of St. Michael's, and produces much the ſame animals and vegetables. It is well cultivated and inhabited; having alſo a manufactory of earthern ware, with which they ſupply the adjacent iſlands.

The other iſlands produce all kinds of grain, fruits, paſture, and cattle; as alſo cedars, and other timber.

Woollen and linen cloths, ſtuffs, oil and ſalt, are ſent to the Azores, which abſolutely want the two laſt articles, though productive of all the other neceſſaries of life.

And Great Britain ſupplies thoſe iſlands with ſtuffs, wool, iron, ſalt-fiſh, cheeſe, butter, and ſalt-meat in barrels.

AZUM. A port of Abyſſinia in the Red ſea.

AZURE. A mineral ſtone, commonly called *lapis*, or *lapis lazuli*, which has been held to be the marcaſite of gold, becauſe found in the mines of this metal, and ſometimes variegated with brilliant particles and veins like gold: but, notwithſtanding it is alſo met with in mines of ſilver, and copper. It is certain that it has more of the nature and quality of marble than of the marcaſite: its colour being of a pretty deep blue, but very beautiful and vivid; which is found in ſeveral parts of Europe: but the moſt beautiful and precious ſort comes from Perſia, and the Eaſt Indies. See *Lapis Lazuli*.

Gold-ſmiths, lapidaries, and artiſts in inlaid-work with precious ſtones, uſe it for ſeveral kinds of workmanſhip; but its moſt ordinary uſe is for making *ultramarine*, which is a blue in great eſtimation among painters, and ſold as a very valuable commodity. See *Ultramarine*.

The azure-ſtone, or lapis lazuli, to be of a good quality, and proper for making ultramarine, ſhould be heavy, little mixed with rock, having veins of copper, and of a deep blue, inclining to that of fine indigo. Care ſhould be taken of its not being rubbed with oil of olives, which makes it appear of a deeper blue than it would naturally be, and this impoſition may be diſcovered by breaking it, when if the colour be found, paler within than without,

it is a ſufficient ſign that it has been falſified: whether the azure-ſtone is of a good quality, might be alſo known by heating it in the fire till it reddens; which, far from changing its colour, gives it, on the contrary, a new luſtre. There is another ſort of azure, or lapis lazuli, very common in France, whoſe colour inclines to green, being chiefly found in Provence, and the neighbourhood of Toulon; but its quality is much inferior to that which comes from Perſia and India, being in no reſpect proper for the making of good ultra-marine

AZURE *in ſtone*, or ſmalt, otherwiſe falſe, or compound lapis, is a vitrification, or enamel, made of tin, ſolder of Alicant, gravelled aſhes, fine ſand, and zafre; but it is this laſt ingredient that gives it the blue colour reſembling that of the real azure-ſtone.

AZURE *in powder*, to which alſo the name of aſhes of azure, or enamel, is given, is nothing elſe but pulverized ſmalt, brought from ſeveral parts, eſpecially Germany and Holland; but the latter is more valuable, becauſe its blue inclines more to the ultra-marine; for which reaſon it is called the common, or Dutch *ultra-marine*. To prevent any miſtake or impoſition, in the choice of good azure in powder, care ſhould be taken that the azure of Germany is ſandy, well grained, and as deep in colour as poſſible; but the finer and paler the azure of Holland is the more it is eſteemed; for tho' its colour is apparently loſt in the pulverization, it makes a very fine blue when uſed by the limner.

There is another kind of German azure, which is a tincture gathered neatly from the tops of ſtones in ſilver mines. There is likewiſe a factitious azure, made with indigo, or the juice of violets, mingled and pounded with a certain chalk: the common ſort being made with ſal armoniac, and ſilver-leaf; or with ſulphur, quick-ſilver, and ſal armoniac.

BAAT, is a weight among the Siamese, being about half an ounce.

BAB, or *Babel-mandel*, is an island at the entrance into the Red sea, and forms one side of the famous streight of Babel, or Bab-mandel. It is situated in 44 deg. 30 min. of E. lon. and 13 deg. of N. lat. being about five miles in circumference. The Ethiopians and Arabians formerly contended, with great fury, for the possession of this island, which was then a place of much importance, as it commanded the entrance into the Red sea, and preserved a communication between Ethiopia and Arabia; but since the Turks have possessed themselves of both shores, the island is in a manner deserted, being a sandy barren soil, and affording scarce any sustenance for a man or beast.

BACAIM, or *Baciaim*. A port-town of Cambaya, in the hither peninsula of India, situated in 72 deg. of E. lon. and 19 deg. 20 min. of N. lat. subject to the Portuguese.

BACALAO. A name given by the Spaniards to the cod-fish, and to a fish very much resembling it, which they catch on the coast of the island of Juan Fernandes in the South Sea. The Spaniards also call Newfoundland, upon account of its cod-fishery, the island of Bacalao: however, at the west end of this great island, there is another small one, more particularly called by them Bacalao. See *Fishery*.

BACHIAN. One of the Molucca islands, subject to the Dutch. See *Moluccas*.

BACHICERAI. The capital of Crim Tartary. See *Tartary*.

BACHU. A port-town of the province of Chirwan in Persia, situated on the western shore of the Caspian sea, in 49 deg. of E. lon. and 40 deg. of N. lat. being 3000 m. S. of Astracan, and 120 m. N. of Ferabat.

BACKS. A sort of tanned hides. See *Hide*.

BACK-*maker*. A person who makes liquor-backs, tender-backs, mash-tuns, coolers, and other things used by brewers; the trade being partly carpentry, and partly cooperage; but there are not many of this business.

BACK-*staff*, in navigation, an instrument called by the French the *English quadrant*, invented by Capt. Davis, of good use at sea in taking the altitude of the sun, and consisting of three vanes; the first called the horizon-vane, the second the shade-vane, and the third the sight-vane. Mr. Flamstead contrived a glass-lens, or double convex, to be placed in the middle of the shade-vane, which makes a small bright spot on the slit of the horizon-vane, instead of the shade; which is a great improvement, if the glass be truly made; for by this means the instrument may be used in hazy weather, and a much more accurate observation made in clear weather than could be by the shadow.

BACK-*stays of a ship*, are ropes belonging to the main-mast and fore-mast, and the masts belonging to them, serving to keep them from pitching forwards, or over-board.

BACON. A well known sort of food, made of hog's flesh salted and dried; which renders it fit for keeping a considerable time.

BADEN. The capital of the margravate of Baden in Swabia, remarkable for its hot baths. See *Germany*.

BADGER. A licensed huckster, or person privileged to buy corn, or other provisions, and carry them from one place to another to make profit of, without being reputed an ingrosser: but in the statutes he is also called a kidder, or cader of corn; as in those of the 5, & 6. Ed. VI. c. 14. and 5. Eliz. c. 12. Besides, in the statute of the 9th of William III. there is likewise mention of badgers and retailers of salt. See *Forestallers*.

BADGER is also a wild four-footed animal, something like the hog, dog, and fox; its age being discoverable from the number of holes under its tail, where a new hole annually makes its appearance. This animal affords three kinds of commodities; its skin, which is ranked among common furs; its fat, sold by druggists, and used for disorders of the reins and sciatic gouts; and its bristles, of which pencils are made for painters and gilders. It dwells in burrows among the woods in England, and most other countries.

BAFFETAS. A cloth entirely fabricated of cotton thread, brought from the East Indies; the best of which are those of Surat, containing about 12½ yards in length, and 1 yard wide.

BAFFETAS is also an Indian stuff, called otherwise *shaub*. See *Shaub*.

BAFFINS *Bay*. A gulph in North America; which runs from Cape Farewel in West Greenland, and lies from lat. 60 N. E. to 80 degrees; being discovered by Capt. Baffin, an Englishman, as he attempted to find a N. W. passage into the Pacific ocean.

BAG. A term used to signify different quantities of certain commodities; as a bag of almonds, for instance, is about 3 hundred weight; of aniseed, from 3 to 4 hundred; of pepper, from 1¼ to 3 hundred; of goats-hair, from 2 to 4 hundred, and of cotton from 2½ to 4¼.

Bags are also used in most countries, especially among merchants and bankers, to put their money in; which are sometimes taken by weight, without counting the contents.

BAGDAT. A strong town of Turky, on the frontiers of Persia, situated on the river Tigris, in 43 deg of E. lon. and 33 deg. 20 min of N. lat.

BAGNAGAR is the capital of Golconda, in the hither peninsula of India. See *India*.

BAHAMA, or *Lucaya islands*, are situated in the Atlantic ocean, between 21 and 27 deg. of N. lat. and between 73 and 81 deg. of W. lon. They are very numerous, and twelve of them of a considerable extent; the principal of which are Bahama, Lucayo, Eleathera, or Long-island; the islands of Andros, Providence, St. Salvador, or Cat-island, Samana, Maquana, and Heneaga. The island of Bahama, which communicates its name to the rest, is situated between 20 and 30 leagues to the eastward of the continent of Florida: but neither this, or any of the rest, are constantly inhabited, except Providence, and three or four more near it, in possession of the English; for the Spaniards did not think them worthy of planting after they had extirpated the natives, because these islands had no gold or silver in them, and were surrounded by rocks and shoals, which rendered the navigation difficult; tho' the gulph of Florida, or Bahama, through which the Spanish galleons sail in their way for Europe, lies between these islands and the continent of Florida. See *British America*.

BAHAR, or *Barre*. A weight used at Ternate, Malacca, Achem, and several other places of the East Indies; of which there two sorts, one called the great, and the other the small bahar.

Pepper, cloves, nutmegs, ginger, cinnamon, and other spices, are weighed by the former, which is equal to 572 lb. English weight. Quicksilver, vermilion, ivory, silk, musk, and other precious commodities, are weighed by the small bahar, which is about 476½ lb. English weight. The bahar of Mocha in Arabia is 450 lb. and 15 frasels make the bahar, by which weight coffee is sold.

BAHAREM, or *Baharen*. An island in the Persian gulph, in Asia, formerly one of the most considerable pearl fisheries in the world, but disused at present.

BAJADOR *Cape*, lies on the W. coast of Africa, S. of the Canary islands, in 15 deg of W. lon. and 27 deg. of N. lat.

BAILE, or *Bale*, in a maritime sense, is what seamen call lading, or casting the water by hand out of a boat, or ship's hold, with buckets, cans, or the like; and when the water is thus bailed out, they say *the boat is freed*; but they also give the name of bailes to those hoops that bear up the tilt of the boats.

BAILE is also a name given to the Venetian embassador at Constantinople, the name signifying a judge-consul.

BAIOCO, or *Bayoc*. A copper coin current at Rome, and in the ecclesiastical state, being worth about three farthings sterling; and there are also half *baiacos*.

BAKER. A person whose employment principally consists in

in the making and vending of bread, or reducing meals of any kind into bread.

The BAKER's *Company of London.* This company appears to be of great antiquity; for, in the beginning of the reign of Henry II. in the year 1155, it was charged, in the great roll of the exchequer, with a debt of one mark of gold, for their guild; which ſeems as if the antient guilds had held their privileges in fee-farm of the crown. However, this company does not appear to have been incorporated till about the year 1307, by letters-patent of Edward II. which charter was renewed by Henry VII. and confirmed by ſeveral of his ſucceſſors; but when or by whom their arms were at firſt granted, is not ſo apparent; tho' it muſt have been before 1590, becauſe in that year their creſt and ſupporters were granted by Clarencieux king at arms.

This company is incorporated by the name of The maſter and wardens of the myſtery or art of bakers of the city of London; being governed by a maſter, 4 wardens, and 30 aſſiſtants; to whom belong a livery of 195, whoſe fine is 10l. on admiſſion, with a handſome hall in Harp-lane, where they tranſact their affairs.

BAKU. A city of Perſia, remarkable for its walnut-oil. *See Perſia.*

BALANCE, or *Ballance.* One of the ſix ſimple powers in mechanics, uſed principally for determining the equality or difference of weights in heavy bodies, and conſequently their maſſes or quantities of matter; of which there are two kinds, the ancient and modern. 1. The antient, or Roman, called alſo *ſtatera Romana*, or ſteel-yard, conſiſts of a lever or beam, moveable on a centre, and ſuſpended near one of the extremities: on one ſide the centre are applied the bodies to be weighed, and their weight is meaſured by the diviſion marked on the beam; on the other ſide is a place, where a weight, moveable along it, keeps the ballance in equilibrio; which is a cuſtom ſtill retained in ſeveral parts of England, but more particularly by the inhabitants, eſpecially the butchers, of Shrewſbury. The modern ballance, now ordinarily in uſe, conſiſts of a lever, or beam, ſuſpended exactly in the middle; to the extremities whereof are hung ſcales, or baſons.

BALANCE *of trade* denotes an equality between the value of commodities bought of foreigners, and the value of the native productions tranſported into other nations; therefore, in the exchange of commodities, if one nation pays the other a quantity of gold or ſilver over and above its property of other kinds, this is called a ballance againſt that nation in favour of the other; from which an inference is drawn, as an indubitable corollary, *that the whole ſcience of profitable commerce conſiſts in the bringing this ſingle point to bear.* However, this is only applicable to the ultimate balance of trade: for, in reference to the intermediate ballance, it is ſometimes defective; becauſe a trade may be beneficial to a nation, where the imports exceed the exports; and conſequently the ballance is paid in ſpecie; if that trade, directly or indirectly, is neceſſary for the carrying on of another more profitable and advantageous; tho' it is to be obſerved, that this trade is not beneficial, conſidered in itſelf, but only as it is relative and ſubſervient to the carrying on of another; of which there is an inſtance reſpecting the greateſt part of the Britiſh trade to the Baltic, and the Eaſt Indies; theſe being inſtrumental in procuring a ballance in other countries, tho' diſadvantageous in themſelves.

It is neceſſary that this ballance be kept in trading nations; and if it cannot be made in commodities, it ought to be in ſpecie; for thereby is underſtood whether a nation gains or loſes by foreign trade, or any branch thereof; and conſequently whether that nation increaſes in opulence, or is depreſſed by penury.

There can be but one general method for maintaining the preſervation of this ballance in all mercantile communities, and that is, ſince gold and ſilver form the univerſal ſtandard for making an eſtimate of the value, and regulating the price of the commodities or manufactures of all countries, to export larger quantities of their own, and import leſs of others; ſo that what is deficient in the value of their merchandiſe, compared with others, may be paid in gold and ſilver; the conſequence of which muſt be, that theſe metals will be continually increaſing with them as far as relates to that particular trade and nation, and decreaſing with others; and in what proportion ſoever the money of foreigners comes into this country, in that proportion it may certainly be affirmed, that the ſailors, freighters, merchants, tradeſmen, tenants, landlords, and duties of that country, are paid at the expence of ſuch foreigners.

A merchant may have a diſtinct intereſt from that of his country, and may find proſperity by a trade which may be extremely detrimental to other merchants, and the whole community; nay more, he may be impoveriſhed by a trade that is beneficial to his country: but merchants have entertained different opinions of this national ballance; becauſe each perſon has probably ſet his own branch of commerce in a favourable light; which obſervation may be corroborated by the opinion of Sir Joſiah Child, who remarks, "That merchants, while they are in the buſy "and eager proſecution of their particular trades, altho' "they be very wiſe and good men, are not always the "beſt judges of trade, *as it relates to the power and profit "of a kingdom*:" for which he aſſigns this reaſon, "that "their eyes are ſo continually fixed upon what makes for "their peculiar gain and loſs, that they have no leiſure to "expatiate, or turn their thoughts, on what is moſt advantageous to the kingdom in general." It is a maxim with traders, and a juſtifiable one, "to get all that can be "got in a legal and honeſt way." Beſides, if the laws of their country give them the permiſſion of carrying on any particular profitable trade, it is their buſineſs, as merchants, to engage in the proſecution of it. But as to the great point of national advantage or diſadvantage, this is properly the concern of thoſe who preſide in the miniſterial cabinet, whoſe province it is to frame the laws and regulations relative to trade, in ſuch a manner as may cauſe the private intereſt of the merchant to coincide with the general good of his country; for which reaſon the appointment of the board of trade is apparently a very wiſe and neceſſary inſtitution, it being calculated to anſwer this important end.

There are ſeveral methods of arriving at the knowledge of a national loſs or gain upon the ballance of trade. 1. The moſt generally received way of computing this ballance is, by taking a ſtrict ſurvey of what proportion the value of the commodities exported bears to thoſe imported; whereby, if the exports exceed the imports, it is concluded that nation is in a gaining way; it being ſuppoſed that the overplus is imported in bullion, and ſo increaſes the national treaſure. But this method is rendered uncertain, eſpecially in the Britiſh dominions, by the difficulty of obtaining a true account, either of the exports or imports; becauſe cuſtom-houſe books are no rule in this caſe, on account of the running of goods, eſpecially ſeveral fine commodities of ſmall bulk, as points, lace, ribbands, ſilks, jewels, fine linens; as alſo of wines, brandies, and teas; to which may be added various accidents affecting the value of the ſtock, either ſent out or brought in; as loſſes at ſea, markets, bankrupts, ſeizures, and the like. Then as to particular trades, there are ſeveral countries to which the manufactures ſent from Great Britain are inconſiderable; yet the goods imported from thoſe countries are neceſſary to the carrying on the Britiſh trade in general, as the trade to Norway and Sweden for timber and naval ſtores.

2. The ſecond method is by obſerving the courſe of exchange; whereby, if generally above the intrinſic value or par of the coins of foreign countries, the Britiſh nation not only loſes by ſuch exchanges, but the ſame is a proof that it loſes by the general courſe of trade: tho' this method is alſo imperfect, becauſe the Britiſh merchants trade to many countries where there is no eſtabliſhed courſe of exchange.

3. The third method, recommended by Sir Joſiah Child, is made from the increaſe or diminution of the Britiſh trade, and ſhipping in general; for if theſe diminiſh, whatever profit particular men may make, the nation loſes; and ſo, on the contrary, if theſe are augmented, the nation is in a gaining condition. To corroborate which, he lays it down as an infallible rule, that in all parts of the world where-ever trade is flouriſhing, and the ſhipping increaſes for a ſucceſſion of ages, that trade muſt be

be nationally profitable, even in the caſe of a merchant, who, by proſecuting a conſiderable trade, impoveriſhes himſelf; for while his ruin is approaching, he contributes to the benefit of the royal revenue, many artificers, ſeveral tradeſmen, and divers labourers.

4. A fourth way is by obſerving the increaſe and diminution of coin and bullion. But this is the leaſt obvious and palpable of any; for the money ſeems, to vulgar eyes, moſt plentiful when there is leaſt occaſion for it, and more ſcarce as the occaſions for employing it are more numerous and advantageous; by which means there is an appearance of moſt money when there is the leaſt trade. Thus when the Eaſt India company have a conſiderable ſale to make, money is generally found to be ſcarce in London, becauſe the occaſion engages people to employ quantities which they had provided for that purpoſe.

Notwithſtanding the variety of calculations for attaining an exact computation of the ballance of the Britiſh trade with foreign nations, there can be no certainty of arriving at a particular eſtimation; for with regard to imports, the bullion, and ſuch valuable articles, are not entered in the cuſtom-houſe books, and ſeldom preſented. As to the exports, ſeeing the woollen manufactures go out cuſtom-free, the entries there made of them cannot be depended on: but ſuppoſe a more exact account of the Britiſh exports and imports could be had; yet ſince ſo great a part of the Britiſh trade is driven by exchange, and ſuch vaſt quantities of commodities are imported from the plantations on account of the inhabitants there, the produce whereof they leave in England as a ſtock at home, beſides their being ſupplied from their mother-country with ſo many things for their conſumption, it cannot be perceived how any moderate computation can be this way made of the general trade of Great Britain; much leſs of that which the Britiſh ſubjects drive with any particular nation, the commodities which they receive at one place being often carried to another: thus the Britiſh merchants tranſport to Italy the ſugars they receive for their manufactures in Portugal, bringing from Italy ſilk and other things to be manufactured in England. And yet it muſt not be concluded they loſe by the Portugal trade, becauſe the returns thence fall ſhort by the cuſtom-books, or that they get more by the Italian trade, becauſe it appears not by thoſe books how they exported commodities to pay for what they import thence. And as to the profits which Britiſh merchants make by the freights of their ſhips, it does not appear at all from the cuſtom-houſe books; nor at what rates their products and manufactures are ſold abroad, or their plantation-goods to foreigners at home: ſo the matter muſt ſtill remain doubtful; for no more certain way to judge of it is known, than by the increaſe the nation makes in its bullion, which always ariſes from the over ballance of its foreign barter and commerce: however, it has been endeavoured more fully to illuſtrate this ſubject in the repreſentation of the Britiſh commerce. See *Great Britain*.

BALANCE *of power*, is the preſervation of the ſeveral European governments, as far as may be, in their preſent condition; and the preventing any potentate whatever from acquiring ſuch a meaſure of power, as may be dangerous or fatal to their reciprocal intereſts; which, as they took riſe from, are abſolutely neceſſary to the continuance of commerce; any attempt upon which is conſequently felt by every nation that has any ſhare of trade, and moſt of all by the maritime powers, who have the largeſt ſhare, and make the moſt of it.

The reciprocal connections reſulting from trade have entirely altered the ſtate of things, and produced, within theſe two, or at moſt three centuries paſt, a kind of new ſyſtem in Europe, or in the Chriſtian parts of Europe at leaſt; by which every ſtate is led to have a much greater concern than formerly for what may happen to another: for inſtance, in former ages, a quarrel in the north could only have affected the north; but in the laſt century things were totally altered. Both the Engliſh and Dutch ſent their fleets into the Baltic, upon the quarrel that happened between the Swedes and the Danes, a little before the reſtoration of King Charles II. Not long before this, the crown of Sweden became a contracting party in the remarkable triple alliance for maintaining the peace of Europe, preſerving the Spaniſh Low Countries, and ſetting bounds to the power of France. After the revolution, towards the cloſe of the reign of King William III. both the maritime powers ſent their fleets again into the Baltic with the ſame view, and the ſame ſucceſs; the like of which has been done more than once ſince. The pretence, in all thoſe caſes, was the love of juſtice, and an exact performance of treaties; in which alſo there was ſomewhat of truth: but the great and real deſign was, to prevent thoſe inconveniencies which muſt have befallen the maritime powers, if either Sweden or Denmark had been entirely ruined by thoſe wars. Therefore it may be ſaid, that the ballance of power, in the ſtrict ſenſe of that phraſe, was created by trade, and muſt continue to be the object more eſpecially of trading countries, ſo long as they preſerve their commerce and their freedom.

It is from a ſenſe of this, that whenever any power attempts to oppreſs another, or betrays a viſible deſign of augmenting its own ſtrength by attacking or conquering its neighbours, other potentates are ready to interpoſe; from a quick ſenſe, not only of the inconveniencies that muſt ariſe from the incroachments made by ſuch a power, but from the juſt apprehenſions that this may prove extremely prejudicial to commerce in general, and to that of ſeveral nations in particular; who, to prevent this, will not ſcruple to take up arms, as was the caſe in the two general wars preceding the treaty of Utrecht, as well as in the laſt terminated by the treaty of Aix-la-Chapelle. Thus it appears, that the ballance of power is not an empty name, or an idle thing; but a very juſt and ſignificant, tho' a new and figurative, expreſſion. However, notwithſtanding it has been thus ſhewn how this political ballance ariſes, yet it is not quite ſo eaſy to explain wherein it truly conſiſts; for, with reſpect to this, the moſt eminent writers find it a very difficult thing to diveſt themſelves of their prejudices. As for inſtance, a French politician takes it for granted, that this ballance ought to be held by his Moſt Chriſtian Majeſty, and never ſo much as ſuſpects that this will or ought to be diſputed. At Vienna, again, there is nothing clearer than that the right of holding the ballance is in the imperial court; and he who ſhould treat this as chimerical, would be thought as deficient in ſenſe as in good manners. But the Italians are the moſt judicious and ſenſible authors upon this ſubject; and particularly the Venetians; for only grant them that the ſea as well as land is ſubject to dominion, and that their republic has an indubitable right to the ſovereignty of the Adriatic, they will very readily concede every thing elſe in favour of other princes and ſtates.

The ſtruggle, therefore, for the ballance of power, is in reality a ſtruggle for power; tho' it is difficult to ſhew where this ballance lies. But beſides the general ballance of power, there are three particular ballances which ought to be attended to and ſupported; becauſe, if any of theſe are debilitated or deſtroyed, it will be almoſt impoſſible to preſerve the reſt. The firſt of theſe is the ballance of the north, where the potency of Ruſſia is principally to be apprehended. There is no ſuch thing as being reſponſible for the views of any court, becauſe they are perpetually changing: the only ſecurity that can be had, muſt reſult from the preſcribing proper bounds to all; and, in the preſent caſe, this chiefly depends on the maritime powers, who are always able, and ought to be ever willing, to maintain that equilibrium which ſubſiſts there at preſent. In this they have reaſon to expect, if ſhe is true to her own intereſt, the concurrence of France, to whom an abſolute and overbearing power in the north would be as fatal as to any other ſtate; becauſe ſhe muſt become dependent upon it for her naval ſtores, and find her grandeur in other reſpects greatly diminiſhed.

The ſecond ballance of power is in Germany; where, for the common peace and ſafety of Europe, it is neceſſary the conſtitution of the empire ſhould be maintained; which cannot be done, if either the imperial dignity is transferred to a houſe more potent than all the reſt, or if any other power be permitted to give laws to the emperor and empire. At preſent the ballance of Germany ſeems to depend upon properly poiſing the two great houſes of Auſtria

ſtria and Brandenburg, and preventing either of them from giving a new form of things in that country; which, conſidering the intereſt that ſeveral princes have in other parts, muſt, from its conſequences, neceſſarily throw all Europe into confuſion.

The third ballance is in Italy; where the ſeveral princes and ſtates ſeem to underſtand their own intereſt the beſt of any. Upon this principle it ſeems reaſonable to preſerve both the houſes of Auſtria and Bourbon in the poſſeſſion of their dominions in that country; ſince, if either ſhould be expelled, the other would ſoon be abſolutely maſter of the whole: for the ſame reaſon it is expedient, that the firſt branch of the houſe of Bourbon ſettled there, ſhould not only be ſovereign, but altogether independent; which, in the courſe of a few years, muſt neceſſarily change the face of affairs there, and bring that power to act under the ſame political maxims with the reſt of the princes and ſtates of Italy. It ſeems likewiſe requiſite for the ſecurity of this ballance, that the power of his Sardinan Majeſty ſhould be extended; becauſe every acceſſion of territory to this prince, muſt fix him more effectually to thoſe principles, which are moſt conducive to the peace and proſperity of Italy: and tho' ſuch accidents may happen, as may for a time oblige him to temporiſe, or perhaps act inconſiſtently in regard to this ballance; yet it is certain that nothing but real neceſſity can carry him into an alliance fatal to his own independency, as well as to the intereſt of his ſubjects, and the common good of Chriſtendom.

Upon the whole, peace and good neighbourhood, the encouragement of arts and ſciences, and the purſuit of manufactures and commerce, as they are agreeable to the intereſt of every particular ſtate, ſo they are beſt for the whole; becauſe they would contribute to render every particular country of Europe infinitely more populous, and the inhabitants of all countries much more happy, than any vain endeavours to aggrandiſe particular families at the expence of the human ſpecies.

BALANCE *of accompt*, is when the accompt is ballanced, or when the debtor and creditor ſides of any particular accompt are equal.

BALANUS *Marepſica*, or *Nux unguentaria*, in the ſhops called *ben*, and by Pliny *myrobolanum*, affords an excellent oil; and is brought from Egypt, Ethiopia, Arabia, Syria, and Barbary.

BALASIUS *lapis*. A gem, of a ſhining purple, or roſe colour, called by ſome *placidus*, being a third ſpecies of the carbuncle. See *Carbuncle*.

BALASSOR, or *Baliſore*. A term for a particular kind of muſlin handkerchiefs, made at Baliſore in India; the piece being about 12 yards long, and 1 yard wide.

BALASTRI, is a term uſed at Smyrna for the fineſt gold-cloths manufactured at Venice.

BALAUDINA. A factitious ſtone, compoſed of the mercury of iron; being, on account of its ſulphur, of a red and ſhining colour.

BALAUSTINES, *Balauſtium*, or *Balauſtia*, in pharmacy, the flowers of the wild pomegranate, or *malus punica ſylveſtris*, growing in the Eaſt Indies. Theſe flowers are very rough to the tongue and palate, as alſo very aſtringent; on which account they are uſed in diarrheas, and other diſeaſes.

There are two kinds of them, the fine, and the common: the common have little or no virtue; and the fine ſhould be choſen new, broad, and of a beautiful gloſſy crimſon colour.

BALAZEES, or *Sauvaguzees*, are white cotton cloths manufactured at Surat in India, and its neighbourhood; the piece containing 16½ yards in length, and ⅞ in breadth.

BALDERDASH. To adulterate, ſpoil, or mix a good and a bad commodity together.

BALDIVIA. A port-town of the province of Chili in South America, ſituated in 80 deg. of W. lon. and 40 deg. of S. lat. See *Spaniſh America*.

BALE. A pack, or certain quantity of merchandiſe; as a bale of ſpicery, of cloth, of books, of thread, or of any other packable commodity; which bales are always marked and numbered, for the merchants to know their own commodities.

A bale of cotton yarn is from 3 to 400 weight; of raw ſilk, from 1 to 400; of lockram, or dowlas, either three, three and a half, or four pieces.

BALEARES. The antient name for the iſlands of Majorca, Minorca, Ivica, and Formentera, ſituated in the Mediterranean, S. of Catalonia in Spain. See *Minorca* and *Spaniſh iſlands*.

BALI, or *Bally*, is one of the Sunda iſlands in the Indian ocean; and, with the eaſt-end of the iſland of Java, forms a ſtreight about a mile over; thro' which the Eaſt India merchant-ſhips ſometimes return to Europe from China: but it is a difficult paſſage, eſpecially if the mariners omit the obſervation, that the S. wind burſts thro' the ſtreights once in 24 hours, and ſets a ſhip back as much as it has gained in a whole day. See *Sunda iſlands*.

BALIEPATAN. A town of India, remarkable for its pepper. See *India*.

BALISORE, or *Balaſſor*. A port-town of the hither India, ſubject to the Mogul, and ſituated on the N. W. part of the bay of Bengal, in 85 deg. 15 min. of E. lon. and 21 deg. 30 min. of N. lat. 180 m. S. W. of Huegley, and 340 m. N. E. of Maſlapatan, being a Britiſh factory, ſubordinate to the government of Fort William; where ſhips, bound for the river Ganges and Bengal, uſually take in pilots. See *India*.

BALL. A ſpherical body of wood, iron, &c. The word is alſo uſed to ſignify ſome tools and inſtruments of ſeveral arts and trades.

BALLAST. Any heavy matter uſed to ſink a veſſel to its proper depth in water, or to give it a juſt weight and counterpoiſe, ſo as to be able to bear ſail without overſetting. The ordinary ballaſt is ſand, or ſtones, ſtowed in the hold, next the falſe keel of a veſſel: but ſometimes lead, corn, or other heavy goods, ſerve for ballaſt, which is ſometimes one half, ſometimes a third, and ſometimes a fourth part, of the burden of the veſſel, tho' flat veſſels require the moſt ballaſt; and ſhips are ſaid to be in ballaſt, when they have no other loading.

Maſters of veſſels are obliged to declare the quantity of ballaſt they bear, and to unload it at certain places; they are alſo prohibited unloading their ballaſt in havens, roads, &c. the neglect of which has ruined many excellent ports. By the ſtatutes of the 27th, 34th, and 35th of Henry VIII. as alſo by that of the 11th and 12th of William III. proper directions are given for ballaſting ſhips or veſſels in the Thames, the Severn, and the Avon.

BALLASTAGE. See *Laſtage*.

BALLIAGE. A ſmall duty paid to the city of London, by aliens, and even denizens, on their exportation of certain commodities. See *Scavage*, *Cuſtoms*, *Package*, *Portage*, *Aliens*, and *Denizens*.

BALLON. A kind of brigantine, uſed by the Siameſe, being made of the trunk of a ſingle tree, and managed with oars, with which they carry on their inland trade, by navigating up and down the rivers.

BALM, or *Balm-mint*, is a common garden plant, of great uſe in medicine, and from which a water is extracted by diſtillation.

BALM *of lead*. See *Lead*.

BALSAM, or *Balm*. A kind of medicinal gum; of which there are ſeveral ſorts; but the principal are thoſe of the Levant and Peru.

The balſam of the Levant oozes from inciſions in a ſhrub growing in Egypt and Judea, but chiefly in Arabia Felix; which is ſo valuable, that it makes part of the ſpecial revenue of the Grand Signior, without whoſe permiſſion none of theſe ſhrubs are allowed to be planted or cultivated. The ſhrub growing in India and Arabia bears leaves like rue, but that of Egypt has leaves like the maſtic tree. The inciſion through which this admirable juice flows, is made in the dog-days. It is firſt liquid, and afterwards thickens to the conſiſtence it is ſeen in Europe: but few can pride themſelves in having it pure; becauſe, upon account of its great price, it is adulterated immediately after its filtration from the ſhrub. The marks of its purity are, as pretended, when its ſmell is ſtrong and briſk, when it is freſh, its taſte bitter, ſharp, and aſtringent, eaſily diſſolving in the mouth, and leaving no ſtain on woollen cloth; its real colour being like that of gold, and its ſmell retaining ſomething of the citron. The fruit is

called *carpo-balſamum*; the twigs *xylo-balſamum*; and the juice *opo-balſamum*: the carpo-balſamum enters the compoſition of Venice treacle, and muſt be choſen of an aromatic taſte, with a grateful ſmell: the xylo-balſamum is uſed in the troches of Hedychrous; and is brought in little faggots, the bark of which is red, the wood white, reſinous, and aromatic.

There is likewiſe a balſam of Mecca, or white balſam; being a dry white gum, reſembling copperas, eſpecially when old; which is brought from Mecca by the return of the caravans, and has all the virtues of the balm of Gilead or Judea; from whence it is conjectured to be the ſame, only hardened and altered in colour. This balm is uſed as a medicine in ſeveral diſorders; as alſo to make pomatum, and virginal milk, for preſerving and beautifying the ladies complections.

BALSAM *of Peru*, though not in ſo much eſtimation as that of the Levant, has, notwithſtanding, all its virtues: it is of three kinds, or rather the ſame balſam has three different names; as balſam of inciſion, a white glutinous reſin, oozing from an inciſion in the tree, and afterwards thickened and hardened; which is uſed for green wounds: dry balſam, diſtilled from the ends of the branches cut off, which is firſt like milk, though it afterwards reddens with the ſun; its uſe being for the compoſition of lac virginale: and balſam of lotion, which is blackiſh, and drawn from the bark; the roots and leaves being cut and boiled together; which is uſed for the ſame purpoſe as the white balſam.

BALSAM *of Copaiba*, or *Copivi*, which comes from Braſil and Guinea, in earthen bottles, is of two ſorts; the one bright and thin, the other thick; the firſt being white, and of a reſinous ſmell, the other inclining to yellow; but both have been much eſteemed for wounds, and venereal diſorders: though now they are not ſo much regarded.

BALSAM *of Tolu*, is at firſt a liquid reſin, which, as it grows old, becomes of the colour and conſiſtence of Flanders ſize; having ſome reſemblance, both in ſmell and taſte, to the balm of Gilead, and comes by inciſion from ſome trees growing in New Spain; where the inhabitants receive it in little veſſels of black wax.

BALSAM *of liquid amber*, is a clear, reddiſh reſin, produced by a tree in New Spain, called, by the natives, *oſoſol*; much reſembling ambergreaſe, eſpecially in ſmell, from whence it is denominated: it alſo reſembles balſam of Tolu in ſmell and colour, and is expreſſed, in the ſame manner as the oil of laurel, from a red fruit in the iſland of St. Domingo. The new balſam is liquid, in which ſtate it is called *oil of liquid amber*; and when old, *balſam of liquid amber*; which comes from Spain in barrels, and is very ſcarce among Europeans, being a ſovereign remedy in wounds, eſpecially fiſtulas in the anus.

BALSAM, is alſo applied to certain factitious ſubſtances, made by chemiſts and apothecaries, chiefly of balſamic and healing ingredients, in imitation of the native balſams. 1ſt, It ſignifies a certain ſort of perfume, of a thick conſiſtence, like an ointment; as balſam of roſes, apoplectick, and others; 2d, liquors diſtilled from gums, and reſinous ſubſtances, with ſpirit of wine, uſed in anointing outwardly; as nervous balſam, ſciatic, &c. 3d, a liquor for anointing the body, thicker than oil, and more liquid than an ointment: 4th, ſalts in fuſion, and melted, are called balſams; as the balſam of ſalt of jewels: 5th, a kind of particular preparation called balſam; as balſam of ſulphur, and balſam of ſaturn: and, laſtly, the ſpirit of common ſalt extracted by art; wherein things of the moſt corruptible quality being ſteeped, are ſaid to remain eternally entire.

BALTIC *ſea*. This ſea, together with the gulphs of Bothnia, and Finland, affords a navigation for carrying on the commerce with the eaſt land, or northern countries of Europe; having Sweden on the N. Denmark on the S. W. Germany on the S. with Poland, Courland, and the conquered provinces of Ruſſia on the E. The Baltic has a communication with the German ocean, by means of the Categate, or Scagerac ſea, which is the paſſage from the ocean to the Sound, or entrance into the Baltic ſea, between Sweden and Denmark: it is obſervable that a current perpetually ſets out of this ſea, through the Sound, into the ocean; for which reaſon, and the numerous rivers diſembogued there, its waters are not ſo ſalt as other ſeas: beſides, there are no tides here; and it is frequently frozen three or four months in the winter, which occaſions a ſuſpenſion of trade with the northern countries, but more particularly with Ruſſia.

BALTIC *Iſlands*. See *Daniſh*, *Swediſh*, *and Ruſſian Iſlands*.

BAMBOUC, or *Bambou*, a kind of wood, or rather cane, or reed, extremely knotty, and of the growth of ſeveral places in the Eaſt Indies: its height and thickneſs is very extraordinary; but no other part of it comes to Europe than the firſt and ſmalleſt twigs, which are uſed for walking canes; the larger wood being uſed by the Indians for building.

BANCA. One of the Sunda iſlands. See *Sunda Iſlands*.

BANCALES. A port town of the E. coaſt of Sumatra, in the Eaſt Indies, ſituated in 99 deg. of E. lon. and 2 deg. of N. lat. being 130 m. W. of Malacca. See *Sunda Iſlands*.

BANCO, or *Banquo*, an Italian word, ſignifying bank; which is moſt commonly uſed to denote that of Venice. See *Bank*.

BAND. A ſmall weight of about 2 ounces, uſed in ſome parts of the Guinea coaſt, for gold duſt.

BANDA *iſlands*, or *nutmeg iſlands*, ſituated in the Indian ocean, are generally comprehended under the names of Banda proper, otherwiſe called Lantor, or Lontor, from the principal town being ſituated upon it; Pooloway, Pooloroon, Nero, Roſinging, and Gonapi, which are a part of the archipelago of the Moluccas, and uſually included among thoſe called the little Moluccas, being ſituated between 127 and 128 deg. of E. lon. and between 4 and 5 deg. of S. lat. having the iſland of Ceram to the N. the iſland of Celebes, or Macaſſar, on the W. with the ocean on the E. and S. about 5 leagues diſtant from Amboyna, and 400 from Batavia; being the only places in the world productive of mace and nutmegs: but there are alſo ſeveral other ſmall iſlands which paſs under the denomination of Banda, though too immaterial for obſervation; however all the principal iſlands are in the poſſeſſion of the Dutch; whereby all the nutmegs and mace cultivated there, paſs through their hands.

Lantor, or Banda proper, is the largeſt and richeſt of all the iſlands of Banda. The town of Lantor is, by nature, as ſtrong as a caſtle, and inacceſſible, being built on the brow of a ſteep hill, with an aſcent as difficult as by a ladder; tho' the Dutch made an eaſy conqueſt of it.

Pooloway is a perfect paradiſe, abounding with nutmegs, and other delicious fruits. Their only want is in ſprings and rivers, which is ſupplied, in ſome meaſure, by the frequent rains; and, when theſe fail, the natives import water from the other iſlands. On the E. ſide of this iſland the Dutch have a fort called the Revenge, being a regular pentagon, and held to be not only one of the ſtrongeſt places the Dutch have in India; but much the pleaſanteſt reſidence of their Indian governors.

Pooloroon had neither pleaſure or profit to invite the Dutch to raviſh it from the Engliſh, in the manner they did; the ſole deſign of that expedition being to engroſs the whole ſpice trade to themſelves, which they could not eaſily do, while other nations had acceſs to this iſland.

The largeſt of theſe iſlands is not above 20 leagues in circumference, and moſt of them much leſs: but the vulcanoes, and earthquakes, which frequently happen there, are very terrible; not a year hardly paſſes without ſome miſchief being done by them, which very much diminiſhes the pleaſures the Dutch would otherwiſe enjoy in this their terreſtrial paradiſe.

Banda, is the third of the ſix grand governments belonging to the Dutch in the Eaſt Indies: it was in the year 1601 that theſe adventurous republicans made their firſt appearance in this iſland, which was one of their earlieſt eſtabliſhments; for the firſt fort they erected in this part of the world, was in the iſland of Nero, which fort is now called Naſſau.

In 1609 they made a treaty with the Orancais, or lords of theſe iſlands, whereby the latter obliged themſelves to ſend all their nutmegs and mace to Fort Naſſau; as alſo to

to deliver them to the company's commiſſioners at a certain ſtipulated price; the Dutch engaging themſelves, on their part, to defend and protect them, particularly againſt the Portugueſe.

This treaty having been ill executed, and the Dutch factories inſulted, their commiſſioners being maſſacred, and, what was their principal grievance, the nutmeg trade paſſing into other hands by the connivance of the Orancais; the Dutch commenced hoſtilities againſt the natives, which continued ſome years, when two other treaties were concluded upon, one in 1616, and the other the year following; but theſe, at the ſollicitation of the Engliſh, who were then at war with the Dutch, were not better obſerved.

At laſt, peace being concluded between the Engliſh and Dutch in 1619, the latter the year following, began to expreſs their reſentment againſt the Orancais of Banda; for which purpoſe they offered the Engliſh to divide with them the conqueſt of theſe iſlands: but the Engliſh having refuſed it, they attacked Banda in the month of March 1621, when they obliged the iſlanders to deliver up their towns, forts, arms, and iſlands; and to acknowledge they belonged to the States General, both by right of conqueſt and ceſſion: whereby the Dutch are in poſſeſſion by force, and maintain that they ought alſo to belong to them by right; the Engliſh having refuſed to ſhare this conqueſt; tho', by the treaty of 1619 they were to trade in common with the Dutch to the Moluccas, Banda, Amboyna, and other places.

To aſcertain the trade of nutmegs and mace, the Dutch have built forts in all the iſlands of Banda; and, to augment, people, and cultivate the lands, they divided the ground into lots, which they diſtributed to the Dutch planters eſtabliſhed there, in proportion to their number of ſlaves; obliging them to plant a certain number of nutmeg trees annually, and to bring to the factory all their harveſt of nutmegs, and mace, where they are purchaſed by the company: but there are alſo ſome Moors in the iſlands, to whom the lots were diſtributed on the ſame footing as to the Dutch.

All theſe iſlands ſubſiſt only by the proviſions, commodities, and merchandize, ſent them from Batavia; the ſoil being too indifferent for the produce of any thing but nutmegs. Stuffs, linens, and hard-ware, ſell tolerably well there, being purchaſed both by the Dutch ſoldiers and planters; as alſo by the native iſlanders, who are generally Mahometans. See *Molucca Iſlands*.

BANDANNOES. A muſlin brought from the Eaſt Indies; the piece being about 20 yards long, and 1 yard broad.

BANDER-CONGO. A port-town on the E. ſide of the Perſian gulph, ſituated in 54 deg. of E. lon. and 27 deg. of N. lat. 100 m. W. of Bander-Abaſſi, or Gombron.

BANDEROLL. A little flag, in form of a guidon, extended more in length than breadth; which is hung out on the maſts of ſome foreign veſſels. See *Flag*.

BANDORA. The capital of the iſland of Salſette, or Canorin, ſituated in 72 deg. 30 min. of E. lon. and 19 deg. of N. lat. on the W. coaſt of the Hither India. See *Salſette*.

BANIAN, in India, ſignifies a book-keeper to merchants; though the word is miſapplied to the name of a religious ſect of people who adhere to the Pythagorean ſyſtem: but this is a miſtake; for the people of that ſect are not called Banyans, but the Banyans are all of them of that ſect.

The principal merchants in the Eaſt Indies are of this ſect: they alſo act as brokers, like the Armenians; and they are ſpread in all parts of India, down to Perſia, where they are alſo eſtabliſhed.

BANJAR. A river in the iſland of Borneo, in the Eaſt Indies, in the mouth whereof is a floating town, where the Engliſh Eaſt India company have a factory. See *Sunda Iſlands*.

BANK. A great ſhoal of ſand in the ſea, where ſhips are frequently ſwallowed up and loſt.

BANK, in commerce, is a denomination given to certain ſocieties, or communities, who aſſume the charge of money belonging to private perſons, for improvement by intereſt, or for ſecurity without. Theſe banks are eſtabliſhed in the ſeveral principal trading cities in Europe; as in Venice, London, Amſterdam, Hamburg, Paris, and Genoa: but, of all others, the Venetian bank is the moſt conſiderable; as being of the greateſt antiquity, and that whereon the others are modelled.

The BANCO, *or* BANK *of Venice*, commonly called *banco del guiro*, is properly a board of publick credit and intereſt; or a general and perpetual purſe, for all merchants and traders; eſtabliſhed by a ſolemn edict of the commonwealth, which enacts, That all payments of wholeſale merchandiſe, and letters of exchange, ſhall be in banco, or bank notes; and that all debtors, and creditors, ſhall be obliged, the one to carry their money to the bank, the other to receive their payments in banco: ſo that payments are performed by a ſimple transfer from one to the other: he who was before creditor on the bank books, becoming debtor as ſoon as he has relinquiſhed his right to another, who is entered down as creditor in his place; by which the parties have only an alteration of the name, without any effective payment being made. Though, ſometimes, there are actual payments made; eſpecially in matters of retail, and when foreigners have an inclination to carry off money in ready ſpecie; or when particular traders chuſe to have a ſtock by them to negotiate in bills of exchange, or other mercantile tranſactions. The neceſſity of theſe effective payments has occaſioned the opening a fund of ready money; which is found ſo far from a diminution of the ſtock, that this liberty of withdrawing money at pleaſure is rather an augmentation to it. By means of this bank, the republic, without encroaching on the freedom of commerce, or without paying any intereſt, is miſtreſs of 5000,000 of ducats, or 1,083,333 l. ſterling, which is the limitation of the capital ſtock, to be in readineſs on any emergent occaſion; the republic being ſecurity for the capital.

BANK *of England*. For the ſupport of public credit, the prevention of extravagant uſury, and the utility of trade in general, this opulent bank was projected by William Paterſon, Eſq; a Scotchman, being eſtabliſhed in the 5th and 6th years of the reign of K. William and Q. Mary, by act of parliament, whereby it was enacted, That their majeſties, by commiſſion under the great ſeal, might appoint perſons to take ſubſcriptions, on or before the firſt of Auguſt 1691, from any perſons, natives or foreigners, for raiſing and paying in to the receipt of the exchequer 1,200,000 l. for the ſecurity whereof, the yearly ſum of 140,000 l. ſhould be kept apart in the receipt of the exchequer, payable out of the duties of exciſe; out of which the yearly ſum of 100,000 l. ſhould be applied to the uſe of the ſubſcribers. Their majeſties were empowered to incorporate ſuch ſubſcribers to be one body corporate, by the name of *The governor and company of the bank of England*, who ſhould be capable to purchaſe, and retain, lands, hereditaments, and perſonalties. The corporation, ſo to be made, ſhould not borrow under their common ſeal any further ſum than 1,200,000 l.; ſo that they ſhould not, at any time, owe more, unleſs by act of parliament, upon funds agreed in parliament; and if any more ſhould be borrowed under the common ſeal, every member of the corporation ſhould, in their private capacities, be liable, in proportion to their ſeveral ſhares, to the repayment of ſuch monies, with intereſt. The corporation ſhould not trade, or ſuffer any perſon in truſt for them to trade, with any of the effects of the corporation, in the buying or ſelling of any merchandiſe or goods; every perſon ſo trading, or by whoſe order ſuch trading ſhould be made, to forfeit treble of the value of the goods and merchandiſe traded for. But the corporation might deal in bills of exchange; as alſo in buying or ſelling bullion, gold or ſilver, or in ſelling goods mortgaged to them not redeemed within three months after the time of redemption. All bills obligatory and of credit, under the ſeal of the corporation, might, by indorſement thereon, under the hand of the proprietors, be aſſigned, and the aſſignee ſue in his own name. If the governor, or other members of the corporation, ſhould, upon account of the corporation, purchaſe any lands or revenues belonging to the crown; or lend to their majeſties, their heirs, or ſucceſſors, any money by way of anticipation on any part of the revenue, other than ſuch part only on which a credit of loan

ſhould be granted by parliament; then the governor, or members, ſo conſenting to lend, ſhould forfeit treble the value of the loan.

In purſuance of this act, ſubſcriptions books were opened at Exeter-change, on the 5th of June 1696; when the lords of the treaſury ſubſcribed 5000 l. on the behalf of his majeſty; but the other ſubſcriptions amounted to no more than 2100 l. for, after all manner of expedients had been propoſed, by the commiſſioners, for rendering their project palatable to the public, they were diſappointed in their expectations; the cauſe of which they aſcribed to the large intereſt allowed upon all ſecurities, both public and private, at the ſame time that theſe ſubſcriptions were limited to 5 *per cent.*

However, the intereſt was enlarged to 8 *per cent.* and the charter paſſed for incorporating the company by the name of *The governor and company of the bank of England*; whereby it was ordained, That there ſhould be, for ever, of the members of the company, a governor, deputy-governor, and twenty-four directors, to be elected annually by the general court; which ſaid governor, deputy governor, and directors, or any thirteen or more, the governor, or deputy-governor, to be always one, ſhould be a court of directors, for managing affairs belonging to the corporation. But, as this limitation, by the unavoidable abſence, or otherwiſe, of the governor, or deputy-governor, might be of great hindrance to the buſineſs of the corporation, an alteration was made in this reſpect, by an act of parliament paſſed in the year 1742, whereby it was enacted, That whenever a court of directors ſhall meet, if the governor, or deputy, ſhall be abſent for two hours after the uſual time of proceeding to buſineſs; the directors then met, being not leſs than thirteen, may chuſe a chairman by majority, and proceed to buſineſs; all their acts being declared to be equally valid as if the governor or deputy had been preſent. And by another act, paſſed in the year 1751, it was enacted, That the governor and company of the bank, in any general court, might proceed to tranſact any buſineſs, without adminiſtring the oaths and affirmation, or ſubſcribing the declaration, appointed by their charter to be taken and ſubſcribed by the members of every general court; unleſs they ſhould be required thereto by nine or more proprietors preſent, qualified to vote: and that when a court of directors ſhould be met, according to ſummons or appointment, and ſhould be ſatisfied that the governor, or deputy-governor, would not be preſent to hold the ſaid court; or if the governor, and deputy-governor, ſhould be abſent after the uſual time of proceeding to buſineſs, the court might chooſe a chairman for that time, who ſhould alſo preſide at a general court, if any ſhould at that time be ſummoned to meet, and proceed to buſineſs, by tranſacting the affairs of the corporation, which ſhould be valid to all intents and purpoſes.

By another act of parliament, paſſed in the 8th and 9th years of K. W. III. the company were empowered to enlarge their capital ſtock, by new ſubſcriptions, to 2,201,171 l. 10 s. 8 d. It was alſo enacted, That the capital ſtock and fund of the bank, ſhould be exempt from taxes; that the ſtock ſhould be accounted a perſonal, and not a real eſtate; to deſcend to executors, and not to heirs; that no contract, or agreement, either by word or in writing, for buying or ſelling of bank ſtock, ſhould be good in law or equity, unleſs it be regiſtered in the books of the bank within ſeven days, and the ſtock transferred within fourteen days; that no act of the bank ſhould forfeit the ſtock thereof, but the ſame ſhould be ſubject to the debts of the company; that it ſhould be felony, without benefit of clergy, to forge, or counterfeit, the common ſeal of the bank, or any ſealed bank bill, or any bank note; or to alter, or eraſe, ſuch bills, or notes; that the duties of tonnage and poundage, on wines, vinegar, and tobacco, on the additional impoſitions on goods and merchandizes, ſtamps, marriages, duties on houſes, and upon ſalt, ſhould be the general fund for making good the particular funds of the company, for money advanced to the government; that in caſe of judgment of forfeiture given againſt the bank, the yearly payments out of the exchequer, and all the eſtate belonging to the bank, ſhould be veſted, for three years, in twenty-four perſons, to be choſen by the majority of the company; who ſhould have power to receive the monies due to the bank, as if no ſuch judgment had been given, and to pay and diſcharge the debts and contracts due at the time of ſuch judgment; after which the ſurplus ſhould be divided among the ſeveral members, and then the ſaid yearly payments ſhonld be veſted in the particular members, in proportion to a liſt thereof, to be made up by the ſaid truſtees; and ſhould be aſſignable in a book to be kept by the auditor of the receipt; and that the debts of the bank ſhould never exceed their capital ſtock.

By another act of parliament, paſſed in the 7th of Queen Anne, the company were empowered to augment their capital ſtock to 4,402,343 l. and the company to be continued till the 1ſt of Auguſt 1732, on condition of advancing 400,000 l. more to the government.

By another act of the 9th of Q. Anne, it was enacted, That every perſon who ſhould be elected governor, deputy-governor, or director of this company, ſhould, during that year, be incapacitated from acting as a director of the Eaſt India company.

In 1714 the company advanced to the government another loan of 1,000,000 l. and 500,000 l.; in conſideration of which the incorporation was continued till the year 1742.

In the 3d year of the reign of K. George I. the intereſt of the capital ſtock belonging to the bank was reduced to 5 *per cent.* and the bank agreed to deliver up as many exchequer bills as amounted to 2,000,000 l. in principal money; and to accept an annuity of 100,000 l. payable out of the aggregate fund, and duties upon houſes It was thereby alſo declared, That it ſhould be lawful for the bank, from time to time, as they ſhould ſee cauſe, to call for, from their members, in proportion to their reſpective intereſts in the capital ſtock, any ſums of money as, in a general court, ſhould be adjudged neceſſary; and all perſonal repreſentatives ſhould be indemnified in paying the ſame: and if any member ſhould neglect to pay his ſhare of the monies ſo called for, at the time appointed by notice in the London Gazette, and fixed upon the Royal Exchange, it ſhould be lawful for the bank, not only to ſtop the dividend of ſuch member, and to apply the ſame towards payment of the money ſo called for; but alſo to ſtop the transfers of the ſhare of every ſuch defaulter, and to charge him with an intereſt of 5 *per cent. per annum*, for the monies ſo omitted by him to be paid, till payment thereof; and if the principal and intereſt ſhould be three months unpaid, the bank ſhould have power to ſell ſo much of the ſtock belonging to the defaulter as would ſatisfy the ſame, rendering the overplus to the proprietors; and the bank might, in a general court, when they ſhould adjudge their affairs would admit thereof, cauſe any ſum of money, ſo called in, to be divided among the then members, in proportion to their reſpective ſhares in the capital ſtock.

In the year 1725, the bank agreed to reduce the intereſt of their annuity of 100,000 l. due from the government, upon the ſum of two millions, to 4 *per cent.* which reduced that annuity to 80,000 l. payable out of the duties on houſes, and the aggregate fund.

In the year 1727 the governor and company of the bank paid into the exchequer 1,750,000 l. for the purchaſe of an annuity of 70,000 l. ſubject to redemption; which was chargeable on the duties of coals and culm.

In the year 1728 the governor and company of the bank paid into the exchequer 1,250,000 l. for the purchaſe of an annuity of 50,000 l. chargeable on the additional duties on ſoap and paper; certain linens, ſilks, calicoes, and ſtuffs; ſtarch, exported coals, and the ſtamp duties; all which had been previouſly mortgaged to the ſouth-ſea company. The ſame year, the government ordered 500,000 l. to be paid to the bank out of the ſinking fund, for redeeming a proportionable part of the annuity of 80,000 l. granted in the year 1725; and, in the year 1737, the government alſo ordered that the ſum of 1,000,000 l. ſhould be paid to the bank, in further diminution of the annuity of 80,000 l. whereby the original principal ſum of 2,000,000 l. was reduced to 500,000 l. and the annuity to 20,000 l.; as alſo the whole debt due to the bank to 1,600,000 l.

The

The incorporation expiring in the year 1742, the company engaged to ſupply the government with the farther ſum of 1,600,000 l. at 3 *per cent.*; in conſideration whereof they obtained an act of parliament for enlarging their capital with that additional ſum, and continuing the company till the 1ſt of Auguſt 1764. The government was now indebted to the company in the ſum of 3,200,000 l. the one half carrying 4, and the other moiety 3 *per cent.*: for which they not only procured the prolongation of the company for 22 years; but the act of parliament for that purpoſe alſo declared, That no other bank ſhould be allowed by parliament; nor ſhould any body politic or corporate, or other perſons whatever, united in partnerſhip above the number of ſix, throughout England, borrow, or take up, any ſums of money on their notes payable for leſs time than ſix months, during the continuance of ſuch privilege to this company; which was thereby declared to be a corporation with privilege of excluſive banking; though ſubject to redemption on a year's notice, after the 1ſt of Auguſt 1764, and repayment of their principal intereſt, and all arrears of annuity.

In the year 1746 the company agreed, that the ſum of 986,800 l. due to them in exchequer bills, unſatisfied on the duties for licences to ſell ſpirituous liquors, and ſtrong waters, by retail, ſhould be cancelled and diſcharged; and, in lieu thereof, they accepted of an annuity of 39,472 l. being the intereſt on the ſaid ſum at 4 *per cent.* to be charged on the ſame ſecurities: and the company alſo agreed to advance the further ſum of 1,000,000 l. into the exchequer, upon the credit of the duties ariſing by the malt and land tax, at 4 *per cent.* for exchequer bills to be iſſued for that purpoſe: in conſideration whereof the company were enabled to augment their capital with 986,800 l.

In the year 1750 the government ſtood indebted to the company, for principal and intereſt, in the ſum of 8,486,800 l. and to the proprietors of certain annuities transferable at the bank, in the ſum of 18,402,472 l. Theſe, with the other national debts, amounted to upwards of 80 millions, which the legiſlature were deſirous of reducing by a diminution of the public intereſt; and, accordingly, an act of parliament paſſed, for this purpoſe, whereby it was enacted, That all perſons, bodies politic and corporate, intitled unto any part of the national debt, who ſhould conſent to accept of an intereſt of 3 *per cent.* to commence from the 25th of December 1757, ſubject to the ſame redemption which their 4 *per cent.* were liable to, ſhould, in lieu of their preſent intereſt, receive 4 *per cent.* until the 25th of December 1750; from thence 3 l. 10 s. *per cent.* until the 25th of December 1757; and to 3 *per cent.* afterwards, till redeemable by parliament: for which all the duties, and revenues, appropriated to the payment of the 4 *per cent.* ſhould be ſubject.

But as the principal ſums on the 4 *per cent.* annuities, unſubſcribed for accepting this reduction of intereſt, and payable at the exchequer and bank of England, amounted to 1,026,476 l. 4 s. 6 d. being 182,250 l. the amount of the unſubſcribed exchequer orders, payable out of the duties upon wrought plate; with 157,571 l. 6 s. 1 d. the amount of the unſubſcribed annuities of the year 1746; and alſo 71,723 l. 9 s. 6 d. the amount of the unſubſcribed lottery annuities of 1747, both transferable at the bank; and 211,634 l. 15 s. the amount of the unſubſcribed annuities of 1747, transferable as aforeſaid; as alſo 281,381 l. 1 s. 9 d. the amount of the unſubſcribed annuities of the year 1748, transferable as aforeſaid; and 103,975 l. 12 s. 2 d. the amount of the unſubſcribed annuities of the year 1749, transferable as aforeſaid: the ſame was, by an act of parliament paſſed in the year 1751, directed to be paid off: and as the bank of England agreed to pay into the exchequer 1,013,148 l. 4 s. 6 d. part thereof, upon condition that exchequer bills ſhould be iſſued to them, charged on the ſinking fund, at 3 *per cent. per annum*; and that the principal in ſuch exchequer bills ſhould be repaid them out of the firſt monies of the ſinking fund, that ſhould be applied to the payment of the principal of the national debt; and alſo upon condition that they ſhould ſubſcribe the reſidue thereof, amounting to 13,328 l. in bank annuities: the government agreed thereto, and the money was accordingly advanced by the company, which increaſed their above mentioned debt of 8,486,800 l. to 9,513,276 l. 4 s. 6 d. See *Fund*, *National Debt*, and *Exchequer*.

The company make dividends of their profits half yearly, of which notice is publickly given; when thoſe who have an occaſion for their money may readily receive it: but private perſons, if they judge convenient, are permitted to continue their funds, and have their intereſts added to the principal.

A magnificent ſtructure was erected behind the royal exchange for the conveniency of this company, the foundation of which was laid in 1732; and, ſoon after the finiſhing of this ſtately fabric, the proprietors of the bank cauſed a ſtatue to be erected in the hall of the building, in commemoration of their founder, with the following inſcription.

Ob
Legibus vim
Judiciis auctoritatem,
Senatui dignitatem,
Civibus univerſis jura ſua,
Tam ſacra, quam civilia, reſtituta,
Et illuſtriſſimæ domus Hanoverianæ
In imperium Britannicum ſucceſſione.
Poſteris confirmata,
Optimo principi,
Gulielmo tertio,
Conditori ſuo,
Grato animo poſuit, dicavitque
Hujus ærarii ſocietas,
A. C. MDCCXXXIV. harumque ædium I.

Or, in Engliſh, thus:

For reſtoring efficacy to the laws,
Authority to the courts of juſtice,
Dignity to the parliament,
To all his ſubjects their religion and liberties,
And confirming theſe to poſterity,
By the ſucceſſion of the illuſtrious houſe of Hanover
To the Britiſh throne.
To the beſt of princes, William the Third,
Founder of the bank,
This corporation, from a ſenſe of gratitude,
Has erected this ſtatue,
And dedicated it to his memory,
In the year of our Lord MDCCXXXIV.
And the firſt year of this building.

Thus firmly eſtabliſhed is this glorious ſuperſtructure of the national credit of Great Britain, having the legiſlative power of the kingdom for its foundation; a ſecurity ſufficient for ſo noble, ſo extenſive a fund; a ſecurity coeval with the liberties of the people, that cannot periſh without the extinction of freedom, and has ſo cloſely rivetted the conſtitution of the bank with the common intereſt of the country, that they ſhould now co-operate for their mutual preſervation, againſt the extended arm of ambition, the deſigning eye of avarice, the envy of ſurrounding enemies, and the force of future invaſions.

BANK *of Amſterdam*. This bank was eſtabliſhed in 1609, much upon the footing of the banco of Venice, and is, properly ſpeaking, a perpetual caſh for traders; its fund having amounted to ſuch prodigious ſums, as ſometimes to have been computed at no leſs than 3000 tons of gold, valued at 100,000 florins *per* ton, amounting in the whole to near forty-two millions ſterling.

By its eſtabliſhment, it was ordained, that the payments of bills of exchange ſhould be made in bank-money, unleſs the ſum was leſs than 300 florins; and a payment cannot be written in bank for leſs than this ſum, paying 6 d. either for receiving or paying, the Eaſt and Weſt India companies excepted; which payments are made by a ſimple transfer; ſo that both debtors or creditors are obliged, the one to bring their money to the bank, and the others to receive it in bank-money.

Tho' the bank of Amſterdam has no open caſh, like the banco of Venice; yet, ſetting aſide the regulation of the bank, payments are ſometimes made in real money; and

there are particular cashiers out of the bank, who make these payments for 8 *per cent.*

It is by this bank that the city of Amsterdam upholds itself with so much splendor; and, without disturbing the liberty of trade, makes itself mistress of the greatest part of the money of its inhabitants; for no man conceives it a diminution of his wealth for having his substance in bank.

Ingots of gold, and bars of silver, are also deposited in this bank, their price being regulated pursuant to their value, after the assay has been made: and it is therefore that the bank-money is usually worth more than the current, this difference being called the *agio* of the bank.

Those who have money in bank, may take it out when they think proper, by paying 16 *per cent.* for the keeping, or they may dispose of it in bills; and if, in taking it out, the agio is under 5 *per cent.* the treasurer makes the difference to be paid, provided that upon receipt the interest was 5 *per cent.*

The bank is shut up twice a-year, in January or February, and in July or August, and continues shut eight, ten, or fifteen days; during which times the books of accompt are adjusted. It is also shut up during the feasts of Easter, Ascension, Christmas, and some other festivals.

The whole city is bound to make good the money deposited in this bank, and the treasure is secured under four different locks; the keys of which are kept by four of the principal magistrates.

When any difficulty arises among merchants and traders concerning bank-affairs, it is regulated summarily by commissioners nominated for this purpose by the magistrates of Amsterdam: and some other formalities are also observed concerning this bank, which are too immaterial to be inserted.

BANK *of Hamburgh.* Tho' the fund of this bank is not so considerable as that of Amsterdam, yet the fidelity and exactness wherewith all things are therein transacted, have given it a great reputation through all Europe, and particularly in the north.

The burghers, and several corporations of the city, are the security of the bank, the senate not assuming the least inspection into its affairs.

The directors are four in number, whose election is by a plurality of voices of the principal citizens. It is the business of these directors to superintend the observance of the regulations, and to furnish the cashiers with money, when payments are to be made; which however is done without intermeddling with the bank-treasure, the directors taking care to provide other funds.

The capital of this treasure is supposed to be very considerable: but as the book-keepers take an oath of secresy with regard to what enters, and goes out of the bank, as also with regard to what each person has deposited therein, it is very difficult to fix upon any certainty; which is likewise the reason that no seizure can be made of the deposit belonging to any person; because creditors are deprived of all such knowledge by this obligation of secresy.

The book-keepers, who, as well as the directors, are four in number, are obliged every week to give in to the comptrollers two books of their accompts; and none but burghers can have an accompt in bank, whose money is deposited there without interest. However, no particular person can write in bank for less than 100 marks, and two stivers are paid for entering any sum under 300 marks.

There are hours specified every day for writing in bank; in the morning, from seven till ten; and in the afternoon, from three till five. It is also at the same hours in the morning, that a person may be informed whether a sum has been written; and the same may be done from ten till five in the afternoon, on paying a fee of two stivers to the book-keeper. But there are merchants who stipulate with the bank, for 20, 30, or 40 marks a year, for a power to write their sums in bank at any time.

The bank is shut up every year, from the 31st December to the 15th of January following.

The species usually received in bank are rix-dollars, halfs, quarters, and eighths of rix-dollars, which are usually worth an eighth, very often a quarter, and even sometimes one half *per cent.* more than the money which is written in bank-bills; so that the agio is sometimes from 30 to 40 *per cent.*

The bank of Hamburgh receives also pledges, on which it lends money at interest, with an obligation of repaying principal and interest in six months; in default whereof the deposited effects are sold at the bar of the bank to the best bidder, after an advertisement importing the day of their sale and delivery.

The BANK *of Genca*, commonly called the *bank of St. George*, was formerly of great opulence, and in high estimation, consisting of such branches of the revenues as were appropriated to the discharge of several sums borrowed from private persons during the exigencies of the commonwealth; which perpetually endangered it during any commotions, where the republic was an accessory party: therefore the unhappy alliance of the Genoese with the French and Spaniards, against the house of Austria in 1746, was attended with the most fatal consequences to this bank, by the impoverishment of the state, which has never been, and perhaps never will be, able to revive the lustre and reputation of its national fund.

BANK-*book*. See *Book-keeping*.

BANK-*fund*. See *Fund*.

BANKER. A person who banks, or negotiates and traffics in money, receiving and remitting from place to place by means of bills or letters of exchange; the word bank, in this sense, being a derivative from the Italian banca, formed of the Spanish banco, a bench whereon the antient money-changers sat in the public markets; or, according to the opinion of others, a table whereon they counted their money.

In Italy, the employment of a banker, especially in republics, is no derogation from nobility; which occasions the principal part of the Italian cadets, or younger sons of condition, to undertake it for the support of their dignity, and the credit of the profession.

An act of parliament, made in the 23d year of King Charles II. recites, "That several persons, being gold-"smiths, and others, by taking up or borrowing great "sums of money, and lending out the same again "for extraordinary hire or profit, have acquired the re-"putation of bankers." It is therefore apparent from this act, that the moneyed goldsmiths in London first obtained the characters of bankers in the reign of that monarch: but bankers of late, are those goldsmiths, and private persons, in whose custody money is deposited for security, to be withdrawn again as the proprietors have occasion for the same, without any manner of interest.

The occupation of a banker is now very advantageously executed by several eminent citizens of London and inhabitants of Westminster, in Edinburgh, Bristol, Shrewsbury, and several other places of the united kingdom; as also in Dublin, and some other of the most considerable maritime towns in Ireland; but, by the act of parliament passed in the year 1742, no company of bankers exceeding six in number, are permitted in England.

BANKRUPT, is a dealer, who, having possession of the property of other people, absconds to defraud his creditors; the word being derived from the Italian *banco rotto*, or broken bench; for it was the custom in Italy, when a banker failed, to demolish his bank, or bench, where he counted his money, and negotiated his business in the public market, on purpose to advertise the community, that the person to whom the bank appertained, was no longer in a condition to continue his employment. However, Cowel deduces the word from the French *banque* or table, and *route*, *vestigium*, or trace; by a metaphor from the sign left in the ground of a table once fastened to it, and no more to be discovered: for, on this principle, he traces the origin of bankrupts, from the antient Roman mensarii, or argentarii, who had their tabernæ or mensæ in certain public places; and who, when they fled, or absconded, with the money intrusted to their care, left only the sign or shadow of their former station behind for the satisfaction of their creditors.

The

The firſt act of parliament relative to bankrupts, was paſſed in the 35th year of the reign of King Henry VIII. which was more particularly explained in another act paſſed in the 13th year of Queen Elizabeth; whereby it was enacted, That if any merchant, or other perſon, uſing the trade of merchandiſe, by way of bargaining, exchange, rechange, bartry, chevisance, or otherwiſe, in groſs, or by retail, or ſeeking his trade of living by buying and ſelling; ſhould depart the realm, or begin to keep his houſe, or otherwiſe to abſent himſelf, or ſuffer himſelf willingly to be arreſted for debt, or other thing, not due for money delivered, wares ſold, or other good conſideration, or ſhould ſuffer himſelf to be outlawed, or yield himſelf to priſon, or depart from his dwelling-houſe, to the intent to defraud or hinder any of his creditors of their juſt debts, he ſhould be deemed a bankrupt: and when any merchant, or other perſon uſing the trade of merchandiſe, ſhall be deemed a bankrupt, the Lord Chancellor is impowered, by commiſſion under the great ſeal, to appoint commiſſioners for examining into the ſtate of the bankruptcy; who ſhould be inveſted with a diſcretionary power, to take care of the body of the bankrupt, and make ſuch order as they think neceſſary relative to the ſecurity of his real and perſonal effects, for the ſatisfaction of the creditors.

By the ſtatute made in the 1ſt year of the reign of King James I. it is enacted, That every perſon uſing merchandiſe, who ſhould willingly or fraudulently procure himſelf to be arreſted, or his goods, money, or chattels, to be attached or ſequeſtered, or depart from his dwelling-houſe, or make any fraudulent grant or conveyance of his land or chattels, whereby his creditors might be defeated or delayed for the recovery of their debts; or being arreſted for debt, ſhould, after his arreſt lie in priſon ſix months upon that arreſt, or any other arreſt or detention for debt, ſhould be adjudged a bankrupt. That if any perſon becoming a bankrupt, ſhould convey to any of his children, or other perſons, any real or perſonal eſtate, or transfer his debts to other men, except the ſame ſhould be conveyed or transferred upon the marriage of any of his children, both the parties married being of the years of conſent, or ſome valuable conſideration, it ſhould be in the power of the commiſſioners to ſell or diſpoſe thereof, in as ample manner as if the bankrupt had been actually ſeized or poſſeſſed thereof. That it ſhould be lawful for the commiſſioners to examine the bankrupt upon interrogatories tending to diſcloſe his eſtate, as they ſhould think proper; and if he ſhould be guilty of perjury, whereby to prejudice the creditors to the value of 10 l. the bankrupt ſhould ſtand upon the pillory two hours, and have one of his ears nailed to the pillory, and cut off.

By a ſtatute of the 21ſt of James I. it was declared, That the ſtatutes againſt bankrupts, and for relief of creditors, ſhould be in all things largely and beneficially conſtrued for relief of the creditors. That every perſon uſing the trade of merchandiſe, by way of bargaining, exchange, bartering, chevisance, or otherwiſe, in groſs or by retail, or ſeeking his living by buying and ſelling, or uſing the trade or profeſſion of a ſcrivener, receiving other men's money or eſtates into his truſt and cuſtody, who ſhould obtain any protection, other than ſuch perſons as ſhould be lawfully protected by privilege of parliament, or ſhould prefer unto his Majeſty, or unto any of the King's courts, any petition or bill againſt his creditors; or any of them, deſiring or endeavouring to compel them to accept leſs than their juſt and principal debts; or to procure time or longer days of payment, than was given at the time of their original contracts; or being arreſted for debt, ſhould, after his arreſt, lie in priſon two months upon that, or any other arreſt or detention for debt; or being arreſted for 100 l. or more of juſt debt, ſhould, after ſuch arreſt, eſcape out of priſon, ſhould be adjudged a bankrupt; and in the caſe of an arreſt, or lying in priſon for debt, from the time of his firſt arreſt. That if any bankrupt ſhould, upon his examination before the commiſſioners, be found to have fraudulently conveyed away his real or perſonal eſtate to the value of 20 l. with an intent to elude the execution of the ſtatutes, or defraud his creditors, and ſhould not diſcover the ſame, ſuch perſon might be indicted for ſuch fraud; and, if convicted, to ſtand upon the pillory for two hours, have one of his ears nailed there, and cut off. That the commiſſioners, or any perſons appointed by their warrant, might break open the houſes, chambers, ſhops, warehouſes, doors, trunks, or cheſts of the bankrupt, where the bankrupt, or any of his goods or eſtate, ſhould be reputed to be, and to ſeize upon and order the body and goods of the bankrupt, and to diſpoſe of the ſame as the commiſſioners ſhould think proper. That all acts againſt bankrupts ſhould extend to ſtrangers born, as well aliens as denizens, as effectually as to natural born ſubjects, both to make them liable to the laws as bankrupts, as alſo to make them capable of the benefit as creditors.

Some other proviſions relative to bankrupts, tho' immaterial to the deſign of this dictionary, were ordained by the ſtatutes of the 13th and 14th of Charles II. the 5th and 10th of Queen Anne, and the 5th and 7th of King George I. But the moſt particular and eſſential act was paſſed in the 5th of King George II. whereby it was enacted, That bankers, brokers, and factors, ſhould be liable to the ſtatutes concerning bankrupts. That if any perſon declared a bankrupt ſhould not, within forty-two days after notice in writing left at his uſual place of abode, or perſonal notice, in caſe ſuch perſon be in priſon, and notice in the London Gazette, ſurrender himſelf to the commiſſioners, and diſcover and deliver up all his effects, books, and writings, except neceſſary wearing apparel for himſelf, his wife, and children; then the bankrupt, in ſuch caſe, or in caſe he ſhould conceal or embezzle his eſtate, to the value of 20 l. or any books of accompt, or writings relating thereto, with intent to defraud his creditors, ſhould, upon indictment and conviction, be deemed *guilty of felony, without benefit of clergy*; and the goods and eſtate of ſuch felon ſhould go among the creditors ſeeking relief under ſuch commiſſion. That the commiſſioners ſhould appoint, within the forty-two days for the bankrupt to ſurrender, not leſs than three meetings, the laſt of which ſhould be on the forty-ſecond day limited for his appearance; and three weeks notice ſhould be given in the Gazette of the time and place of ſuch meeting. That the Lord Chancellor might enlarge the time for ſuch perſon ſurrendering himſelf, and diſcovering his effects, not exceeding 50 days from the expiration of the ſaid forty-two days, ſo as ſuch order for enlarging the time be made ſix days before the time of ſurrender.

That all bankrupts who ſhould ſurrender and conform, as by the act directed, ſhould be allowed 5 *per cent.* out of the neat produce of the eſtate that ſhould be received, if it was ſufficient to pay 10 s. in the pound, and ſo as the ſaid 5 l. *per cent.* ſhould not amount to above 200 l. In caſe the eſtate ſhould be ſufficient to pay 12 s. 6 d. in the pound, then all perſons ſo conforming ſhould be allowed 7 l. 10 s. *per cent.* ſuch allowance not exceeding 250 l. and if the eſtate was ſufficient to pay 15 s. in the pound, the bankrupt to be allowed 10 l. *per cent.* but not to exceed 300 l. and every ſuch bankrupt ſhould be diſcharged from all debts owing at the time he became bankrupt, on producing his certificate; unleſs the plaintiff could prove the certificate was unfairly obtained, or make appear any concealment by ſuch bankrupt to the value of 10 l. But if the neat produce of ſuch eſtate ſhou'd not amount to 10 s. in the pound, the bankrupt ſhould only be allowed ſo much as the aſſignees and commiſſioners ſhould think fit, not exceeding 3 l. *per cent.* That no diſcovery ſhould entitle ſuch bankrupt to the benefits allowed by the act, unleſs the commiſſioners certified to the Lord Chancellor his conformity to the act, and unleſs 4 parts in 5 in number and value of the creditors for 20 l. reſpectively, ſhould ſign ſuch certificate; which certificate the bankrupt ſhould make oath was obtained without fraud, after which it muſt be allowed by the Lord Chancellor; and any of the creditors were to be heard, if they thought fit, againſt the making ſuch certificate, and againſt the confirmation thereof. That nothing in this act ſhould give any advantage to any bankrupt, who ſhould, upon marriage of any of his children, have given above the value of 100 l. unleſs he proved before the commiſſioners, that he had other eſtate remaining ſufficient to ſatisfy his debt; nor to any bankrupt

rupt who ſhould have loſt, in one day 5 l. or in the whole, the value of 100 l. within twelve months next preceding his becoming bankrupt, at any ſort of gaming; or that, within one year, ſhould have loſt 100 l. by contracts for ſtock, or ſhares of any public funds, where ſuch contract was not to be performed within one week from the making, or where the ſtock was not actually transferred.

That the commiſſioners ſhould examine the bankrupt, and every other perſon they thought proper, touching the bankruptcy; and, if they refuſed to anſwer in a ſatisfactory manner, the commiſſioners might by warrant commit them to priſon, to remain there without bail, till they ſubmitted to anſwer, and ſubſcribed their examination; and if any goaler wilfully ſuffered ſuch perſon to eſcape, or to go without the walls or doors of the priſon, he ſhould forfeit 100 l. for the uſe of the creditors.

That every perſon who ſhould, after the time allowed to ſuch bankrupts, voluntarily make diſcovery of any part of the eſtate belonging to the bankrupt, not before come to the knowledge of the aſſignees, ſhould be allowed 5 *per cent.* and ſuch further reward as the aſſignees, and the major part of the creditors, in value, ſhould think fit.

That every perſon who ſhould have accepted of any truſt, and ſhould wilfully conceal any eſtate of any bankrupt, and ſhould not, within forty-two days after ſuch commiſſion ſhould iſſue, and notice given in the Gazette, diſcover ſuch truſt and eſtate, in writing to one of the commiſſioners or aſſignees, and ſubmit to be examined, ſhould forfeit 100 l. and double the value of the eſtate concealed, to the creditors.

That it ſhould be lawful for the perſons taking bills, notes, or other ſecurity for money payable at a future day, to petition for a commiſſion, or join in petitioning.

That no commiſſion of bankrupt ſhould be awarded, unleſs the ſingle debt of the creditor, or of more perſons being partners, petitioning for the ſame, amounted to 100 l. or unleſs the debt of two creditors petitioning amounted to 150 l. or unleſs the debt of more creditors petitioning amounted to 200 l. and the creditors petitioning ſhould, before the ſame be granted, make affidavit, or ſolemn affirmation, before one of the maſters in chancery, of the truth of their debts, and give bond to the Lord Chancellor, in the penalty of 200 l. to be conditioned for proving their debts; and if ſuch debts ſhould not be really due, or if it could not be proved that the party was a bankrupt, then the Lord Chancellor ſhould, upon petition of the party grieved, order ſatisfaction to be made for the damages ſuſtained; and, in caſe there be occaſion, aſſign ſuch bond to the party, who might ſue for the ſame in his own name.

That if any bankrupt ſhould, after iſſuing of any commiſſion againſt him, pay to the perſon who ſued out the ſame, or deliver to ſuch perſon goods, or ſecurity for his debt, whereby the perſon ſuing out ſuch commiſſion ſhould privately have more in the pound than the other creditors, ſuch payment, delivery of goods, or giving ſecurity, ſhould be deemed an act of bankruptcy, whereby ſuch commiſſion ſhould be ſuperſeded; and the Lord Chancellor might award, to any creditors petitioning, another commiſſion; and the perſon receiving ſuch goods ſhould forfeit as well his whole debt, as the whole he ſhould have received, and ſhould deliver up the ſame, or the full thereof, to be divided among the other creditors.

That the creditors who ſhould petition for a commiſſion of bankruptcy, ſhould be obliged at their own coſts to proſecute the ſame, until aſſignees ſhould be choſen; and the commiſſioners ſhould, at the meeting to be appointed for chuſing aſſignees, aſcertain ſuch coſts, and order the aſſignees to reimburſe ſuch petitioning creditors, out of the firſt effects of the bankrupt received, and every petitioner ſhould be at liberty to prove his debt without paying contribution.

That the commiſſioners ſhould immediately, after the declaration of the bankrupt, cauſe notice thereof to be given in the Gazette, and ſhould appoint a time and place for the creditors to meet to chuſe aſſignees; which meeting for the city of London, and all places within the bills of mortality, ſhould be at Guildhall: at which meeting the debts ſhould be proved, and the commiſſioners ſhould aſſign the eſtate belonging to the bankrupt unto ſuch perſons as the major part in value of ſuch creditors ſhould chuſe; and the aſſignees ſhould be obliged to keep books of accompt, wherein they ſhould enter all ſums of money, or other effects, received out of the eſtate of the bankrupt, to which books every creditor ſhould have free reſort; but no creditor ſhould be permitted to vote in ſuch choice of aſſignees, whoſe debt ſhould not amount to 10 l.

That where it ſhould appear there had been mutual credit given, or mutual debts, between the bankrupt and any other perſon, the commiſſioners or aſſignees ſhould ſtate the accompt; when one debt might be oppoſed againſt another, and the ballance of ſuch accompt ſhould be claimed or paid.

That the commiſſioners might immediately appoint aſſignees, who might be removed by the majority of the creditors; and the Lord Chancellor might, upon petition of the creditors, order the choice of new aſſignees; when the commiſſioners ſhould cauſe public notice to be given in the two Gazettes, that ſhould immediately follow the removal of ſuch aſſignees, and the appointment of others.

That, before the creditors ſhould proceed to the choice of aſſignees, the majority preſent ſhould, if they thought fit, direct how, and with whom the monies to be received ſhould remain until the ſame was divided; to which rule the aſſignees ſhould conform, as often as 100 l. ſhould be got in.

That the aſſignees, after the expiration of four months, and within twelve months from the time of iſſuing ſuch commiſſion, ſhould cauſe twenty-one days notice to be given in the Gazette, of the time and place the commiſſioners and aſſignees intend to make a dividend; when the creditors, who had not before proved their debts, ſhould be at liberty to prove the ſame; and, upon every ſuch meeting, the aſſignees ſhould produce accompts of their receipts and payments, as alſo of what ſhould remain outſtanding, and might be examined upon oath touching the truth of ſuch accompts; when the aſſignees ſhould have all juſt allowances, and the commiſſioners ſhould order ſuch dividend, and at ſuch time, as they ſhould think neceſſary; and the aſſignees, in purſuance of ſuch order, without any deed of diſtribution, ſhould make ſuch dividend, and take receipts in a book from each creditor.

That the aſſignees ſhould be empowered, with conſent of the creditors, to make compoſition with any debtors, where it ſhould appear neceſſary.

That after the bankrupt ſhould have obtained the confirmation of his certificate, he ſhould attend the aſſignees to ſettle any accompt, or any court of record, or for ſuch other buſineſs as the aſſignees ſhould judge neceſſary; for which attendance the bankrupt ſhould be allowed 2 s. 6 d. a day; but if he ſhould neglect to attend, or refuſe to aſſiſt in ſuch diſcovery, without cauſe ſhewn to, and allowed by the commiſſioners, he ſhould be committed to priſon, until he ſhould conform to the ſatisfaction of the commiſſioners.

That, within eighteen months after the iſſuing of any ſuch commiſſion, the aſſignees ſhould make a ſecond dividend, if the eſtate was not wholly divided upon the firſt; when the commiſſioners ſhould order what was to be divided; which ſecond dividend ſhould be final, unleſs any ſuit ſhould be depending, or any part of the eſtate ſtanding out; or unleſs ſome future eſtate of the bankrupt ſhould afterwards come to the aſſignees; in which caſe the aſſignees ſhould convert the ſame into money, and within two months after divide the ſame by order of the commiſſioners.

That no ſuit in equity ſhould be commenced by aſſignees, without conſent of the majority of the creditors preſent.

And that no farmer, graſier, or drover, or receiver-general of taxes, ſhould be deemed a bankrupt, or be intitled to the benefits given by this act, which was to continue for three years from the 24th of June 1732.

The above act was continued, by the ſtatute of the 9th of George II. to the 29th of September 1743, and afterwards continued in full force. And, by an act of parliament paſſed in 1746, it was enacted, That no real creditor of a bankrupt, in reſpect of goods ſold to, or bills of exchange really drawn, negotiated, or accepted by ſuch bankrupts in courſe of dealing, ſhould be liable to refund

fund to the aſſignees, any money, which, before the iſſuing of the commiſſion, was really in the courſe of trade received by him of ſuch bankrupt, before he knew of his becoming a bankrupt, or being in inſolvent circumſtances. And reciting, that whereas merchants, and other traders, frequently lent money on bottomry, or at reſpondentia, and cauſed their veſſels with their cargoes to be inſured; and where commiſſions of bankruptcy iſſued againſt the obligor, or aſſurer, before the loſs of the ſhip or goods happened, it had been made a queſtion whether the obligee, or aſſured, ſhould be permitted to prove their debts, or have any benefit under the commiſſion, which might be a diſcouragement to trade: for remedy thereof, it was therefore enacted, That the obligee in any bottomry, or reſpondentia bond, and the aſſured in any policy of aſſurance, made upon a valuable conſideration, ſhould be admitted to claim; and after the loſs or contingency, to prove the debt thereon, as if the ſame happened before the iſſuing of the commiſſion, and receive a proportionable dividend.

By the ſtatute of the 24th of George II. it was enacted, That where any perſons ſhould fraudulently ſwear, or being quakers affirm, before the major part of the commiſſioners in a commiſſion of bankruptcy, or by affidavit or affirmation exhibited to them, that a ſum of money is due to him, or her, from any bankrupt, which ſhould, in fact, not be really and duly owing; and ſhould, in reſpect of ſuch fictitious debt, ſign the certificate for ſuch bankrupt's diſcharge: in every ſuch caſe, unleſs ſuch bankrupt ſhould, before the major part of the commiſſioners have ſigned ſuch certificate, by writing ſigned by him, and delivered to one or more of the commiſſioners, or of the aſſignees of his eſtate and effects, diſcloſe the fraud, and object to the reality of ſuch debt; ſuch certificate ſhould be null and void, and the bankrupt ſhould not be entitled to his diſcharge, or to any of the benefits or allowances given to bankrupts, by the act of the 5th of George II.: and that where any creditor of a bankrupt reſides in foreign parts, the letter of attorney of ſuch creditor, atteſted by a notary-public, in the uſual form, ſhould be a ſufficient evidence of the power by which any perſon thereby authoriſed ſhould ſign the bankrupt's certificate.

Such are the precautions taken by the Britiſh legiſlature, for the ſecurity of credit, the ſupport of mercantile confidence, and the proſperity of commerce: neither have other nations been leſs provident againſt ſuch fraudulent practices in trade; particularly in France, where, by the regulation of Henry IV. in the year 1609, and that of Lewis XIV. in 1673, it is declared, That fraudulent bankrupts ſhould be rigorouſly proſecuted, and puniſhed with death.

BANTAM. Once the capital of a large kingdom, and a port-town of great trade on the N. W. coaſt of the iſland of Java; ſituated in 105 deg. of E. lon. and 6 deg. 30 min. of S. lat. See *Sunda Iſlands*.

BANTRY. A port-town of the county of Cork, in the S. W. part of Ireland, ſituated in 9 deg. of W. lon. and 51 deg. 30 min. of N. lat. on a bay of the ſea, which is denominated from the town. See *Ireland*.

BAR, is that ſhallow part at the entrance of a port, which prevents ſhips from coming in with the tide; as that of Goa, Cheſter, Dublin, and many other places.

BAR, is alſo ſaid of certain bits, or pieces of metal, extended in length; as a bar of ſilver, and a bar of iron.

BAR, is likewiſe a denomination given, among traders on the coaſt of Guinea, to a certain quantity of goods of any kind, which quantity was of equal value among the natives, to a bar of iron, when trade was firſt carried on to the river Gambia. Thus, a pound of fringe is a bar, two pounds of gun-powder is a bar, and 100 gun-flints is a bar, and each ſpecies of trading goods has a quantity in it called a bar: therefore, their way of reckoning is by bars, or crowns, one of which does not ſometimes amount to one ſhilling ſterling; but that happens according to the call of goods, which are ſometimes dear, and ſometimes cheap.

BARACOU. A port-town on the N. E. part of the iſland of Cuba, in N. America, ſituated in 76 deg. of W. lon. and 21 deg. of N. lat. 50 m. N. E. of St. Jago de Cuba. See *Spaniſh America*.

BARANCA, or *Baranco de Melambo*, among the Spaniards, is an office, or factory, of receipt, in America, which they have upon the river Magdalen, ſix leagues diſtant from the N. ſea; where all European commodities deſigned for new Granada are unloaded; being about 30 leagues diſtant from Carthagena, and 20 from St. Martha.

BARATRY. See *Barratry*.

BARBADOES. One of the Britiſh Caribbee iſlands. See *Britiſh America*.

BARBARY, or the N. diviſion of Africa, extends itſelf along the ſouthern ſhore of the Mediterranean ſea, from the 2d deg. of W. lon. to the 30th deg. of E. lon. the river Mulvia ſeparating it from Morocco, on the W.; it is bounded by Egypt on the E.; and by the great mountain, called Mount Atlas, on the S.; comprehending the countries of Algiers, Tunis, Tripoli, and Barca; being inhabited by Moors and Arabs, under the juriſdiction of an abandoned race of Turks, conſiſting of pirates, banditti, and the very refuſe of the Ottoman empire, who have compulſorily quitted their ſeveral countries to avoid the puniſhment of their crimes.

As theſe piratical ſtates are very formidable enemies to the Chriſtian powers, and frequently occaſion a ſtagnation of the Italian commerce, by their numerous corſairs interrupting the navigation of the Mediterranean; it may be thought neceſſary to give ſome relation of the riſe and eſtabliſhment of theſe piratical kingdoms; which happened in the following manner.

The Moors of Spain having been diſpoſſeſſed of their country, after the loſs of Granada, in 1492, when Ferdinand and Iſabella were upon the Spaniſh throne, and being obliged to renounce their religion, or tranſport themſelves to the coaſts of Barbary, many of them choſe to go into exile; but, to revenge themſelves on the Spaniards, and ſupply their neceſſities, they confederated with the Mahometan princes, on the Barbary coaſt; fitted out little fleets of cruizing veſſels, took all the Spaniſh merchant ſhips they met with at ſea, landed in Spain, and brought away multitudes of people to wear the ſhackles of captivity. The Spaniards thereupon invaded Barbary, took Oran, with ſeveral other places on the coaſt of Algiers, and were in a proſperous way of reducing the whole country: but, in this diſtreſs, the African princes made application to Barbaroſſa, a famous Turkiſh rover, deſiring his aſſiſtance againſt the Chriſtians; which he very readily afforded them; though he had no ſooner repulſed their enemies, than he uſurped the government of Algiers; treating the Moors, and Africans, with all the denotations of ſlavery; as his brother Heyradin Barbaroſſa afterwards did the inhabitants of Tunis; while another of theſe adventurers obtained the government of Tripoli: in which uſurpation they were ſupported by the Grand Signior, who claimed the ſovereignty of the whole coaſt, which, for ſome time, was reputed a provincial part of the Ottoman dominions, and governed by Turkiſh baſhaws, or viceroys: but theſe reſpective ſtates, or rather their military men, at length took upon them to elect a ſovereign out of their own body, and rendered themſelves independent of the Turkiſh empire.

The piratical ſtates have never been at peace with the Spaniards ſince the loſs of Granada; and they find it their intereſt to be at perpetual war with the ſtates of Italy, whoſe ſhips they are continually plundering, and carrying their unhappy crews into a moſt deplorable ſlavery: which depredations are very beneficial to the captors, and contribute to the preſervation of the reſpective ſtates; becauſe, the ranſom for the redemption of their priſoners, occaſions a continual plenitude of money, and enables them to ſupport an obſtinate war, whereby the Europeans furniſh theſe Barabarians with new weapons for their own deſtruction.

The kingdom of Algiers extends 600 m. from E. to W. and, in ſome places, about 400 m. from N. to S. being divided into the provinces of Tremeſen, Titterie, and Conſtantina. The government is, in reality, an abſolute monarchy; though it has ſome appearance of a mixed government, becauſe the dey, or ſovereign, ſometimes aſſembles a divan, conſiſting of the principal officers of the ſtate, and of the janizaries. The dey is elected by

the army; who depoſe, or put him to death, whenever they apprehend he does not conſult their intereſt: the want of ſucceſs, in any inſtance, almoſt infallibly occaſions a rebellion; for, of the ſix deys that have preſided there ſince the year 1700, four have been murdered, and a fifth reſigned his government for the preſervation of his life. The Grand Signior had, till very lately, a baſhaw conſtantly reſiding at Algiers, to whom he expected the dey, and his ſubjects, ſhould pay a great regard; but, finding his authority ſlighted, and that they would not permit his baſhaw to intermeddle in their affairs, or even allow him a vote in their divan, he conſtituted the dey himſelf his baſhaw, that he might ſtill ſeem to retain ſome authority over the Algerines.

This country is very populouſly inhabited by many Arabian and African tribes, governed by their particular princes; who are kept under ſubjection by about 6000 Turks and Cologlies, the ſtanding forces of the government, by that political maxim, *Divide and command*; for theſe Turks maintain their ground againſt all oppoſition, by promoting diſſentions between the different tribes.

The revenues of the government ariſe from the tribute paid by the Moors and Arabs; a detachment of the army being annually ſent into each province to make the collection, under the command of a bey, or viceroy, which amounts to about 300,000 dollars, or 45,000 l. ſterling; however, the cuſtoms paid by ſuch Europeans as are permitted to traffic, is far from being inconſiderable: and the captures at ſea, ſometimes are equal to the taxes raiſed upon the natives.

The principal port is Algiers, the metropolis of the country, which is a large, ſtrong, and populous city, about 400 m. E. of Gibraltar, containing about 100,000 Mahometans, 15,000 Jews, and 2000 Chriſtian ſlaves. The commercial buſineſs is generally tranſacted by the Jews, which principally conſiſts in the ſale of captives; who are uſually brought to this city, where they have a maritime force generally of 20 veſſels, each with 3 or 400 men on board, which are uſually employed in cruizing againſt the Chriſtians. However, there are ſeveral other ports belonging to this government; particularly Tremeſen, Arzer, Sercelli, Tedlis, Bugia, Gigery, Eſtore, Bona, Tabarca, and the Baſtion of France, remarkable for its coral fiſhery, which the French poſſeſſed themſelves of towards the end of the reign of Solyman II. from whom they obtained the conceſſion of it in 1561, in conſequence of a previous treaty with the Algerines: beſides, there are Marſalquiver, and Oran, in poſſeſſion of the Spaniards, who took them in 1509, loſt them in 1708, and recovered them again in 1732.

The principal commodity of this country is corn, which is produced in great quantities, and frequently exported to the countries on the northern ſide of the Mediterranean, by European merchants; who alſo export Barbary horſes, olives, oil, wool, ſoap, dates, figs, raiſins, oſtrich-feathers, hides, honey, wax, iron, allum, and hair.

The principal commodities imported here, are Engliſh and Venetian cloths, lead, ſhot, deal-boards, perpetuanos, ſpices, ſaffron, ſilks, canvas, madder, iron, wire, paper, cotton, yarn, and wool. The importation of all goods is permitted; but the exportation of corn, peaſe, beans, oil, butter, honey, dates, and other edible commodities, are generally prohibited.

The cuſtoms of this country, upon all commodities imported, are 10 *per cent.* upon the real value ſold; excepting lead, ſhot, and iron, which pay no cuſtom at all: though every ſhip, on entering the harbour, muſt either land her ſails or her rudder, for prevention of her running away without licence, and paying the duties: but the cuſtoms on goods exported are only 5 *per cent.* excepting hides, wax, and wool, which are free from any duty.

The kingdom of Tunis, is ſeparated from the kingdom of Algiers, on the W. by the river Guadalbarbar; and by Tripoli on the E.; extending only 250 m. along the coaſt of the Mediterranean, but about 400 into the interior part of the country, where it is bounded by the eaſtern part of Biledulgerid; comprehending the provinces of Tunis proper, and Bogia. The government, and inhabitants, are of a ſimilar regulation, and mode, with the Algerines; only in this kingdom, the Grand Signior has ſtill a baſhaw, who is ſome check upon the dey, or ſovereign, and has a ſmall tribute paid him; for which the Tuniſians are in expectation of his protection, and aſſiſtance, when endangered with an invaſion from the Chriſtian powers.

The beſt ports in this country are Biſerta, Tunis, Bona, Nubia, Alchamamot, Hamamet, Suſa, Capſa, and Elhamina: but the principal port is Tunis, the capital city, which is about 3 miles in circumference; ſituated in a fine plain, near a ſpacious lake, 30 m. S. of the ruins of the ancient Carthage, 300 m. E. of Algiers, and 120 miles S. W. of Trapano in Sicily.

This city is more populous than Algiers, containing about 10,000 families, and 3000 ſhops, where they ſell linen, woollen, and other manufactures: but their maritime force is greatly inferior to that of the Algerines; their commodities, both imports and exports, as alſo their duties, are much of the ſame nature as thoſe among the Algerines; but their conſumption of European goods is nothing like equivalent: for the Tuniſians encourage very few manufactures, ſupplying their neceſſities chiefly by piracies. And what elſe can be expected from the moſt profligate deſperadoes, the moſt abandoned ſet of men? The ſoldiery, as they elect, have the dey at their devotion; theſe are criminals, renegadoes, or pirates; who, notwithſtanding their infamous original, look upon themſelves as noblemen, uſing the Moors, and other inhabitants of Africa, little better than ſlaves: they ſeldom make any application to agriculture, or traffic, eſteeming piracy and robbery as nobler employments, or, at leaſt, an eaſier way of accumulating treaſure: however, the Europeans have ſome trade with Tunis, importing from thence moſt of the ſame commodities as from the Algerines.

The kingdom of Tripoli, including Barca, is bounded by Tunis on the W. and by Egypt on the E. being about 1000 m. long, but not above 200 broad, comprehending the provinces of Tripoli proper, and Barca deſart; the people and government, as alſo their trade, being like thoſe of Algiers and Tunis. Tripoli is divided into five provinces, wherein are ſome populous cities: the principal ports being Capes, Zoara, Raſagafaron, Tripoli, Racazarra, Razil, Lebeda, Caſamhomet, Salines, Sudico, Caſar Sarton, Caſreinum, and Arcadia: but Tripoli is the capital, which is well fortified, and ſituated 300 m. S. E. of Tunis; being alſo ſomewhat remarkable for its ſilk manufactures. The Turkiſh ſoldiers that govern this country are not above 3 or 4000; though they have ſeveral hundred thouſand Moors and Arabs under their juriſdiction: however, the dey of Tripoli is not ſo abſolute as the deys of Tunis and Algiers, becauſe of their proximity to the Turkiſh province of Egypt: for a Turkiſh baſhaw has his reſidence here, who has a power of controuling the dey, and levying a tribute on his ſubjects; though the dey is elected or depoſed by the ſoldiery.

Theſe piratical ſtates have, for more than two centuries paſt, moleſted the navigation of the Mediterranean; which was originally owing to the expulſion of the Moors from Spain; and obnoxious as ſuch a proceeding has been found, the court of Madrid ſtill continues to drive away the Mooriſh poſterity from the dominions of Spain to thoſe of Barbary; though it muſt certainly be a very impolitic ſtep, as Spain has been much exhauſted of its inhabitants ſince the diſcovery of America.

The naval force of the regency of Algiers is the moſt formidable among the Barbary ſtates; which has occaſioned the friendſhip of that government to be frequently ſolicited by ſeveral of the European powers; who find it more for their intereſt to contract ſuch an alliance, than live at open enmity with ſuch poor and deſperate opponents, who confiſcate all veſſels they ſeize without proper paſſports.

The Algerines are in alliance with the Engliſh, the French, the Swedes, the Dutch, and the Grand Duke of Tuſcany; being at open war with the other European powers, who frequently ſend out little armaments to oppoſe them, particularly the King of Spain, their Sardinian and Sicilian majeſties; the Pope, the Genoſe; the Venetians, and the Knights of Malta: even the ſubjects of the Grand Signior were liable to their depredations till

till the year 1749, when an accommodation was made. The Swedes purchaſed their peace at the rate of 70,000 dollars, or 15,000 l. ſterling. The ſucceſs which the Dutch met with, during a war of twelve years, to deſtroy a few of their veſſels; the magnificent preſent of naval ſtores that were promiſed, upon ratifying the peace; together with the natural timidity of the dey, leſt by further loſſes he ſhould be reckoned unfortunate, and ſuffer a depoſition, were the concurring reaſons for extending their amity to that republic; though the greateſt part of the ſoldiery, and the maritime officers in general, very ſtrenuouſly oppoſed it; alledging, that it would be in vain to arm out their veſſels, when tranquillity was ſupported with the three trading nations; that their loſs was inconſiderable, when compared with their opulence obtained by the war; concluding, with a very expreſſive Arabian proverb, *That ſuch perſons ought never to ſow who are afraid of the ſparrows*; whereby it is probable, the preſent dey will be obliged to contract his alliances, from thoſe very principles which, a few years ago, engaged his predeceſſor to increaſe them.

The Algerines have certainly a peculiar eſteem and friendſhip for the Britiſh nation; and, provided there could be any ſecurity in a government guided by capricious choice and humour, more than by council and mature deliberation, England has no occaſion to apprehend a quarrel from this anarchy of a legiſlature. The Dutch are very induſtrious in cultivating a good underſtanding with the Algerines, by making an annual preſent to the regency; a method hitherto very prevalent and ſucceſsful: whilſt, on the other hand, the French may influence them as much by reminding them of the execution which their bombs formerly did to the capital city; and of a later inſtance of their reſentment at Tripoli: however, if the Algerines are to be intimidated, the Engliſh have as much intereſt to expect from the expedition of Sir Edward Spragg, at Bugio, as the French can have in that of the Marquis d'Eſtrees at Algiers: for, notwithſtanding all the arguments that may be urged in behalf of Marſeilles and Toulon, the Algerines cannot be perſuaded but that Gibraltar and Minorca are in a more convenient ſituation to give them diſturbance.

But reaſon and argument will not always be good politics at the court of Algiers, where the firſt miniſter is the cook, and where an inſolent ſoldiery have too frequently the command: therefore, in critical junctures, the ground is to be maintained by the nice management and addreſs of the conſul; by knowing how to make proper application to the particular paſſions of thoſe who have the aſcendency over the dey; by flattering one, placing a confidence in another, and eſpecially by making a proper uſe of thoſe invincible arguments money, kaf-tans, and gold watches: for, according to an old obſervation, *Give a Turk money with one hand, and he will permit his eyes to be plucked out by the other.*

No confidence can be repoſed in the profeſſions of amity from the Algerines; becauſe, what appearance they have of equity, honeſty, or public faith, proceeds rather from fear and compulſion, than from choice and free election: for the acknowledgment is very juſt, which Ali Baſhaw, a late dey, made to Mr. Cole, the Britiſh conſul, upon complaining of the injuries that Britiſh veſſels met with from his cruizers; who replied, *That the Algerines were a company of rogues, and he was their captain:* which has been evidenced in their capture and detention of the Britiſh packet from Liſbon, which was carried into Algiers, and the ſpoil divided among the captors; notwithſtanding the remonſtrances of the Britiſh conſul, and a ſolemn deputation for reſtitution made by commodore Keppel, who returned without obtaining any other ſatisfaction than information that the regency had ſent an ambaſſador, and a preſent to the Britiſh monarch; which was the only compenſation ever made.

The European ſtates who have conſuls in the four principal ports of Barbary, are thoſe who keep ambaſſadors at Conſtantinople; eſpecially the Engliſh, French, and Dutch; though the Venetians and Genoeſe are thoſe who trade moſt to Tripoli: but for their regulations of commerce with Great Britain, ſee *Treaty*.

The coins generally uſed on the coaſt of Barbary are foreign; as the Turkiſh ſultanins of gold, worth about 3 s. 4 d.: the moticales of Fez, worth 2 s.; Spaniſh rials, French crowns, Hungarian ducats, and others. At Algiers they coin the barbas, worth half an aſper; and at Tremecen they coin gold rubios, worth 35 aſpers; medians worth 501, and zians worth 100; the aſper being about a halfpenny ſterling.

The weight uſed at Algiers is the quinta, or quintar, containing 100 rott. or lb. which make about 120 lb. averdup. in London, or 112 lb. averdupois makes about 94 rottelos. But the quintar is of ſeveral ſorts: thus 150 rottelos make the quintar of lead, yarn, and wool; 166 rottelos make the quintar of raiſins, butter, figs, honey, dates, oil, and ſoap; 110 rottelos make the quintar of almonds, cheeſe, and cottons; and 100 rottelos make the quintar of flax.

The long meaſure of Algiers is of two ſorts; the Turkiſh and Moriſco picos. The latter is the meaſure of the country, being in length but $\frac{3}{4}$ of the Turkiſh pico. The Turky pico is divided into 16 parts, and every 8th part is called a robo; and, with giving a thumb in the yard, according to the cuſtom in England, one yard is $1\frac{1}{2}$ Turky picos; by which all ſilks, ſtuffs, and woollen goods, are ſold in Algiers; where the meaſure for grain is the tarri, which, when heaped up, as is cuſtomarily done in meaſuring, holds about 5 Engliſh gallons.

In Tunis, Tripoli, and Barca, the common weight is a cantar, or 100 lb. which makes about 114 lb. averdupois in London: they reckon 8 tamins to an ounce, and 16 ounces to a pound. Their meaſure for corn is the ſaw, the weab, and the coffice; 12 ſaws make a weab, and 18 weabs a coffice; the coffice containing about 10 Engliſh buſhels. Their meaſure for wine and oil is the meetar; the oil meetar being twice as big as the wine meetar, and contains about 5 Engliſh gallons. Their meaſure for cloth and ſtuffs is a pico, which is about 26 $\frac{1}{2}$ Engliſh inches: the ſilk is $\frac{1}{10}$ ſhorter than the cloth pico; and the linen pico is about $\frac{1}{4}$ ſhorter than the ſilk pico.

BARBARY *company*, was an Engliſh company incorporated by King Henry VII, when his ſubjects, in imitation of the Portugueſe and Spaniards, began to make diſcoveries: which company carried on a conſiderable traffic on the coaſts of Barbary and Morocco, and was in a very flouriſhing condition in the reign of Q. Elizabeth: but the inteſtine diſſentions in Morocco prevented all commerce, and overthrew the company; from whoſe diſſolution ſprung up the Turky company. See *Turky company*.

BARBAS. An Algerine coin, worth about a farthing.

BARBER. A perſon whoſe employment conſiſts in ſhaving, bleeding, and drawing of teeth; formerly ranked among ſurgeons, but now among peruke-makers. See *Surgeon, and Peruke-maker*.

BARBER'S *company of London*, on account of the art of ſurgery being formerly ſolely practiſed by the barbers, was incorporated by letters patent of Edw. IV. in 1461, by the name of "The maſter, or governor, of the miſtery, or commonalty, of the barbers of London." Sometime after, others aſſuming the practice of ſurgery, the barbers, in the 3d of Henry VIII. in the year 1512, obtained an act of parliament, to prevent all perſons from practiſing ſurgery, within the city of London and 7 miles of the ſame, except ſuch as were duly examined, and admitted by the biſhop of London, or the dean of St. Paul's, and ſuch perſons, expert in ſurgery, as he, or they, ſhould judge proper to call to his, or their aſſiſtance: and that all perſons preſuming to act contrary to the tenor of this act, were to forfeit, for every month's practice, the ſum of 5 l.

By virtue of this act of parliament, ſeveral perſons, not barbers, being examined and admitted as practitioners in the art of ſurgery, they ſoon erected themſelves into a ſociety, ſeparate from that of barbers; which the parliament taking into conſideration, for their mutual intereſt, united them, by the appellation of The maſters or governors of the miſtery, or commonalty, of barbers and ſurgeons of London: and as the ſaid act ſtrictly enjoined all perſons practiſing the art of ſhaving not to intermeddle with that of ſurgery, except what

belongs

belongs to the drawing of teeth; ſo likewiſe it enjoined all ſurgeons from following the practice of ſhaving.

This united company conſiſted of a maſter, 3 wardens, 26 aſſiſtants, and 322 liverymen; whoſe fine, on admiſſion, was 10 l. to whom belonged a magnificent hall and theatre for the diſſection of human bodies; all parts whereof were explained by anatomical lectures for the inſtruction of the juvenile part of the faculty: but, by act of parliament in the year 1745, the body was divided into two diſtinct companies of barbers and ſurgeons; and the former were ſeparately incorporated by the name of The maſter, governors, and commonalty of the miſtery of barbers of London, to be governed by a maſter, 3 wardens, and 24 aſſiſtants; having the old hall belonging to the united company in Monkwell ſtreet, and the ſame privileges as the united company enjoyed, with reſpect to every thing but ſurgery. See *Surgeon*.

BARBE, or *Barb*. A breed of horſes brought from Barbary, much eſteemed for their vigour and ſwiftneſs, being uſually of a ſlender make, with their legs far apart; and they retain their metal to the laſt, which makes them prized for ſtallions. According to Dapper they are ordinarily ſold for about 150 l. a horſe, their genealogy being preſerved in Barbary, with as much care as Europeans do thoſe of their noble families; and, in ſelling them, they always produce their titles of nobility. The race of horſes is much degenerated in Numidia, the Arabs having been diſcouraged from keeping it up, by the Turkiſh officers, who were ſure to be maſters of them; but at preſent the Tingitanians and Egyptians have the reputation of preſerving the beſt breed, both for ſize and beauty; the ſmalleſt of theſe laſt being uſually ſixteen hands high, and all of them ſhaped, according to the phraſe, like the antelope.

The good conditions of a Barbary horſe, beſides the ſuppoſed quality of never lying down, and of ſtanding ſtill when the rider drops his bridle, are to have a long walk, and to ſtop ſhort, if required, in a full career.

BARBOTINA, or *Semen contra*, otherwiſe underſtood *vermes*, is a ſeed that kills the worms engendering in the human body, to which children are very liable; and it is alſo called *ſemen ſanctum*. The plant which produces it has ſuch ſmall leaves, that they ſcarce can be diſtinguiſhed from the ſeed itſelf. The French pretend that it grows in Xaintonge, whence they give it the name of Santoline, or Xantoline; but that uſually ſold by druggiſts, comes from Perſia, and the borders of Muſcovy; tho' the Engliſh, Dutch, and French, have it from Aleppo, Alexandretta, and Smyrna.

This ſeed, to be good, ſhould be plump, of an agreeable ſcent, and very green; but care muſt be taken that the green is not the reſult of ſome drug.

BARBUDA. One of the Britiſh Caribbee iſlands, ſituated in 61 deg. of W. lon. and 18 deg. of N. lat. See *Britiſh America*.

BARCA is a barren deſart country, ſituated on the S. coaſt of the Mediterranean, between Tripoli and Egypt. See *Barbary*.

BARCELONA. A port, and the capital town of Catalonia in Spain, ſituated in 2 deg. of W. lon. and 41 deg. 20 min. of N. lat See *Spain*.

BARCELOR. A Dutch factory, and port-town on the coaſt of Malabar in the Eaſt Indies, ſituated in 74 deg. of E. lon. and 13 deg. of N. lat.

BARFLEUR *Cape*, is ſituated 12 miles E. of Cherburg in France, in 1 deg. 15 min. of W. lon. and 49 deg. 47 min. of N. lat. the town which is ſituated near it being antiently one of the beſt port-towns in France; but the harbour being choaked up with ſand, it is now in ruins.

BARFOULS. A kind of ſtuff made in the kingdom of Cantor, ſituated upon the banks of the river Gambia in Negroland in Africa; being a kind of cloathing for the negroes, called *pagnes*, or *paans*, who carry on a pretty briſk trade of them with Europeans, to whom they give them in exchange for iron bars.

BARGAIN. An agreement or contract relating to the buying or ſelling of any thing.

BARGE, is a veſſel uſed in navigable rivers, either for burthen or pleaſure, under the different denominations of a company's barge, a row-barge, a royal barge, a ſand-barge, a ſevern-barge, a ware-barge, a light horſeman, and a weſt country barge.

BARIGA *de more*. A kind of ſilk brought by the Dutch from the Eaſt Indies.

BARIGA is alſo a term uſed by the Portugueſe for a ſort of Indian ſilk. See *Cobeca*.

BARILLA, or *Barillia*, is a Spaniſh plant, uſually ſowed by the poor peaſants of Murcia, which is of conſiderable uſe in the compoſition of ſoap, and the manufactory of glaſs. See *Soſa*.

BARIQUE *of France*. See *Barrel*.

BARK is the exterior part of trees, ſerving them for a ſkin or covering; of which there are a great many kinds in uſe in the ſeveral arts: ſome in medicine, as the quinquina or Jeſuits bark, and mace; others in dying, as the bark of the alder; others in ſpicery, as cinnamon, and caſſia lignea; the bark of oak, in tanning; the bark of the cork-tree, for corks; that of the linden-tree, for a kind of cordage; and the bark of a ſort of birch-tree is uſed by the Indians for canoes, capable of holding twenty-four perſons.

In the Eaſt Indies, they alſo manufacture the bark of a particular tree into a kind of ſtuff or cloth, which is ſpun and dreſſed much after the manner of hemp; the long filaments ſeparated from it, upon beating and ſteeping it in water, compoſing a thread of a middle kind between ſilk and common thread; neither ſo ſoft nor bright as ſilk, nor ſo hard or flat as hemp. Some of theſe ſtuffs are pure bark, being called *pinaſſes* and *biambonnes*; but in others they mix ſilk with the bark, and call them *ginghams* and *nillas*.

BARK-*mill*. See *Mill*.

BARK, in navigation, denotes a little veſſel for the ſea, having uſually two or three triangular ſails: but there are various kinds of barks; as a bilander, a ſaick, a ſettee, a ſhint, a maul, and a ſmouk; tho' the word *bark* is ſometime uſed for any veſſel that has no maſts.

BARK *of incenſe*. See *Frank-incenſe*.

BARKING *of trees*, is the peeling off or ſtripping the bark from the wood; for which purpoſe the month of May is the moſt ſeaſonable; becauſe the ſap then looſens the bark from the wood, which it is very hard to effect in any other time, unleſs the ſeaſon is very wet; heat and dryneſs being always oppoſite thereto; but maliciouſly barking of apple-trees, or other fruit trees, is made felony by the ſtatute of the 37th of Henry VIII.

BARKER. A cant word for a ſaleſman's ſervant, that walks before his door, to invite cuſtomers in to buy cloaths.

BARLETTA. A port town in the territory of Barri in Naples, ſituated on the gulph of Venice, in 17 deg. of E. lon. and 41 deg. of N. lat. See *Italy*.

BARLEY. A grain, or corn, which grows very plentifully in England, where ſome people make bread of it; but its particular uſe is for making malt, whence a variety of liquors, ſuch as ale and beer, are brewed; from which grain, according to hiſtorians, was taken the ſtandard of Engliſh weights or meaſures. The chief kinds of barley are, 1. The common long-eared barley; 2. Winter, or ſquare barley, otherwiſe beer-barley, or big; 3. And the ſpratt, or battledor barley. See *Corn*, and *Malt*.

BARLEY *ſugar*. See *Sugar*.

BARLOVENTO *Iſles*. See *Caribbee iſlands*.

BAROMETER. A certain inſtrument, ſo called by the curious enquirers into nature; whereby, with the aſſiſtance of mercury put therein, the weight and preſſure of the air may be ſeen and obſerved, according to the minuteſt variations.

BARNSTABLE. A port-town of Devonſhire, ſituated on the river Tau, in 4 deg. 10 min. of W. lon. and 51 deg. 15 min. of N. lat. See *Great Britain*.

BAROCHE. A port-town of the hither India in Aſia, in the province of Cambaya, ſituated 60 miles N. of Surat, in 72 deg. 5 min. of E. lon. and 22 deg. 15 min. of N lat. See *India*.

BARRA, or *Vara*, is a long meaſure, uſed in Portugal for woollen cloths, ſerges, and linens, being the length of an Engliſh ell.

BARRA, is alſo a long meaſure, uſed in ſome parts of Spain for meaſuring ſtuffs: being of three kinds; the Valentia barra, 13 of which are $12\frac{6}{7}$ yards Engliſh meaſure; the Caſtile barra, 7 of which make $6\frac{3}{4}$ yards Engliſh meaſure; and

and the Arragon barra, 3 of which are equal to 2, Engliſh meaſure.

BARRACAN. A French ſtuff, ſomething like a camblet, uſed for cloaks, great coats, and other outward garments, to keep off the rain. They are made of wool, ſometimes mixed with hemp; being chiefly manufactured at Abbeville, Amiens, Roan, Liſle, and Valenciennes; but the latter are moſt in repute, the piece being about 24 Engliſh ells in length, and about $\frac{3}{4}$ in breadth. There are alſo barracans made in Holland and other places.

BARRAGE. A kind of worked linen, made at Caen in Normandy.

BARRAS. A gum, or reſin, oozing from inciſions made in the pine-tree; of which there are two kinds; but neither of them are ſcarce known by this name, being commonly called white and marbled incenſe; whoſe difference is only in colour, and that according as they are gathered more or leſs cleanly, or ooze in fair or foul weather.

The marbled, when neat, and clean, is ſold ſometimes for benjoin, to which it has a near reſemblance; but the ſmell is ſufficient to diſcover the impoſition: and the white is the real galipot.

BARRATRY, *Baratry*, or *Barretry*, in a marine ſenſe, is when the maſter or crew of a ſhip defraud the owners or inſurers, either by running away with the ſhip, ſinking her, deſerting her, or embezzling the cargo; and it has been determined, in a court of law, that fraud is barratry, tho' not named in the covenant; but negligence might not.

BARREL. An oblong veſſel, of a ſpheroidal, or rather cylindrical figure, made of fir, oak, beech, or other timber, uſed for containing ſeveral ſorts of goods, both liquid and dry.

The Engliſh barrel, wine-meaſure, contains the eighth part of a tun, the fourth part of a pipe, and the half of a hogſhead; that is, thirty-one gallons and a half; but of beer it contains 36 gallons, and of ale only 32.

However, according to the ſtandard of the ale-quart by the 10th and 11th of William III. the barrel of beer, vinegar, or liquor preparing for vinegar, is to contain 34 gallons.

BARREL is alſo uſed for a certain quantity, or weight, of ſeveral merchandiſes, which varies according to the commodities.

By the ſtatute of the 13th of Elizabeth, the barrel of herrings is to contain 32 gallons wine-meaſure, being about 28 gallons old ſtandard, uſually amounting to about 1000 full herrings.

By the ſtatute of the 5th of George II. the barrel of ſalmon is to contain 42 gallons, and the barrel of eels the ſame; but by the 10th of Queen Anne the barrel of ſoap is to contain 256 lb.

A barrel of Eſſex butter ſhould weigh 106 lb. and of Suffolk butter 256 lb.

BARTERING. The art of trucking or exchanging one commodity for ano her of equal value; but the word, according to its derivative *baratar*, from the Spaniſh, ſignifies to deceive, or circumvent, in bargaining; becauſe it is probable, that thoſe who dealt this way, uſually endeavoured to over-reach one another. See *Commerce*, *Exchange*, and *Truck*.

BARTHOLOMEW *Iſle*, is one of the Caribbees, ſituated in 62 deg. 5 min. of W. lon. and 18 deg. 6 min. of N. lat. ſubject to France. See *French America*.

BARUTH. An Indian meaſure, containing 17 grantans, that is, about 56 lb. of pepper; ſo that the grantan ſhould be about $3\frac{1}{2}$ lb.

BASALTES. A kind of ſtone, deſcribed by ſome of the antient naturaliſts to be of the hardneſs and colour of iron; but others called it *lapis Lydius*, from Lydia, the place where it was found in moſt abundance; tho', among the moderns, it is denominated the touchſtone, as being uſed for the trial of gold and ſilver.

It is hard, heavy, cloſe, black, and reſiſts the file. There are ſtones of this kind near Gaillon in Normandy; others are brought from Ethiopia and Germany; and the Giants cauſeway in Ireland is ſaid to be made of the baſaltes.

BASARUCO. A ſmall Indian coin, of a very baſe allay, being compoſed only of ordinary tin; of which there are two kinds, the one bad, and the other good; the former being by a ſixth inferior to the latter; thirty of which are worth about three halfpence ſterling.

BASHAW, *Paſcha*, or *Pacha*. A Turkiſh governor of a province, city, or other diſtrict; and Captain-Baſhaw is the title of the Turkiſh high-admiral.

BASILIC, or *Baſilica*, in the antient architecture, denoted a kind of public hall, or court of judicature, where the princes, or magiſtrates, ſat to adminiſter juſtice; but, in after-times, the denomination was alſo given to other buildings of public uſe; as town-houſes, exchanges, burſes, and the like.

BASILICON, or *Baſilicum*, in pharmacy, is the denomination of an officinal unguent, or plaiſter; alſo called *tetrapharmacum*, as being compoſed of four ſimples, which are roſin, wax, pitch, and oil of olives.

BASKET. An uncertain quantity; as of aſſa fœtida from 20 to 50 lb. and of medlars two buſhels.

BASKET. A convenient utenſil, fit for many purpoſes, particularly for the carriage of garden-ſtuffs, made of willow twigs, or ruſh, wove together, ſometimes cloſe, and ſometimes open, according to the uſe for which it is wanted.

BASKET-*makers company of London*, is a fraternity by preſcription, and not by charter; but when or by whom erected into a fellowſhip, is unknown: however, it has the honour to be reckoned one of the city-companies, by the title of, The wardens, aſſiſtants, and freemen of the company of baſket-makers of the city of London; being a community governed by 2 wardens and 28 aſſiſtants; but they have neither livery nor hall to manage their affairs in.

BASON, in a maritime ſenſe, is uſed for a dock; as alſo for a reſervatory of water in a port. See *Dock*.

BASSAIM, or *Bacceim*. A port-town of the province of Cambaya, in the hither India in Aſia, ſituated in 72 deg. 5 min. of E. lon. and 19 deg. 30 min. of N. lat. ſubject to Portugal.

BASSON, or *Baſſoon*. A muſical inſtrument of the wind kind, blown with a reed, and furniſhed with eleven holes, ſerving for the baſs in concerts of hautboys. To make it more portable, it divides into two parts; whence it alſo bears the denomination of faggot. Its diameter at bottom is nine inches, and its holes are ſtopped like large flutes.

BASSORA. See *Boſſora*.

BASS-*Viol*. A muſical inſtrument of the ſame form with that of the violin, except that it is much larger, and is ſtruck like it with a bow; but has ſtrings, and eight ſtops, divided by half ſtops, or ſemi tones; the ſound it yields being much more grave, ſweet, and agreeable, than that of the violin, and of much nobler effect in a concert.

BASTIA. The capital city, and port, of the iſland of Corſica, ſituated in 9 deg. 40 min. of E. lon. and 42 deg. 20 min. of N. lat. See *Italian iſlands*.

BASTIMENTOS, are ſome ſmall uninhabited iſlands on the coaſt of Darien in South America, lying a little to the eaſtward of Porto Bello.

BASTION *of France*. A French eſtabliſhment for a coral fiſhery on the coaſt of Barbary, ſituated in 8 deg. of E. lon. and 36 deg. of N. lat. See *Company of the Baſtion of France*, under *African Company*.

BATACALO. A fort and town on the coaſt of the iſland of Ceylon, in India, ſituated in 81 deg. of E. lon. and 8 deg. of N. lat. See *Ceylon*.

BATAVIA. A large and populous city in the iſland of Java, the capital of all the Dutch colonies and ſettlements in India, ſituated in 106 deg. of E. lon. and 6 deg. of S. lat. See *Sunda iſlands*.

BATE. To lower the price of a commodity, or to make an allowance for a damage.

BATH-*metal*. See *Metal*.

BATICALA. A town of India, remarkable for its rice. See *India*.

BATMAN, or *Bateman*. A Turkiſh weight for ſilks; of which there are two kinds; the one weighs about 24 lb. Engliſh, and the other about 5 lb. only.

BATMAN, or *Bateman*, is likewiſe a Perſian weight, of two ſorts as well as that of Turky; the firſt being called batman of Chahi, and the ſecond batman of Tauris.

That of Chahi is uſed both for weighing the neceſſaries of

life, and the loadings of beaſts of burden, weighing about 13 lb. Engliſh.

That of Tauris is uſed only for mercantile commodities, and weighs about 7 lb. Engliſh.

BATZ, or *Batzen*. A ſmall ſilver coin, current in ſeveral towns of Germany, particularly at Noremberg; which is worth 4 cruitzers, or $1\frac{1}{13}$ d. ſterling.

There are alſo ſilver and copper batzens in Switzerland, of a different currency, in proportion to their allay; the good batz is worth $2\frac{1}{2}$ d. ſterling, and the bad batz is worth only $1\frac{7}{8}$ d. ſterling.

BAVARIA. A circle of Germany. See *Germany*.

BAULK. A name for a young fir-tree. See *Fir*.

BAY, in geography, is a part of the ſea, almoſt ſurrounded by land; being larger in the middle within, than at its entrance, which is called the mouth of the bay; as the bay of Biſcay in Spain, and Torbay in Devonſhire. See *Gulph*.

BAY-*ſalt*. See *Salt*.

BAY-*yarn*, is a name ſometimes given to woollen yarn. See *Yarn*.

BAYS, or *Baize*, is a ſort of coarſe, open woollen ſtuff, made chiefly at Colcheſter in Eſſex; where there is a hall, called the *Dutch bay-hall*, or *Raw-hall*.

By the ſtatute of the 12th of Charles II. it was enacted, That no perſon ſhould weave in Colcheſter any bay, known by the names of *four-and-fifties*, *ſixties*, *ſixty-eights*, *eighties*, *or hundred bays*, but within two days after weaving they ſhould carry it to the Dutch bay-hall, to be viewed and ſearched, that it might appear whether it be well and ſubſtantially wrought, before it was carried to be ſcoured and thicked; and that no fuller or thicker ſhould receive ſuch bay before it was ſtamped at the ſaid hall.

Formerly the French, as well as the Italians, were furniſhed with bays from England; but of late the French have undertaken to imitate them, and have ſet up manufactures of their own with ſucceſs, at Niſmes, Montpelier, and other places.

The export of Engliſh bays is very conſiderable to Spain, Portugal, and Italy, their chief uſe being for dreſſing the monks and nuns; as alſo for linings, eſpecially in the army: but the looking-glaſs makers likewiſe uſe them behind their glaſſes, to preſerve the tin or quickſilver; and the caſe makers to line their caſes.

The breadth of bays is from three quarters to 2 yards, and the length from 42 to 48 yards the piece; but thoſe of a yard and three quarters broad are beſt for the Spaniſh trade.

By an arret of the French King of the 14th of July 1703, it was obſerved, that, ſince the late union between the two crowns of France and Spain, there had been ſet up in France manufactures of bays, perpets, and ſerges, calculated for the commerce of Spain and America, in imitation of thoſe made in England, of which there was great conſumption in the Spaniſh dominions: that theſe new fabrics of France were in equal perfection with the Engliſh: that if they could be ſold at the ſame price, a conſiderable trade might be opened for them in Spain; and that to gain this point, it would be convenient to free them from all duty upon exportation, as they did in England upon ſuch as were ſhipped for Spain; or at leaſt to reduce the duty lower, in order to ſupply the Spaniards at the price the Engliſh did: from theſe motives, his moſt Chriſtian Majeſty, by the above arret, permitted the ſaid woven commodities to be exported out of the kingdom upon payment of an inconſiderable duty.

BAYONNE. A port-town of Gaſcony in France, ſituated in 1 deg. 20 min. of E. lon. and 43 deg. 30 min. of N. lat. See *France*.

BAZAC. A very beautiful and fine ſpun cotton, which comes from Jeruſalem, from whence it has received the name of Jeruſalem cotton; the half bazac, and the middle bazac, are alſo cottons from the ſame place, but far inferior in quality. See *Cotton*.

BAZAR, *Bazari*, or *Bazaard*. A place appropriated for trade, among the eaſtern nations, eſpecially the Perſians; ſome of which are uncovered, like European markets, and ſerve for the ſame uſes; commodities of ſmall value, and great bulk, being generally expoſed to ſale there; but others are covered with high roofs, having a kind of domes, and windows, to tranſmit the light; where the dealers in precious ſtones, rich ſtuffs, goldſmiths work, and ſuch like commodities, have their ware-houſes. Sometimes even ſlaves are ſold there; tho' this barbarous commerce is alſo carried on in the open bazars.

The bazar, or maidan, of Iſpahan is one of the moſt beautiful market-places in all Perſia, and ſurpaſſes even all thoſe in Europe; but, notwithſtanding its great magnificence, it muſt be confeſſed that the bazar of Tauris is the moſt extenſive, as it contains more than 15,000 ſhops; but in Tauris the bazar for precious ſtones is called *kaiſerie*, or the royal market.

BAZAT. A kind of cotton, brought from the Levant.

BAZGENDGE. A kind of red gall-nut, uſed by the Turks to dye ſcarlet.

BAZZO. A coin of Germany, worth about 6 d. ſterling.

BDELLIUM, or *Bedelium*. An aromatic gum, brought from the Levant; of ſome uſe, both as a medicine, and a perfume: but there is much uncertainty concerning it; for Moſes deſcribes manna as of the colour of bdellium: and Joſephus explains the paſſage, by ſaying it is the gum of a tree reſembling the olive-tree; and that the manna the Jews were fed with in the deſart, reſembled this drug: but Scaliger, and others, ſet aſide this explication, owning they know not what is the bdellium mentioned in ſcripture.

The bdellium, now ſold by druggiſts, is ſcarce better known than that of the antients: ſome ſay that it drops from a thorny tree, whoſe leaves are like thoſe of the oak, and whoſe fruit is like that of a wild fig-tree, having notwithſtanding a pretty good taſte; others make the tree that produce it like the myrtle-tree; others will have it, that theſe trees grow in the Bactriana; others in Arabia Felix, near a town called Saraca; others in Africa, near the banks of the river of Senegal; and others in the Eaſt Indies.

Good bdellium ſhould be in clear and tranſparent lumps, of a reddiſh grey on the outſide, and the colour of Engliſh glue within; and, by paſſing the tongue over it, it ſhould become yellow.

BEACHY-*head*. A cape on the coaſt of Suſſex in England, between Haſtings and Shoreham.

BEACONS, are marks and ſigns for the ſea, erected on the coaſts of England by the maſters and company of Trinity-houſe, who are empowered thereto by act of parliament. See *Trinity-houſe*, and *Light-houſe*.

BEACONAGE *Money*, is that paid towards the maintainance of a beacon; the word being derived from the Saxon *beacnian*, to nod, or ſhew by a ſign.

BEADS, are little glaſs-trinkets, that ſerve for the commerce carried on by the Europeans in ſeveral places of the coaſts of Africa, as well as in the iſlands and continent of America. Theſe trinkets conſiſt of ſeveral grains of glaſs of all colours, and different ſizes, perforated in the middle, to be run on ſtrings for necklaces, bracelets, ear-pendents, and other ornaments, with which the inhabitants, and eſpecially the women, of theſe countries are very fond of adorning themſelves.

The duty in England on the importation of bracelets, or necklaces, of glaſs, was formerly 4 s. the ſmall groce, containing 12 bundles: but as it was difficult for the officers in the cuſtoms, and dealers in thoſe commodities, to diſtinguiſh between great bugle and glaſs-beads, on the importation; and as the duties on glaſs-beads were much lower than thoſe on great bugle, which was a great temptation to unfair traders to deceive the officers, and a diſcouragement to the fair merchants; it was therefore, by an act of parliament paſſed in 1744, enacted, That the duties on the importation of glaſs-beads ſhould ceaſe and determine; and, in lieu thereof, there ſhould be paid the ſame duties as were payable for great bugles imported, which was 4 s. in the pound.

BEAK-*head of a ſhip*, is that part without the ſhip, which is faſtened to the ſtern, and ſupported by a knee; being uſually carved and painted, making, beſides its uſe, the ornamental part of a ſhip.

BEAMS *of a ſhip*, are the large, main croſs timbers, which prevent the ſides of a ſhip from falling together, and which alſo ſupport the decks and orlops.

The main beam is next the main maſt, and from it they are reckoned by firſt, ſecond, and third beams, the greateſt beam of all being called the *mid-ſhip beam.*

BEAN. A pulſe of the large ſort, commonly cultivated in gardens and fields, and of different denominations; as the ſmall Liſbon, the Spaniſh, the Sandwich, and Windſor; as alſo the horſe bean, and French or kidney bean.

BEAN *of St. Ignatius*, is a ſmall ſolid fruit growing in ſome of the Philippine iſlands, and much uſed in medicine.

BEAR, is an animal found in ſeveral parts of the world, particularly the northern countries, whoſe ſkin is a conſiderable article in trade. The ſkins of old bears are uſed for houſings, or horſe-cloths; and thoſe of young bears for muffs, and other things, for warmth or ornament.

BEAR'*s greaſe*, is alſo of uſe in medicine; and, to be of a good quality, ſhould be choſen newly melted, greyiſh, clammy, of a ſtrong taſte, and pretty thick; that which is too white being adulterated with common tallow.

BEARER *of* a *bill of exchange*, denotes the perſon in whoſe hands it is, and in favour of whom the laſt order, or endorſement, was made. See *Bill*, and *Exchange.*

When a bill is ſaid to be payable to the bearer, it is underſtood to be payable to him who firſt offers himſelf after it becomes due: but to be paid a bill of this kind, there needs neither order nor transfer; however, it is good to know to whom it is paid.

BEARING, in geography and navigation, is the ſituation of one place from another, with regard to the points of the compaſs; or the angle, which a line, drawn through the two places, makes with the meridians of each.

BEARING alſo, in the ſea-language, is uſed in another ſenſe; as when a ſhip ſails towards the ſhore, ſhe is ſaid *to bear in with the land*; when a ſhip that was to windward comes under the ſtern of another ſhip, and ſo gives her the wind, ſhe is ſaid *to bear under her lee*; and if a ſhip ſails into a harbour with the wind large, or before the wind, ſhe is ſaid *to bear in with the harbour.*

In crouding they ſay, *bear up the helm*, that is, let the ſhip go more large before the wind; or *bear up round*, that is, let the ſhip go between her two ſheets, directly before the wind.

They alſo ſay, a ſhips *bears*, when, having too ſlender a quarter, ſhe will ſink too deep into the water with an overlight freight, and therefore can carry but a ſmall quantity of goods.

BEATEN, or *Leaf-gold.* See *Leaf-gold.*

BEAVER, or *Caſtor.* An amphibious four-footed animal, ſometimes living upon land, and ſometimes in water; tho' ſome live entirely out of water, where they only go to drink, as other land-animals; making holes and dens for themſelves, like rabbits and foxes; but theſe are called ſluggiſh beavers, or land beavers.

The largeſt beavers meaſure, between the occiput and the root of the tail, about 26 inches, the head meaſuring ſeven; having a flat, oval tail, covered with thin ſcales like a fiſh, meaſuring 14 inches; which in all make about 4 feet.

They are found ſometimes in France, Germany, and Poland; but moſt abundantly in the province of Canada in North America; under which denomination are comprehended thoſe that come from Acadia, Hudſon's bay, and other parts of North America. See *Hudſon's bay company.*

The beavers of Canada are of three colours; the brown reddiſh, the black, and the white. The firſt is the cheapeſt; the next is the moſt valued in England; and the laſt is the moſt valued in Canada, where one of theſe ſkins ſells for 18 s. ſterling, while the others ſell only for 5 or 6 s. The beavers are excellent food; they breed once in a year, having from 10 to 15 in a litter; and their ſkins are principally uſed in the manufacture of hats and furs.

Beſides, in 1669, an attempt was made in France to employ it in other merchandiſes: accordingly a manufactory was ſettled in the Fauxbourg St. Antoine, near Paris; where they made cloths, flannels, ſtockings, and other commodities, of beaver, with a mixture of wool; which manufacture flouriſhed for a while, but ſoon decayed; it being found, by experience, that the ſtuffs not only loſt their dey when wet; but when they became dry again, were as harſh and ſtiff as felts.

Merchants diſtinguiſh three kinds of beaver, tho' they are all the ſkins of the ſame animal; theſe are new beaver, dry beaver, and fat beaver: new beaver, called alſo winter beaver, and Muſcovite beaver, becauſe ordinarily ſent into Muſcovy, is that taken in the winter-huntings, which is the beſt, and moſt eſteemed, for rich furs, as having loſt none of its hairs by moulting. Dry, or lean beaver, is got in the ſummer-huntings, when the beaſt is moulted, and has loſt part of its hair; which being much inferior to the former, is little uſed in furs, but moſtly in hats. Fat beaver, uſually called *old coat*, is that which has contracted a certain fat unctious humour, exhaled by ſweat from the bodies of the Indians, after they have wore it for ſome time. But tho' this is better than the dry, it is only uſed for hats. See *Caſtor*, and *Caſtoreum.*

After the hair is cut off the ſkin, the pelt, or ſkin itſelf, is uſed in various works; as for the covering of mails, and trunks, in ſlippers, and other things.

BEAVER, is alſo a term for what is made entirely of beaver's hair; and a half-beaver is a hat in which other hair has been mixed with that of the beaver.

BEAUVOIR. A port-town of France, in 2 deg. of W. lon. and 47 deg. of N. lat. ſituated on the coaſt of Poictu, in the province of Orleanois.

BECALMED, is to have no wind to fill the ſails of a ſhip; which is occaſioned either by its being taken off by the interpoſition of the ſhore, or for want of any ſtirring. See *Calm.*

BECANER. The capital of the territory of Becar in India, ſituated on the Ganges, in 83 deg. of E. lon. and 28 deg. of N. lat. See *India.*

BEDOUINS, are tribes of Arabs, living in tents, and diſperſed all over Arabia, Egypt, and the north of Africa, whoſe chief employment is the graſing of cattle; being governed by their own chiefs, and their own laws, without interfering with thoſe of the country where they reſide.

BEDS, in ſpeaking of minerals and foſſils, ſignify certain ſtrata, or layers of matter, diſpoſed over each other; and feather-beds are an article in trade, belonging to the upholſterers buſineſs.

BEE. An inſect, or fly, which produces honey and wax; both being of conſiderable uſe in trade, eſpecially the latter. In Poland, Ruſſia, and North America, the bees make their hives in the trunks of old foreſt trees, and afford great plenty of honey; but in the ſouthern parts of Europe their hives are preſerved in gardens. Bees delight much in watery places, uſing a great deal of it in aſſiſting them to make honey, which they extract from aromatic herbs and flowers, towards the latter end of April, and in May. The bees generate from February to the end of October; they ſwarm in May and June; but the May-ſwarms are moſt in eſtimation.

The age of the honey-comb is eaſily known by its colour; for the firſt year it is whitiſh, the ſecond yellow, and the third brown; but when older, it turns black, is barren, and without production; at which time the bees ceaſe to make honey, or breed other ſwarms.

BEECH. A foreſt-tree, very thick, and full of branches; its wood is whitiſh, tender, and dry; being of uſe among joiners for houſhold-furniture; as alſo for many domeſtic utenſils, and fuel.

BEECH-*oil.* An oil drawn from the fruit, or maſt, of the beech-tree. See *Oil.*

BEEF. The fleſh of beeves, or of bulls, oxen, cows, and heifers; being a great article in commerce, as it is generally ſalted, both for reſiſting putrefaction, and for being the more eaſily tranſported into thoſe countries where it may be ſold to advantage.

By the ſtatute of the 6th of George II. beef cured with any ſalt in England, but in Scotland only with foreign ſalt, which has paid duty, is to be allowed a bounty of 5 s. the barrel upon exportation.

This is one of the moſt conſiderable branches of the Iriſh trade; for the paſture of that country is ſo excellent, that their cattle, in a great meaſure, ſupply France, Spain, Portugal, the Netherlands, and the Weſt Indies, with this kind of proviſion. Jutland is alſo a conſiderable country for the venditure of beef; but Ireland is the moſt convenient market, from whence the duty on beef is 1 l. *per* barrel on its importation into England. Beef is alſo

one

one of the principal commodities of the Britiſh colonies on the continent of North America, which they export to the Weſt Indies.

BEEN, *Ben*, or *Behen*, a medicinal root, celebrated for its aromatic, cardiac, and alexiterial virtues; eſpecially among the Arabs: of which there are two kinds; the white, and the red: the former being inſipid, making little impreſſion on the tongue, beſides that of a little bitterneſs it leaves behind; and ſuppoſed, by ſome modern botaniſts, to be the ſame with the lychnis terreſtris; and by others, with the papaver ſpumeum; the red is fibrous, brown without, and reddiſh within, ſuppoſed to be the ſame with the lemonium maritimum majus, or ſea lavender.

They are both brought from the Levant in ſtumps like jalap, and have the ſame virtues; being ſubſtituted for each other: but they ſhould be choſen dry, of a deep colour, and of an aromatic taſte.

BEER. A popular drink, prepared from malt and hops; which Meſſieurs Perrault, Rainſſant, and others defend, by urging that the hops, which the ancients were ſtrangers to, have a faculty of purifying the blood, and removing obſtructions; ſerving as a corrective, and freeing the drink from the inconveniencies to which the antients were liable. See *Hops and Malt*.

In the year 1691 there were brewed by the common brewers in the city and ſuburbs of London, 1,222,764 barrels of ſtrong beer and ale, and 865,831 barrels of ſmall beer: But, in the ſame year, the duty upon beer and ale being doubled, it ſet a great number of private brewers to work; which ſo greatly affected the common breweries that, in the year 1695, the annual quantity of ſtrong beer and ale was reduced to 909,299 barrels, and the ſmall beer to 813,824 barrels.

And altho' the number of inhabitants within the bills of mortality ſince that time is encreaſed one fourth, yet the quantity of ſtrong beer and ale brewed within the city and ſuburbs, in the year 1724, was only increaſed to 1,172,494 barrels, while the ſmall beer was decreaſed to 798,495 barrels; whereas, according to the ancient ſtate of the London brewery, and the great increaſe of the inhabitants of the city, the ſtrong beer and ale brewed within the bills of mortality at preſent, by public and private brewers, ought to amount to 1,528,464 barrels; and the ſmall beer to 1,74,288 barrels: but, by the great conſumption of brandy, and other pernicious ſpirits, the London brewery decreaſes daily; wherefore, ſuch a quantity of beer and ale as aforeſaid is not to be expected, though there is a vaſt conſumption of country beer and ale in the city, from many parts of the kingdom.

Strong beer, ſtrong ale, mum, cyder, and perry, may be ſhipped off in Great Britain, to be exported into foreign parts, as merchandiſe, from the common keys of any lawful port, within the uſual hours of exciſe, in the preſence of a ſworn gauger, or other ſworn officer of exciſe; upon notice given, at the exciſe-office, within the limits whereof the ſaid liquors were brewed or made: and upon the ſaid gauger's, or officer's, certifying the quantity of ſuch liquors off, to the officer of exciſe where the entry was made, they are to pay the exciſe of the ſaid liquors ſo exported, to the brewer, or maker thereof, within one month after ſhipped exportation; deducting 3 d. *per* ton for charges: but no drawback is to be allowed for what is taken on board for the uſe of the ſhip: however, if the ſaid liquors are unladen, or laid on land, or put into any other ſhip, or veſſel, in Great Britain, they are, by the ſtatute of the 1ſt of William and Mary, liable to be forfeited, with 50 l. for every caſk. See *Clap-board*.

By the ſtatute of the 11th and 12th of William III, it was enacted, for the aſcertaining the meaſures for retailing ale and beer, that all perſons retailing ale and beer, ſhould ſell their ale and beer by a full ale-quart, or ale-pint; according to the ſtandard remaining with the chamberlains of the exchequer, in a veſſel made of wood, earth, glaſs, horn, leather, pewter, or other wholeſome metal, marked from the ſaid ſtandard in the exchequer, or city of London, or ſome other place, where a ſtandard ſhould be kept; and not in any other veſſel not marked, on forfeiture of a ſum not exceeding 40 s. nor leſs than 10 s.

And by the ſtatute of the 13th of William III. it was enacted, That no common brewer, inn-keeper, victualler, or retailer of beer and ale, ſhould uſe any ſugar, honey, foreign grains, Guinea-pepper, the liquor called *eſſentia bine*, made from malt and water boiled up, coculus indiae, or any unwholſome ingredients, in the brewing or making of beer or ale, or mix any ſugar with any beer or ale in caſk, after the ſame is cleanſed, on pain of forfeiture of 20 l.

Eager BEER, beer turned ſour, which is uſed by callicoe-printers, chymiſts, lapidaries, ſcarlet-dyers, vinegar-merchants, white-lead men, and others. See *Eager*.

BEIBAZAR. A city of Turky, remarkable for its goat-hair. See *Turky*.

BEID. A plant growing near the village of Martarca, in Egypt, which ſhoots forth an abundance of roots, from whence ſeveral branches, and twigs, ſprout 5 or 6 feet high. Its leaves are broad, very thick, and terminate in an oval form; from whence, while ſoft and tender, oozes a kind of milk, which hardens by heat, and is fit not only for the currying of leather, but is alſo of ſuch uſe in medicine, as to ſerve for a depilator, and to cure ſcalds, the itch, and other tumours of the ſkin.

Its bloſſoms, of a ſaffron colour, inclining to a red, grow in little cluſters on the top of the branches, where they are faſtened by long ſtalks, and form a kind of crown turned toward the ground; from which bees extract excellent honey.

A kind of cotton more ſleek, and ſofter, than ſilk, covers both ſeed and fruit, ſerving to make mattraſſes and cuſhions.

BEIGE. A kind of French ſerge, of a black, grey, or tann-colour, called otherwiſe natural ſerge; becauſe the wool whereof it is manufactured, receives no dye, being uſed either for the warp or woof, as it has been taken off the ſheep.

BELAY, on board a ſhip, ſignifies the ſame as faſten: thus they ſay, belay the ſheet, or tack; that is, faſten it to the kennel, or to any other thing.

BELEM. A fortreſs on the N. ſide of the river Tagus, 3 m. W. of Liſbon, in Portugal, which commands the entrance of that port.

BELELAIS, are ſilks ſtuffs manufactured at Bengal, after the manner of taffetas; the piece being about 20 yards long, and yard wide.

BELEDINE. A kind of ſpun ſilk. See *Silk*.

BELENITES, or *Belemnites*, ſo called from a dart, or arrow, whoſe figure it reſembles, is a pyramidal ſtone, of various colours; particularly recommended in intermitting fevers, having power to precipitate the febrile ferment; which is alſo called *dactylus idæus*, as being found on Mount Ida, in the iſland of Candia: but it is alſo found on the Alps, and in ſeveral parts of Germany, France, and Switzerland.

BELFAST. A port-town of Ireland, ſituated in Carickfergus bay, in 6 deg. 15 min. of W. lon. and 54 deg. 38 min. of N. lat. in the county of Antrim, and province of Ulſter.

BELLISLE. An iſland ſituated near the eaſtern coaſt of New Britain, or Eſkimaux, in 58 deg. of W. lon. and 52 deg. of N. lat. giving its name to the ſtreights of Belliſle, which ſeparates the N. of Newfoundland from New Britain. See *French America*.

BELLISLE, is alſo an iſland on the S. coaſt of Britany, in France, ſituated in 3 deg. of W. lon. and 47 deg. 20 min. of N. lat. See *French Iſlands*.

BELL. A popular machine, ranked by muſicians among the number of muſical inſtruments of percuſſion.

BELL-*metal*, is a compoſition of copper and tin melted together: the ordinary proportion being 22 or 23 pounds of tin, to 100 weight of copper: but ſome add lead and braſs to the compoſition. See *Copper*, *Tin*, *Lead*, *and Braſs*.

BELL-*founder*. A perſon who caſts or makes bells.

BELL-*glaſſes*, is a particular kind of glaſs made in the form of bells, being uſed by gardeners to preſerve tender plants from the weather.

BELLOWS. An inſtrument to blow, or convey wind with, very often uſed by all ſorts of ſmiths, to make their fires burn quick and fierce; and alſo for many other purpoſes; ſuch as giving air to mines in deep and long drifts; the cauſing the pipes of an organ, or bagpipe, to ſpeak; as alſo for domeſtic uſes.

BELOCULO. One of the names given to ipecacuanha.

BELT, is a name given to two particular parts of the ſea, bordering

bordering upon the Daniſh territories, at the entrance of the Baltic; the one called the Greater Belt, dividing Zeland from Funen; and the other called the Leſſer Belt, dividing Funen from the continent of Jutland. See *Denmark and Baltic.*

BELVIDERE. The capital of the province of Belvidere, ſituated in 22 deg. of E. lon. and 37 deg. of N. lat. on the W. coaſt of the Morea, near Cape Torneſe; whence the Engliſh import the raiſins called *belvideres.* See *Turky.*

BENCOOLEN. A port, and town, belonging to the Engliſh, ſituated in 101 deg. of E. lon. and 4 deg of S. lat. on the S. W. coaſt of Sumatra, whence they export great quantities of pepper, the growth of the adjacent country. See *Sunda Iſlands.*

BENDING, is a maritime word: thus they ſay, *bend the cable*, when it is to be made faſt to the ring of the anchor; and to bend two cables, ſignifies to tie them together with a knot, which, though leſs ſure than ſplicing, is ſooner done.

To unbend the cable, is to looſen it from the ring of the anchor; which is done when a ſhip deſigns to be long at ſea: and to bend a main ſail, is to make it faſt to the yard in its proper place.

BENDS. A ſort of tanned hides. See *Hide.*

Bends, in a ſhip, are the ſame with wailes, or wales, the outermoſt timbers of a ſhip, on which the men ſet their feet in climbing up; being reckoned, from the water, the firſt, ſecond, and third bend; which contribute much to ſtrengthen the ſhip, having the beams, knees, and foot hooks, bolted into them.

BENEAPED, in the ſea-language, is ſpoken of a ſhip when the water does not flow high enough to bring her out of a dock, or over a bar of ſand.

BENGAL. The moſt eaſterly province of the Mogul's dominions in India; being annually overflowed by the Ganges, as Egypt is by the Nile. See *India.*

BENIN. The capital of the territory of the ſame name, on the Guinea coaſt in Africa, ſituated on the river Formoſa, in 5 deg. of E. lon. and 7 deg. 30 min. of N. lat. 120 m. N. E. of Whidah, whither the Europeans reſort for Negro ſlaves. See *Guinea.*

BENZOIN, *Benjoin*, or *Benjamin*, is a medicinal kind of gum, imported from the kingdoms of Cochinchina, Lao, and other parts of the Eaſt Indies; particularly from the iſland of Sumatra; being ſometimes called *aſſa dulcis*; and is procured by a longitudinal inciſion, made in a tree whoſe leaves reſemble thoſe of the almond tree; which is of a yellowiſh colour, an agreeable ſcent, and melts eaſily.

There are three ſorts of benzoin; the firſt called *amygdaloides*, becauſe of its being interſperſed with ſeveral white ſpots, reſembling broken almonds, which comes from Siam, and is eſteemed the beſt: the ſecond is black, which drops from young trees, in the iſland of Sumatra, being very odoriferous, and called *benzoinum de boninas:* the third ſort is alſo black, but leſs odoriferous, and is found in the iſlands of Java and Sumatra.

Benzoin is uſed in phyſic as a pectoral and anti-aſthmatic; but when thrown on live coals it ſerves to perfume houſes and other places.

BERAMS. A coarſe cotton cloth, brought from the Eaſt Indies, particularly from Surat; of which ſome are white, and others ſtriped: the former being about 11 yards in length, and about a yard wide: the latter about 15 yards long, and ſomething leſs than a yard in breadth.

BERCHEROCT. A weight uſed at Archangel, and in other places in Ruſſia, for weighing pot-aſhes, and other commodities of great bulk: the bercheroct weighing 400 lb. Muſcovite weight; which amount to about 364 lb. Engliſh averdupois.

BERGAMO. A coarſe kind of tapeſtry, manufactured in ſeveral parts of France; but ſeldom exported to other countries.

BERGAMOT, gives the denomination to a kind of eſſence drawn from a fruit, produced by ingrafting the lemon tree on the bergamot pear ſtock; which is no more than the oily fluid of theſe lemons expreſſed by the fingers.

There is likewiſe a kind of ſnuff of the ſame name; which is only clean tobacco, with a little of the eſſence rubbed into it.

BERGEN, capital of the province of Bergen in Norway; is ſituated in 6 deg. of E. lon. and 60 deg. of N. lat. being a conſiderable port-town on the German ocean. See *Denmark.*

BERLIN. The capital of the King of Pruſſia's dominions in Germany, ſituated on the river Spree, in 14 deg. of E. lon. and 52 deg. 30 min. of N. lat. having a communication by water, both with the Baltic ſea and the German ocean. See *Germany.*

Berlin, is alſo a travelling carriage, chair, coach, or chariot; ſo called from the city of Berlin, where they were firſt uſed. See *Coach.*

BERMUDA *iſlands*, are ſituated in the Atlantic ocean, between 65 deg. of W. lon. and 32 deg. 30 min. of N. lat. 700 m. E. of Charles-town in S. Carolina. See *Britiſh America.*

BERRY, *bacca*, a grain, fruit, or ſeed, produced by ſeveral herbs, trees, and ſhrubs; being of various ſizes, forms, properties, and uſes, according to the plants whereon they grow: ſome of which are uſed in medicine, as juniper-berries, and buckthorn-berries; and others in dying, as French, or yellow berries.

Berry-*point*, an Engliſh cape, at the entrance of Torbay in Devonſhire.

BERVY. A ſea-port town of Scotland, in the county of Merns, ſituated in 2 deg. 5 min. of W. lon. and 56 deg. of N. lat.

BERYL, is a precious ſtone, reſembling cryſtal, brought from the Eaſt Indies, and found alſo on the banks of the Euphrates: of which there are ten ſorts; but the moſt eſteemed are thoſe that go under the denomination of *beryl*, *chryſoberyl*, and *chryſopraſin.*

The beryl inclines a little to a ſea-green, whence it has obtained the name of *aqua marina:* but to give it fire, and luſtre, it muſt be cut facetwiſe; the poliſh giving no ſplendor, whatever other way it is cut. The chryſoberyl is paler, inclining ſomewhat to a gold colour: and the green has the aſcendant in the chryſopraſin.

Some are of opinion, that the beryl is the diamond of the antients; and it is certain, that many ingenious modern jewellers have been ſometimes deceived therein.

Pieces of beryl have been often found ſo large as to be big enough to form very beautiful vaſes; ſeveral of which kind are met with at Cambay, Martaban, Pegu, and in the iſland of Ceylon.

The properties of the beryl were very great in the opinion of ancient naturaliſts; but this opinion is now exploded.

BESESTAN. See *Bezeſtin.*

BESORCH, is a tin coin of Perſia, current at Ormus; 5 of which are about 3 farthings ſterling.

BETEL. A plant of great reputation in all the Eaſt, particularly in India: of which there is an incredible commerce and conſumption.

This plant, which is not unlike the pepper-ſhrub, is ſo weak that it requires a prop to ſupport it as it grows: its leaves are like thoſe of ivy, but more ſoft and full of a red juice; which, as the Eaſtern people conceive, is excellent for fortifying the heart, and faſtening teeth; as alſo for making the breath ſweet, and agreeable; for it is theſe leaves, chewed continually by the Indians, with a kind of nut called *areca*, which makes their lips ſo red, and teeth ſo black, the latter being a colour preferred by them to the whiteneſs of the European's teeth.

The commerce of betel leaves is ſo very conſiderable, that ſeveral eminent merchants deal in them, and ſend ſeveral ſhips freighted therewith into moſt parts of the Eaſt; where its uſe is ſo common, that the grandees and people, the rich and the poor, are never without their box of betel, which they preſent to each other whenever they meet: and what makes the traffic of betel eaſy, is its property of continuing for a long time uncorrupted.

BETILLES, muſlins, or white cotton cloths, manufactured in the Eaſt Indies; particularly at Pondicherry, of which there are three kinds: the firſt, called ſimply *betille*, is ſomewhat coarſe; being from 1 yard to 2 yards wide, and about 20 yards long. The ſecond ſort, called *betille oringal*, has a ſmart clear thread, and is very fine: the piece contains about 16 yards in length, and of the ſame breadth as the ſimple betille. The third kind, called *pelicat betilles*,

is very clear; the piece being about the ſame length and breadth as the oringal.

There is alſo a kind of cambric betilles, made by the Indians, of cotton, in imitation of cambrics.

BEVELAND, N. and S. are two iſlands, ſituated in the province of Zealand, in the United Provinces; between the eaſtern and weſtern branches of the river Scheld. See *United Provinces*.

BEURT-SCHEPEN, or *Beurt-Schuyten*, are ſhips, lighters, or river boats, ſo called at Amſterdam, that have the ſole privilege of trading to ſeveral towns, as well without as within the ſeven United Provinces: having this denomination on account that each of them is obliged to depart, and load, in its turn, for the place it is to go to; which is regulated by the wardens of the company of boat-men. The privileged places for theſe ſhips are London, in England; Rouen, and St. Vallery, in France; Hambourg, and Bremen, in Germany: there are alſo ſome for Middlebourg, in Zealand, the greater part of the towns of Brabant, Flanders, and almoſt all the towns of the ſeven provinces; which is of a great conveniency to ſuch of the Amſterdam merchants, who have not merchandiſe ſufficient to freight an entire ſhip; and who, on paying the freight regulated by the ordonances, find proper conveniencies, by theſe veſſels, to ſend goods into all theſe places in what quantity they pleaſe.

BEZANS, cotton cloths brought from Bengal; of which there are white, and ſtriped of different colours.

BEZESTIN, or *Beſeſtan*, are the covered halls, ſo called at Conſtantinople, where the richeſt and moſt precious kind of merchandizes are ſold; of which there are two buildings, the new and old: in the old bezeſtin, built in the year 1461, are ſold arms, and harnaſſes for horſes, ſome common, and others enriched with gold, ſilver, and precious ſtones.

In the new are ſold all kinds of merchandize; but generally the moſt precious ſort, as goldſmiths goods, furrs, veſts, tapeſtry, ſtuffs of gold, ſilver, ſilk, and goats hair, precious ſtones, and porcelain; in which alſo the Engliſh, Dutch, and French merchants, have their ſhops for linen and woollen goods.

The merchandiſes are in great ſafety in theſe places, and the doors are ſhut up early: for the Turkiſh merchants, who have ſhops here, retire to their own homes in the town: and the Chriſtian merchants, and Jews, retire to the ſuburbs, and return the next morning.

BEZOAR, or *Bezoard*, a ſtony ſubſtance, taken out of the ſtomach of ſome animal; compoſed of ſeveral coats, like an onion, and endued with the power of reſiſting poiſon: being of two kinds, the oriental, and occidental.

Oriental bezoar is moſt in eſtimation; which is brought from ſeveral parts of the Eaſt Indies, particularly Golconda and Cananor, where it is found intermingled with the dung of an animal, of the goat-kind, called *pazan*; in whoſe belly this ſtone is formed; for the buds of a certain ſhrub which the animal uſes to brouze, are generally found in the middle of it, and ſuppoſed to be the baſis on which this formation is made. The bezoar ordinarily grows to the bigneſs of an acorn, and ſometimes to that of a pidgeon's egg: its colour is variable, ſometimes of a blood colour, ſometimes a pale yellow, a browniſh red, and honey colour; the number of bezoars produced by each animal is alſo various, ſome yielding from one to ſix, and others none at all. A ſtone of one ounce is ſold in the Indies for about 5 l. ſterling, and one of four ounces for about 100 l. ſterling; ſo that the value of the ſtone is augmented according to its magnitude, the price increaſing like that of a diamond. Oriental bezoar ſhould be choſen gloſſy, of a ſmell like that of ambergreaſe, ſmooth to the touch, and in large pieces; its figure is indifferent, but its colour uſually olive.

Bezoar is eaſily ſophiſticated, and the deceit as eaſily diſcovered; for the methods of proving it are, 1ſt, to ſteep it 3 or 4 hours in luke-warm water; when, if the water is not tinged, nor the bezoar does not loſe of its weight, it is pure: 2dly, to try it with a ſharp red hot iron; when, if it enters the ſtone, and the heat makes it fry and ſhrivel, it is factitious: 3dly, to rub it over a paper ſmeared with chalk, or quick lime; when, if it leaves a yellow taint on the former, or a green one on the latter, it is good. Occidental bezoar is heavier, more brittle, of a dirtier green colour, leſs gloſſy, and generally held much inferior in virtue than the oriental; being found in the belly of ſeveral animals, eſpecially in Peru; as the guanacos, jackos, and vicunnas, as alſo the taraguas, whoſe bezoar is moſt eſteemed, this animal being much like the goat that produces the oriental.

German bezoar, alſo called *cows egg*, is ſaid to be found in the ſtomach of certain cows; but more frequently in that of the chamois, a ſort of rapicapra, or wild goat: but theſe bezoars are ſuppoſed to be only the hair of thoſe animals; which, being occaſionally licked off by the tongue, is ſwallowed down; and, being impregnated with the ſaliva, is condenſed into balls, which are uſed in ſome medicines, but chiefly to make a yellow colour for painters in miniature.

Beſides theſe three kinds of bezoars, which the ſhops afford, there are three other kinds of greater value; as the hog, or boar bezoar, porcupine bezoar, and monkey bezoar; the former of which is found in the gall-bladder of a boar in the Eaſt Indies, which, in figure and ſize, reſembles a filbert, though more irregular; its colour not fixed, but moſt commonly white, with a tincture of blue, being ſmooth and ſhining, and valued at ten times its weight in gold. The Indians, who call it *maſtica de ſoho*, prefer it to the goat bezoar, and attribute infinite medicinal virtues to it: but for uſe, they infuſe it in water, or wine, till it has communicated a little bitterneſs to it; and, to facilitate the infuſion, as alſo at the ſame time to preſerve ſo precious a ſtone, they uſually ſet it in a gold caſe full of holes.

Porcupine, and monkey bezoars, are like the hog bezoar; though Tavernier ſays, theſe kinds are found in the heads of the monkey and porcupine; and that they are held in ſuch eſteem by the natives of Malacca, that they never part with them, unleſs as preſents to ambaſſadors, or the greateſt princes of the Eaſt; though ſome add, that they are likewiſe found in Siam: however, the form, colour, and properties of theſe three bezoars are ſo ſimilar, that it is more than probable, they are all the ſame ſtone, under three different denominations.

BEZOARDICUM *minerale*, or *Mineral Bezoar*, is a preparation of antimony, corrected with ſpirit of nitre, and ſoftened by repeated lotions, which carry off the purgative virtue, and ſubſtitute a diaphoretic one; whereby it promotes perſpiration like the native ſtone of bezoar.

BEZOARDICUM *joviale*, or *Bezoar of Jupiter*, is a regulus, made by melting three ounces of regulus of antimony, and two of block-tin; which, powdered and mixed with ſix ounces of corroſive ſublimate, and diſtilled off in a kind of butter, that is diſſolved in ſpirit of nitre, and the ſolution diſtilled three times; the bezoar remaining at the bottom is to be powdered, waſhed and mingled with ſpirit of wine, till it grows inſipid.

BEZOARDICUM *lunale*, or of *ſilver*, is made by mixing rectified butter of antimony with fine ſilver, diſſolved in ſpirit of nitre; when a powder falls to the bottom, which is the bezoar.

BEZOARDICUM *martiale*, is a diſſolution of crocus martis, by reverberation in butter of antimony, with ſpirit of nitre poured on it; which has been recommended as efficacious againſt hyſterical, and hypochondriac diſorders.

BIA, is a name given by the Siameſe, to the little white ſhells of the Maldives, which ſerve for ſmall money, and are called *coris* in almoſt all the other parts of the Eaſt Indies. At Siam, 800 bias are given for a fouang, which is the eighth part of a fical; ſo that 12 bias, or coris, are not quite worth a halfpenny ſterling. See *Coris*.

BIAMBONNCER. A ſort of Indian ſtuff, made entirely of bark.

BIARIS. A kind of whale, called alſo *cachalot*; of the hinder part of whoſe brain the drug called *ſperma ceti* is made. See *Whale*, and *Whale fiſhery*.

BIASSE. A kind of raw ſilk, brought from the Levant.

BICE. A blue powder, or colour, uſed by painters.

BICHET. A dry meaſure of France, different according to the places where it is uſed; being generally from 13 to 19 buſhels Wincheſter meaſure.

BID, is to offer a certain ſum of money for goods, eſpecially thoſe ſold by auction.

BIDON. A liquid meaſure, in uſe among French ſailors; containing about five quarts Engliſh wine-meaſure.

BIGONTIA, or *Bigorza*. A liquid Venetian meaſure, making 3 quarts and an half Engliſh wine meaſure.

BIIS. A weight uſed on the coaſt of Coromandel in the Eaſt Indies, being about 8 lb. averdupois.

BILANDER. A veſſel of about 80 tons, uſed for the tranſport of merchandiſe; being a kind of hoy, conducted by four or five men only; but furniſhed with maſts and ſails in all reſpects like a hoy. See *Hoy*.

BILBOA. The capital of the province of Biſcay in Spain, ſituated in 3 deg. of W. lon. and 43 deg. 30 min. of N. lat. at the mouth of the river Ibaicabal, which a little below falls into a bay of the ſea, and forms a good port; in ſome repute for its exportations of wool, ſword blades, and other manufactures of iron and ſteel. See *Spain*.

BILBOES. The puniſhing a perſon at ſea, by laying or putting the offender in irons, or a ſort of ſtocks, but more ſevere than the common ſtocks.

BILDGE, or *Bilge*, of a ſhip, denotes the bottom of her floor, or the breadth of that part which ſhe reſts on when ſhe is a ground.

BILDGE-*water*, is that which, by reaſon of the flatneſs of the ſhip's bottom, lies on her floor, and cannot go to the well of the pump: but the Dutch, whoſe ſhips are frequently of this form, uſe a ſort of pumps, called *bildge-pumps*, or, as they are called in England, *burr-pumps*, to carry off the bildge-water.

When a ſhip ſtrikes againſt a rock, they ſay ſhe is bildged, or bulged.

BILEDULGERID, is a diviſion of Africa; having Zaara on the ſouth; Morocco, and the coaſt of Barbary, on the north; the unknown parts of Africa on the weſt; and the Atlantic ocean on the eaſt; comprehending the kingdoms of Teſſe, Darha, Tafilet, Segelmeſſa, Tegorarin, Techort, Zeb, or Zab, Meſab, Gademis, Fezzan, and Levata. This country was the ancient Numidia; when it was tolerably fertile, poſſeſſed by an induſtrious people, and had Zama for its metropolis; the inhabitants were ſo numerous, and of ſuch a warlike diſpoſition, as to enable their king Jugurtha, to make a long and formidable contention with the antient Romans, when that republic was in the meridian of its glory; but the Mahometan Arabs, who are now in poſſeſſion of this extenſive country, are negligent in cultivating the ſoil; by which their vagrant tribes are no otherwiſe conducive to the promotion of any mercantile intereſt, than by gathering dates, which they have in great plenty in their woods; as alſo in procuring oſtrich-feathers.

BILL, in parliament, denotes a paper, containing propoſitions offered to the houſes to be paſſed by them, and then to be preſented to the king, to paſs into an act or law.

BILL ſignifies alſo a paper, either written or printed, in large characters; which is poſted up in the Royal Exchange, and other open and public places, to give notice of the ſale of any merchandiſe, or ſhip, or of the ſailing of any veſſel to foreign parts.

BILL, in trade, both wholeſale and retail, as alſo among tradeſmen and workmen, is an accompt of merchandiſe or goods delivered to a perſon, or of work done for another.

BILL *of entry*. An account of goods entered at the cuſtom-houſe, both inward and outward; wherein is expreſſed the name of the merchant importing or exporting the quantity of goods, and the ſort, as alſo from whence imported, or to what place exported.

BILL *of exchange*, is a ſhort note, or writing, ordering the payment of a ſum of money, in one place, to ſome perſon aſſigned by the drawer, or remitter, in conſideration of the like value paid to him in another place.

The whole eſtate and effects of merchants uſually conſiſt in bills of exchange; which are inſtruments ſo noble and excellent, that tho' they want thoſe formalities required by the common law, and cannot be deemed ſpecialties; yet they are ſuperior to any bonds or ſpecialties, by the reſpect that is paid to them, and the punctuality and preciſeneſs of the payment.

That which conſtitutes the form and eſſence of a bill of exchange, is the ceſſion or transferring of a ſum of money by the drawer to him on whoſe account it is drawn, to be received of his correſpondent at another place; which ceſſion or transfer is made in the mercantile terms for value received, that is, for a like ſum given by the perſon for whoſe ſake the bill is drawn to the drawer, in money, merchandiſe, or other effects.

The juſt and true exchange for monies by bills, is according to value for value; which is grounded on the ſtandard of coins, proportionable to their valuation; which, being juſtly made, reduces the price of exchange to a ſum certain, for the exchange of monies to any place. See *Exchange*.

To note, and *to proteſt a* BILL. See *Note*, and *Proteſt*.

Bank-BILLS, are inſtruments whereby private perſons become intitled to a part in the bank-ſtock. See *Bank of England*.

BILL *of lading*. An inſtrument ſigned by the maſter of a ſhip, acknowledging the receipt of a merchant's goods, and obliging himſelf to deliver them, at the place to which they are conſigned, in good condition.

Of ſuch bills there are uſually three; the firſt the merchant keeps; the ſecond is ſent to the factor, to whom the goods are conſigned; and the third is kept by the maſter of the ſhip.

BILL *of parcels*. An account of the particular ſorts and prices of goods bought, given by the ſeller to the buyer.

BILL *of ſale*, is when a perſon wanting a ſum of money, delivers goods as a ſecurity to the lender, to whom he gives this bill, impowering him to ſell the ſaid goods, in caſe the ſum borrowed is not repaid, with intereſt, at the time appointed.

BILL *of ſtore*. A kind of licence granted at the cuſtom-houſe, to merchants to carry ſuch ſtores and proviſions, cuſtom free, as are neceſſary for their voyages.

BILL *of ſufferance*. A licence granted at the cuſtom-houſe, to a merchant to ſuffer him to trade from one Engliſh port to another, without paying cuſtom.

BILL *of Debt*. See *Debt*.

Exchequer-BILL. See *Exchequer*.

Paper-BILLS *of Credit*. See *Paper-Bill's*.

Shipping-BILLS. See *Entry*.

BILLET. A log of wood, cut for fuel. See *Fuel*.

BILLON, in coinage, a kind of baſe metal, either of gold or ſilver, in whoſe mixture copper predominates. According to ſome authority, billon of gold is any gold beneath ſtandard, or 21 carats; and billon of ſilver all below 10 penny weights; but according to others, gold and ſilver beneath the ſtandard, as far as 12 carats, and 6 penny weights, are properly baſe gold and ſilver; and all under thoſe, billon of gold, and billon of ſilver, in regard copper is the prevailing metal.

BILLOW. A large rolling wave, or ſurge of the ſea.

BIMAES. A ſort of Braſil wood.

BIMLIPATAN. A port-town of Golconda in India, ſituated in 83 deg. of E. long. and 18 deg. N. lat. where the Dutch have a factory. See *India*.

BINDELY. A kind of ſmall ſilk and ſilver ribbon, manufactured in ſeveral places of Italy.

BINDING *an apprentice*, or to bind him, is to engage him with a maſter or freeman of any trade or company, in order to learn that profeſſion or trade; the term for which the apprentice is bound being generally ſeven years to tradeſmen, five to attornies, or leſs to merchants. See *Apprentice*.

BINDING *of books*, is the ſewing the ſheets together, and putting a cover to them, either of paper, parchment, or leather; which occaſions the terms of French binding, Dutch binding, law-binding, marble-binding, binding in leather, in wood, in ſheep, in calf, in parchment, and in vellom.

BINN. A place made up, wherein to put corn, or other grain.

BINTAW. A French ſettlement on the river Gambia in Africa.

BIRCH-*tree*, is a tree of a middling height, whoſe branches are thin, and bending, which are uſed for making brooms; the bark is rough, thick, and white; the wood is white; and

and the tree, which grows in a poor ſoil, or marſhy places, caſts its bark every year.

The birch-tree, tho' very indifferent, is uſed by turners for chairs, and other domeſtic things; as alſo by huſbandmen for ox-yokes, and hop-poles; by coopers for hoops, and by baſket-makers for baſkets.

BIRDLIME, is a viſcid ſubſtance, prepared various ways, and from various materials, for the catching birds, mice, and other vermin.

The bird-lime ordinarily uſed in England, is made from holly-bark, having a third part of nut-oil, or any thin greaſe, incorporated with it over the fire.

The birdlime brought from Damaſcus is ſuppoſed to be made of ſebeſtens; but it endures neither froſt nor wet: that brought from Spain is of an ill ſmell: that of the Italians is made of the berries of miſleto heated, mixed with oil; but, to make it bear the water, they add turpentine; and it is ſaid the bark of the Engliſh way-faring ſhrub, makes the beſt ſort of birdlime.

BIRTH, or *Birthing*, among ſeamen, denotes the due diſtance obſerved between ſhips lying at anchor, or under ſail; but a convenient place aboard for a meſs to put their cheſts, and other things, is alſo called a birth; and a proper place to moor a ſhip in, is called by the ſame name.

BIS. A Latin word, ſignifying twice; which is frequently uſed by merchants, when two leaves in the ſame book have been marked with the ſame number by miſtake; when, to ſhew that it has been twice uſed, bis is wrote next to the number of one of thoſe leaves; which method is practiſed, to prevent the trouble of altering a whole ſeries of numbers.

BISA, or *Biza*. An Indian coin, current in Pegu, for about 1 s. 8 d. ſterling. The biſa is likewiſe a weight uſed in Pegu, being about 1 lb. 12 oz. Engliſh averdupois.

BISANTAGAR. A town of India, where there is a manufactory of cotton-cloths. See *India*.

BISCAY *Bay*, or the *Bay of Biſcay*, extends from Cape Ortegal on the north coaſt of Spain, to Uſhant on the weſtern coaſt of France.

BISERTA. A port-town of the kingdom of Tunis in Africa, ſituated in 9 deg. of E. lon. and 37 deg. of N. lat. on the coaſt of the Mediterranean. See *Barbary*.

BISKET, or *Biſcuit*. A ſort of bread made of wheat, ſo denominated from the word *biſcoctus*, or twice baked; and is particularly applied to bread made for the ſervice of ſeamen; which is baked twice to preſerve it, and called *ſea-biſcuit*: but for long voyages, they bake it four times, and prepare it ſix months before it is put on ſhip-board.

BISCUIT is alſo commonly underſtood of ſmall cakes made by the confectioners of fine flour, eggs, ſugar, and other ingredients.

BISHOP, *and his clerks*. Some little iſlands and rocks on the coaſt of Pembrokeſhire in Wales, too frequently fatal to mariners.

BISMUTH. A mineral body, half metallic, compoſed of the firſt matter of tin, while imperfect, found uſually in tin mines, and ſometimes alſo in ſilver. See *Tin*.

Its ſubſtance is hard, ponderous, and brittle; of a large, gloſſy, white, and ſhining grain: but it is called *tin glaſs*; becauſe, when broke, it ſhews a great number of little poliſhed laminæ, like glaſs: it is likewiſe called *marcaſite*, by way of excellence, becauſe ſurpaſſing all others in whiteneſs and beauty.

It is ſometimes uſed by pewterers, inſtead of regulus of antimony, and by letter-founders in caſting their types; but it contains an arſenical ſalt, which makes it dangerous in medicine.

The precipitate of biſmuth makes a very white magiſtery; which, mixed with prepared waters and pomatums, makes a fucus, to beautify the complexion and preſerve the ſkin.

There is alſo an artificial biſmuth, much like the natural, being that which is uſually found in the ſhops, made by reducing tin into thin laminæ, and cementing them by a mixture of white tartar, ſalt-petre, and arſenic, placed alternately in ſeveral ſtrata, or layers, in a crucible over a naked fire; tho' the ſame is alſo made of a mineral called zink, by uſing lead inſtead of tin, and a little calamine. See *Zink*.

BISNAGUA, or *Viſnagua*. A plant reſembling fennel; which grows abundantly in the Levant, from whence it is brought into Europe, where its principal uſe is for the making of tooth picks.

BISTER, or *Biſtre*, among painters and deſigners, is a colour made of chimney-ſoot boiled, and afterwards diluted with water, ſerving to waſh their deſigns.

BISTI. A ſmall Perſian coin; which, from ſome relations of good authority, is placed among the current ſilver coins of Perſia, being worth about three farthings ſterling; but others make the biſti only a money of accompt.

BISTORT. A medicinal plant, uſed in the compoſition of the theriaca, growing on the Alps, the Pyreneans, and the mountains of Auvergne. Its root is the only part uſed by druggiſts; which is wreathed in the form of a wreathed column, being brown without, and fleſh-coloured within, ſurrounded with tufted fibres, and of an aſtringent taſte; which is good againſt fluxes and hernias; but its principal property is to be an antidote againſt poiſon.

It ſhould be choſen plump, freſh, brown on the outſide, reddiſh within; and, if poſſible, it muſt be the produce of a warm climate.

BIT. That part of a horſe's bridle which goes into his mouth: but, in the Weſt Indies, it is the leaſt piece of ſilver coin in the Britiſh colonies, which goes current at ſeven pence halfpenny ſterling.

BITCHEMARE. A kind of fiſh, ſalted and dried like cod, found upon ſome parts of the coaſts of Cochinchina, which is brought to China in great quantites by the Dutch, and the natives of Cochinchina.

BITTACLE. A ſea-term, ſignifying a wooden frame with two ſtories, placed in the ſteerage, before the ſteerſman, by the mizen-maſt; being faſtened with wooden pegs inſtead of iron, to prevent the direction of the needle of the compaſs which is incloſed in it, from being altered by the proximity of that metal.

BITTER. A ſea-term, ſignifying any turn of the cable about the bitts, ſo that the cable may be let out gradually; and when a ſhip is ſtopt by a cable, they ſay ſhe is brought up by a bitter; alſo that end of the cable which is wound about the bitts, is called the bitter-end of the cable.

BITTS, are two perpendicular pieces of timber in the forepart of the ſhip, bolted to the gun-deck and orlope-beams, their lower ends ſtepping in the foot-waaling; the heads of which are braced to the croſs-piece; and when ſeveral turns of the cable taken over them is for bearing the ſhip at an anchor, there are generally two pair of bitts; beſides, there are others on the upper deck, which are fixed by the main and fore maſt, and called the top-ſail-ſheet, and jeer-bitts.

BITUMEN. A fatty, tenacious, mineral juice, very inflammable; or a foſſil body which readily takes fire, yields an oil, and is ſoluble in water; of which naturaliſts diſtinguiſh three kinds; the hard, the ſoft, and the liquid or oily; and each of theſe they ſubdivide into ſeveral others.

Among the hard bitumens are reckoned yellow amber, ſometimes ambergreaſe, jet, aſphaltum, piſſaſphaltum, pit-coal, black-ſtone, and ſulphurs: the ſoft are maltha, bitumen of Calao, Surinam, and Copal: laſtly, the naptha of Italy, and petroleum, are reckoned among the liquid bitumens; to which may be added zacinthius.

Of bitumens, ſome again are foſſil; others are found floating on the ſurface of certain lakes; and others ſpring from the earth like fountains, as at Pitchford in Shropſhire. Some bitumens are ſo hard, that they are uſed in forges inſtead of coals; others ſo glutinous, that they ſerve inſtead of cement or mortar in buildings; and others ſo liquid, that they are burnt in lamps inſtead of oil: but the bitumen in moſt eſteem, is that of India. See *Aſphaltum*.

BLACK, commonly called a colour; of which there are various kinds in commerce; as dyers black, painters black, German black, ivory-black, Spaniſh black, lamp-black, and others.

Dyers BLACK, or good black, is one of the five ſimple and mother colours uſed in dying; and is made differently, according to the different quality and value of the ſtuffs to be dyed. See *Dying*.

For

For broad-cloths, fine ratines, and druggets, they uſe woad and indigo: the goodneſs of the colour conſiſts in there not being above ſix pounds of indigo to a ball of woad, when the latter begins to caſts its blue flower, and in not being heated for uſe above twice. Thus blued, the ſtuff is boiled with alum, or tartar, then maddered; and, laſtly, the black given with galls, copperas, and ſumac; to bind which, and for preventing its ſmearing in uſe, the ſtuffs are to be well ſcoured in the fulling mill when white, and afterwards well waſhed.

For ſtuffs of leſs value, it is ſufficient they are well blued, with woad, and afterwards blacked with galls and copperas; but no ſtuff can be regularly dyed from white into black, without paſſing through the intermediate blue.

Yet there is a colour called *coal-black*, or Jeſuit's black, prepared of the ſame ingredients as the former, but without being firſt dyed blue; for here the drugs are diſſolved in water boiled for four hours, which have afterwards ſtood to cool till the hand could bear it; then the ſtuff is dipped in it, and again taken out ſix or eight times. This method of dying black is ſaid to be invented by the Jeſuits; and ſome even prefer it to the other.

By the ſtatute of the 23d of Elizabeth, it was enacted, That nothing of the nature of cloth ſhould be maddered for a black, except it was firſt grounded with woad only, or with woad and anele, unleſs the madder was put in with ſumac or galls, on pain of forfeiting the value of the thing dyed; provided it ſhould be lawful to dye any manner of gall-black, and ſumac-black, wherein no madder ſhould be uſed.

Earth-BLACK, is a kind of coal found in the ground, which, when well pounded, is uſed by painters in freſco; but there is alſo a kind of black made of ſilver and lead, to fill up the cavities of things engraved; as alſo another kind of black or ink, made of gall-nuts, copperas, or vitriol.

German or Frankfort BLACK, is made of the lees of wine burnt, waſhed in water, and ground in mills, together with ivory or peach-ſtones burnt. This black makes the principal ingredient in the rolling-preſs-printers ink. See *Ink*.

It is uſually brought from Frankfort, Mentz, and Straſbourg, either in lumps or powder; but that of France, upon account of the difference in the lees of wine, is leſs valued than that of Germany.

Ivory-BLACK, or velvet black, is made of ivory burnt between two crucibles, well luted; which is chiefly uſed by painters and jewellers. See *Ivory*.

Bone-BLACK, is made with the bones of oxen, cows, and other cattle, burnt and well ground; being much uſed in painting, but not ſo much valued as ivory-black.

Harts BLACK, is made from that part of hartſhorn which is left in the retort, after the ſpirits of volatile ſalt and oil have been extracted; which remains are ground with water, and make a black almoſt as fine and good as that of ivory.

Lamp-BLACK, or lamb-black. The ſooty fumes of roſin, prepared by melting and purifying the roſin in iron veſſels, ſetting fire to it under a chimney lined at the top with ſheep-ſkins, or thick linen-cloth, to receive the vapour, which is the black, thus prepared in vaſt quantities at Paris: but in England it is generally prepared from the reſinous and fatty parts of wood, burnt under a kind of tent which receives it: however, the greateſt part is brought from Sweden and Norway; being uſed on various occaſions, particularly in printers ink, mixed up with oils of turpentine and linſeed, all boiled together.

Spaniſh BLACK. So called becauſe firſt invented by the Spaniards, is no other than burnt cork; which is uſed in various works, particularly among painters.

BLACK *Hellebore*. See *Hellebore*.

BLACK *Lead*. See *Lead*.

BLACKS, or *Negroes*, are the inhabitants of ſeveral nations on the coaſt of Africa. See *Negroes*.

BLACK *Sea*, or *Euxine Sea*, lies between Europe and Aſia; being bounded by Tartary on the north; by Circaſſia, Mingrelia, and Georgia, towards the eaſt; by Natolia, or the Leſſer Aſia, on the ſouth; and by Romania, Bulgaria, and Beſſarabia, towards the weſt; extending from the 29th deg. of E. long. to the 44th, and from the 42d to the 46th deg. of N. lat. being entirely ſurrounded by the dominions of the Grand Signior, who enjoys the ſole navigation of it; tho' it is ſometimes diſturbed by the excurſions of the Coſſacks, who iſſue from the mouth of the Boriſthenes, and commit great ravages on the coaſt of Turky. The Ruſſians alſo attempted to eſtabliſh a navigation on this ſea; but have been obliged, by late treaties, to deliver up all the fortreſſes they had erected on the coaſts of the Euxine, and abandon this navigation; which is reckoned dangerous to the Turks, on account of the ſea being ſo tempeſtuous, and having but few tolerable harbours on it; from whence it is ſaid to have obtained the name of the *Black Sea*.

BLACKSMITH. One who makes any ſort of iron-work.

BLACKSMITH's *Company of London*, was an antient guild or fraternity, continued ſo by preſcription, till incorporated by letters patent of Queen Elizabeth, bearing date the 20th of April 1571, by the title of The keepers, or wardens, and ſociety of the art and miſtery de lez blackſmiths, London; which was confirmed by King James I. being a corporation governed by a maſter, 3 wardens, and 21 aſſiſtants; to which belongs a livery of 220 members, whoſe fine is 8 l. with a pleaſant hall on Lambert hill for the diſpatch of buſineſs.

BLACKWATER. A river of Ireland, that runs through the counties of Cork and Waterford, and diſcharges itſelf into Youghall bay.

BLACKWELL-*Hall*, in London, is the greateſt ſtaple for the woollen manufacture in Great Britain, being under the direction of the preſident and governors of Chriſt's hoſpital; where clothiers ſend their manufactures to be diſpoſed of, either by themſelves, or the factors appointed for that purpoſe.

By an act of parliament, paſſed in the 8th and 9th of King William III. it was enacted, That the governors of Blackwell-hall, and their deputies, ſhould ſtrictly hold the following times and rules. That the public market of Blackwell-hall ſhould be held every Thurſday, Friday, and Saturday, from 8 o'clock in the forenoon till 12, and from 2 in the afternoon till 5; and the keepers of the hall ſhould not permit any buying or ſelling of any woollen cloth at the hall upon any other days or hours, upon the penalty of 100 l. That the governors ſhould appoint to the country clothiers the moſt convenient room in the hall for the ſale of their cloth, and warehouſe room for keeping the ſame, paying the antient duties of the hall. That no factor, or other perſon other than the owner of the cloth, ſhould ſell, or expoſe to ſale, out of the ſaid market of Blackwell-hall, any cloth directed to be brought to the ſaid market, or any factor there, upon penalty of 5 l. for every cloth ſo ſold. That books, and weekly regiſters, ſhould be kept of all the cloths bought and ſold there; in which books ſhould be entered the names and habitations of the owners, buyers, and ſellers; the times of ſale, the factor or other perſon, buying or ſelling of every cloth; to which books the clothiers, their agents or ſervants, ſhould, at all convenient times, have recourſe, without fee; and any hall-keeper, clerk, or maſter-porter, neglecting his duty herein, ſhould for every offence forfeit 10 l. That if any perſon buy any cloth of another, except the owner, otherwiſe than for ready money, the perſon ſhould, within twelve days after ſale and delivery of the ſame, take or demand of the buyer a note, teſtifying under his hand the cloth ſold, and the ſum of money ſold for, payable to the owner; and ſhould deliver ſuch note on demand, with notice of the buyer's place of abode thereon ſubſcribed, to the owner, or any perſon authoriſed by him to receive the ſame, on pain to forfeit to the owner of the cloth ſold double the value thereof, for every neglect of ſo doing: and if any woollen-draper, or perſon trading in the woollen manufacture, buying woollen cloth upon truſt, ſhould refuſe, or neglect to give ſuch note upon requeſt, at any time after eight days of the ſale and delivery, he ſhould forfeit 20 s. for every cloth ſo ſold to the owner; and every piece of cloth not returned within eight days after delivery of the ſame, ſhould be deemed to be paſſed and approved of by the buyer as a merchantable cloth; and all contracts for allowing a longer time, for the paſſing of any cloth, ſhould be void. See *Woollen Cloth*.

BLADDERS. A ſkinny ſubſtance, of a ſtrong texture, which receives and keeps the urine of all animals till nature

ture diſcharges it; bladders of cattle and ſheep being uſed by apothecaries for holding liquids.

BLADE. The cutting part of a knife, ſword, or ſaw.

BLAFFART. A ſmall coin, current in the electorate of Cologne in Germany, being worth about a farthing ſterling.

BLANC. A ſmall copper coin, formerly current in France, and worth ſomewhat leſs than a farthing; but ſince the year 1670, the blanc has not been a current coin, being now uſed only as a money of accompt.

BLANCARDS. A name given, in France, to certain linens, becauſe the thread was half bleached before ſent to the loom. Their chief manufacture is in Normandy, whence they are ſent to the Spaniſh Weſt Indies, for the uſe of the mine-ſlaves.

BLANCHING, in coinage. See *Coinage*.

BLANCO *Cape*, or *Cape Blanco*. A promontory of Peru, in South America, ſituated on the coaſt of the Pacific ocean, 120 miles S. W. of Guiaquil.

BLANCO *Cape*, is alſo a promontory of Africa, in the Atlantic ocean, ſituated 180 miles N. of Senegal river.

BLANES. A port-town of Catalonia in Spain, ſituated in 2 deg. 40 min. of E. lon. and 41 deg. 30 min. of N. lat. being 20 miles S. of Gironne. See *Spain*.

BLANK, is a name given by traders to ſuch ſpaces as are not written upon, which are ſometimes to be met with in their day-books; tho' they are of dangerous conſequence, upon account of the abuſes that might be committed therein; for merchants books have no credit in point of juſtice, but according as all the paragraphs are ſuppoſed to be wrote after each other in unſuſpected times; and eſpecially, if blanks appear at the bottom of the pages, no credit at all is to be given them: thus care ſhould be taken that conteſted articles are not written at the bottom of pages, which carries a great face of ſuſpicion.

With regard to bills of exchange, it is ſaid that an indorſement is blank, to ſignify, that, on the back of the letter, there is but a ſimple ſignature; over which there is a ſufficient ſpace to write an order, a receipt, or acquittance.

BLANKET. A ſtuff, commonly made of white and coarſe wool, to cover beds; being made in a loom like cloth, only they are croſſed like ſerges.

BLANQUIL. A ſmall ſilver coin ſtruck at Morocco, worth about 2 d. ſterling.

BLARE. A ſmall copper coin, alloyed with a little ſilver, ſtruck at Bern in Switzerland, and is worth about $1\frac{4}{5}$ d. ſterling.

BLATTA-*Byzantia*, in pharmacy, a teſtaceous body, being the upper part of a ſhell, whoſe fiſh yields a purple dye.

The blatta differs from the buccinum, or purpurea, in figure; the former being oblong, the latter round; but in the ſhops they are uſually confounded, and ſold for each other.

The blatta byzantia is alſo confounded, by apothecaries, with the unguis odoratus; from which it ought to be diſtinguiſhed, as belonging to another kind of ſhell-fiſh. The beſt was formerly brought from the Red ſea, being the paleſt and fatteſt; the blacker, and leſs, came from Babylon, or the Perſian gulph: but latter times took up with thoſe about Conſtantinople, whence the preſent blatta has its name, Conſtantinople being formerly called *Byzantium*.

BLAVET, or *Port-Louis*. A port of Britany in France, ſituated in 3 deg. of W. lon. and 47 deg. 40 min. of N. lat. at the mouth of the river Blavet, being one of the ſtations for the royal navy of France.

BLAYE. A fortreſs of the province of Guienne in France, ſituated on the river Garonne, 21 miles N. of Bourdeaux, to defend the paſſage of the river, that no ſhips may go to or return from that city without permiſſion. See *France*.

BLEACHING. The art of whitening linens, ſtuffs, ſilks, wax, and other matters, which ought to be greatly regarded in the linen manufacture.

BLIND. A ſort of falſe light, commonly made uſe of in the ſhops of tradeſmen, to prevent too great a light from diminiſhing the beauty and luſtre of their goods; particularly linens and ſilks.

BLOCK. A large piece of marble, rough as it comes out of the quarry.

BLOCKS, on board ſhips, are pieces of wood, in which the ſhivers of pullies are placed, and the running ropes paſs: ſome are ſingle, ſome double; and ſome have three, four, or five ſhivers in them; being named, and diſtinguiſhed, by the ropes they carry, and the uſes for which they ſerve.

BLOCK-*tin*, that which is pure and unwrought. See *Tin*.

BLOCK-*wood*, the ſame as logwood.

BLOOD-*ſtone*, or *Lapis Hæmatites*, is a mineral of a reddiſh colour, hard and ponderous, being found in iron mines: it is uſe in medicine, and among gilders.

BLOWING, the action of the wind, in a briſk gale; and the operation of making glaſs veſſels is called blowing of glaſs.

BLUBBER. The fat of whales, and other large fiſh, from whence the oil is extracted. See *Train-oil, and Whale-fiſhery*.

BLUE. One of the primitive colours of the rays of light.

Painters BLUE, is made differently, according to the different kinds of painting: in limning, freſco, and miniature, they uſe indifferently ultramarine, blue aſhes, and ſmalt; theſe being the natural blues; except the laſt, which is partly natural, partly artificial; but in oil, and miniature, they uſe indigo, verditer, lapis armenus, ſmalt, lit-mouſe, and alſo a counterfeit ultramarine.

Dyers BLUE, is one of their ſimple, or mother colours, uſed in the compoſition of others, being chiefly made with woad and indigo: though ſome dyers heighten their blue, by adding madder, braſil, and other woods.

Turnſol BLUE, uſed in painting on wood, is made of the ſeed of that plant: the preparation being by boiling four ounces of turnſol in a quart of water, wherein lime has been ſlacked.

Flanders BLUE, is ſeldom uſed but in landſcapes, being apt to turn green.

Pruſſian BLUE, is made of tartar and crude nitre, ox blood, Engliſh vitriol, crude allum, and ſpirit of ſalt; which form an excellent blue for painters, being reckoned as good as the ultramarine.

BLUEING *of metals*, is done by heating them, till they aſſume a blue colour; particularly gun-barrels and buckles; as alſo by gilders before they apply their gold or ſilver.

BLUNDERBUSS. A ſhort gun, the barrel of which is commonly braſs, with a large bore.

BOARD. A piece of timber, ſawed into thin pieces for building. Boards thicker than ordinary are called planks; thoſe formed ready for coopers are called clap-boards; and the mill-boards, and ſcale-boards, are ſhaved very thin for caſes, or band-boxes.

BOARD, is alſo a number of governors, directors of a corporation, commiſſioners of the cuſtoms, or exciſe, lords of the treaſury, or of trade and plantations, who, when met together to do the buſineſs they are choſen for, or appointed to, are called a board.

BOARD, in the ſea-language, is to enter into a ſhip by force, in order to take, or make a prize of her.

BOAT. A ſmall, open, floating veſſel, commonly wrought, or moved, only by rowing; and intended chiefly for the navigation of rivers, lakes, and the like: but there are alſo boats belonging to ſhips; and even thoſe ſhips which carry the packets, or mails, to and from foreign parts, are called packet-boats.

The ſeveral boats for ſhips are, a jolly-boat, a long-boat, a ſkiffe, a pinnace, a water-boat, and a yawl: other boats, are a gondola, a Greenland-boat, a Bermudas-boat, a ballon of Siam, a horſe-boat, a periaga, a pleaſure-boat, a ponton, a canoe, a curricle, a curry-curry, a deal-hooker, a felucca, a ferry-boat, a praw, a flying praw, a punt, a tilt-boat, a tod-boat, a well-boat, and a wherry.

The boats, or wherries, allowed to ply about London, are either ſkullers wrought by a ſingle perſon, with two oars, or oars wrought by two perſons, with each an oar: but all boats rowed with more than four oars, above, or below London-bridge, are forfeited, by the ſtatute of the 8th of Geo. I. See *Watermen*.

BOATSWAIN. An officer on board of a king's ſhip, charged with her rigging, ropes, cables, anchors, ſails, flags, colours, and pendants: he is alſo to take care of the long boat, with its furniture; and to ſteer her either by himſelf, or his mate: he likewiſe calls out the ſeveral gangs aboard, to the due execution of their watches, and buſineſs: beſides, he is a kind of provoſt-marſhal, to ſee, and

and puniſh, all offenders, ſentenced by the captain, or a court-marſhal of the fleet.

BOBBIN. A ſmall, neat, turned ſtick, made either of hard wood, bone, or ivory, to weave thread-lace: alſo an inſtrument to wind wool, thread, worſted, hair, cotton, ſilk, gold, and ſilver, to render them more ſuitable for the weaver's uſe. And it is likewiſe a white round tape, uſed by women to tie their head-cloths with, and in child-bed linen.

BOCA-CHICA. The ſtraight or entrance into the harbour of Carthagena, in S. America.

BOCA DEL DRAGO. A ſtraight between the iſland of Trinidad and new Andaluſia, a province of the Terra Firma, in S. America.

BOCAL. An Italian liquid meaſure uſed at Rome, being properly what the Engliſh call bottle, and is about half a gallon wine-meaſure.

BOCCASSINE. Cotton cloths, manufactured at Tiria in Turky, ſtarched and ſtiffened with ſtationer's paſte.

BOCHARA. A city of Uſbec Tartary, ſubject to Perſia, ſituated on the river Oxus, in 65 deg. of E. lon. and 40 deg. of N. lat. See *Perſia*.

BODICE. An ordinary kind of ſtays, wore by the poorer ſort of women.

BODY, or *Body-corporate*, is a company, or corporation, of ſeveral perſons who compoſe a juriſdiction, by charter or act of parliament.

Body of a ſhip, is the whole veſſel, except the ſails, ropes, and rigging.

Body, is likewiſe ſaid of the materials which compoſe any kind of manufactures; in which ſenſe tradeſmen ſay, the body of cloth or ſerge is good; the body of velvet is too looſe, or too thin; or the body of paper is too weak.

Body of a tree, is the large timber.

BOG. A river of Poland, which runs S. E. through the province of Podolia and Budziac Tartary, falling into the Euxine ſea, between Oczakow, and the mouth of the river Boriſthenes.

BOHEA. One of the beſt kinds of tea, which comes from China. See *Tea*.

BOHEMIA. A kingdom ſubject to the queen of Hungary. See *Germany*.

BOHOL. One of the Phillippine iſlands, in Aſia, ſituated in 122 deg. of E. lon. and 10 deg. of N. lat. See *Philippine Iſlands*.

BOIS. A term for the madder of Georgia and Armenia, where it grows in great plenty, particularly about Teflis.

BOKAS. A cotton cloth, brought from Surat, of which ſome are white, and others blue.

BOLE, is applied to ſeveral kinds of earths which enter galenical preparations; and ſuch as are uſed by painters, potters, and other artiſts. Boles may be ranked under the general names of loam and clay, being native foſſile earths, commonly ſomewhat unctuous: ſo that when mixed up with water, they may be wrought into a paſte; as white clay, fullers earth, and ruddle: but there are others of a drier nature, as marle, and chalk.

Bole *Armoniac*, or the *Armenian bole*, is a ſoft, friable, fatty earth, brought from Armenia and Perſia, of a pale red colour; eaſily pulveriſed, adhering to the tongue, eſteemed a good drier, ſtyptic, and vulnerary: but it is eaſily falſified; and druggiſts frequently ſell Lemnian, or other earth, for it. See *Lemnian Earth*.

Bole *of the Levant*, is a medicinal earth, much of the ſame nature and uſe with the bole armoniac: but there is ſcarce any ſuch thing in England, as either true bole armoniac, or bole of the Levant; all the boles now in uſe being brought from France, or the neighbouring countries.

BOLLARDS, are large poſts ſet in the ground, on each ſide of a dock, to which are laſhed large blocks, for docking, or undocking of ſhips.

BOLLOS. A term given by the Spaniards of Peru, to the ingots, or bars of ſilver.

BOLOGNE, or *Boulogne*, a port-town on the Engliſh channel, ſituated at the mouth of the river Lenart, in 1 deg. 30 min. of E. lon. and 50 deg. 40 min. of N. lat. being the capital of the Bolognois, a territory of Picardy, in France. See *France*.

BOLONIAN *ſtone*. See *Bononian Stone*.

BOLT, in trade, is 28 ells of canvas.

Bolts, or iron pins, in a ſhip, are of ſeveral ſorts, frequently diſtinguiſhed according to the places where they are uſed; as chain-bolts; bolts for carriages; ring-bolts, ſerving for the bringing to of the planks; drive bolts, uſed to drive out others; ſet bolts, employed for forcing the planks and other works, and bringing them cloſe to one another; rag-bolts, on each ſide full of jags, or barbs, to keep them from flying out of their holes; clench-bolts, faſtened at the ends where they come through; fore-lock-bolts, made like locks, with an eye at each end, wherein a fore-lock of iron is driven to prevent ſtarting out; fend, or fender-bolts, made with long and thick heads, ſtruck into the uttermoſt bends or wales of a ſhip, to ſave her ſides from bruiſes and hurts.

BOLT-SPRIT, or *Bow-ſprit*, the name of a uſeful part of the rigging of a ſhip. See *Bowſprit*.

BOLZAS. A kind of cotton ticking, either intirely white, or ſtriped with yellow, brought from the Eaſt Indies.

BOMB. A large, hollow, iron ball, or ſhell, filled with gun-powder, and ſome combuſtible matters, to be fired, or thrown from a mortar.

BOMBASINE, or *Bombycine*, a ſort of ſtuff made of worſted and hair, commonly worn as mourning; for which the duty on importation into England is 6 d. for the narrow ſingle piece, not above 15 yards, and 7 d. for the broad: but the greateſt part of what is now uſed in England is made in Spittal-fields.

BOMBAY. An iſland, and fort, near the W. coaſt of the hither peninſula of India, ſituated in 72 deg. 20 min. of E. lon. and 18 deg. 13 min. of N. lat. being 130 m. S. W. of Surat; 200 m. N. of Goa, and 40 m. N. W. of Dunde Rajopere.

The iſland is 7 m. long, and about 20 in circumference; having a town upon it a mile in length, with ſome other ſmall towns; but the houſes are low and mean, except ſome few belonging to the Engliſh and Portugueſe.

The fort is ſtrong, and regularly fortified; having 120 pieces of cannon mounted, and ſtands at ſome diſtance from the town.

There is no good water, but what they preſerve in ciſterns, in the time of the rains; that which they have from their wells having a brackiſh taſte: but thoſe who can afford it, ſend a mile farther up the bay for what they drink, where there is a good ſpring.

The Portugueſe, who poſſeſſed themſelves of this iſland ſoon after their coming to India, gave it the name of Boonbay, from the goodneſs of the harbour, which is capable of containing near 1000 veſſels: but the king of Portugal, in the year 1663, transferred the property of it to K. Charles II. of England, on his marriage with the princeſs Katherine, the infanta of Portugal, as part of her fortune; and K. Charles II. made a preſent of it ſometime after to the Engliſh Eaſt India company. See *Engliſh Eaſt India Company*.

The iſland is but barren, and does not produce grain ſufficient to ſubſiſt half the inhabitants; though they are ſupplied very reaſonably from the neighbouring countries: but what they abound in moſt, and what the eſtates of the iſland conſiſt in, are their groves of cocoa-nut trees. Their gardens all produce mangoes, jacks, and other Indian fruits; and they make pretty large quantities of ſalt, with very little trouble, from the ſea-water, which being let into little pits, the ſun extracts the moiſture, and the ſalt, is left behind.

The inhabitants are a mixture of ſeveral nations; as Engliſh, Portugueſe, and Indians; amounting in all to 50 or 60,000: but the preſident of Surat is uſually governor of the place; who has a deputy here, and courts of juſtice after the model of England; and the governor, when he is upon the iſland, appears in greater ſtate than the governor of Fort St. George; being attended, when he goes abroad, by two troops of Moors and Banderins, with their ſtandards.

The iſland is not a very healthy place, becauſe ſevere fluxes, the ſcurvy, and a diſtemper called the barbiers, which affects the whole body, ſo that a man can hardly ſtir hand or foot, are frequent among the inhabitants; though the natives, and thoſe who are ſeaſoned to the country, enjoy

enjoy a tolerable ſtate of health, frequently living to a good old age; and thoſe who go over young find no great inclemency from the climate.

Both the Dutch and the Mogul, in their turns, have endeavoured to make themſelves maſters of Bombay, but have been hitherto diſappointed. So lately as 1688, the Mogul general landed 25,000 men upon the iſland, and attacked the fort; but not being able to carry it, came to a treaty with the governor, and retired; though the villages, and plantations, in the iſland, ſuffered very much by the enterpriſe; for which the governor, Sir John Child, was deſervedly blamed, having made no preparations to prevent a deſcent.

This place is exceedingly well ſituated for trade on the continent of India, being, indeed, the principal ſettlement the Engliſh have in this part of the world; and, ſince governor Bohun drained the bogs and ſwamps, it has been as healthful as any of the Engliſh ſettlements on this coaſt; being the ſtation for ſome of the company's ſhips ſent there every year for the trade of Mocha and Decan: it is alſo frequented by the country ſhips belonging to Fort St. George, and Fort William.

BOMB-KETCH. A ſmall veſſel ſtrengthened with large beams, for the uſe of mortars at ſea.

BOMENE. A port-town of the United Provinces, in the province of Zealand, ſituated in 40 deg. of E. lon. and 51 deg. 50 min. of N. lat. on the N. ſhore of the iſland of Schouen, oppoſite to the iſland of Gorce. See *United Provinces*.

BONA. A port-town of the province of Conſtantina in Algiers, in Africa, ſituated in 8 deg. of E. lon. and 36 deg. of N. lat. on the coaſt of the Mediterranean. See *Barbary*.

BONAIRE. An iſland near the coaſt of Terra Firma, in America, ſituated in 67 deg. of W. lon. and 12 deg. 30 min. of N. lat. ſubject to the Dutch, who traffic from hence with the coaſt of Caraccao. See *Dutch America*, under *United Provinces*.

BONAVISTA, one of the Cape Verd iſlands, ſituated in the Atlantic ocean, in 23 deg. of W. lon. and 16 deg. of N. lat See *Cape Verd Iſlands*.

BOND, in law, an inſtrument between two or more parties, containing certain conditions to be done and performed upon the forfeiture, or penalty, of double the debt or obligation. Bonds for apprenticeſhips, are called indentures: but bonds not to uſe trades, till or ſow the ground, or of the like nature, are unlawful, becauſe they are againſt the public good, and therefore void.

BONDED *goods*, are ſuch as have an allowance of time for payment of their duties: thus the additional duty on linen and ſilk, may be bonded for 12 months; the additional duty for tobacco, and wine, 9 months; the new ſubſidy on tobacco for three months; the one 3d ſubſidy on tobacco for 9 months; impoſt on ditto for 18 months; impoſt on wine at 3 equal payments, one 3d at 3 months, one 3d at 6 months, and one 3d at 9 months; impoſt of 1690, impoſition of 1692, and new duty on whale fins, at 4 equal payments, one 4th at 3 months, one 4th at 6 months, one 4th at 9 months, and one 4th at 12 months: new duty on raiſins, nutmegs, cinnamon, cloves, mace, and ſnuff, for 12 months; and the duties on coals coaſtwiſe for 3 months.

BONDS, for paying cuſtom-houſe duties, are to be ſtamped, in the ſame nature as other bonds, with an eighteen penny ſtamp; otherwiſe, the bond to be void not only till ſtamped, but till payment of the duties, and 15 l. beſides, and the officer to forfeit his employment.

This bonding of duties is greatly injurious to trade, and inconvenient to the merchant, or trader; becauſe it ariſes from high and numerous impoſts on the commodities, and obliges the dealer to find ſecurities for his obſervance of the laws belonging to thoſe impoſts.

BONE-LACE. See *Lace*.

BON ESPERANCE CAPE, or *Cape of Good Hope*, the moſt ſouthern promontory of Africa, ſituated in 16 deg. of E. lon. and 34 deg. 15 min. of S. lat. where the Dutch have built a good town and fort; the capital of their ſettlements in the country of the Hottentots.

BONETA. A fiſh, found in great plenty, about the Madeira iſlands; being about 3 feet long, and 2 about; its fleſh being white, tender, and of a good taſte, affording good proviſion to ſeamen while in thoſe parts. The bonetas go in ſhoals, are eaſily taken, and are fit for ſalting or pickling.

BONGO. A capital, and port-town, of one of the Japaneſe iſlands, ſituated in 132 deg. of E. lon. and 82 deg. 30 min. of N. lat.

BONIFACIO. A port-town at the S. end of the iſland of Corſica, ſituated in 9 deg. 20 min. of E. lon. and 41 deg. 20 min. of N. lat. which gives name to the ſtreight between Corſica and Sardinia, and is one of the beſt towns in the iſland. See *Italian Iſlands*.

BONNETS, in the ſea-language, are ſmall ſails ſet upon the courſes, on the mizzen, main ſail, and fore-ſail, of a ſhip, when theſe are too narrow, or ſhallow, to clothe the maſt; or in order to make more way in calm weather.

BONONIAN *ſtone*, a ſmall, grey, ſoft, gloſſy, fibrous, ponderous, ſulphurous ſtone, about the bigneſs of a large walnut; but when broken, having a kind of cryſtal, or ſparry talc, within; found in the neighbourhood of Bologna, or Bononia, in Italy; and, when duly prepared, making a kind of phoſphorus. See *Phoſphorus*.

BONTANS. A kind of ſtuff, or covering of cotton, ſtriped with red, and manufactured at Cantor, a kingdom ſituated on the upper part of the river of Gambia, in Africa; great quantities of which are bought up by the Engliſh, French, and Dutch, ſerving them in their trade with the inhabitants of the other coaſts of Africa.

BOOK, is a work of wit, or genius, compoſed and printed, for the public utility, or ſometimes only for curioſity, and pleaſure: of which printers make the impreſſion, bookbinders bind, and gild them; and bookſellers ſell them, by wholeſale and retale.

Printed books are diſtinguiſhed according to their different forms, which are of ſeveral ſorts; as folios, quartos, octavos, duodecimos, and ſo on; which is to be underſtood of the folding of the ſheets, with the quantity of leaves and pages each ſheet contains.

BOOKS, *Bookſellers*, and *Bookbinders*, were formerly no ways material to the commercial world; though, ſince the invention of printing, they have been thought conſiderable enough to attract the obſervation of their reſpective legiſlatures; but more particularly in France and England: for, in the former kingdom, the ſovereign has taken the direction of them into his own hands, giving them new ſtatutes; appointing officers to fix prices, granting licences, and privileges, without the ſanction of which no book can be publiſhed: however, in the latter country, the caſe is very different; for the Engliſh look upon the toleration of the preſs as one of the moſt eſſential denotations of Britiſh liberty.

The ſtatute of the 8th of Q. Anne regulates the property of authors: and thoſe of the 9th of George I. and the 11th of George II. aſcertain the manner of importing books printed abroad. See *Stationers Company*.

But, to prevent the importation of ſuch as are popiſh, and ſuperſtitious, there is, in the port of London, a particular officer appointed to examine all books imported, printed, or written, in any language whatſoever.

A baſket of books is 8 bales.

BOOK-*binding*, the art of ſewing together the ſheets of a book, and covering them with a back: binding being diſtinguiſhed from ſtitching; as in the latter the leaves are only ſewed, without bands or backs. See *Binding*.

BOOK-*keeper*. A perſon who keeps the accompts of a merchant, or trader, in a correct and methodical manner, being generally the principal clerk in the compting-houſe.

BOOK-*keeping*, the art of keeping accompts; that is, of recording the tranſactions of a perſon's affairs in ſuch a manner, that the true ſtate of any part, or of the whole, may be thereby known with the greateſt perſpicuity, exactneſs, and facility.

By the tranſactions of a perſon's affairs are meant either ſuch as relate to the perſons dealt with, or the things dealt in; which laſt are either money, the principal means of commerce; or goods, comprehending all other effects.

And by knowing the true ſtate of a perſon's affairs, is meant to know what relates to every perſon dealt with, and every thing dealt in; that is, what every perſon owes

a merchant, or the merchant owes him; as alſo what quantity and value of every kind of effects are in the hand of the merchant, with the gain and loſs on that ſubject within the time of the account.

The art of book-keeping is compriſed in the uſe of ſeveral books of accompts, partly eſſential, and partly ſubſidiary: theſe books are either kept ſingle, as among retail dealers; or double, as among eminent merchants: for the firſt, a journal, or a day-book, and a ledger, or poſt-book, are ſufficient; for the ſecond, there are ſeveral others required, as mentioned in the article of *Books of accompt*.

It is univerſally acknowledged, that the Italians, particularly thoſe of Venice, Genoa, and Florence, firſt introduced the method of keeping books double, or in two parts; from whence it is called the Italian method, which is followed by moſt European merchants: but for the different monies in which the ſeveral nations of Europe keep their reſpective accompts, and the value of the ſame according to ſterling money, ſee *Money of Accompt*.

In book-keeping, merchants have books of various kinds, as the waſte-book, which is the firſt, and moſt eſſential; in this all kinds of matters are, as it were, mixed promiſcuouſly together, to be afterwards ſeparated and transferred into others; ſo that this may be called the elements of all the reſt. It may be kept two ways; the firſt by entering things down ſimply as they happen, as, *Bought of ſuch a perſon*; *ſold to ſuch a perſon*; *paid to ſuch a perſon*; *lent ſo much*, and the like: the ſecond by entering at once, each article, debtor and creditor; which laſt is eſteemed the beſt, in regard, as forming a kind of little journal, it ſaves the keeping any other. This waſte book, Mr. Malcolm obſerves, is an univerſal and compleat memorial of all the tranſactions and events of buſineſs, taken in the natural order of time, whereby all things of one date are placed together; ſerving as a preparation for the ledger book, into which they are to be all transferred, upon diſtinct accompts, according to the order of ſubjects.

The waſte-book begins with the inventory of a merchant's effects, and debts; and contains a compleat record of every tranſaction of his affairs, with all the circumſtances, in a plain narration of matters of fact; every tranſaction following another in the order of dates. This book is, in reality, a journal, or day-book; but that name being applied to another, the name waſte-book is given to this by way of diſtinction; though what relation the word waſte bears to the nature of this book, is not very obvious. Some authors better call it the memorial-book, or memorandum-book, in regard, its principal uſe is for taking memorandums.

Journal-Book, or *Day-book*, is that wherein the affairs of each day are entered orderly down, as they happen, from the waſte-book. Each article in this book conſiſts of ſeven parts; as the date, debtor, creditor, ſum, quantity, and quality, how payable, and the price.

The journal, ſo far as it differs from the waſte-book, is only a book of aid to the ledger: but there are two different methods of keeping it; in the firſt, which is that hitherto chiefly in uſe, the journal is a compleat tranſcript of the waſte-book, in the ſame order of time, but in a different ſtile: for the waſte-book expreſſes every tranſaction in a ſimple narration of what is done; whereas the journal diſtinguiſhes the debtors and creditors, as a preparation for the ledger: thus, when any tranſaction is to be transferred from the waſte-book into the journal, it is examined by the rules of the ledger, as if it was to be entered immediately there; and finding the debtors and creditors to which it belongs, theſe are diſtinctly marked by their denominations of debtor and creditor, in the ſtile of the journal; at leaſt, the accounts that are debtors, are expreſly ſo named; and by their being directly connected debtor to ſome other accounts, theſe are ſufficiently determined to be the creditors, though the word creditor be not written.

The form of the journal, which Mr. Malcolm judges moſt preferable, is a compleat tranſcript of the waſte-book, without any alteration; leaving, on the left ſide of every page, a large margin, about a third part of the page, on which, againſt every tranſaction, are to be written the names of the debtors and creditors of that tranſaction, with their titles of debtor and creditor, and ſums of money; obſerving, that where there are ſundry debtors or creditors to one creditor or debtor, they write their names next each other, and the name of the one correſponding debtor or creditor againſt the total of the other ſums; by which means the balance and connection appears at firſt ſight: then when the tranſaction is transferred to the ledger, they write on this margin the number of the folios, where the accounts ſtand in the ledger.

This book may be called either the waſte-book or journal, being, in reality, both; not only as every waſte-book is a journal, but as there is here alſo that which diſtinguiſhes both a waſte-book and a journal.

Ledger Book, or *Ledger*, ſometimes alſo called the great-book, and the poſt-book, is a large volume, containing all the tranſactions of a man's affairs, in ſuch order, as that thoſe belonging to every different ſubject lie together in one place; making ſo many diſtinct or ſeveral accounts. The ledger is only the waſte-book ſtill further digeſted; being extracted either immediately from it, or from the journal. It is uſually ruled in ſix columns, in which all the accompts diſperſed in the journal, are drawn out, and ſtated in debtor and creditor. To form each accompt two pages are required, oppoſite to each other; that on the left ſerving for debtor, the other for creditor; each article to conſiſt of five parts, or members; the date, the perſon whom another credits, or is credited by; the ſubject, that is, the thing credited, or indebted for; the page where it is found, and the ſum or amount of the article.

The management of the ledger being of great importance in accompts, it may be neceſſary to ſubjoin, from Mr. Malcolm, the following rules relating thereto. 1. That, for every diſtinct ſubject, with which a merchant has an accompt; that is for every perſon with whom he deals on mutual truſt and credit, or who, by any means becomes indebted to the merchant, or the merchant to him, as well as for every thing the merchant deals in, there muſt be a certain ſeparate ſpace, or portion allowed, wherein are to be written all and only the tranſactions relating to that ſubject; whoſe name is to be inſcribed or written at the head thereof, making hereby diſtinct and particular accompts.

2. Every accompt is to be diſtinguiſhed into two parts, taking for each an equal portion, leſs or more, as is thought proper, of right and left pages, of one folio or opening; the name of the ſubject being written on the head of the accompt, on both ſides, which are diſtinguiſhed by the words debtor on the left ſide, and creditor on the right, for the uſes following: to which the columns explained below are ſubſervient.

3. Every perſonal accompt to contain, on the debtor's ſide, all the articles which that perſon owes the merchant, and the payments made by the merchant of his debts to that perſon: and on the creditor ſide all that the merchant owes to him, and the payments he makes of his debts to that perſon; or, becauſe this rule conſiders payments under the notion of mutual oppoſite debts upon the receiver, if this be once ſuppoſed, the rule may be briefly expreſſed thus: every perſon is debtor for what he owes the merchant, and creditor for what the merchant owes him.

4. Every real accompt to contain on the debtor's ſide, the quantity and value of what was upon hand at the beginning of the accompt, and what was afterwards received, with all coſt and charges: and on the creditor ſide, the quantity and value of what is diſpoſed of, or any way taken away, or gone out of it; with all the returns that ſubject makes. Or, more briefly thus: it is debtor for all received, firſt coſt and charges; and creditor for all gone out of it, with the returns.

5. Every tranſaction muſt be entered in the ledger-book, with a balance of debt and credit; that is, ſo as every article be placed on the debtor ſide of ſome other, making thereby equal debt and credit in the ledger; and where the perſonal and real accompts, concerned in the tranſaction, do not, in the articles belonging to them, make this balance, as they will in moſt caſes, then ſome imaginary accompt muſt be uſed to ſupply the defect.

6. Thoſe accompts, whoſe articles of debt and credit, in any tranſaction, balance one another, are, in the ledger, to be connected together in the ſtile of every article, as mutual and correſpondent debtors and creditors; by writing in each of the correſponding accompts the name of the other, after the article *to* in the debtor's accompt, and *by* in the creditor's, which connects the two; the name of the accompt, in which articles are written, with its quality of debtor and creditor, being underſtood as joined to, and ſo is read before the word *to* or *by* in every article, tho' it be written only once for all on the head of the accompt: then, after the name of the correſponding creditor or debtor, follows a brief narration of the fact; the date, and other numbers, being placed in their proper columns: hence is found the uſe of the column that ſtands before, and next to the money-column; which is this, to write in it the number of the folio where ſtands the correſponding accompt, with which the accompt, wherein you write, is connected in every article.

To facilitate the uſe of the ledger, there is an alphabet, to ſerve as an index or repertory, conſiſting of 24 leaves, each cut on the edge, and marked with one of the 24 letters; wherein the initial letters of the perſons names, with whom a merchant has accompts, are inſerted with the folio of the ledger, where the accompt is ſtated.

The more exact book-keepers, extend the index to the things or commodities a man has dealings in, as well as the perſons he deals with: generally it is the firſt letter of a man's ſirname, and the proper name of the thing that directs its place in the index: thus, John Gordon is put under G, and claret wine under C, unleſs all ſorts of wine be comprehended in one accompt; in which caſe it is put under W.

Debt-Book, or *Book of Payments*, is a book wherein is entered the day whereon all ſums fall due, whether to be paid, or received by bills of exchange, merchandiſes, or otherwiſe; to the end, that, by comparing receipts and payments, proviſion may be made, in time, for a fund for payment, by receiving bills due, or taking other precautions. It is only to be obſerved, that, like the ledger, it muſt be on two oppoſite pages; monies to be received on the left hand, thoſe to be paid on the right.

Caſh-Book, is the moſt important of all the auxiliary ones; being ſo called becauſe it contains, in debtor and creditor, all the caſh that comes in, or goes out of the merchant's ſtock. In this are entered all the ſums received and paid daily; thoſe received on the left hand, with the perſon's name, of whom received, for what, for whom, and in what ſpecies: thoſe paid on the ſide of the creditor, mentioning likewiſe the ſpecies, the reaſon why, the perſon to whom, and for whom the payment is made.

The better to conceive the nature of this book, it is to be obſerved, that in buſineſs where caſh happens to be an accompt, which has numerous articles, it is convenient to keep a particular accompt thereof, in a book diſtinct from the ledger; and for this reaſon called the caſh-book. This is formed, in all reſpects, like the caſh accompt in the ledger, with a debtor and creditor ſide, in which all the caſh received, and given out, is entered, either in a ſimple ſtile, or in that of the ledger: but which way ſoever the narration is made, every article muſt be duly entered on the oppoſite ſide of the correſponding accompt in the ledger, with a reference to the ledger accompt of caſh: for ſuch an accompt there muſt alſo be, into which the ſums of the debtor and creditor ſides of the particular accompt muſt be transferred once a week or month, as is found convenient: thus, in the caſh-book, the ſums being written down againſt them, write transferred to the ledger, and mark the folio; and in the ledger accompt, enter the ſum with the date of the transfer, debtor to, and creditor by ſundry accompts, as *per* the caſh-book. The caſh accompt in the ledger, is neceſſary for the balance of the whole; and the convenience of the ſeparate accompt of all the particulars is, that they are had all together, in one continued accompt; whereas the rule of the ledger being not to allow more than one folio for one accompt, till that be filled up, the accompt might hereby lie in ſeveral different folios.

Book *of Invoyces*, a book to ſave the journal from the eraſures inevitable in taking accompts or invoyces, of the ſeveral goods received, ſent, or ſold, where it is neceſſary to be very particular, and to render thoſe invoyces eaſier to find than they can be in the waſte-book. The invoyces here entered, are to be thoſe of goods bought, and ſet to accompt of ſome other; thoſe of goods ſold by commiſſion; of goods ſent away to be ſold on proper accompt; and thoſe of goods ſold in partnerſhip, whereof a merchant has the direction, or whereof others have the direction.

This book contains an accompt, or invoyce, of all the goods which a perſon ſhips off, either for his own accompt, or for others in commiſſion, according to the bills of lading; with the whole charges till on board, every invoyce following after another, in order as they happen. But the invoyce book is only a copy of what is written in the waſte-book, in thoſe caſes, and deſigned for the more ready finding out theſe invoyces, than can be done in the waſte-book.

Factor-Book, is an accompt of what a perſon receives to ſell in commiſſion for others, and of the diſpoſal thereof; which is numbered and diſtinguiſhed into folios, like the ledger; on the left-hand is written, in a plain narrative ſtile, an account of the goods received, with all charges: and on the oppoſite ſide, an account of the ſales, and diſpoſals of the goods; ſo that this is only a copy of the employer's accompt of goods in the ledger in the ſtile of the waſte-book: though where a perſon does little in commiſſion, a ſeparate book for this purpoſe is needleſs.

Book *of Accompts current*, is kept in debtor and creditor, like the ledger, and ſerves for accompts ſent to correſpondents, to be regulated in concert with them, before they are entered in the ledger: this being properly a duplicate of the accompts current, kept to have recourſe to on occaſion.

Book *of Acceptances*, or of *Draughts*, is deſtined for the regiſtring all bills of exchange, notified by letters of advice from correſpondents, to be able to know, on the bills being preſented, whether they have orders to accept them or not. When merchants chuſe to decline accepting a bill, againſt the article thereof, in the book they put P.; that is, proteſt; that on offering the bill the bearer may be told he may proteſt it: on the contrary, if they accept it, they write againſt it an A, adding the date, or day of acceptance: and this, upon being transferred to the debt-book, is cancelled.

Book *of Remittances*, ſerves to regiſter bills of exchange, as they are remitted by correſpondents, to require the payment thereof; but if they are proteſted for want of acceptance, and returned to thoſe who remitted them, mention is made thereof againſt each article, by adding a P. in the margin, and the date of the day when they were returned, or cancelled. The books of acceptances and remittances have ſo near a relation to each other, that many merchants and tradeſmen make only one of the two, which they keep in debtor and creditor; putting acceptances on the ſide of debt, and remittances to that of credit.

Book *of Expences*, a detail of the petty expences, both domeſtic and mercantile; which, at the end of each month, are ſummed up, and made an article for the caſh-book. This book being a ſeparate accompt of all the expences of living, ſerves to keep both the profit and loſs accompt, and alſo the caſh book, more diſtinct: the greater and more conſiderable articles are to be placed here particularly; but the ſeveral ſmall articles of daily diſburſements only in totals; though under what denominations, and how general or particular the articles of this book are to be made, muſt be left to the choice of every perſon: all that is neceſſary to obſerve here being, that the caſh paid out on ſuch accompts muſt be carefully entered here, and thence, once a week, or month, be transferred to the caſh-book, and to the profit and loſs accompt in the ledger, which is debtor to caſh for it.

Book *of Numeros*, or *Wares*, is kept for the eaſy knowledge of all the goods brought in, ſent out, or remaining in a ware-houſe. On the left-hand page are entered the quantity, and number, or mark of the goods brought in: on the right, the diſcharge of the goods out of the ware-houſe, againſt the reſpective articles of the firſt.

Month-Book, is numbered in folios, like the ledger, and divided into ſpaces; on the top of each of which are the names of the 12 months of the year, allowing a whole folio, more or leſs, to each month, and a different ſet of 12 ſpaces for every different year. On the left-hand page the merchant ſhould enter the payments to be made to him, in that month, and on the right-hand page the payments he is to make; a column is likewiſe to be made on the left-hand of every page, in which the day of payment is to be wrote, after this the name of the debtor or creditor, and then the ſum is to be drawn into the money-columns.

Book *of veſſels*, is kept in debtor and creditor, a particular accompt being kept for each veſſel. To the ſide of debtor are put victualling, fitting out, wages, and other expences; to the ſide of creditor are put every thing the veſſel has produced, whether by way of freight or otherwiſe: laſtly, the total of each is entered in the journal, upon ballancing the accompt of each veſſel.

Book *of workmen*, is particularly in uſe among manufacturers who have conſiderable works in their hands, being kept debtor and creditor for each workman employed; on the ſide of debt is put the matters given them to work, and on that of credit the work they return.

Book *of cargo*, or *loading*, is kept by a clerk of a ſhip; wherein are entered all the goods aboard the veſſel, whether thoſe only for freight, or for ſale or exchange, the whole according to the ſpecification in the maſter's bill of loading.

Bank-Book, in cities where there are public banks, as at Venice, Amſterdam, Hamburgh, and London, is neceſſary, wherein to keep an accompt of the ſums paid to or received from the bank.

Book, abſolutely uſed, denotes the waſte-book, ſometimes the journal, or day-book; in which ſenſe it is, they ſay, I have put down ſuch a ſum in my book, You ſhall have an extract of my book, and the like.

Book-*keeping*, tho' principally in uſe among merchants and eminent dealers, is yet applicable, with advantage, to perſons of all other conditions; with this only difference, that the narrower their affairs and tranſactions are, the fewer books they need to keep, and ſo on the contrary. The ſame ways of accompting, which in great and diffuſed trade prevent confuſion, by an artful and regular diſpoſition of things, if applied to mean and narrow dealings, will create confuſion, at leaſt give unneceſſary trouble; ſince a few things ſhew themſelves readily, and are examined by mere inſpection; ſuppoſing no other book but a waſte-book record, every corner whereof, in very ſmall dealings, is familiar to the eye of the owner, ſo that he can readily turn to what he wants; but this, in larger accompts, is impoſſible, which makes order, the ſtricteſt form, and much writing, abſolutely neceſſary: yet one rule muſt be indiſpenſibly obſerved in all caſes; that is, to make a true and exact memorial of every thing belonging to the accompt, juſt as things occur; and if buſineſs increaſe, ſo that a nearer approach to the perfection of accompting be neceſſary, this will ſerve as a foundation, on which the accompt may be raiſed to any requiſite form.

Artificers, handicraftſmen, and the like, ought to keep an account of the charges and profit of their buſineſs, which may be eaſily done, by an exact accompt of all they pay or owe for the materials and inſtruments of their work, with ſervants wages, and taxes upon their trade; and of all they receive, or is remaining due, for their work. They may conveniently keep accompts for the materials of their work, to ſatisfy them of the diſpoſal thereof, and ſerve as a check on ſervants, who have acceſs to thoſe things; and they ſhould keep accompts for the perſons they deal with, both in buying and ſelling.

For petty traders, who deal in ſome hundreds of trifling wares, and make ſales to the value of a farthing or halfpenny, theſe cannot pretend to keep orderly accompts; the beſt they can do is to be careful that ſervants commit no wrong, for they have no accompt of goods; and if it is aſked what of any kind remains with them, they muſt make an inſpection of their ſtock, if their memory fail. Theſe can only have a caſh-accompt, which they ſhould charge once a week with the money received, and diſcharge for what they give out: it is not convenient they ſhould touch the caſh-box, or till, oftener than once a week, when it is completed; but if they do, they muſt keep a ſeparate accompt of what they take out, to know what was received; beſides, they ſhould have a kind of ledger for the perſons with whom they deal upon credit, in which they ſhould give every debtor or creditor an accompt, with a debt and credit both on one ſide, either with a double money column, or conſtant deductions, as the debts and credits ſucceed one another; they may alſo, for the ſake of thoſe, have a memorandum, or day-book, wherein all things of this nature ſhould be writ down, and then carried into the other.

For more conſiderable ſhop-keepers, who commonly deal in a few different ſpecies of goods, as drapers and mercers, they uſually keep a ledger for perſons and wares diſtinct, without any formal connection or reference of the accompts in their ſeveral articles; whereby there can no regular ballance be made. In the accompts of perſons, they uſe the formality of a debtor and creditor ſtyle, which is mere ſhew, without the real value of a regular accompt, there being no oppoſite correſponding debtors and creditors to be found; for their ledger of wares, as they call it, contains nothing of this, and is but an imperfect contrivance, which they ſatisfy themſelves with, to know how much remains. But the worſt is, that in allotting ſpaces for the accompts of wares, they frequently allow no more than they ſuppoſe may ſerve for the retail of the quantity firſt entered on that ſpace, and, when this is diſpoſed of, take a new ſpace for a new parcel; which, in a quick trade, is not only troubleſome, but confuſed, if there be any of the old parcels remaining, unleſs they carry it to the new accompt. In reality, dealers in retail, if conſiderable in their way, ought not to come ſhort of the utmoſt pitch of art; at leaſt, they ſhould keep three grand books, a waſte, journal, and ledger, unleſs they join the firſt two into one; the waſte-book to contain every thing done in the ſhop, both what is ſold on truſt, and for caſh; this and the journal may be made into one, by marking the debtors and creditors on the margin, againſt every tranſaction of value; and for the ledger, becauſe there are commonly many articles of debt to one of credit, on the accompts of perſons with whom they deal, and many articles of credit for one of debt, upon accompt of wares, they may keep the debt and credit both on one ſide, by double money-columns; in the one of which the debt, and in the other the credit, ſhould be ſet.

BOOK *of Rates*. See Book of *Rates*.

Book *of the Ship*, is an officer in the port of London, appointed by, and out of, the tackle porters, to accompt for the freighters, which is more fully explained at the end of the article *Cuſtoms*.

BOOM. A long pole, wherewith ſeamen ſpread out the clue of the ſtudding ſail; as alſo ſometimes that of the main-ſail, and fore-ſail, to make them broader, and receive more wind.

A ſhip is ſaid to come *booming*, when ſhe makes all the ſail ſhe can. But boom likewiſe denotes a pole, with a buſh or baſket on the top, placed to direct ſhips how to ſteer into a channel, otherwiſe called a *beacon*.

BOOT. A covering for the leg, commonly made of leather, for riding.

Boot, in bargaining, is when ſomething is given freely, or more than the commodity, which is ſaid to be given to *boot*.

BORAX. A mineral, urinous ſalt, of the nitrous kind; chiefly uſed in ſoldering and fuſing of metals; ſometimes alſo in medicine, as an emetic, and promoter of delivery. Borax is uſually ſuppoſed to be known to the antients under the denomination *chryſocolla*. See *Chryſocolla*.

Pliny divides the antient borax or chryſocolla into natural and artificial; the natural a ſlimy humour in mines of gold, ſilver, copper, and lead, by the winter's cold becoming of the conſiſtence of pumice-ſtone; the artificial, a mineral putrified by water running in the veins of the mine all winter long till June, and letting the mine dry the reſt of the year. The moderns alſo diſtinguiſh two kinds of borax; the natural, which is crude; and the artificial, which is purified and refined.

The

The former is a mineral ſalt, of the common form, dug out of the earth, in ſeveral parts of Perſia; and found alſo at the bottom of a torrent, running in the mountains of Purbeth, near the frontiers of White Tartary; when taken up, it is expoſed to the air, where it acquires a reddiſh fatneſs, that ſerves to feed, and prevent its calcining; but when in perfection, it is ſent to Amadabat, in the territories of the Great Mogul, where it is purchaſed by the European merchants. However, there is another kind of natural borax, drier, and of a greyiſh colour, like Engliſh copperas, only differing from the former by being longer expoſed to the air.

The Venetians were the firſt inventors of artificial borax, or they rather diſcovered the art of purifying the natural; but the Dutch, after refining it, reduce it into little pieces, like tagged points, in which form it is commonly uſed.

Borax, either in the Dutch or Venetian manner, ſhould be tranſparent, almoſt inſipid to the taſte, and without any mixture of Engliſh allom.

By an act of parliament, paſſed in the 17th year of King George II. it was enacted, That all borax refined in Great Britain ſhould have the ſame draw-back, and all the ſeveral duties on exportation, as a like quantity of unrefined borax.

BORAX, is likewiſe a kind of bezoar, found in the head of a toad; to which ſeveral extraordinary virtues are attributed; ſome naturaliſts affirming it to be a petrifaction of one of the head-bones; but others ſay it is found in the head of the ſea-toad only, and give it a place among precious ſtones. See *Bezoar*.

BORDAT. A ſtuff manufactured in ſome places of Egypt, particularly at Cairo, Alexandria, and Damietta.

The bordats of Cairo are worth about 2 s. 3 d. ſterling the piece, thoſe of Alexandria 3 s. and thoſe of Damietta 3 s. 3 d. ſterling.

BORD-*Halfpenny*, or *Brod-halfpenny*, is money paid in markets and fairs, for ſetting up boards, tables, and ſhells, for the ſale of wares.

BORIQUE, or *Crab-iſland*. One of the Caribbee iſlands, ſubject to Spain, ſituated in the Atlantic ocean, in 64 deg. 30 min. of W. long. and 18 deg. of N. lat.

BORISTHENES, or *Nieper*. One of the largeſt rivers in Europe, riſing in the province of Moſcow in Ruſſia; and running W. by Smolenſko, afterwards bends its courſe to the S. till it paſſes by the city of Kiow; and then running S. W. through the country of the Coſſacks, falls into the Black ſea between Oczakow and Little Tartary.

BORITSCHIA, or *Brotchia*. A town of India, remarkable for its cotton cloths, where the Engliſh and Dutch have factories. See *India*.

BORNEO, the greateſt iſland in the world, is ſituated in the Indian ocean, between 107 and 117 deg. of E. lon. and between 7 deg. 30 min. N. lat. and 4 deg. of S. lat. See *Sunda Iſlands*.

It is ſubject to ſeveral princes; and the Engliſh Eaſt India company have their factors here, from whence they chiefly import pepper.

BORNHOLM. An iſland of the Baltic ſea, ſituated in 15 deg. of E. long. and 55 deg. 15 min. of N. lat. See *Denmark*.

BOROUGH. A large village, or corporate town, which ſends one or more burgeſſes to parliament. See *City*, and *Town*.

BORROWING, is the taking up money, or goods, upon credit, in order to pay it, or return them again to the lender in kind or value.

BOSPHORUS of Thrace, or ſtreight of Conſtantinople, divides Europe from Aſia; being about a mile broad, between Conſtantinople on the European ſide, and Scutari on the ſide of Aſia.

There is alſo the Cimmerian Boſphorus, generally called the ſtrait of Caffa.

BOSSORA, or *Baſſora*. A port-town of Aſiatic Turky, in the province of Eyraca Arabic, ſituated in 47 deg. of E. lon. and 30 deg. of N. lat. on the W. ſide of the river Euphrates. See *Turky*.

Gulph of BOSSORA. See *Perſian Gulph*.

BOSTON. A port-town of Lincolnſhire, ſituated in 15 min. of E. long. and 53 deg. of N. lat. near the mouth of the river Witham, which falls into the German ſea. See *Great Britain*.

BOSTON is alſo the capital of New England, ſituated in 71 deg. of W. lon. and 42 deg. 24 min. of N. lat. See *Britiſh America*.

BOTANICY, or *Botany*. The ſcience of herbs and plants, which ſearches into the ſeveral ſpecies, teaching how to diſtinguiſh their forms, ſorts, uſes, and virtues.

BOTARGO. A kind of ſauſage, made with the eggs and blood of the ſea-mullet; the beſt of which comes from Tunis in Barbary: they are alſo made at Alexandria, and other parts of Egypt, where it is made in the ſame manner as the cavear of ſturgeon is in Ruſſia; and there are great quantities of botargoes conſumed throughout all the Levant.

BOTCH. To mend old cloaths; alſo an ordinary, bad, or bungling piece of work of any kind.

BOTHNIC *Gulph*. The northern arm of the Baltic ſea, dividing the eaſt and weſtern provinces of Bothnia in Sweden. See *Baltic*.

BOTTLE. A veſſel to hold liquor, or other things, of various ſizes and forms, commonly made of glaſs, by the glaſs-makers. There are alſo bottles made of leather, and ſold by the caſe-makers, as likewiſe ſtone-bottles made by the potters.

BOTTOMRY, or *Bottomree*. The act of borrowing money upon the keel or bottom of a ſhip; whereby the maſter binds the ſhip, that if the money is not paid by the day appointed, the creditor ſhall have the ſhip; which agreement is commonly in nature of mortgaging a ſhip; and in the inſtrument, there is a clauſe expreſſing that the ſhip is engaged for the performance of the ſame.

Bottomry is alſo where a perſon lends money to a merchant, who wants it to traffic, and bottomrees his ſhip as a ſecurity; being an engagement of the veſſel for repayment of the money: ſo that if the ſhip miſcarry, the lender loſes the money advanced; but if it arrives ſafe at the end of the voyage, he is to be repaid the money lent, with a certain premium or intereſt agreed on; and this on pain of forfeiting the ſhip: in regard to which, tho' the intereſt be greater than that allowed by law, it is not uſury; for money lent to ſea, is allowed a larger intereſt than money advanced on land, by reaſon it is furniſhed at the hazard of the lender, and, if the ſhip periſhes, he ſhares in the loſs; ſo that there is no real ſecurity, as in caſe of lands and hereditaments: beſides, the greater the danger is, the greater may be the profit reaſonably required for the money lent; which has been the opinion of civilians, and allowed by all, or the general part, of the trading nations in Europe.

The ſecurity or contract of bottomry, as generally made, is juſt and honourable, according to the laudable practice among maritime perſons, notwithſtanding the advantage may be 20, 30, or ſometimes 40 *per cent.*; but it cannot be denominated uſury, becauſe the money is lent without conſideration of time.

By the laws of Oleron, a maſter of a ſhip hath no power to take up money by bottomry, in places where his owners dwell, unleſs he is a part owner; and in that caſe he may take up ſo much only as his part will anſwer in the ſhip; for if he exceeds that, his own eſtate is liable to make ſatisfaction. But when a maſter is in a ſtrange place or country, where he hath no owners, nor any goods of theirs, nor of his own, and for want of money, which he cannot procure by exchange or otherwiſe, his voyage might be retarded, there money may be borrowed upon bottomry, and all the owners are liable for it; that is, they are anſwerable by their veſſel, but not in their perſons, by the act of the maſter; and the owners may have their remedy againſt ſuch maſter whom they put in truſt.

By the Rhodian law, when a maſter or owner of a ſhip takes up money on bottomry, and buys in lading, but endeavours to defraud the prince or ſtate of their cuſtoms, or puts ſuch goods on board which incur a forfeiture of the ſhip; in ſuch caſe the borrower only runs the hazard, and not the lender; and where bonds and bills of bottomry are ſealed, and the money is paid, if the ſhip receives injury by ſtorm, fire, enemy, or any other accident, before the commencement of the voyage, then the perſon borrowing ſhall only run the hazard; unleſs it be otherwiſe provided, by particular words, that the contract

is

is to have its beginning from the time of the ſealing; but otherwiſe the contingency does not commence till the departure.

Many maſters of ſhips having inſured, or taken up money upon bottomry, to a greater value than their adventure, have ſometimes wilfully caſt away, burnt, or otherwiſe deſtroyed the ſhips under their care; therefore, by the ſtatute 10th Charles II. c. 6. the crime was made felony, and the perſon or perſons offending were to ſuffer death; which was continued by a ſtatute made in the firſt year of the reign of Queen Anne; and, by another made the 14th of George II. was extended to America. See *Inſurance.*

BOUGES. See *Coris.*

BOUL, is a term uſed at Smyrna, ſignifying the impreſſion made with lamp-black and linſeed-oil on cotton cloths, to prevent their being changed by the Armenians and Greeks, when given them to dye after the Indian manner.

BOULINIS, or *Boligneſe.* A copper coin ſtruck at Bologna in Italy, being about a halfpenny ſterling.

BOUNTY-*Money*, is an encouragement given by the Britiſh parliament for the venditure of ſome of their national commodities, when there is a greater quantity than anſwers the conſumption of the kingdom, which ſo greatly diminiſhes the price, that the owners would be impoveriſhed by keeping their commodities if periſhable; or if not, their circumſtances may be ſuch, as to render them incapable of waiting till there is a greater ſcarcity, to occaſion a riſing market; in conſideration whereof, proviſion is made, by ſeveral ſtatutes, when the goods are under the price limited, to allow the exporter ſo much *per cent.* or *per* quantity exported. There is likewiſe an encouragement given for importing into England, ſome of the manufactures of the Britiſh plantations. See *Corn*, *Fiſh*, *Fleſh*, *Gun-powder*, *Whale-fiſhery*, *Sail-cloth*, *Naval Stores*, and *Spirituous Liquors.*

BOURBON, formerly called the *iſland of Maſcarenha*, is an iſland ſituated in the Indian ocean, 300 miles E. of Madagaſcar, and is about 90 miles in circumference, affording a variety of hills and vallies, woods and champian ground; which occaſioned it to be called the Engliſh foreſt, by Captain Caſtleton, who viſited it in the year 1613; but the Engliſh neglected to make any ſettlement there; whereupon the French took poſſeſſion of it in the year 1664, and gave it the name it retains at preſent.

Its firſt inhabitants were brought there from Madagaſcar, conſiſting only of three unhappy perſons, who were baniſhed there, and who, on their return to Madagaſcar, after the expiration of three years, made ſuch a magnificent and agreeable deſcription of it, that ſeveral of the inhabitants of Madagaſcar requeſted leave to dwell there.

The iſle of Bourbon is almoſt of an oval figure, and is divided into two unequal parts, the ſmaller being entirely barren; but the larger is ſo far the contrary, that ſcarce any part of the world, as it is pretended, has a greater appearance of fertility; and nothing would be wanting to the country, if it had any commodious ports for ſhipping. However, this iſland, together with that of Madagaſcar, makes part of the French Indian company's conceſſion, ſerving them for a place of refreſhment in their voyages to India; and promiſing them a conſiderable object of commerce by the coffee beans cultivated there. See *Madagaſcar*, and *Iſland of Mauritius.*

BOURDALOUE. A kind of French worked linen, made in Lower Normandy.

BOURDEAUX. A city of France, capital of the Bourdelois, and of all Guienne and Gaſcony, ſituated in 40 deg. of W. lon. and 44 deg. 50 min. of N. lat. on the river Garonne. See *France.*

BOURG. The capital city of Cayenne, and of the French colonies on the coaſt of Guiana, ſituated in 52 deg. of W. lon and 5 deg. of N. lat. See *French America.*

BOURME. A middling ſort of Perſian ſilk.

BOURO. One of the Celebes iſlands in the Indian ocean, ſituated in the midway between the iſlands of Macaſſar and Ceram; being ſubject to the Dutch, who have a fortreſs there. See *Celebes.*

BOUTANES, cotton cloths, or dimitties, made in the iſland of Cyprus.

BOUTON, an iſland of the Celebes, ſituated in 121 deg. 30 min. of E. lon. and between 4 and 5 deg. of S. lat. See *Celebes.*

BOW *of a ſhip.* That part which is broadeſt before, beginning at the looſ, compaſſing about towards the ſtem, and ending at the ſternmoſt part of the forecaſtle.

If a ſhip has a broad round bow, ſailors call it a *bold bow*; if a thin narrow bow, they ſay ſhe has a *lean bow*; the piece of ordnance that lies in this place is alſo called the *bow-piece*, and the anchors that hang there are called her great and little *bower.*

BOWER, is an anchor carried at the bow of a ſhip; of which there are uſually two, called firſt and ſecond, or the great and little bower. See *Anchor.*

BOWLING, or *Bow-line.* A rope faſtened to the leech, or middle part of the outſide of the ſail in a ſhip, ſerving to make the ſail ſtand ſharper or cloſer by a wind.

The bowling is faſtened by two, three, or four ropes, like a crow's foot, to as many parts of the ſail; only the mizen-bowling is faſtened to the lower end of the yard.

The bowling belongs to all ſails, except the ſprit-ſail, and ſprit-top-ſail, where it is omitted for want of room to hale it forwards; and thence it is thoſe ſails cannot be uſed cloſe by a wind.

When ſailors ſay, *eaſe the bowling*, *check or run up the bowling*, they mean, let it more ſlack.

BOWSE, or *Bowſe.* A ſea-term, ſignifying as much as hale, or pull together: thus, haling upon a tack, is called *bowſing upon a tack*; and when they would have the men pull all together, they cry *bowſe away.*

BOW-*ſprit*, or *Bolt-ſprit.* A kind of maſt in a veſſel, ſtanding foremoſt on the prow, and reſting ſlope-ways on the head of the main-maſt. Its lower end is faſtened to the partners of the fore ſtern, and farther ſupported by the fore-ſtay; ſo that it ſerves to carry the ſprit-ſail, ſprit-top-ſail, and jack-ſtaff.

The bow-ſprit ſhould be two thirds of the length of the main maſt, and its thickneſs equal to the mizen-maſt: when it is twelve fathoms five feet long, its yard muſt be eight fathoms two feet long, and the top-maſt of the bow-ſprit three fathoms one foot. See *Stores.*

BOWYER. One whoſe trade is to make bows and arrows fit for archery.

BOWYERS *Company of London*, was a fraternity by preſcription, till the 18th of James I. who incorporated the ſame by his letters-patent on the 25th of May 1620, by the name of The maſter, wardens, and ſociety of the myſtery of bowyers of the city of London. That the incorporating of this fraternity ſhould be deferred to this time, is ſomewhat ſurpriſing; tho' not ſo much as that of its being incorporated then, when the military engine called the *bow* was almoſt rendered uſeleſs, by the invention of fire-arms.

This company, for the management of their affairs, have a maſter, 2 wardens, and 12 aſſiſtants, with 30 liverymen, whoſe fine on admiſſion is 8 l. their hall being antiently in Noble ſtreet; but at preſent they have none.

BOYNE. A river of Ireland, which riſes in Queen's county, in the province of Leinſter, runs N. E. by Trim and Cavan, and falls into the Iriſh channel a little below Drogheda.

BOX. A tree of the ever-green kind, the wood whereof is much uſed to make mathematical and muſical inſtruments, works of ſculpture, and toys; being yellowiſh, hard, ſolid, even, heavy, and fit for poliſhing; but the beſt box comes from Turky and Spain.

BRACCIO, or *Brace*, is an Italian term for a fathom. See *Fathom.*

BRACELET. An ornament for the wriſts or arms of women; of which ſome are made of ribbons, others of wove hair, horſe-hairs, pearls, glaſs-beads, amber, and precious ſtones; which are good commodities to vend among the negroes on the coaſt of Guinea.

BRACES, in the ſea-language, are ropes belonging to all the yards of a ſhip, except the mizen, being two to each yard, which are received through blocks faſtened to pendants at the yard-arms.

The uſe of braces is *to ſquare the yard*, that is, to ſet it ſquare; hence, *to brace the yard*, is to bring it to either

ſide; *to traverſe the yard*, is to ſet it any way overthwart; and *to right the yard*, is to bring it ſo as it may ſtand at right angles with the length of the ſhip.

All braces come aftward on, the main brace comes to the poop, the main-topſail brace to the mizen top, and thence to the main-ſhrouds; the fore, and fore-topſail braces, come down by the main, and main-top-ſail ſtays, and ſo of the reſt.

The mizen-bowling ſerves for a brace to that yard, and the croſs-jack braces are brought forward to the main-ſhrouds, whenever a ſhip ſails cloſe by a wind. See *Yards*.

BRACKETS, with ſhipwrights, are ſmall knee timbers, that ſupport the galleries, and gratings.

BRADS. Long, thin, ſlender nails, uſed to drive into thin fir, and other boards, to keep them from ſplitting, having no heads, and ſo are drove down within the ſurface of the wood.

BRAID. A ſmall, narrow ſort of lace, uſed for ornamenting womens ſhoes, and bed-curtains.

BRAILS, in a ſhip, are ſmall ropes uſed in furling the ſails acroſs; being reeved through blocks, which are ſeized on either ſide the ties, a little diſtance off upon the yard; ſo that they come down before the ſails of a ſhip, and are faſtened at the ſkirt of the ſail to the crengles; their uſe being, when the ſail is furled acroſs, to hale up its bunt, that it may the more readily be taken up, or let fall: but theſe brails belong only to the two courſes and the mizen ſail.

Sailors ſay, *hale up the brails*, or *brail up the ſails*; the meaning of which is, that the ſail is to be haled up, in order to be furled, or bound cloſe to the yard.

BRAKE. An inſtrument uſed for dreſſing hemp and flax; alſo a name of female fern; as likewiſe a ſharp bit, or ſnaffle, for horſes.

BRAN. The ſkins or huſks of corn, eſpecially wheat ground, ſeparated from the farina, or flower, by a ſieve or boulter; of wheat-bran it is that ſtarch-makers make their ſtarch; and bran is alſo uſed in dying as a non-colouring drug.

BRANDY. A ſpirit, obtained by ſimple diſtillation from real wines, or fermented juices of grapes; which thoſe who deal in this commodity chuſe to be white, clear, and of a good taſte; as alſo, when poured into a glaſs to form a little white lather on the top, which, upon diminiſhing, makes a circle, called by the French merchants the *chaplet*, and by the Engliſh the *head*, or *bubble*; there being no brandy well deflegmated but this, which retains no ſuperfluous humidity, wherein the bead will be entirely formed.

Brandy made of wine, is called *French brandy*; but there is alſo Engliſh brandy, extracted from malt or molaſſes, and decayed fruit.

The chief uſe of brandy is as a dram, eſpecially in the cold northern countries; as alſo among the negroes in Guinea, who ſell one another for a few bottles of brandy; and among the Indians of Canada, and other parts of North America, who are infinitely fond of it. But it is alſo of ſome uſe in medicine, being ſaid to ſtrengthen the nerves; and it is likewiſe of ſervice in dying, when raiſed into rectified ſpirit of wine, being accounted one of the dyers non-colouring drugs.

The beſt brandies, and in the greateſt quantities, are prepared in France: thoſe of Bourdeaux, Rochelle, Cogniac, Nantz, and Poictu, are the moſt eſteemed; as being of a better taſte, finer, ſtronger, and enduring the bubble-proof longer than any of the reſt; and thoſe of Anjou, Touraine, and Orleans, claim the ſecond place.

Brandy makes a very conſiderable article in the French commerce, the number of foreign veſſels wherewith all their ports are full in time of peace, and which are laden with brandy, being incredible.

Nantz alone furniſhes 174,000 gallons *per annum*, Bourdeaux above twice as much, and the other places in proportion; of which there are annually imported into Great Britain upwards of 300 tons; but the Dutch take off their hands almoſt as much as all the reſt of Europe; tho' Poland and Sweden are the only nations which are not their cuſtomers, theſe preferring the corn-brandies of their own countries to the wine-brandies of France.

French brandies imported by any veſſel into any port of Great Britain, pay 78l. 4s. *per* ton; and brandies from any other countries, except France, only 48l. 4s. all other foreign brandies being exempted from the duties of 30l. charged on French brandies in the reign of King William III.

Brandy diſtilled a ſecond time, is called *ſpirit of wine*; and this, after another rectification, is called *ſpirit of wine rectified*.

BRASIER, or *Brazier*. A maker or dealer in braſs-ware; as coppers, pots, tea-kettles, candleſticks, and other braſiery goods; as alſo lead and iron goods for houſhold-furniture. See *Armourer*.

BRASIL *Wood*. See *Brazil*.

BRASS, is a factitious metal, compoſed of copper, fuſed with lapis calaminaris, which gives it a hardneſs and yellowneſs. See *Copper*, and *Calaminaris*.

Pure braſs is only malleable when hot; if cold, it breaks; and after melting twice, it is no longer in a condition to bear the hammer; but to work it, ſeven pounds of lead is put to 100 lb. of braſs, which renders it more ſoft and pliable.

The beſt braſs guns are made of malleable metal, not of pure copper and calamine alone; but it is neceſſary to add coarſer metals, ſuch as lead and pot-metal, to make it run cloſer and founder.

The beſt proportion for gun-metal, is for 11 or 12,000 lb. weight of metal, to uſe 10,000 lb. of roſe copper, 900 lb. of tin, and 600 lb. of braſs; but the proportion is variable, according to the quality and goodneſs of the copper.

For making the fineſt ſtatues of braſs, the proportion ſhould be half copper, and half braſs.

Bell-metal is a compoſition of braſs and tin, and pot-metal of braſs and lead. See *Bell-metal*, *Pot-metal*, and *Metal*.

BRASS *wire*, is braſs drawn through the wire-drawing iron.

The exportation of Britiſh braſs is prohibited, by the ſtatute of the 2d of Edward VI. under penalty of forfeiting the double value, and 10l. for every 1000 lb. weight; but, by the ſtatute of the 7th of Queen Anne, braſs-wire made in Great Britain, is permitted to be exported, even without paying duty; tho' the importation of braſs wrought is 5l. for every quantity of 100 l. value; braſs lavercocks are 1s. 4d. the pound, and pile weights 1s. braſs trumpets are 12s. the dozen, and lamps 10s. the duty.

BRASS is alſo a colour made by colourmen and braſiers, to imitate braſs. The fineſt braſs colour is made of the powder-braſs of Germany, diluted into a varniſh: but there are two ſorts of this colour; the red braſs, or bronze; and the yellow, or gilt braſs; with which figures of plaſter are braſſed or gilt over, ſo as to look like real braſs. See *Bronze*.

BRASSA *Sound*, or *Bay*, is on the eaſt part of the iſle of Main-land, one of the iſlands of Shetland.

BRAULS. Indian cloths, ſtriped with blue and white, otherwiſe called *turbans*; becauſe they ſerve to cover that kind of head-dreſs, particularly on the coaſts of Africa.

BRAUNSBURGH. A town of Pruſſia in Poland, ſituated on the Baltic ſea, in 20 deg. of E. lon. and 54 deg. 15 min. of N. lat.

BRAVO. One of the Cape Verd iſlands, ſituated in 25 deg. of W. lon. and 14 deg. of N. lat. See *Cape Verd iſlands*.

BRAY. A port-town of Ireland, in the county of Wicklow, and province of Leinſter, ſituated on St. George's Channel, in 6 deg. 16 min. of W. lon. and 53 deg. 12 min. of N. lat.

BRAZE, is to ſolder with braſs and tin, or to mend braſs goods with that compoſition.

BRAZIL, an American wood, commonly ſuppoſed to have been thus denominated, becauſe firſt brought from Fernambucco, a town of Brazil in South America, belonging to the Portugueſe; but the ſame ſort of wood is alſo brought from Japan, Lamon, and St. Martha; and braziletto, or Jamaica wood, is likewiſe brought from ſome of the Antilles iſlands.

Brazil wood is very heavy, dry, crackles much in the fire, and ſcarce raiſes any ſmoak, by reaſon of its extreme dryneſs.

neſs. None of theſe different ſorts of wood have any pith, except that of Japan; but that of Fernambucco is eſteemed the beſt, which ſhould be choſen in thick pieces, cloſe, ſound, and without any bark on it; upon ſplitting, from a pale colour, it becomes reddiſh; and, when chewed, has a ſweetiſh taſte. It is uſed by turners; but its chief uſe is in dying, where it ſerves for a red colour, which eaſily evaporates and fades; tho' it ſhould not be uſed without alum and tartar.

From the brazil of Fernambucco is drawn a kind of carmine, by means of acids, and alſo a liquid lacca for miniature.

BRAZING, in ſmithery, is the ſoldering of two pieces of iron together, by means of thin plates of braſs melted between the pieces that are to be joined.

BRAZZA. A town and iſland on the coaſt of Dalmatia, in the gulph of Venice, ſituated in 18 deg. of E. lon. and 43 deg. of N. lat. See *Venetian Iſlands.*

BREAD. The principal food of man, moſt commonly made of different ſorts of corn, reduced to a dough, or paſte, and uſually baked in an oven.

The kinds of grain, uſed chiefly in Europe for bread, are wheat, rye, and maſlin corn, which is a mixture of both; but, in times of ſcarcity, poor people make bread of barley and oats; and the ſarraſin corn is a grain whoſe uſe is pretty frequent in ſome provinces of France. Maize is alſo the principal ingredient for bread in ſeveral parts of Aſia, Africa, and America; in ſome countries they make bread of fiſh, and in others of the roots of trees, and plants, raſped into a kind of flour.

The ſtatute of the 8th of Queen Anne, of the 1ſt of George I. and the 3d of George II. regulate the aſſize and weight of all ſorts of bread to be ſold by any baker, and the manner of ſelling them; all which ſorts of bread ſhould be made according to the goodneſs of the grain; and the aſſize and weight of the white, wheaten, and houſhold bread, ſhould be ſet and aſcertained according to the table following.

The ASSIZE of BREAD, in pounds, ounces, and drams, avoirdupoize.

In the firſt column is the price of the buſhel of wheat, from 2s. to 15s. the allowance for baking included; and in the other columns is the weight of the loaves, the white loaves being one half, and the wheaten three quarters, of the weight of houſhold-loaves.

SMALL BREAD.

BREAD-*room*. A ſea-term, for that place in the hold of a ſhip, generally towards the ſtern, where the bread or biſcuit is kept.

BREADTH. The extent which linen or woollen cloths, ſtuffs, or ſilks, ought to have between the two ſelvages or liſts.

BREAKING, among tradeſmen, is failing in buſineſs, by becoming a bankrupt, or inſolvent.

BREAKING *Bulk*. The beginning to unload the cargo of a ſhip. See *Bulk*.

BREEZE. A briſk or freſh gale of wind, blowing from the land or ſea.

BREMEN. One of the moſt conſiderable port towns of Lower Saxony in Germany, ſituated in 8 deg. 20 min. of E. lon. and 53 deg. 25 min. of N. lat. See *Germany*.

BRENTE. A river riſing in the biſhopric of Trent; and running S. E. through the Venetian territory in Italy, falls into the Adriatic ſea, oppoſite to the city of Venice.

BREST. An excellent port and harbour of France, ſituated in 4 deg. 30 min. of W. lon. and 48 deg. 25 min. of N. lat. on Cameret bay, in the Atlantic ocean, and on the weſt coaſt of Britany. See *France*.

BRETON, or *Cape Breton*. An iſland in North America, ſituated between 61 and 62 deg. of W. lon. and 45 and 48 of N. lat. See *French America*.

BREWER. A perſon who brews, or makes and ſells beer, and other kinds of malt liquor, by wholeſale. See *Ale*, *Beer*, and *Malt*.

BREWERS *Company of London*, was incorporated by letters-patent of the 16th of Henry VI. in the year 1438, by the appellation of The maſter, and keepers, or wardens, and commonalty of the myſtery or art of brewers of the city of London; which were confirmed by Edward IV. in 1480, with an additional privilege of making by-laws; the company being governed by a maſter, 3 wardens, and 28 aſſiſtants, with a livery of 108 of their members, who pay a fine of 16l. 13s. 4d. upon admiſſion; and have a handſome hall in Addle-ſtreet, where they tranſact their affairs.

BREWER's *Haven*. A good harbour at the north ſide of the iſland of Chiloe, ſituated in 82 deg of W. lon. and 42 deg. of S. lat. near the coaſt of Chili in South America. See *Spaniſh America*.

BREWING. The art of mixing or managing liquors; but particularly applied to the brewing of beer and ale from malt and hops; which is a conſiderable trade in the city of London.

BRICK. A kind of factitious ſtone, made of a fatty earth, formed into long ſquares, four inches in breadth, and eight or nine in length, by means of a wooden mould, and then baked and burnt in a kiln, to ſerve for the uſes of building. There are alſo bricks of a whitiſh colour; and Walpit in Suffolk is remarkable for this ſort.

Bricks acquire various names, according to their forms, dimenſions, uſe, method of making, and place. The principal ſorts are, compaſs-bricks, of a circular form, uſed in ſteening of walls: concave, or hollow bricks, on one ſide flat, like a common brick, on the other hollowed, uſed for conveying water under-ground: cogging bricks, uſed for making the indented work under the coping of walls, built with great bricks: coping bricks, formed on purpoſe for coping of walls: Dutch or Flemiſh bricks, uſed to pave yards and ſtables; as alſo for ſoap-boilers vats and ciſterns: clinckers, being ſuch bricks as are glazed by the heat of the fire in burning: feather-edged bricks, like the common ſtatute bricks, only thinner on the one ſide than on the other, and uſed to pen up the brick-pannels in timber buildings: ſamel or ſandal bricks, are ſuch as lie outermoſt in a kiln, or clamp, being conſequently ſoft, and uſeleſs, as not being thoroughly burnt: great bricks are thoſe which are twelve inches long, ſix broad, and three thick, the weight of one being about 15 lb. ſo that 100 weigh 1500 lb. and 1000 of them 15,000 lb. their uſe being to fence walls: pilaſter, or buttreſs bricks, which are of the ſame dimenſions with the great bricks, only they have a notch at one end, half the breadth of the brick; their uſe being to bind the work at the pilaſters of fence-walls, which are built of great brick. Paving-bricks, or tyles, are of ſeveral ſizes, in ſeveral countries and places. Place-bricks, ſuch as are made in a place prepared on purpoſe for them, near the building they are to be uſed in. Statute, or ſmall common bricks, when burnt ought to be nine inches long, four and a quarter broad, and two and a half thick. By the 3d of George II. within 15 miles of London, theſe bricks are to be 8 ¼ inches long, 4 ⅛ broad, and 2 ½ thick: 100 of theſe commonly weighing 550 pounds, and 1000, 5500 pounds; about 407 in number make a ton weight; being commonly uſed in paving cellars, hearths, and ſinks: 30, or 32, of true meaſure, will pave a yard ſquare, and 330 will pave a ſquare of 100 foot laid flat; but, if laid edgeways, there muſt be near double the number: and ſtock-bricks muſt be of the ſame dimenſions, only ⅛ of an inch thicker.

Barbaro, in his commentary of Vitruvius, recommends a triangular form of bricks, every ſide a foot long, and only an inch and half thick: theſe, he obſerves, would have many conveniencies above others, as being more commodious in the management, of leſs expence, and of fairer ſhew; adding much beauty and ſtrength to the mural angles, where they fall gracefully into an indented work: and Sir H. Wotton wonders they have never been taken into uſe, being recommended by ſo great an authority.

The earth whereof bricks are made muſt not be ſandy, which will render them both heavy and brittle; nor muſt it be too fat, which will make them crack in drying: they ſhould be made either in the ſpring or autumn; and when made, muſt be ſheltered from the ſun if too hot, and yet be expoſed to the air to dry: if in froſty weather, they are to be covered with ſand; if in hot weather, with wet ſtraw; and when well dried, they are to be burnt.

The ſtatutes of the 12th of Geo. I and the 3d of Geo. II. regulate the manner of preparing the earth or clay for making bricks, the method of making them, and the penalties on thoſe who act contrary to theſe ſtatutes.

Goldman obſerves, that bricks will have double the ſtrength, if, after one burning, they are ſteeped in water, and burnt afreſh. If the brick earth be too fat, it muſt be tempered with ſand, and that trodden out again, firſt by cattle, then by men. Bricks made of common earth not only melt but vitrify, by too much heat; for which reaſon the kilns are made of ſuch ſtones as will calcine themſelves, that the vehemence of the fire may be broken by them; beſides which, they uſually place bricks, made of an argillous earth, which will melt next the fire. See *Tile*.

Oil of BRICKS, is oil of olives, imbibed by the ſubſtance of bricks, and afterwards diſtilled from it.

The pieces of brick, being heated red hot in live coals, are extinguiſhed in a trough half filled with oil of olives; being then ſeparated, and the brick thus ſaturated with oil, groſly pounded, it is put into a retort, and placed in a reverberatory furnace; and thus is drawn an oil, which the apothecaries call *oleum de lateribus*, and ſome chemiſts *oil of the philoſophers*; uſed for reſolving tumours in the ſpleen, alſo againſt palſies and epilepſies. See *Oil*.

BRICKLAYER. A perſon who lays bricks in buildings. The tilers and bricklayers of London were incorporated by Q. Elizabeth. See *Tilers Company*.

BRIDGE-TOWN. The capital of the iſland of Barbadoes, ſituated in 59 deg. of W. lon. and 13 deg. of N. lat. in the American ſea, or Atlantic ocean. See *Britiſh America*.

BRIDGE WATER. A borough and port-town of Somerſetſhire, ſituated in 3 deg of W. lon. and 51 deg. of N. lat. near the mouth of the river Evil, which diſcharges itſelf into the Briſtol channel a little below it.

BRIDLINGTON, or *Burlington*, a port-town of Yorkſhire, ſituated in 10 min. of E. lon. and 54 deg. 15 min. of N. lat on the German ocean.

BRIDPORT. A borough, and port-town, of Dorſetſhire, ſituated in 3 deg. of W. lon. and 50 deg. 4 min. of N. lat.

BRIEL. The capital of the iſland of Voorn, in Holland, ſituated in 4 deg. of E. lon. and 51 deg. 50 min. of N. lat. See *United Provinces*.

BRIEUX. A port-town of Britany, in France, ſituated on the Engliſh channel, in 2 deg. 50 min. of W. lon. and 48 deg. 40 min. of N. lat. See *France*.

BRIGANTINE. A ſmall, light, flat, open veſſel, going both with ſails and oars; either for fighting or giving chace; having uſually 12 or 15 benches on a ſide for the rowers, with a man and an oar to each bench.

Brigantines are principally uſed by the corſairs; all the hands on board being ſoldiers, and each having his muſket ready under his oar.

BRIGHTHELMSTONE. A little port-town in Suſſex, ſituated in 10 min. of W. lon. and 50 deg 50 min. of N. lat.

BRILLIANT *diamond*. See *Diamond*.

BRIMSTONE, the mineral called ſulphur, which is one of the chemiſts univerſal principles of all bodies. See *Sulphur*.

Flower of BRIMSTONE. See *Flower of Sulphur*.

BRINDISI. A port-town of the territory of Ortanto, in Naples, ſituated in 18 deg 45 min. of E. lon. and 40 deg. 40 min. of N. lat. at the entrance of the gulph of Venice. See *Naples*.

BRINE. The liquor that produces ſalt; which after being taken out of the brine-pots, or brine-pans, is prohibited, by the ſtatute of the 1ſt of Q. Anne, from being uſed for curing or pickling of fiſh, without boiling the ſame into ſalt; as is alſo rock-ſalt, without refining it into white-ſalt. See *Salt*.

BRISTLE. A ſtrong hair, growing upon the backs of ſwine, which is put to ſeveral uſes, particularly in making different ſorts of bruſhes; as alſo by ſhoe-makers, ſadlers, harneſs-makers, and others, in ſewing their works. Great quantities of briſtles are imported from Ruſſia, and are commonly ſold by weight.

BRISTOL. A large city, and port-town of England, ſituated in 2 deg. 40 min. of W. lon and 51 deg. 30 min. of N. lat. on the river Avon, being part in Glouceſterſhire, and part in Somerſetſhire. See *Great-Britain*.

BRITAIN-GREAT, or *Great-Britain*, is the nobleſt, and moſt opulent, iſland on the face of the globe, ſituated in the Atlantic ocean, between 50 and 59 deg. of N. lat. and divided into S. and N. Britain; the former comprehending England and Wales, in which are 52 counties; 26 cities, 207 borough towns, 803 market-towns, and 9284 pariſhes; being 380 miles long, and 300 broad; containing 8 millions of inhabitants: the latter comprehending Scotland, in which are 33 ſhires; being 278 miles long, and 194 broad; containing 1,500,000 inhabitants.

England is of a triangular figure, bounded by Scotland on the N. by the German ſea on the E; by the Engliſh channel, which divides it from France, on the S. and by St. George's or the Iriſh channel on the W.

Scotland is bounded by the Caledonian ocean on the N.; by the German ocean on the E.; by the river Tweed, the Teviot hills, and the river Eſk, which divide it from England on the S.; and by the Iriſh ſea and Atlantic ocean on the W.

The ſituation of Great Britain, environed by the ſea, affords it inexpreſſible advantages; having, on all ſides, ſafe and commodious ports, and abounding with all the neceſſaries of life. England has always been remarkable for a commercial country; its trade and manufactures have always been conſiderable; and it may be obſerved, that this nation, without being more fertile than the adjacent countries, is inhabited by richer men; that, wanting wood, it covers the ſea with its ſhips; and, though it produces few things, has a flouriſhing trade with all the world. The commercial intereſt of England was but faintly underſtood till the reign of Q. Elizabeth, who not only eſtabliſhed the woollen manufactories on the ruins of thoſe in the Netherlands, but alſo promoted the navigation and commerce of her ſubjects; opening a paſſage for them into both the Indies, and inciting that ſpirit which afterwards induced them to make ſettlements in the moſt diſtant parts of the globe. This princeſs, by a wiſe and happy conjunction of the labours of her people both at home and abroad, formed the extenſion of the national wealth and power, without the leaſt diminution of the people; contrary to the effects of plantations made from other countries, which have ſuffered at home, by aggrandizing themſelves abroad, and eſpecially the Spaniards; whereas the domeſtic power of Britain is conſtantly augmented, in proportion to the advantages derived from its ſettlements abroad; and to this circulation of commerce it is, in reality, owing, that the ſtrength of Britain is ſo much greater, its lands ſo much more valuable, and its intrinſic wealth ſo much increaſed, as they are ſince the reign of Q. Elizabeth. However, it has been conjectured, by Baron Puffendorf, that England was weakened by planting the ſeveral colonies in America; and that it would have been more advantageous, to have employed the coloniſts at home, in manufactures, and in the herring fiſhery. But he never conſidered, that the commodities and manufactures of a country have a certain limit, beyond which it is impoſſible they ſhould extend, without an alteration of circumſtances; or, when they are carried ſo high, as that no markets are to be found, domeſtic induſtry can proceed no further: had he reflected on this important fact, he muſt have been of opinion, that it is owing to the American colonies that Great Britain has not been very ſenſible of ſuch a ſtagnation in trade; becauſe, the coloniſts eſtabliſhed there take off much greater quantities of the national commodities and manufactures than if they had remained at home. This may be farther illuſtrated, by obſerving, that the number of inhabitants in and about the city of London, is now about five times more than at the death of Q. Elizabeth: and though it cannot be imagined, that the number of people throughout the whole kingdom, hath increaſed in the ſame proportion; yet it is certain that theſe are very much augmented, as is apparent from the growth of other great cities, the ſwelling of ſmall villages into large towns, and the raiſing ſeveral new ſea-ports along the coaſts. From hence, it may be diſcovered how the other parts of the Britiſh dominions have alſo increaſed in the number of their inhabitants, as well as England; and have reaped a proportionable benefit from ſo happy a change in their circumſtances; which, as it demonſtrates how much they are indebted to their excellent conſtitution, ſo it is alſo an evident proof that it is the intereſt, and ought to be the care, of ſuch as are entruſted with the adminiſtration of the government, to ſee that every part of the Britiſh empire amply enjoys the advantages derived from the laws, and that glorious freedom which is the reſult of maintaining them in full vigour. The ſubjects, as well as the ſoil, are ever to be conſidered as appendages of the Britiſh empire; and as obedience is expected from the remoteſt quarters, as well as thoſe bordering upon the center of government, ſo they are intitled to the ſame protection and encouragement; which while they receive, there is no doubt but affairs will continue in a flouriſhing condition, and the fears which many have entertained, that ſome of the diſtant colonies may throw off their obedience to the mother country, will diſappear as viſionary ſhadows: for it is in the body politic, as in the natural body; while the vital parts are ſtrong and ſound, the conſtitution will be every where briſk and lively, and the effects of it perfectly felt to its very extremities.

There is a diſtinction frequently made, chiefly by foreigners, between the national and commercial intereſt of Great Britain; but, in reality, this is a diſtinction without a difference; for theſe are ſo inſeparably united, that they may be very well conſidered as one and the ſame: becauſe commerce is that tie by which the ſeveral, and even the remoteſt, parts of the Britiſh empire, are connected, and kept together, ſo as to be rendered parts of the ſame whole, and to receive not only countenance and protection, but warmth and nouriſhment, from the vital parts of the government; of which monarchy is only the head, but liberty is the ſoul: therefore, whatever aſſiſts, promotes, and extends the commerce of Britain, is conſiſtent with its national intereſt; and whatever impairs, diminiſhes, or circumſcribes it, is repugnant thereto: from whence may be derived a true notion of the intereſt of Great Britain, with reſpect to the other European powers; and alſo an opinion formed when that intereſt is really purſued, and when it is either neglected or abandoned; which will be preſently fully expatiated upon.

The encouragement given to the woollen manufactures of England, was the foundation of its flouriſhing commerce; which was ſoon extended to Archangel in Ruſſia, to all the maritime towns of the Mediterranean, and to

the coaſts of Africa, Aſia, and America; where it is ſo firmly rooted, as to ſeem too permanent to be ſhaken, and to ſtand leſs in need of enlargement than moderation.

The principal commodities of the growth of Great Britain are wool and in; the other commodities are iron, lead, copperas, vitriol, ſlate, allom, coals, live oxen and cows, horſes, tallow, ſalt-fleſh, green hides, dreſſed buff, dreſſed ſkins of all ſorts, parchment, vellum, butter, cheeſe, and tallow candles; ſeveral ſtuffs, and woollen manufactures; as cloths, ratines, ſerges, bays, flannels, druggets, woollen-carpets, and tapeſtries; various kinds of manufactures made up of a mixture of wool, ſilk, thread, cotton, and other ingredients; caps, and bonnets, of all kinds, ſtockings of all ſorts; blanketing; hair-buttons; horſe-hair, woollon, and beaver hats; thread, and ſilk lace; ſeveral kinds of furs; ivory unwrought, ox-horn, horn for lanthorns; combs of tortoiſe-ſhell, ivory, box, and horn; all kinds of artillery, and of arms; all ſorts of hard-ware; nails of all ſorts; corn ground and unground, ſtarch, and various kinds of pulſe; bees-wax; timber; wood for dying, and hoops for barrels; ſeveral ſorts of ſpirituous liquors, malt-liquors, cyder, and perry; glaſs, litharge, calamine; moſt kinds of chemical extracts; groceries of all kinds; drugs; yellow and red ochre; all kinds of fiſh, dry and ſalt; and quills for writing. Beſides theſe, the Britiſh nation ſupplies other countries with ſugar, rum, tobacco, and other commodities of its American colonies; as alſo with the linen manufacture of Ireland.

The ſoil of this country is generally clay; but, in many places, gravel and ſand: the former produces good wheat and beans; the latter barley, and oats; and both of them good peas. The timber growing in this iſland is chiefly oak, aſh, elm, beech, and horn-beam: however, there are other trees exceeding uſeful and ornamental, though not honoured with the name of timber; ſuch as the walnut-tree, poplar, maple, hazle, willow, ſallow, ſycamore, and ſome other ſpecies of wood. Plantations of hops are very numerous in Kent, Surry, Eſſex, Worceſterſhire, and Herefordſhire; where there is abundance of apples for cyder, as well as in Devonſhire. In Eſſex and Cambridgeſhire are fields of ſaffron; and in Bedfordſhire and Buckinghamſhire woad for dying. The moſt conſiderable foreſts now remaining are Windſor-foreſt in Berkſhire, New-foreſt in Hampſhire, Sherwood foreſt in Nottinghamſhire, and Epping-foreſt in Eſſex. Cornwal abounds in tin-mines, which are the moſt excellent of any in the world; and Devonſhire is alſo remarkable for this valuable commodity. Cumberland, Derbyſhire, Flintſhire, Denbighſhire, and Montgomeryſhire, are rich in mines of lead, iron, and copper. Staffordſhire and Cheſhire are remarkable for ſalt pits; Yorkſhire for allum, and Northumberland for coal. Norfolk, Eſſex, Wiltſhire, Devonſhire, Dorſetſhire, Somerſetſhire, Leiceſterſhire, Glouceſterſhire, and Worceſte ſhire, are celebrated for their woollen manufactures. Cheſhire, Glouceſterſhire, Suffolk, and Cambridgeſhire, produce plenty of cheeſe; but the two latter are more abundant in butter.

It has been computed that the arable lands, ſown with wheat in England, annually produce 24 millions of buſhels of that grain; of which, in good ſeaſons, great quantities are exported, and the remainder converted into excellent bread and flour for the uſe of the natives. About the ſame quantity of barley is annually produced, according to Doctor Davenant, of which 23 millions of buſhels are firſt converted into malt, and afterwards into ale and beer; one million more of buſhels made into malt, are converted into ſpirits and ſtrong waters; and the reſidue, being ten millions of buſhels unmalted, is either made into bread, exported abroad, or uſed for ſeed at home. But of rye, there is the leaſt ſown of any kind of grain; the lands being too good for it, and the common people generally too dainty to eat the bread made of it.

The numbers of ſheep annually ſhorn in England are computed to be 12 millions; which, at a medium of 3 s. 4 d. *per* fleece, amounts to 2 millions ſterling; and when manufactured may be reckoned 10 millions: for there are reckoned 250,000 cloths, broad and narrow, to be annually made; beſides great quantities of perpetuanos, bays, ſays, ſerges, kerſies, buffins, mocados, grograms, calimancoes, pluſhes, worſteds, fuſtians, durances, tukes, and ſeveral other of the like commodities. The tin mines produce 1,200,000 lb. yearly; the lead mines 800 fodders; allom 800 tons; copper 500 tons; there are great quantities of iron and coal; as alſo of ſalt.

There is ſcarce a manufacture in Europe, but what is brought to great perfection in Great Britain; but the woollen manufacture is the moſt conſiderable, which exceeds, in goodneſs and quantity, that of any other nation. Hard-ware is another extraordinary article; for the Engliſh locks, edge-tools, guns, ſwords, and other arms, exceed any thing of the kind; houſhold utenſils of braſs, iron, and pewter, are alſo important articles; and clocks and watches are in extraordinary eſteem. The Engliſh are not defective in many manufactures; however, among theſe is that of tin-plates, or white-iron, which is manufactured, from the Engliſh tin, in Germany; either becauſe the Engliſh are not ſufficiently experienced in the art of manufacturing tin-plates, or the Germans work ſo much cheaper, that it will not turn to any advantage to make them in England. The Engliſh are alſo leſs acquainted with lace and linen than the French, the Dutch, and the inhabitants of the Auſtrian Netherlands: and paper is alſo another manufacture in which they are excelled by the Dutch.

The principal maritime cities and towns in Great-Britain, are London, Rocheſter, Deal, Dover, Rye, and Winchelſea, on the S. eaſtern coaſt: Seaford, Arundel, Chicheſter, Portſmouth, Southampton, Pool, Lime, Exeter, Dartmouth, Plymouth, and Falmouth, on the ſouthern coaſt: St. Ives, Padſtow, Biddeford, and Briſtol on the S. W. Cardiff, Swanſey, Pembroke, Haverford weſt on the ſouthern coaſt of Wales. Cardigan, Aberyſtwith, and Harlegh, on the weſtern coaſt of Wales. Cheſter, Liverpool, Whitehaven, and Cockermouth, on the N. W. coaſt of England. Kirkcudbright, and Wigton, on the S. of Scotland. Port-Patrick, Irvin, Renfrew, and Glaſgow, on the weſtern coaſt of Scotland. Inverneſs, Bamff, Peterhead, Aberdeen, and Leith, on the eaſtern coaſt of Scotland. Newcaſtle, Shields, Sunderland, Whitby, Scarborough, Hull, Boſton, Lynn, Yarmouth, Southwold, Orford, Aldborough, Ipſwich, and Harwich, on the eaſtern coaſt of England. But, of all theſe, London, Briſtol, and Liverpool, are the moſt conſiderable for the proſecution of a foreign trade. See *Ports*.

The principal inland cities and towns, throughout the modern diviſion of England into ſix circuits are, 1ſt, *In the home circuit*, Colcheſter in Eſſex, where the greateſt manufacture of bays is carried on; St. Albans in Hertfordſhire, one of the moſt conſiderable markets for wheat; and Canterbury, in Kent, remarkable for its ſilken manufactory, introduced by the French and Walloons, in the reign of Q. Elizabeth, on their expulſion from their native countries for adhering to the proteſtant religion. 2d, *In the Norfolk circuit*, are Aileſbury, and Buckingham, where great quantities of lace and ſtraw-hats are made; Bedford, Huntingdon, Cambridge, Ely, Bury in Suffolk, and Norwich which is celebrated for its woollen manufacture, eſpecially in crapes and ſtuffs. 3d, *In the Oxford circuit*, are Oxford, Reading, Abingdon, Glouceſter, Worceſter, Monmouth, Hereford, Shrewsbury celebrated for being the ſtaple for the woollen manufacture of Wales; Bridgnorth; Litchfield; Stafford; Wolverhampton, and Walſal, remarkable for their manufacture of all ſorts of hard-ware. 4th, *In the midland circuit*, are Coventry, Warwick, Birmingham where the greateſt quantity of hard-ware is made; Leiceſter, Derby, Nottingham, Lincoln, Peterborough, and Northampton. 5th, *In the weſtern circuit*, are Wincheſter, Saliſbury, Malmſbury famous for its woollen manufactory, Dorcheſter, Bath, Wells, Taunton remarkable for its woollen manufacture, and Launceſton. 6th, *In the northern circuit*, are York, Leeds conſiderable for its woollen trade, Sheffield remarkable for a manufacture of hard-ware; Durham, Lancaſter, Mancheſter celebrated for its great manufactures of haberdaſhery wares; Appleby, and Carliſle. The principal inland places, belonging to the principality of Wales, are, 1ſt, *In North Wales*, St. Aſaph, Flint, Den-

Denbigh, Wrexham, Montgomery, Welch-pool, Bangor, and Bala. 2d, *In South Wales*, are Radnor, Brecknock, Landaff, St. David's, and Carmarthen.

The moſt remarkable interior cities and towns of Scotland are, Peebles, Lanerk, Edinburgh, which is put down here as an inland place, becauſe Leith is properly the port; Stirling, St. Andrew's, Perth, Duhkeld, Forfar, Brechin, Ruthven, Innerury, Bamff, Nairn, Innernavern, and Dungſby.

The principal rivers in England are the Thames, Severn, Medway, Trent, or Humber, the two Ouſes, the Tyne, the Tees, the Eden, the Derwent, the Ribble, the Merſey, and the Dee. Thoſe in Scotland are the Forth, Clyde, Tay, and Tweed; all which are particularly deſcribed under their reſpective heads.

The capes, or promontories, are Flamborough-head, and Spurn-head, in Yorkſhire; Winterton-neſs, and Eaſton-neſs, in Norfork; Orford-neſs, in Suffolk; Walton naze, in Eſſex; North-foreland, South-foreland, and Dungeneſs, in Kent; Beachy-head, in Suſſex; Dunnoſe, and the Needleſs, on the iſle of Wight; Peverel-point, and Race of Portland, in Dorſetſhire; Berry-point, Star point, and Bolt-head, on the S. of Devonſhire; Lizard-point, Landsend, and Trevoize-point, in Cornwal; Hartland point, and Bag point, in the N. of Devonſhire; Naſh-point, and Worms-head, in Glamorganſhire; St. Goven's-point, Biſhop and his clerks, in Pembrokeſhire; Cardigan point, in Cardiganſhire; Sarnabuck-point, in Merionethſhire; Braychilpult-point, in Caernarvonſhire; Holy-head, and Hillary-point, in Angleſea; Orms-head, in Denbighſhire; and St. Bee's-head, in Cumberland.

The principal commerce of Great Britain centers in the city of London; which was a conſiderable mart among the Romans, enlarged by the Saxons, encouraged by the Danes, protected by the Normans, and by many favourable occurrences is now the emporium of the kingdom, the glory of Europe, and the admiration of all mankind. Through all the variety of governments in Britain, this ancient city obtained many early immunities for the propagation of commerce, and the advantage of merchants: for which purpoſe the ſeveral ſecular guilds of merchants, tradeſmen, and artizans, were formed and incorporated; which, as they are the baſis of commerce, demand an enumeration.

Theſe were the companies of mercers, grocers, drapers, fiſhmongers, goldſmiths, ſkinners, merchant-taylors, haberdaſhers, ſalters, iron-mongers, vintners, cloth-workers, dyers, brewers, leather-ſellers, pewterers, barbers, ſurgeons, cutlers, bakers, wax-chandlers, tallow-chandlers, armourers, girdlers, butchers, ſadlers, carpenters, cordwainers, painter-ſtainers, curriers, maſons, plumbers, innholders, founders, poulterers, cooks, coopers, tilers and bricklayers, bowyers, fletchers, blackſmiths, joyners, weavers, woolmen, ſcriveners, fruiterers, plaiſterers, ſtationers, broderers, upholders, muſicians, turners, baſket-makers, glaziers, horners, farriers, paviours, loriners, apothecariers, ſhipwrights, ſpectacle-makers, clock-makers, glovers, comb makers, felt-makers, frame-work knitters, ſilkmen, pin-makers, needle-makers, gardeners, ſoap-makers, tin plate workers, wheel-wrights, diſtillers, hat-band-makers, patten-makers, glaſs-ſellers, tobacco-pipe makers, coach-makers, gunſmiths, gold and ſilver wire-drawers, long bow-ſtring makers, card-makers, fan-makers, wood-mongers, ſtarch-makers, fiſhermen, pariſh-clerks, carmen, porters, and watermen, whoſe corporations are all particularly deſcribed under their reſpective heads.

So that the whole number of companies in the city of London are 91; having 78 maſters, 220 wardens, 2318 aſſiſtants, 8217 liverymen, and 52 halls.

Excluſive of the city companies, there are ſeveral incorporations of merchants in London; as the merchant adventurers, merchants of the ſtaple, the Hudſon's bay company, Ruſſia company, Eaſtland company, Turky company, Eaſt India company, African company, South Sea company, and Herring fiſhery company: which are alſo particularly deſcribed under their reſpective denominations. Beſides theſe, there were formerly many other companies of merchants which had been incorporated, but are now extinct; ſuch as the Spaniſh, Portugueſe, Italian, French, Dutch, and American companies: however, the commerce to all thoſe countries, except France, is carried on with greater advantage to the Britiſh nation, than when it was under the direction of the companies.

The port of London is allowed to carry two parts in three, or ſix parts in nine, of the foreign trade of England; one ninth may be given to the ports on the S. coaſt of this iſland; which S. coaſt is oppoſite to the N. coaſt of France, the ſea between them being called the channel; the E. end of this, on the Engliſh ſide, is the N. Foreland, which ſtands oppoſite to Newport in France; and the W. end, on the Engliſh ſide, is the Lands end, over againſt Uſhant, or Breſt, in France. One ninth of the trade is allowed to the eaſtern coaſt of England, waſhed by the German ocean; and the other ninth to the W. coaſt, which looks on the Iriſh ſeas.

The great increaſe of the Britiſh navigation, the mercantile opulence, and the potency of the country, are ſufficiently evinced by the ſtupendous commerce of London to and from all parts of the terraqueous globe, and by the great number and magnitude of the national ſhips continually trafficking to this magnificent city: for, in the year 1732, it appeared, from the general regiſter at the cuſtom-houſe, that the number of ſhips belonging to the port of London only were 1417, burthen 178,557 tons, and carrying 21,997 men. In the year 1727, the number of ſhips belonging to other nations that arrived in the port of London amounted to 213, and the number of Britiſh ſhips from all ports beyond the ſea to 1839, making together 2052; and the ſame year the coaſting ſhips which arrived at London, from the ſeveral ports of Great Britain, amounted to 6837; ſo that, in one year, the number of ſhips which arrived there were 8889. For unlading this amazing number of mercantile veſſels, and carrying the prodigious quantities of merchandiſe to and from the 144 wharfs of the city, ſuburbs, and vicinal parts, there are not only employed about 2000 lighters, barges, and boats, but alſo 607 great carts. However, the number of ſhips annually imported at London have been conſiderably increaſed in ſeveral years ſince: but this is always greatly affected by a war with France, or Spain; the difference of which may be eaſily diſcovered from what happened in the war with France preceding the treaty of Utrecht; becauſe, in the years 1709 and 1710, there were only 3556 and 3750 national ſhips cleared from the cuſtom-houſe at London; but in the years 1713 and 1714, they were 5807 and 6614; the net produce of the cuſtoms in 1709 being 1,342,833 l. 14 s. 4 ½ d. but in the year 1714 they amounted to 1,765,695 l. 4 s. 2 ½ d. being an increaſe of 422,861 l. 9 s. 10 ¼ d.: beſides, during the laſt war, the Engliſh loſt 1360 ſhips taken by the Spaniards, and 1878 taken by the French; making together 3238, including men of war, and privateers; which, however, were 196 leſs than thoſe taken by the Engliſh from the French and Spaniards; for the naval force of Britain, at the concluſion of the treaty of Aix la Chapelle, conſiſted of 6 ſhips of 100 guns, 13 of 90, 16 of 80, 25 of 70, 32 of 60, and 34 of 50, being 126 ſhips of the line, beſides 30 frigates of 40 guns, and 45 of 20, 43 ſloops, 16 bombs, and 19 fireſhips, in all 279; of which 225 were in commiſſion; 40,000 ſeamen, and 11,500 marines being granted by parliament for manning this formidable armament: and when the peace was eſtabliſhed, there were 71 ſhips of the line, and 29 frigates, beſides ſloops and tenders contiued in pay; though the marines were diſbanded, and the ſailors reduced to 10,000; but by a liſt of the royal navy, publiſhed in July 1751, it appears to have then conſiſted of 5 firſt rates, of 11 ſecond rates, of 48 third rates, of 58 fourth rates, of 42 fifth rates, and of 50 ſixth rates; being 90 ſhips of the line, and 125 frigates, beſides 42 ſloops, 12 fireſhips, 8 yatchts, and 14 hoſpital ſhips; in all 291.

The woollen manufacture is ſtill the great foundation and ſupport, of the foreign traffic of Great Britain; of which great quantities are exported to Holland, Germany, Ruſſia, Turky, the Eaſt and Weſt Indies, Spain, Portugal, and Ireland: for which Great Britain receives the produce of the ſeveral countries in return, and from ſome places a ballance in treaſure: but the moſt profitable traffic of

Great Britain is carried on with her own plantations in America; who are furniſhed from their mother country with the principal part of their cloathing and furniture; for which they return treaſure, or the merchandiſes of the reſpective colonies; and it is to be obſerved, that theſe colonies, if properly encouraged, would, in a ſhort time, be enabled to take off all the manufactures the mother country could ſpare.

Leather, corn, lead, and coals, are alſo very conſiderable articles in the Britiſh exportations: but there are ſome nations whoſe trade is incompatible with the Britiſh intereſt, and particularly France; beſides, there are ſeveral goods prohibited, which are particularly mentioned under the article *Contraband*. See *Balance of trade*, and *Contraband*.

The Britiſh trade to Ruſſia, Sweden, Denmark, and the Hans towns, has been eſteemed prejudicial; becauſe, in 1721, an enquiry was made into this branch of commerce; when it was found, that Great Britain had loſt above 400,000 l. by it in the years 1716 and 1717, by having bought of thoſe countries the value of ſo many more goods than it had ſold there. Great Britain ſupplies Ruſſia with woollen manufactures, tin, lead, and tobacco: from whence ſhe imports hemp, flax, linen, linen-yarn, Ruſſia leather, tallow, furs, iron, pot-aſhes, and naval ſtores. Sweden, Poland, Pruſſia, Pomerania, the Hans-towns, Denmark, and Norway, are ſupplied with the woollen manufactures of Great Britain; as alſo with ſugar, and tobacco, from the Britiſh plantations: but Great Britain is furniſhed from theſe northern countries with naval ſtores; ſuch as pitch, tar, hemp, maſts, baulks, and deal boards; beſides iron, and copper, which muſt be obtained, though purchaſed with money.

The Turky trade is very profitable to Great Britain, as it affords her markets for great quantities of her woollen manufactures, together with lead, tin, iron, and ſugar; which are ſhipped to Conſtantinople, Scanderoon, and Smyrna; from whence they are diſperſed all over the Turkiſh dominions, as alſo into the Perſian territories. The commodities which great Britain receives in return from Turky, are great quantities of raw ſilk, cotton-wool and yarn, goats-wool, grogram-yarn, fruit, pot-aſhes, ſoap, leather, drugs, and oil, which are the foundations of ſeveral manufactures different from thoſe in Great Britain, by the variety whereof ſhe is enabled the better to ſuit her cargoes for exportation again: and though this trade may require ſome bullion to be carried thither, yet there is a great difference between purchaſing commodities already manufactured, ſuch as thoſe brought from the Eaſt Indies, and buying ſuch commodities as are brought from Turky to keep the poor at work.

The Eaſt India trade has been eſteemed to be of little advantage to the Britiſh nation; for though great quantities of cloth, lead, and ſome other domeſtic manufactures of Great Britain, are exported to Perſia, China, and the Indies, theſe countries are a bottomleſs gulph for the Britiſh bullion, which can never circulate home again: indeed, it has been alledged that, by the exportation of thoſe manufactures again, more bullion in ſpecie is brought into the Britiſh dominions, than is carried out for the buying them in India; but this has never been ſatisfactorily proved; though the doing of it would extremely redound to the honour of the Eaſt India company, whoſe principal commodities imported are, raw and wrought ſilks, callicoes, chints, muſlins, tea, china-ware, cabinets, drugs, and ſome ſpices.

The traffic carried on by the Britiſh merchants along the coaſt of Africa, and from thence to the American colonies, is a very beneficial branch of commerce, both for the mother country, and the plantations: for, in return to goods of the Britiſh manufacture, and others generally purchaſed with them, this trade ſupplies the American ſettlements with ſlaves; by whoſe labour ſuch great quantities of ſugar, tobacco, cotton, ginger, fuſtick, and indigo, are raiſed. Beſides, the gold, wax, and ivory, are profitable commodities for Great Britain to export: ſo that the African trade, both for its exports and imports, and alſo as it ſupplies the plantations, and advances navigation, is an advantageous branch of commerce, which, by the abolition of the monopoly formerly granted to the African company, will remain in a more flouriſhing condition than it could poſſibly do under an excluſive regulation; becauſe the African company ſeldom traded for more than 6000 negroes annually; but, ſince the trade has been laid open, 30,000 and upwards have been purchaſed in a year.

The trade between Great Britain and Italy is a profitable branch; for the former ſupplies the latter with the woollen manufactures, and ſtuffs of Great Britain, leather, tin, lead, fiſh, Weſt and Eaſt India goods; and the Italians ſupply the Britiſh merchants with raw and wrought ſilk, velvets, wine, ſoap, olives, oil, anchovies, paper, glaſs, and ſome dying drugs.

The Britiſh trade to Portugal, and the Portugueſe iſlands of Cape Verd, Madeira, and the Azores, is very advantageous for both nations: for Great Britain exports to Portugal a great quantity of woollen manufactures, ſtuffs, fiſh, corn, and other products of Britiſh growth; from whence ſhe receives, in return, ſalt, oil, woad, fruit, and wines; beſides the precious ſtones, gold, and ſilver, of the Braſils.

The trade to Spain is certainly the moſt beneficial of any to Great Britain; where ſhe exports broad cloth, druggets, bays, long-ells, calamancoes, and other ſtuffs, ſilk and worſted ſtockings, haberdaſhery-wares, tin, lead, fiſh, corn, leather, butter, cheeſe, tobacco, ginger, and wax; receiving, in return, from Spain, their wool, gold, ſilver, iron, fruit, wines, oil, cochineal, indigo, anata, and barillia; but Great Britain has a very conſiderable balance.

The trade between Great Britain and France is manifeſtly to the advantage of the latter, which takes but an inconſiderable quantity of the Britiſh produce; ſuch as tin, lead, horn, flannels, corn, and tobacco; while what Great Britain takes from the French are chiefly articles of luxury, as wines, brandy, linen, fine cambrics, lace, lawn, brocades, velvets, and other rich ſilk manufactures, all tending to impoveriſh Britain, and throw a weighty ballance on the ſide of France. For, by an account of this trade, delivered in to the parliament, by Sir George Downing, commiſſioner of the cuſtoms, and teller of the exchequer, in 1675, it appeared, that the linen and ſilk manufactures only, imported that year from France, amounted to upwards of 800,000 l.; and that the manufactures of wool and ſilk exported from England to France did not amount to 85,000 l.; as alſo that all commodities of the product and manufacture of England, exported into France, did not amount to 90,000 l. more: whereas the wine, brandy, and other commodities of the product and manufacture of France, imported into England, amounted to upwards of 300,000 l.; beſides an incredible value of toys, rich apparel, point-lace, and other articles: by which it was evident, that the export of the natural commodities of Great Britain to France, were leſs in value, by at leaſt a million ſterling, than the native commodities and manufactures of France imported into Britain.

Great Britain exports to the Netherlands ſome ſerges, flannels, ſtuffs, ſugar, tobacco, tin, and lead; for which ſhe receives cambrics, lawns, lace, linen, thread, and tapes, to a great value; ſo that the ballance is very much in favour of the Netherlands.

The trade between Great Britain and the United Provinces is mutually beneficial; the former exporting to Holland conſiderable quantities of woollen manufactures, tin, lead, leather, corn, coals, India and Turky re-exported goods, ſugars, tobacco, rice, ginger, pitch, tar, and other commodities of the Britiſh plantations, which the Dutch retail up in Germany; and, in return, ſupply the Britiſh merchants with lace, cambrics, and other fine linen, thread, tapes, incles, whale-fins, madder, argol, toys, clap-board, nutmegs, mace, cloves, and cinnamon.

A conſiderable traffic is ſupported between Great Britain and Ireland; the former importing great quantities of Iriſh linen, wool, hides, tallow, and ſkins; as alſo beef, pork, butter, cheeſe, ſalmons, and herrings, for other markets: while Ireland is ſupplied with the woollen manufactures of Great Britain, eſpecially fine broad cloth, ſilk, ribbons,

gold and ſilver lace, ſtockings, cutlery wares, pewter, hops, coals, tobacco, ſugar, Eaſt India goods, and other things. Thus, from a conſideration of the ſtate of the Britiſh trade, this inference may be drawn; that ſo far as any nation furniſhes Great Britain with things already manufactured, or only to be ſpent among the inhabitants of the country; ſo much leſs is the advantage to Great Britain by the trade ſhe drives with thoſe nations; eſpecially if their manufactures interfere with thoſe of Great Britain, and are purchaſed with bullion. Therefore, it may be concluded, that the trade to the Eaſt Indies is unprofitable to Great Britain; becauſe, by the ſilks, muſlins, and calicoes, it prevents the conſumption of more of the Britiſh manufactures in Europe, than it takes from the Britiſh nation. The French trade is alſo prejudicial to Great Britain; becauſe, France is to her like a tavern, where ſhe extravagantly ſquanders away all the profits of her labour and frugality, extracted from other nations. Turky, Italy, Portugal, and Spain, are very advantageous to the Britiſh trade, as they conſume great quantities of her manufactures, and furniſh her with materials to be wrought up at home: beſides, theſe nations diſperſe the commodities of Great Britain to other places, which ſhe could not ſo well undertake: this Spain does to her ſettlements in America; Turky to all its territories, both in Europe and Aſia, and alſo to Perſia; while Portugal does the ſame to Braſil. The Dutch, Hamburg, and Dantzick trades, are of much utility to Great Britain; becauſe, they ſupply Germany, Poland, and ſome parts of Ruſſia, with Britiſh manufactures, and little interfere with England in theirs. Ruſſia, Sweden, and Denmark, are profitable to Great Britain, both in what they take, and in what ſhe has from them again. But above all, the African and American trades are the moſt profitable to the Britiſh nation; as they employ more people at home, and give greater encouragement to navigation by their product.

The ballance of trade with Spain and Portugal is always in favour of the Britiſh nation. As for Germany and the United Provinces, their ballances are dubious; ſome being of opinion that they ſhip moſt to England, and others that they receive moſt from England. The northern crowns ſupply Great Britain with more than they take from her; but they are commodities ſhe cannot be without, at leaſt till ſhe can be better furniſhed with them from her plantations in America. Turky may require ſome bullion, yet that trade is very beneficial to Great Britain. And Italy will grow more and more in its balance on the ſide of Great Britain, as the importation of wrought ſilks is diminiſhed, and converted into raw and thrown.

BRITISH *Iſlands*. The principal of theſe are Ireland, with the iſlands of Wight, Scilly, Angleſea, Man, the Hebrides, or the weſtern iſlands, the Orkneys, and the iſlands of Shetland; with Guernſey, Jerſey, Alderney, and Sark: but Ireland is particularly deſcribed under its reſpective head. See *Ireland*.

The iſland of Wight, the ancient Vecta of the Romans, was formerly a kingdom, but is now included as a part of Hampſhire, lying oppoſite to Portſmouth; from which it is ſeparated by a ſmall channel, the narroweſt part whereof is called the Needles, being about two leagues over, through which ſhips paſs, but with ſome hazard. The iſland is about 20 miles long, and 12 broad. Newport is the principal town; but Cowes is the only maritime place of conſequence, which is a very ſafe and convenient port; though the iſland is remarkable for nothing but corn, and is uſually governed by ſome general officer.

The iſlands of Scilly, are a cluſter of ſmall iſlands and rocks, ſituated about 40 miles W. of the Lands-End, in Cornwal; which have frequently endangered the lives of mariners, and have been fatal to ſeveral; particularly to Sir Cloudeſly Shovel, whoſe ſhip, together with 3 other men of war, were caſt away here on the 22d of October 1707, in the night-time, when this brave admiral, and his gallant ſailors, periſhed in the waves. The 5 larger iſlands are St. Mary, Treſco, St. Martin, St. Agnes, and Bryer: there are alſo 5 ſcattering ones, called Sampſon, St. Helens, Tean, White iſland, and Annet: the 10 eaſtern iſlands are, Great Arthur, Great Ganilly, Great Gannick, Minewithen, Nornour, Little Arthur, Little Ganilly, Little Gannick, Ragged iſland, and Inniſvouls: and there are ſeven other ſcattering iſlands placed about the largeſt, called Mincarlo, Guahall, Northwithel, White iſland, Round iſland, Scilly iſland, and Rat iſland. There are about 1400 inhabitants in theſe iſlands, being all in a ſtate of ſubjection to the Earl of Godolphin, who has the propriety of all the iſlands by patent, claims all the tythe of land, and of fiſh taken at ſea; as alſo of all ſhips coming to anchor, commonly called harbour-dues, which is 2 s. 2 d. every Britiſh veſſel, and double for every foreigner. The ſeat of the government is at St. Mary's, where there is a company of invalids, whoſe commanding officer has the direction of all the iſlands; but all maritime affairs are ſubject to the admiralty of Great Britain. There is a convenient light-houſe, ſupported by the trinity-board, on the iſland of St. Agnes, which facilitates a paſſage to theſe iſlands, where ſhips are furniſhed with pilots from the place; and there are ſome large and commodious harbours; though the ſterility of the place affords no manner of merchandiſe.

The iſland of Angleſea, is one of the counties of N. Wales, having Beaumaris for its principal town; though Holyhead is the only port of conſequence, which is the ſtation for the packets between England and Ireland: but the country is remarkable only for corn.

The iſle of Man, anciently called Mona, is ſituated 35 m. W. of the coaſt of Cumberland, and 28 m. N. of Angleſea; 20 miles S. of the coaſt of Galloway in Scotland, and 40 miles E. of the coaſt of Down in Ireland; being about 30 miles long, and 15 broad; having for its principal towns Ruthin and Peel, though Douglas is the principal port; which is much frequented by ſmugglers, becauſe the duties of importation and exportation were not extended to this iſland until very lately: though the ſoil produces corn, in which their exports conſiſt, as well as in wool, hides, and tallow.

King Edward IV. granted the regality of this iſland to the Earl of Derby, and his heirs; but, on the death of the laſt Earl, it devolved to the Duke of Athol. This alienation of the iſland from the Britiſh government has occaſioned more diſadvantages than all the royalties and juriſdictions of Scotland: becauſe, the Iſle of Man is the great magazine for the French to depoſite their wines and brandies, teas, and other commodities in, till opportunity offers of ſmuggling them on the coaſts of England, Scotland, Ireland, and Wales: whereby the loſs to the Britiſh nation, and the gains to the French, were inexpreſſibly great; who, in the caſe of the ſovereignty of Belleiſle, formerly in poſſeſſion of the family of the famous duke of that name, plainly ſhew that they would not ſuffer ſuch a ſovereignty and juriſdiction to remain on their coaſts. Beſides, the Iſle of Man creates a prodigious expence to the Britiſh government, in maintaining ſo many offices, and cruizers, to guard againſt its illicit and pernicious trade: not to mention the notorious frauds committed in the cuſtoms, together with the perjuries always attending them; or the entry of certain goods for exportation, receiving a drawback or debenture; though thoſe goods are landed in the Iſle of Man, and then run back again upon the Britiſh coaſts. Therefore, and as the whole revenue of the iſland belonging to the noble proprietor is reported not to exceed 3 or 4000 l. annually, it would be a cheap exchange to the public, if he was paid 40, 50, or 60 years purchaſe for his property therein.

The Hebrides, or *Weſtern iſles of Scotland*, which were anciently denominated Ebudæ, are very numerous, and ſome of them large; extending from the coaſt of Argyle, to the N. W. of Strathnavern. The principal iſlands conſiſting of Arran, Ilay, Jura, Mull, Skie, Viſt, and Lewis; the laſt of which is 60 miles long and 20 broad; the inferior iſlands being Bute, Collonſa, Scarba, Luing, Kerera, Liſmore, Kin, Erra, Jona, Tiree, Coll, Biſhops iſles, Barra, Muck, Egg, Helſkyr, Rum, Kannay, Rona, Benbecula, Taranſay, Rona, Glas, Bernera, Moir, Sigram, Pigmies, St. Kilda, Borerau, and ſeveral others uninhabited. Some of theſe iſlands are very populouſly inhabited, and produce great quantities of corn, flax, hemp, cattle, and fowl: ſeveral of them have commodious bays and harbours; and the herring fiſhery is ſo conſiderable there,

there, that 400 buſſes have been loaded in a ſeaſon from he northern part of the iſland of Viſt only.

The Orkney Iſlands, or *Orcades*, lie north of Dungſby head in Caithneſs; from which they are divided by Pentland frith, a ſea remarkable for its ſwift and contrary tides. The principal iſland is Pomona, which is 24 miles long, and 10 broad; the chief town being Kirkwal, where there is an excellent harbour: Hoy is the next iſland in magnitude; and the others are North Ronaldſha, Weſtra, Sanda, Rowſay, Edds, Stronſa, Shapinſha, Burſa, South Ronaldſha, Skerrys, Stroma, and ſome other inconſiderable ones. Theſe iſlands are well inhabited, producing corn, and ſuch other commodities as are found in the Hebrides; but the greateſt riches of the inhabitants are the herrings that annually viſit their coaſts.

The Shetland Iſles lie N. E. of the Orcades, upwards of 100 miles from Caithneſs; being reckoned 46 in number, including ſome little uninhabited holms, which afford the inhabitants paſture for their cattle. The principal iſland is Mainland; being 60 miles long, and 20 broad, indented and cut through by fine bays, which make ſo many harbours; and the principal towns are Skalloway and Lerwick: Yell is the next iſland; after which are Vuiſt, Fetlar, and Whalſey; but no other of any conſequence. Moſt of theſe iſlands abound in black cattle, ſheep, and fowl; but they have little corn: however, they have ſuch plenty of fiſh, that the Britiſh and Dutch buſſes begin their fiſhery for herrings off Braſſa ſound, on the eaſtern part of the Mainland; where they arrive about Midſummer, and continue fiſhing there for ſeveral months; the nature, produce, and trade of which is particularly related under the article *Herring-fiſhery*.

The Norman Iſlands of Jerſey, Guernſey, Alderney, and Sark, are all the remaining inheritance of William the Conqueror, and the dukedom of Normandy, in the poſſeſſion of the Britiſh crown, to which they were annexed by Henry I. in 1180; having, to their great honour, continued firm in their allegiance to England, notwithſtanding ſeveral attempts made upon them by the French. Jerſey is ſituated 15 miles W. of the coaſt of Normandy in France, and 80 miles S. of Portland in Dorſetſhire, being about 30 miles in circumference. Guernſey is about 7 miles W. of Jerſey, being 10 miles long, and as many broad. Theſe two iſlands are well fortified, and have Engliſh garriſons, lying extremely well for trade in time of peace, and to annoy the French with their privateers in time of war. Their ſoil is ſufficiently fruitful, producing corn and fruit in great abundance; eſpecially apples, of which they make plenty of cyder: the inhabitants, who are ſtill ſubject to the antient laws of Normandy, have a tolerable woollen manufactory of ſtockings and caps, and each of them is generally governed by an Engliſh officer of diſtinction.

As for Alderney and Sark, they are under the protection of the other iſlands; but are no ways conſiderable enough to carry on any merchandiſe, or ſupport a garriſon: tho' the race or ſtreight of Alderney, which ſeparates this iſland from Cape la Hogue in Normandy, is very remarkable for its dangerous paſſage, where Sir John Balchen was loſt, in the Victory man of war, of 110 guns, in the year 1744: beſides, between this iſland and Torbay in Devonſhire, are the dangerous rocks called the *Caſkets*.

By the ſtatute of the 3d of George I. it was enacted, That the inhabitants of Guernſey, Jerſey, Sark, and Alderney, might import into any lawful port of Great Britain any goods of the produce or manufacture of thoſe iſles, upon certificates from the governors or commanders in chief, that the ſame were of the produce or manufacture of the ſaid iſlands, without paying any cuſtoms or duties, except ſuch exciſe as ſhould be payable for the like goods of the produce and manufacture of Great Britain: but that nothing in this act ſhould exempt any goods of the produce or manufacture of any foreign nation, which might be imported into the ſaid iſlands, or ſuch foreign goods as ſhould be in part or fully manufactured in the ſaid iſlands by the people thereof, from payment of ſuch cuſtoms upon importation thereof into Great Britain, as ſhould be payable for goods of the like kinds imported into Great Britain from ſuch foreign nation. See *Spirituous Liquors*.

Britiſh America. On the diſcovery of the weſtern world by Columbus, and the eſtabliſhment of the Spaniards on the rich continent of Mexico and Peru, other nations were incited to naval adventures, through the expectations of participating in the opulency of the Spaniards: accordingly Henry VII. King of England, employed Sebaſtian Cabot, a native of Briſtol, and ſon of John Cabot, a Genoeſe or Venetian pilot, in the year 1497, to find out a N. W. paſſage to China, which Cabot was not ſo fortunate to accompliſh: however, this excellent navigator diſcovered all the N. E. coaſt of America, from Cape Florida in 25 deg. N. lat. to 67 and a half; from whence England claimed a right to the poſſeſſion of that country prior to the Spaniards, or any other European power, who had made no diſcovery of it; tho' the Engliſh planted no colonies there till the reign of Queen Elizabeth; which, as Cabot intimates, was owing to the wars with Scotland and France, and afterwards by the reformation, which engaged the whole attention of the Engliſh government. But when Queen Elizabeth had eſtabliſhed the proteſtant religion, ſhe fitted out ſeveral ſquadrons to annoy the Spaniards in America; by which expedition the Engliſh became well acquainted with the fertile and beautiful country of Florida: however, they had ſo long neglected it ſince the diſcovery by Cabot, that the Mexican Spaniards, in the mean time, invaded Florida, and obtained the poſſeſſion of that part of it which lies upon the gulph of Mexico, as far as the Atlantic ocean; while the French alſo made ſome attempts to form a ſettlement near Cape Florida, in which they were diſappointed by the vigilance of the Spaniards.

Queen Elizabeth, in the 26th year of her reign, granted a patent to Sir Walter Raleigh, for all ſuch parts of America as he ſhould diſcover and plant, from 33 to 40 deg. of N. lat.; who, in 1584, ſent two ſhips on the diſcovery, under the command of Capt. Philip Amidas, and Capt. Arthur Barlow, who arrived on that part of Florida denominated Wingandacoa by the natives, and afterwards Virginia by the Engliſh, in honour of their virgin-ſovereign Queen Elizabeth; where they were hoſpitably entertained by Wingina the king of the country, and carried on a beneficial traffic with the inhabitants: after which they returned home, with two Indians who were deſirous of embarking for England, and brought the firſt tobacco into Europe. In 1585, Sir Edward Greenville was ſent out by Sir Walter Raleigh, with ſeven ſhips, to renew the diſcovery of Virginia, who formed a ſettlement in the iſland of Roanoak, oppoſite to that part of the continent afterwards called North Carolina: but the unhappy coloniſts left here were diſregarded by the Engliſh court, and periſhed in attempting to form the firſt ſettlement, while their patron was proſecuting another enterpriſe on the coaſt of Guiana in South America.

As Sir Walter Raleigh himſelf obſerves, the hope of gold was the principal, and almoſt only motive to theſe undertakings; for the Engliſh had obſerved the ſucceſs of the Spaniards, and imagined that gold and ſilver mines were as common in America, as lead-mines are in Europe. The firſt adventurers to Florida, whether Engliſh or Spaniſh, extended their views only to the acquiſition of treaſure, never conceiving that the Virginian tobacco would be equally profitable; for they could not apprehend it would be the foundation of that large and profitable commerce now ſubſiſting between Great Britain and her plantations. However, as ſeveral private Engliſh adventurers had trafficked on the coaſt of Florida, the mercantile part of the nation were ſufficiently appriſed that a very advantageous commerce might be carried on with North America; and the patent granted to Sir Walter Raleigh being forfeited by his attainder in the 1ſt year of K. Ja. I. ſeveral gentlemen and merchants petitioned his Majeſty for a patent to enable them to raiſe a joint ſtock to ſettle colonies at Virginia; obſerving, that this could never be done effectually but by a company or corporation. Whereupon King James granted them a patent, dated the 10th of April 1606; whereby it was ordained, That Sir Thomas Gates, Sir George Summers, Richard Hackluit, and Edward Maria Wingfield, adventurers, of the city of London, and all others that ſhould aſſociate with them, ſhould be called the firſt colony, and might begin their firſt plantation at any place upon the coaſt of Virginia

or America, where they ſhould think fit, between 34 and 41 deg. of lat. and ſhould have all the territorial juriſdiction for 50 miles either way, along the coaſt of N. and S. and 100 miles to the weſtward within land; alſo all the iſlands oppoſite the coaſt for 100 miles at ſea; and that no other ſubjects ſhould be permitted to ſettle themſelves on the lands to the weſtward of this colony, without their leave. And his Majeſty alſo granted letters-patent to Tho. Hanham, Raleigh Gilbert, William Parker, and George Popham, of Briſtol, Exeter, and Plymouth, and all others who ſhould aſſociate with them, ordaining that they ſhould be called the ſecond colony, and might extend their plantation to 45 degrees of latitude, with the like privileges granted to the firſt colony. It was ordained, that the reſpective colonies ſhould not plant, within the ſpace of 100 miles of each other: that each company ſhould have a council, conſiſting of thirteen perſons, in whom the government ſhould be lodged, but limited by certain articles under the privy ſeal. They were empowered to dig mines in and beyond their reſpective limits to the weſtward, paying the crown a fifth of all gold, and a fifteenth of all copper-ore, they ſhould get; and they were alſo empowered to ſeize all ſhips trading within their reſpective limits, to coin money, raiſe forces, and other acts of prerogative.

The London adventurers immediately ſent out three ſhips, with 110 planters, under Capt. Chriſtopher Newport, who entered the bay of Cheſepeak; where he landed, and formally took poſſeſſion of the country, in the name of King James I. He contracted a friendſhip with ſome of the weroances, or kings of the country, and ſailed up the river Powhaton, to which he gave the name of James river, in ſearch of a proper place to ſettle the colony; where they erected the foundation of James town, between 40 and 50 miles from the mouth of the river; after which Capt. Newport returned to England, leaving the colony under the direction of Capt. Smith, who made ſeveral diſcoveries in the interior part of the country, and ſoon received a reinforcement of ſix or ſeven ſhips from England, with between 3 and 400 planters.

As the council in Virginia had incurred the diſpleaſure of the company in England, the latter procured a new patent from King James, whereby they were empowered to appoint a governor, with a more ample authority than they had by the preceding patent, and prevailed on the Lord De la War to accept of the government of their new colony, who made his arrival in the country, and formed a regular eſtabliſhment among the planters.

The government of Virginia contracted alliances with the Indians, and were reinforced by 1200 men from England; when the plantations of tobacco began to be very numerous, in which they were principally aſſiſted by the introduction of negroes, in the year 1620. The colony was ſoon in a flouriſhing condition, extending their plantations, and receiving additional ſupplies from England, till they became too formidable for the Indians: but the company gave no proper attention to the preſervation of the coloniſts, which induced King Charles I. to diſſolve the patent, and reduce the country and government under his own immediate direction, appointing the governor and council himſelf; reſerving to himſelf a quit-rent of 2 s. for every hundred acres, and ſo in proportion for any leſſer number. His Majeſty re-eſtabliſhed the conſtitution by a governor, council, and aſſembly; which made the government ſimilar to that of England, increaſed the number of coloniſts, and put the ſettlement in a very proſperous condition.

In this manner the colony continued, tho' not exempt from ſeveral invaſions of the Indians: but, after the reſtoration of King Charles II. peace and commerce were eſtabliſhed with the Indians by a law, and their boundaries preſcribed: ſeveral other acts were made ſuiting the neceſſity of the government; ſo that nothing then ſeemed to remain but the improvement of the country; upon which the duty of 2 s. *per* hogſhead on all tobaccos, and 1 s. *per* ton port-duty on ſhipping, were made perpetual, for ſupport of the government. Thus, not only the colony of Virginia was eſtabliſhed, but alſo all the other extenſive countries belonging to the Britiſh government on the northern coaſt of America, and in the iſlands of the Weſt Indies, ſituated between the Atlantic ocean, the North ſea, and the gulph of Mexico, comprehending the following diviſions and iſlands.

The ſeveral parts of the Britiſh empire on the continent of North America, except Hudſon's bay, or New Britain, lie contiguous, extending along the eaſtern coaſt from 31 deg. of northern latitude, to 50 and upwards; lying between the 63d and 83d degrees of weſtern longitude; and, as the coaſt is extended from the S. W. to the N. E. they are about 1500 miles in length, tho' generally under 200 miles broad, but in no places 400, unleſs the Iroquois, and other Indian nations under the protection of Great Britain, are included. All this part of the continent was originally called by the natives Apalacha, and by the Spaniards Florida. It was afterwards divided by the Engliſh into N. and S. Virginia; but it is now ſubdivided into the following provinces; Georgia, N. and S. Carolina, Virginia, Maryland, Penſylvania, New Jerſey, New York, New England, and Nova Scotia or Acadia; beſides a tenth province called New Britain, or the Terra de Labarador, which is much the ſame with the country called Hudſon's bay and ſtreights; being ſeparated from the reſt of the Britiſh territories by the river St. Lawrence, and part of the French Canada, extending from 50 to 64 deg. of N. lat. and lying between 60 and 90 deg. of weſtern lon. The Britiſh iſlands in America are, Barbadoes, St. Chriſtophers, Antigua, Montſerat, Nevis, Dominica, Barbuda, and Anguilla, among the Caribbees or Antilles; Jamaica, the Lucayas or Bahama iſlands, Newfoundland, and the iſlands of Bermudas, where upwards of 60,000 families have arrived, at different times, from England, for the colonization of theſe countries; which are divided as follows, according to their reſpective ſituations.

Georgia is a new province, denominated ſo in honour of K. Geo. II. being ſeparated from South Carolina by the river Savannah on the north; bounded by the ocean on the eaſt; by the river Alatamaha, which ſeparates it from Spaniſh Florida, on the ſouth; and by Indian Florida on the weſt; containing about 124 miles in length, from north to ſouth, and about 200 from eaſt to weſt. As the Indians were in poſſeſſion of this country, they were frequently ſtimulated by the Spaniards at Auguſtine, to make depredations on the ſouthern frontier of Carolina; therefore a charter for eſtabliſhing this colony was granted by his Britannic Majeſty, in 1733, to the Lord Viſcount Percival, and 19 other gentlemen, truſtees and proprietors of the colony, with the principal views of providing a ſubſiſtence for poor and indigent families at home, and making a barrier for South Carolina; which was effectually carried into execution under the conduct of General Oglethorpe, who eſtabliſhed a trade with the Indian nations adjacent to the colony; and, by his prudent behaviour, ſo attracted their affection as to make them retain the higheſt veneration and eſteem for ſo brave, ſo meritorious a governor, and at all times to ſhew an inviolable attachment to the Britiſh nation. The colony was ſpeedily and populouſly inhabited; Frederica, the capital town, was ſoon erected; as alſo Savannah, and ſeveral other towns built; beſides Hampſtead, Highgate, and ſome other villages, the whole defended by ſeveral forts.

The Indians ſupplied the colony annually with 10,000 lb. weight of deer-ſkins, beaver, and other furs; which were chiefly paid for in woollen goods and iron, being the produce and manufacture of England: and the colony gives the ſtrongeſt indications of amply rewarding her mother-country with a conſiderable produce of ſilk, cochineal, indigo, olives, oil, and cotton, if properly cultivated; but the government has lately taken it out of the hands of the truſtees.

Carolina, comprehending the two provinces of North and South Carolina, is bounded by Virginia on the north; the Atlantic ocean on the eaſt, Georgia on the South, and by Indian Florida on the weſt; extending from 32 to 36 deg. of N. lat. that is, on the weſt to the Apalachian mountains, which run through Florida from the S. W. to the N. E. at about 150 miles from the ocean. This colony

colony was eſtabliſhed in 1663, under a patent granted by King Charles II. to Edward Earl of Clarendon, and ſix other proprietors, who gave this denomination to the country, in honour of his Majeſty; but neglected to plant the colony, till the year 1670; when it was carried on, for a conſiderable time, with no manner of advantage, which was entirely owing to ſeveral miſunderſtandings between the proprietors. Therefore King George II. in 1728, purchaſed their ſeveral intereſts; and, ſince that time, it has been apparent, that it is the joint intereſt of prince and people to encourage theſe plantations; which, if well managed, may furniſh Great Britain, in time, with naval ſtores, ſilk, wine, and oil, which ſhe is at preſent compelled to purchaſe of foreigners; and, at the ſame time, advance her own manufactures, by exporting them to theſe colonies, in return for thoſe products, as alſo for the ſkins, furs, olives, rice, cotton, indigo, ginger, tobacco, ſarſaparilla, turmerick, and ſnakes-root, which are produced here in conſiderable quantities. South Carolina is divided into the four counties of Granville, Colleton, Berkley, and Craven; and North Carolina is divided into the two counties of Clarendon and Albemarle. The principal town of South Carolina is Charles-town, ſituated on the point of a peninſula formed by Aſhley and Cooper rivers; the former being navigable for ſhips 20 miles above the town, but for boats and pettiaugres about 40 miles: the other is not navigable for ſhips ſo far, tho' for leſſer veſſels much farther. The town of Beaufort, on the iſland of Port Royal, about 50 miles S. of Charles-town, is alſo a tolerable port, and the ſtation of the Britiſh ſquadron in thoſe ſeas; and Georgetown, about 50 miles to the north of Charles-town, is alſo a port of ſome reputation. But there has not yet been diſcovered any one good harbour on the coaſt of North Carolina; the beſt they have being at Roanoak, at the mouth of Albemarle river, and at Pimlico; tho' here ſhips have little ſecurity.

The trade of Carolina is ſo conſiderable, as to have employed annually 200 ſhips, laden with merchandiſes of the country; for it appears, from the cuſtom-houſe books, that, in the year 1730, there ſailed from Charles-town 207 ſhips, moſt of them for England; which carried, among other goods, 41,957 barrels of rice, about 500 lb. weight *per* barrel, 10,754 barrels of pitch, 2063 of tar, and 1159 of turpentine; 300 caſks of deer-ſkins, containing 8 or 900 each, which they purchaſe of the Indians for lead, powder, coarſe cloth, vermilion, and iron ware; beſides a great quantity of Indian corn, peaſe, beans, beef, pork, and other ſalted fleſh; with a conſiderable number of beams, planks, and timber for building, moſt part of cedar, cypreſs, ſaſſafras, oak, walnut, and pine.

As the mulberry-trees are very numerous, a good manufacture of ſilk may be eaſily eſtabliſhed; but the planters confine themſelves chiefly to the production of rice, pitch, and tar: however, it is to be obſerved, that North Carolina produces a good quantity of tobacco, and but little rice; as alſo that South Carolina, on the contrary, produces great quantities of rice, and little tobacco; but they are diſtinct colonies, under different governors.

Virginia, at preſent, is bounded by the river Potomack, which divides it from Maryland, on the north eaſt, by the Atlantic ocean on the eaſt, by North Carolina on the ſouth, and by the Apalachian mountains on the weſt; being ſituated between 36 and 39 deg. of N. lat. and between 74 and 80 deg. of W. lon. containing about 200 miles in length from north to ſouth, and about 130 from eaſt to weſt, of cultivated lands.

The colonization of this country has been already related: their principal trade is in tobacco; tho' all ſorts of naval ſtores may be produced there, which are neglected for the more general and profitable commodity of the country, as it affords a comfortable livelihood for the planters, employs yearly 200 large ſhips, and brings in a revenue of 200,000 l. annually to the Britiſh government, where their only foreign conſiderable trade is carried on. They had alſo a foreign trade to the Caribbee iſlands, where they exported lumber, corn, and fleſh; for which they took rum, ſugar, and molaſſes, in return; but New England, New York, and Carolina, have ſupplanted them in this branch of buſineſs.

The Virginia tobacco is of two kinds; the York river, or ſweet-ſcented, which is generally for the conſumption of Great Britain, being eſteemed the beſt in the world; and the Oronoac, which is hotter in the mouth, and is ſent from England to Holland, Germany, Denmark, Sweden, and Ruſſia; where 30,000 hogſheads have been exported in a year; and granting 4 l. a hogſhead to be cleared by them at foreign markets, the profit is 120,000 l. See *Tobacco*.

Virginia abounds in oaks, cedars, pines, cypreſſes, cheſnut-trees, elm, aſh, beech, ſaſſafras, hickories, and ſome other trees. It has plenty of paſture-ground, well ſtored with cattle; alſo mines of coal, iron, and lead, as well as quarries of ſtone.

The principal towns are Williamſburgh, and James-town: but neither of theſe are any ways conſiderable; for every planter chuſes to reſide upon his eſtate, and moſt of them lie adjacent to the principal rivers, where ſhips can come almoſt up to their doors, and take in their tobacco; ſo that tho' the country is extremely populous, there are no well inhabited towns in the whole province. However, the country is very convenient for navigation, where ſhips enter, between Cape Charles and Cape Henry, into the great bay of Cheſepeak; which runs up through Virginia and Maryland, almoſt due north, 300 miles and upwards; being about 28 miles over in the entrance, in moſt places about 20 miles broad, and navigable almoſt all the way for ſhips of conſiderable burthen; beſides, four great rivers fall into the weſt-ſide of this bay, which riſe in the Apalachian mountains, all of them running from the N. W. to the S. E. The moſt ſoutherly of theſe is James-river, called by the Indians Powhaton, being generally about two miles over, and navigable at leaſt 80 miles: York river, whoſe Indian name was Pamunky, is a little to the northward of James river: north of York river is the river of Rappahanock; the two laſt being equally broad with York river; and to the northward of Rappahanock is the river Patowmack, being navigable near 200 miles, and from 7 to 9 miles broad.

Maryland was granted, under patent, to Lord Baltimore in 1631, by King Charles I. who gave it this denomination in honour of his Queen Henrietta-Maria; being a colony ſituated between the 38th and 40th degrees of northern latitude, and between the 74th and 78th degrees of weſtern longitude. The north end of the bay of Cheſepeak divides Maryland into two parts, called the Eaſtern and Weſtern ſhores, which are bounded by part of Penſylvania and the Atlantic ocean on the eaſt, by Virginia on the ſouth, and by the Apalachian mountains on the weſt; being about 140 miles long from north to ſouth, tho' not ſo broad from eaſt to weſt.

This colony has the advantage of ſeveral fine navigable rivers, as well as Virginia; the Patuxent and Severn being on the weſtern ſhore; and, on the other ſide, the Chiptonk, Cheſter, and Saſſafra. The principal towns are Annapolis, and St. Mary's, both convenient ports; but the ſame humour prevails among the inhabitants here as in Virginia, of living on their reſpective plantations, and not in towns. Lord Baltimore took ſuch care in eſtabliſhing the colony, that he had little interruption from the Indians; whereby Maryland ſoon became a rival to Virginia in the cultivation of tobacco, and the heir of that noble family is now the proprietor of this colony.

The Maryland tobacco, which is generally called *Oroonoko*, is ſtronger than that of Virginia, and employs 150 ſhips yearly; but its greateſt demand is for the eaſtern and northern parts of Europe.

This province is divided into eleven counties; St. Mary's, Charles, Prince George, Calvert, Anne-Arundel, and Baltimore counties, being on the weſtern ſide of the bay; and Somerſet, Dorcheſter, Talbot, Kent, and Cecil counties, being on the eaſtern ſide.

The barter of tobacco in the provinces of Virginia and Maryland anſwers all the uſes of gold and ſilver; all the neceſſaries of life being ſold for tobacco, inſtead of money.

Penſylvania, New York, and New Jerſey, were firſt inhabited by the Dutch, but were reduced, or ceded, to the ſubjection of the crown of England under the reign of King Charles the Second, in 1684, who transferred them to his brother the Duke of York; and his Highneſs par-

celled them out to under-proprietors, among whom William Pen, Eſq; a quaker, obtained this part of the country, which he called after his own name, the province being now a propriety in that family. This colony lies between 39 and 42 deg. of N. lat. and between 75 and 79 deg. of weſtern lon. being bounded by the country of the Iroquois, or five Indian nations, on the north; by New York and New Jerſey, from which it is ſeparated for the moſt part by De la War bay and river, on the eaſt; and by Maryland on the ſouth and weſt; containing about 200 miles in length from north to ſouth, but of an unequal breadth. There are ſeveral navigable rivers in this colony, which give large ſhips a commodious paſſage up into the heart of the country; but of theſe the river De la War is the moſt remarkable, which riſing far north in the country of the Iroquois, and dividing this province from that of New Jerſey, falls into the Atlantic ocean, between the promontories of Cape May and Cape Hinlopen; being navigable for 200 miles and upwards with large veſſels, whereby this country is rendered admirably well ſituated for a foreign trade.

The city of Philadelphia being a large, populous, and extenſive place, is the capital of the province, and is ſituated upon the river De la War, in 40 deg. 30 min. N. lat.; The town of Newcaſtle is alſo a conſiderable port, and there are ſeveral other places well inhabited.

The produce of Penſylvania conſiſts in horſes, pipe-ſtaves, pork, beef, and fiſh, ſalted and barrelled up, ſkins, and furs; all ſorts of grain, as wheat, rye, peaſe, oats, barley, buck-wheat, Indian corn, Indian peaſe and beans; pot-aſhes, wax, ſome little quantities of rice and tobacco, and ſome other inferior articles, which they chiefly export to the Caribbee iſlands; from whence they receive, in return, rum, ſugar, molaſſes, ſilver, negroes, ſalt, and wine. They ſend ſome of their corn into Europe; and they receive from Great Britain, houſhold-goods, cloathing of all kinds, hard-ware, tools, and toys. But their trade with the Indians is chiefly in the ſkins and furs of wild beaſts; for which they exchange cloathing, arms, ammunition, rum, and other ſpirits.

The inhabitants of this province have ſet up no remarkable manufacture of their own; nor can they be ſaid to have any ſtaple-commodity; tho', from the ſituation of Philadelphia, it commands a flouriſhing trade.

New Jerſey, and *New York*, are both royal governments; the former lying between 74 and 76 deg. of W. lon. and between 39 and 41 deg of N. lat. about 140 miles in length from north to ſouth, and 60 miles from eaſt to weſt; being bounded on the north by Hudſon's river, which divides it from New York; by the Atlantic ocean on the eaſt and ſouth; and by De la War bay and river, which ſeparate it from Penſylvania, on the weſt; the province being uſually ſubdivided into Eaſt and Weſt Jerſey, having generally the ſame governor with New York, but by a diſtinct commiſſion.

New York is bounded by the river of St. Lawrence, which ſeparates it from Canada, on the north-weſt and north; by New England, and the Atlantic ocean, on the eaſt and ſouth; and by Eaſt Jerſey, from which it is ſeparated by the river De la War, on the weſt; lying between 76 and 80 deg. of weſtern lon. excluſive of Long Iſland, the eaſt-end whereof lies in 72 deg. of weſtern lon. and between 41 and 47 deg. of N. lat. However, the Iroquois, and their allies, inhabit the countries between theſe provinces, and the lakes of Erie, Champlain, and Ontario; where they form a ſecure boundary againſt the French of Canada, and carry on a conſiderable trade in beaver-ſkins with the Engliſh.

There are ſeveral navigable rivers in theſe countries; but the principal is Hudſon's river, which riſes from a ſmall lake between the lakes of Ontario and Champlain, continuing its courſe due ſouth, when it falls into the ſea between Long Iſland and Staten Iſland.

New Jerſey is about 140 miles long upon the coaſt, and about 80 broad; Eaſt Jerſey being divided into the counties of Monmouth, Middleſex, Eſſex, and Bergen; but Weſt Jerſey conſiſts only of the county of Cape May.

The principal towns in New Jerſey are Burlington, ſituated in an iſland in the middle of the river De la War; Perth-Amboy, in Eaſt Jerſey, pleaſantly ſituated at the mouth of Raritan river; and Elizabeth town, N. of Perth-Amboy; which rivers are navigable for ſhips of burthen.

New York is about 200 miles long from ſouth to north, and about 25 miles broad; being divided into the counties of Richmond, Suffolk, Queen's county, New York county, Cheſter, King's county, Orange, Ducheſs, and Albany; but the five laſt counties are ſaid to be inhabited by Dutch, or ſuch as are of Dutch deſcent. There are alſo Staten Iſland, and Long Iſland, or Naſſau Iſland, before the mouth of Hudſon's river; the former being about 14 miles long, and 8 broad; the latter about 120 miles in length, and 18 in breadth; as likewiſe the iſland of Manahattan, or Manhatan, at the mouth of Hudſon's river, being about 12 miles long, and 3 broad.

The principal place in New York, is the city of New York, ſituated on Manahattan iſland; being a large, handſome, and populous place; where there is an excellent harbour, furniſhed with commodious keys and warehouſes, from whence ſome hundreds of ſhips and veſſels are annually employed in its foreign trade and fiſheries; Kingſton, New Albany, and Schenectada, are alſo places of trade.

The commodities of theſe colonies are much the ſame as thoſe of Penſylvania, conſiſting of the ſame ſort of grain, fleſh, fiſh, timber, and cattle, beſides ſome tobacco, peaſe, apples, onions, flour, pipe-ſtaves, and ſtrong beer, which they export to the Britiſh and other foreign ſugar-colonies; receiving, in exchange, rum, ſugar, molaſſes, cocoa, indigo, logwood, cotton, wool, and other articles. They likewiſe ſend their fiſh and pipe-ſtaves to the Madera and Azores iſlands; from whence they receive wine and brandy; and they deal largely with the Indians for furs and ſkins. They are alſo employed in the fiſhery for whales, as well as cod-fiſh; which they carry to ſeveral parts of Europe; bringing the rum, molaſſes, logwood, cocoa, whale oil and bone, to England; which, with a conſiderable quantity of money, ſerve to make up the deficiency on the ballance of trade there, from whence they are ſupplied with furniture, tools, hardware, and the woollen manufactures.

New England received its denomination from K. Charles I. when Prince of Wales; being ſituated between 41 and 45 deg. of N. lat. and between 67 and 73 deg. of weſtern lon. comprehending the ſeveral colonies or governments of the Maſſachuſets, New Hampſhire, Connecticut, and Rhode Iſland, with Providence plantation; bounded by Canada on the north-weſt, by Nova Scotia on the north-eaſt, by the Atlantic ocean on the eaſt and ſouth, and by New York on the weſt; the whole length extending 300 miles, and from 100 to 200 broad.

The four provinces have different conſtitutions, and generally different governors; but the Maſſachuſet colony is ſuperior to the reſt in opulence, trade, and number of inhabitants; its principal town being Boſton, ſituated on a peninſula at the bottom of a fine bay, being a very commodious and flouriſhing port. The principal town of Connecticut, is New London; of Rhode Iſland, Newport; and of New Hampſhire, Portſmouth.

There are ſeveral navigable rivers in this country, as the Connecticut, the Thames, the Patuxet, the Merrimech, the Piſcataway, the Saco, the Caſco, and ſome others; but the moſt remarkable is that of Piſcataway, which runs from W. to E. and falls into the ſea near the town of Portſmouth in Hampſhire; the mouth of which is more like an arm of the ſea than a river, being capable of receiving the largeſt ſhips.

All theſe colonies abound in grain, and the ſame proviſions as thoſe of Penſylvania and New York: the foreſt-trees, and others, are cedar, oak, aſh, elm, cypreſs, pine, fir, aſpin, beech, walnut, cheſnut, hazel, ſaſſafras, ſumack, and other woods uſed in dying and tanning leather. Their fir-trees are of an uncommon growth, and furniſh the royal navy of England with maſts and yards; they draw alſo from theſe, and other trees, pitch, tar, roſin, turpentine, gums, and balms uſed in phyſic and ſurgery: beſides, the ſoil is proper for hemp and flax; ſo that a ſhip may be built and rigged out with the produce of the ſoil, which makes ſhip-building a conſiderable employment

in this country; where the merchants build them for their Britiſh correſpondents, which are freighted full from Boſton to the Weſt Indies; and very often the profit is equal to that of the freight to England. They have alſo many noble advantages, by carrying on a whale-fiſhery in Greenland, and a cod-fiſhery on the banks of Newfoundland; beſides, the ſperma-ceti whale is found upon their own coaſt; by which means they principally ſupply their mother-country with whale-bone and whale-oil. They employ near 500 ſail of ſhips, with 4000 ſeamen, annually in their trade, which they alſo carry on to the Britiſh ſugar-colonies, and the Dutch at Surinam and Curaſſou, where they ſend horſes, ſeveral kinds of live ſtock, ſalt proviſions of fleſh and fiſh, flour, peaſe, cyder, butter, onions, oils, turpentine, ſhips, and lumber, that is, deal-boards, pipe-ſtaves, hoops, and ſhingles. To the ſouthern colonies they ſend rum, molaſſes, imported ſalt for the fiſhery, and all ſorts of proviſions. They alſo ſend their ſhips to the bay of Honduras for logwood, which they tranſport to Europe, as they alſo do ſugar from the Weſt Indies. They manufacture coarſe linen and woollen cloth for their own uſe, as well as iron tools and utenſils; beſides, they have manufactures of hats and paper, from which the Britiſh merchants endeavour to divert them, as being prejudicial to their mother-country, tho' their imports from thence have been computed at 300,000 l. a year; but if Great Britain would encourage their raiſing naval ſtores, and their works of iron, this would prove extremely advantageous to both; becauſe naval ſtores are now imported from Norway, and other places in the Baltic, to Great Britain in foreign bottoms; as alſo is iron from Sweden, which drains the nation of immenſe ſums of money.

Nova Scotia, or *New Scotland*, comprehending Acadia, is bounded by the bay and river of St. Lawrence on the north-eaſt and north-weſt; by the Atlantic ocean on the eaſt; by the ſame ocean, and the bay of Fundi, on the ſouth; and by part of Canada, and part of New England, on the weſt; lying between 43 and 51 deg. of N. lat. and beween 63 and 70 deg. of W. lon. being about 500 miles in length from north to ſouth, and about 300 miles from eaſt to weſt.

This country was formerly inhabited by a Scotch colony, ſent over, in 1622, by William Alexander, then Lord Secretary of Scotland: but that colony failing, the French took poſſeſſion of the country, calling it by the name of Acadia; tho', by the treaty of Utrecht, the whole country was conceded to the crown of Great Britain.

The French had eſtabliſhed a conſiderable ſettlement there; and the Engliſh fortified Annapolis and Canſo, which were the only conſiderable improvements that were undertaken in this colony, till the year 1749; when the government of Great Britain ſent about 4000 coloniſts there, with four regiments of ſoldiers, to form a regular province, under the direction of the Hon. Edward Cornwallis, Eſq; who was appointed Captain-General and Governor in chief of the colony, and formed a ſettlement at the head of Chiboctou harbour, in the very centre of the ſouthern coaſt of the province, having Annapolis on the left, and Canſo on the right, where he founded the town of Hallifax; ſince which the colony has proceeded in a tolerable manner; tho' attended with ſome inconveniencies by the reſentment of the Indians, inſtigated by the French of Canada, to interrupt the plantation of the coloniſts.

By a proper colonization of Proteſtants in ſo valuable a tract of territory, more than an equal participation of the profits of the French fiſhery at Cape Breton muſt fall to the Engliſh; a potent barrier is erected for the ſecurity of the Britiſh provinces in North America, and a perpetual ſeminary for ſailors may be eſtabliſhed. Great were the advantages to be expected from the formation of this colony; becauſe it is equally commodious with Newfoundland for the fiſhery; its harbours are ſo numerous and fine, as not to be exceeded in any part of the world; it abounds with ſalmon, and almoſt all kinds of freſh water fiſh, and has a great plenty of wild-fowl; its woods are ſtocked with deer, and an uncommon variety of furred animals, eſpecially beavers, whoſe ſkins the Indians exchange for European goods. The ſoil is very fertile, producing all kinds of grain and proviſions; the country is covered with aſh, beech, elm, firs, maple, cedar, and pines, fit for naval uſes; beſides, it abounds with lime-ſtones, and fine quarries for building.

New Britain, or *Terra de Labarador*, and *Hudſon's bay*, are ſeparated from Nova Scotia by the river of St. Lawrence, and part of Canada; extending from 49 to 64 deg. of N. lat. lying between 60 and 90 deg. of W. lon. This cold inhoſpitable country is but thinly inhabited with Indians; and the only part of it planted by any Europeans was the bottom, and the weſt-ſide of Hudſon's bay; where the Engliſh have four or five little forts and factories, the principal being Fort Albany, where the Hudſon's bay company trade for furs and ſkins, to the value of 20,000 l. prime coſt annually; of which three fourths are beaver-ſkins. See *Hudſon's bay company*.

As for the Britiſh iſlands in America, it may be proper to begin with the *Bermuda*, or *Summer Iſlands*, which were diſcovered in 1522 by one Bermuda, a Spaniard; but Sir George Summers happening to run his ſhip a-ground here, in a voyage to Virginia, in the year 1609, found them deſerted; and the Engliſh have been in poſſeſſion of them ever ſince. They are a cluſter of ſmall iſlands, ſuppoſed to be 400 in number, and lying in a very narrow compaſs, almoſt in the ſhape of a ſhepherd's crook, containing only about 20,000 good acres, and not above one eighth part of them inhabited; being ſituated in the Atlantic ocean, in 32 deg. 30 min. of N. lat. and in 65 deg. of W. lon. about 250 leagues eaſt of Charles-town in South Carolina.

Theſe iſlands contain about 10,000 Engliſh people, beſides their ſlaves, being eſteemed the Montpelier of America for health; nor are they more remarkable for their health than their plenty. The inhabitants rear little ſugar or tobacco, and admit no convicts to be tranſported here; but apply themſelves principally to the making of joinery work, building of ſloops for ſale in the Weſt Indies, making hats of palmeto-leaves, raiſing corn, fruit, garden-ſtuff, and other proviſions, which they ſend to the other plantations; beſides theſe, they have commodities of ſilk, ſome cochineal, oranges, tortoiſe-ſhell, ambergreaſe, and pearls: but the European merchandiſes, fit for the Bermudas, are wines, brandy, corn, Iriſh beef, ſtuffs, and cloths.

The government belongs to the crown; and the chief town is that of St. George, ſituated in the N. W. part of theſe iſlands, on an iſland of the ſame name, which is about 16 miles long, and 3 broad, walled round in a manner with rocks; whereby it is rendered inacceſſible to pirates or enemies, there being but two narrow entrances, both of them well guarded by forts.

The iſland of *Newfoundland* is the moſt eaſterly part of North America; being ſituated in the Atlantic ocean, between 47 and 52 deg. of N. lat. and between 55 and 60 deg. of W. lon. ſeparated from New Britain by the narrow ſtreights of Belleiſle, and from Canada by the bay of St. Lawrence, containing 350 miles in length, and 200 in breadth; which was diſcovered by Sebaſtian Cabot in 1497, but more particularly by Thorn and Elliot, of Briſtol, in 1527; and the Engliſh title thereto being renewed, in the name of Queen Elizabeth, in 1583, a colony was ſettled there about thirty years afterwards.

As the French and Portugueſe fiſhed on the coaſts, and carried on a trade with the Indians for ſkins and furs, the Engliſh objected againſt ſuch proceedings, inſiſting on the ſole right of fiſhing on the coaſt, which was conceded to them by the French and Portugueſe in the reign of Ja. I. but, in the reign of Charles II. the French were ſuffered to ſettle at Placentia, and afterwards poſſeſſed themſelves of great part of the iſland: however, by the 13th article of the treaty of Utrecht, they entirely relinquiſhed the whole iſland to the Britiſh crown; reſerving a liberty to catch fiſh, and dry them on the land, from Cape Bonaviſta to the northern point of the iſland, and from thence to Point Riche on the weſtern ſide; tho' the French are not to fortify any place in Newfoundland, or erect any buildings there, beſides ſtages, and huts, uſual for drying of fiſh; nor are they to reſort to the iſland beyond the neceſſary time for fiſhing, and drying of fiſh.

This

This iſland is an exceeding mountainous, ſteril country: however, the poverty of the land is compenſated by the abundance of cod, and other fiſh, ſwarming, in innumerable ſhoals, on the adjacent fiſhing-banks; which have proved an inexhauſtible fund of wealth to the Engliſh, French, and other European nations, for 100 years paſt; eſpecially to the former, who thereby bring an increaſe of between 3 and 400,000 l. yearly to the national ſtock, beſides the profits of the merchants, tradeſmen, and mariners; there being ſeldom leſs than 5 or 600 ſail of ſhips of all nations, of which 150 are Engliſh, that load with cod-fiſh here, every ſeaſon, for the Mediterranean, and other parts of Europe. The principal bank lies about 20 leagues from Cape Race, the ſouth-weſt promontory, being about 100 leagues long, and 25 broad. There is another to the weſtward, called Green-bank, about 25 leagues in length, and 12 in breadth; where the fiſhing-ſeaſon continues from the vernal till the autumnal equinox, and of late ſomething longer. The coaſt affords abundance of commodious bays and harbours; and the principal towns are St. John's, Placentia, and Bonaviſta; which are ſmall places, and thinly inhabited. See *Cod-fiſhery*.

The *Bahama*, or *Lucaya Iſlands*, are the moſt eaſterly of all the Antilles; being ſo numerous as to have been computed to be between 4 and 500; ſome of which are 160 miles long, but are only rocks riſing above the water. They are bounded by the Atlantic ocean, and the coaſt of Florida, on the north and eaſt; by the gulph of Florida on the weſt, and by Cuba and Hiſpaniola on the ſouth; ſtretching from N. E. to S. W. between the 21ſt and 27th deg. of N. lat. and between the 73d and 81ſt deg. of W. lon.

The principal iſlands are Bahama, Providence, Eleuthera, and Harbour iſland; Lucayonequa, Andros, and Cigateo, Guanahani, Yumeta, Samana, Mayagnana, Exuma, Ynagua, Caicos, and Triangulo; but the reſt are rather barren rocks than iſlands.

The iſland of Bahama is between 40 and 50 miles long, and about 16 broad; but it is thinly inhabited, and productive of nothing but Indian wheat, fowl, and rabbits.

Providence is the ſeat of government, which is about 25 miles long, and 21 broad, lying in the center of many other iſlands; its principal commerce ariſing from the misfortunes of ſhipwrecked mariners, whom the people of Providence ſupply with proviſions, which they have from Carolina: however, the iſland produces ſome ſalt, and braziletto wood.

Theſe iſlands were the firſt part of America diſcovered by Columbus; when the adjacent ſeas abounded in pearl-fiſheries, in which employment the avaritious Spaniards ſoon exterminated the whole race of Indians in the Bahamas; afterwards Providence, and the neighbouring iſlands, became the refuge of pirates, and buccaneers: however, King Charles II. eſtabliſhed a colony at Providence, which in 1718 was made a royal government, and is commodiouſly ſituated to command the navigation of the gulph of Florida, thro' which the Spaniards convey all their wealth to Europe.

Jamaica is ſituated in the Atlantic ocean, between 76 and 79 deg. of W. lon. and 17 and 19 deg. of N. lat. lying near 5000 miles S. W. of England, about 100 miles S. of Cuba, 70 W. of Hiſpaniola, and upwards of 350 miles to the N. of Porto Bello, and Carthagena, on the coaſt of Terra Firma; containing about 140 miles in length, and about 60 in breadth. This iſland was diſcovered by Columbus in 1493, and ſoon afterwards planted by the Spaniards; who cultivated the plantations, ſtocked the country, erected conſiderable towns, and continued in poſſeſſion till the year 1656; when Admiral Pen and General Venables were ſent by the uſurper Cromwell to reduce Hiſpaniola, where they were diſappointed in their attempt; when, to ſave their reputation, they invaded, and made a compleat conqueſt of Jamaica; which the Spaniards have been ſo far from attempting to recover, that they yielded and confirmed it to Great Britain, by a ſubſequent treaty of peace.

The principal commodities of this iſland are ſugar, rum, tobacco, cocoa, coffee, ginger, indigo, cotton, long pepper, caſſia, tamarines, guaiacum, china-root, ſarſaparilla, venellas gums and roots, ſalt, and piemento. The foreſts afford prickle-pear, and ſeveral other woods, for dying; as well as mahogony, and other timber, both for houſhold ornament, and building of ſhips: the wild bulls and cows of the mountains afford tallow and hides; beſides, the great quantity of tortoiſes that, in certain ſeaſons of the year, reſort the coaſts, are no indifferent object of the Jamaica commerce. However, ſugar, rum, and logwood are the moſt conſiderable articles of their merchandiſe, in both of which the inhabitants have found a conſiderable diminution; becauſe the low value of ſugar may be very juſtly attributed to the great improvement the French have made in their ſugar-colonies, by the encouragement given them; particularly in allowing them to export their commodities to foreign markets, without firſt introducing them into any of the ports of France; and from the lowneſs of their duties, by which, and being under no neceſſity of double voyages, they could afford to underſel the planters of Jamaica. As logwood is the product of Jucutan, a peninſula, on each ſide whereof are the bays of Campeachy and Honduras, the Spaniards have greatly interrupted them in this trade, by ſeizing and confiſcating the ſhips in that employment, which they pretended to be illicit; tho' the Engliſh have frequently aſſerted their right to that branch of traffic, which will be more amply expatiated upon under the article of *Spaniſh America*. But here it may be proper to obſerve the importance of this trade, by the importation of logwood into Great Britain, from the year 1713 to 1716; which was, *communibus annis*, 3741 tons, computed at 60,000 l. a year; beſides, there are generally made 33,000 hogſheads of ſugar annually in Jamaica, and 20,000 hogſheads of rum.

The merchants of Jamaica generally employ 300 ſhips annually in the exportation of their commodities, which are principally ſent to Great Britain; from whence they receive woollen and linen cloths, laces, cambrics, hats, ſhoes, ſtockings, ſilks, ribbands, hardware, wines, brandy, beer, cyder, ſalt fiſh, ſalt fleſh, butter, cheeſe, ſoap, candles, and other commodities; for which they pay a conſiderable ballance in ſpecie. They alſo pay bullion for proviſions, and other goods, from the northern colonies; tho' this bullion is obtained by carrying on a prohibited trade with the inhabitants of Carthagena, Porto Bello, and other places on the Spaniſh main; where they diſpoſe of great quantities of the Britiſh manufactures for Spaniſh coin, and bullion.

Jamaica is very populouſly inhabited, having many commodious harbours; of which Port Royal is the chief, and the ſtation of the royal navy: beſides, there are ſeveral large towns on the iſland; of which Kingſton, and St. Jago de la Vega, or Spaniſh-town, are the principal; tho' the latter is the ſeat of government, which is under the appointment of the crown.

The Britiſh ſettlements among the *Antilles*, or *Caribbee Iſlands*, are St. Chriſtopher's, Antigua, Nevis, Montſerat, Anguilla, Barbuda, and Dominica, as alſo Barbadoes; all of them productive of the ſame ſort of merchandiſe, which generally conſiſts in ſugar, and rum extracted from the molaſſes or droſs of the ſugar.

St. Chriſtopher's is ſituated in 17 deg. 25 min. of N. lat. and in 62 deg. 40 min. W. lon. about 15 leagues W. of Antigua, to which the celebrated Chriſtopher Columbus gave his Chriſtian name; being about 22 miles long, and 7 broad, and formerly jointly poſſeſſed by the Engliſh and French; but the whole iſland was yielded to the Engliſh by the 24th article of the treaty of Utrecht.

The place is well ſtocked with inhabitants, who uſually make about 10,000 hogſheads of ſugar yearly. They alſo raiſe ſome tobacco, indigo, and ginger; but ſugar, rum, and molaſſes, are their principal commodities; the former being in a manner the current money of the iſland, which they ſhip for England, in exchange for the neceſſaries of life; as alſo to the northern colonies, for horſes, timber, negroes, and proviſions.

Antigua lies to the eaſt of Nevis and St. Chriſtopher's, in 62 deg. of W. lon. and 17 deg. 30 min. of N. lat. being about 20 miles long, and as many broad. It produces about 1600 hogſheads of ſugar, tho' not half that quan-

tity of rum; and they have alſo ſome indigo, ginger, and coarſe tobacco.

Nevis is ſituated in 62 deg. of W. lon. and 17 deg. 30 min. of N. lat. being divided from the eaſt-end of St. Chriſtopher's by a narrow channel. It is about 18 miles in circumference, containing about 3000 white people, and 4000 negroes employed in the ſugar-trade, who make about 6000 hogſheads yearly; but the iſland alſo produces ſome tobacco, cotton, and ginger.

Montſerat lies in 62 deg. of W. lon. and 17 deg. of N. lat. about 24 miles S. W. of Antigua; being about 18 miles in compaſs, and producing about 2500 hogſheads of ſugar yearly; as alſo ſome indigo.

Anguilla is ſituated in 63 deg. of W. lon. and 18 deg. 15 min. of N. lat. 100 miles N. of St. Chriſtopher's. Barbuda lies N. E. from Montſerat, being about 15 miles long, and containing about 1200 inhabitants. Dominica lies about 140 miles N. W. of Barbadoes, being about 40 miles long, and as many broad in ſome parts. But theſe 3 iſlands, as well as thoſe of St. Lucia, Tobago, and St. Vincent, are no ways remarkable for trade. The 4 latter have been alternately in poſſeſſion of the Engliſh, the French, and the Dutch; and, notwithſtanding their ſoil is productive of the ſame commodities as the other Antilles, they ſtill remain uncultivated; and the propriety of them is ſtill indeterminately held in ſuſpenſe between the crowns of Great Britain and France, who have called them neutral iſlands: but the French have too much infringed upon this neutrality, by almoſt formally ſettling in theſe iſlands.

Barbadoes, is imagined to have received its name from the Spaniards, or Portugueſe, who pretended that the original inhabitants were barbarians, as well as thoſe of the adjacent iſlands, who were erroneouſly eſteemed canibals; which occaſioned their country to be denominated the Caribbees. This iſland is the moſt conſiderable of all the Britiſh iſlands in America, excepting Jamaica: it is ſituated in 13 deg. of N. lat. and 59 deg of W. lon. being 25 miles long, and 15 broad; the whole country being almoſt an entire plantation of ſugar-canes; though they have ſome cotton, indico, ginger, piemento, lignum-vitæ, maſtic, and fuſtick. The firſt colonization of this iſland was in the reign of K. Cha I. who granted the propriety of it to James Earl of Carliſle; but K. Cha. II. in 1661, purchaſed the propriety of the Lord Kinoul, heir to the Earl of Carliſle; ſince which time it has been a government under the crown. Sugar, and alſo fruit in general, are become the ſtaple commodities of Barbadoes, which abounds in all ſorts of oranges and lemons, citrons, limes, tamarinds, pine-apples, and others. It has alſo the cotton, cedar, maſtic, cocoa, fig, and bulley-trees; as likewiſe the locuſt tree, lignum-vitæ, and red-wood: beſides plants of ginger, and red-pepper. Barbadoes receives from Great Britain and Ireland, linen and woollen goods, ſilks and ſtuffs, laces, braſs and copper wares, iron utenſils, for the ſugar-works; peaſe, beans, and oats; butter, cheeſe, and candles; wine, beer, and ale; hard-ware, gun-powder, and ſhot: India goods, millinary wares, toys, coals, and hoops. The Barbadians alſo receive corn, flour, rice, tobacco, cattle, fleſh, and ſalted fiſh, from the northern colonies: and wine from Madeira and the Azores.

The exports of Barbadoes conſiſt in ſugar, rum, moloſſes, cotton, indigo, lignum-vitæ, ginger, fruit, and citron-water; which formerly employed 400 ſail of ſhips, whoſe cargo amounted to 350,000 l. yearly: but the French colonies have greatly diminiſhed this trade: however there were, in 1730, 22,769 hogſheads of ſugar exported from this iſland to Great Britain, which ought to produce 14,000 hogſheads of rum; becauſe, 3 hogſheads of ſugar ought to produce 2 hogſheads of rum.

There are about 20,000 white inhabitants on this iſland; and about 100,000 negro ſlaves. The principal town is Bridge-town, in Carliſle bay; which is a convenient port, and the only one of ſecurity belonging to the iſland: nor have they any ſtream that deſerves the name of a river.

Remarks on the BRITISH *colonies in America.* There were originally three ſorts of governments eſtabliſhed by the Engliſh in America; being royal governments, governments by charter, and proprietary governments. A royal government is properly ſo called, becauſe the colony is immediately dependant on the crown, and the King remains ſovereign of the province; appointing the governor, council, and officers of ſtate; the people only electing their repreſentatives: ſuch are the governments of Virginia, New Hampſhire, New York, New Jerſey, both Carolinas, and all the principal iſlands in the Weſt Indies, where the ſalary of the government is paid by the coloniſts. A charter government was a company incorporated by the royal charter, inveſted with a ſort of ſovereign authority, to eſtabliſh what ſort of government they ſaw moſt expedient: and theſe charter governments have generally thought fit to transfer their authority to the populace; for, in theſe governments, the freemen not only elect their repreſentatives, but annually chuſe their governor, council, and magiſtrates; making laws without the concurrence, or even knowledge, of the King; being under no other reſtraint than to enact no law contrary to thoſe of England; for if they do, their charters are liable to be forfeited: ſuch is the government of Rhode iſland; but the other colonies in New England have ſome alteration in their original conſtitution; for though the appointment of the governor is reſerved for the crown, yet the houſe of repreſentatives chuſe the council, and the governor and council appoint the magiſtrates and officers of ſtate: from whence it appears, that the government of the Maſſachuſets is, in ſome inſtances, different from either of the two former ſpecies of government; or rather a mixture of both. A proprietary government, is where the proprietor is veſted with ſovereign authority, appointing the governor, council, and magiſtrates; the repreſentatives of the people being ſummoned in his name; when he, by their advice, enacts laws without the concurrence of the crown: but, by a late ſtatute, the proprietor muſt have the conſent of his Britannic Majeſty in the appointing a governor, when the proprietor does not perſonally reſide in the plantation; and of a deputy governor, when he does. And by another ſtatute, all the governors of the plantations are liable to be called to an account for male-adminiſtration by the court of king's bench in England: but Maryland and Penſylvania, are the only proprietary governments now exiſting; except Barbuda, which belongs to Chriſtopher Codrington, Eſq.

It has been the invariable maxim of all the politer nations, to regulate their government to the beſt advantage of their trading intereſt: becauſe, the opulence, and potency, of any trading nation are principally dependant on its commerce; the increaſe of wealth, and power, having generally been proportionate to the enlargement of trade; and hiſtory fully proves that ruin and deſolation have always attended the loſs of it: the moſt flouriſhing countries are indebted to it for their grandeur; and the moſt opulent, and powerful, have been impoveriſhed, and ſubjugated, by neglecting it: of which Great Britain, and the republic of the United Provinces, are remarkable inſtances of the one; as the ſtates of Venice, and Genoa, are of the other. Great Britain has enjoyed the benefit of a moſt extenſive commerce ſince the diſcovery of America; which, if properly attended to, will contribute more to its future intereſt than any other branches of trade; by enlarging the demand for all its manufactures, and increaſing the means of its naval force: wherefore, it may be proper to take a curſory view of the principal benefits ariſing to Great Britain from the trade of the colonies.

The American plantations take off, and conſume, above one ſixth part of the woollen manufactures exported from Great Britain; which is the chief ſtaple of England, and main ſupport of the landed intereſt. They take off, and conſume, more than double that value in linen, and calicoes, which are either the product of Britain and Ireland, or partly the profitable returns made for that product carried to foreign countries. The luxury of the colonies, which increaſes daily, conſumes great quantities of Engliſh manufactured ſilk, haberdaſhery, houſhold-furniture, and trinkets of all ſorts; as alſo a very conſiderable value in Eaſt India goods.

A great revenue is raiſed to the Britiſh government by returns made in the produce of the plantations; eſpecially in tobacco, which, at the ſame, enables England to bring

her unprofitable trade with France nearer to a balance. Theſe colonies promote the intereſt and trade of Britain, by a vaſt increaſe of ſhipping and ſeamen; which enables them to carry great quantities of fiſh to Spain, Portugal, Italy, and Turky; as alſo furs, logwood, and rice to Holland; whereby they are particularly contributary to Great Britain in enhancing the balance of trade with thoſe countries. If reaſonably encouraged, the colonies are now in a condition to furniſh Great Britain with naval ſtores, oil, roſin, copper-ore, and with pig and bar iron, as much as it can demand; by which means the balance of trade to Ruſſia, Sweden, and Norway, may be conſiderably reduced in favour of Great Britain. The profits ariſing to all theſe colonies by trade, is returned in bullion, or other uſeful effects, to Great Britain; where the ſuperfluous caſh, and other riches, acquired in America muſt center; which is not one of the leaſt ſecurities that Great Britain has to keep the colonies always in due ſubjection. The colonies upon the northern continent are the granaries of America, and a neceſſary ſupport to the ſugar plantations; which could not ſubſiſt without them. Never any people were poſſeſſed of ſo fine a country, and ſo happily ſituated, as that which is ſubject to the crown of Great Britain on the other ſide of the Atlantic ocean; a country of 1,500 miles extent; where every thing that is neceſſary, every thing deſirable in life, is, or may be, produced, in the greateſt abundance, and brought to the metropolis of Great Britain with as little labour and expence almoſt as they may be brought from any diſtant county in England; it being but a ſix weeks voyage in an open ſea, not ſubject to the interruptions and accidents of coaſting voyages.

The eaſtern ſhores of America, on which the Britiſh colonies are ſituated, abound in commodious harbours and navigable rivers; inſomuch that ſhips take in their lading in many places at the planters doors, and then falling down into the ocean, ſail directly home: whereas both the French and Spaniards have a much longer and more difficult navigation to and from thoſe parts of that continent which are poſſeſſed by them.

It is evident, to a demonſtration, that, in theſe countries, it is in the power of Great Britain to raiſe ſilk, hemp, flax, pitch, tar, wine, oil, raiſins, and other fruits; and that the ſugar and tobacco colonies, and fiſheries, ſhe already has in that part of the world, bring in an inconceivable treaſure: but it is as evident theſe articles are not conſidered with that attention their importance ſeems to demand. Every one who has any calculation of the national expences of Great Britain, knows that ſhe lays out annually with foreigners four millions of money and upwards, in ſilks, linen, lace, wine, naval ſtores, and other merchandiſe; which ſhe might make herſelf, if her colonies were encouraged to raiſe materials; and it is computed that thoſe materials would employ half a million of people at home, who are now a burthen to their country. It ſhould alſo be conſidered, that the riches of the Britiſh plantations are the riches of Great Britain; their forces her forces, and their ſhipping her ſhipping; as theſe proſper, ſo will their mother country proſper of courſe; for hither all their wealth flows in the end. The coloniſts either bring their eſtates over to England, if they meet with ſucceſs; or they live in an elegant manner there, and import the Britiſh manufactures. Great Britain would need ſcarce any other foreign trade, therefore would want nothing that other countries produce, if the plantations were fully encouraged; for the materials they might raiſe would abundantly employ all the idle hands in Great Britain, and furniſh them with every thing that contributes to the ſupport or conveniencies of life. Can Great Britain then do too much for her colonies; when, in ſupporting them, ſhe moſt effectually ſerves herſelf? Therefore Great Britain has no reaſon to be afraid of leſſening the revenue by prohibiting foreign manufactures, if it tends to inrich the nation; for the richer the people are, the better able will they be to ſupport the government, and the legiſlature can never be at a loſs for ways and means to raiſe money, if the people have it in their purſes.

But the legiſlature ſhould be cautious of laying high duties on their own produce and manufactures, whether at home or in their colonies; for this has totally deſtroyed ſome branches of their trade, and prevents others from flouriſhing: by this the people of Jamaica were intirely beat out of the cacao, or chocolate trade; other nations being able to afford it cheaper than they could, on account of the duties: by the like conduct, it is apprehended, the ſugar and tobacco trades may be loſt, the duties on which are ſo conſiderable a branch of the revenue. But is it not better to take a ſmall duty, than to loſe all the duties and the trade together? And in Great Britain, is it not the duty on paper made there, that damps the progreſs of the manufacture, and ſtill obliges the merchants to import moſt of their paper from abroad? Indeed, Great Britain may ruin all her trade, and all her manufactures, by high duties; and, when that is done, how is the government to be ſupported? How can money be found to purchaſe even neceſſaries of foreigners? And how are thoſe multitudes of poor to be maintained, that a failure in their manufactures, and plantation trade, may occaſion? But next to high duties, nothing ſurely can be a greater diſadvantage to the Britiſh manufactures, or plantation trade, than the locking up money in banks and funds; which, till theſe were eſtabliſhed, were employed in commerce. The man who lives purely on the intereſt of his money in theſe banks, is the moſt contemptible and uſeleſs member in the commonwealth: inſtead of increaſing his own, and the common ſtock, he chuſes a ſlothful indolent way of life; he takes no pains to ſerve himſelf, his friends, or his country; but, like a certain animal he reſembles, is only uſeful when he dies, and his ſubſtance is transferred to perſons of a more public ſpirit.

From this recapitulation it may be underſtood, that theſe colonies can be very beneficially employed both for Great Britain and themſelves, without interfering with any of the ſtaple commodities of England; which has been one of the principal objections againſt the colony of New England, where the inhabitants have been diſcouraged from raiſing naval ſtores, and have ſet up ſeveral manufactures, which muſt neceſſarily interfere with thoſe of Great Britain. Therefore, it is highly requiſite to encourage a trade with theſe plantations, in all ſuch articles as ſhall make for the mutual benefit of the mother country, and her colonies; for a mutual benefit is a mutual dependence: from whence it follows, that the culture of coffee, cocoa, cohineal, indico, and pimento, ought eſpecially to be encouraged in the mountainous inland part of Jamaica; as alſo the manufacture of bar iron, and raiſing of hemp, flax, indico, and raw ſilk, in the countries between and beyond the mountains, on the back of Georgia, Carolina, Virginia, Maryland, and Penſylvania, and the other northern provinces: for the great complaint againſt the trade to ſome of theſe colonies long has been, that it is inferior to the mercantile profits to be reaped from the navigation of the Baltic; which is more advantageous to the merchant, though very detrimental to his country.

It has been imagined, that the government of the Britiſh northern colonies have been improperly conſtituted; by leaving them diſunited under diſtinct legiſlatures; with ſo remarkable a difference in their religious rites, and their emulation of trade; which ſome gentlemen would have altered to the form of other nations: alledging, that theſe colonies can never defend themſelves againſt the invaſions, and outrages, of the French, and their Indian allies; but by uniting them under one viceroy, or generaliſſimo. The ſame obſervations may be extended to the ſugar colonies, each of them being as much independent upon the other in its polity, as diſtant in its ſituation; not even excepting the iſlands under the governor of the Caribbees: there is little or no intercourſe, and leſs commerce, between thoſe which are ſituated neareſt to the others, and no intercourſe at all between the remoteſt of thoſe iſlands; becauſe, the produce of them all being the ſame, there can be no exchange of commodities, and conſequently no commerce or intercourſe. It has been obſerved, that all princes and ſtates, who have planted colonies, or ſubdued nations, have given the command of them to particular governors in ſubordination to others, who have preſided over the whole, for preventing and ſuppreſſing ſedition; and that each particular government might be ſtrengthened, and

and ſupported, by the reſt, againſt the attacks of their common enemies. It muſt be acknowledged, that in the Roman empire, which contained 120 provinces, and near 300 colonies, there were only 4 prefects, or chief governments, under the emperor: that over thoſe extenſive countries the Spaniards poſſeſs in North and South America, there are but 2 viceroys; that in Canada, and Louiſiana, equal in extent to all the Britiſh colonies, the French have but one governor and chief, or generaliſſimo, who can unite the whole force of the French againſt any one of the Britiſh colonies he pleaſes to attack; while the countries in America poſſeſſed by the Engliſh, ſeem to be in much the ſame ſtate that Great Britain was, on the invaſion of the Romans; divided under ſeveral chiefs, and conſequently eaſily ſubdued, one after another, by the united forces of their enemies. However, the Britiſh government have thought proper to continue their ſettlements under their reſpective conſtitutions; which may contribute to the preſervation of that dependency, and ſubjection, which they owe to their mother country; and prevent any of the provinces from revolting, and ſhaking off their obedience.

By the act of navigation, of the 23d of September 1660, it was ordained, that all the commerce of theſe colonies ſhould be carried on by the way of England: and it is only in time of war that the traders of Boſton and Philadelphia attempt ſending their ſhips directly to the Mediterranean, with the commodities and merchandiſe of their produce. See *Navigation*, *Plantations*, and *Colonies*.

BRITISH *companies of Trade*. See *African Company*, *Eaſt India Company*, *Hamburgh Company*, *Hudſon's Bay Company*, *North Sea Company*, *Ruſſia Company*, *South Sea Company*, and *Turkey Company*.

BROAD, in manufactures, is the breadth of a piece of cloth, ſilk, or ſtuff, or the ſmalleſt extent; the length being the greateſt.

BROAD-*ſide*. A ſea term, for the firing all the guns on one ſide of a ſhip, upon an enemy.

BROCADE. A ſort of ſtuff, or cloth, of gold, ſilver, or ſilk, raiſed, and enriched, with flowers, foliages, or other figures, according to the fancy of the manufacturer; which is prohibited to be imported into Great Britain. See *Embroidery*.

BROCATELLA. A cotton, or coarſe ſilk ſtuff, in imitation of brocade: there are ſome entirely of ſilk, and others intirely of wool: but the Venetian brocatille has been always in moſt eſteem.

BRODERER, *Broiderer*, or *Embroiderer*, a perſon who works devices, with a needle, upon ſilk, or cloth. See *Embroidery*.

BRODERERS *Company of London*, was incorporated, by letters patent in 1561, by the name of The keepers, or wardens, and company of the art or miſtery of the broderers of the city of London: which is a ſociety governed by 2 keepers, or wardens, with 40 aſſiſtants, and 115 members on the livery, who have a ſmall but convenient hall, in Gutter-lane, where they manage their affairs; and their fine is 5 l. upon admiſſion.

BROKAGE, or *Brokerage*, the pay, reward, or allowance, which is given to a broker, or perſon that finds cuſtomers, and ſells them the goods of another perſon; whether a ſtranger or a native.

BROKERS, are of ſeveral kinds; exchange-brokers, ſtock-brokers, pawn-brokers; and common brokers, who ſell houſhold-furniture, and other goods.

Exchange-brokers are a ſort of negotiators, who contrive, make, and conclude bargains, between merchants and tradeſmen, in matters of money, or merchandiſe; for which they have a fee, commiſſion, or premium. They make it their buſineſs to know the alteration of the courſe of exchange; to give the merchants information of its fluctuating condition; and to notify, to thoſe who have money to receive or pay beyond ſea, who are proper perſons for negotiating the exchange with; and when the matter is accompliſhed, that is, when the money is paid, they have 2 s. for every hundred pounds ſterling.

By the ſtatute of the 8th and 9th of W. III. for reſtraining the ill practice of brokers, and ſtock jobbers, it was enacted, that no perſon ſhould exerciſe the employment of an exchange-broker in London, Weſtminſter, or within the bills of mortality; without being admitted, and licenſed, by the Lord Mayor and court of aldermen of London; and having, upon ſuch admiſſion, taken an oath for the due execution of his truſt; and alſo entered into bond to the Lord Mayor, in the penalty of 500 l. for the faithful diſcharge of his office; that the number of ſuch brokers ſhould not, at one time, exceed 100; and the Lord Mayor, and court of aldermen, ſhould cauſe their names, and places of habitation, to be publickly affixed on the Royal Exchange, and other public places: and every ſworn broker, after his admiſſion, ſhould carry about him a ſilver medal, having the King's arms on one ſide, and the arms of the city of London, with his own name, on the other ſide; which he ſhould produce at the concluding of every bargain to the parties concerned, upon pain to forfeit 40 ſhillings for every omiſſion: that if any perſon acted as a broker, not being duly omitted, he ſhould forfeit 25 l. for every offence: and in caſe any perſon knowingly employed another to deal for him as a broker, or ſtock-jobber, who was not legally admitted, ſuch perſon ſhould forfeit 50 l.: and if any perſon, not being a legal broker, ſhould act, and deal, in diſcounting tallies, or bills; or in ſtock-jobbing, in ſelling ſtock, or any ſecurity upon any funds granted by parliament, he ſhould be liable to the forfeiture of 500 l. and to ſtand in the pillory three ſeveral days, for the ſpace of one hour: that every ſworn broker ſhould keep a book or regiſter; and therein enter all contracts, and bargains, he ſhould make between any perſons, on the day the contract was made, under the penalty of 50 l. for any omiſſion.

By the ſtatute of the 6th of Q. Anne it was enacted, That all perſons acting as exchange-brokers within London, ſhould, upon their admiſſion, pay to the chamberlain 40 s.; and ſhould alſo annually pay 40 s. upon the 29th of September, for the uſe of the chamber. Every exchange-broker, by the 10th of Q. Anne, is to take no reward exceeding 2 s. for every 100 l. under forfeiture of 20 l.; and if any broker deals for himſelf in the exchange, or remittance of monies; or buys any tallies, orders, bills, or ſhares, in any joint ſtock, for his own uſe; or buys goods, or merchandiſes, to ſell again; or makes any profit, in buying, or ſelling, any goods, more than the brokage allowed; he is to forfeit 200 l. and be for ever incapacitated from acting as a broker.

The ſtatute of the 3d of George II. regulates the number of exchange brokers within the city of Briſtol, and the method of their negotiating buſineſs.

In France, till the middle of the 17th century, their exchange brokers were called *courtiers de change*; but, by an arret of council, in 1639, the name was changed for that more creditable one of agents *de change*, *banque*, *and finance*: and, in the beginning of the 18th century, to render the office ſtill more honourable, the title of *King's counſellors* was added. See *Agent*, and *Factor*.

The exchange-brokers at Amſterdam, called *makelaers*, are of two kinds; the one like the Engliſh, called *ſworn brokers*, becauſe of the oath they take before the burgomaſters; the others negotiate without any commiſſion, and are called *walking brokers*. The firſt are 395 in number, whereof 375 are Chriſtians, and 20 Jews; the others are near double that number: ſo that, in Amſterdam, there are about 1000 exchange brokers. The difference between the two conſiſts in this; that the books, and perſons, of the former are allowed as evidence in the courts of juſtice; whereas, in caſe of diſputes, the latter are diſowned, and their bargains diſannulled.

At Grand Cairo, and ſeveral places of the Levant, the Arabs, who undertake the office of exchange-brokers, are honoured with the appellation of cenſals. See *Cenſals*.

In the other Eaſtern countries, all affairs are tranſacted by a ſort of brokers, whom the Perſians call *delal*, or great talkers. The manner of making their markets is very ſingular; for after the brokers have launched out into long, and uſually impertinent, diſcourſes; coming towards a concluſion, they only converſe with their fingers. The brokers, belonging to the buyer and ſeller, each take the other by the right-hand, which they cover with their coat, or a handkerchief: the finger ſtretched out, ſtands for 6; bent, for 5; the tip of the finger for one; the whole hand

for 100; and the hand clenched for 1000: they will expreſs even pounds, ſhillings, and pence, by their hands; and, during all this myſtic commerce, the two brokers appear as cold and compoſed as if there were nothing tranſacting between them.

Stock-BROKERS, are thoſe employed to buy and ſell ſhares in the joint ſtock of a company, or corporation. The ſtatute of the 7th of Geo. II. regulates the method of ſtock-jobbing; which was made perpetual by the 10th of Geo. II. See *Stock*.

Pawn-BROKERS, are perſons who keep ſhops, and lend out money to neceſſitous people upon pledges, generally on uſurious conditions; and are ſometimes called pawn-takers, or tallymen; as alſo fripers, or friperers. Theſe ſort of people are very numerous in London and Weſtminſter, where they are tolerated under ſeveral reſtrictions; being allowed to take the intereſt of 6 d. a month for the loan of 20 s.: however, by the ſtatute of the 1ſt of James I. it was enacted, That the ſale of goods, wrongfully gotten, to any broker, within 2 miles of London, ſhould not alter the property: and if any broker having received ſuch goods, ſhould not, upon the requeſt of the true owner, truly diſcover them how and when he came by them, and to whom they are conveyed; he is to forfeit double the value thereof to the owner.

In ſeveral cities of Italy, there are companies eſtabliſhed by authority, for the letting out money on pawns, called *mounts of piety*; an honourable title like that of the charitable corporation in England; but little becoming ſuch inſtitutions; becauſe the loan is not *gratis*, but more uſurious than the charitable corporation erected in London under Q. Anne, for the relief of the induſtrious poor, when 30,000 l. was raiſed for enabling indigent manufacturers and traders to take up money at common and legal intereſt. See *Charitable Corporation*.

BRONZE. A factitious metal, compoſed of the mixture of ſeveral others.

For the making of beautiful bronze ſtatues, the allay is made with one half of red copper, and the other of braſs: but the Egyptians, to whom ſome attribute the invention of this art, uſed two thirds braſs, and the other third copper.

In ordinary bronze the allay is with tin, and ſometimes with lead: but there is a kind of compoſition of copper, which is, in reality, bronze, with the ſole difference of the quantity of tin mixed therein; the proportion of the allay for the metal being from 12 to 25 *per cent.*

Bronze, beſides its uſe for the making of ſtatues, medals, veſſels, mortars, cannons, and bells, furniſhes alſo medicine with ſome remedies; its lees, or ſediment, called *diphryes*, being of ſome uſe.

BROOMING, or *Breaming of a ſhip*, the burning off the filth ſhe has contracted on her ſides with ſtraw, reeds, broom, or the like; when ſhe is on a careen, or on the ground. See *Careening*.

BROUAGE. A fortreſs in the territory of Santoign, in France, ſituated in 1 deg of W. lon. and 45 deg. 50 min. of N. lat. on a bay, affording great quantities of the beſt ſort of ſalt; from thence called bay-ſalt. See *Salt*.

BROUERSHAVEN. A port-town of the United Provinces, in the province of Zealand, and iſland of Schouen, ſituated on a bay of the ſea, in 3 deg. 55 min. of E. lon. and 51 deg. 50 min. of N. lat.

BRUGES. A city, and port-town, of the Auſtrian Netherlands, ſituated in 3 deg. 5 min. of E. lon. and 51 deg. of N. lat. See *Netherlands*.

BRUNSBUTTLE. A port-town of Holſtein, in the circle of Lower Saxony, in Germany; ſituated in 8 deg. 42 min. of E. lon. and 54 deg. 30 min. of N. lat. at the mouth of the river Elbe. See *Germany*.

BRUNSWICK. A dutchy in the circle of Lower Saxony. See *Germany*.

BRUNTIS-*Iſland*, on the coaſt of Fife, in Scotland, is ſituated in 3 deg. of E. lon. and 56 deg. 12 min. of N. lat.

BRUSSELS, the capital of Brabant, and of all the Auſtrian Netherlands, ſituated in 4 deg. 6 min. of E. lon. and 50 deg. 50 min. of N. lat. on the river Senne. See *Netherlands*.

BRYONY. A medicinal root, chiefly uſed as an uterine detergent; in which quality it enters the compoſition of an officinal water, denominated, from it, *aqua bryoniæ*; generally preſcribed againſt hyſteric diſorders.

BUBBLE, in commerce, a cant name given to projects for the raiſing of money on imaginary grounds; very frequent in England and France about the years 1719, 1720, and 1721.

The pretended deſign of theſe undertakings was to raiſe a ſtock for the retrieving, ſetting on foot, or carrying on ſome promiſing and uſeful branch of trade, manufacture, machinery, or the like; in order to which propoſals were given out, ſhewing the advantages of the deſign: the ſum neceſſary to carry on the affair, together with the profits expected from it, being divided into a certain number of ſhares, or ſubſcriptions, to be purchaſed by perſons diſpoſed to be adventurers: but the real deſign in ſome, was to raiſe money for the private advantage of the projectors, to be laid out by them in South Sea ſtock, or other funds, in hopes, by the riſe thereof, to be able to refund the ſubſcribers money, with profit to themſelves; though, in others, the deſign was abſolutely to defraud the adventurers of their ſubſcription-money, without any view to reſtitution.

There was a third kind ſomewhat different; the projectors proceeding more ſecurely by propoſals of having books opened, and ſubſcriptions taken at ſome time to come; yet money was taken by way of premium to entitle the admiſſion of ſubſcribers as ſoon as the affair ſhould be ripe, for dividing into ſhares: ſeveral thouſand ſhares being thus very frequently beſpoke in one day; and premiums, from one ſhilling to ſome pounds, paid thereupon to the profits of the projectors.

The number of bubbles, and their qualities, were very extraordinary; ſome of them authoriſed by patents, others formed into corporations for fiſheries, inſurances, digging of mines, and other purpoſes: but poſterity, doubtleſs, will be ſurpriſed to hear of bubbles for cleaning the ſtreets; others for furniſhing ſhoes; others for ſtockings; others for phyſic; others for the maintenance of baſtard children; others for the buying of bad titles; and others for the lending of money. See *Company*, *South Sea Company*, and *Charitable Corporation*.

BUCCANEER, is a perſon who hunts bulls, cows, and boars, in the Weſt Indies, particularly among the French and Spaniards at St. Domingo; and afterwards dries and ſmokes the fleſh, after the manner of the Americans. Theſe buccaneers hunt more for the hides of cattle than the fleſh, and ſend great quantities of the former in packs to France and Spain: but they buccan or dreſs the boars fleſh with ſalt, and ſell it in packs or bundles among the French and Spaniſh colonies, or to the crews of ſhips.

BUCCANEERS, is alſo a term given to the pirates, or free-booters, of America, who formerly infeſted theſe ſeas; compoſed of Engliſh, French, Portugueze, and Dutch: theſe people were very numerous, had ſtrong veſſels, and committed many piratical expeditions on the Spaniſh main; where they plundered many towns, and made terrible devaſtation in the country; returning to Jamaica with their plunder, which was ſo conſiderable, and beneficial to the iſland, that the Engliſh governors, though they did not openly protect and encourage their undertakings, were far from refuſing them an aſylum, while they ſpread ſuch a flow of treaſure in the country; for the gang under Morgan, in their ſeveral expeditions, brought to Jamaica no leſs than 950,000 pieces of eight in ſpecie; beſides cloth, linen, ſilk, ſlaves, and other profitable merchandiſes, to a prodigious value; which occaſioned ſeveral miſunderſtandings between the courts of London and Madrid.

BUCCASSINE. A name formerly given to certain kinds of gummed linnen cloths, dyed with different colours. The Smyrna buccaſines are cotton cloths dreſſed, and calendered with paſte, manufactured uſually at Tyre, and in ſome of the neighbouring villages.

BUCKLE. An inſtrument made of various ſorts of metal, uſed to faſten the harneſs of a horſe; the ſhoes of men and women, and the like; in ſuch faſhion and form, as beſt pleaſes the artificer or cuſtomer.

BUCKRAM, coarſe linen cloth, ſtiffened for the uſe of taylors, upholders, ſtay-makers, and other workers with the

the needle: as alſo for wrappers, or covers, for cloths, ſerges, and other merchandize.

BUDZIAC *Tartary.* See *Tartary.*

BUENOS-AYRES, one of the moſt conſiderable Spaniſh ports in the province of La Plata, on the E. coaſt of S. America, ſituated in 60 deg. of W. lon. and 36 deg. S. lat. on the S. ſhore of the river Plata, 50 leagues within its mouth; though here the river is 7 leagues broad. See *Spaniſh America.*

BUFF, or *Buffle*, a ſort of leather, prepared from the ſkin of the buffalo, a wild animal ſomewhat like an ox; which is common enough about the Levant, particularly near Smyrna and Conſtantinople; as alſo in Egypt, and ſeveral other parts of Aſia and Africa; where, as well as in Italy, it is frequently tamed, and put to labour as oxen are in England.

The ſkin of the buffalo, being dreſſed in oil, after the manner of ſhammy, makes what is called *buff-ſkin*; in uſe among military men for its exceeding thickneſs and firmneſs.

Buff-ſkins, or buff-leather, is a very conſiderable article in the Engliſh, French, and Dutch commerce, at Conſtantinople, Smyrna, and along the coaſts of Africa. The hair, and horns, of the buffalo are alſo uſed in trade; the former for ſtuffing chairs, and other things; the latter for ſnuff-boxes, beads, and in turnery work.

The ſkins of elks, oxen, and other like animals, when dreſſed in oil, and prepared after the ſame manner as that of the buffalo, are likewiſe denominated buff, and uſed for the ſame purpoſes. See *Leather.*

BUGIA. A port-town, capital of a territory of the ſame name, in the kingdom of Algiers, ſituated in 4 deg. of E. lon and 35 deg. 30 min. of N. lat. at the mouth of the river Major, on a bay of the Mediterranean. See *Barbary.*

BUGIE. A port town of Egypt, ſituated in 36 deg. of E. lon. and 22 deg. of N. lat. on the W. ſhore of the Red ſea, almoſt oppoſite to Ziden, the port-town to Mecca.

BUGLES, are long, thin, ſlender, glaſs beads; and the duty on importation is, for the great ſort 4 s. the pound; 6 s. 8 d. for the ſmall, or ſeed-bugle; and 8 s. for the lace. See *Beads.*

BULAC. A town of Egypt, ſituated in 32 deg. of E. lon. and 30 deg. of N. lat. on the E. ſhore of the river Nile, 2 miles W. of Grand Cairo, of which it is the port-town; where all veſſels going up and down the Nile make ſome continuance.

BULBA, more uſually called *Forle*, a ſmall copper coin current in Egypt; 240 of which are equal to 2 s. 6 d. ſterling.

BULDGE. See *Bildge.*

BULK *of a ſhip*, denotes her whole content in the hold, for ſtowage of goods. See *Ship* and *Hold.*

BULK *heads*, are partitions made acroſs a ſhip, with boards of timber; whereby one part is divided from another: the *bulk head afore* being the partition between the fore-caſtle and gratings in the head, and in which are the chaſe-ports.

BULL. See *Cow.*

BULLION, denotes gold, or ſilver uncoined, in the maſs, or billet; being either when ſmelted from the native ore, and not perfectly refined, or when perfectly refined, and caſt into bars or ingots: but the exact value of bullion cannot be known without an aſſay; it being allowed, in every country, to mix a certain proportion of baſer metal with gold and ſilver, as well for bullion as for the ſtandard.

Silver and gold, whether coined or uncoined, though uſed for a common meaſure of other things, are no leſs a commodity than wine, tobacco, or cloth; and may, in ſeveral caſes, be exported as much to national advantage, as any other commodity: for no nation can ever be conſiderable in trade that prohibits the exportation of bullion: but it is more for the public advantage to export gold or ſilver coined, than uncoined; becauſe, in the former, ſuch a nation has the advantage of the manufacture.

Where the national exports are inferior to the imports, or where a nation ſells leſs than it buys from another; the deficiency muſt be made up in money; as is the caſe with the Engliſh and Dutch, in their trade to the Levant and the Eaſt Indies, where they are obliged to make up the difference in ſpecie. The Chineſe are extremely fond of ſilver, and never ſet an equal value upon gold: ſo that in this ſpecie of gold, both in bullion and coin, the Engliſh carry on a large commerce, by exporting and giving ſilver, either coined or in bullion, in exchange for it, with a profit of 40 *per cent.*; by which traffic, after deducting expences and inſurance, there remains to the Engliſh a neat profit of 30 *per cent.*

Bars of ſilver and gold, are imported, by all nations, from Spain and Portugal; where, eſpecially in Spain, it is impoſſible to prevent the extraction, though the penalties extend to forfeiture of life and effects; which will be perpetually the caſe, till Spain is no longer in debt to other nations; a point that is alone attainable by ſelling more than they buy: and this is evident, from what happens in England, where the exportation of gold and ſilver is allowable, with good effect; for, by certain circulations of commerce, ſome portions are drawn out for the Eaſt Indies, Turky, Perſia, Ruſſia, Holland, and other parts, and are entered in the very cuſtom-houſes of England; yet this kingdom is always opulent; for if by one port there goes out ten, by another comes in a hundred pieces; which proceeds from their ſelling more to foreigners in general than it buys; and particularly to Spain and Portugal.

While the Britiſh trade is open, and vaſt quantities of bullion annually imported, it may ſeem ſtrange that ſilver ſhould grow ſcarce; but when it is conſidered how much is carried away to the Eaſt Indies, and how little encouragement the importer hath to ſend it to the mint, when he can ſell it for more to export, than it will come to when coined, the wonder will ceaſe; and except ſome care be taken in this matter, England may ſoon be reduced to ſuch ſtraits, that the manufactures muſt ſtand ſtill; for though gold may ſerve for large payments, it cannot anſwer the occaſions of the manufacturers, who are to make their payments among the poor. As for gold, there is no need to give encouragement to bring it to the mint; becauſe it is only a commodity, and not the ſtandard, as ſilver is: beſides, it is generally worth more in England than in any other country; and it is apparent, from the great quantity which is coined yearly more than of ſilver, that it is the intereſt of every perſon to ſend it to the mint.

By the ſtatute of the 15th Cha. II. it is made lawful to export, out of any port of England or Wales, all bullion of gold or ſilver; firſt making entry thereof in the cuſtom-houſe, without paying any duty.

By the ſtatute of the 6th and 7th of Will. III. no perſon is to caſt ingots or bars of ſilver, in imitation of Spaniſh bars or ingots; nor ſtamp any mark upon any ingot, or bar, in likeneſs of the Spaniſh marks, upon pain to forfeit the ſilver ſo caſt, and 500 l. Any broker, not being a trading goldſmith or refiner, buying or ſelling any bullion, is to ſuffer ſix months impriſonment: and in caſe any perſon enters or ſhips any bullion, allowed to be exported, other than in the name of the true owner or importer, the exporter is to forfeit the ſame, or the value. See *Coin*, as alſo *Gold* and *Silver.*

BULLION, is alſo uſed for the place where the King's exchange is kept; or where gold and ſilver is brought in the lump, to be tried or exchanged.

BUNIAS, or the ſeed of wild turnip, is chiefly uſed in the compoſition of the theriaca: ſometimes the ſeed of the garden turnip is ſubſtituted in its room; but the difference is eaſily known by the taſte, that of the bunias being much more poignant.

BUNT *of a ſail*, is its middle part, purpoſely formed into a kind of bag, or pouch, to catch the more wind; being chiefly uſed in top-ſails; for courſes are uſually cut ſquare, or at leaſt with a ſmall allowance for bunt, or compaſs: ſo that when mariners ſay, *the bunt holds much leeward wind*, they mean it hangs too much to the leeward.

BUNT-*lines*, are ſmall lines, made faſt to the bottom of the ſails, in the middle part of the bolt-rope, to a crengle, and ſo are reeved through a ſmall block ſeized to the yard; their uſe being to trice up the bunt of the ſail, for the better furling it up.

BUOY, at ſea, is a piece of wood, or cork, or ſometimes an empty caſk well cloſed, ſwimming on the ſurface of the

water, and faſtened, by a chain or cord, to a large ſtone, piece of broken cannon, or the like; ſerving to mark the dangerous places near a coaſt; as rocks, ſhoals, wrecks of veſſels, anchors, and other impediments to navigation.

EUOY, is alſo uſed for a piece of wood, or a barrel at ſea, faſtened ſo as to float directly over the anchor, that the men, who go in the boat to weigh the anchor, may certainly know where it lies: and a merchant-ſhip, lying in a harbour, muſt have ſuch a buoy at her anchor; or if not, the maſter is anſwerable for half the damage that may accrue for want of it.

BUOY *in the Nore*, is a buoy in the mouth of the Thames; placed there to direct mariners to avoid a dangerous ſand.

BURAIL, called more uſually *ferrandine*, is a ſtuff woven with ſilk, wool, hair, thread, or cotton. See *Ferrandine*.

BURATINE, are ſilks brought from Perſia, by the way of Ziden; which are weighed by the damaſquin of 600 drachms, amounting to about 4 pounds avoirdupois.

BURBAS. A ſmall coin, ſtruck at Algiers, with the dey's arms, 6 of which were formerly worth an aſper, or a halfpenny, but now are worth only one half. There are alſo ſome coined at Tunis, and current upon the footing of thoſe in Algiers.

BURDEN, or *Burthen*, of a ſhip, ſignifies its content, or the number of tons it will carry: to determine which, it is neceſſary to multiply the length of the keel, taken within board, by the bread of the ſhip within board, taken from the midſhip beam from plank to plank; and the product by the depth of the hold, taken from the plank below the keelſon to the under part of the upper deck plank; and divide the laſt product by 94, when the quotient is the content of the tonnage required. See *Freight*.

The burden of a ſhip is reckoned by the ton, of 2000 lb. weight: thus, if it is ſaid a ſhip is burden 100 ton, it is thereby meant that the ſhip is able to carry in merchandizes, ammunition, proviſions, men, and ballaſt, a weight of 100 times 2000 pounds, or 200,000 lb.

BURGUNDY. A particular kind of fine flavoured wine, of the growth of the province of Burgundy, in France; being of a paliſh red colour, and very animating to the ſpirits.

BURLINGTON. The capital of New Jerſey, in North America, ſituated in 74 deg. of W. lon. and 40 deg. 40 min. of N. lat. See *Britiſh America*.

BURNING-*glaſs*. A piece of glaſs, or metal, ſo ground as to collect the ſeveral rays of the ſun that fall upon it into one point, and thereby render the heat ſo intenſe as to burn whatever lies in its way, or ſphere of activity.

BURNISHED *gold*. See *Gold burniſhed*.

BURNISHER, one who ſmooths, poliſhes, or brightens metal.

BURNT *lead*. See *Lead*.

BURSA, or *Pruſa*, the capital of Bythinia, in Aſia Minor, ſituated in 29 deg. of E. lon. and 40 deg. 30 min. of N. lat. remarkable for ſilk, and a manufacture of tapeſtry. See *Turky*.

BURSE. A different name for an exchange, eſpecially in the Aſiatic countries, where the merchants aſſemble to tranſact their buſineſs. See *Exchange*.

BUSARD, or *Buſſe*, one of the nine kinds of veſſels, or regular caſks, uſed in France; particularly at Anjou, and Poictu, for wines, and others liquors; being the half of a pipe.

BUSHEL, an Engliſh dry meaſure, containing 4 pecks, or 8 gallons, or one eighth of a quarter.

By the 12th of Hen. VII. it was enacted, That a buſhel ſhould contain 8 gallons of wheat; the gallon 8 pounds of wheat troy weight; the pound 12 ounces troy weight; the ounce 20 ſterlings; and the ſterling 32 grains, or corns, of wheat, growing in the midſt of the ear.

At Paris the buſhel is divided into two half buſhels; the half buſhel into two quarts; the quart into two half quarts; the half quart into two litrons; and the litron into two half litrons: but, in other parts of France, the buſhel is more or leſs; and at Boudeaux 38 buſhels of corn is equal to 10 quarters and $\frac{3}{8}$ of London.

BUSIOCHE. A kind of woollen cloth manufactured in Provence, in France.

BUSS, called by the Dutch *Haring buis*, a kind of veſſel, or pink, uſed by the Engliſh, French, and Dutch, for the fiſhing of herrings, being from 48 to 60 tons, and ſometimes more; having two ſmall cabins, one at the prow, and the other at the ſtern. Every buſs, particularly among the Dutch, has its maſter, an aſſiſtant, a mate, and ſeamen in proportion to its ſize: the maſter commands in chief, without whoſe expreſs orders the nets can neither be caſt into, nor taken out of the ſea. The aſſiſtant is ſecond in command; and the mate next to him, who has an eye over the men, and moſt other neceſſaries to be tranſacted aboard the veſſel. See *Herring Fiſhery*.

BUTCHER. A perſon exerciſing the art of butchery, or ſlaughtering of cattle, or expoſing their fleſh to ſale.

BUTCHERS *company of London*, appears to be a very ancient fraternity; for, in the 26th of Henry II. in the year 1180, it was fined in the exchequer, as an adulterine guild, being ſet up without the royal licence: however, it was not incorporated till the 3d of James I. who, by letters-patent in 1605, incorporated the ſame, by the title of The maſter, wardens, and commonalty, of the art, or myſtery, of butchers of the city of London: which is a corporation conſiſting of a maſter, 5 wardens, 21 aſſiſtants, and 214 liverymen; who have a very neat and convenient hall in Pudding-lane, to diſpatch their affairs in; and whoſe fine is 2 l. upon admiſſion.

By the ſtatute of the 4th of Henry VII. it was enacted, That no butcher ſhould ſlay any beaſt within the walls of any city, or walled town in England, except Carliſle, upon pain to forfeit for every ox 12 d. and for every cow and other beaſt 8 d.

By the 1ſt of James I. no butcher is to gaſh, ſlaughter, or cut, any hide of an ox, bull, ſteer, or cow, in flaying thereof, or otherwiſe; whereby the ſame ſhall be impaired and hurt, on the penalty of 20 d. for every hide. No butcher is to water any hide, except in June, July, or Auguſt; or offer to ſale any hide being putrified and rotten: they are not to kill any calf, to ſell, being under five weeks old; nor are they to uſe the craft and myſtery of a tanner.

By the 15th of Cha. II. no butcher is to ſell, or expoſe to ſale, any fat oxen, ſteers, runts, kine, heifers, calves, ſheep, or lambs alive, on pain to forfeit double the value of the cattle.

By the 5th of Q. Anne, no butcher is to ſell, in London and Weſtminſter, or within 10 miles thereof, to any other butcher, any fat cattle, or ſheep, alive, or dead, upon pain to forfeit the value: though, by the 7th of Q. Anne, the above act is not to extend to the ſelling of dead calves, ſheep, or lambs, by one butcher to another.

BUTLERAGE *of wines*, is an impoſition on ſale wine brought into England, which the King's butler in any port, by order of the ſteward of the houſhold, may take of every ſhip; the ſame amounting to 2 s. for every ton imported by ſtrangers.

BUTRINTO. A port-town of the province of Epirus, or Canina in Turky, ſituated in 20 deg. 40 min. of E. lon. and 39 deg. 45 min. of N. lat. oppoſite to the iſle of Corfu, at the entrance of the gulph of Venice. See *Turky*.

BUTT, is uſed for an Engliſh veſſel, or liquid meaſure, either of wine or beer; the former, otherwiſe called a pipe, containing 2 hogſheads, or 126 gallons; and the latter containing 2 hogſheads, or only 108 gallons: but, in dry meaſure, a butt of currants is from 15 to 22 hundred weight.

BUTT, or *Butt-end*, in the ſea-language, denotes the end of any plank, which joins to another on the outſide of a ſhip under water: hence, when a plank is looſe at one end, they call it *ſpringing a butt*; to prevent which, ſhips are uſually bolted at the butt-heads, that is, at the plank ends.

BUTTER. A fat, unctuous ſubſtance, prepared or ſeparated from milk by beating or churning it, which is one of the principal commodities of Ireland and the United Provinces, from whence the American plantations are generally ſupplied.

In England, that part of Suffolk called High Suffolk, being a rich ſoil, is for a long tract of ground entirely employed in

in dairies; from whence the butter is barrelled, or often pickled up in ſmall caſks, and ſold, not in London only, but ſent to the American plantations; however, Cheſhire and Glouceſterſhire are the moſt celebrated counties for cheeſe. See *Cheeſe*.

The ſtatute of the 13th of Cha. II. regulates the manner of packing butter for ſale: that of the 32d of Cha II. prohibits the importation of butter and cheeſe from Ireland; and that of the 4th and 5th of Will. and Mary contains proper directions for the warehouſe-keepers, weighers, ſearchers, or ſhippers, of butter and cheeſe in any port, to receive all butter and cheeſe, and ſee it carefully ſhipped.

The quantity of butter generally imported every year in the port of London from York, Hull, Scarborough, and Stockton, is about 115,000 firkins, from Newcaſtle upon Tine 15,700 firkins, and from the county of Suffolk 56,700 firkins. There are alſo annually brought to London by land-carriage about 75,000 firkins of Cambridge butter, and about 30,000 firkins from all other parts of the kingdom; the whole amounting to 292,263 firkins; which being reduced to pounds, at 56 lb. the firkin, the ſame will appear to be 16,366,748. See *Cattle*.

BUTTON. A kind of ſmall bowl flatted underneath; being an ornament in dreſs, and uſed for cloſing the two ſides of a coat, or ſome other garment: of which there are ſeveral ſizes, faſhions, and materials; as of gold, ſilver, tin, or braſs, as alſo of ſilver thread, ſilk, goats-hair, linen thread, hemp, horſe-hair, horn, and jet; as likewiſe of precious ſtones, as diamonds, agates, mocos and others.

By the ſtatute of the 4th and 5th of Will. and Mary, no foreign buttons are to be imported, ſold, or exchanged, in Great Britain, upon pain of forfeiting the buttons, and incurring the further penalty of 50 l.

By the 4th of Geo. I. no taylor, or other perſon, is to make, ſell, ſet on, uſe, or bind on any cloaths, buttons, or button-holes, made of, or bound with cloth, ſerge, drugget, frize, camblet, or any ſtuffs that cloaths are uſually made of, on forfeiture of 40 s. for every dozen of ſuch buttons, and button-holes, ſo made or ſold, or in proportion for a leſſer quantity; beſides, ſuch garments expoſed to ſale are to be ſeized and forfeited. And, by the 7th of George I. no perſon is to uſe or wear on any cloaths, buttons, or button-holes, ſo made, on forfeiture of 40 s. for every dozen, or in proportion for a leſſer quantity: however, neither of theſe acts are extended to cloaths made of velvet.

BUTTON's *Bay*, is the north-part of Hudſon's bay in North America; whereby Sir Thomas Button ineffectually attempted to diſcover a N. W. paſſage after Hudſon miſcarried. See *Hudſon's Bay*.

BUTTS. A ſort of tanned hides. See *Hide*.

C.

CAB

CAACHIRA. A name which the native Americans give to the plant of indigo.

CABALLEROS, or *Cavalleros*. A kind of Spaniſh wool.

CABBAGE. A cant word in trade, to expreſs any thing that is pilfered privately; as remnants of cloth or ſilk, retained by tailors, mantua-makers, or others, after finiſhing the garment, or other work.

CABBIN, or *Cabin*, in a ſhip, is a room, or partition, belonging to the captain, mate, or paſſengers, to lie or be in alone.

CABECA, or *Cabeſſa*, is a term among ſuch of the Portugueſe who trade to the Eaſt Indies for ſilks, where they diſtinguiſh theſe goods by the names of cabeca and bariga, or head and belly; the former being the fineſt, and the latter from 15 to 20 *per cent.* inferior to them. The Dutch have alſo a great trade in theſe ſilks, which they diſtinguiſh by the names of the moor cabeſſa, and the common cabeſſa; but the Indians endeavour to impoſe upon all Europeans, by mixing them together, and paſſing the one off for the other.

CABESAS. A particular kind of wool, ſhorn from the ſheep of the province of Eſtramadura, in Spain.

CABIDOS, *Cavidas*, or *Cavidos*. A kind of long meaſure uſed in Portugal, and in the Portugueſe ſettlements in India, for linens, ſtuffs, and other things, being $\frac{3}{4}$ of an Engliſh yard.

CABINDA, or *Cabenda*. A port-town of Congo, in Africa, ſituated in 12 deg. of E. lon. and 4 deg. of S. lat. See *Guinea*.

CABINET. A kind of cheſt, with ſeveral drawers, made of different kinds of the beſt wood, to lay up money, writings, or other valuable effects in, or only uſed for ornament in furniture; from whence is denominated the trade of a cabinet-maker, whoſe buſineſs conſiſts in making all kinds of cabinet-goods; as tables, bureaus, chairs, and other houſhold-furniture.

CABLE. A thick, long, three ſtrand rope, commonly made of hemp; ſerving to hold ſhips faſt at anchor, to tow veſſels in large rivers, and other offices in navigation.

Every cable, of whatever thickneſs it is, ſhould be compoſed of three ſtrands, each ſtrand of three ropes, and each rope of three twiſts; the twiſt containing a certain number of threads of yarn, according to the dimenſions of the cable; but every cable ſhould be three inches in diameter at leaſt, thoſe that are leſs being generally called ropes.

The following is a table, to ſhew the number of threads of which cables ſhould be compoſed, with regard to their circumference, from 3 inches to 20, and from 48 threads to 1943.

Inches.	Threads.	Inches.	Threads.
3	48	12	699
4	77	13	821
5	121	14	952
6	174	15	1093
7	238	16	1244
8	311	17	1404
9	393	18	1574
10	485	19	1754
11	598	20	1943

To find, by this table, the weight that a cable of a certain length given ſhould have, as for inſtance, from 110 to 120 fathoms in length, the thickneſs of the cable muſt be meaſured by its circumference; and in the table muſt be ſeen how many threads, relative to this circumference, it ſhould have; afterwards, the number of threads muſt be multiplied by four, each thread of the neceſſary length for ſpinning out the cable of the propoſed extent being to weigh about 4 lb. and the product of the multiplication

CAC

will give near the matter the weight of the cable. Thus a cable of 20 inches in circumference, which, purſuant to the table, ſhould have 1943 threads, will weigh 7772 pounds; tho' this is to be underſtood of a new cable, not as yet dawbed over with tar.

A TABLE for judging of the weight of a cable by its circumference.

Inches.	wt. or lb.	Inches.	wt. or lb.
3	192	12	2796
4	308	13	3284
5	484	14	3808
6	606	15	4372
7	952	16	4976
8	1244	17	5616
9	1572	18	6296
10	1940	19	7016
11	2392	20	7772

Every merchant-veſſel, how ſmall however, has three cables; being the main, or maſter cable, which is that of the chief anchor; the common cable; and the ſmall one; but the ordinary length of the great cable is 110 or 120 fathoms or braces: hence, at ſea, cable, or cable's length, is alſo uſed for a meaſure of 120 fathoms. See *Fathom*.

By the ſtatute of the 35th of Queen Elizabeth, it was enacted, That if any perſon ſhould make cables of old and over-worn ſtuff, which ſhould contain above 7 inches in compaſs, every perſon ſo offending ſhould forfeit four times the value; and if any perſon ſhould tar any halſers, or other cordage, made within the realm, of ſuch old and over-worn ſtuff, not containing 7 inches in compaſs, and ſhould by retail put to ſale the ſame, being ſo tarred, every perſon ſo offending ſhould forfeit treble the value, and be impriſoned during pleaſure.

The duty on cables imported into Great Britain is 13 s. 4 d. the hundred weight: and, by the ſtatute of the 6th of Queen Anne, no foreign cordage, or cable-yarn, imported, is to have any allowance or draw-back of duties on exportation. See *Stores*.

The cable is well laid, is a term among ſeamen, when it is well wrought.

Serve the cable, or *plant the cable*, ſignifies to bind it about with ropes, or clouts, to keep it from gauling the hauſe.

To ſplice a cable, is to make two pieces faſt together, by working the ſeveral ſtrands of the rope one into another.

To coil the cable, is to roll it up round in a ring; of which the ſeveral rolls, upon one another, are called *cable-tire*.

Pay more cable, is to let it more out from the ſhip, that the boat which carries the anchor may the more ſpeedily paſs.

CABUIA. A kind of hemp, of the growth of the province of Panama, in South America; the plant which produces it having leaves like thoſe of the thiſtle, or the iris, tho' broader, thicker, and greener; when ripe, it is ſteeped in water, as European hemp; afterwards dried, and beaten till nothing remains but the hemp, which the Indians ſpin, and make ſuch very good thread and cords of it, that the thread is uſed as a ſaw for iron, by mounting it on a bow, and putting over it a little fine ſand, according as the work advances.

CACAO. See *Cocoa*.

CACHALOT. A kind of whale with teeth, which is mentioned by Cornelius le Brun, in his voyages to the Eaſt Indies, printed in 1718; wherein he ſpeaks of the commodities got from it; but certainly on memoirs not much to be credited, eſpecially with regard to the drug commonly called *ſperma ceti*, which he takes for a ſalt found in the hinder part of the neck of this monſtrous fiſh; from each of which, he ſays, may be gathered 7 or 8 tons; tho' it is certain that this ſperm is nothing but the brain of the cachalot. But this author, perhaps, is better in-

ſtructed,

ſtructed, when he makes the teeth of this fiſh to be about 5 inches in length; which are uſed for turners work, and ſeveral kinds of toys. See *Whale*, and *Whale-fiſhery*.

CACHAN. A town of Perſia, remarkable for its trade in all ſorts of manufactures. See *Perſia*.

CACHAO, or *Kecio*. The capital of the kingdom of Tonquin, ſituated in 105 deg. of E. lon. and 22 deg. 30 min. of N. lat. on the W. ſhore of the river Domea, 100 m. N. W. of the mouth of it; where the Engliſh, and other European nations, have factories to purchaſe ſilks, and lacquered ware, as in China. See *India*.

CACHATIN, or *Gum laccachatin*, is one of the ſorts of lacca ſent by European merchants to Smyrna in Turky. See *Lacca*.

CACHE, or *Caſche*, called at China *coyas*, and in ſeveral parts of the Eaſt Indies *cas*, *caſſe*, or *caſſie*, is a ſmall copper coin, 12 of which are worth about a halfpenny ſterling; but the caches of Japan are of different value, a thouſand of them being worth from 8 to 25 s. See *Caxa*.

CACHOOTS. A Portugueſe ſettlement, near the coaſt of Cape Verd in Africa.

CACHOU, or *Cachu*. A medicinal and aromatic drug, ranked among perfumes; but notwithſtanding cachou had been greatly uſed before coffee and tea were introduced, and tho' ſeveral ſtill uſe it, its nature is not therefore the better known, even among the moſt ſkilful phyſicians, and moſt experienced druggiſts.

Some, becauſe it is called in Latin *terra Japonica*, give it a place among medicinal earths; pretending that it is found on the higheſt mountains, covered by the roots of cedars, for which it ſerves as a nouriſhment; and that, after being dug out, waſhed in river-water, and dried in the ſun, a kind of paſte is made of it, and ſo brought into Europe, where it ſerves as a baſis to thoſe kinds of paſtils, or ſmall blackiſh grains, called *cachou*.

Others, with more probability, reckon it among gums; ſaying that it is extracted from a thick decoction of a tree called caious, growing in the Eaſt Indies, particularly in the kingdom of Cochin-China; the tree being of the ſize of a pomegranate, its leaves pretty thick, and of a clear green; its bloſſoms white, like thoſe of the orange-tree, and its fruit of the bigneſs of an apple, of a beautiful yellow without, ſpungy within, and full of a ſweetiſh and aſtringent juice.

Others, upon a more received opinion, think that the cachou is a drug compoſed of ſeveral others, particularly of the juice of areca, an extract of liquorice, calamus aromaticus, and the bark of a tree called by the Indians catechu, which, in all probability, is the ſame with the cachou.

However, be it earth, gum, or compoſition, it is much eſteemed in medicine for colds, as it fortifies the ſtomach, and makes the breath ſweet, after having been reduced to an impalpable powder, and mixed with ambergreaſe, gum adraganth, and ſo made up into paſtils.

Cachou ſhould be choſen of a tanned red on the outſide, and a clear red within, not burnt, and very gloſſy.

CADE. A cag, caſk, or barrel, uſed in the book of rates for a determinate number of ſome ſorts of fiſh: thus a cade of herrings, is a veſſel containing the quantity of 500 herrings, and of ſprats 1000.

CADENE is one of the kinds of carpets brought by Europeans from the Levant, by the way of Smyrna; which are the leaſt of all, and are ſold by the piece, from 4 to 8 s. the carpet.

CADIS. A kind of very narrow, ſlight French ſerge, manufactured at Gevaudan, in the Cevennes, near Puy in Velay, and in ſome other countries bordering upon the province of Languedoc, from whence ſeveral conſiderable cargoes are ſent to foreign countries, by the way of Lyons, the piece being generally about 30 ells in length.

CADIS is alſo another kind of woollen ſtuff, but fine, after the manner of a German ſerge, manufactured in the neighbourhood of Montauban, in the province of Languedoc in France; the pieces containing from 36 to 40 ells in length, and about half an ell in breadth.

CADIZ. A city and port-town of the province of Andaluſia in Spain, ſituated in 6 deg. 40 min. of W. lon. and 36 deg. 30 min. of N. lat. at the N. W. end of the iſland of Leon, oppoſite to Port St. Mary's on the continent. The iſland it ſtands upon is in length about 18 miles, the ſouth-weſt end being about 9 broad; but the north-weſt end, where the town ſtands, is not more than 2. It has a communication with the continent by a bridge; and, with the oppoſite ſhore, forms a bay of 12 m. long, and 6 broad; but about the middle of the bay are two points of land, one on the continent, and the other on the iſland, ſo near together, that the forts upon them command the paſſage; within theſe points being the harbour, which it is impoſſible for an enemy to enter, till theſe forts are taken. See *Spain*.

CADMIA. A mineral ſubſtance, of two kinds, natural and artificial; the natural being of two ſorts; the one containing metallic parts, and called cobalt; the other none, called calamine, or lapis calaminaris.

The artificial kind is prepared from copper in furnaces, being of five ſorts: the 1ſt called botrytis, as of the form of a bunch of grapes; the 2d, oſtracitis, as reſembling a ſea-ſhell; the 3d, placitis, reſembling a cruſt; the 4th, capnitis; and the 5th, calamitis; this laſt hanging round certain iron rods, wherewith the matter of the copper is ſtirred in the furnace, which, being ſhaken off, bears the figure of a quill, called in Latin *calamus*; the cadmia botrytis is found in the middle of the furnace, the oſtracitis at the bottom, the placitis at the top, and the capnitis at the mouth of the furnace; cadmia is deſiccative, and deterſive, generally uſed in ſtinking ulcers; but the botrytis and placitis are good in diſeaſes of the eyes.

CADSAND. An iſland on the coaſt of Dutch Flanders, at the mouth of the river Scheld; which gives the Dutch the command of the navigation of that river. See *United Provinces*.

CAEN. A good trading town of the province of Normandy in France, ſituated in 25 min. of W. lon. and 49 deg. 20 min. of N. lat. having a communication with the Engliſh channel, which lies 7 miles north of it. See *France*.

CAFFA, or *Kaffa*. A city, and port-town of great trade in Turky, ſituated in 37 deg. of E. lon. and 44 deg. 55 min. of N. lat. on the S. E. part of the peninſula of Crim Tartary. See *Turky*.

CAFFA, are cotton-cloths, painted with ſeveral colours, and of different deſigns, manufactured in the Eaſt Indies, and purchaſed at Bengal; but their meaſure is uncertain.

CAFFARD, or *Damaſk Caffards*, are ſeveral kinds of French ſtuffs; ſome of which have the warp of ſilk, or ferret, and the woof of thread; others both the woof and warp of thread, and others entirely of wool.

CAFFILA. A troop of merchants or travellers, or rather a body compoſed of both, aſſembled for traverſing, with more ſafety, the vaſt territories of the Mogul, and other parts of the Indian continent.

There are alſo ſuch caffilas which traverſe a part of the deſarts of Africa; particularly what goes under the denomination of the *Sea of ſand*, between Morocco and Tombut. This voyage, which is about 400 leagues, continues two months in going, and the ſame in returning; the caffila travelling only in the night, upon account of the exceſſive heats; the principal commodities it brings back conſiſting in gold-duſt, called by the natives *antibar*, and by the Europeans *tibir*.

The caffila is much the ſame with the caravan in the dominions of the Grand Signior, Perſia, and other places of the eaſt; or rather the caffila is a private caravan, belonging to ſome particular perſons. See *Caravan*.

CAFFILA is alſo a term, in the different ports ſtill poſſeſſed by the Portugueſe upon the coaſts of the kingdom of Guzarat, in India, for thoſe little fleets of merchant-ſhips which go from theſe ports to Surat, or return from thence, under the convoy of a man of war, which the King of Portugal keeps there for this purpoſe.

CAFFRARIA. A territory on the ſouth of Africa, lying in the form of a creſcent, about the inland country of Monomotapa, between 35 deg. of S. lat. and the tropic of Capricorn; bounded on the E. S. and W. by the Indian and Atlantic oceans, inhabited chiefly by the Hottentots; but moſt of the ſea-coaſts are ſubject to the Dutch, who have built a town and caſtle near the moſt ſouthern promontory called the Cape of Good Hope. See *Lower Ethiopia*.

CAG, or *Keg*. A ſmall wooden veſſel, uſed for containing brandy; as alſo pickled fiſh, ſuch as ſturgeon, oyſters, *&c.*

CAGLIARI, capital of the iſland of Sardinia, is ſituated in 9 deg. 12 min. of E. lon. and 39 deg. of N. lat. on a bay of the Mediterannean, in the ſouth part of the iſland. See *Italian Iſlands*.

CAGOSANGA, is the plant ſo ſovereign againſt a dyſentery, otherwiſe called ipecacuanha. See *Ipecacuanha*.

CAHYS. A corn-meaſure, uſed in ſome parts of Spain, particularly at Seville and Cadiz, four of which make an Engliſh buſhel.

CAJANTES, called alſo *Plumettes*, is a kind of ſtuff manufactured at Liſle, and in ſome other parts of the Netherlands. The breadth of thoſe of Liſle is from 3-4ths to 7-8ths of an ell, and their length from 20 to 40 ells. The other kinds have the ſame length, but are 1 ell 5-4ths broad; and great quantities of them are ſold in Holland.

CAIMACANIS. A kind of fine linen, of the number of Bengal cambraſines. See *Cambraſines*.

CAIMAN *Iſlands*, are ſituated in 81 and 86 deg. of W. lon. and 21 deg. of N. lat. lying S of Cuba, and N. W. from Jamaica; being moſtly conſiderable for the fiſhery of tortoiſes, which the Jamaica-men take here, and carry home alive; keeping then in pens for food, and killing them as they want them. See *Britiſh America*.

CAIRO, or *Grand Cairo*, is the capital of Egypt, in Africa, ſituated in 32 deg of E. long. and 30 deg. of N. lat. in a plain at the foot of a mountain; where the Engliſh, and other Europeans, have their conſuls and factors, for the protection and management of the Turky trade on that ſide. See *Egypt*, and *Turky*.

CALADARIS. A cotton-cloth, ſtriped with red or black, and brought from the Eaſt Indies, particularly from Bengal; the piece being uſually 10 yards in length, and 7-8ths in breadth.

CALAIS. A town of Picardy, in the county of Oye in France, on the coaſt of the Engliſh channel, ſituated in 2 deg. of E. lon. and 51 deg of N. lat. being one of the two ports of that kingdom, fixed for the entry of certain ſtuffs and commodities of the growth and manufacture of England and Holland.

CALAMANCOES. A gloſſy ſtuff, chequered in the warp, whence checks appear only on one ſide: they are uſually made entirely of wool, tho' ſome have a mixture of ſilk in the warp, and others of goats hair.

There are calamancoes of all ſorts of colours and faſhions, ſome plain, others flowered, and others watered; the piece being from 30 to 40 yards long, and from half a yard to three quarters wide; of which there are great manufactures in all parts of Flanders, Brabant, and France, from whence they are ſent abroad, and eſpecially to Spain; their chief uſe being for men and womens wearing apparel. But there is alſo a great manufacture of calamancoes in England, carried on at ſeveral places; particularly at Norwich, Coventry, Kidderminſter, and Halifax, both for domeſtic conſumption, and foreign exportation.

CALAMBOUC. A kind of wood brought from China, and ſold by druggiſts for aloes.

CALAMBOURG. An odorous wood, bordering upon a green colour, but different from the calambouc, and brought from the Eaſt Indies in large and long logs; its uſe being for the making of beads, turnery and cabinet work; as alſo for bagnio-keepers, for giving an agreeable ſcent to their baths.

CALAMINE, *Calaminaris lapis*, or *Calamine ſtone*, is a kind of foſſile, bituminous earth, reputed to be the ore of zink; of ſome uſe in medicine, but more ſo in foundery; being uſed to dye copper yellow, by converting it into braſs.

There are two ſorts of calamine, grey and red: the grey is found in the copper or lead mines of Germany and England; the red is found near Bourges and Saumur in France; but neither the grey nor the red becomes yellow, without baking them like bricks. Beſides theſe two natural, there are two artificial kinds of calamine, the beſt of which is called pompholyx. See *Pompholyx*, and *Zink*.

CALAMITA, in pharmacy, is a term ſometimes uſed for ſtyrax, becauſe antiently put up in canes, or calami, to preſerve it. See *Styrax*.

CALAMITE, is a name for the loadſtone.

CALAMUS *Verus*, called alſo *Calamus aromaticus*, and *Calamus amarus*, is a kind of reed, ruſh, or flag, growing in the Levant, and even in ſeveral parts of England, about the thickneſs of a gooſe-quill, and 2 or 3 feet high. It is called the ſweet cane in England, being much uſed as a cephalic and ſtomachic, and as an ingredient for the theriaca, or Venice treacle. The beſt ſort is greyiſh and reddiſh without, whitiſh within, its pith white, and taſte extremely bitter; but its leaves, as well as roots, well ſcented.

CALASH. A light, open, ſmall chariot, or travelling-coach. See *Coach*.

CALCANTHUM, or *Chalcanthum*, is nothing but vitriol, which ſome pretend to be the ſame thing with colcothar; tho' this is contrary to the ſentiment of the famous druggiſt Pomet, who ſays that the word *calcanthum* ſignifies only vitriol. See *Colcothar*, and *Vitriol*.

CALCEDONY, or *Lapis calcedonius*, is a precious ſtone of great reſemblance to the common agate, whereof it is a ſpecie. See *Agate*.

CALEDONIA. A ſettlement which the Scots made on the weſt-ſide of the gulph or river of Darien, in South America, in 1698, but abandoned it in 1700.

CALENDER. A machine uſed in manufactories for preſſing certain ſtuffs, ſilks, and linens, to make them ſmooth, even, and gloſſy; it is alſo uſed for watering, or giving waves to tabbies and mohairs.

CALF. A common animal for food, whoſe fleſh is called veal, and of whoſe ſkin leather is made for ſhoe-makers, ſaddlers, and bookbinders. Parchment is alſo made of calve-ſkins, and vellum of the ſkins of abortive or very young ſucking calves. See *Leather*.

CALICOULAN, or *Quilon*. A Dutch factory on the Malabar coaſt, in India, ſituated in 75 deg. of E. lon. and 9 deg. of N. lat. See *India*.

CALICUT. An Engliſh factory on the Malabar coaſt, ſituated in 75 deg. of E. lon. and 11 deg. 20 min. of N. lat. which was the firſt land the Portugueſe diſcovered in India, when they found the way by the Cape of Good Hope, in the year 1498; from whence the Engliſh import pepper, and other Indian merchandiſe. See *India*.

CALIFORNIA. An iſland, or peninſula, ſituated between 116 and 138 deg. of W. lon. and between 23 and 46 deg. N. lat. having the Pacific ocean on the north-weſt and ſouth; and the gulph of California, which ſeparates it from the Mexicoes, on the eaſt, unleſs it is joined to that continent by a narrow iſthmus on the north-weſt. See *Spaniſh America*.

CALIN. A kind of metal, finer than lead, but coarſer than tin; or perhaps a mixture of lead and tin with ſome mineral. It is very common in the Eaſt Indies, and in China, where it is uſed like lead in Europe for covering the roofs of houſes; and the tea-boxes which come from China are made of calin.

CALIPATAN. A town of India, remarkable for its pearl-fiſhery. See *India*.

CALK. See *Cauking*.

CALKUTTA, *Calcutta*, or *Fort William*. The preſidency of the Britiſh Eaſt India company on the coaſt of Bengal in India. See *India*.

CALLAO. The port-town of Lima, in Spaniſh America, ſituated in 76 deg. of W. lon. and 12 deg. of S. lat. See *Spaniſh America*.

CALLICOE. One of the general names for the cotton-cloths of India; being a particular kind of cotton, brought from Calicut, and other places, both white and coloured; which was formerly much worn in England, for the garments of women and children; but now prohibited to be worn, printed or coloured, otherwiſe than by needle-work, upon account of its prejudicing the woollen and linen manufactures of Great Britain and Ireland, as alſo the manufacturing of raw ſilk imported from Turky and other countries.

The ſtatutes of the 10th and 12th of Queen Anne, the 3d, 6th, and 7th of Geo. I. and the 9th of Geo. II. regulate the duties on callicoes, the prohibition againſt wearing them in England, and the manner of exportation.

The advocates for prohibiting the wearing of callicoes ſay,

ſay, that the printed and painted callicoes uſually worn in Great Britain, come under four denominations, all pernicious and deſtructive to trade: 1ſt, ſuch as being imported by the Dutch, are printed either in the Indies, or in Holland, and clandeſtinely run into Great Britain, notwithſtanding the prohibition: 2d, ſuch as are imported into Great Britain by the Engliſh Eaſt India company, and prohibited to be worn, becauſe printed in India, which are pretended to be exported, but privately run aſhore again and ſold: 3d, ſuch as being printed in Great Britain, are entered and ſhipped for exportation, in order to draw back the duties on the ſtamps, but are relanded and ſold: laſtly, ſuch as are printed in Great Britain, and legally worn and uſed; yet, under colour of which, all the other frauds are practiſed and concealed.

That the importation of printed callicoes from the Eaſt Indies, and allowing the uſe of them in Great Britain when imported, has all along been found prejudicial to the home conſumption of the woollen and ſilk manufactures in Great Britain, they ſay, needs no other proof than the above mentioned acts of parliament, which were obtained in conſequence of the general application of the manufacturers, as well maſters as workmen, through the whole kingdom, to prohibit and limit their conſumption.

In doing this, the parliament weighed the allegations on every ſide, and obſerved that the weavers cauſe ſupported itſelf: that the nature of the thing pleaded for it, and their own reaſon importuned them to it. The thing was ſelf-evident; the humour of the people, as too often is the fate of nations, ſeemed at that time poſſeſſed againſt their intereſt; and being hurried down the ſtream of fancy, they ran headlong into the greateſt contempt of the growth and manufactures of their own country and people; embracing, with a violence in their temper, not to be reſiſted, the ſilks and callicoes of India, in a manner even ridiculous to themſelves, as well as fatal to their intereſt; which ſtrange infatuation had almoſt been the ruin of their own trade, put a ſtop to the employment of the weavers, and, in a word, had ſtarved the poor: in ſupport of which they brought examples from their neighbours.

It may be aſked, perhaps, whither muſt the vaſt quantities of callicoes which the French Eaſt India company imports go? why, to England, Scotland, and Ireland; where the people are ſo fond of them, and where it is ſo eaſy to get them on ſhore. What then has not Great Britain to fear for her woollen and ſilk manufactures, which are ſo oppreſſed already with the clandeſtine importations of callicoes from abroad, as well as printing them at home, and when the French will not fail to bring in quantities equal to the opportunities which they have to land them? How eaſy this may be done, is evident to any one who is acquainted with the ſhores of England that lie neareſt to France: for are not French brandies, French wines, and French ſilks, to be had almoſt in as great plenty in the port-towns of Great Britain on that ſide of the country, as in ſome parts of France itſelf? and will it not be the ſame thing with India goods? Can Rumney-marſh want callicoes, where all French goods are, as it were, as familiar to them as in France? Can thoſe people who know how to carry off whole freights of wool, the moſt bulky of all merchandiſe, be ignorant to take on ſhore French callicoes, and French Eaſt India goods of all kinds? It cannot be doubted, but when the French come to have a quantity of callicoes by them, and no conſumption for them at home, they will find ways and means to croud them in upon Great Britain with much more eaſe than they do their wines and brandies. What the conſequence of this will be to the Britiſh woollen and ſilk manufactures, is very plain. They muſt be deſtroyed; nothing can prevent it.

Are the Indians or Chineſe, ſay they, prevailed with to lay by their own manufactures for any of Great Britain? No; it is evident that Great Britain is ſo far from being able to place any of her manufactures among them, that they deſpiſe the propoſal; refuſing to ſell thoſe goods, which Great Britain has ſo little need of, but for that ready money which ſhe has ſo little need to part with. And can Britons, without a juſt concern, ſee their own wilfully-poſſeſſed nation dreſſed up in the manufactures of foreigners, and deſpiſing the workmanſhip of their own people; madly ſending their money to India and China, to feed and ſupport heathens and ſavages; rejecting the manufactures of their own country, tho' they ſee the poor families ſtarving for want of work?

On the contrary, it has been urged, that the act paſſed for prohibiting the wearing of callicoes, has certainly done conſiderable prejudice to ſome of the manufactures of England, and particularly to the city of Norwich, for whoſe benefit it was chiefly intended. Of this truth they are fully convinced, the very people of that city being now ſenſible of it themſelves; and one of the chief promoters confeſſed before he died, that he found it one of the worſt acts that ever paſſed. The reaſon is, ſay they, that the prohibition of callicoes in Great Britain made them more plenty in foreign markets, where there uſed to be a demand for Norwich ſtuffs; and when the people abroad found that they could purchaſe callicoes, having the advantage of being new every time they were waſhed, for a ſmall matter more than they could procure Norwich ſtuffs, they choſe rather to get into the wear of this cleaner and neater apparel: ſo that thus there became little or no demand for Norwich ſtuffs abroad, and conſequently, by degrees, a decay of the manufactory at home; beſides which, the revenue loſt above 50,000 l. a year.

CALLICOE *printing*. The ſtaining, painting, or printing of callicoe; the perfection of which conſiſts in bright, fixed, and permanent colours, wherein the Engliſh printers now rival thoſe of India.

CALM. A ceſſation of wind on the ſea; which is never ſo great in the ocean, as in the Mediterranean; becauſe the ebbing and flowing of the ocean always agitate the water, when even there is no wind: but as the Mediterranean has neither a flux, nor reflux, the calm is there ſometimes ſuch, that a looking-glaſs is not ſo tranſparent as the boſom of the ſea; tho' ſuch a calm is an almoſt aſſured preſage of an impending hurricane.

CALMI. A kind of painted linen, manufactured in the territories of the Great Mogul.

CALMUCKS. Wandering tribes, or hords of Tartars, who inhabit the country north of the Caſpian ſea, and ſometimes put themſelves under the protection of Ruſſia, viſiting the city of Aſtracan, and the adjacent country once or twice a year. See *Tartary*.

CALPE *Mountain*, at the foot whereof ſtands Gibraltar, in the province of Andaluſia in Spain, is ſituated in 6 deg. of W. lon. and 36 deg. of N. lat. being antiently one of the pillars of Hercules; the other being Abyla, on the oppoſite coaſt of Africa.

This mountain, or rock of Calpe, which covers Gibraltar on the land-ſide, is half a league in height, and ſo ſteep that there is no approaching on that ſide; whereupon the Spaniards, when they beſieged Gibraltar in 1727, attempted to undermine the rock, and blow it up, which was found impracticable. See *Gibraltar*.

CALQUIER, or the *Calquiers Atlaſſes*, are Indian ſatins; but there are alſo Indian taffetas of this name. See *Atlas*, and *Taffetas*.

CALVI. A port-town of the iſland of Corſica, ſituated in 9 deg. 5 min. of E. lon. and 42 deg. 10 min. of N. lat. on a bay on the weſt-ſide of the iſland.

CAMAIEU. A ſtone, whereon are found various figures, and repreſentations of landſkips, and other appearances, formed by a kind of *luſus naturæ*, or fancy of nature; but the term is alſo applied to thoſe precious ſtones, as the onyx, ſardine, and agate, whereon lapidaries engrave figures.

CAMBAYA, or *Cambay*. A town of the Moguliſtan empire, ſituated in 72 deg of E lon. and 23 deg. 30 min. of N. lat. formerly conſiderable for a great trade, which is now removed to Surat. See *India*.

CAMBAYES, are cotton-cloths, manufactured at Bengal, Madraſs, and ſome other places of the coaſt of Coromandel; their length and breadth, particularly of the common ſort, being 15 cobres by 2, the cobre eſtimated at 17 inches and an half, which make an important article in the trade carried on by the Engliſh from Madraſs to the Manilles.

CAMBIO. An Italian term, ſignifying exchange, uſed in

Provence in France, and by ſome other nations, particularly the Dutch.

CAMBIST. A name derived from the Latin word *cambium*, or the Italian *cambio*; being appropriated to thoſe who negotiate bills of exchange, and regularly reſort the change, to inform themſelves of the currency of money, with regard to the exchange of foreign countries. See *Broker*.

CAMBLET, or *Camlet*. A ſtuff, made ſometimes of wool, ſometimes of ſilk, and ſometimes of hair, eſpecially of goats-hair with wool or ſilk; but in others, the warp is ſilk and wool twiſted together, and the woof hair.

England, France, Holland, and Flanders, are the chief places for this manufacture; but Bruſſels exceeds them all in the beauty and quality of its camblets; where the piece is from 44 to 75 yards long, and three quarters broad; and thoſe in England are reputed the ſecond in quality.

Figured CAMBLETS, are thoſe of one colour, ſtamped with various figures, flowers, and foliages, by means of hot irons, which are a kind of moulds, paſſed together with the ſtuff under a preſs; which are chiefly brought from Amiens in France, and from Flanders; tho' their commerce was formerly much more conſiderable than at preſent.

Water CAMBLETS, thoſe which, after weaving, receive a certain preparation with water; and are ſometimes paſſed under a hot preſs, to give them a ſmoothneſs and luſtre.

Waved CAMBLETS, are thoſe whereon waves are impreſſed, as on tabbies, by means of a calender; under which they are paſſed and repaſſed ſeveral times.

The manufacturers of camblets are to take care they acquire not any falſe and uſeleſs plaits, it being almoſt impoſſible to get them out again.

Camblets are proper for ſeveral uſes, according to their qualities, ſome ſerving for bed curtains, and other houſehold-furniture; and others for wearing apparel, both for men and women.

CAMBODIA. The capital city of a kingdom of the ſame name in Aſia, ſituated in 104 deg. of E. lon. and 12 deg. 30 min. of N. lat. being tributary to Siam. See *India*.

CAMBRASINES. Fine Egyptian linens, ſo called upon account of their reſemblance to cambrics; with which a pretty good trade is driven on at Cairo, Alexandria, and Roſetta; their price being about 18 s. the piece.

There are alſo cambraſines, of two ſorts, from Smyrna in Turky, thoſe brought from Perſia, and thoſe from Mecca: the former retain their name of cambraſines; but the latter are called mamoudis; being yellowiſh, ſofter, and finer than the others. Their uſual length is about 24 yards, and they are ſold for about 15 s. the piece.

Beſides theſe cambraſines of Perſia and Mecca, there are thirty other kinds bearing this name; particularly thoſe of Bengal, which are of different lengths and breadths, and of which two or three kinds are diſtinguiſhad by particular names, as horſe-ſhoes, turbans, and caimancanis.

CAMBRAY. The capital city of the Cambreſis, in the French Netherlands, ſituated in 3 deg. 15 min. of E. lon. and 50 deg. 15 min. of N. lat. on the river Scheld, near its ſource; being a large, well-built city, in a fruitful country, and conſiderable for its linen manufactory, eſpecially cambrics, which took their denomination from hence. See *France*, and *French Netherlands*.

CAMBRIC. A name given to a very fine, white, linen, manufactured at Cambray, Valenciennes, Arras, Bapoume, Vervins, Peronne, St. Quintin, Noyon, and other parts of the provinces of Hainault, Cambreſis, Artois, and Picardy in France; as alſo in ſeveral places of Germany and the United Provinces, and of late years in Scotland and Ireland; the piece being generally 7 yards 3-4ths long, and 7-8ths wide.

The conſumption of cambrics was very conſiderable in the Britiſh dominions; becauſe there were generally imported, every year, about 120,000 pieces into England, about 2000 into Scotland, and about 3000 into Ireland; which, upon an average, were worth 30 s. a piece; the duty amounting to 5 s. and the profit to the fair trader to about 5 s. a piece: whereby the whole money circulated in that trade amounted to 187,500 l. the duty to upwards of 30,000 l. and the fair profit to an equal ſum, annually. This branch of trade being ſo beneficial to the French, at a time when they are at open war with his Britannic Majeſty, it was ſeaſonably interdicted by an act of parliament paſſed in the year 1745; whereby it was enacted, That, after the 24th of June 1748, it ſhould not be lawful for any perſon to wear in Great Britain, any cambric, or French lawns, under penalty of forfeiting to the informer 5 l. for every offence; and, after the 1ſt of Auguſt 1745, no cambrics, or French lawns, ſhould be imported into Great Britain; tho' after the 1ſt of Auguſt 1746, liberty was given for ſuch importation, on proof made that they were for exportation only, and really the property of Britiſh ſubjects; for which the importer ſhould give ſecurity, in double the value of the goods imported, for payment of 5 l. for each piece which ſhould not be exported out of the kingdom, within three years after entry of the ſame. But, by a ſubſequent act for explaining the former, paſſed in the year 1748, it is declared, That if any wearer of cambric, or French lawn, who ſhould have purchaſed the ſame after the 24th of June 1748, ſhould be proſecuted, and ſhould diſcover and convict, before ſome juſtice, the vender, of having ſold the ſame, after the ſaid day; then, and not otherwiſe, he ſhould be diſcharged from the penalty of the ſaid act; when the penalty on the vender ſhould go to the perſon who informed againſt the wearer. If the offender be a feme-covert, the penalties to be levied on her huſband; and any milliner, ſempſtreſs, or other perſon, who ſhould for hire, after the ſaid 24th of June, make up any cambric, or French lawn, ſhould be liable to the penalties inflicted on the venders.

Theſe acts for prohibiting the wearing and importation of cambrics and French lawns, were certainly calculated with a deſign to diminiſh the trade of France, and contribute to the impoveriſhment of an open enemy at war: but ſurely they were never intended for the emolument of France, and the prejudice of Britain; both of which is now, and long has been, actually the caſe; becauſe the prohibition was not extended to Ireland, where the French have an opportunity of introducing about 16,000 pieces yearly, and 13,000 into Scotland; by which means his Britannic Majeſty is abſolutely defrauded of a conſiderable revenue, and the honeſt tradeſman of a profitable branch of buſineſs; while the French laugh at the ſmall diminution of their ſale, and the ſmuggler collects the rewards properly due to induſtry and honeſty.

Since the termination of the war, it was expected by the dealers in linen, that the act of prohibition would be repealed; which encouraged ſeveral merchants, and eminent tradeſmen, to prefer a petition to parliament, for re-opening that part of their commerce with France. The houſe of commons took the merits of this petition into conſideration, and the petitioners conceived the greateſt expectations of an immediate compliance with their requeſt; but a member of that illuſtrious body intimated that France ought to allow Great Britain ſome compenſation in return for taking off the prohibition, and gave ſome hopes of procuring ſuch an alternative; upon which the petitioners diſcontinued their application, in hopes of obtaining ſome ſpeedy and adequate conceſſion from France; who, in return for retracting this prohibition, would take no impolitic ſtep, in granting Great Britain the permiſſion of introducing into France the hard-wares of the Britiſh manufactures, which is the thing deſired.

CAMBRING, or *Cambering*, is a term among ſeamen, who ſay *a deck lies cambring*, when it does not lie level, but higher in the middle than at either end; they alſo ſay a ſhip is *camber-keeled*, if her keel is bent in the middle upwards; which may happen from her lying aground on a place, where neither her aft nor her fore-part touch it, and from many other reaſons taken from her make.

CAMEL. A domeſtic quadrupede animal, very tame, and well known in ſeveral parts of Aſia and Africa, making the principal riches of the Arabs. See *Caravan*.

The hair of this animal is the only particular belonging to it, which is regarded by Europeans, who make a conſiderable trade of it, being fit, when ſpun, for the making of ſtuffs, or, mixed with other hair, for being an ingredient in the manufacture of hats; as alſo principally uſed for pencils in painting.

CAMERET *Bay*, in the province of Britany in France, forms the harbour of Breſt, and is one of the ſtations for the royal navy. See *France*.

CAMERON *Cape*. A promontory on the north-part of the province of Honduras, in North America.

CAMINHA. A port-town in the province of Entre-minho-duero in Portugal, ſituated in 9 deg. 20 min. of W. lon. and 41 deg. 50 min. of N. lat. at the mouth of the river Minho. See *Portugal*.

CAMINI, in Spaniſh *Yerva-camini*, an herb differing only from the paraguay, or yerva con-palos, in that it is better culled, and without any of the ſtraws with which the other abounds. See *Paraguay*.

CAMMIN. A port-town of Brandenburgh Pomerania, in Germany, ſituated in 15 deg of E. lon. and 54 deg. of N. lat. at the mouth of the river Oder, oppoſite to the iſle of Wollin. See *Germany*.

CAMOMILE. A plant which has fibrous roots, hairy, thin, and ſupple ſtalks, with branches, encircled by a vaſt quantity of very ſmall leaves, crowned on the top by pretty large radiated flowers, hanging by a long ſtalk; the plant, and the oil extracted from its flowers, being drugs proper for medicine. See *Oil*.

CAMP, is a term given by the Siameſe, and ſome other people of the Eaſt Indies, for the quarters they aſſign to foreigners, who come to trade with them; it being in theſe camps, where each nation forms, as it were, a particular town, for carrying on their trade; where they have not only their warehouſes and ſhops, but alſo live with their families, clerks, and factors. However, Europeans are exempted at Siam, and almoſt in every other place, from this ſubjection; being allowed to live in cities, or in the ſuburbs of cities, according as it is moſt convenient for their trade.

CAMPANA. A kind of fringe made of gold, ſilver, or ſilk thread; terminating, at the bottom, by ſmall hoops, reſembling little bells. See *Fringe*.

CAMPANA, is alſo a kind of ſmall, ſlight, and fine lace, uſually of white flax thread, or ſilk of ſeveral colours. See *Lace*.

CAMPANINI. A ſort of marble, hewn out of the mountains of Carrara in Tuſcany; being very hard, but ſubject to crack, and having this denomination, becauſe, in the working, the ſound of a bell is in ſome manner imitated by it. See *Marble*.

CAMPBEL. A port-town of Scotland, ſituated in 5 deg. 10 min. of W. lon. and 55 deg. 35 min. of N. lat. on the E. coaſt of Cantire, in the ſhire of Argyle, 10 m. W. of the iſle of Arran.

CAMPEACHY, is a town ſituated in 93 deg. of W. lon. and 10 deg. of N. lat. on the gulph of Mexico, in North America, to a part of which it gives the name of Campeachy bay.

CAMPEACHY, or *Campeche*. A kind of wood uſed in dying, brought from Campeachy and Yucutan, in North America. See *Logwood*, and *Indian wood*.

CAMPHOR, or *Camphire*. A white, ſhining, tranſparent, friable, inflammable, odoriferous, volatile gum, or reſin, of a bitteriſh taſte, and very hot in the mouth; flowing from a tree of the ſame name, frequent in the iſlands of Borneo and Ceylon, and the neighbouring mountainous coaſts of India, reſembling a walnut tree. But ſome make two different kinds of camphor, according to the different parts of the tree where they are found; and that in the veins of the wood, is ſaid to be different from that which oozes out upon breaking the bark.

The camphor, as is reported, being at firſt red, is whitened either by the ſun or the fire; but there is little of the raw natural camphor in England; the Dutch taking care that it comes all refined by ſublimation, and ready prepared, which ſhould be choſen white, clear, light, and of a ſtrong ſmell.

Crude camphor is brought in ſmall lumps or loaves from the Eaſt Indies; which ſhould be of a good ſcent, dry, clean, white, and brittle, and ſhould be like common white ſalt when crumbled.

But there is another kind of camphor, much inferior in quality, which the Dutch bring from Japan, and mix with the other.

Camphor has various uſes, but eſpecially in medicine, wherein it is the moſt efficacious known diaphoretic.

Artificial CAMPHOR, is prepared with ſandarach, and white vinegar diſtilled, kept twenty days in horſe dung, and afterwards expoſed a month to the ſun to dry; at the end of which the camphor is found in form of the cruſt of a white loaf: but this is alſo called *juniper-gum*, *white varniſh*, and *maſtic*.

By an act of parliament paſſed in the 17th year of King George II. it was enacted, That all camphor refined in Great Britain ſhould have the ſame draw-back on all the duties of exportation, as a like quantity of unrefined camphor.

Refined camphor is ſold at Amſterdam for about 4 s. *per* pound; the tare is purſuant to the weight, and deductions are of 2 *per cent.* for good weight, and of 1 *per cent.* for prompt payment.

CAMPO, or *ſmall Campo*, is a kind of Spaniſh wool brought from Seville and Malaga. See *Wool*.

CANABASSETE. A French ſtuff, of which there are two kinds; the one without ſilk, and the other ſtriped with ſilk.

CANADA *company of France*. See *French Eaſt* and *Weſt India companies*, alſo *India Company*, and *Hudſon's Bay Company*.

CANADAS, or *Cavadas*, a Portugueſe liquid meaſure, 12 whereof make 1 almond, or 4 ½ gallons Wincheſter meaſure.

CANAN. A liquid meaſure, uſed in the kingdom of Siam, called by the Portugueſe choup, containing about a quart.

CANARY *iſlands*, or the *Canaries*, are the ſame with thoſe the ancients knew by the name of the Fortunate iſlands, being, as it is generally believed, firſt diſcovered and planted by the Carthaginians; but were neglected, and ſoon unknown, on the deſtruction of that republic by the Romans, who diſregarded navigation and the encouragement of commerce: however they were afterwards diſcovered again, about the year 1405, by John de Betancour, a Frenchman, in the ſervice of John, King of Caſtile, who firſt eſtabliſhed himſelf there, but poſſeſſed only the five ſmalleſt iſlands; having met with too conſiderable an oppoſition from the natives who inhabited the others; though theſe were afterwards reduced by the Spaniards, whereby the propriety of all the Canaries were annexed to the crown of Spain, and the Spaniards ſtill retain their poſſeſſion.

Theſe iſlands, ſituated to the W. of the coaſt of Biledulgerid, in Africa, lie between 12 and 21 deg. of W. lon. and 27 and 29 deg. of N. lat. the moſt eaſterly of them being 50 leagues from Cape Non in Africa.

There are 12 of theſe iſlands, but only 7 of them of any conſequence; whereof the principal is called the Grand Canary; and the other 6, Palma, Ferro, Gomera, Teneriff, Fortuventura, and Lancerola.

The Grand Canary is about 150 miles in circumference; being very fruitful, and remarkable for its excellent wine, which bears its name. It has alſo great plenty of melons, apples, olives, peaches, plantanes, figs, pomegranates, citrons, and oranges; as likewiſe of fir, dragon, and palm-trees.

Palma is ſituated about 60 miles N. W. of Teneriffe, and 200 miles W. of the continent, being about 80 miles in circumference. Palma is the principal town, which has a ſafe harbour, and is remarkable for its produce of wine, called palm-ſack, or Canary.

Ferro is the moſt weſterly of theſe iſlands; where the firſt meridian was lately fixed in moſt maps; but now almoſt every kingdom makes its capital the firſt meridian, as London is that of Great Britain, which is 19 deg E. of Ferro. The iſland is about 75 miles in circumferenee; but the ſoil is dry and barren, in moſt places, for want of water.

Gomera is ſituated to the W. of Teneriffe, about 200 miles W. of Cape Bajadore, in Africa; being about 70 miles in compaſs. It has a town of the ſame name, with a tolerable haven: but the country is remarkable only for ſmall cattle, and ſome dragon-trees.

Teneriffe is ſituated 350 miles W. of Morocco, and is about 120 miles in circumference: it is a fruitful iſland,

abounding in wines, corn, and oil; as alſo in fruit, cattle, fiſh, and fowl; though much encumbered with mountains, of which the moſt remarkable is that called the Pico, or Peak of Teneriffe, being one of the higheſt mountains in the world, of the form of a ſugar-loaf, the white top whereof may be ſeen at ſea upwards of 100 miles; and through this peak the Dutch formerly placed their firſt meridian. Oratavia is the principal ſea-port on the iſland, where the Engliſh merchants reſide with their conſul; from whence they export the beſt Malmſey wine; as alſo Canary, and Verdona, or green wines.

Fortaventura lies about 120 miles W. of Africa, being about 75 miles long, but of unequal breadth. It abounds in corn, and cattle, eſpecially goats, with whoſe milk they make cheeſe, and make great profit of their ſkins and fat: it has alſo palm, olive, and maſtic trees; orchella for dying; and a kind of fig-trees which yield a balm of ſome virtue in medicine.

Lancerola is about 120 miles in circumference: it produces ſome corn, and has good paſture for cattle.

The ſoil of all theſe iſlands is extremely fertile in all kinds of grain, fruits, and legumes; but more particularly in excellent wines, whereof Europeans annually export great quantities: but the Engliſh and Dutch export moſt; and it is computed, that, one year with another, 16000 tons paſs into England, and as many into Holland: however, other nations alſo drive on a tolerable trade in this commodity; though far inferior to that of theſe two nations. Sugars are likewiſe abundantly cultivated there; the Grand Canary alone has ſufficient to employ continually 12 ſugar mills; and the ſame, in proportion, may be ſaid of the other iſlands.

The other commodities exported from theſe iſlands are barley in abundance, honey, wax, goat-ſkins, and pitch; ſeveral ſorts of freſh, dry, and confected fruits; tame fowl, canary birds, and large and ſmall cattle, which the ſhips, trading there, purchaſe for their refreſhment.

The Engliſh ſhips uſually come directly to Teneriffe, from the time of the vintage of the Malmſey wines, till April. The commodities they bring with them being partly ſtuffs, and utenſils of their own manufactures; and partly what ſerves for the ſuſtenance of life: ſuch as cloths, ordinary camblets, bays, the greater part black, and ſome green; white and black anacoſts; blue everlaſtings; lamperi'les, of all colours; worſted knitted, and woven ſtockings; hats; Flanders linens, of about an ell in breadth, and other coarſer ones from Scotland; fine flax, and other more ordinary kinds; threads of all numeros; ſeveral pieces of wooden furniture, ſuch as bureaus, chairs, and drawers; harnaſſes for horſes; tin; hard, and haberdaſhery, wares; clay, for the making of pipes; Iriſh leather; all kinds of commodities, eſpecially ſilk ſtuffs, ſilk ſtockings for men and women, ribbands of all kinds, and taffetas of all ſorts, though only a few of the latter, becauſe they are brought from Spain at a cheaper rate; Engliſh and Iriſh wheat; barley of the ſame countries; herrings and pilchards; beef and pork; butter, cheeſe, and candles; and laſtly flour, from New England.

The other iſlands uſually bring from Teneriffe the European commodities they have an occaſion for.

The principal return of the Engliſh conſiſts in wines; whereof, during the war for the ſucceſſion of Spain, they exported almoſt three fourths leſs than when they joined Spain againſt France: but, ſince the peace of Utrecht, it may be ſaid, that they load to the amount of 4000 pipes of malmſey of the firſt quality; which they purchaſe, for the moſt part, in exchange for their commodities, and pay the overplus in the term of 12 or 18 months, either *per* week or month, till the whole is diſcharged; and the reſt conſiſt in ſack wines.

When the Engliſh were, in ſome reſpects, maſters of the Canary trade, they confined it not to the iſlands alone; their principal view being to facilitate that of the Weſt Indies, by the means of the regiſter-ſhips which uſually take in a loading there for the coaſts of Spaniſh America. It was therefore, upon this account, that they then kept there large ware-houſes, always well ſtored with their manufactures; which they readily found an occaſion to export, notwithſtanding the prohibition to the contrary; and whoſe returns they received in money, fruits, and commodities of the Weſt Indies; which they afterwards ſent into England.

It is certain that the commodities exported by Engliſh merchants, from the Canaries, ſcarce defray their coſt when brought into England; which undoubtedly might give them a diſtaſte for this trade, had not they indemnified themſelves in their imports, by which they gain from 60 to 70 *per cent.* in time of peace, and much more in time of war: but it is alſo true, that the ſale is tedious, and that they are obliged to contract ſome bad debts.

When the vintage turns out well in the Canaries, the iſland of Teneriffe alone affords upwards of 30,000 pipes, whereof about one third is of Malmſey wine, and the two other thirds of ſack: the reſt of the iſlands, as the Grand Canary, the iſlands of Palma, and Ferro, alſo afford ſcarce leſs than 15 or 16000 pipes; the greater part being ſack wines.

The price of malmſey, when the vintage is tolerable, is from 8 to 10 l. the pipe; that of ſack from 4 l. 10 s. to 6 l. and that of brandy about 10 l.

Of the regiſter ſhips which freight in the Canary iſlands, for Spaniſh America.

Beſides the regiſter-ſhips authorized with permiſſions from Spain, ſeveral others are alſo freighted at the Canaries, which receive their permits from the officers of his Catholick Majeſty, eſtabliſhed in theſe iſlands: though the permiſſions of theſe are, in reality, leſs extenſive than thoſe of others; being only granted them for bringing to America the produce of the country, ſuch as wines; and for returning with the ſole productions of the Weſt Indies, ſilver, and cochineal excepted, which they are prohibited from making their returns in: however, theſe exceptions are no prevention to them from importing to America all apparently neceſſary commodities; and returning with a quantity of ſilver, and cochineal, together with the other commodities allowed them.

Foreigners, who trade to the Canaries, have a greater ſhare in this contraband commerce than the iſlanders themſelves; whether they have an inclination to undertake it with their own ſhips, or content themſelves to freight the ſhips belonging to the ſubject of his moſt Catholic Majeſty: but, in both caſes, great ſecrecy and caution ſhould be uſed, that the King's officers might have no intelligence; though, in this caſe, even theſe officers are not untractable; it being eaſy to purchaſe their ſilence.

The French have but little commerce to the Canaries, in compariſon to ſome other nations; particularly the Engliſh: yet, as they ſay themſelves, it would be eaſy for them to equal, and perhaps to ſurpaſs others, if they knew how to make uſe of their advantages, eſpecially of the inclination theſe iſlanders have for them, and the diſguſt they have for a conſiderable time conceived of the Engliſh nation; either upon account of the act of navigation paſſed in 1660, which they always thought contrary to the liberty of their commerce; or upon account of the exceſſive duties of entry, which their malmſey and ſack-wines pay in England.

The principal reaſon which has hitherto prevented the French from having a greater ſhare in this trade is, that it conſiſts for the general part in two kinds of wine, whoſe conſumption in France is inconſiderable; where 500 pipes of both are more than ſufficient; and they have nothing to make up their cargo of return. However, as Mr. Savary inculcates, the example of other nations may eaſily remove this obſtacle; when the French, making as well as them their returns in malmſey and ſack-wines, may ſend into France what is ſufficient for the conſumption of the kingdom, and afterwards bring to the Baltic, and the North, the remaining part of their cargo. But, continues he, what ſhould excite the French moſt to undertake this trade is, that the merchandiſe, and manufactures, of their kingdom, are more proper for the Canaries, and the Indies, than the greater part of thoſe of other nations; and which theſe iſlanders can ſcarcely have, but at ſecond hand.

The Canary iſlands yield the King of Spain a conſiderable revenue: they have ſome tolerable fortifications, to protect them from the inſults of enemies; but they have no

good road, or harbour, for the galleons, and rich fleets of Spain, which generally rendezvous at Teneriffe, when outward bound, for wine, freſh water, and proviſions; as alſo, in their return they meet here for intelligence, eſpecially in time of war, when they wait here for a convoy to conduct them to Cadiz.

CANARY-*birds*, are little birds, greatly eſteemed for their muſical pipes, and the variety of their plumage: many of which are bred in Germany, and brought over to England for ſale.

CANASS. A term in uſe at Amſterdam, for the great cheſts, wherein the company's ſhips bring different kinds of teas from China, and the Eaſt Indies; which are generally made of tin, or calin.

CANCANIAS *Atlaſſes*, a kind of ſatin brought from the Eaſt Indies. See *Atlas*.

CANCANUM. A kind of gum lac, of uſe in medicine. See *Lacca*.

CANDIA *iſland*, the antient Crete, is ſituated between 22 and 27 deg. of E. lon. and between 35 and 36 deg. of N. lat. in the Mediterranean ſea; having the Archipelago on the North, Aſia Minor on the N. E. the Morea on the N. W. and Africa on the S. See *Turkiſh Iſlands*.

CANDIA, is alſo a kingdom in the interior part of the iſland of Ceylon. See *Ceylon*.

CANDIIL, *Candile*, or *Candy*, a meaſure uſed at Cambay, and Bengal, in the Eaſt Indies, for the ſelling of rice, and other grain, containing 14 buſhels, and weighing about 500 lb. upon which footing the burden of ſhips is eſtimated, as in Europe by the ton; for when it is ſaid that a ſhip is of 400 candiils burden, it may ſignify that ſhe can carry 200,000 lb. weight, which make 100 tons, the ton being upon the footing of 2,000 lb.

CANDIIL, is alſo a weight uſed in China, and Galanga, whereof there are two ſorts, one called the ſmall candiil, containing about three hundred weight; and the other the large candiil, of about four hundred.

CANDLE. A cotton, or flaxen wick, looſely twiſted, and covered with tallow, wax, or ſperma-ceti, in a cylindrical figure.

A good tallow candle ſhould be equally made of the tallow of bullocks, and of ſheep; that of hogs making them gutter, giving an ill ſmell, and a thick black ſmoak. Theſe candles are of two kinds; the one dipped, the other moulded: the firſt, which are thoſe in ordinary uſe, are of an old ſtanding; the latter are reported to be the invention of the Sieur le Brez, at Paris: but the manufacture of the two kinds is very different; excepting in what relates to melting of the tallow, and making the wick, which is the ſame in both. See *Tallow*.

Wax candles are made of a cotton, or flaxen wick, ſlightly twiſted, and covered with white or yellow wax. See *Wax*, and *Wax-candle*.

The quantity of candles made within the city and ſuburbs of London, generally amounts to 11,644,863 pounds a year: beſides which, great quantities of candles are imported and brought to London from many parts of the kingdom.

By the ſtatute of the 9th of Q. Anne, a duty of 4 pence *per* pound is to be paid on all wax candles imported; and for all tallow candles a half penny *per* pound, to be paid before landing: for all wax candles made in England 4 d. *per* pound; and for all tallow candles a halfpenny *per* pound, to be paid by the maker: however, one moiety of the duty on importation is to be repaid on exportation; which was made perpetual by the 3d of Geo. I. The duties upon imported candles are to be under the direction of the officers of the cuſtoms; and the duties of thoſe made in England are to be under the direction of the officers of exciſe, who may compound with private perſons, making candles to be ſpent in their houſes, at the rate of 1 s. *per* head *per annum*, for every one in the family; and ſuch compounders are not liable to any other duty.

Candles, for which the duty has been paid, may be exported, on giving ſecurity that the ſame ſhall not be relanded in Great Britain, when the exporter is to have a debenture for repaying him the duty on making.

By the ſtatute of 11th of Geo. I. it was enacted, That if any maker of candles, other than compounders, ſhould uſe any place for making or keeping candles or materials, without having made entry thereof at the office of exciſe, he ſhould, for every warehouſe, or copper, forfeit 100 l. See *Cattle*.

Sale, or auction, by inch of CANDLE, is when a piece of candle being lighted, people are allowed to bid while it burns; but, as ſoon as extinct, the commodity is adjudged to the laſt bidder.

CANDO, *Candi*, or *Condi*, a long meaſure uſed in ſeveral parts of the Eaſt Indies; and particularly at Goa, the capital of the places ſtill in poſſeſſion of the Portugueſe; which makes about 26 ells Engliſh.

CANDUAL, one of the Maldivia iſlands. See *Maldivia*.

CANDY, in ſpeaking of ſugar, denotes a preparation of that ſubſtance, made by melting and chryſtalliſing it ſix or ſeven times over, to render it hard and tranſparent.

CANDYING, makes an operation in pharmacy, as well as confectionary; thoſe ſimples which are preſerved in ſubſtance by boiling in ſugar being ſaid to be candied; though this performance is now turned over to the confectioner from the apothecary, to whom it originally belonged. See *Confects*.

CANE, or *Canna*, a long meaſure frequent in Italy, Spain, and the ſouth parts of France, of greater or leſs length, according to the places where it is uſed; being at Naples equal to 7 foot $3\frac{1}{2}$ inches Engliſh meaſure; at Tholouſe, and the Upper Languedoc, it is equal to the vara of Aragon, and contains 5 feet $8\frac{2}{3}$ inches; at Montpellier, in Provence, Dauphine, and the Lower Languedoc, it is equal to 6 Engliſh feet, $5\frac{1}{2}$ inches.

CANE, is alſo a kind of reed, brought from the Eaſt Indies, uſed for walking-ſticks, and other conveniencies: but the moſt beautiful canes brought into Europe come from Bengal; ſome being ſo fine that bowls, or veſſels, are made of them, which, being varniſhed within, by a kind of black, yellow, or ſome other coloured lacca, contain liquids like veſſels of glaſs and porcelain: theſe veſſels being made much after the manner of oſier baſkets, and much eſteemed for their fineneſs.

There are alſo canes ſlit into narrow bits, uſed for making cane-chairs, and hoops for ladies.

The ſugar-cane is the reed from which ſugar is extracted.

CANEA. A port-town on the N. ſide of Candia, ſituated in 24 deg. of E. lon. and 35 deg. of N. lat. being eſteemed the ſecond in the iſland.

CANELLA. A kind of confect, compoſed of a bit of cinnamon, covered with hard and white ſugar: the beſt kind of which is brought from Milan in Italy.

CANESSE DE MORE. A kind of ſilk brought by the Dutch from the Eaſt Indies; but the bariga de more is alſo a ſpecies of this commodity. See *Bariga de more*.

CANG *ſea*, or gulgh of Nankin, lies between China and Tartary, on the E. end of the long wall. See *China*.

CANGETTE. A kind of ſerge, manufactured in ſome parts of Lower Normandy, in France; particularly at Caen, from whence it is denominated: its uſe being for cloathing the common people, as it is both cheap and ſerviceable.

CANICA. A kind of ſpice growing in the iſland of Cuba, in the Weſt Indies, reputed a kind of wild cinnamon; tho' bordering in taſte more upon the clove than the real cinnamon: it is alſo uſed in medicinal caſes, wherein it is ſubſtituted for caſſia, and ſells very well in the Spaniſh iſlands.

CANISTER. A large tin box, in which tea is brought from China, containing from 75 to 100 pounds; but it now commonly means any veſſel, large or ſmall, that holds tea, whether it be made of earth, as china; or metal, as ſilver, tin, lead, or any thing elſe.

CANN. A drinking veſſel made of wood, in the ſhape of a barrel, from whence, at ſea, they call large barrels, or buoys, thrown on ſhoals, for ſea-marks, cann-buoys.

CANNA. See *Cane*.

CANNEQUINS, are white cottons, folded in a ſquare manner, and containing 8 ells in length; which are brought from the Eaſt Indies, being proper for the ſlave trade on the coaſts of Guinea, particularly at Senegal and Gambia.

CANNON. A military engine, or piece of ordnance, for throwing

throwing iron, lead, or ſtone bullets, by force of gun-powder, to a place directly oppoſite to the axis of the cylinder whereof it conſiſts: the firſt ſort of which were called *bombardæ*, from bombus, by reaſon of their noiſe.

The parts and proportions of a cannon about 11 feet long, are its barrel, or cavity 9 feet, its fulcrum, or ſupport, 14, and its axis 7, the bore, or diameter of the mouth 6 inches, and 2 lines the play of the ball; the diameter of the ball is therefore 6 inches, and its weight 33 $\frac{1}{2}$ lb.; the metal is 2 inches thick about the mouth, and 6 at the breech; it weighs about 5600 lb. the charge being from 18 to 20 pounds; it carries point-blank 600 paces, loads ten times in an hour, ſometimes fifteen, and 120 times in a day; its bed is 15 feet broad and 20 long, for the rebound, and it requires twenty horſes to draw it.

Larrey makes braſs cannon the invention of J. Owen, and ſays the firſt known in England were in 1535.

Cannons are made cylindrical, that the motion of the ball might not be retarded in its paſſage, and that the powder, when on fire, might not ſlip between the ball and the ſurface of the cannon, which would hinder its effect: but Wolfius would have the cannon always decreaſe, in proportion to the ſpace thro' which it is expanded; and the new cannons, after the Spaniſh manner, have a cavity, or chamber, at the bottom of the barrel, which helps their effect.

The names of the ſeveral cannon, their length, their weight, and that of their balls, are as in the following table.

Names of cannon.	Wt. of an iron ball.		Wt. of the cannon.	Length of the cannon.
	lb.	oz.	lb.	feet.
Cannon royal	48		8000	12
Demi-cannon large	36		6000	12
Demi-cannon ordinary	32		5600	12
Demi-cannon leaſt	30		5400	11
Culverin largeſt	20		4800	12
Culverin ordinary	17	5	4500	12
Culverin leaſt	15		4000	11
Demi-culverin ordinary	10	11	2700	11
Demi-culverin leaſt	9		2000	10
Saker ordinary	6		1500	10
Saker leaſt	4	12	1400	8
Minion largeſt	3	12	1000	8
Minion ordinary	3	4	800	7
Falcon	2	8	750	7
Falconet	1	5	400	6
Rabinet		8	300	5. 6 dig.
Baſe		5	200	4. 6

For the metal of cannons, it is either iron, or, which is more uſual, a mixture of copper, tin, and braſs; the tin being added to the copper to make the metal more denſe and compact; ſo that the better or heavier the copper is the leſs tin is required. Some to 100 pounds of copper, add 10 of tin, and 8 of braſs; others 10 of tin, 5 of braſs, and 10 of lead.

It is found by experience, that of 2 cannons of equal bore, but different lengths, the longer requires a greater charge of powder than the ſhorter, in order to reach the ſame range.

The ordinary charge of a cannon is, for the weight of its gun-powder, to be half that of the ball; but after each thirty diſcharges, the cannon is to be cooled, with two pints of vinegar, mixed with four of water, poured into the barrel, the touch-hole being firſt ſtopped. See *Ammunition*, *Arms*, and *Artillery*.

CANOE. A denomination given to the little boats uſed by the natives of both Indies; as well as by the Negroes in Guinea, made chiefly of the trunks of trees hollowed, and ſometimes of pieces of bark faſtened together. See *Boat*.

CANORIN. See *Saſſette*.

CANONOR. A fort and factory on the Malabar coaſt, in India, ſituated in 75 deg. of E. lon. and 10 deg. of N. lat. now belonging to the Dutch, who took it from the Portugueſe in the year 1663. See *India*.

CANQUES. A kind of cotton cloth manufactured in China; of which the Chineſe make the firſt part of their dreſs; the canques being properly their ſhirt: but there are two kinds of this cloth, thoſe of Fokian, containing

15 covids, or cobres, in length, and thoſe of Nankin, containing 20 covids in length, the covid being 14 $\frac{1}{2}$ inches.

CANSO. A port-town of Acadia, or Nova Scotia, in North America, ſituated in 62 deg. of W. lon. and 46 deg. of N. lat. on a narrow ſtreight, which ſeparates Acadia from Cape Breton, where there is a fine cod fiſhery, which the French of Cape Breton interrupt when at war with the Engliſh.

CANTAR. A Portugueſe meaſure. See *Alquier*.

CANTARO. A weight uſed in Italy, particularly at Leghorn, for certain kinds of merchandiſe; of which there are three ſorts; the firſt weighing 150 lb. the ſecond 151 lb. and the third 160 lb. The pound of Leghorn being 12 ounces avoirdupois weight: ſo that, upon this footing, theſe three ſorts of cantaros ſhould make in England as follows; that of 150 lb. 103 lb. 8 oz.; that of 151 lb. 104 lb. 3 oz.; and that of 160 lb. 110 lb. 6 oz. 3 drachms, and ſomewhat more.

CANTARO, is alſo a meaſure uſed in Cochinchina, being of three ſorts, which are uſed according to the different kinds of merchandiſe to be meaſured.

CANTHARIDES. A kind of poiſonous inſects, brought from Spain and Italy, with wings and feet like flies, or beetles, much uſed as an epiſpaſtic for the raiſing of bliſters.

There are various kinds of cantharides, but all of a yellow golden hue; the beſt being thoſe which appear with different colours, having yellow lines running acroſs their wings; which are killed by expoſing them over a very ſtrong vinegar, made to boil for that purpoſe; and they are afterwards dried to preſerve them.

Cantharides are ſometimes applied to the temples for the tooth-ach; and farriers uſe them in ſeveral diſeaſes among horſes; but they muſt be choſen new, dry, and whole, for they will not keep above two years without mouldering into a duſt of no uſe.

CANTIN *Cape*. A promontory in the Atlantic ocean, on the coaſt of Morocco, in Africa.

CANTON. A large populous wealthy city, and port-town of the province of Canton, in China, ſituated in 112 deg. 30 min. of E. lon. and 23 deg. 25 min. of N. lat. See *China*.

CANTOR. A weight uſed in Sardinia, equal to about 86 lb. of London.

CANVAS, or *Canvaſs*, a coarſe ſort of linen cloath, clear, and unbleached, ſerving for ſeveral purpoſes, eſpecially for the ground of tapeſtry work and painting; as alſo for cloathing negroes, covering womens ſtays, ſtiffening cloaths, and making coarſe towels; likewiſe for making ſails for ſhipping. See *Naval Stores*.

Canvas is made both of hemp and flax, and in moſt countries of Europe, particularly the northern parts. The piece for tapeſtry is about 45 ells long, and from a quarter to three quarters wide; that for cloaths is about 60 ells long, and $\frac{5}{6}$ broad; that for towels about 60 ells long, and $\frac{7}{12}$ broad: and that for ſails about 28 ells long and $\frac{2}{3}$ wide.

CAORLO. An iſland ſituated in 13 deg of E. lon. and 46 deg. of N. lat. at the bottom of the gulph of Venice.

CAP, in a ſhip, is a ſquare piece of timber, put over the head, or upper part of a maſt, having a round hole to receive the maſt, by which the top-maſts, and top-gallant maſts, are kept ſteady in the treſſel trees, where their feet ſtand, as thoſe of the lower maſts do in the ſteps.

CAP, is alſo a garment ſerving to cover the head, generally made of wool, cotton, thread, ſilk, brocade, velvet, taffety, or furr.

CAPE, in geography, a promontory, or head land, being a piece of land running out beyond the reſt into the ſea: ſuch as the Cape of Good Hope, and others, particularly deſcribed under their reſpective denominations.

CAPE-*Breton*. See *Breton Cape*.

CAPE *of Good Hope*. See *Bon Eſperance Cape*.

CAPE *Coaſt-caſtle*. A principal fort, and ſettlement, belonging to the Britiſh government, on the coaſt of Guinea, ſituated under the meridian of London, in 5 deg. of N. lat. See *Guinea*.

CAPER, the bud, bloſſom, or fruit, of a ſhrub of the ſame name, gathered green before it is expanded into a flower; dried in a dark place till withered, then infuſed in vinager,

to which at laſt ſalt is added, being uſed chiefly as a pickle in ſauces, and in medicine as an aperitive; all of which are brought from Toulon in France, except ſome ſmall ſalt capers from Majorca, and a few flat ones from about Lyons.

CAPHAR. A toll, or duty, impoſed by the Turks on the Chriſtian merchants, who carry or ſend merchandiſes from Aleppo to Jeruſalem; which was eſtabliſhed by the Chriſtians themſelves, when they were maſters of the Holy-land, for the ſupport of the troops, which they poſted in different paſſages to reconnoitre the Arabs, and put a ſtop to their incurſions: but the Turks uſe it as a ſpecious pretext for extorting arbitrary and conſiderable ſums from Chriſtians, in order to defend them, as they ſay, from the Arabs, with whom, notwithſtanding they not only keep up a correſpondence, but favour their incurſions and robberies.

CAPILLARY, *Capillaceous plants*, or *Maiden-hair*, are thus denominated from their form; being ſuch as have no principal ſtem with branches ſhooting out of the ſame, but growing from the ground like hairs from the head, and bearing their ſeed in little tufts on the backſide of their leaves. All the capillaries are reputed of uſe in medicine; eſpecially in the making of ſyrups, to which wonderful virtues are attributed; but the capillary of Montpellier, or *adianthum album Monpelienſe*; and that of Canada, or *adianthum album Canadenſe*, are the only ſort regularly uſed for that purpoſe; the reſt only ſerving to counterfeit them.

Capillaries of Canada, and Montpellier, ſhould be choſen new, very green, and the leaſt bruiſed as poſſible. As to the ſyrup, it ought to be of an amber colour, good taſte, boiled into a reaſonable conſiſtence, clear, tranſparent, and ſmelling neither ſour nor muſty.

CAPITAL, is the fund or ſtock, of a trading company, or corporation; or the ſum of money they jointly furniſh to be employed in trade. See *Fund*.

CAPITAL, alſo ſignifies the ſtock which a merchant, or trader, firſt adventures in trade on his own account.

The capital of the Eaſt India company at its firſt erection was 369,891 l. ſterling, which was afterwards doubled, and is now much more conſiderable: but 500 l. in the capital ſtock of the company, entitles the perſon to a vote in their general courts. See *Eaſt India Company*.

The power given by parliament, to the South Sea company to encreaſe their capital, was the ſource of all the miſchief in the year 1720. See *South Sea Company*.

CAPITAL-*city*, is the metropolis, or chief city, in a kingdom, in or near which the king or emperor commonly reſides; as, London, in England; Paris, in France; Madrid, in Spain; Vienna, in Germany; and Conſtantinople, in Turky.

CAPLAN. A little fiſh found on the banks of Newfoundland, which the fiſhermen uſe as bait for the cods.

CAPOC. A particular kind of cotton, obtained from a large tree in the Eaſt Indies, being uſed only for beds, cuſhions, or pillows, becauſe it is too fine and too ſhort to be ſpun.

CAPRAIA, or *Capraria*, an iſland of the Tuſcan ſea, ſituated in 11 deg. of E. lon. and 43 deg. of N. lat. 30 miles S. W. of Leghorn.

CAPRI, or *Caprea*. A city and iſland, ſituated in 14 deg. 50 min. of E. lon. and 40 deg. 45 min. of N. lat. at the entrance of the gulph of Naples. See *Italian Iſlands*.

CAPSTAN. A large cylinder, or barrel, placed perpendicularly on the deck of a ſhip, and turned by four leavers, or bars, which croſs it, ſerving, by means of a cable, which winds round the cylinder, to draw up vaſt burdens faſtened to the end of the cable, to keep veſſels in tow, or draw them aſhore, and hoiſt them up to be refitted; as alſo to unload the heavieſt goods, weigh anchors, and hoiſt the ſails.

There are 2 capſtans in a veſſel; the main capſtan, placed behind the main maſt, ſtanding on the firſt deck, and reaching 4 or 5 feet above the ſecond, being alſo called double capſtan, becauſe ſerving 2 decks for drawing of anchors; and becauſe its force may be doubled by applying hands on each deck, having bars, whelps, a pannel, and other things, for turning and ſtopping it.

The jeer capſtan, or little capſtan, ſtands on the ſecond deck, between the main maſt and the mizzen; its uſe being chiefly to heave upon the jeer rope, or to heave upon the viol, to hold off by when the anchor is weighing; and on other occaſions, where a leſs force is required than to weigh the anchors.

There is alſo a flying capſtan, which may be moved from place to place.

The terms belonging to the uſe of the capſtans are, *come up, capſtan*; that is, ſlacken the cable which they heave by. In a like ſenſe they alſo ſay, *launch out the capſtan*; and *pawl out the capſtan* ſignifies, ſtop it from going back.

CAPTAIN *of a ſhip*, is a ſea-officer, whereof there are two kinds; the one of a ſhip of war, the other of a trading veſſel; though, in propriety, the title captain belongs only to the commander of a ſhip of war, galley, fireſhip, or the like: but the captain of a merchant ſhip is only the maſter thereof, or he who has the command, or direction, of the ſhip, her crew, and lading; being an officer more uſually called the maſter, eſpecially in ordinary voyages: on the Mediterranean he is called the patron, or patroon; and in long voyages, as to the Eaſt Indies, he is honoured with the title of captain.

The owner of a mercantile veſſel appoints the captain, or maſter; who is to form the crew, chuſe and hire the pilots, mates, ſeamen, and other things; though, when the owner and maſter reſide on the ſame ſpot, this is uſually done in concert with the owner. See *Ship*.

CAPTIVE. A ſlave, or perſon, taken by the enemy, particularly by a pirate or corſair. See *Slave*, *Corſair*, and *Pirate*.

CAPTURE. A prize, or prey; particularly that of a ſhip, taken at ſea. The number of prizes during the continuance of the laſt war between the crowns of Great Britain, Spain, and France, were very conſiderable; for Great Britain had 1360 ſhips taken by the Spaniards, and 1878 taken by the French, making together 3238: the Spaniards loſt 1249 ſhips, and the French 2185, being together 3434, which were 196 leſs than thoſe taken by the Engliſh: ſeveral of the Spaniſh prizes were immenſely rich, a great number of the French were of conſiderable value, and ſo were many of the Engliſh; but the ballance was almoſt two millions in favour of the latter; which is a remarkable inſtance of the ſuperiority of the maritime force of Great Britain. See *Prize-ſhips*.

CAPUCHIN. A plant growing in the Eaſt Indies; and, when pickled, is ſomewhat like the caper.

CARABE, or *Powder of amber*, is yellow amber pulverized. See *Amber*.

CARABINE, or *Carbine*. A ſmall ſort of fire-arm, ſhorter than a fuſee; carrying a ball of 24 in the pound, being a medium between the piſtol and the muſket; which was formerly made with a match-lock, but of late only with a flint-lock. The barrel is two feet and a half long, and is ſometimes furrowed ſpirally within, which is ſaid to add to the range of the piece. See *Arms*.

CARACAOS, *Caracas*, or *Curaſſow*. A town on the coaſt of Terra firma, in South America, to a part of which country it gives the name of Caracca, ſituated in 67 deg. of W. lon. and 10 deg. 30 min. of N. lat. where the beſt cocoa, or chocolate nuts grow. See *Spaniſh America*.

CARACCA. A name ſometimes given to the cocoa of the continent. See *Cocoa*.

CARACOLI. A kind of metal, whereof the natives of the Antilles make a ſort of ornament in the form of a creſcent, which they alſo call caracoli; but the metal comes from Terra firma; and the common opinion is, that it is compoſed of ſilver, copper, and gold. The mixture of theſe metals is ſo perfect, that it has a never-fading colour, tho' remaining ever ſo long a time under ground, or in the ſea. It is grainy, and brittle; and thoſe who work it, are obliged to employ a mixture of gold to make it more malleable.

The Engliſh and French goldſmiths have made ſeveral experiments in imitation of it; thoſe who came neareſt putting to fix parts of ſilver three parts of purified copper, and one part of gold: but tho' ſkilful perſons found this allay very beautiful, it is much inferior to that of the In-

dians. However, father Labat thinks that the caracoli is a ſimple metal, of which rings, buckles, cane heads, and ſuch like trinkets, are made in the Antilles.

CARACT, or *Carat*. A denomination given to the weight, expreſſing the degree of goodneſs, fineneſs, perfection, or imperfection of gold. See *Gold*.

The mints have fixed the higheſt purity and perfection of gold at 24 caracts, the ſeveral degrees being eſtimated from the diviſions thereof, called *grains*; tho' it muſt be obſerved, that whatever care is taken to purify gold, and clear it from droſs, it can never be brought to 24 caracts, but ſtill comes ſhort at leaſt 1-4th of a caract, or a grain, which they call a ſixteenth, and ſubdivide it into 2-8ths, as they do each of thoſe 8ths into 2-16ths; on which calculation, they ſay, gold may be purified as far as the 1ſt 16th of the ſecond 8th, but no further. See *Grain*.

The ſtandard-gold of England is 22 caracts of fine gold, 1 of ſilver, and 1 of copper; which make 24 caracts, or 1 ounce troy; and goldſmiths generally work in gold of 22 caracts.

Caract fine, is the 24th part of the goodneſs of a piece of true gold; and *caract price* is the 24th part of the value of an ounce; tho' they alſo ſometimes ſay the *caract weight*, which is the 24th part of the weight of the ounce, or mark, 2 troy grains making a caract grain.

CARACT, is alſo the weight uſed in weighing diamonds, pearls, and precious ſtones, where it conſiſts of 4 grains; each of theſe grains being divided into halves, fourths, eighths, ſixteenths, and ſo on; upon which footing precious ſtones and pearls are eſtimated: and Tavernier relates, that the diamond of the Grand Mogul, deemed the largeſt in the world, weighs 272 caracts 9-16ths. See *Diamond* and *Grain*.

CARAGACH. A kind of cotton brought from Smyrna.

CARAGACH *thread*, is a name given at Smyrna to the fineſt ſpun cotton, which comes from Jaſſelaſſar, and the neighbouring places.

CARAGI, is a term in Turky, and all the ſtates of the Grand Signior, for the duties of importation and exportation paid for merchandiſe; the former of which are paid but once, and at the cuſtomhouſe only, where the merchandiſe is firſt unloaded; traders being allowed, if they have not ſold them, to tranſport them elſewhere; or, on ſhewing the firſt receipt for the duty, there is an exemption from any other cuſtomhouſe duties.

CARAGI, is alſo the name of the cuſtomhouſe officers, where the duties are paid; the general cuſtomhouſe officer, or chief director of the cuſtom-houſe, being called caragi-baſhaw.

CARAGNA, or *Karagna*. A very rare kind of gum brought from New Spain; the tree from which it oozes being like the palm-tree; and the gum, at its firſt iſſuing out, is white, but ſome time after becomes greyiſh, with a tincture of green; which is the ſort ſent into Europe, the white being but ſeldom met with.

It is imported moſt commonly in lumps, wrapped up in red leaves; which, to be of the beſt quality, ſhould be ſoft, like unguents for plaiſters; yet of a good conſiſtence, of an aromatic agreeable ſmell, and as white as poſſible; but the ſcarcity and dearneſs of this gum occaſions its frequent ſophiſtication, or a ſubſtitution of others, which have neither its properties, nor virtues: applied to the head, it baniſhes aching; its effect is the ſame with regard to rheumatic pains; and it is ſo highly eſteemed in medicine, as to give room to the proverb in pharmacy, "that what the "tacamahaca cannot cure, the caragna will." Beſides, the Americans compoſe a ſovereign balſam of this gum, as they pretend, for the healing of wounds and hemorrhoids.

CARAGROUCH. A ſilver coin, current in Germany, and worth about 2 s. 4 d. ſterling.

CARAGUATA *Maca*. See *Karata*.

CARAMANGCE. A medicinal drug, brought from China, and in great eſtimation among the Tonquineſe; who pay the Chineſe, at Tonquin, 12 tales, and 5 mace, or 4 l. 3 s. 4 d. ſterling, for what coſts the Chineſe at Canton only 6 tales and 2 mace, or 2 l. 1 s. 8 d. ſterling.

CARAMEL, is a ſugar, baked to a hard conſiſtence, and more than half burnt; being a ſpecies of black ſugar candy, with which ſeveral ſorts of fruits are candied, or covered, as almonds, filberts, and piſtachoe-nuts.

CARAPACE. The ſhell which covers the turtle, of which tortoiſe-ſhell is made.

CARAQUE, or *Carac*. A name given to the beſt kind of cocoa from the Caraccas. See *Cocoa*.

CARAQUE, or *Caracca*, is alſo the name which the Portugueze formerly gave to the largeſt ſhips they ſent to the Eaſt and Weſt Indies, laden with European merchandiſes, and for which they made their return with thoſe of Aſia and America; the caraque being uſually of 2000 tons, and having ſometimes ſeven or eight decks: but finding, by experience, the inconvenience of them, as well as the advantage of middling veſſels, they begun to make a reform, by laying aſide veſſels of this extraordinary magnitude.

The Dutch call the fineſt porcelains *kroak-porcelain*; becauſe the firſt oriental porcelain brought into Europe, was imported by the Portugueze caraques.

CARARA. A weight uſed in ſome places of Italy, particularly at Leghorn, for the ſale of wool and cod-fiſh; being about 115 lb. avoirdupois of London.

CARAVAN, in the eaſt countries, is a troop, or company, of travellers, merchants, and pilgrims, who, for their greater ſecurity, march in a body through the deſarts, and other dangerous places, infeſted with Arabs and robbers, accompanied by a chief, or aga, who commands each caravan, and has under him a number of janizaries, or other ſoldiers, ſufficient for their defence.

In Aſia, for forming a caravan, it is neceſſary to have, in writing, the permiſſion of a ſovereign prince, approved by two other neighbouring ſovereigns; which permiſſion ſhould contain the number of men, carriages, and quantity of merchandiſe, to compoſe the caravan; but thoſe to whom the caravan belongs, have it in their power to chuſe the officers, and to regulate every thing regarding the orders to be obſerved during the journey.

There are uſually four principal officers; the caravan bachi, or chief of the caravan, who commands abſolutely all the reſt, and gives them his orders; the captain conveyancer, who is abſolute during the march; the captain of repoſe, who exerciſes his employment when the caravan ſtops, and continues any time in one place; and the captain of diſtribution, whoſe buſineſs it is to diſpoſe all the parts of the caravan in caſe of attack, or battle, and to look to the management of the proviſions.

There is alſo a paymaſter or treaſurer, who has ſeveral clerks and interpreters under him, for keeping journals of all that paſſes; by which journals, ſigned by the ſuperior officers, the parties concerned in the caravan judge whether they have been faithfully ſerved.

But there is alſo another kind of officers, called Arabian mathematicians, being uſually three in large caravans, who act both in quality of quarter-maſters, and aids-de-camp; guiding the troops when the caravan is attacked, and appointing the quarters where they are to encamp.

There are five diſtinct kinds of caravans; the heavy caravans, compoſed of elephants, dromedaries, camels, and horſes; the light caravans, wherein are but few elephants; the ordinary caravans, where there are no elephants at all; the horſe caravans, wherein neither camels nor dromedaries are uſed; and laſtly, ſea caravans, that is, a fleet of merchant-ſhips convoyed by ſhips of war, ſuch as the caravan of veſſels from Conſtantinople to Alexandria.

The proportion obſerved in the heavy caravans is, that when there are 500 elephants, there are at leaſt 1000 dromedaries, and 2000 horſes employed; when the eſcorte is of 4000 horſemen, two men being required for the conducting of an elephant, five for three dromedaries, and ſeven for twelve camels; which multitude of ſervants, joined to the officers and paſſengers, whoſe number is not fixed, ſpirit up the eſcorte in caſe of a battle, making the caravan more formidable and ſafe: tho' paſſengers are not obliged to fight; yet, if they decline fighting, they are not to depend upon any proviſions from the caravan.

There are elephants which ſerve only for fighting; and, as ſuch, an elephant, in good condition, is worth 180 l. ſterling; being brought from the Eaſt Indies, where their beauty and whiteneſs increaſes their price.

The dromedaries are found in the mountains of Golconda, each of which is worth 70 l. ſterling.

A good camel is worth about 14 l. ſterling, which is an animal abundantly found in Perſia, and the territories of the Mogul; but the beſt come from Arabia Felix.

The equipage of an elephant coſts about 16 l. ſterling, that of a dromedary about 8 l. and that of a camel about 4 l. ſterling.

The expences of an elephant amount to about 16 s. a day whilſt on a journey: a dromedary expends on a journey 5 abaſſis, and a camel 3 abaſſis a day, each abaſſi being about 16 d. The feeding of a horſe is an abaſſi a day; and it will coſt a man on journies thro' inhabited countries, where caravanſeras are met with every night, two abaſſis; but twice as much on journies acroſs deſarts, becauſe the carrying of drink adds to the expence.

The payment of the officers and ſervants, beginning with the meaneſt, is made on Monday, unleſs it be full, or new moon; in which caſe it is referred till the next day.

The arms for the convoy are a carabine, a half pike, two piſtols, a ſabre, a bayonet, and a calot of iron to place under their caps or turbans.

A nick, that is, a child, of about 9 or 10 years old, fitted for this exerciſe, is mounted on each elephant, whom he conducts, and ſpurs on, to animate it for the battle; and he alſo charges the arms of two ſoldiers, who mount the elephant with him; but the day ſpecified for departure is never changed.

For ſuſtaining the exceſſive heats, ſtockings and drawers are worn, made of a kind of cotton, extracted from that ſtone which the antients called *amianthus*; and which, when beaten, has the property of being ſpun, and ſuppoſed incombuſtible.

As the greater part of the Arabian princes have no other funds to ſubſiſt upon but plunder, they diſpatch ſpies to inform them of the departure of the caravans, which they attack very often with ſuperior forces; making their greateſt efforts againſt the center, to cut it off with the van-guard, which they often ſucceſsfully effect; but, when repulſed, they come to an agreement, and are pretty obſervant of their conditions; tho', if the caravan is defeated, it is abſolutely pillaged, and all the eſcorte made ſlaves: however, ſtrangers are treated with more clemency; for ſometimes the capture of a ſingle caravan is ſufficient to enrich theſe princes.

The plague being very common in the eaſt, great precaution is uſed that the caravans might not communicate it to the places through which they paſs, or be infected therewith themſelves; ſo that, upon arriving near towns, mutual queſtions are put concerning the ſtate of health; and, if there is the leaſt apprehenſion of any diſtemper, victuals are furniſhed over the walls; nor is any reciprocal communication allowed.

The profits made in theſe caravans, while on the road, are often incredible: and Monſieur Bugnon relates, that, by different repetitions of exchange, one of his friends had gained to the amount of 20,000 crowns, by a gold watch that had coſt him 30 louis-d'ors, which he gave for two rough diamonds to a merchant of the caravan with whom he travelled; ſo that for what coſt him only 28 l. 9 s. 6 d. he made 4834 l. ſterling.

A great number of caravans, ſome more, and others leſs conſiderable, depart uſually in the month of September, from Erzerum, the capital of Turkiſh Armenia, with ſilks and furs, to Tocat, Smyrna, and Conſtantinople.

Beſides, as Erzerum is a great thorough-fare from Perſia and India to Conſtantinople, by the way of Trepiſond, and the Black ſea, the merchants chuſe this way to avoid the Arabs who lie on the road to Aleppo; upon which account a caravan ſets out every week from hence to Tocat, Teflis, Tauris, Trepiſond, or Aleppo; but the Curdes, or the natives of Curdiſtan, or Aſſyria, who ramble about with their flocks and herds, as far as the ſource of the Euphrates, are almoſt as troubleſome to the merchants as the Arabs, frequently extorting money from the caravans on one pretence or other: and notwithſtanding theſe Curdes call themſelves Jaſides, or followers of Jeſus, they have a great deal of ſuperſtition, and very little religion among them; acknowledging neither the Turks or Perſians for their ſovereigns, and retiring, when they are attacked, to their cold inacceſſible mountains; ſo that neither of theſe powers think it worth their while to make an entire conqueſt of them.

There are alſo caravans which carry on a commerce between Ruſſia and China, by traverſing the extenſive country of Siberia; and there are likewiſe caravans for carrying on a trade from the coaſts of Barbary, and other parts of Africa, to Egypt.

CARAVAN, is alſo an appellation given to the voyages, or campaigns, which the knights of Malta are obliged to make at ſea, againſt the Turks and Corſairs, in order to arrive at the commanderies and dignities of the order; which denomination was occaſioned by the knights frequently ſeizing the caravan going from Alexandria to Conſtantinople.

CARAVANSERA, is a large public building, or inn, in the oriental countries, deſtined to receive and lodge the caravans, as alſo people of all religions and countries, without any queſtions aſked, or money required.

Though the caravanſeras ſerve in lieu of inns; yet there is this eſſential difference between them and the European inns, that the traveller finds nothing at all in the caravanſera, neither for himſelf nor his cattle; but muſt carry all his proviſions and neceſſaries with him. There are few cities in the eaſt without their caravanſera, eſpecially within the dominions of Turky, Perſia, and the Great Mogul; where thoſe of Conſtantinople, Iſpahan, and Agra, the capitals of the three empires, are diſtinguiſhed for their magnificence and utility: however, there are ſeveral of them in other cities which ſerve not only as inns, but as ſhops, warehouſes, and even exchanges.

Theſe caravanſeras are uſually great ſquare buildings, containing very ſpacious courts; under whoſe piazzas there is a kind of bank, raiſed ſome feet above the level ground, whereon merchants and travellers reſt themſelves, and their equipage, as well as they can, the beaſts of burden being faſtened to the foot of the bank; but over the doors, opening into the court-yard, there are ſometimes ſmall chambers, which the ſtewards of the caravanſera let at an exceſſive rate, to thoſe who are willing to be in private.

The greater part of theſe buildings are the effects of Mahometan charity; the greateſt lords, either through devotion or oſtentation, laying out prodigious ſums on them, eſpecially if built in dry and deſart places, where there is a neceſſity of bringing water from a great diſtance, and at vaſt expence; no caravanſera being without its fountain.

CARAVANSERASKIER, is the director, ſteward, or intendant, of a caravanſera; and at Iſpahan, where there are caravanſeras, in manner of halls, or exchanges, for laying up goods, and expoſing them to ſale, the caravanſeraſkier is accountable for them, in conſideration of a certain fee.

CARAVEL, or *Carvel*. The name of a trading veſſel uſed by the French in the Mediterranean ſea, as alſo for their herring-fiſhery; having a ſquare poop, and being rigged like a galley, of about 30 tons burden.

CARAWAY, or *Caroway*. A medicinal ſeed, produced from a plant of the ſame name, chiefly in Provence and Languedoc in France; being narrow, longiſh, furrowed on the back, and of a briſk aromatic taſte; which is of great uſe in England and Germany, particularly for making biſkets, ſeed-cakes, and confections.

CARBEQUI, or *Copper aſper*. A coin current in Aſiatic Georgia, particularly in Teflis, the capital, worth about 1 s. 4 d. Sterling. See *Abagi*.

CARBOUILLON, or rather *Quart-Bouillon*, is a duty raiſed on white ſalt in Normandy.

CARBUNCLE, among modern lapidaries, is a ſtone of the ruby kind, very rare, and of a rich glowing blood red colour; though ſome ſay it is not intitled to the appellation unleſs it exceed twenty carats weight. See *Ruby*.

CARCHEO *Company*, was a Portugueſe company of African merchants. See *Portugueſe African Companies*.

CARD. See *Cards*.

CARDAMOMUM, or *Cardamum*. A medicinal ſeed, of the aromatic kind, contained in the pods of a plant brought from the coaſt of Malabar in the Eaſt Indies, and from the iſle of St. Mary, near Madagaſcar; being uſed in the compoſition

compoſition of Venice treacle. The ſeed is diſtinguiſhed into three kinds, according to the ſeveral ſizes of the pods, as majus, minus, and maximum; but the taſte, ſmell, colour, and form of the grain, is the ſame in all; which is a purple colour, angular, of a ſharp biting taſte, and a ſtrong penetrating ſmell; but the laſt kind is alſo called grains of paradiſe; though the firſt excels the reſt, both in ſmell, taſte, and virtue; their chief uſe being in diſeaſes of the brain, ſtomach, and womb; as alſo to ſeaſon rice in the eaſtern countries.

CARDER. A perſon who cards wool, flax, wad, hair, cotton, or ſilk, for ſpinning.

CARDIGAN. A port-town of Wales, ſituated in 4 deg. 40 min. of W. lon. and 52 deg. 15 min. of N. lat. near the mouth of the river Tivy, on a bay of its own name, in the Iriſh channel.

CARDINAL *points*, in coſmography, are the four interſections of the horizon with the meridian, and the prime verticle; of theſe, two are called north and ſouth, with regard to the poles they are directed to, being the interſections of the horizon and meridian; and the other two are called eaſt and weſt, being the interſections of the horizon and firſt vertical: the cardinal points, therefore, coincide with the four cardinal regions of the heavens, and are ninety degrees diſtant from each other.

CARDINAL *winds*, are thoſe that blow from the cardinal points.

CARDING. A preparation of wool, cotton, hair, or flax, by paſſing it between the iron points, or teeth, of two inſtruments, called cards, to comb, diſentangle, and range the hairs or fibres thereof; as alſo to diſpoſe it for ſpinning: but, before the wool is carded, it is greaſed with oil, whereof one fourth of the weight of the wool is required, for wool deſtined for the woof of ſtuffs, and one eighth for that of the warp.

CARDS, are the above mentioned inſtruments uſed in carding; which, by the ſtatutes of the 3d of Edward IV. the 1ſt of Richard III. the 39th of Elizabeth, and the 3d of Charles I. are not to be imported; nor the wire taken out of old cards be put into new leather and boards, in order for ſale, upon forfeiture thereof, or the value, if not ſeized: but, by the ſtatutes of the 14th of Charles II. and the 2d of William and Mary, they may be amended for the proprietor's own uſe, or for exportation only.

CARDS, for play, are little pieces of fine paſteboard, made of ſeveral ſheets of paper paſted together, and cut in oblong ſquares of three inches and a half in length, and one inch and a half in breadth; on which ſeveral figures and points are painted, and of which ſeveral numbers are put together, according to the games for which they are deſigned.

In the commerce of cards, a pack is 52 of them wrapped up in a paper, ſtamped with the name, ſign, place of abode, and device of him who ſells them; the half-dozen of cards making ſix packs, and a groſs of cards being 12 half-dozens.

By the ſtatutes of the 10th of Queen Anne, and the 5th of George I. cards and dice may, upon ſufficient ſecurity, be exported without payment of the ſtamp-duty; but no playing cards are to be imported. See *Stamps*.

CARDMAKERS *Company of London*, was incorporated by letters-patent of Charles I. on the 22d of October 1629, by the name of The maſter, wardens, and commonalty of the myſtery of the makers of playing-cards of the city of London; being a corporation governed by a maſter, two wardens, and 18 aſſiſtants, who have neither livery, nor hall to tranſact their affairs in.

CAREENING. A term, in the ſea language, uſed for the laying a veſſel on one ſide, to caulk, ſtop up leaks, refit, or trim the other ſide.

A ſhip is ſaid to be brought to a *careen*, when the greateſt part of her lading is taken out, and a pontoon, or another veſſel lower than herſelf, laid by her ſide; ſo that ſhe is haled down to it, as low as occaſion requires, either a fourth or fifth ſtrake, and there kept, by the weight of ballaſt, and ordnance, as well as by ropes, leſt it ſhould ſtrain her maſts too much.

This is done with deſign to trim her ſides or bottom, to caulk her ſeams, or to mend any fault ſhe has under the water: hence, when a ſhip lies on one ſide in ſailing, ſhe is ſaid to *ſail on the careen*.

Ships of war are generally careened every three years; and the half careen is when they can only careen half the ſhip, not being able to reach ſo low as her bottom.

CARELSCROON. A port-town, and excellent harbour, in the province of Gothland, ſituated on the coaſt of the Baltic, in 15 deg. of E. lon. and 56 deg 20 min. of N. lat. where the Swedes lay up their royal navy. See *Sweden*.

CARGADORS, is a name given at Amſterdam, to a kind of ſhip-brokers; whoſe ſole buſineſs is to inquire after a freight for ſuch ſhips as are ready fitted out; or to give notice to merchants, who have goods to ſend by ſea, of the ſhips ready for departure, and the places of their deſtination. See *Broker*.

CARGAMON. A kind of ſpice, very ſcarce and precious, growing only in Viſapour, in India.

CARGO, or *Cargoe*, ſignifies ſeveral things with regard to commerce: ſometimes it is underſtood of the entire lading of a ſhip, very often of the invoice of merchandiſe wherewith a ſhip is laden, and ſometimes for expreſſing the proper time for loading ſhips with different kinds of merchandiſe; in which laſt ſenſe it is ſaid, this month is the time for the cargo of wines, oil, cod-fiſh, and of other commodities. See *Freight*.

Or a cargo commonly implies all the lading of a ſhip, excluſive of the crew, rigging, furniture, and proviſions: thus, it is ſaid, a ſhip has its cargo, when it is fully laden, or its half cargo, when half laden; and it is called a rich cargo, when the lading conſiſts of a great and valuable quantity of merchandiſe, ſuch as are generally on board the ſhips belonging to the Eaſt India and Turky companies.

Book of CARGO. See *Book-keeping*.

CARGO, or *Cargue*, is alſo a weight or meaſure uſed at Marſeilles, in France, ſignifying a load, weighing about 261 lb. of London avoirdupois, and is uſed in the ſale of Levant and Turky goods.

CARIBBEE *Iſlands*, or the *Antilles*, are ſituated in the Atlantic ocean in America, between 59 and 63 degrees of W. lon. and between 11 and 18 deg. of N. lat; comprehending the ſeveral iſlands of Barbadoes, St Vincent, St Lucia, Martinico, Dominica, Guardaloupe, Marigalante, Deſeada, Montſerat, Redonda, Antigua, Nevis, St. Chriſtopher's, Barbuda, Euſtatia, St. Bartholomew, Saba, St. Martin, Anguilla, Sombrero, Anegada, and ſome other conſiderable places, which are alſo diſtinguiſhed by the names of the Leeward and Windward iſlands; the former including all the iſlands from Anegada to Guardaloupe, and the latter all thoſe from Dominica to Barbadoes: beſides, the iſlands of St. Vincent, St. Lucia, and Dominica, as well as Tabago, are denominated the Neutral iſlands, on account of a mutual claim being laid to them by the crowns of Great Britain and France, who agreed that they ſhould remain unfortified, as neutral places, till their propriety was determined. See *Britiſh America* under *Great Britain*, *French America* under *France*, and *Dutch America* under the *United Provinces*.

CARIDOW. One of the Maldivia iſlands. See *Maldivia Iſlands*.

CARISSEL, or *Creſean*. A kind of coarſe cloth, uſed for making of tapeſtry; being either white, or dyed of ſeveral colours, and ſomewhat like canvas.

CARLA. An Indian cloth, manufactured in a village of the ſame name, about a league from Cananor, pretty near Tellicherry, on the coaſt of Malabar; which Monſieur Savary, and Mr. Poſtlethwayt after him, have miſtaken for Pondicherry.

CARLIN. A ſmall ſilver coin, current in the kingdoms of Naples and Sicily; the former being worth 4 d. ſterling, and the latter only three halfpence.

CARLINA, *Carolina*, or *Chamæleon*. A medicinal plant, reputed as a ſovereign againſt poiſon and the plague, tho' uſed for the cure of ſeveral other maladies; of which there are two ſorts, the white and the black, differing hardly in any thing more than colour; tho' the white puſhes out no ſtalk, and the black riſes to a reaſonable height. They both grow on the Alps, Pyreneans, and on the Mount d'Or in

in Auvergne, in ſuch abundance as to be a great article of food for the peaſants, who partly live upon their roots, and a kind of artichokes, of which they are productive. However, there is another kind, whoſe bloſſoms are of a purple colour; but this is known only to botaniſts.

The roots of black and white carlina, to be good, ſhould be new, plump, of a ſweet taſte, and aromatic ſmell; the root of the black being half open, and lighter than that of the white.

CARLINGFORD. A port-town of Ireland, ſituated in 6 deg. 23 min. of W. lon. and 54 deg. 45 min. of N. lat. on Carlingford bay, in the county of Louth, and province of Leinſter. See *Ireland*.

CARLINGS, or *Carlines*, in a ſhip, are two pieces of timber lying fore and aft, along from one beam to another, directly over the keel, ſerving as a foundation for the whole body of the ſhip: for on theſe the ledges reſt, whereon the planks of the deck, and other matters of carpentry, are made faſt; the carlings having their ends let into the beams called *culver-tail-wiſe*.

CARLING *knees*, are timbers going athwart the ſhip, from the ſides to the hatchway; ſerving to ſuſtain the deck on both ſides.

CARLOCK. A kind of blubber, made out of the ſturgeon's bladder, and brought from Archangel, in Ruſſia; its principal uſe being to clear wine; tho' it is uſed for dying: but the beſt ſort comes from Aſtracan, a city of Ruſſia, on the mouth of the Volga, where there is a conſiderable ſturgeon fiſhery.

CARMEN, are ſuch perſons who are employed in loading, carrying, and unloading goods, and merchandiſes, in carriages called cars.

CARMENS *company of London*, were, in the reign of Henry VIII. by an act of common council, conſtituted a fellowſhip of the city; and by letters patent of James I. in 1606, were incorporated with the fraternity of fuellers, under the appellation of woodmongers; with whom they continued till the year 1668, when the woodmongers were by parliament convicted of many enormous and grievous frauds in the ſale of coals, and other fuel; and, being apprehenſive of a puniſhment adequate to their crimes, threw up their charter to avoid the ſame: whereupon the carmen were, by an act of common council, re-appointed a fellowſhip of the city, under the title of The free carmen of the city of London; being governed by a maſter, 2 wardens, and 41 aſſiſtants, under the direction of the Lord Mayor and court of aldermen; but they have neither hall or livery.

To this fellowſhip belong 420 cars, or carts, for the carrying of goods and merchandiſe to and from all parts within the city and ſuburbs; the rule and government of which are, by an act of common council, veſted in the preſident and governors of Chriſt's hoſpital, under the following regulations and reſtrictions.

1ſt. That no more than 420 cars, or carts, be allowed to work within the city of London, and liberties thereof; every perſon preſuming to work a ſupernumerary car, or cart, contrary to the tenor of this injunction, being, for every ſuch offence, to forfeit 40 ſhillings. 2d, That no car, or cart, be kept by the fellowſhip, but ſuch as ſhould be duly licenſed by the preſident and governors of Chriſt's hoſpital, upon penalty of 40 ſhillings. 3d, That a fine of 20 s. be paid upon the admittance, or alienation of every car or cart, and 17 s. 4 d. annually for a licence to work, in default of which every offender is to be ſuſpended and diſabled from working. 4th, That, for the more effectually preventing all abuſes and impoſitions upon the citizens, by the carmen, or workers of carts, every car, or cart, is to have a number cut in braſs upon it.

The following rates or prices aſcertained by act of common council, are to be paid for the carriage of goods to and from the ſeveral places following.

1ſt. From any wharf between the Tower and London-bridge, to Tower-ſtreet, Grace-church-ſtreet, Fen-church ſtreet, Leadenhall-ſtreet, Cornhill, Biſhopſgate-ſtreet within, and places of the like diſtance up hill, with 18 hundred weight, not exceeding 20 hundred wt. 2 s. 8 d.; and being above 20 hundred wt. 2 d. for every hundred; provided the carmen help to load and unload their carts. 2d, From any wharf aforeſaid, to Broad-ſtreet, Lothbury, Old-jewry, Baſſiſhaw, Coleman-ſtreet, Ironmonger-lane, St. Lawrence-jewry, Milk-ſtreet, Aldermanbury, Cheapſide, Wood-ſtreet, Friday-ſtreet, Bread-ſtreet, and places of like diſtance, for the like weight as aforeſaid, 2 s. 6 d. 3d. For every half chaldron of coals, and for every hundred of faggots, 1 s. and 4 d. 4th, From any of the wharfs aforeſaid to Smithfield-bars, Holborn-bars, Temple-bar, or any of the bars on the north ſide of the city, and places of like diſtance, up the hill, with 18 hundred wt. 3 s. 4 d. for every load; and going beyond the ſaid places the parties to agree with the carmen. 5th, From any of the wharfs aforeſaid, to Tower-ſtreet, Fenchurch-ſtreet, Leadenhall ſtreet, Biſhops-gate-ſtreet, and places of the like diſtance, with a load of 15 hundred, not exceeding 18 hundred weight, 1 s. 8 d. and ſo in proportion for the reſt.

But, if a carman exacts more than the rates aforeſaid, upon due proof before the Lord Mayor, or any two juſtices of the peace, he is to ſuffer impriſonment for 21 days, without bail or main-prize; and complaints of the abuſes of carmen may be made every Tueſday, at 2 o'clock in the afternoon, to the court ſitting in Chriſt's hoſpital.

Carmen, porters, or watermen, aſſiſting in the landing of goods, without a warrant and an officer, may be committed to goal for the firſt offence, till they find ſecurity for their good behaviour; and for the ſecond offence to be impriſoned two months without bail, or pay 5 l. to the ſheriff.

CARMINE. A bright red, or crimſon colour, bordering ſomewhat on purple; which is uſed by woollen drapers to colour and hide thoſe places in ſcarlet cloth which are defective: it is alſo uſed by painters in miniature, and ſometimes by painters in oil; tho' rarely by the latter, upon account of its exceſſive price; this being the moſt valuable product of the cochineal meſtique; and to be good it ſhould be almoſt an impalpable powder, and of a high colour. See *Cochineal*.

Some make carmine with braſil wood, fernam bone, and gold leaf, beat in a mortar, and ſteeped in white-wine vinegar; the ſcum which ariſes from this mixture upon boiling, and when dried, making this ſort of carmine, which is much inferior to the former.

CARNARVON *Bay*, lies between two points, at the ſouth entrance of the channel, which runs between the county of Carnarvon and the Iſle of Angleſea, in Wales.

CARNEL, or *Carnel-work*, is a term uſed for the building of ſhips firſt with their timber and beams, and after bringing on their planks, to diſtinguiſh it from clinch-work.

Veſſels alſo which go with mizen-ſails, inſtead of main-ſails, are by ſome called carnels.

CAROBS, or *Carouge*, a kind of beans, growing abundantly in the iſland of Cyprus, being partly the food of ſeveral of its inhabitants: but notwithſtanding the great conſumption they make of them, for their own eating, and that of their cattle, inſtead of giving them barley or oats; the carobs alſo make a conſiderable article in the commerce of this iſland, whence vaſt quantities are annually exported for all the iſlands of the Archipelago.

CAROLINE. A Swediſh ſilver coin, worth 1 s. 2 d. ſterl.

CAROLUS. An ancient Engliſh broad piece of gold, ſtruck under King Charles I. whoſe image and name it bears; its value of late has been eſtimated at twenty three ſhillings ſterling; tho', at the time when it was coined, it is ſaid only to have been rated at 20 s.: but it is now out of uſe.

CAROLUS, is alſo a ſmall copper coin of France, allayed with a little ſilver, being ſo called becauſe it was ſtruck during the reign of Charles VIII. being worth 10 deniers, or ſomewhat leſs than a halfpenny ſterling: but they are no longer current except in Lorrain, and ſome of the neighbouring provinces.

CARPENTER, is a perſon whoſe employment conſiſts in cutting, framing, and joining large pieces of wood, for the uſes of building, or carpentry; which is one of the trades ſubſervient to architecture, and is divided into two branches, houſe-carpentry, and ſhip-carpentry: the firſt employed in raiſing, framing, roofing, and flooring of houſes: the ſecond in the conſtruction of veſſels for ſea; ſuch as ſhips, barks, barges, and boats.

The rules and practices in carpentry, as to planing, ſawing, morteſſing, tenanting, ſcribling, paring, and moulding, are much the ſame as thoſe in joinery; ſo likewiſe are the tools, or inſtruments; and the ſtuff the ſame in both; all the difference between the two trades conſiſting in this, that joinery is uſed in the ſmaller, and more curious works; and carpentry in the larger, ſtronger, and coarſer. See *Joinery*.

Fr. Pyrard aſſures us, that the art of carpentry is in its greateſt perfection in the Maldivia iſlands; their works there, he obſerves, being ſo artfully managed, that they will hold right and firm without nails or pins; and adds, that they are ſo curiouſly put together, as no body can take them aſunder but thoſe who are acquainted with the myſtery.

CARPENTERS *company of London*, was incorporated on the 7th of July 1344, by letters-patent of Edward III. by the ſtile of the maſter, wardens, aſſiſtants, and commonalty of The miſtery of freemen of the carpentry of the city of London, with a power to make by-laws for their better regulation; which is a company governed by a maſter, 3 wardens, and 20 aſſiſtants; to whom belong a livery of 100 members, who have a beautiful hall at London-wall, in which they manage their affairs, and pay a fine of 8 l. each upon their admiſſion.

CARPET. A ſort of covering, worked either with the needle, or on a loom, to be ſpread on a table or trunk; but chiefly on a floor or paſſage.

The beſt carpets are made in Perſia and Turky; the warp and woof holding the ſilk and wool very tight, which are cut very cloſe, and form a kind of pluſh or velvet of different colours: but they are ſometimes mixed with gold and ſilver thread, frizzled, or curled, which increaſes the price, as it adds to the beauty of the manufacture.

The Turky carpets are either hairy or ſhorn; that is, either with long or ſhort hair, and are chiefly imported from Smyrna, where they diſtinguiſh three ſorts. The moſquets, which are ſold according to their ſize and quality, from 1 l. to 5 l. the piece, being the moſt beautiful of all. The pics, which are the largeſt kind, being ſold in ſquares at 1 s. 10 d. the ſquare-pic. And the cadene, or the worſt ſort, which are ſold from 3 s. 7 d. to 7 s. 2 d. the piece.

There are alſo carpets made in ſeveral parts of France, ſome in Germany, and of late years in England, where the Wilton carpets are in much eſteem.

CARPO-BALSAMUM, the berry, or fruit, of the tree which yields the true balm, or balſam of the Levant: the berry being oblong, with a ſhort footſtalk, a brown wrinkled rind, marked with four ribs, of a grateful taſte and ſmell: but the genuine ſort is ſeldom found in ſhops; that commonly ſold in its place being only Jamaica pepper; though others ſubſtitute cubebs for it. See *Cubebs*.

CARRE, called alſo *Carſe*, is a corn meaſure uſed at Briare in France, weighing about 20 lb.

CARRIAGE, is a vehicle for the conveyance of perſons, and goods, from one place to another, either by land or water; ſuch as waggons and carts, barges and boats.

In Europe, horſes, mules, and aſſes, are uſed in land-carriage; but in Lapland and Siberia the elk or rain-deer is uſed: in Aſia, and Africa, the caravans and cafilas, are made up of elephants, dromedaries, and camels: and in the ſouthern parts of America, the vigonnas, lamas, and alpagnas, are uſed as beaſts of carriage.

Water-carriages, are thoſe veſſels which ſerve for the conveyance of perſons or goods by rivers, lakes, or canals; being either ſailed, rowed, or drawn by men or horſes: but freight implies ſea-carriage.

Several acts of parliament have been paſt for the regulating of carriages in G. Britain, being thoſe of the 3d of Will. and Mary, the 9th of Q. Anne, the 1ſt, 3d, 5th, and 6th of Geo. I. and particularly an act paſt in the year 1750, intitled, An act for the more effectual preſervation of the turnpike roads in that part of Great Britain called England; and for the diſpoſition of penalties given by acts of parliament relating to the highways, in that part of Great Britain called England, and for enforcing the recovery thereof; and for the more effectual preventing of miſchief, occaſioned by the drivers riding upon carts, drays, cars, and waggons, in the city of London, and within ten miles thereof. The preamble reciting, that though great ſums of money have been expended in repairing the turnpike roads, yet they cannot be kept in ſufficient repair; and are in many places become ruinous, by the great and exceſſive weights, which the number of horſes, allowed by law to draw waggons and other carriages, enable carriers, and other perſons, uſing the ſaid roads, to carry upon the ſame. For remedy whereof it was enacted, That the truſtees of the roads ſhould, after the 1ſt of July 1752, take 20 ſhillings, for every hundred exceeding 60 hundred in every waggon or other carriage drawn by ſix horſes, paſſing through any turnpike, over and above the tolls already granted; or in caſe any horſe was taken from any waggon or carriage, to avoid the additional toll, the perſon ſo offending ſhould forfeit 5 l. to the informer: but this act was not to extend to any other carriages than thoſe commonly hired for the conveyance of goods: that the truſtees for the roads ſhould erect engines for weighing carriages, within their reſpective diſtricts; and ſhould receive ſuch additional toll of 20 ſhillings the hundred, as was directed to be taken by them purſuant to the act of the 14th of George II.: but this part of the act was not to extend to any places above 30 miles from London, or where the tolls did not amount to 50 l. annually: however, any carriages, drawing up ſteep hills might uſe as many horſes as the juſtices at the quarter ſeſſions ſhould think neceſſary, and direct; which order is to be kept by the reſpective clerks of the peace among the records of the ſeſſions, to which all perſons ſhould have recourſe, without fee or reward. And by a ſubſequent act, no waggon is to draw with more than five horſes, except in going up hills.

CARRIAGE, alſo ſignifies the money paid to a carrier for conveying goods from one place to another.

Bill, or letter of CARRIAGE, is a note, or writing, given to a carrier, containing an account of the goods, that he may demand payment for the carriage, and that the perſon to whom they are directed may ſee that they are delivered in good condition.

CARRIAGE *of a cannon*, is the timber-work, or frame, on which it is mounted.

CARRICKFERGUS *bay*, lies in the county of Antrim, and province of Ulſter, in Ireland, 14 miles eaſt of Antrim, and 85 north of Dublin.

CARRIED *over*, in books of accompt, is a term when the ſum total at the bottom of one page is carried to the top of another, where it is ſaid brought over.

CARRIER, is a perſon who carries goods from one place to another, either in waggons, carts, or other carriages, or on pack-horſes: thoſe goods which are of a bulky ſolid ſubſtance, in bales, cheſts, or the like, paying according to the pound weight, which is more or leſs according to the diſtance; and thoſe which are liquid paying according to the ſize of the caſk.

CART. A land carriage with two wheels, commonly uſed by higlers.

CART-WRIGHT. A perſon who makes carts. See *Wheel-wright*.

CARTE, or *Quarte*, a corn meaſure uſed in ſome places of Savoy; that of Conflans weighing 35 pounds avoirdupoiſe; and that of St. John de Maurienne only 21 pounds avoirdupoiſe.

CARTEL. A corn meaſure uſed at Rocroy, Mezieres, and other places in France; that of wheat weighing at Rocroy 35 pounds avoirdupoiſe; that of maſlin-corn 34; and that of rye 33.

CARTHAGE *Cape*, is ſituated in 9 deg. of E. lon. and 36 deg. of N. lat. on a peninſula on the coaſt of the Mediterranean, in the kingdom of Tunis in Africa.

CARTHAGENA. A city, and one of the beſt harbours in Spain, ſituated in 1 deg. 5 min. of W lon. and 37 deg. 40 min. of N. lat. on a fine bay of the Mediterranean, in the province of Murcia. See *Spain*.

CARTHAGENA, or *New Carthage*, one of the largeſt and beſt fortified towns of South America, with a very ſecure and capacious harbour; the entrance whereof is ſo very narrow, that no more than one ſhip can enter it at a time; being well defended by caſtles and platforms of guns, and ſituated

ſituated in 77 deg. of W. lon. and 11 deg. of N. lat. See *Spaniſh America*.

CARVEL. See *Caravel*.

CARWAR. A town on the coaſt of Malabar, in the Hither India, ſituated in 73 deg. of E. lon. and 15 deg. of N. lat. 60 miles S. of Goa; where the Engliſh Eaſt India company have a factory, from whence they import pepper. See *India*.

CAS. See *Caxa*.

CASCHE. See *Cache*.

CASE-HARDENING, is an inferior degree of ſteel-making.

CASE-*ſhot*, are muſket-bullets, ſtones, old pieces of iron, or the like, put into caſes, and ſhot out of great guns, being chiefly uſed at ſea, to clear the enemies decks when they are full of men.

CASH, the ſtock of ready money which a banker, merchant, or other perſon, has in his preſent diſpoſal to negotiate.

The management of the caſh of a company is of great importance, being that whereon its good or ill ſucceſs chiefly depends.

The partners of a company ſhould apply themſelves to the things for which they are the beſt fitted; as well with regard to the purchaſe, as the ſale of merchandiſe; beſides the keeping of the caſh, books, and the management of other particulars He who is of an active diſpoſition is more proper for buying and ſelling, than he who loves his repoſe; wherefore, the moſt active of the partners ſhould be employed in the purchaſe and ſale of merchandiſe; and the other ſhould be the caſh, and book-keeper; becauſe, having leſs vivacity, he can, with more caution, and prudence, conduct himſelf in the diſpatch of ſedentary buſineſs.

Sir William Petty was of opinion, that the caſh, or circulating money in a ſtate, is equal to the tenth part of the annual product of the land.

CASH-*book*. See *Book-keeping*.

CASHIER. The caſh-keeper, who is charged with receiving and paying money, on the account of a company, or ſociety.

CASHOO, is a medicinal and aromatic drug, extracted by decoction from the cattee-tree, which grows in the kingdom of Bahar, in India, of which there are two ſorts; the rough and the refined; the former is brought to Bengal, where it is refined, and afterwards ſent into Europe, in the form of lozenges, about the bigneſs of half a crown.

Caſhoo is eſteemed for ſtrengthening the ſtomach, ſtopping coughs, and ſweetening the breath: it is frequently mixed with other perfumes, and ſhould be of a tanned red without, of a bright red within, not burnt, and very gloſſy.

CASK. A common name for veſſels of different kinds, in contradiſtinction from the liquor, or other matter, contained therein: thus a hogſhead of ſpirits is ſaid to weigh 4 c. $\frac{1}{2}$ and 22 lb. caſk and liquor; and a puncheon 6 c. $\frac{1}{4}$ and 2 lb. caſk and liquor: but a caſk of ſugar is a barrel of that commodity, containing from 8 to 11 hundred weight; and a caſk of almonds is about 3 hundred wt. A caſk in ſtaves is when the ſtaves are ready made, and want only to be joined and hooped; which are thus commonly ſent to America for the ſake of room.

CASPIAN *ſea*, is bounded by the province of Aſtracan, and the country of the Calmuc Tartars on the north; by the Bocharas, and part of Perſia, on the eaſt; by another part of Perſia on the ſouth; and by another part of Perſia, and Circaſſia, on the weſt; being upwards of 400 miles in length from north to ſouth, and 300 miles broad from eaſt to weſt; in which, though the great river Volga, and ſeveral others, diſcharge themſelves, the waters are generally about the ſame depth, and no tides obſerved; but once in 15 or 16 years it riſes a great many fathoms, and drowns the adjacent countries: however, this conſiderable maſs of waters is properly a lake; becauſe it has no viſible communication with any other ſea. The Ruſſians have the ſole navigation of the Caſpian, carrying on a conſiderable trade between Aſtracan and Reſhd, where the Perſians ſupply them with great quantities of ſilk, which they diſpoſe of to the Engliſh factors in Ruſſia.

CASSAVA, or *Manihot*, is a crooked knotty ſhrub, with ſoft and brittle wood, common in America; of whoſe root the natives make a kind of bread.

CASSEL, or *Heſſe-caſſel*. See *Germany*.

CASSIA. A purgative fruit brought from the Eaſt and Weſt Indies; being the produce of a tree of the ſame name, called in Engliſh the *pudding pipe tree*.

There are four kinds of caſſia, alike in properties, and nearly in figure; all in long black pods, but very different, if conſidered with regard to the trees that produce them; being the caſſia of the Levant, that of Egypt, that of Braſil, and that of the Antilles iſlands.

Caſſia of the Levant, muſt be choſen new, in large pods, heavy, and of a tan colour; the bark, when broke, fine, white within, and full of a black ſoft pulp of a ſweetiſh taſte.

Caſſia of Egypt, is like that of the Levant, except that the fruit is ſmaller, and the bark ſofter.

Caſſia of Braſil, is the largeſt of all, ſome of the pods being found 4 or 5 inches in circumference: but this kind is not very common in the ſhops.

Caſſia of the Antilles, is now chiefly uſed, being produced there in ſuch abundance that the veſſels, in their home voyages, uſe it as ballaſt, whereby it is frequently found foul and dirty; but it ſhould be choſen in the ſame manner as that of the Levant.

When the pod is entire, and the pulp not yet taken out, it is moſt commonly called *caſſia fiſtula*, or *caſſia in the cane*; for uſing whereof the pulp is taken out, and ſifted; though apothecaries uſe little of this kind, but what is old and boiled up with ſugar to make it keep.

Caſſia, when green, as alſo the flowers of the caſſia tree, are confected both in the Levant and the Antilles iſlands; having almoſt the ſame effects with the common caſſia, the baſis of moſt purgative electuaries.

The tincture of caſſia is a ſlight infuſion of the pulp with the ſeed; and the extract of caſſia is nothing but the pulp, ſeparated from the ſhell and the ſeeds, with the addition of a certain quantity of ſugar to preſerve it from turning ſour.

CASSIA *lignea*, or *Xylocaſſia*, is the bark of a tree, reſembling that which bears the cinnamon, growing promiſcuouſly with it in the iſland of Ceylon.

Both the barks are gathered and dried in the ſame manner, their ſmell and taſte being nearly alike; for they are equally ſweet, poignant, and agreeable, with ſcarce any difference in their colour and form; but the caſſia is fatter, and alſo more mucilaginous than cinnamon; and, in chewing, diſſolves in the mouth, without leaving any thing woody behind; whereas the woody part of cinnamon will ſtick tho' ever ſo well chewed: ſome authors will have the tree that bears cinnamon to bear the caſſia too; making this only difference between them, that the firſt comes from Ceylon, and the latter from the coaſt of Coromandel.

Caſſia lignea is uſed in the compoſition of Venice treacle, and alſo frequently uſed for adulterating cinnamon.

CASSIDONY. A kind of mineral, or precious ſtone, uſed for making vaſes, and veined with ſeveral colours.

CASSIMBUZAR, *Caſſumbazar*, or *Kaſſumbazar*, is properly a part of the ſuburbs of the city of Muxadevat, the capital of the province of Bengal, in India, ſituated on the river Ganges, in 87 deg. of E. lon. and 24 deg. of N. lat. where there is a Britiſh factory, ſubordinate to the government of Fort William. See *India*.

CASTAMBOULI. A town of Turky. See *Turky*.

CASTILLAN. A gold coin current in Spain, for 14 rials, or about 6 s. 3 d. ſterling.

CASTILLAN, or *Caſtillian*, is alſo a weight uſed in Spain for weighing gold, being the hundredth part of a pound Spaniſh weight; which is about three *per cent*. heavier than the pound avoirdupoiſe London.

The caſtillan is likewiſe in uſe at Buenos-Aires, in the mines of Chili and Potoſi; as alſo in all the reſt of Spaniſh America.

What is uſually called in Spain a weight of gold, is always underſtood of a caſtillan: thus, when it is ſaid ten thouſand weight of gold, the weight of ten thouſand caſtillans of gold is underſtood.

CASTING, in foundery, and plumbery, is the running of

iron and lead into a mould prepared for that purpoſe, for making iron veſſels, and leaden pipes.

CASTLE, in the ſea-language, denotes an elevation on the deck of a veſſel; or a part of the deck, fore and aft, raiſed above the reſt. See *Deck*.

Fore-CASTLE. See *Fore*-caſtle.

Hind-CASTLE. See *Hind* caſtle.

CASTOR. See *Beaver*.

CASTOR *company*. See *Hudſon's Bay Company*, and *Canada Company*.

CASTOREUM. A liquid matter incloſed in bags, or purſes, near the anus of the caſtor or beaver, falſely taken for the teſticles of that animal.

The beſt caſtoreum is brought from Dantzic; that of Canada being much inferior: but the largeſt lumps, and thoſe that ſmell ſtrongeſt, are the moſt eſteemed, eſpecially when heavy and well fleſhed.

Care ſhould be taken that it is not adulterated with honey, or other drugs, to increaſe its weight; which is known by ſqueezing it, the ſophiſticated being ſoftiſh, and yielding a liquid ſtinking honey; but the natural is hard and heavy, of a brown colour, of a briſk ſmell, and full of ſmall filaments.

Caſtoreum is uſed in the compoſition of Venice treacle, and mithridate; as alſo in various other hyſteric and cephalic medicines: beſides, an oil is extracted from it called *oil of caſtor*; which is likewiſe uſed while in its liquid ſtate, to make ſeveral kinds of unguents.

CASTOS, is a term at Japan, for the duties paid on the importation and exportation of goods into that country; or rather the caſtos are the preſents which Europeans were accuſtomed to make yearly for their reception, before the Dutch had engroſſed all the commerce of theſe iſlands.

CATANIA. A city and port-town of the province of Demona; in Sicily, ſituated in 15 deg. of E. lon. and 38 deg. of N. lat. on a bay of the Mediterranean, which forms a good harbour. See *Italian Iſlands*.

CATAPULTA. A plant, from whoſe ſeed an oil is extracted, which is uſed in the compoſition of ſome plaiſters.

CATASTRO, is a tax in the province of Catalonia, in Spain, which extends to merchants, manufacturers, handicraftmen, and labourers, who have an eſtimate made of their gains, and are charged 10 *per cent.* upon them; a proportion which ſeems ſo very oppreſſive, that it muſt be an onerous clog upon the manufactures, and highly injurious to the commercial intereſt of Spain.

CATEE. The tree which produces caſhoo. See *Caſhoo*.

CATEGATE, or *Scagerac ſea*, is the paſſage from the ocean to the Sound, or entrance into the Baltic ſea, between Sweden and Denmark. See *Denmark*.

CATERGI. A name given to the public carriers on the roads in Turky.

CATHOLICON. A ſoft and purgative electuary, being a kind of univerſal remedy, of which there are ſeveral ſorts, diſtinguiſhed by the name of the inventors; ſuch as that of Fernel; and that of Nicholas from Salerne, called ſimply, by way of excellence, *catholicon*.

CATI, or *Catty*, a Chineſe weight, particularly uſed at Canton, which is about 1 lb. 5 oz. Engliſh avoirdupois.

CATI, is alſo the only weight of Japan; though it is uſed likewiſe at Batavia, and in other parts of the Indies, where it weighs more or leſs, according to the number of taels it conſiſts of: as for inſtance, the cati of Java being worth 20 taels, and that of Cambay 27; each tael being 4 ounces and 10 drachms avoirdupois.

CATI, is likewiſe a ſmall weight, uſed by the lapidaries of the Eaſt for weighing emeralds, being 3 grains.

CATI, is alſo a money of accompt uſed at Java, and in ſome neighbouring iſlands, amounting to about 1 l. 13 s. 3 d. ſterling.

CATIANG. A kind of pulſe growing in ſome places of the Eaſt Indies, particularly upon the coaſts of Malabar, where the Engliſh and Dutch, who keep factories in theſe parts, annually buy up great quantities, which they diſtribute in all the parts of the Indies, not productive of this pulſe; where it ſerves them in exchange for ſuch other merchandiſe, as they load their ſhips with for Europe.

CATIMARON, or *Catimaran*, a kind of float, or raft, uſed by the Indians along the coaſt of Coromandel, for fiſhing, conſiſting of two or three poles tied together with ropes, having a triangular ſail in the middle made of mats: there is alſo another kind, made of two or three canoes faſtened together, which are uſed for carrying goods.

CATOCH *Cape*, lies in the province of Yucatan in Mexico, in North America.

CATT, or *Catt-head*, in a ſhip, is a large piece of timber faſtened aloft, right under the hawſe, with two ſhivers at the end thereof, wherein is put a block, and a rope, with a large iron hook, whoſe uſe is to raiſe the anchor from the hawſe.

CATTLE. Under this denomination are generally included all ſorts of horſes, mares, oxen, bulls, cows, and calves, which are called black or great cattle; ſheep, lambs, ſwine, goats, and kids, which are called ſmall cattle; for the preſervation of which there are ſeveral prudent proviſions made by the Britiſh legiſlature. For by the ſtatute of the 3d and 4th of Edward VI. no perſon is to buy any oxen, ſteers, ronts, kine, heifers, or calves, but only in open fair, or market, except for proviſion for their houſehold, team, or dairy: nor are the butchers to buy them with an intent to ſell them again alive, under forfeiture of the cattle.

By the ſtatute of 2d and 3d of Philip and Mary, every perſon keeping above ſixſcore ſheep, for the moſt part of the year, upon his ſeveral paſtures or farms apt for milch kine, and wherein no other perſon hath common, ſhall yearly, for every threeſcore ſheep keep one milch cow; and ſhall rear up yearly, for every ſixſcore ſheep, one calf, upon pain of forfeiting 20 ſhillings every month, for every cow ſo neglected to be kept, and 20 ſhillings for every calf ſo neglected to be reared. That every perſon keeping above 20 oxen, runts, ſchrubs, ſteers, heifers, or kine, ſhall, for every ten beaſts, keep one milch cow; and rear yearly one calf for every two milch kine, under the penalties aforeſaid; which act was made perpetual by the 13th of Q. Elizabeth, and by the 7th of James I. extended to all grounds apt for milch kine, and not to be laid open to common at any time of the year.

By the ſtatute of the 18th of Charles II. it is declared, That the importation of cattle ſhall be adjudged a public nuſance; and if any great cattle, ſheep, or ſwine, or any beef, pork, or bacon, ſhall be imported, the ſame ſhall be forfeited, except they are for the neceſſary proviſion of ſhips in which the ſame ſhall be brought, without expoſing the ſame to ſale: but nothing in this act was to hinder the annual importation of 600 head of cattle from the Iſle of Man, on condition that they were of the breed of that iſland, and ſhould be landed only at the ports of Cheſter and Liverpool; though they may be ſeized by conſtables, or any perſon whatever, and kept forty eight hours in ſome public place: but if, within that time, the owner makes it appear to ſome juſtice of the peace, by the oaths of two credible witneſſes, that they were not imported from beyond the ſeas, they may, upon ſuch juſtices warrant, be forthwith delivered, otherwiſe they are forfeited: beſides, Britiſh or other cattle, driven or intermixed with Iriſh, and ſeized together, are to be deemed Iriſh, and to be forfeited accordingly.

By the ſtatute of the 20th of Charles II. it was enacted, That if the officers or inhabitants where ſuch cattle or goods ſhould be firſt imported, neglected to make a ſeizure, they ſhould forfeit 100 l.; which by a ſubſequent act was altered to 40 s. for every one of the great cattle, and 10 s. for every ſheep or ſwine: that every veſſel, with all her tackle, in which any ſuch cattle or goods ſhould be imported, and out of which they ſhould be put on ſhore, ſhould be forfeited, and ſeized any time within one year after ſuch importation: beſides which, the maſters and ſeamen belonging to the veſſel, as alſo every other perſon employed in the landing of ſuch cattle and goods, are to be impriſoned for 3 months.

By the ſtatute of the 22d of Charles II. it was declared lawful to tranſport, by way of merchandiſe, horſes or mares, beeves and ſwine, as alſo beef, pork, and bacon, to any place in amity with Great Britain, on paying a duty of one ſhilling for every ox, ſteer, cow, or heifer; and

and two pence for each hog; but five ſhillings are to be paid for every horſe or mare: however, by the ſtatute of the 3d of William and Mary, all perſons are at liberty to export out of England, Wales, or Berwick, to any part in amity, beef, pork, bacon, butter, cheeſe, or candles, free from cuſtom, or impoſition; though four pence is to be paid for every pound of bacon imported.

Cattle are the chief ſtock of a farm; they ſerve either for food, or for tilling the ground; and they who rear cattle for ſale are called graziers; thoſe who kill them for ſale being called butchers. Beſides the fleſh of cattle, they afford hides, tallow, wool, hair, butter and cheeſe, for trade: Great Britain being the moſt remarkable for ſheep, and Ireland for beeves.

CAVADAS, or *Canadas*, a meaſure uſed in Portugal for oil. See *Canadas*.

CAVALLO. A ſmall braſs coin of Italy, ſo called from the impreſſion of a horſe on one ſide; the firſt of which were ſtruck in Piedmont in 1616, 12 of them being worth about a halfpenny.

CAVAN. A meaſure uſed in ſome of the Philippine iſlands, particularly at Manilla, for meaſuring rice; of which the cavan weighs about 48 pounds Engliſh avoirdupoiſe.

CAVELIN, is a term in trade at Amſterdam, for a parcel of goods put up to ſale, being the ſame with what is called in England a lot.

CAVIA, *Caviac*, or *Cavear*, a kind of food or pickle, in great uſe and repute throughout Muſcovy, and introduced upon the Engliſh table; being the roe, or ſpawn, of the ſturgeon and bolluca, taken out, ſalted, and dried in the ſun, or by the fire; which to be good ſhould be of a reddiſh brown colour, and very dry.

The Italian merchants ſettled at Moſcow drive an incredible trade with cavear; the fiſh being caught in prodigious quantities at the mouth of the Volga, and other rivers that empty themſelves in the Caſpian ſea; as alſo in the black ſea: but the Engliſh import conſiderable quantities of this commodity from Archangel; tho' not ſo much for home conſumption as to ſupply the French and Italians. See *Sturgeon-fiſhery*.

CAUKING, or *caulking of a ſhip*, implies the driving in oakum, or ſomewhat of that kind, into the ſeams, or commiſſures of the planks, to prevent the ſhip from leaking.

CAURIS, called alſo *Bugis*, or wrote more commonly *Coris*, is a kind of ſmall white ſhell brought from the Eaſt Indies, and current there in ſeveral places for money. See *Coris*.

CAXA. A little leaden coin, mixed with ſcoria of copper, ſtruck in China, but current chiefly at Bantam, and in the reſt of the iſland of Java; as alſo in ſome of the neighbouring iſlands; though the Malais call them cas, and the Javeſe pitis, being ſomewhat ſmaller than the French double, and having a ſquare hole through the middle, by means whereof ſeveral of them are hung on the ſame ſtring: this ſtring, which they call ſanta, containing 200 caxas, or 3 farthings ſterling; and 5 ſantas tied together, that is 1000 caxas, make a ſapacou.

Nothing can exceed the brittleneſs of the caxa; for a ſtring never falls to the ground without breaking 10 or 12 pieces: but leaving them a night ſteeped in ſalt-water, they cling ſo faſt to one another that they are not to be ſeparated without breaking one half of them.

CAYANG. A plant growing in the kingdom of Bengal, in India, producing a kind of pulſe like peaſe, which Europeans uſe for food among the mariners.

CAYELAC. A kind of ſweet-ſcented wood growing in the kingdom of Siam, which the Siameſe, and Chineſe, burn in their temples, in honour of their pagods; and it alſo makes a part of the commodities exported from Siam for China.

CAYENNE. A town ſituated on a ſmall iſland of the ſame name, near the coaſt of S. America, in 53 deg. of W. lon. and 5 deg. of N. lat. being the capital of the French ſettlements there, to which the French have given the name of equinoctial France, from its ſituation under or near the equator. See *French America*.

CAZUMA. A river on the coaſt of Cape-verd in Africa.

CEBU, one of the moſt ſoutherly Phillippine iſlands, ſituated between the iſland of Layte on the weſt, and Negroon the eaſt, in the Indian ocean. See *Philippine Iſlands*.

CEDAR. A large tree, whoſe timber is uſed by Europeans in inlaid-work, and that of turners; as alſo in the wainſcotting and cielings of magnificent edifices: but, in the places where it grows, it is uſed in building houſes, and ſhips, as ordinary carpenters timber: though that of America is alſo uſed in ſhip-building; eſpecially by the Spaniards, who ſay that cedar has an excellent quality peculiar to itſelf; becauſe, in an engagement, it ſucks in the ball; ſo that they are not expoſed to the miſchiefs done by the ſplinters of European ſhips, which uſually wound, and even kill great numbers.

This tree bears berries like the juniper, which are large and round like myrtle berries; the wood is red and odorous, which paſſes for incorruptible, either upon account of its extreme bitterneſs or hardneſs: the tree delighting in cold places, and mountains, being generally green, living a long time, but dies as ſoon as its top is cut off: they are in Turky, the iſles of Cyprus and Candia; as alſo in ſome parts of Aſia, in ſome places of Africa, and in many in America.

The cedar of Lebanus is another kind ſtill more precious, growing to a prodigious height, and in figure pyramidical; the bark being ſmooth, the leaves green, ſmall and narrow, the fruit ſimilar to the pine-apple, and the berry to that of the cypruſ. From the trunk, and large branches of this tree, a white, clear and tranſparent reſin, called cedar gum, or *manna maſticina*, oozes of itſelf, during the great heats, without inciſions: but the largeſt trees yield ſcarce more than ſix ounces a day. When the gum has ceaſed to flow of itſelf, an inciſion is made in the tree, from whence an unctuous humour proceeds, which dries as it runs along the trunk; which is the cedar reſin ſold by druggiſts; being of a beautiful yellow, friable, lucid, tranſparent, and well ſcented.

The cedar alſo furniſhes a third drug called *turpentine of cedar*, which is a clear, and white liquor like water, of a ſtrong active ſmell, and contained in ſmall bubbles like bladders, which the exceſſive heat of the ſun ſublimes from the trunk of the tree.

CEDAR *of Phœnicia*, called otherwiſe *Oxycedar*, is a kind of cedar growing in Phenicia and Cilicia, much reſembling the juniper tree. See *Oxycedar*.

CEDRA, or *Cedrat*, a kind of citron tree, growing plentifully in Italy, whoſe fruit is of a good ſmell, being made into a liquid confect, when ſmall; as alſo into a dry confect when large, and ſliced into quarters.

The water of cedrat, eſteemed extremely upon account of its excellent perfume, is called by ſome Barbadoes water: but they have this difference, the water of cedrat being pure, and the Barbadoes water a mixture of brandy rectified with a mixture of pure cedrat-water.

Beſides the uſe of cedrat for the compoſition of Barbadoes water, it is uſed for perfuming tobacco, and other things; as alſo for being an ingredient in ſome remedies.

CEDRIA is a term ſometimes given to the gum or reſin oozing from the cedar, whoſe good quality conſiſts in being fat, thick, tranſparent, of a ſtrong ſcent, and when poured out falling equally drop by drop.

CEER, or *Seer*, is both a weight and a meaſure uſed upon the coaſt of Coromandel, in India; 40 of which make the maund of 25 lb. Engliſh avoirdupoiſe.

CELEBES, or *Macaſſar*, an iſland ſituated between 116 and 124 deg. of E. lon. and between 2 deg. N. and 6 deg. S. lat. being 500 m. lon. and generally 200 broad, which communicates the general name of Celebes to ſeveral other iſlands lying cloſe together: the other iſlands being thoſe of Gilolo, Ceram, Flores, Timor, Solor, Miſacomby, Bouton, Bouro, and ſome others; all of them ſurrounding the iſlands of Molucca and Banda, being ſometimes called the little Moluccas. See *Moluccas*.

The name of Maccaſſar is from one of its kingdoms, the moſt fertile of all, and, in ſome reſpects, the only place of trade for Europeans. The capital city, remarkable for its magnitude, the number of its inhabitants, and the beauty of its buildings, all almoſt in the European taſte, is ſituated in the ſouth part of the iſland of Celebes, 5 deg. 6 min. from the line; where the Portugueſe formerly kept on footing one of their moſt conſiderable India trades: however the Dutch eſtabliſhed themſelves there afterwards;

and, with the conſent of the king of Macaſſar, who ſeemed haraſſed with the kind of ſervitude the Portugueſe kept him in, built Panakoke and Samboupo, two forts which inſured their trade; and, as they made the inhabitants of Macaſſar believe, the liberty of their country: but, theſe new gueſts becoming ſcarce more tractable than the antient, in matters of commerce, and full of acting the maſter at Macaſſar; as alſo of excluding all other nations, the Portugueſe regained their credit, and the Dutch were upon the point of being expelled; when, for the preventing their enemies deſigns, which they were apprehenſive of, they appeared before Macaſſar in 1660, with a fleet of 33 ſhips, and after having been equally victorious by ſea, where they took, burnt or ſunk, ſix large Portugueſe ſhips richly laden; as alſo by land, where, in a deſcent, they forced ſword in hand, two forts at the entrance of the city; they ſo intimidated the king and his people, tho' the braveſt of the Indians, that they obliged themſelves, by a treaty concluded at Batavia, the ſame year, to ſuffer no longer the Portugueſe in their kingdom, and to leave the Dutch in poſſeſſion of their forts and commerce.

However it was not, till the year 1669, that the Dutch entirely reduced this turbulent nation; who, in deſpight of the treaty of 1660, and another of 1667, troubled them continually in the ſpice commerce, ſending privately, on the coaſts of the Banda iſlands and Moluccas, little veſſels to treat with the inhabitants for cloves and nutmegs, which they afterwards ſold to the Engliſh, keeping up, as it was ſaid, a correſpondence with the enemies of the Dutch company, to rob them of Amboyna, one of their ſix grand Indian governments.

The Dutch, notwithſtanding ſo much expence, and ſuch an effuſion of blood, could not eſtabliſh an excluſive trade at Macaſſar; the port and the town having remained open to all the nations of the Indies and Europe, except the Portugueſe, who come there, however, to trade like others, ſince, upon account of their weakneſs in the Indies, they are no longer objects of Dutch jealouſy: but what attracts there a great number of traders, is the free port; merchandiſe paying no duty, either of importation or exportation.

The principal commodities exported from thence are, rice in great abundance, whereof the Dutch make conſiderable cargoes for the Moluccas, and the iſlands of Banda; as alſo gold, ivory, ſandal, cotton, camphire, iron, ſeveral kinds of hardware of this metal, arms fit for the Indians, ginger, long pepper, opium, and pearls, which are fiſhed for on ſome coaſts of the Celebes: the imported commodities conſiſting in ſcarlet, gold and ſilver cloths, Cambay cloths, tin, and copper.

Gilolo, or *Batochina*, is ſituated between 125 and 128 deg. of E. lon. and from 1 deg. of S. lat. to 2 deg. of N. lat. being about 200 leagues in circumference; where the Dutch eſtabliſhed themſelves; having in it the forts Tacome, and Tabou; though leſs for keeping on footing a trade with the natives, than for hindering the culture of cloves, which grow there in a tolerable condition: but the beſt commodity they export from it is the ſago; of which there is a great conſumption among the inhabitants of the little Moluccas, and the Banda iſlands, who uſe it inſtead of rice, and even make drink of it.

The ſago is the pith of a kind of tree not unlike that of the fir, which is raſped, and reduced into a ſweet flour, whereof the Moluccqueſe make a kind of broad thin cakes, either on a fire, in an iron baking pan, or before the ſun, leaving them expoſed to it till they dry; though they alſo make a kind of ſoup of it, which is glutinous, but of a pretty good taſte, very nouriſhing, and when ſteeped in water it ſerves as a drink: however, rice and ſeveral other ſorts of proviſions, are exported from Gilolo.

Ceram, is another of theſe iſlands, ſituated between 126 and 129 deg. of E. lon. and 3 deg. S. lat. being about 150 miles long, and 60 broad. It is a mountainous woody country; a part of the coaſts whereof for a long time belonged to the King of Ternate, which was the cauſe of a tedious war between this prince and the Dutch, upon account of the cloves cultivated there; but, ſince the peace between them in 1638, Ceram has had the ſame fortune with Ternate, and the other iſlands depending on it; for the clove-trees have been rooted up, and the Dutch, in ſeveral parts, have raiſed redoubts and forts, either for putting a ſtop to this trade, or for making themſelves maſters of it.

Bouton, is ſituated in 124 deg. of E. lon. and between 4 and 5 deg. of S. lat. about 12 miles from the S. E. part of the iſland of Macaſſar. It contains about 80 leagues in circumference, being productive of no rice, but having a good ſlave trade, with a little ambergreaſe of an indifferent quality.

The beſt trade is that of tamettes, a kind of linen manufactured there, and ſelling well in the Moluccas; of which the Dutch buy up great quantities every year, together with the caxas, a ſmall Indian copper or leaden coin.

Till 1612 there was no coin current in this iſland; but the Dutch, by the treaty there made that year with the King, who received them favourably, obliged themſelves to import caxes, and other copper ſpecie; which they executed with great profit, giving them a currency upon a higher footing than they had actually in Java, and the reſt of the Indies.

Timor, and *Solor*, lie between the advanced part of the iſland of Celebes and Flores, where the Dutch have alſo ſome forts and trade. At Timor there is a commerce of ſlaves, wax, and ſantal wood; of which laſt there is ſold every year about 2000 bars, of 560 lb. weight the bar; it being principally for this wood that the Dutch company keeps this eſtabliſhment, upon account of the great vent it has in China. The commerce of Solor is ſtill leſs conſiderable than that of Timor; tho' the ſame commodities are brought from it, as alſo what is called in medicine the *Solor-ſtone*, which is a kind of bezoar, thought ſovereign againſt poiſons: but the other iſlands are no ways remarkable for trade.

CEMENT, in a general ſenſe, is any compoſition, of a glutinous or tenacious nature, proper to bind, unite, or keep things in coheſion. M. Felibien obſerves, that what the ancient architects called cement, was a very different thing from that at preſent; the name *cement*, with them, ſtanding for a kind of maſonry, or the manner of laying the ſtones, and even the quality of the ſtones, as when the walls were built of rude, unequal ſtones; tho', in reality, the ſtones were cut for ſuch work, neither ſquared nor uniform; ſo that cement ſtood oppoſed to ſquared ſtones. Mortar, ſolder, and glue, are cements; and the bitumen brought from the Levant is ſaid to have been the cement uſed in the walls of Babylon; but equal quantities of powder-glaſs, ſea-ſalt, and iron-filings, mixed and fermented, make one of the hardeſt and moſt durable cements that is known; and M. Perault affirms that the juice of garlic is a cement for broken glaſs.

CEMENT, is particularly uſed in architecture, for a ſtrong, binding ſort of mortar, uſed to bind or unite bricks or ſtones together for ſome kind of mouldings, or to make a block of bricks, for the carving of ſcrolls, capitals, and the like. This cement is of two ſorts, the hot and the cold; the former, which is moſt common, is made of roſin, bees-wax, brick-duſt, and chalk, boiled together, the bricks to be cemented being heated, and rubbed one upon another with cement between; the latter is made of Cheſhire cheeſe, milk, quick-lime, and whites of eggs: though cement is alſo uſed among goldſmiths, engravers, jewellers, and other artificers, for a compoſition of fine brick-duſt well ſifted, roſin, and bees-wax, of great ſervice in keeping the metals to be engraven or wrought on firm to the block, and alſo to fill up what is to be chiſeled.

CEMENT, in chemiſtry, is a compound maſs, or moiſtened powder, uſed for the purifying of gold, by conſuming the impurer metals mixed therewith; which is prepared of ſuch ſalts, and other ingredients, as by their acrimony corrode and ſeparate the ſilver, copper, or other matters from the body of the gold. Some authors make but two kinds of this cement; the common, and royal; the firſt is made of brick-duſt, nitre, and verdigreaſe; the ſecond of ſal gemmæ and armoniac, of each one part, two parts of common

common ſalt, and four of bole, the whole reduced into a paſte with urine; but many other compoſitions are given by Le Mort, Le Febure, and others.

CENSAL. A term uſed on the coaſts of Provence in France, and in the ports of the Levant, ſignifying the ſame thing as broker; merchants paying one half *per cent.* to the cenſal, for his cenſery fee, or brokerage. See *Broker*.

Moſt of the Levant cenſals, but particularly thoſe who exerciſe that profeſſion at Grand Cairo, are Arabs; whoſe negotiations are carried on between European merchants and thoſe of the country, either for the purchaſe or ſale of merchandiſe, which are all tranſacted in grimaces, when the cenſal would feign oblige the European merchant to pay for his countryman's merchandiſe at the firſt word, or at leaſt to abate but little.

When the European has made his offer always under what the vender demands, the Arabian cenſal feigns to put himſelf in a paſſion, bawls and cries like a madman, advancing, as it were, to ſtrangle the foreign merchant, yet does not touch him. If this firſt ſcene is unſucceſsful, he falls upon himſelf, tears his cloaths, ſtrikes furiouſly on his breaſt, and, rolling on the ground, cries out, in a terrible tone of voice, that a merchant of honour has been inſulted, and that his merchandiſe has not been ſtolen, to offer at ſo low a rate. However, the European trader, accuſtomed to this burleſque negotiation, being eaſy, and offering nothing more, the cenſal reſumes alſo his tranquillity; when ſtretching him his hand, and embracing him tenderly as a token of the bargain concluded, he puts an end to this farce by ſaying, *Halla quebar, Halla quebir*, God is great, and very great; which he pronounces very diſpaſſionately, as if he had not counterfeited all the contorſions and cries of a demoniac.

CENT, is an abridgment of the Latin word *centum*, ſignifying a hundred: thus *cent* is ſaid of a certain fixed weight, called in ſeveral places quintal, or hundred, compoſed of 100 lb. the pound being more or leſs heavy, according to the difference of places; ſome merchandiſes being ſold by the hundred pieces, and others ſold by the hundred weight.

CENT, is alſo a term frequently uſed in commerce, for expreſſing the profit or loſs, ariſing from the ſale of a commodity: ſo that when it is ſaid there was 10 *per cent.* profit or loſs, it ſignifies that 10 l. in the 100 l. was either loſs or gain.

To gain *cent. per cent.* in trade, is to double the capital; and to loſe 50 *per cent.* is to diminiſh it by one half.

CENT, is likewiſe a term uſed in the negotiation of money, ſignifying the intereſt thereof: thus money is ſaid to be worth 5 *per cent.*

CENT, laſtly, is ſaid with regard to remittances of money from one place to another; as it will coſt two and an half *per cent.* for remitting to ſuch a town; ſo much *per cent.* for ſtipulations and remittances of money, being called the price of the exchange. An agent or factor charges 2 *per cent.* for his commiſſion; and a broker has 2 s. 6 d. for every 100 l. from each party, which is 5 s. for every 100 l. and 2 l. 10 s. for every 1000 l.

In books of accompt, the rate *per cent.* is abbreviated in this manner, 2 *p* $^{c}_{o}$, or 2 *pr ct.* which ſignifies 2 *per cent.*

CENTAURY *the Leſſer*, is a ſmall ſhrubby plant, with leaves growing by pairs, and a flower conſiſting of a purple petal, cut into five ſegments, and a tubulous calyx divided in like manner; its leaves being eſteemed a good bitter, and very ſerviceable to the ſtomach, as it expels viſcid humours, is good againſt worms, and by ſome extolled as an alexipharmic febrifuge.

CEPHALONIA, is an iſland and town of the ſame name, ſituated in 21 deg. of E. lon. and 38 deg. 30 min of N. lat. in the Mediterranean, near the coaſt of Epirus, and ſubject to the Venetians. See *Italian Iſlands*.

CERAM, is one of the iſlands of the Celebes, or Little Moluccas, in the Indian ocean, ſituated in 126 and 129 deg. of E. lon. and 3 deg. of S. lat. having the iſlands of Molucca and Gilolo on the north, with Amboyna and the Banda iſlands on the ſouth, being about 150 miles long, and 60 broad. See *Celebes*.

CERIGO, or *Cytherea*. An iſland in the Turkiſh Archipelago, ſituated in 23 deg. 40 min. of E. lon. and 36 deg. of N. lat. near the eaſt part of the Morea, 50 miles N. of the iſle of Candia, being between 40 and 50 miles in circumference. See *Turkiſh Iſlands*.

CERTIFICATE. A writing, to aſſure or aſcertain the truth of a fact done; eſpecially in mercantile affairs, for the allowance of exportation or importation of goods, the obtaining of bounties, or other things neceſſary to be obſerved: but it is alſo a licence, or permiſſion, to do certain things therein related.

CERTIFICATE *of franchiſe*, is an act which declares certain merchandiſe free, and exempted from the duties of exportation; becauſe purchaſed, and taken away, during the time of the franchiſe of fairs.

By the ſtatute of Henry VII. all cuſtomers not mentioning the colour, length, content, weight, and value of foreign goods in coaſt-certificates, are to forfeit their office, and to be fined at the King's pleaſure.

By the ſtatutes of the 33d of Henry VIII. and the 13th and 14th of Charles II. all officers of the cuſtoms in Great Britain, granting a falſe coaſt-certificate, forfeit their office, and 50 l. to be impriſoned a year without bail, as alſo to ſuffer ſuch corporal puniſhment as the court of exchequer ſhall think fit, and to be incapable of ſerving again in the cuſtoms.

CERTIFICATE *in bankruptcy*. See *Bankrupt*.

CERTIFICATE-*cocket*. See *Entry*.

CERVIA. A city and port of Romagna, in Italy, ſituated in 13 deg. of E. lon. and 44 deg. 30 min. of N. lat. on the gulph of Venice, and ſubject to the Pope. See *Italy*.

CERUSSE, or *Ceruſe*. A white calx of lead, made by calcining that metal in the vapour of vinegar, and uſed in painting and coſmetics. The beſt ſort is that of Venice; but this is ſcarce; that chiefly uſed being either Engliſh or Dutch, both of which have more chalk in them than white lead: however, the latter is the better of the two, which ſhould be white, fine, clean, ſoft, and friable.

CESS. To tax, rate, or lay a mulct, or fine, upon a perſon, diſtrict, or diviſion.

CETTE. A port-town of France, in the province of Languedoc, ſituated in 3 deg. 16 min. of E. lon. and 43 deg. 25 min. of N. lat. on the bay of Maguelone, in the Mediterranean. See *France*.

CEYLON, or *Cinnamon Iſlands*, are the iſlands of Ceylon proper, Ramanakoiel, and four other little iſlands, ſituated in the Indian ocean; but the latter are inconſiderable places, lying between the N. W. part of Ceylon, and the coaſt of Coromandel in India.

The iſland of Ceylon is ſeparated, by a very narrow ſtrait, from Cape Comorin, the ſouthern promontory of the hither India, and the coaſt of Coromandel, from which it is diſtant about 45 miles to the ſouth-eaſt, lying between the 6th and 10th deg. of N. lat. and between the 79th and 82d deg. of E. lon. being about 250 miles in length, and 200 broad; which is one of the nobleſt acquiſitions the Dutch have in theſe remote regions, being the only country in the world which produces the true cinnamon in any conſiderable quantity.

The deſcendants of the ancient inhabitants, of whom the bulk of the people ſtill conſiſt, are called Cingaſſes, who are Pagans, and governed by their own prince: however, there are alſo great numbers of Moors, Malabars, Portugueſe, and Dutch, upon the iſland. No nation had a more conſiderable foreign trade antiently than the inhabitants of Ceylon, their cinnamon bringing the Egyptians, Arabians, Perſians, and all the people of the eaſt, here once in two or three years. The Portugueſe diſcovered this iſland about the year 1505, under the conduct of Lawrence d'Almeida; but it was twelve years afterwards before they began to ſettle a trade and factories there. About the year 1550, they erected a fort near Columbo, the principal port on the weſt part of the iſland; at which the King was alarmed, and immediately laid ſiege to it: but the Portugueſe having eſtabliſhed themſelves in ſo formidable a manner, that it would be extremely difficult to diſpoſſeſs them of their ſettlement, a treaty was entered into between the King of Ceylon and the Portugueſe; whereby that monarch was to deliver them a quantity of cinnamon annually at a certain price. After the concluſion of this

treaty,

treaty, ſo good a correſpondence ſubſiſted between the two nations, that the Ceyloneſe monarch ſent an ambaſſador to Portugal, and a very ſtrict alliance was entered into; inſomuch that ſeveral of the moſt conſiderable inhabitants embraced Chriſtianity, and put themſelves under the protection of the Portugueſe, who extended their ſettlements along the principal part of the country; but they behaving themſelves very cruelly and inſolently to the natives, and the Dutch General Spilbergen arriving on the coaſt in 1602, the Ceyloneſe entered into an offenſive and defenſive alliance with the Dutch; who gradually diminiſhed the power of the Portugueſe, till they abſolutely extirpated them out of the iſland, by the reduction of Columbo, their principal ſettlement, in the year 1655.

The Dutch obtained their opulent acquiſitions in the Eaſt Indies, more by ſtratagem and perfidy, than by bravery and ſtrength; for they would permit their generals and ambaſſadors to the Indian princes, to ſtipulate any thing, in order to bring them into their meaſures; but when their ends were accompliſhed, they pretended that their commanders had not full power to treat; by which artifices they prevailed on thoſe princes to unite their forces with the Dutch, who got into poſſeſſion of their ſtrongeſt fortreſſes, and at length became maſters of the country, where they exerciſed an unlimited authority. The Dutch prudently took care to form defenſible ſettlements along the principal maritime parts of the iſland, leaving the King to reſide in his capital of Candia, in the interior mountainous part of the country; where he is confined, like a tributary prince, to ſuch places as are unenvied by the Dutch, who monopoliſe the trade of the iſland, without paying any duties, or acknowledging the leaſt ſubjection to the King.

The whole coaſt is generally under the ſubjection of the Dutch; whoſe principal towns are Columbo, which lies on the ſouth-weſt part of the iſland; Negumbo, about eight leagues north of Columbo; Chilas, one of the beſt harbours in the iſland, 20 miles north of Negumbo; Jafnapatan, on the moſt northerly part of the iſland; Trinquamale, or Crankanella, on the eaſt part of the iſland; Battacalao, on the ſouth part of the iſland; with Punt de Galle, and ſeveral other fortifications, in the ſouth part of the iſland, inſomuch that the country is perfectly ſurrounded with their forts; whereby the Dutch have all the cinnamon-plantations to themſelves, and are the ſole venders of that commodity to the Europeans. They are alſo poſſeſſed of the pearl-fiſhery, between Jafnapatan and Madura, on the continent; tho' this has been lately neglected: however, they carry a great number of elephants over to the continent of India, where they are in ſuch great eſtimation as to bring 500 guilders for the leaſt, or 43 l. 15 s. ſterling, and 800, or 70 l. ſterling, for the ſtrongeſt of theſe noble animals, which are numerous in the woods of Ceylon.

The cinnamon-tree, ſo peculiar to this iſland, is as common as any other in the woods, on the ſouth weſt part of the iſland, near Columbo; but there is little or none to be found towards the north part: however, the Dutch have ſecured all the bays and mouths of the rivers round the iſland, to prevent other nations ſettling here, as the French attempted to do in the year 1673, or having any commerce with the Ceyloneſe. The quantity of cinnamon produced in this iſland, is ſufficient to ſupply all the world: but the Dutch are anxious to reduce the cinnamon-groves to a narrow compaſs, ſince they have monopoliſed them, and can exact what exorbitant price they pleaſe upon this ſpice. Beſides, the leſs extenſive theſe woods are, they will be the better enabled to defend their poſſeſſion, to which force is their ſuperior title. There are cinnamon-trees alſo upon the coaſt of Malabar, on the continent of India, whoſe bark reſembles the Ceylon cinnamon, both in colour and taſte; for which reaſon the Dutch deſtroy as much as they can of it, becauſe other nations uſed to mix them, and paſs both off together as true cinnamon.

One of the principal officers of the Dutch company, who brought back the India merchant fleet in 1688, ſeemed to be perſuaded, in the report he made the ſame year to the general directors, concerning the ſtate of the Dutch commerce in the Indies, that the great number of ports, forts, and habitations, poſſeſſed by the Dutch on the coaſts of Ceylon, with the extraordinary number of factors, clerks, and garriſons, they were obliged to keep up, conſumed over and above the product of the profits of the cinnamon-trade, and the other commodities exported from the iſlands; and that it would be adviſable to ſuppreſs ſome of them; which however could not be effected, as long as the bad underſtanding ſubſiſted between them and the King of Candia, who, as far as lay in him, interrupted, by frequent inroads, the cinnamon-harveſt.

The iſland of Ceylon produces ſeveral other things, whereby the inhabitants may drive on a conſiderable trade, either abroad or at home, if they were allowed it with ſtrangers, or if their natural indolence, and the hard ſervitude the King and the grandees keep them in, were not an obſtacle to an application to trade among themſelves, amaſſing every thing properly for their maſters, not for themſelves; and conſequently having no public markets, but ſome poor ſhops, where they ſell fruits, and a few neceſſaries for life.

However, their manufactures of cotton and ſtuffs may be excepted, which they ſend into ſuch provinces where there are none, and exchange for other productions of the country. 'Tis the chitics, that is, the weavers, who promote this trade; each family being entirely of the ſame profeſſion, and the laws prohibiting the ſons to quit that of their father.

The commodities met with commonly, and almoſt without any difficulty, in ſeveral parts of the iſland, are long pepper, cotton, ivory, ſeveral drugs, and roots for dying and medicine; cardamum, mirabolans, ſilk, tobacco, ebony, excellent timber for building, lead, betel, wild honey, muſk, wax, cryſtal, ſaltpetre, ſulphur, ſugar, corcoma, and rice, whereof the Dutch export great quantities for the coaſt of Coromandel; iron, ſteel, copper, gold, and ſilver; all kinds of precious ſtones, except diamonds; laſtly, cinnamon, and elephants.

Moſt of theſe things are found abundantly in the upper part of the iſland, ſubject to the King of Candia, but cannot be had from the natives, when prohibited to interfere with the Dutch, among which are gold and ſilver, precious ſtones, ſulphur, and ſaltpetre, which the King particularly reſerves to himſelf; ſo that cinnamon properly conſtitutes the Dutch commerce, and that only with ſuch of the inhabitants who are kept in reſpect by the dread of their garriſons.

There are three kinds of cinnamon, the fine, the midling, and the coarſe; the younger trees producing the fine, being always of an inferior quality, according to their age; and the bark to be good ſhould be at leaſt two or three years old; but the tree multiplies ſo abundantly, and almoſt without any culture, that the Dutch, to make it dearer, hinder its multiplication.

The uſual price the Dutch company give to ſuch of the inhabitants as are ſubject to them for cinnamon, is 48 ſtivers, or 4 s. 4 d. ſterling, the quintal of 120 lb. See *Cinnamon*.

Beſides elephants, there are great numbers of other animals, both wild and tame, in this iſland; ſuch as, bears, tigers, jackals, monkeys, deer, and hares, oxen and buffaloes, goats and hogs; but no other horſes, aſſes, or ſheep, than what are imported by Europeans; nor have they any navigable rivers. See *Cinnamon*, *Spice*, and *United Provinces*.

CHA. A ſlight ſilk ſtuff, manufactured among the Chineſe, and wore by them for a ſummer apparel, which has a great reſemblance to the French taffety, but is leſs cloſe and gloſſy.

CHA, is alſo a name given to the tea-bloſſom. See *Tea*.

CHABNAM, or *Roſee*. A kind of muſlin, or very fine and clear cotton cloth; the piece containing 16 ells in length, and 2-3ds or 3-4ths in breadth, which is brought from the Eaſt Indies, and particularly from Bengal.

CHACART. A kind of cotton cloth, chequered with different colours, brought from the Eaſt Indies, particularly from Surat; the piece being eleven ells and a half in length, and three quarters in breadth.

CHADECQ. One of the four ſorts of oranges found in the French American iſlands, and brought alſo from Barbadoes; the leaves, bloſſoms, and fruit of the tree being of an

an extraordinary bigneſs; the fruit, eaten raw, is ſomewhat diſagreeable, but is pretty good when confected.

CHAFFER *Connees*. Printed linens, manufactured at Surat in India.

CHAGRE. A fort at the mouth of the river Chagre, in the province of Darien in Spaniſh America, ſituated in 82 deg. of W. lon. and 9 deg. 50 min. of N. lat. which was taken ſeveral times by the buccaneers, and laſtly by Admiral Vernon in 1740, where he found ſome rich merchandiſe; moſt of the goods laden on board the galleons being ſent down the river hither from Panama, except the plate, in order to be ſhipped at Porto Bello.

CHAIN. A long piece of metal, compoſed of ſeveral rings; being made either of gold, ſilver, copper, braſs, or tin; either round, flat, or ſquare; ſingle, double, or treble; ſerving for watches, jacks, and other things.

CHAIN is alſo a meaſure of content in France, and uſed for ſurveying of land in England.

CHAIN-SHOT. Two bullets, or rather half bullets, linked together by a chain, uſed at ſea to ſhoot down yards or maſts, or to cut the ſhrouds, or any other rigging of a ſhip.

CHAIRMAN. The preſiding member, or officer, in a public aſſembly, particularly in thoſe of trading companies: thus, by an act of parliament of the 1742, the directors of the bank of England, in the abſence of the governor, or deputy governor, may chuſe a chairman to act in their ſtead. See *Bank of England*.

CHAISE. A ſmall, light ſort of open chariot, commonly made with two wheels.

CHALCANTHUM. See *Calcanthum*.

CHALCITIS. A kind of vitriolic mineral, reddiſh, like copper, friable, and having yellow ſhining veins within, otherwiſe called colcothar: it has the taſte of vitriol, melts alone in a crucible, and diſſolves very eaſily in aqueous liquor. See *Vitriol*, and *Colcothar*.

But there are two other minerals, called miſi, and ſory, much reſembling the chalcitis, which the antients confounded together, and not only the miſi and ſory, but alſo the melanteria; or rather they imagined a ſucceſſive tranſmutation of the four minerals, which, beginning with chalcitis, became miſi, then melanteria, and laſtly ſory, where it fixed. However, the moderns make theſe four diſtinct matters; tho' the chief difference between them is ſuppoſed to lie in the different tenuity or groſſneſs of their ſubſtance.

Some ſay the miſi is formed on the chalcitis, as verdigreaſe is on copper, being properly its ruſt; and that chalcitis is formed in the ſame manner on the ſory. It is certain they are all found in copper-mines; but modern druggiſts know little of any of them, except the chalcitis, which is brought from Germany, being very cauſtic and eſcharotic; ſo that it is chiefly uſed in the compoſition of Venice treacle; but, in lieu of it, calcanthum rubified, or copperas, or calamita, are frequently ſubſtituted.

CHALDRON, *Chalder*, or *Chaudron, of coals*. A dry Engliſh meaſure, conſiſting of 36 buſhels, heaped up, according to the ſealed buſhel kept at Guild-hall, London; by which the chaldron ſhould weigh 2000 pounds; tho' it is uſually divided into 12 ſacks, each holding 3 buſhels, weighing about a ton and a half: but on ſhip-board 21 chaldron of coals are allowed to the ſcore, and 8 chaldron at Newcaſtle makes at London 15 chaldrons. However, in Wales, and other places, they reckon 12 barrels, or pitchers, to the ton or chaldron, and 29 hundred weight, of 120 pounds, to the ton. See *Coal*, and *Sack*.

CHALK. A white, foſſile ſubſtance, uſually reckoned, but improperly, a ſtone; being of two ſorts; the firſt, a hard, dry, ſtrong chalk, uſed for making of lime; the other a ſoft, unctuous chalk, uſed to manure lands, as eaſily diſſolving with rain and froſt.

It is likewiſe uſed for the whitening of plate, leather, and woollen ſtuffs; as alſo for marking or deſigning the works of artificers.

There are great quantities of chalk in ſeveral parts of England; but the beſt they have in France is from Champagne, where they build their houſes of it, particularly at Rheims, and in the greater part of the neighbouring villages.

The chalk of the antients was brought from the iſland of Crete, or Candia; whence this iſland had its denomination, diſtinguiſhed into three ſorts, the white, the greeniſh, and the black; but they uſed only the white in medicine.

Moderns alſo uſe it, in ſome reſpects, as a topic remedy; or taken inwardly, by the vehicle of ſome liquor: applied outwardly, it is deemed deſiccative, deterſive, and proper for cicatrizing wounds and ulcers, and inwardly for curing the heart-burn.

Briançon CHALK, is a kind of ſtone met with in France, much of the nature of talc, except that it is ſcaly, and more hard; of which there are two ſorts, the white and the green, uſed chiefly for taking greaſe out of ſilks.

Red CHALK, is a kind of common Armenian bole; but in all reſpects inferior to the real, being very brittle, and eaſily broke; the beſt ſort whereof comes from Egypt, and about Carthage; as alſo ſome from the Weſt Indies; but the better part of what is imported, is only ochre burnt, and converted into chalk; which carpenters, and joiners, formerly uſed for marking their work; from whence it was denominated, in Latin, *rubrica fabrilis*.

CHALYBEAT, ſomething that partakes of the nature of ſteel, or iron; or that is impregnated with particles of thoſe metals, as chalybeat waters.

CHAM, or *Khan*. The title given to the ſovereign princes of Tartary, ſignifying, in the Perſian language, mighty Lord; and Emperor, in the Sclavonian.

CHAMBERLAIN, is an officer in moſt of the Engliſh corporate places; ſuch as the chamberlain of London, who is an officer intruſted with the city-money, which is laid up in one of the apartments in Guild hall, called the chamber of London; he alſo preſides over the affairs of maſters and apprentices, and admits citizens to their freedom; but his office continues only for a year, being choſen annually on Midſummer-day; tho' the cuſtom uſually obtains, to re-appoint the ſame perſon, unleſs he has been chargeable with any miſdemeanor in his office.

CHAMBERS *of Commerce*, are aſſemblies of merchants and traders, where they treat about matters relating to commerce; of which there are ſeveral eſtabliſhed in moſt of the principal cities in France, by virtue of an arret of the 10th of Auguſt 1701; tho' there were ſome before this general eſtabliſhment, particularly one at Marſeilles, and another at Dunkirk. Theſe chambers carefully ſuperintend every branch of the French commerce, and lay their obſervations thereon before the royal council; who, in purſuance thereof, have taken ſuch prudential meaſures for the encouragement of trade, that the French commerce is now become a very formidable rival to that of Great Britain, where there ſeems ſome other eſtabliſhment wanting beſides the board of trade and plantations for the promotion of the trading intereſt; and ſome of our moſt ſenſible merchants have thought that we ought to follow the example of the French nation, in eſtabliſhing chambers of commerce; of which we have ſeen a ſmall attempt, in the chambers belonging to the herring-fiſhery.

CHAMOIS. See *Shammy*.

CHAMPLAIN *Lake*, lies on the north of the province of New York in North America.

CHAN, or *Kan*, is a term uſed in ſome places of the Levant, particularly in Syria, for public places, built at the expence of the Grand Signior, or the charity of private perſons, for the more commodious lodging of merchants and travellers; which are much of the ſame nature with the caravanſeras, being built in the form of cloiſters, near villages, or even deſarts, at a reaſonable diſtance, that the traveller, or merchant, might not proceeed too far from the high road. All paſſengers may retire there, by paying a little, and often nothing; which is a great conveniency in countries where there are no houſes of entertainment; yet no other accommodation is uſually to be met with but the four walls; all perſons being obliged, before their arrival, to provide themſelves with meat, drink, beds, fire, and forage. See *Caravanſera*.

CHANDLER. A trader or dealer in many ſorts of commodities, but commonly meant of trifling dealers; ſometimes it is reſtrained to one commodity, as wax or tallow chandlers, whoſe principal buſineſs is to make and ſell wax

and tallow candles; likewiſe to corn-chandlers, who ſell all kinds of grain; and ſometimes to thoſe who ſell all ſorts of ſhips ſtores.

CHANGE. See *Exchange*.

CHANGER, or *Chaunger*. An officer belonging to the mint of his Britannic Majeſty, who changes money for gold or ſilver bullion. See *Mint*.

Money-CHANGER, is a banker, who deals in exchange, receipts, and payment of money. See *Banker*.

CHANNEL, imports the bed of a river; tho' it is alſo applied to ſeveral arms of the ſea, where the water runs within the land; or to certain narrow ſeas, confined between two adjacent continents, or between an iſland and continent; in which ſenſe it is ſaid St. George's channel, the Britiſh channel, the Iriſh channel, the channel of the Black ſea, of Conſtantinople, and other places.

CHAOUL. A town of India, remarkable for its ſilk. See *India*.

CHAOURI, called alſo *Sain*. A ſilver coin current at Teflis, the capital of Georgia in Armenia, worth about 4 d. halfpenny ſterling.

CHAPMAN. A buyer of any ſorts of goods, or a cuſtomer to a merchant or tradeſman.

Petty CHAPMAN, is a perſon who hawks, or retails goods, in ſmall quantities. See *Hawker*.

CHAPPA-DELLALA, is a term uſed on the coaſt of Coromandel in India, particularly in the kingdom of Golconda, for a duty paid for the marking of cloth; which is impoſed only upon the people of the country, and wherefrom Europeans are exempted, being 12 *per cent.* of the price of the cloth.

CHARABON. A ſea-port town, ſituated in 108 deg of E. lon. and 6 deg. of S. lat. on the north coaſt of the iſland of Java, in the Indian ocean. See *Sunda iſlands*.

CHARACTERS, in commerce, are certain abbreviations for the more expeditious expreſſion of particular words; thoſe being

D° for ditto, the ſame	C. or ℔, hundred weight, or 112 pounds
N° numero, or number	q^r quarter, or 28 pounds
F° folio, or page	℔ *per*, or *by*, as ℔ *ann.* by the year, and ℔ *cent.* in the hundred
R° recto } folio	R^x rixdollar
V° verſo } folio	D^d ducat
£. ſterling, or pound ſterling	P. S. poſtſcript
s. ſhillings	
ꝑ or d. pence.	
℔. pound weight	

CHARACTERS uſed in medicine, pharmacy, and chemiſtry, are as follows.

℞. recipe	♎. ſulphur
♁ antimony	♀ ſpirit of wine
Æ. aquafortis	♀ or S.V.R. ſpirit of wine rectified
Æ. aqua regia	☾. ſilver
MB. balneum mariæ	♃. tartar
☤. calx viva	℔. a pound, or a pint
⊛. caput mortuum	℥. an ounce

☿ — ſublimate	P. P. pulvis patriam, the Jeſuits bark
☿ — precipitate	
☉. nitre	
*. ſal armoniac	
⊕. vitriol	

CHARAG. The annual tribute, which Chriſtians and Jews in Turky pay to the Grand Signior, according to the eſtate of the party, which men begin to pay at 9 or 16 years old; but women are diſpenſed with, as alſo the clergy.

CHARCANAS. A ſilk and cotton ſtuff, manufactured in the Eaſt Indies; the length of it being from about 7 to 8 ells, and the breadth always 5-6ths.

CHARCOAL. A ſort of artificial coal, or fuel, conſiſting of wood half burnt, chiefly uſed where a clear ſtrong fire, without ſmoke, is required.

Charcoal is made in woods and foreſts; the middlemoſt branches of trees being cut for this purpoſe, uſually of two feet and a half in length, and diſpoſed pyramidally in a round, broad, and deep ditch, covered exactly with earth; where a ſmall opening is made for putting in fire, which is afterwards cloſed up, when the wood is ſuppoſed to be ſufficiently conſumed, and, by being extinguiſhed for want of air, is brought to the conſiſtence of good charcoal, retaining the ſulphur, which otherwiſe would have evaporated.

A charcoal fire is very active, and therefore uſed for the melting of metals; but perſons ſhould be greatly on their guard againſt its vapour, which is capable of preying upon the brain, and cauſing a ſudden death.

CHARENTE. A river of France, riſing in Limoſin, which runs weſtward by Angouleſme and Saintes, falling into the bay of Biſcay oppoſite the iſland of Oleron.

Tonnai CHARENTE. A village of France. See *France*.

CHARIBBEE *iſlands*. See *Caribbee Iſlands*.

CHARIOT. A light coach, or carriage by horſes, of pleaſure. See *Coach*.

CHARITABLE *Corporation*, was a company incorporated by letters-patent of the ſixth of Q. Anne, in 1708, by the ſtyle of The charitable corporation for the relief of induſtrious poor, by aſſiſting them with ſmall ſums, upon pledges at legal intereſt. To enable the members of the corporation to anſwer their title, they were empowered to raiſe a fund, not leſs than 20, nor more than 30000l. but this fund afterwards, by additional grants, being increaſed to 600,000 l. the ſame, inſtead of being employed to the advantage of the proprietors, was wickedly embezzled by their caſhier, and other officers, who eſcaped into France: on which occaſion the unfortunate proprietors applied to parliament for redreſs, who granted them a power to make a lottery for 500,000 l. whereby they cleared about 80,000 l. and were enabled to continue their office in Spring Garden, Charing-Croſs, where their buſineſs is tranſacted purſuant to the regulations of their charter; by which they were, upon pain of diſſolution, injoined not to interfere with the bank of England, by diſcounting of bills, either foreign or domeſtic, or keeping other caſh than their own; nor to traffic, or deal in buſineſs, any other than that of lending money upon pledges, which they were to advance upon legal intereſt, and a reaſonable allowance for charges.

The affairs of this company are under the direction of a committee of ſeven of the proprietors, three or more whereof conſtitute a court, who, in conjunction with others, may call a general court, which is to conſiſt of ſeventeen at leaſt, who are empowered to make bye-laws for the better government of the company, and to appoint their caſhier, warehouſe-keeper, accomptant, clerks, or other officers.

CHARLES *Cape*, in Virginia, in North America, makes the north-ſide of the ſtrait entering the bay of Cheaſepeak.

CHARLES *Cape*, is alſo another promontory in North America, on the ſouth-weſt part of the ſtrait entering into Hudſon's bay.

CHARLES-TOWN. The capital city of South Carolina in North America, ſituated in 79 deg. of W. lon. and 32 deg. 30 min. of N. lat. on a peninſula, formed by Aſhley and Cooper rivers; the former of which is navigable for ſhips 20 miles above the town. See *British America*.

CHARLETON. An iſland at the bottom of Hudſon's bay in North America, ſituated in 80 deg. of W. lon. and 59 deg. 30 min. of N. lat. being ſubject to Great Britain.

CHART, or *Sea-Chart*. A hydrographical map, or a projection of ſome part of the ſea *in plano*, for the uſe of navigation; the invention of theſe charts being attributed to Henry, ſon of John King of Portugal; but all ſea-charts are not of the ſame kind; ſome going under the denomination of *plain charts*, others *reduced*, or *Mercator's charts*, and others *globular charts*.

Plain CHARTS, are thoſe wherein the meridians and parallels are exhibited by right lines, parallel to each other: but

theſe Ptolemy, in his geography, rejects for the following faults, tho' their inventor judged them of good uſe; and experience has confirmed his judgment, eſpecially in ſhort voyages; their defects being, 1. That ſince, in reality, all the meridians meet in the poles, it is abſurd to repreſent them, eſpecially in large charts, by parallel right lines; 2. That plain charts exhibit the degrees of the ſeveral parallels, equal to thoſe of the equator; and, of conſequence, the diſtances of places lying eaſt and weſt much larger than they ſhould be; and, 3. That, in a plain chart, while the ſame rhumb is kept, the veſſel appears to ſail in a great circle, which is yet falſe.

However, notwithſtanding theſe defects in the plain chart, the eaſineſs of its application has ſo reconciled it to mariners, that it is uſed almoſt alone, in excluſion of the more accurate ones: but, for the application of the plain chart in ſailing, ſee *Plain-ſailing*.

Reduced CHART, or *Chart of reduction*, is that wherein the meridians are repreſented by right lines, parallel to one another, but unequal; which therefore, as appears by their conſtruction, muſt correct the errors of the plain charts. But ſince the parallels ſhould cut the meridians at right angles, theſe charts are defective, in as much as they exhibit the parallels inclined to the meridians: hence another kind of reduced charts has been invented; wherein the meridians are parallel, but the degrees thereof unequal, called *Mercator's charts*.

Mercator's CHART, is that wherein the meridians and parallels are repreſented by parallel right lines; but the degrees of the meridians are unequal, ſtill increaſing as they approach the pole, in the ſame proportion as thoſe of the parallels decreaſe; by means whereof the ſame proportion is preſerved between them as on the globe; which chart has its name from N. Mercator the author, who firſt propoſed it for uſe, and made the firſt chart of this projection; tho' that thought was not originally his, as it was hinted by Ptolemy near 2000 years ago: nor is the projection of it owing to him; Mr. Wright, an Engliſhman, being the firſt who demonſtrated it, and ſhewed a ready way for its conſtruction, by enlarging the meridian line with the continual addition of ſecants: but, for the uſe of Mercator's charts in ſailing, ſee *Mercator's ſailing*.

Globular CHART, is a projection ſo called, from the conformity it bears to the globe itſelf; being a repreſentation of the ſurface, or ſome part of the ſurface, of the terraqueous globe, upon a plane; wherein the parallels of latitude are circles nearly concentric, the meridians curves bending towards the poles, and the rhumb-lines alſo curves.

The merit of which conſiſts in this, that the diſtances between places upon the rhumb, are all meaſured by the ſame ſcale of equal parts; and the diſtance of any two places in the arch of the great circle, is nearly repreſented in this chart by a ſtraight line. Hence land-maps, made according to this projection, would indiſputably have great advantages above thoſe made any other way. But for ſea-charts, and the uſes of navigation, it is yet controverted, whether the globular chart be preferable to Mercator's, where the meridians, parallels, and particularly the rhumb-lines, are all ſtraight lines, inaſmuch as ſtraight lines are found more eaſy to draw and manage than curves, eſpecially ſuch as are the rhumb-lines on the globular chart.

This projection is not new, tho' not much taken notice of till of late; for it is mentioned by Ptolemy in his geography, as alſo by Blundeville in his exerciſes.

CHARTS *compoſed by rhumbs and diſtances*, are thoſe that have no meridians or parallels; but all is effected by the rhumbs, and the ſcale of miles; theſe being chiefly uſed by the French, eſpecially in the Mediterranean, which are patched up, without any great art, from the obſervations of the mariners, and are only uſed in ſhort voyages.

CHARTER, is an inſtrument, or written evidence, of a thing, under the ſeal of a prince; whereby he makes a grant to a perſon, or community, of ſome particular and excluſive privileges, under certain limitations. See *Company*, and *Corporation*.

CHARTER-*Party*, in commerce, denotes the inſtrument of freightage, or articles of agreement for the hire of a veſſel; which ſhould be in writing, to be ſigned both by the owner or maſter of the ſhip, and the merchant who freights it; wherein muſt be contained the name and burden of the veſſel, thoſe of the maſter and the freighter, the price or rate of freight, the time of loading and unloading, and the other conditions agreed on.

The Preſident Boyer ſays the word comes from hence, that *per medium charta incidebatur, et ſic fiebat charta partita*; becauſe, in the time when notaries were leſs common, there was only one inſtrument made for both parties, which they cut in two, and gave each his portion, joining them together at their return, to know if each had done his part; and this he obſerves to have ſeen in his time, agreeable to the method of the Romans, who, in their ſtipulations, uſed to break a ſtaff, each party retaining a moiety thereof as a mark.

The charter-party is properly a deed or policy, whereby the maſter or owner of a veſſel engages to furniſh immediately, a good tight veſſel, well equipped, caulked, ſtopped, provided with anchors, ſails, cordage, and all other furniture, to make the voyage required; as equipage, hands, pilots, victuals, and other munitions, as alſo for the taking in and delivering out of the loading, in conſideration of a certain ſum to be paid by the merchants for the freight: but the ſhip, with all its furniture, and the cargo, are reſpectively ſubjected to the conditions of the charter-party; which differs from a bill of lading, in that the charter party is for the entire freight or lading, both for the going and returning; whereas the latter is only for a part of the freight, or at moſt only for the voyage one way.

It has been determined by the civil law, that if any goods are put on board a veſſel, without agreeing for the freight by charter-party, the maſter ſhall have freight according to cuſtom; and, if the goods are ſent to the ſhip ſecretly, the ſame may be ſubjected to what freight the maſter thinks proper. When coffers, packs, veſſels, or other marked goods, are delivered on board, cloſe packed or ſealed, and afterwards ſhall be received open and looſe, the maſter is to be charged for ſuch goods and merchandiſe, until he is acquitted by law; beſides, he muſt anſwer for the damage committed by the rats on board his ſhip to any merchandiſe, for want of keeping a cat, as well as for any other damage.

The common law always conſtrues charter-parties as near as poſſible, according to the intention and deſign of them, and not according to the literal ſenſe of traders, or thoſe that merchandiſe by ſea; but they muſt be regularly pleaded: and, if the maſter of a ſhip enters into a charter party for himſelf and owners, the maſter, in that caſe, may releaſe the freighters, without adviſing with the owners; tho' if the owners let out to freight ſuch a ſhip, and the maſter only covenants at the bottom, and ſubſcribes his name, here his releaſe will not bind or affect the owners of the ſhip; but their releaſe, on the other hand, ſhall conclude the maſter; and the reaſon is, for that he is not a proper party to the indenture of charter-party; which was adjudged in Trin. 29 Eliz. B. R. 2 Inſt. 673.

CHARYBDIS. A rock in the ſtreight of Meſſina, between the continent of Italy, and the iſland of Sicily, being formerly very dangerous to mariners, on account of a rapid eddy about this place, which violently drove the veſſels on the rock of Scylla, when the ſeamen endeavoured to avoid Charybdis; but, now navigation is better underſtood, the modern ſailors find no ſuch inconvenience here.

CHASE, in the ſea-language, is to purſue a ſhip; which is alſo called *giving chaſe*.

Stern-CHASE, is when the chaſer follows the chaſed a ſtern, directly upon the ſame point of the compaſs.

To lie with a ſhip's fore-foot in a chaſe, is to ſail, and meet with her, by the neareſt diſtance, ſo to croſs her in her way, or to come acroſs her fore-foot.

A ſhip is ſaid to have *a good chaſe*, when ſhe is ſo built forward on, or a-ſtern, that ſhe can carry many guns to ſhoot forwards or backwards; according to which ſhe is ſaid to have *a good forward*, or *good ſtern-chaſe*.

CHASE-*Guns*, are ſuch whoſe ports are either in the head, when they are uſed in chaſing of others; or in the ſtern, which

which are only uſeful when they are purſued or chaſed by any other ſhip.

CHASER. A perſon whoſe buſineſs conſiſts in chaſing, which is a method of working, or enriching gold, ſilver, or other metals, properly called *enchaſing*. See *Enchaſing*.

CHATHAM. A port-town of Kent, adjoining to Rocheſter, ſituated in 40 min. of E. lon. and 51 deg. 20 min. of N. lat. on the river Medway, 30 miles S. E. of London, being the principal ſtation of the royal navy of Great Britain, furniſhed with timber, rope-yards, and naval ſtores, ſufficient for the building and fitting out of the largeſt fleet. See *Great Britain*.

CHATHAM *Cheſt*, is a fund appropriated for the uſe of wounded and decayed ſeamen on board the Britiſh fleet, their widows, and children, in the ſame manner as that for ſeamen in the mercantile ſervice, under the direction of the Trinity-houſe.

By the ſtatute of the 1ſt of James II. it was enacted, That all foreign built ſhips which ſhould be bought and brought into England, Wales, or Berwick, and employed in carrying any goods from port to port in the inland-trade, for every voyage ſhould pay to his Majeſty at the port of delivery of their lading, before the delivery, over and above all duties payable by Engliſh built ſhips, 5 s. *per* ton; one moiety for the cheſt at Chatham; the other moiety to the maſter, wardens, and aſſiſtants, of the Trinity houſe of Deptford-ſtrond, for relief of wounded and decayed ſeamen, their widows and children. See *Trinity houſe*.

And, by the ſtatute of the 1ſt of George I. it was enacted, That all the fines ariſing from ſuch ſeamen who ſhould be found guilty of committing any diſturbances in his Majeſty's yards, or about the office of the treaſurer of the navy, on pay-days, in London, Portſmouth, and other places, ſhould be paid to this cheſt for the uſe of the maimed ſeamen.

CHATTELS. A Norman term, under which were antiently comprehended all moveable goods; thoſe immoveable being termed fief, or, according to the modern appellation, fee: but now the word implies all ſorts of goods, moveable or immoveable, except ſuch as are in the nature of freehold, or parcel thereof.

CHATTELS *perſonal*, are ſuch as either belong immediately to the perſon of a man; as his horſe, ſword, or ſuch things as being injuriouſly with-held from him, a man has no way to recover but by perſonal action.

CHATTELS *real*, are either ſuch as do not appertain immediately to the perſon, but to ſome other thing, by way of dependance; as charters of lands, and apples upon a tree; or ſuch as neceſſarily iſſue out of ſome immoveable thing to a perſon, as a leaſe, or rent for years.

CHATTIGNAN. A port-town of India, ſituated in 91 deg. of E. lon. and 23 deg. of N. lat. at the mouth of the moſt eaſterly branch of the Ganges, and ſubject to the Mogul. See *India*.

CHAUF, *Chouf*, or *Chaufettes*, are Perſian ſilks, brought from ſeveral port towns of the Levant, particularly by the way of Aleppo, where they are weighed by the rotulo, of 680 drachms, or 4 lb. 9 oz. Engliſh avoirdupois.

CHAY. A plant, which grows only in the kingdom of Golconda in India, and is productive of that beautiful red colour, for which Maſulipatan callicoes are ſo highly eſteemed, being valued in this part of the Indies, as cochineal is in other places, and particularly in Europe; yet with this difference, that the oftener callicoes painted with chay are waſhed, the more the vivacity of the colour increaſes, which is never ſubject to be effaced.

CHAYE, *Shahee*, or *Chay*. The ſmalleſt ſilver coin that is ſtruck and current in Perſia, worth 4 d. ſterling.

CHEASEPEAK *Bay*, runs about 300 miles up into the country, between Virginia and Maryland, in North America, navigable almoſt all the way, for large ſhips; being about 20 miles broad, at the entrance between Cape Charles and Cape Henry; and between 20 and 30 broad afterwards; having abundance of navigable rivers falling into it, whereby ſhips go up to the very doors of the planters, and take in their lading of tobacco and other goods. See *Britiſh America*.

CHECK, *Clerk of the Check*, is the name of an officer in the yards appointed for the ſervice of the royal navy; as at Plymouth, Portſmouth, and Deptford, who has the check or controulment of the workmen.

CHEDA. A tin-coin ſtruck and current in a kingdom of the ſame name, in the Eaſt Indies, in the neighbourhood of the Mogul's territories, worth about a penny ſterling.

CHEESE. A popular food, being a preparation of milk curdled by means of rennet, dried and hardened; or it is nothing but milk purged of its ſerum, or whey; and ſometimes too of the cream, or butyrous part of the milk. There are ſo many ſorts, and of ſuch different names, that it would be a difficult matter to enumerate them all; ſo that it will be ſufficient to give an account of the moſt conſiderable in trade.

Great quantities of cheeſe are made in ſeveral counties of England; but the moſt excellent ſorts are made in Cheſhire and Glouceſterſhire.

By the ſtatute of the 17th of George I. it was enacted, That if any ſhip, or veſſel, employed by the cheeſemongers of the city of London, in the cheeſe trade, to the city of Cheſter, ſhould not go up to the city, or within any parts of the intended works of navigation; but ſhould have their lading put on board ſuch ſhip or veſſel by boats or keels; two pence *per* ton ſhould be paid to the river Dee company, by the maſter or owner of every ſuch boat, or keel, carrying cheeſe to be put on board ſuch ſhip or veſſel, in full ſatisfaction of all duties and tonnage whatſoever to the company. See *Butter*, and *Dee Company*.

The quantity of cheeſe annually imported in London is about 5,760 ton of Cheſhire cheeſe; thin cheeſe, from Hull and Gainſborough, 1400 tons; from Suffolk 980; and from Newbury, Abingdon, and other places, by barges, 2,400 tons; being together 10,523 tons, or twenty one millions and ſixty ſix thouſand pounds.

Of all kinds of cheeſe the Italian is moſt in eſteem, and is imported to other parts of Europe in large round forms, between 5 and 6 inches thick, and weighing from 50 to 90 pounds: of which there is a conſiderable trade in all parts of Europe, eſpecially in France; and ſome pretend that the French have given it the name of Parmeſan, becauſe a princeſs of Parma had firſt brought it into their dominions; tho' it is known in Italy under the name only of *Lodi*, a territory adjacent to the Parmeſan, abounding in excellent paſture, and conſequently productive of a great quantity of theſe ſorts of cheeſe; the good qualities of which are, to be new, of a yellow taſte, cloſe, and without eyes: but though the Normans endeavoured to counterfeit it, all their attempts were unſucceſsful.

Switzerland makes a large quantity of cheeſe, brought from Griers, a bourg of the dioceſs of Loſanne, in the canton of Fribourg; and from Bern the capital of another canton of the ſame name: but the cheeſe of Griers is eſteemed the better ſort; and both kinds, to be good, ſhould be new, the paſte yellow, the eyes large, and the whole well ſeaſoned with ſalt.

Holland furniſhes ſeveral countries with a prodigious quanty of cheeſe, whoſe form has a great reſemblance to a ſkittle bowl, ſomewhat flatted on both ſides; of which there are two kinds, ſome painted red, and others painted white; but the red is reputed the better ſort, upon account of the yellow, hard, and cloſe paſte, like the parmeſan.

The cheeſe made in France is moſtly conſumed in that kingdom, whereof the moſt remarkable provinces for its production are Dauphiny, Languedoc, Foreſt, and Auvergne.

CHEGOS. A weight uſed by the Portugueſe in the Indies, for weighing pearls; 4 chegos making a carat.

CHEIT-A-BUND. A kind of ſilk in the Mogul's territories, holding the ſecond rank among the ſix kinds gathered there.

CHELLES. Cotton cloths checquered with different colours, brought from the Eaſt Indies, particularly from Surat: the piece containing about 13 or 14 ells in length, and $\frac{3}{4}$ in breadth.

CHELSEA *water-works*. See *Waterworks*.

CHEMBALIS. A ſort of Turky leather.

CHEMIST, or *Chymiſt*, a perſon who practiſes the art of chemiſtry

chemiſtry, which teaches the manner of performing certain phyſical operations, whereby bodies cognizable to the ſenſes, or capable of being rendered cognizable, and of being contained in veſſels, are ſo changed, by means of proper inſtruments, as to produce certain determined effects, and diſcover the cauſes thereof, which have been converted to many uſes in trade; but particularly ſo in medicine.

CHEPELIO. An iſland in the bay of Panama, and province of Darien, in North America, ſituated in 81 deg. of W. lon. and 9 deg. of N. lat. about a league from the city of Panama, which it ſupplies with proviſions and fruit. See *Spaniſh America*.

CHEQUI, or *Chique*, one of the four weights uſed in the ports of the Levant, particularly at Smyrna, being 5 lb. 6 oz. Engliſh avoirdupoiſe.

CHERAFIS, called otherwiſe *Tela*, a kind of gold medal ſtruck in Perſia, ſignifying noble in the Perſian tongue, upon account of the excellence of the metal: ſome travellers have been of opinion that the cherafis was a current coin; but it is certain that no gold ſpecie is coined in Perſia. See *Tela*.

CHERAFS, are Banian factors eſtabliſhed in Perſia; particularly at Scamachi, near the Caſpian ſea, who are reputed ſo ſubtle in trade as to exceed even the Jews. See *Banian*.

CHERBURG. A port-town of France, in the province of Normandy, ſituated in 1 deg. 40 min. of W. lon. and 49 deg. 50 min. of N. lat. on a bay of the Engliſh channel.

CHERIF. A gold coin ſtruck and current in Egypt, being worth about 3 s. 8 d. ſterling.

CHERRY-*brandy*, is a liquor produced by ſteeping cherries in brandy. See *Brandy*.

CHERRY-*Iſle*, is an iſland ſituated in 20 deg. of E. lon. and 75 deg. of N. lat. in the N. or frozen ocean, between Norway and Greenland.

CHERSO. An iſland in the gu'ph of Venice, ſituated in 15 deg. of E. lon. and 42 deg. 25 min. of N. lat. being ſubject to the Venetians. See *Italian iſlands*.

CHESNUT. The fruit of a tree well known, of the produce of ſeveral countries; but particularly abounding in Limoſin and Perigord in France; whence, by the way of Bourdeaux, great quantities are ſent into foreign countries, eſpecially to the Dutch, who tranſport them to the north.

CHEST. A kind of meaſure, containing an uncertain quantity of ſeveral commodities: a cheſt of ſugar being from 10 to 15 hundred weight; a cheſt of glaſs from 200 to 300 feet; of ſoap from 2 ½ to 3 hundred weight; and of indigo from 1 ½ to 2 hundred weight, five ſcore to the hundred.

Chatham CHEST. See *Chatham*.

CHIARENSA. A port-town, ſituated in 21 deg. 15 min. of E. lon. and 37 deg. 35 min. of N. lat. on the N. W. coaſt of the Morea, oppoſite to the iſland of Zant, in the Mediterranean, and ſubject to the Turks. See *Turky*.

CHIARVATAR. A term in ſome parts of Perſia, particularly at Bander-Congo, for what Europeans call a cuſtom-houſe officer.

CHILOE *iſland*, is ſituated near the coaſt of Chili, in South America. See *Spaniſh America*.

CHIMAY. An extenſive lake, lying between India and China, in the country of Acham.

CHINA, and *Great Tartary*, are now united, and compoſe one extenſive empire, comprehending all the eaſtern ſide of the continent of Aſia; China being conquered by the Tartars about 100 years ago. The moſt ſouthern part of China lies in the latitude of 21 degrees, and the moſt northerly part of Chineſian Tartary is ſituated in 55 degrees; the whole lying between 95 and 135 degrees of E longitude; being bounded by Ruſſian Tartary on the north; by the Pacific ocean on the eaſt and ſouth; and by Tonquin, Tibet, and the territories of Ruſſia on the weſt, from which it is ſeparated by the river Argun; being about 2000 miles in length from north to ſouth; and 1500 broad, from eaſt to weſt. The whole country is uſually divided into 16 provinces, in which there are computed to be 155 capital cities, 1312 of the ſecond rank, 2352 fortified towns, and innumerable villages, containing upwards of 10 millions of families, and 58 millions of people, who are all pagans; the annual revenues of the crown amounting to 21 millions ſterling.

There are ſeveral large navigable rivers in China; particularly the Kyam, or blue river; the Hoambo, or yellow river; the Kinxa, or golden river; the Ta, and others; but where theſe are wanting, the whole country is cut through with navigable canals, and a briſk trade is driven on them from one end of the empire to the other: for, through every province, there is one grand canal, which ſerves as a high road; the banks whereof are lined with great ſquare ſtones, of coarſe marble, where the people walk who draw the veſſels; and from this great canal are cut ſeveral ſmaller, which are again branched out into rivulets generally terminating at ſome town or village. One of theſe, called the grand canal, extends from Canton, the moſt ſoutherly part of China, to Pekin, the imperial city in the north; being upwards of 1200 miles: there is ſcarcely a city, or village, through the whole empire, eſpecially in the ſouthern provinces, but enjoys the conveniency of ſome navigable river, lake, canal, or arm of the ſea; where there are almoſt as many people live upon the water, as upon the land: for wherever there is a town upon the ſhore, there is another of boats upon the water; and ſome ports are ſo blocked up with veſſels, that it will take up ſeveral hours to get acroſs them to land. However, their ſhips for the ſea ſervice are not comparable to thoſe of Europe; and their ſkill in navigation extends only to coaſting and piloting.

The imperial city of Pekin is ſituated in the interior part of China, about the 40th degree of N. latitude: it conſiſts of two cities joined in one, like London and Weſtminſter; being about 18 miles in circumference, and containing, according to Le Compte, two millions of inhabitants; which is certainly above double the number to be found either in Paris or London.

Nankin is almoſt as conſiderable a place as Pekin, both in extent and number of inhabitants; and both theſe cities have a communication, by their rivers, with the Cang ſea, or gulph of Nankin. But the principal port frequented by the Europeans is Canton, the capital of Quamtung, the moſt ſouthern province of China, which lies under, or very near, the tropic of Cancer, about 50 m. from the mouth of the river Ta; and is reported to be the beſt harbour in China: however, there was formerly a great trade to Macao, an iſland to the ſouth of Canton, poſſeſſed by the Portugueſe, who are now in a ſort of ſubjection to the Chineſe. North-eaſt of Canton, in the province of Fokien, is another port called Amoy, from the iſland that forms it; but this is now little frequented. The moſt eaſterly port on the continent of China is Nimpo, a large and populous city, but two days ſail diſtant from Japan, where they maintain a great trade, exporting their ſilks, and other manufactures, among the Japaneſe; for which they receive gold, ſilver, braſs, japan cabinets, porcelain, and ſeveral other commodities.

The Chineſe formerly would have no trade with foreign nations; though now they not only admit all people into their ports, but alſo carry their merchandiſe themſelves to India, Japan, the Philippines, Java, and other iſlands in the Indian ſeas, where a conſiderable number of Chineſe merchants have taken up their ſettlements: yet they were never accuſtomed to make a voyage to any diſtant country; for they hardly ever heard of any other part of the world but Aſia, till the Europeans diſcovered the paſſage thither by the Cape of Good Hope. The veſſels on their rivers, and canals, are boats and jonks, which are flat-bottomed: thoſe that go to ſea are deeper and more capacious; ſome of which have two maſts, and others three, with ſquare heads and ſterns, the largeſt being above a thouſand tons burden; each maſt is but one rough piece of timber, ſupported on each ſide; their ſails are made of matting, ſtrengthened with ſplit cane, at about two feet diſtance, which they let down upon deck inſtead of going up to furl, and fold them up like a fan; having no yards, like European ſhips.

The anchors are made of a hard wood, called *iron-wood*: they have no pumps; and, inſtead of pitch, they caulk

their ſhips with a particular kind of gum: their ſailors are good-coaſting pilots, but very bad ones in the main ſea; and they ſteer by that point of the compaſs which leads directly to the place where they are bound. They carry their ſea-idol, or Neptune, with them in all their voyages, and make great vows to him when they are in danger; every evening a gilt paper being lighted before him, and thrown into the ſea as an offering, with ringing of bells, and playing upon muſical inſtruments.

The principal commodities brought by the Europeans from China are tea, gold, quickſilver, vermilion, China-root, rhubarb, raw and wrought ſilks, copper in bars like ſticks of ſealing wax, camphire, ſugar-candy, fans, pictures, lacquered-wares, porcelain, or china-ware, ink, ſoy, borax, lapis lazuli, galingal, genſen, toys, tutanaque, which is a ſort of coarſe tin, and ſeveral other kinds of merchandiſes, eſpecially thoſe of Japan, are purchaſed at Canton as cheap as in the countries that produce them. Goods uſually exported from Europe to China, are ſilver coin, or bullion, cloth, cloth-raſh, perpetuanoes, camblets of ſcarlet, black, blue, ſad, and violet colours, which are of late ſo lightly ſet by, that to bear the duties, and bring the prime coſt, is as much as can be reaſonably expected: lead turns to a good account; and a private trader may carry coral in branches; clear amber-beads, thin flint ware; ordinary horſe-piſtols with gilt barrels; ſword-blades of about 14 s. a dozen; ſpectacles ſet in horn of about 8 s. 6 d. a dozen; clocks and watches of a good appearance, but of ſmall price; as alſo any new toy that has not been carried thither before, which if he can get aſhore without paying the duties, he may make a better voyage than with all ſilver, otherwiſe the charge and trouble will be more than the profits.

The principal manufacture of China is that of ſilk, being held in greater eſtimation than that of any other country; of which the natives account the beſt to be wrought in the province of Nanking, of Chekiang ſilk; but that of Quamtung is highly valued by foreigners. Beſides taffety, gold tiſſue, and ſeveral other ſorts of ſilk, the Chineſe alſo make pluſh, velvet, crapes, druggets, ſerges, and tammies: but though wool is very plentiful, eſpecially in the provinces of Xenſi, and Xanſi, which abound in ſheep of the Turkiſh kind, they make no woollen cloth; notwithſtanding they have a great value for Engliſh cloth, which is ſold dearer at Canton than the richeſt ſilks: however, they make blankets of their own wool, and a ſort of ruſſet cloth. They have a great deal of cotton linen, and linen produced from another ſort of plant called *co*, which is tranſparent, cool, and light. China is remarkable for a kind of white wax, not made by bees, but gathered from trees, which they have in ſuch abundance, that it ſerves the whole empire; being generally found in the provinces of Huquam and Xantung, where it is produced by an inſect not bigger than a flea, which has a ſting ſharp enough to pierce the bark and even the body of the trees.

For their own conſumption, the Chineſe have large quantities of rice, and all kinds of grain; as alſo all kinds of fruits, and fleſh proviſions: their ſeas, rivers, and canals, abound in fiſh; and from hence the Portugueſe firſt introduced the oranges, called China oranges, into Europe. Sugar-canes grow in great abundance in this country; as alſo great quantities of ginger, growing wild in ſeveral places near the ſea. The province of Quangſi produces ſome cinnamon, cloves, nutmegs, and mace; but in too ſmall quantities to ſupply even their own conſumption. Their tame animals are camels, horſes, mules, aſſes, oxen, cows, hogs, and ſheep; and their wild beaſts are elephants, tygers, bears, wolves, and other creatures of prey, beſides deer and hares. They have mines of gold, tin, iron, and copper; as alſo ſome little quantities of ſilver, and lead: but their gold mines are never permited to be opened; for the gold which they have in ſuch plenty is reported to need no refining, and is waſhed down by torrents from the mountains in the rainy ſeaſons.

The port of Canton is in the greateſt reputation with the Engliſh merchants of any port in China: but Amoy was formerly more uſed, till the extortions of the Mandarins were grown to ſuch a height, that the merchants could gain little profit by trading thither. Another inducement which the European merchants have to frequent Canton is, that whole fleets may be freighted in a ſhort time there, and are not in danger of being delayed till the monſoon ſets in to prevent their return till another ſeaſon: but preſents muſt be made to the hoppous, or cuſtom houſe officers; and, as the Chineſe are of a very cheating diſpoſition, they muſt be carefully attended in all their proceedings.

Lead is almoſt the only commodity wherein European merchants get more than their prime coſt: for the gains ariſe from the goods imported from China, and not by what are carried thither. Silver is the next moſt material article for trading in this country, which is ſometimes in ſuch piaſtres as come from Mexico to the Philippine iſlands, or in bars as the Dutch bring it from Japan, or in coin or bullion as exported from Europe; for as the Chineſe have no mines of this metal, they highly eſteem it, and give their gold and beſt merchandiſes in exchange for it; which is of conſiderable advantage to the Europeans, when it is conſidered that ſilver is there to gold as one to ten, and moſt commonly in Europe as one to fifteen. Indeed, the exportation of gold is prohibited in China; but the magiſtrates, notwithſtanding, will privately ſell it to the Europeans: where ten tale weight of gold touch 92, bought at touch for touch, the moſt governing price, amounts to one hundred and eleven ounces, 8 pennyweights, and 5 grains, of current ſilver, at 5 s. 6 d. the ounce, which is 30 l. 12 s. 8 d. for which the Europeans receive 12 ounces, 2 pennyweights, and 4 grains of gold, worth about 4 l. an ounce, being 48 l. 8 s. 8 d. Silver, in any form, paſſes current by weight, inſtead of money; reckoning, from a tale decimally, or 4 oz. 10 drams, to the ſmalleſt part imaginable: but in payments made with tankards, diſhes, bowls, baſons, plates, ſpoons, and ſilver porrengers, the Chineſe will cut a piece out of the ſides of what they think is not ſufficiently fine, and try it immediately by aſſay; and afterwards, if they agree in the touch, reduce it into the current ſilver, by multiplying the quality by the touch.

The duty uſually paid by European ſhips, in the river of Canton, is according to their tonnage; nor can any ſhip purchaſe naval ſtores, or proviſions, without a licence from the Viceroy; who is always ſollicited by the mediation of the principal Chineſe merchants; which frequently throws inſuperable difficulties on the Europeans. So arbitrary are they in the collection of their duties, that when Commodore Anſon entred the river, with the Centurion man of war, after he had taken the Manila galeon in 1743, the officers inſiſted upon collecting their duty even from a man of war, which the commodore refuſed, and nobly ſupported the character of his nation, the honour of his royal maſter, and the glory of the Britiſh flag.

CHINESE *iſlands*. The principal iſlands ſubject to China are the following: 1ſt. Formoſa, a large iſland lying in the latitude of 22 north, about 4 or 500 miles in circumference, and about 20 leagues diſtant from the province of Fokien: the Spaniards from Manila ſettled themſelves here; and after them the Dutch, who defended their poſſeſſion a conſiderable time againſt the attacks of the Chineſe; but were, at laſt, overpowered, and compelled to abandon the country: 2d, Aynan, or Hainan, about the latitude of 18 or 19 north, which lies about 50 miles to the ſouth of China, and is about 300 miles in circumference: having both gold and ſilver mines in it, with a pearl fiſhery. 3d, Macao, a little iſland near the coaſt of Quamtum, at the entrance of the river of Canton, which was formerly very rich and populous, and capable of defending itſelf againſt the power of the adjacent Chineſe governors: but at preſent it is much fallen from its ancient ſplendor; for though it is inhabited by Portugueſe, and hath a governor nominated by the King of Portugal, yet it ſubſiſts merely by the ſufferance of the Chineſe, who can ſtarve the place, and diſpoſſeſs the Portugueſe whenever they pleaſe. Beſides theſe, there are the iſlands of Xitum, Xamuen, Tenchew, Yuxa, and Tungna, in the gulph of Nankin, on the N. E. part of China; Iſongming, Chuſan, and ſeveral other little iſlands on the eaſtern coaſt; Amoy, Tygers iſle, Lempeco,

peco, and ſome others on the ſouthern coaſt; but none of theſe iſlands are any ways remarkable for trade. See *Eaſt India Company.*

The Chineſe are very deceitful in their dealings, uſing falſe weights, ſelling bad meaſure, adulterating, and often changing the goods in packing. The worſt ſort of tea pays the ſame ſort of freight as the beſt, and many times the ſame cuſtom; being a very profitable commodity from Canton to all parts of the world, where it is uſed.

Canton is the port where all the Chineſe jonks take in their cargoes for foreign parts, and where they import their returns: the places where they uſually trade to being Cochin-china, Cambodia, Tonquin, Siam, Batavia, Japan, Manila, Surat, the Maldives, and Acham.

The Chineſe veſſels depart from Canton the beginning of the month of March, and arrive at Cochin-china about the 15th of the ſame month; they return for Canton the beginning of July, and arrive there in about 20 days. The Chineſe export to Cochin-china gold ſtuffs, crapes, ſatins, porcelain, all kinds of medicinal drugs, coarſe paper, glaſs bracelets, iron cauldrons, gold in plates, and caxas. The merchandiſe brought from Cochin-china to Canton conſiſts in gold ingots, agracaramba wood, black wood, Japan wood, arrack, pepper, coarſe ſilk ſtuffs, ſkins of ſea dogs, horns of the rhinoceros, buffalo, and cow, with white and candied ſugar.

The Chineſe veſſels depart from Canton for Cambodia about the beginning of January, and arrive there the ſame month; returning in June, and arriving at Canton in July. The goods exported by the Chineſe to Cambodia are porcelain, anchors, umbrellas, mats, and all kinds of fruit. The principal returns from Cambodia being elephants teeth, lacca for varniſhing, loung for yellow paint; ſkins of buffaloes, camels, cows, and ſtags; horns, feathers, and medicinal drugs.

The voyage from Canton to Tonquin takes up about 15 days in going, and as many in returning; the jonks ſetting out at the beginning of January, and returning to Canton about the beginning of July. The Chineſe take to Tonquin caxas, porcelain, iron cauldrons, ſmall caſt cannons, pewter, many drugs, cloves, crape, gauze, glaſs bracelets, vermillion, allum, and fruit. The merchandiſe brought from Tonquin to Canton being raw yellow ſilk, mudis, or ſtuffs of the bark of a tree, taffeties, cotton cloths, Japan wood, cinnamon, and aniſe.

The Chineſe veſſels depart from Canton for Siam about the middle of November, and are 30 or 40 days in the voyage: they leave Siam in June, and return to Canton about the end of July. The Chineſe export to Siam wrought and unwrought iron, wrought copper, copper-wire, iron-wire, copper-baſons, ciſterns of caſt copper, iron cauldrons, allum, and white ſugar; all of which ſerve for ballaſt; ſatins, taffeties, ſewing ſilk, gold thread, marelle or red paint, drugs, fruit, and quickſilver. The goods brought from Siam to Canton are elephants teeth, lead, pewter, areca, ſapan wood, and tafouſſa, a medicinal drug; which ſerve for ballaſt: lacca, hides, horſes, cows, and buffaloes, horns of the buffalo and rhinoceros, myrrh, loung, frankincenſe, feathers, and cayelac, a ſweet-ſcented wood for burning before the pagods.

The jonks depart from Canton to Batavia, the capital of the Dutch ſettlements in India, on the iſland of Java, at the beginning of December: they return from Batavia the beginning of June, and arrive at Canton about the middle of July. The Chineſe merchandiſe for Batavia conſiſts in gold, porcelain, teas, gold thread, ſatins chiefly black, taffeties, ſewing ſilk, aniſe, quickſilver, muſk, rhubarb, borax, glaſs, iron cauldrons, and copper baſons. The Chineſe receive in return, lead, pewter, coral, camphor, pepper, frankincenſe, nutmegs, cloves, amber, myrrh, aſſa fœtida, other drugs, and matts.

The commerce of Canton to Japan is begun about the beginning of May, when the jonks ſet out for that iſland, where they arrive in about 25 days: they return about the 10th of October, and arrive at Canton in the middle of November. The Chineſe commodities proper for Japan, are, coral in grain, agracaramba, ultramarine, enamel, allum, iron, tutenac, white and brown ſugar, taffeties, crapes, cotton cloths, raw ſilk, galanga, lacca, bark of areca, benjoin, eagle wood, frankincenſe, myrrh, loung, muſk, rhubarb, cinnamon, ſaffron, and other drugs. The Chineſe receive from Japan, varniſh, porcelain, fine pearls, ſteel, wrought copper, and a particular kind of camphor proper for China.

The trade from Canton to Manila, or the Philippine iſlands, begins in March, and the veſſels return in July. The Chineſe export to Manila ſilks, ſtuffs, linens, tutenac, iron, and porcelain. They receive from thence ſapan wood, ſtags fleſh ſalted, ſulphur, and pearls.

The Chineſe ſet out for the Maldivia iſlands about the end of October, in order to arrive at Achen in Sumatra, from the 1ſt to the 10th of December, and proceed from thence to the Maldives. Their cargo is white ſugar, ſugar-candy, tutenac, Japaneſe copper, quickſilver, and many European goods, which are ſold at Achen; gold, coarſe porcelains, copper baſons, Chineſe tobacco, gold thread, taffeties, and ſilks, ſold in the Maldives. The Chineſe receive from the Maldives, coris, dry fiſh of Achen, and hemp made from the palm-tree for cables.

The Engliſh ſhips depart from Madras for Canton in the month of July, and arrive there in the months of Auguſt and September: but ſometimes they loſe their paſſage, being obliged to expect the Engliſh ſhipping from Europe, in order to have ſilver, without which they cannot trade to China.

Ships return from Canton to Madras in the months of January and February; and the voyage, either going or coming, is between 45 and 60 days.

The merchandiſe ſent by the Engliſh to Canton, conſiſts of Engliſh lead, Pegu lead, Pegu pewter, liquid ſtorax of Malacca, incenſe, aſſa fœtida, red wood of Madras, myrrh, puchoc, and fine pearls of all ſorts.

All which produce from 50 to 100 *per cent.* profit.

The merchandiſe of return conſiſts in gold, Japaneſe copper, Canton copper, in imitation of that of Japan, tutenac, allum, quick-ſilver, vermillion, coarſe porcelains for the uſe of the Moors, white ſugar, and Chineſe ſugar-candy.

The profits in theſe being from 100 to 200 *per cent.*

The ſame goods as are ſent from Madras are alſo ſent by the Engliſh from Surat to Canton; beſides, a conſiderable quantity of cotton. Such as return from China to Surat are alſo the ſame, except gold: but the profits from China to Surat are 30 *per cent.* more than thoſe to Madras.

Ships depart from Surat for Canton in the months of May and June, in order to arrive there in the month of Auguſt: and the return from Canton to Surat is about the 15th of December, to be there in the month of March.

They have no gold nor ſilver coined in China, the inhabitants making all their payments in lumps of gold and ſilver by weight, which they diſtinguiſh by talents and meaſure.

In trade, every man carries about him a pair of ſheers to cut and divide the money; as alſo weights and ſcales to weigh it, which is proportioned to the value of the commodities bought. Their gold is reckoned worth 3l. 3s. ſterling the ounce: they weigh all monies by dodgins, like ſtilliards, and take none but good ſilver; an Engliſh crown being worth 8 mace. Their coins are the caxa, 10 of which make a caſh, and 10 caſh make the candarin, or a penny ſterling; 10 candarins make the mace, and 10 mace the tale, or 6 s. 8 d. ſterling. Their weights are alſo the candarin, the mace, and tale, with the catty and picul: 10 candarins make the mace, and 10 mace the tale, or 4 ounces ten drams Engliſh weight; 46 tale make the catty, and 100 catties the picul, or 133 lb. Engliſh. Their meaſure is the covid of 14 $\frac{1}{2}$ inches.

The kingdom of Corea, called alſo *Caoli*, and *Tiocencouk*, extends from the latitude of 36 to 42, and is frequently accounted a province of China. To the ſouth it is very near Japan, from which it is ſeparated by an arm of the ſea; and to the north it touches China by a high mountain, which makes Corea a peninſula.

The country is not equally fertile; the north part ſcarce producing a ſufficiency for the ſuſtenance of the inhabitants, who live upon a kind of indifferent barley, and cloath themſelves with the ſkins of animals.

The reſt of the kingdom, on the contrary, produces abun-

dantly

dantly all the neceſſaries of life; among others, rice and corn of different ſorts, cotton, hemp, and even ſilk, which the natives know not how to prepare. There are likewiſe found in Corea ſilver, lead, tigers ſkins, niſy-root, ſo much eſteemed by the Tartars and Chineſe; with an abundance of large and ſmall cattle, eſpecially horſes, cows, and hogs.

The Coreaſians ſeldom trade with any but the Japaneſe, and the inhabitants of the iſland Suiſſima, ſituated between Japan and Corea: the latter having even a warehouſe for their merchandiſe to the S. E. in the town of Pouſant.

The merchandiſes imported to Corea are pepper, ſapan wood, allum, buffaloes horns, ſtags, and goats ſkins; as alſo European merchandiſe, which the Dutch and Chineſe ſell to the Japaneſe: all theſe merchandiſes being exchanged for the manufactures and productions of the country.

The Coreaſians have alſo ſomething of a direct commerce to Pekin, and to the north parts of China; but this trade is ſo expenſive, becauſe carried on all by land, and on horſeback, that none but able merchants can undertake it. Thoſe of Sior are ſuch as reſort chiefly to China, and they are not leſs than three months in their journey: their whole trade conſiſts in cotton and hemp cloths; and the principal merchants pay ready money for what they purchaſe; but the poorer ſort trade only with rice, and the other productions of their country.

There is but one weight and one meaſure in the kingdom; but both are greatly abuſed by traders, notwithſtanding the precautions and regulations of the governors. They know no money but the caxas, current upon the frontiers of China; and they give ſilver by the weight, in ſmall ingots, as is practiſed by the Japaneſe.

CHINA-CHINA. A name ſometimes given to the quinquina, or peruvian bark. See *Quinquina*.

CHINA-*orange*. A ſweet kind of orange, originally brought by the Portugueſe from China, but now very common in Europe, eſpecially in Portugal.

CHINA-*root*. A medicinal root brought from the Eaſt Indies; though it has been alſo lately introduced from Peru, and New Spain; which is of a ruddy brown colour, bordering on a black, on the outſide, and white, or reddiſh within; growing chiefly in fenny places, uſually covered with the ſea, which, upon its withdrawing, leaves great quantities on the ſhore: the beſt ſort being firm, ruddy, and freſh; which is held to be a ſweetener of the blood, good againſt the ſciatica, and ſovereign againſt the aſthma and dropſy.

CHINA-*ware*. A fine ſort of earthen-ware, originally brought from China; but more properly called *porcelain*. See *Porcelain*.

CHINT, or *Chints*, white cotton cloths, of the manufacture of India, whereof there are ſeveral ſorts, diſtinguiſhed by the name of the places where they are manufactured, and by their aulnage: as the chint-ſeronges, whereof the piece contains about 6 ells in length, and $\frac{3}{4}$ in breadth.

The chint-mamodes, containing 7 ells and $\frac{1}{2}$ in length, and $\frac{1}{2}$ in breadth.

The broad-chint of the ſame length as the mamodes, and $\frac{3}{4}$ in breadth.

The chint-ſurat, 8 ells in length, and of the ſame breadth as the broad-chint.

The chint-cadix-ſmals, 6 ells long, and $\frac{2}{3}$ broad.

The chint-jaffercon, 8 ells long, and $\frac{3}{4}$ broad.

The chint-ramauls, 7 $\frac{1}{2}$ ells long, and $\frac{3}{3}$ broad; all of which are fit for handkerchiefs.

CHINTAL, or *Quintal*. A kind of weight uſed by the Portugueſe of Goa, in the Eaſt Indies, being about 124 lb. Engliſh avoirdupoiſe.

CHIOS, *Xio*, or *Sio*, an iſland called by the Turks *Saki Saduci*, ſituated in 27 deg. of E. lon. and 38 deg. of N. lat. near the coaſt of Ionia, in the Leſſer Aſia, about 100 miles W. of Smyrna. See *Turkiſh Iſlands*.

CHIOZZO, or *Chioggio*, an iſland in the gulph of Venice, by which there is a paſſage into the Lagunes, ſituated 12 miles S. of the city of Venice.

CHITES, are Indian cotton cloths, extremely beautiful, which come from Maſulipatan, a town of the kingdom of Golconda, upon the coaſt of Coromandel; whoſe colouring has no leſs a duration than the cloths themſelves, without loſing in the leaſt their vivacity.

The chites are uſually half a yard long, and 2 inches broad: beſides the great quantity of chites brought into Europe, conſiderable parcels are alſo bought up for the commerce of both Indies, by the Engliſh and Dutch; the former eſpecially ſend them in abundance to the Philippine iſlands, where they are ſold from 120 to 200 piaſtres; or from 21 l. 10 s. to 35 l. 16 s. ſterling the piece.

CHITES *of Amadabat*, and *Chites of Seronges*, are painted cottons brought from Surat; being the moſt beautiful ſort manufactured in the Mogul's territories.

CHOCOLATE. A kind of cake, or confection, prepared of certain drugs, the baſis or principal whereof is the cocoa-nut.

The name chocolate is alſo given to a drink prepared from this cake, of a dusky colour, ſoft and oily, uſually drank hot; eſteemed not only an excellent food, as being very nouriſhing, but alſo a good medicine; at leaſt a diet for keeping up the warmth of the ſtomach, and aſſiſting digeſtion.

The Spaniards were the firſt who brought chocolate into uſe in Europe, and that, perhaps, as much out of intereſt, to have the better market for their cocoa-nuts, achiott, vanilla, and other drugs which their Weſt Indies furniſh, and which enter the compoſition of chocolate; as out of regard to thoſe extraordinary virtues which their authors ſo amply enumerate. The qualities above-mentioned, however, being what the generality of phyſicians, and others, allow it.

The method of making chocolate, as firſt uſed by the Spaniards, was very ſimple, and the ſame with that in uſe among the Indians: they only uſed cocoa-nuts, maiſe, and raw ſugar, as expreſſed from the canes, with a little achiott, or rocou, to give it a colour. Of theſe 4 drugs, ground between two ſtones, and mixed together in a certain proportion, the Indians made a kind of bread, which ſerved them equally for ſolid food, and for drink, eating it dry when hungry, and ſteeping it in hot water when thirſty. This drink the Mexicans call chocolate, from *chocao*, ſound, and *alte*, or *atte*, water; as if they ſaid, water that makes a noiſe, from the noiſe which the inſtrument uſed to mill and prepare the liquor made in the water. But the Spaniards, and other nations, have ſince added a great number of other ingredients to the compoſition of chocolate; all of which, vanilla only excepted, ſpoil rather than mend it; the vanilla being a ſhell full of a luſcious juice, with little black ſeeds of a moſt agreeable odour, gathered from a tree of the ſame name in New Spain.

The method of making chocolate, now in uſe among the Spaniards of Mexico, is thus: the fruit being gathered from the cocoa-tree, is dried in the ſun, and the kernel taken out, and roaſted at the fire, in an iron pan pierced full of holes; then pounded in a mortar; then ground on a marble ſtone, with a grinder of the ſame matter, till it is brought to the conſiſtence of a paſte, mixing with it more or leſs ſugar, as it is to be more or leſs ſweet. In proportion as the paſte advances, they add ſome long pepper, a little achiott, and laſtly vanilla: ſome add cinnamon, cloves, and aniſe; and thoſe who love perfumes, muſk, and ambergreaſe. There is alſo a kind of Mexican chocolate, in the compoſition whereof are put almonds and filberts; but this is rather to ſpare the cocoa, than to render the chocolate better; and, accordingly, this is looked upon as ſophiſticated chocolate.

The chocolate made in New Spain differs ſomewhat from that made in Mexico; for, beſides the drugs uſed in this laſt, they add two or three kinds of flowers, pods of campeche, and generally almonds and hazle-nuts. The uſual proportion, at Madrid, is to 100 kernels of cocoa, to add two grains of chilé, or Mexican pepper, a handful of aniſe, as many flowers, called by the natives *vinacaxtlides*, or little ears, ſix white roſes in powder, a little machuſia, a pod of campeche, two drachms of cinnamon, a dozen almonds, and as many hazle nuts; with achiott enough to give it a reddiſh tincture: the ſugar and vanilla are mixed at diſcretion; as are alſo the muſk and ambergreaſe. They

They frequently work their paſte with orange-water, which they think gives it a greater conſiſtence and firmneſs: the paſte being uſually made up into cakes, ſometimes into large rolls, and ſometimes the cakes are made up of pure cholocate, without any mixture; thoſe who uſe it being to add what quantity they pleaſe of ſugar, cinnamon, and vanilla, when in the water.

In England, the chocolate is uſually made ſimple and unmixed of the kernel of the cocoa; excepting, that ſometimes ſugar, and ſometimes vanilla, is added, any other ingredients being ſcarcely known.

The neweſt chocolate is eſteemed the beſt, the drug never keeping well above two years, and uſually degenerating much ſooner. It is kept in brown paper, put up in a box, and that in another in a dry place.

The quantity of chocolate made in New Spain is ſuch, that there are annually uſed twelve millions of pounds of ſugar in the preparation thereof; the Spaniards eſteeming it the laſt misfortune that can befal a man, to be reduced to want chocolate; and they are never known to leave it, except for ſome intoxicating liquor. See *Cocoa* and *Coffee*, for the regulations of the duty.

CHOPINE. A French meaſure uſed at Paris, for wine, brandy, and other liquors, even for olives ſold by retail, being half a pint.

At Lyons they make uſe of a ſmall liquid meaſure, called fouillette, much of the ſame contents with the Paris chopine; but at St. Dennis the chopine is near double that of Paris.

CHOUAN. See *Kouan*.

CHOUPAR. A town of India, remarkable for its ſaltpetre. See *India*.

CHREMNITZ. The chief of the mine-towns of Upper Hungary, ſituated in 19 deg. of E. long. and 48 deg. 45 min. of N. lat.

CHRISTAL. See *Cryſtal*.

CHRISTIANOPLE. A port-town of Sweden, ſituated in 15 deg. 40 min. of E. lon. and 57 deg. of N. lat. on the Baltic ſea, in the territory of Bleking, and province of S. Gothland. See *Sweden*.

CHRIST's *Hoſpital*, principally eſtabliſhed for teaching boys the theory of navigation. See Chriſt's *Hoſpital*.

CHRISTINA. A Swediſh ſilver coin, of very baſe allay, worth about 7 d. ſterling. There are alſo half chriſtina's, worth 20 runſtacs, or about 3 d. ſterling.

CHRISTMAS *Roſe*. See *Hellebore*.

CHRISTOPHERS, St. One of the Caribbee iſlands, ſituated in 62 deg. of W. lon. and 17 deg. 30 min. of N. lat. to which Columbus gave his Chriſtian name. See *Britiſh America*.

CHRYSOBERIL. A precious ſtone, which is nothing elſe but a kind of pale beryl, tinctured with a gold colour. See *Beryl*.

CHRYSOCOLLA. A mineral ſalt, uſed by the antients in the ſoldering of gold and other metals; as it was alſo frequently in phyſic, for an eſcharotic, reſolvent, and drier.

Chryſocolla, according to Pliny, is found in mines of gold, ſilver, copper, and lead; its colour being various, purſuant to that of the matter in which it is found; as yellow, if among gold; white, in ſilver; green, in copper; and black, in lead.

The Arabs, and the inhabitants of Guzarat in India, call it tincar, or tincal; the beſt ſort of which is found in copper-mines, and the worſt in thoſe of lead; tho', in Europe, it is confounded with borax. See *Borax*.

CHRYSOLITE. A precious ſtone of a yellow colour, being the topaz of the moderns. See *Topaz*.

CHRYSOPRASIN. A precious ſtone of a greeniſh colour, which is a kind of beryl. See *Beryl*.

CHUSAN, or *Cheuxan*. An iſland on the coaſt of China, ſituated in 124 deg. of E. lon. and 30 deg. 40 min. of N. lat. near the province of Chekiam; where the Engliſh Eaſt India company had a factory, but were obliged, by the extortions of the natives, to remove.

CHYMIST. See *Chemiſt*.

CIDER. See *Cyder*.

CIENTO, or *Cientos*, is a tax levied throughout all the provinces of Spain, of 4 *per cent.* upon all manner of merchandiſe bartered or ſold.

CIFALU, or *Cefaledi*. A port-town of Sicily, in the province of Valdemona, ſituated in 13 deg. of E. lon. and 38 deg. 30 min. of N. lat. on a cape or promontory 36 miles E. of Palermo. See *Italy*.

CIGALES, called by the Spaniards *cigarros*, a kind of tobacco cultivated in ſome parts of the iſland of Cuba, and ſmoaked uſually without a pipe; being only the leaves of this plant twiſted in the form of a horn, and ſet fire to at one end.

CINDERS, are coals burnt till the ſulphur is evaporated out of them. See *Coal*.

CINNABAR. A mineral ſtone, red, heavy, and brilliant, found chiefly in quickſilver mines; being of two ſorts, the native, and the factitious.

Natural or mineral cinnabar is found in moſt places where there are quickſilver mines; yet it has alſo mines of its own; of which thoſe in Spain are very remarkable; and the French too have theirs in Normandy: there are alſo ſome in Hungary, and others in the Eaſt Indies. It may be eſteemed as marcaſite of quickſilver, or rather as quickſilver petrified and fixed by means of ſulphur, and a ſubterraneous heat; chemiſtry being found to reduce it, without much trouble or loſs, to the nature of mercury.

Each pound of good cinnabar yields fourteen ounces of mercury; accordingly, the principal property and uſe of this mineral, is to yield a moſt excellent mercury; but the beſt mineral cinnabar, is of a high colour, brilliant, and free from the ſtone, which is ſold either in lumps or pounded.

Factitious, or *artificial* CINNABAR, is formed of a mixture of mercury and ſulphur, ſublimed, and thus reduced into a kind of fine red glebe; the beſt ſort being of a high colour, and full of fibres, like needles.

This cinnabar, called alſo by painters vermillion, is rendered more beautiful by grinding it with gum-water and a little ſaffron, thoſe two drugs preventing its growing black.

There is alſo a blue cinnabar, made by mixing two parts of ſulphur with three of quickſilver, and one of ſal ammoniac; theſe being ſublimed, produce a beautiful blue ſubſtance; whereas quickſilver and ſulphur alone produce a red.

But chemiſts prepare other kinds of artificial cinnabar, as cinnabar of antimony, being a compoſition of mercury, common ſulphur, and crude antimony ſublimed.

CINNAMON. An agreeable aromatic ſpice, being the bark of a tree, growing in the iſland of Ceylon; and, as ſome ſay, alſo in the iſland of Java, and on the coaſt of Malabar, in the Eaſt Indies.

This tree has a thick trunk, and divides into many branches: the bark is at firſt green, but grows reddiſh with age, and binds itſelf cloſe to the wood, which is whitiſh, firm, and without ſmell. The leaves are like thoſe of the bay-tree, and the flowers are ſmall and white. The woods and foreſts of Ceylon are full of theſe trees, where the bark is ſtript off in the ſpring and autumn every two or three years.

The leaves of the cinnamon-tree are called *folia Malabathri*, and yield a bitteriſh aromatic oil, called *oleum Malabathri*, reputed excellent againſt cephalagia's.

The chief virtue of the cinnamon-tree is in its bark; which, when green, appears to be double; its exterior ſurface being browniſh, and the inner of the common cinnamon-colour. It is then diviſible into two barks of different colours; but theſe drying together, become inſeparable, and paſs for the ſame bark, the browniſh colour changing in proportion as it dries.

The cinnamon, taken freſh from the tree, is flat, has little taſte, ſmell, or colour; but it twiſts, or convolves, as it dries, in form of a ſtick, or cane; whence the French call it *canelle*. By thus exhaling its ſuperfluous humidity, it acquires a ſweet, briſk ſmell, and a ſharp, pungent taſte.

Some hold that the ſmall branches of the tree make the caſſia; but that muſt be a miſtake: however, the natives draw from the roots of the tree a liquor in all reſpects reſembling

ſembling camphor, and which, in reality, is a true camphor. See *Camphor*.

Cinnamon, to be good, muſt have a briſk, agreeable taſte, and a bright, brown colour. There is a great conſumption for it in Europe as a ſpice; and it is alſo uſed in medicine as an aſtringent.

From cinnamon an oil is extracted, called its eſſence, or quinteſſence; but the Dutch are ſaid to have a method of preparing, or rather adulterating, oil of cinnamon, which is kept a ſecret among themſelves; and the common cinnamon is often adulterated with that out of which this eſſence has been extracted.

Cinnamon, by means of fire, furniſhes waters, extracts, and ſalts; out of which are compounded ſyrups and paſtils, called *oleo ſaccharo*; together with an eſſence that ſerves to turn all manner of wines, white and red, into hypocras.

CINNAMON-*Water*, is made by diſtilling the bark, firſt infuſed in barley-water, in ſpirit of wine, or white wine.

All the cinnamon conſumed in Europe comes from the Dutch, who have got its whole commerce into their own hands, by becoming maſters of the iſle of Ceylon, and deſtroying all the other cinnamon-trees about the kingdom of Cochin; ſo that they ſell it at Amſterdam from 3 s. 6 d. to 5 s. 3 d. the pound. See *Ceylon*.

Clove-CINNAMON, is alſo the bark of a tree growing in Braſil and Madagaſcar, where it is known under the name of ravendfara; but the Portugueſe call it cravo de Marenham; the bark of which pulveriſed, is ſometimes ſubſtituted for real cloves, tho' far inferior in reſpect of quality. See *Cloves*.

Saſſafras is ſometimes alſo called cinnamon-wood. See *Saſſafras*.

White CINNAMON, which ſome call *coſtus corticus*, or *cortex Winteri*, Winter's bark, from the perſon's name who firſt brought it into England, is the bark of a tree reſembling the olive-tree, frequent in the iſlands of St. Domingo, Guardaloupe, and Madagaſcar, called by the natives *ſimpli*. See *Cortex Winteranus*.

The bark, which dries like that of cinnamon, is at firſt browniſh, of a ſharp biting taſte, like pepper, and a ſmell like muſk, which whitens as it dries. Some uſe it in lieu of nutmeg; but, in medicine, it is uſed as a ſtomachic, and ſometimes as an antiſcorbutic.

The ſame tree alſo yields a gum, called alouch, and ſometimes bdellium, which is no diſagreeable perfume. See *Bdellium*, and *Spice*.

CINNAMON *iſlands*. See *Ceylon*.

CINQUE-*Ports*, or *Quinque-ports*, are five havens, lying on the coaſt of Kent and Suſſex, on the eaſt part of England, towards France, ſo called by way of eminence, on account of their ſuperior importance, as having been thought by the Kings of England to merit a particular regard, for their preſervation againſt an invading enemy. Hence they have a particular policy, being governed by a keeper, with the title of Lord Warden of the cinque-ports, who has the authority of an admiral among them, and iſſues writs in his own name.

William the Conqueror firſt appointed a warden of the cinque-ports; but their privileges were not granted till the reign of King John, who did it upon condition that they ſhould provide 80 ſhips at their own charge for 40 days, as often as the King ſhould have occaſion in the wars; he being, at that time, ſtraitened in a navy to recover Normandy.

The five ports are Haſtings, Romney, Hythe, Dover, and Sandwich. To Haſtings belonged Seaford, Pevenſey, Hedney, Winchelſea, Rye, Hamine, Wakeſbourn, Creneth, and Forthclip; which were to furniſh 21 veſſels, and in each 21 men. To Romney belonged Broomhall, Lyde, Oſwarſtone, Dangemares, and Romenhal; which were to provide 5 ſhips, and in each 24 men. To Hythe belonged W(ſtmeath, which were to furniſh 5 ſhips, and in each 21 ſeamen. To Dover belonged Folkſtone, Feverſham, and Marge; which were to furniſh the ſame number as Haſtings. And to Sandwich belonged Fordiwic, Reculver, Serre, and Deal, which were to provide the ſame with Hythe.

CINTRA *Cape*, uſually called the Rock of Liſbon, lies in the province of Eſtramadura in Portugal, on the north-ſide of the entrance of the river Tagus.

CIPHER, or *Cypher*, in trade, is a kind of enigmatic character, compoſed of ſeveral letters interwoven, which are ordinarily the initial letters of the perſons names for whom the cypher is intended, and frequently uſed on ſeals; as alſo on bales, bags, boxes, and other parcels of goods. Antiently merchants and tradeſmen were not allowed to bear arms in England: but, in lieu thereof, they bore their cyphers, or the initial letters of their names, artfully interwoven about a croſs.

CIRCASSIA. See *Turky*.

CIRCLES *of Germany*, are ſuch provinces and principalities of the empire, as have a right to be preſent at diets. See *Germany*.

CIRCULAR *ſailing*, is that performed in the arch of a great circle; which, of all others, goes the neareſt or ſhorteſt way; and yet there are ſuch advantages in ſailing by rhumbs, that this latter is generally preferred. See *Rhumb*, and *Sailing*.

CIRCULATION *of Money*, is that quantity of money which is employed in trade, or other negotiations. See *Caſh*.

CIRSAKAS. An Indian ſtuff, almoſt entirely of cotton, with a very little mixture of ſilk; the length of which is from 8 to 40 ells, or thereabouts, and the breadth from 2-3ds to 5-6ths.

CITRON. An agreeable fruit, brought chiefly from Italy, in colour, taſte, and ſmell, reſembling a lemon, and ſerving like that to cool and quench the thirſt; being produced by a tree of the ſame name, which is like the lemon-tree. But the citron-fruit is different from the lemon, being bigger, its pulp firmer, its ſmell briſker, and colour higher, which is excellent againſt poiſons: diſtillers, perfumers, and confectioners, alſo procure ſeveral things from citrons, as eſſences, oils, confections, and waters.

The citron-juice is uſed by dyers; and the ſmall Madeira citrons are candied, as are alſo thoſe of Martinico; the peels of the large citrons of thoſe iſlands are likewiſe candied, which are called citronnade, being cut into pieces for the European conſumption; and ſhould be new, clear, and tranſparent, green without, well glazed within, plump, eaſy to cut, and not pricked.

Citron-wood is a term given by Europeans to the American candle-wood, which ſome druggiſts ſell for ſantal; but the billets of the real ſantal weigh only 100 lb. and thoſe of the citron-wood are 1000 lb. weight: beſides, the ſantal is of an agreeable taſte; but the citron-wood is oily, and of a ſtrong ſmell.

CITTADELLA. The capital of the iſland of Minorca, in the Mediterranean, ſituated in 3 deg. 30 min. of E. lon. and 40 deg. of N. lat. See *Minorca*.

CITY. A large, walled town, endowed with particular prileges: it was antiently appropriated to thoſe towns that were biſhops ſees only, and ſeems ſtill to retain that diſtinction in England, tho' not always in other countries. See *Borough*, and *Town*.

CIVET. A kind of perfume, bearing the name of the animal from which it is taken, and f rmed like a kind of greaſe, or thick ſcum, in an aperture, or bag, under his tail, between the anus and pudenda.

There is a very conſiderable traffic of civet, from Baſſora, Calicut, and other places in India, where the animal that produces it is bred, as alſo from the Levant, Braſil, and Guinea; though the beſt civet is furniſhed by the Dutch, who bring up a conſiderable number of theſe animals in Holland; where it is ſold for about 2 l. 10 s. an ounce.

Civet muſt be choſen new, of a good conſiſtence, a whitiſh colour, and a ſtrong diſagreeable ſmell. It is of little uſe in medicine, but much uſed by confectioners.

CIVIL *Law*, *Lex civilis*, is defined in the inſtitutes to be the laws peculiar to each city, or each people: but, in the modern uſe, it properly implies the Roman law, contained in the digeſt, the code, and the inſtitutes, otherwiſe called lex ſcripta, or the written law.

The Emperor Juſtinian, finding the authority of the Roman law almoſt aboliſhed in the weſt, by the declenſion of the

the empire, reſolved to make a general collection of the whole Roman juriſprudence out of their writings, which made no leſs than 2000 volumes; and committed the care of it to his chancellor Trebonius, who, in conſequence thereof, choſe 16 juriſconſulti, or lawyers, to work upon the ſame. Theſe, accordingly, took out the beſt and fineſt deciſions from the voluminous writings of the antient juriſconſulti, and reduced them all into one body, which was publiſhed in the year 533, under the name of the *digeſt*; to which the Emperor gave the force of a law, by a letter, at the head of the work, ſerving it as a preface: ſo that this digeſt makes the firſt part of the Roman law, and the firſt volume of the corpus, or body of the civil law. The code was publiſhed in the year 534, which is compriſed in 12 books, and makes the ſecond part of the civil or Roman law. The inſtitutes were alſo publiſhed about the ſame time, which conſtitutes the laſt part of the corpus juris civilis, being a compendium, or ſummary, of the whole body of the civil law, in four books. All theſe together make the corpus juris civilis, or body of the civil law, as reduced by the order of Juſtinian.

For the ſpace of 300 years, this ſyſtem of law obtained without any innovation: but the new conſtitutions, made by the Emperors from time to time, at length occaſioning ſome alterations, the Emperor Baſil, and Leo his ſon, compoſed a new body of the Roman law, chiefly from the Juſtinian, in the Greek language; dividing it into ſeven volumes, and 60 books, under the title of *Baſilica*; from which time the Baſilica ſupplanted the credit of the body compoſed by Juſtinian, in the eaſt. In the weſt, the civil law had a different fortune; for it is generally ſuppoſed to have been there unknown till the year 600; when Lotharius II. finding the book at the taking of Melphi, a town in Naples, made a preſent of it to the city of Piſa, though it may be found quoted in ſeveral Latin works long before Lotharius: it is true, however, it was never publicly taught till the 12th century; when Irnerius firſt made profeſſion of it at Bologna, in 1128; whence it was carried, by his diſciples, into other countries; and, in a little time, was taught in all the univerſities.

It is allowed that the civil law contains all the principles of natural equity, and that nothing can be better calculated to form good ſenſe, and ſound judgment: hence, though in ſeveral countries it has no other validity but that of reaſon and juſtice, it is every where referred to for authority, and is that alone taught in univerſities as the law of nations: but it is not received, at this day, in any country without ſome alterations; ſometimes the feudal law being mixed with it, or general and particular cuſtoms, and frequently ordinances and ſtatutes cut off a part of it.

In Turkey the Baſilics are only uſed; in Italy, the canon law, and cuſtoms, have excluded a conſiderable part of it; for in Venice, cuſtom hath almoſt an abſolute government; in the Milaneſe, the feudal law, and particular cuſtoms, bear ſway; and in Naples and Sicily, the conſtitutions and laws of the Lombards are ſtill prevalent. In Germany and Holland, the civil law is eſteemed to be the municipal, or eſtabliſhed law; yet many parts of it are there grown obſolete; and others are altered, either by the canon law, or a different uſage. In Friezeland it is obſerved with more punctuality; but, in the northern parts of Germany, the jus Saxonicum, Lubecenſe, or Culmenſe, is preferred to it. In Denmark and Sweden it hath ſcarce any authority at all. In France only a part of it is received, and that part is in ſome places as a cuſtomary law; though, in thoſe provinces adjacent to Italy, it has the force of a municipal law: however, in criminal cauſes, the civil law is more regarded in France; but the manner of trial is regulated by ordonnances and edicts. In Spain and Portugal, the civil law is connected with the jus regium, and cuſtom. In Scotland, the ſtatutes of the ſederunt, part of the regiæ majeſtatis, and their cuſtoms, controul the civil law. And in England it is uſed in the eccleſiaſtical courts, in the courts of admiralty, and in the two univerſities; yet in all theſe reſtrained and directed by the common law.

CIVILIANS, are ſtudents, profeſſors, or doctors, of the civil law; who have a

College of CIVILIANS *in London*, commonly called Doctors Commons, founded by Dr. Harvey, dean of the arches, for the profeſſors dwelling in the city; where uſually reſide the judge of the admiralty, with other civilians, who all live, as to diet and lodging, in a collegiate manner, commoning together; whence the appellation of Doctors Commons: and to this college belong 34 proctors, who make themſelves parties for clients, and manage all maritime cauſes.

CIVIL *Liſt*, is a term given for the annual allowance granted by the Britiſh parliament for the private uſes of the crown. See *Fund*.

CIVITTA VECCHIA. A town on the bay of the Tuſcan ſea, ſituated in 12 deg. 30 min. of E. lon. and 42 deg. of N. lat. in the papal territories, which was declared a free port by the pope. See *Italy*.

CLAM. The ſmalleſt weight uſed in the kingdom of Siam, weighing 12 grains, and 768 grains make the tale, or $1\frac{3}{4}$ lb. Engliſh weight.

CLAM, is alſo a money of accompt, worth about a farthing; and it is worthy of obſervation, that in Siam, China, and ſeveral other parts of Aſia, the ſilver coins, or at leaſt the bits of ſilver which ſerve there for coins, ſerve alſo for weights.

CLAMP *in a ſhip*, is a piece of timber applied to a maſt, or yard, to ſtrengthen it, and prevent the wood from burſting. See *Maſt*.

CLAMP-*nails*, are ſuch nails as are uſed to faſten on clamps, in building and repairing of ſhips.

CLAP-*board*. A ſtaff, or board, cut ready for the coopers uſe to make caſks with; which is a conſiderable part of the commerce from the northern colonies of America to the Weſt India iſlands; as alſo between Norway, and other countries adjacent to the Baltic, with other European nations.

By the ſtatute of the 35th Eliz. it was enacted, That all perſons tranſporting beer beyond the ſeas for merchandiſe, ſhould, if a ſtranger before tranſporting, if a ſubject born then within four months after, bring into the realm for every ſix tons of beer, 200 of clapboards, fit for to make caſk of, in length 3 feet and 2 inches; or elſe the ſame caſk again, or ſo much other good caſk; or, if the tranſporting be into Ireland, then to bring ſo much ſhaffold-board as the clapboard amounted to. That no ſtranger ſhould tranſport beyond the ſeas, any pilchards, or other fiſh, in caſk, unleſs the ſame perſon had brought into the realm, for every ſix tons of fiſh, according to the rate aforeſaid of clapboard or caſk, upon pain of forfeiture of the beer, pilchards, and caſk. That it ſhould not be lawful to tranſport wine-caſk out of the realm with beer or eager-beer, nor any wine-caſk ſhaken, except for the victualling of any ſhip, or of the Engliſh garriſons and forces, upon pain of forfeiture of 40 s. for every tun of caſk. But this act was not extended to the tranſportation of herrings in caſks, and was continued indefinitely by the 3d and 16th of Charles I.

CLARA, St. An iſland of Peru in South America, ſituated in 80 deg. of W. lon. and 3 deg. 30 min. of S. lat. on the bay of Guiaquil. See *Spaniſh America*.

CLARET, or *Clairet*, pale red, a name which the French give to ſuch of their red wines as are not of a deep or high colour. See *Wine*.

CLAY, in natural hiſtory, a ſoft viſcous earth, found in various places, and uſed for various purpoſes, of ſeveral kinds and properties.

Dr. Liſter, in the philoſophical tranſactions, gives a table of 22 ſeveral clays found in the ſeveral counties of England; five whereof he calls pure, that is, ſuch as are ſoft, like butter, to the teeth, with little or no grittineſs in them. 1. Fuller's earth, which he diſtinguiſhes by its colour into yellowiſh, brown, and white; 2. Boles; 3. Pale yellow clay; 4. Cowſhot clay; 5. Dark blue clay, or marle. The other ſeventeen impure; whereof eight are hard and duſty when dry; as, 1. Creta, or milk-white clay; 2. Potters pale yellow clay; 3. Blue potters clay; 4. Blue clay, wherein is found the aſtroites; 5. Yellow clay; 6. Fine red clay; 7. Soft chalky blue clay; 8. Soft chalky red clay. Three are ſtony when dry; 1. A red ſtony clay; 2. A blue ſtony clay; 3. A white ſtony clay. Three are mixed with ſand, or pebbles; 1. A yel-

low

low loam; 2. A ſandy red clay; 3. A ſecond ſpecies of the ſame kind. Laſtly, three are mixed with flat or thin ſand, glittering with mica; 1. Crouch, or white clay; 2. Grey, or bluiſh tobacco pipe clay; and, 3 Red clay.

CLAYS are uſed for making bricks, tyles, tobacco-pipes, earthen ware, porcelain, and glaſs. See *Porcelain*.

CLEAR *Cape*, or *Cape Clear*, is a promontory on a little iſland, on the ſouth-weſt coaſt of Ireland.

CLEPSYDRA. An inſtrument to meaſure time by water, like a clock or hour-glaſs, much uſed formerly, as well by ſea as land.

CLERK, in trade or buſineſs, is a perſon employed in exerciſing the pen, by merchants, lawyers, public companies, bankers, or in the revenues.

CLERMONT. A city of France. See *France*.

CLICKER. A cant term for a perſon who ſtands at a ſhoemaker's door, to invite cuſtomers.

CLOCK. A kind of movement, or machine, ſerving to meaſure and ſtrike time.

The uſual chronometers are watches and clocks; the former, in ſtrictneſs, are ſuch as ſhew the parts of time; the latter, ſuch as publiſh it by ſtriking; though the name watch is often appropriated to pocket clocks, and that of clocks to larger machines, whether they ſtrike or not. See *Watch*.

The invention of clocks with wheels, is referred to Pacificus archdeacon of Verona, who lived in the time of Lotharius, ſon of Louis the Debonnair, about the year 840; but Mr. Derham makes clock-work of a much older ſtanding; ranking the ſphere of Archimedes, mentioned by Claudian, and that of Poſidonius, mentioned by Cicero, among the machines of this kind: however, it is certain the art of making clocks, ſuch as are now in uſe, was either invented, or at leaſt retrieved, in Germany, about 200 years ago.

The diſcovery of pendulum-clocks is owing to the happy induſtry of the laſt age. The honour of which is diſputed between Huygens and Galileo; but, whoever was the inventor, the invention never flouriſhed till it came into the hands of Huygens. The firſt pendulum-clock made in England, was in the year 1622, by M. Fromantil, a Dutchman: but clocks and watches now compoſe no inconſiderable branch of the commerce carried on by the Europeans to the Eaſt Indies and the Levant.

By the ſtatute of the 9th and 10th of King William III. it was enacted, That no perſon ſhould export, or endeavour to export, out of the kingdom, any outward or inward box, caſe, or dial plate, of gold, ſilver, braſs, or other metal, for clock or watch, without the movement in, or with the ſame, made up fit for uſe, with the maker's name engraven thereon; nor ſhould any perſon make up any clock or watch, without putting the name and place of abode, or freedom, and no other name or place on every clock or watch, on penalty of forfeiting 20 l. and alſo every ſuch empty box, caſe, and dial plate, clock, and watch, not made up and engraven as aforeſaid.

CLOCK-MAKER. A perſon who makes clocks.

CLOCK-MAKERS *company of London*, was incorporated by letters-patent of Charles I. dated the 20th of Auguſt 1632, by the name of The maſter, wardens, and ſociety of the art of clock-makers of the city of London; which is an incorporation conſiſting of a maſter, 3 wardens, and 21 aſſiſtants; but they have neither livery nor hall.

CLOISTER, is a name given to the factory, or ware-houſe, which ſome towns of Germany have in the city of Bergen, the moſt conſiderable port of Norway; where a trade of ſalt, and dry fiſh, is carried on in ſo great a quantity, as to be in a manner ſufficient for all Muſcovy, Sweden, Poland, Denmark, and Germany, ſetting aſide what is imported on Engliſh, Dutch, and French bottoms.

The merchants reſiding in this cloiſter, are obliged to celibacy during their reſidence, and are upon that account called monks, tho' of the proteſtant profeſſion.

CLOTH, in its general ſenſe, includes all kinds of ſtuffs wove or manufactured on the loom, whether their threads are of wool, hemp, or flax; and is more particularly applied to a web, or tiſſue, of woollen threads interwoven, whereof ſome, called the *warp*, are extended lengthwiſe, from one end of the piece to the other; the reſt, called *woof*, being diſpoſed acroſs the firſt, or breadthwiſe of the piece.

Woollen cloths are woven on looms as well as linens, druggets, ſerges, camblets, and ſuch like, being of various qualities; as fine, coarſe, and ſtrong: ſome of wool, of different colours; the wools being dyed, and dreſſed, are firſt ſpun and then wove; others are wrought white, deſtined to be dyed in ſcarlet, black, blue, green, yellow, and other colours: but their breadths and lengths are various, according to the places of their manufacture. See *Wool*, *Woollen cloths*, *Stuffs*, and *Fuſtian*, *Linen-cloth*, *Sail-cloth*, and *Weaver*.

Cloth, is ſaid alſo of all rich gold and ſilver ſtuffs; as plain, faſhioned, frized, wrought, even of thoſe whoſe ground is of gold and ſilver, variegated with flowers or foliages of ſilk of different colours and ſhades. See *Embroidery*.

Tho' ſtuffs of gold and ſilver are ranked among cloths of gold and ſilver; yet they are uſually called gold and ſilver tiſſues. See *Tiſſue*.

CLOTHIER, *Cloth-worker*, or *Sheerman*, one whoſe buſineſs it is to make woollen cloth fit and ready for uſe. See *Wool*, and *Woollen trade*.

CLOTH-WORKERS *company of London*, is a fraternity incorporated by letters-patent of Edward IV. dated the 28th of April 1482, by the appellation of the fraternity of the aſſumption of the bleſſed Virgin Mary of the ſheermen of London, which was confirmed by Hen. VIII. in 1528. but they being re-incorporated by Queen Elizabeth, ſhe changed their firſt title to that of The maſter, wardens, and commonalty of freemen of the art and miſtery of cloth-workers in the city of London, which charter was confirmed by Charles I. in the year 1634.

This company has a very large eſtate, out of which is annually paid to the poor about 1400 l. a year: and, for the government of the incorporation, they have a maſter, 4 wardens, and 33 aſſiſtants, with a livery of 154 members, each of whom, upon his admiſſion, pays a fine of 20 l. and the company has a ſtately hall in Mincing-lane, where they tranſact their affairs.

ST. CLOUD. See *France*.

CLOVE, an aromatic fruit, growing on a tree of the ſame name, which was formerly very common in the Molucca iſlands, where all the European nations, who traffic in ſpices to the Eaſt Indies, furniſhed themſelves with what quantity of cloves they required: though at preſent ſcarce any are found but in the iſland of Ternate: for the Dutch, to render themſelves maſters of that merchandiſe, have dug up the clove-trees in the reſt of the Molucca iſlands, and tranſplanted them to Ternate; ſo that none are now to be had but through their hands.

The tree is about 20 feet high, with leaves like thoſe of the bay-tree. When the cloves begin firſt to appear, they are of a greeniſh white colour, and, as they ripen, grow brown, being gathered from October to the middle of February, when they are placed on hurdles, with a ſmall fire under them, and afterwards dried in the ſun. They muſt be choſen dry, brittle, harſh to the touch, well grown, of a duſky red colour, a hot aromatic taſte, an agreeable ſmell, and, if poſſible, with the ſhank on. Such of the fruit as eſcape the gatherers, grow and ſwell on the tree, whereby they become full of a gum uſed in medicine, called *mother of cloves*.

There is alſo an oil drawn from cloves by diſtillation, uſed as a ſovereign remedy for the tooth-ach, and in medicinal compoſitions with the ſame view as the fruit: beſides, it is alſo much uſed among perfumers. See *Spice*.

CLOVE, is alſo an Engliſh weight for wool, being 7 lb.

CLOUGH, or *Draught*, in trade, an allowance of two pounds in every hundred weight, for the turn of the ſcale, that the commodity may hold out weight when ſold by retail.

CLYDE. A river of Scotland, riſing in Annandale, and running N. W. through Clydeſdale, paſſes by Lanerk, Hamilton, and Glaſgow, falling into the frith of Clyde, oppoſite the iſle of Bute.

COACH. A vehicle for commodious travelling, invented by the French in the time of Francis I. who reigned in the year 1515, which was afterwards introduced among all the politer nations of Europe, and is now one of their principal articles of luxury; though Lewis XIV. of France made ſeveral ſumptuary laws for reſtraining the exceſſive magnificence of theſe carriages, which have had the fate to be neglected.

Coaches are diſtinguiſhed with regard to their ſtructure, into coaches, properly ſo called, chariots, calaſhes, and berlins: beſides theſe, there are hackney coaches, expoſed to hire in the ſtreets of London, and ſome other capital cities, at rates fixed by authority; and ſtage coaches, which are thoſe appointed for the conveyance of travellers, from one city, or town, to another.

Hackney coaches in London are 800 in number, under the direction of commiſſioners, who take cognizance of all cauſes and diſputes ariſing thereupon. They are diſtinguiſhed by numbers affixed to the coach-doors: their fares, or rates, were ſettled by a ſtatute of the 14th of Charles II. and confirmed by another in the 5th and 6th of William III. whereby the fare is ſettled at 10 s for a whole day of 12 hours; for a ſingle hour 1 s. 6 d. and 1 s. for every hour after the firſt; and, at theſe rates, they are obliged to carry paſſengers any where, within ten miles of London, under a penalty not exceeding 3 l. nor under 10 ſhillings, in caſe of refuſal to go, or an exaction of more than the fare.

COACH-MAKERS *company of London*, was incorporated by letters-patent of Charles II. dated the 20th of Auguſt 1677, by the name of The maſter, wardens, aſſiſtants, and commonalty of the company of coach and coach-harneſs makers of London, conſiſting of a maſter, 3 wardens, 23 aſſiſtants, and 104 liverymen, who, upon their admiſſion, pay each a fine of 10 l. and have a ſpacious hall in Noble-ſtreet, in which they diſpatch their affairs.

COAGIS. A term uſed in the Levant among traders, ſignifying a factor, or commiſſioner; in which quality there are Engliſh, French, Dutch, and Italians eſtabliſhed in thoſe ports, trading by commiſſion, each upon the account of the merchants of their reſpective nation. See *Factor*.

COAL. A black, ſulphurous, inflammable matter, dug out of the earth, ſerving, in many countries, as common fuel; being ſometimes called pit-coal, Scotch-coal, Welch-coal, cannel-coal, foſſil-coal, earth coal, and natural-coal, to diſtinguiſh it from charcoal, and ſmall-coal; and, in places where it is brought by ſea, it is called ſea-coal. See *Charcoal*, and *Small-coal*.

Cannel, or canole-coal, is a ſort of foſſil coal found in ſeveral of the northern counties of England, very hard, gloſſy, and light, apt to cleave into thin flakes, and, when kindled, yields a continual blaze till it is burnt out.

Pit-coal is ranked among the number of minerals, and the places it is dug out of are called *coal-mines*, or *coal-pits*, being common in moſt of the European countries; though the Engliſh coal is of moſt repute, even in foreign countries, notwithſtanding it is pretended that the coal of the Foſſe of Auvergne in France is nothing inferior to it.

Scotch-coal is dug in great quantities in many parts of England, particularly about Lymington in Hamphire; it burns briskly into aſhes, without turning into cinders.

Welch-coal, ſometimes alſo called Scotch-coal, is very plentiful in Wales, and many parts of England; it burns without much ſmoak, but makes cinders. Tanfield-moor coal is the ſame as Newcaſtle coal, which principally ſupplies London.

The goodneſs of coal conſiſts in its being as free as poſſible from ſulphur, in its heating iron well, and in its burning a long time in the forge: but the Engliſh coal has this quality peculiar to it, that it never lights ſo perfectly as when water is thrown on it.

The commerce of coal is very conſiderable in England, for the mines at Newcaſtle, in Northumberland, and Whitehaven, in Cumberland, not only ſupply the conſumption of London and the ſouthern counties, but alſo afford large quantities for Ireland, eſpecially from Whitehaven; and Newcaſtle loads a conſiderable number of ſhipping with this commodity for Britanny and Normandy in France; as alſo to ſome parts of Holland: the meaſure whereby it is ſold being the chaldron, containing 36 buſhels.

In the year 1536 coals were ſold at Newcaſtle for 2 s. 2 d. the chaldron, and 4 s. the chaldron in London, which now generally exceed 30 s. the chaldron in London. There are generally above 1500 ſhips annually employed in this trade between Newcaſtle and London, which is the principal nurſery of the Britiſh ſeamen: there are about 2000 ſeamen employed from Whitehaven, and many thouſand colliers employed in the mines; as alſo a great number of people in land-carriage: but all coal for the conſumption of London is to have no other than ſea carriage to it; the amount of which upon an average is annually 474,717 chaldrons.

By the ſtatute of the 12th of Q. Anne, the coal-buſhel is to be round, with a plain bottom, and to be 19 inches and a half from out to out, containing one Wincheſter buſhel, and one quart of water: and all ſea coals and culm, chargeable with duties by Wincheſter meaſure, are to be chargeable, ſold, and meaſured, by the chaldron, containing 36 buſhels heaped; and the commiſſioners of the treaſury were to cauſe a buſhel to be made of braſs, of theſe dimenſions, to be ſealed and kept in the exchequer.

By the ſtatute of the 9th and 10th of William III. a duty of 5 s. *per* ton, or 7 s. 6 d. *per* chaldron, for coals ſold by meaſure, is to be paid by the importer of coals, brought from Scotland, or any parts beyond ſea; 3 s. 4 d. *per* ton for coals laid on board in Engliſh ports, and 5 s. *per* chaldron for culm imported. By the 6th of Q. Anne coals exported in foreign bottoms are to pay 10 s. *per* chaldron, in Britiſh bottoms only 3 s. By the 8th of Q. Anne an additional duty of 3 s. *per* ton, and 4 s. 6 d. *per* chaldron was laid on foreign coals; and 3 s. *per* chaldron for water-born coals. By the 9th of Q. Anne coals exported to Ireland were to pay 1 s. *per* chaldron; to the plantations 2 s.; coals imported from foreign parts 2 s. *per* ton, and 3 s. *per* chaldron; carried from port to port 4 s. *per* ton, and 2 s. *per* chaldron.

By the laws now in being, the maſters of all veſſels employed in carrying coals, culm, and cinders, coaſtwiſe, from port to port within Great Britain, are to enter into bond with ſecurity, at the ports where the ſame are ſhipped, for delivery of the ſaid lading in ſome other port or creek in Great Britain. But as ſeveral maſters of theſe veſſels, under pretence of being forced by contrary winds and ſtreſs of weather, carried and diſpoſed of their ſaid lading in foreign ports, without having firſt paid the cuſtoms and overſea duties, upon the exportation thereof: it was, therefore enacted, in the 22d year of K. Geo. II. That no officer of the cuſtoms ſhould clear outwards any ſhip or veſſel wherein coals, culm, or cinders ſhould have been exported from any place in Great Britain to any parts beyond the ſeas, or permit ſuch veſſel to go out of any port in Great Britain, till all the cuſtoms and duties for ſuch coals, culm, or cinders, be paid; or until an authentic certificate ſhould be produced, ſignifying the payment of the ſaid duties, under penalty of 100 l. for every ſuch offence committed by the officers of the cuſtoms, contrary to the term of this act; that if any maſter, or other perſon, taking charge of any veſſel, whereon coals, culm, and cinders, ſhall be laden in Great Britain to be carried coaſtwiſe, ſhould proceed with the ſaid loading to parts beyond the ſeas, and there unlade and diſpoſe of the ſame, not being compelled thereto by ſtreſs of weather, or other lawful neceſſity, he ſhould pay 5 s for every chaldron thereof ſo exported or unladen, over and above all other duties.

By an act made in the 16th and 17th year of King Cha. II. The Lord Mayor of London, and the court of aldermen, for the time being, and the juſtices of the peace of the ſeveral counties and places where coals, brought into the river Thames, are ſold by retail, were empowered to ſet the prices of all ſuch coals as ſhould be ſold by retail, as they ſhould judge reaſonable, allowing a competent profit to the retailer, beyond the price paid by him to the importer, and the ordinary charges thereupon accruing.

And by an act of the 17th of Geo. II. the above act was extended to be put in execution by all the juſtices of the peace of the ſeveral counties in England and Wales, upon any coals brought into any other rivers, creeks, havens, or ports, and ſold by retail after landed; and if any ingroſſer or retailer of ſuch coals, ſhould refuſe to ſell as aforeſaid, the juſtices were authoriſed to enter their wharfs, and ſell the coals at the limited price.

The ſtatutes of the 9th of Q. Anne, and the 3d and 10th of Geo. II. are the other acts for regulating the coal trade: and, by an ancient cuſtom in the port of London, one chaldron, called the ingrain, is allowed in every ſcore bought on board a ſhip.

COAL-METERS *office*, is an office kept in Church-alley, St. Dunſtan's hill, where are entered the names of all the ſhips that arrive in the port of London with coals, to which belong 15 maſter-meters, or meaſurers, who appoint a ſufficient number of perſons to meaſure the coals brought by the ſaid ſhips, to prevent impoſitions, which would otherwiſe happen both to the king and ſubject, in reſpect to the duty and meaſure.

Notwithſtanding the laws in force for the regulation of the coal-trade, many frauds and abuſes were daily committed in the admeaſurement of coals, and the coal trade, within Weſtminſter and the parts adjacent: for remedy whereof an act was made in the 19th of Geo. II. for erecting one public office, called land coal-meters office, to be continued within Weſtminſter for the city and liberty thereof, which ſhould be managed by two perſons, to be appointed by his Majeſty, with the title of The principal land coal meters of the city and liberty of Weſtminſter. The principal land coal meters, or either of them, are to appoint a ſufficient number of labouring coal-meters within the ſaid city, to attend the coal-wharfs, ware-houſes, or other places of ſale within the ſaid city, who are to be ſworn "to meaſure coals between buyer and ſeller, without favour or ill-will." If the lighterman, or other perſon, ſhall break bulk, after coals ſhall have been delivered on board any lighter or craft, from out of any ſhip, before the time of delivery at the wharf, in the abſence of a meter, or of the conſumer, or his agent in caſes where the meter is not obliged to attend the delivery, he ſhall forfeit 50 l. All contracts for coals to be delivered within the ſaid city, directly from the lighter to the conſumer, not being leſs than five chaldron, ſhall be for pool meaſure, including the ingrain of one chaldron in every ſcore. Four pence *per* chaldron, for every chaldron of coals ſold at any wharf in Weſtminſter, is to be paid by the ſeller to the principals or labouring coal-meters, one moiety of which is for the principals, and the other for the labourers, who thereupon are to give the ſeller of ſuch coals, or to the carmen who ſhall carry them, a ticket ſpecifying the quantity, quality, price, and other conditions of the ſale; and if any cart loaded with above 8 buſhels of coals, ſhall be ſent from any wharf in Weſtminſter, without having firſt obtained ſuch ticket, the vender is to forfeit 50 l. and the carman 5 l.

COAST. A ſea-ſhore, or a country adjoining to the edge of the ſea.

COASTING, that part of navigation wherein the places ſailed to and from are not far diſtant; ſo that a ſhip may ſail in ſight of the land, or within ſounding between them: ſuch are the voyages on the narrow, or Britiſh ſeas, between England, Holland, and France; alſo thoſe about the Britiſh ſeas, and in the Mediterranean; for the performance whereof, a good knowledge of the land is only required, the uſe of the compaſs, and of the lead or ſounding-line.

COASTING *ſhips*. See *Ship*.

COASTWISE *goods*, are ſuch as are brought from one port to another port in the ſame country. See *Goods coaſtwiſe*.

COBALT. A kind of marcaſite, ſuppoſed to be the cadmia of the ancients, from which arſenic and ſmalt are extracted; uſually containing a little ſilver, ſome copper, but much arſenic: of which there are ſeveral mines, eſpecially in Saxony; as alſo ſome in France and England. See *Marcaſite*.

COBALT is uſed in making glaſs, of a ſapphire colour: the veſſels in which it is contained having ſeveral marks; as O. C. for the ordinary cobalt; M. C. for the middling ſort; F. C. for the fine; F. F. C. for the finer; and F. F. F. C. for the fineſt of all, which is very ſcarce and valuable.

COBIT, or *Covid*. A long meaſure uſed in ſeveral parts of the Eaſt Indies; but not alike in all places, being uſed like the ell, in different places of Europe: but it is generally about half a yard Engliſh meaſure.

COBLER, any unſkilful workman, particularly applied to thoſe men who make it an employ to patch, or mend old ſhoes, tho' it is done curiouſly. See *Cordwainers company*.

COBLON. A port-town of the Hither India, in Aſia, ſituated in 80 deg. of E. lon. and 12 deg. 50 min. of N. lat. on the coaſt of Coromandel, 12 m. S. of Fort St. George, which was the only ſettlement the Oſtend Eaſt India company had in India; and this they were obliged to abandon to the Engliſh and Dutch Eaſt India companies.

COBRE. A kind of long meaſure uſed in China, particularly at Canton, for ſtuffs, cottons, and ſuch like merchandiſe, 10 of which make about 3 ells Engliſh.

COBRISSO, is a term given to the ſilver mines in Chili, and Peru, when they contain copper; becauſe they are then tinged with a green colour, and hard to be worked, upon account of the mixture.

COCA. A Peruvian plant, whoſe fruit, when dry, ſerve as the cacao of Mexico, for money, among the Indian mountaineers, who uſe it in their traffic of cloths, cattle, and other ways of bartering.

COCHIN. A port-town of India, on the Malabar coaſt, ſituated in 75 deg. of E. lon. and 9 deg 30 min. of N. lat. where the Dutch have a factory, and a very ſtrong fort. See *India*.

COCHIN-CHINA, or *Weſt China*, is a kingdom of India, beyond the Ganges, ſituated between 104 and 109 deg. of E. lon. and between 10 and 17 deg. of N. lat. See *India*.

COCHINEAL, or *Cochineel*. A drug uſed by dyers, and painters, for giving red colours, eſpecially crimſons, and ſcarlet; and likewiſe in medicine, as a cardiac and alexipharmic; which is brought from the Weſt Indies in a body of an irregular figure, oblong, convex on one ſide, and concave on the other: but authors are divided as to its nature, ſome taking it to be a kind of worm, and others for the berry of a tree or plant called *opuntia*: though Dampier, with ſome probability, ſays, that there is both a cochineal a worm, and another a berry. However, there are whole plantations of the cochineal tree about Guatimala, Chepe, and Guaxaca, in the kingdom of Mexico, where the berry yields a dye almoſt as beautiful as that of the inſect; but the deception in them is eaſily made, and the latter is in much greater eſtimation: it is of a deep purple colour, very light and friable.

The Spaniards of Mexico take great care in the preſervation of theſe animals, by placing them at proper ſeaſons on the opuntia-tree, where they breed, and ſuck in its juices, which are of a purple colour. There are three gatherings of theſe inſects in a year; and after the laſt the boughs of the opuntia are cut off, to preſerve the remaining inſects for the next year. The Spaniards import generally 8 or 900,000 lb. weight of cochineal into Europe; and it is to be lamented that the Britiſh colonies are not yet ſufficiently, or at all, productive of this uſeful commodity. See *Drug*.

COCKET, or *cocquet*. A ſcroll of parchment ſealed and delivered, by the officers of the cuſtom-houſe, to the merchants upon entering their goods, certifying that the goods were cuſtomed, and duly entered. See *Cuſtoms* and *Entry*.

Certificate-COCKET. See *Entry*.

COCKIEN. A kind of Japaneſe money of accompt, about 18 s. ſterling.

COCK-SWAIN, or *Cockſon*, an officer on board a man of war, who hath the care of the boat, or ſloop, and all things belonging to it; to be always ready with his boat's gang, or crew, and to man the boat on all occaſions; having a whiſtle to call and encourage his men; and his place being in the ſtern of the boat, where he is to ſteer.

COCOA, or *Cacao*. A kind of nut, about the ſize of a moderate almond, being the ſeed, or fruit, of a tree of the

the ſame name, much reſembling the cherry-tree, and growing in ſeveral parts of America; particularly in the provinces of Guatimala, and Nicaragua; at Maragnan, in the north part of Brazil; as alſo in ſome of the Caribbe iſlands; and in the iſles of Magdalen, in the gulph of St. Lawrence in Canada: the Spaniards making ſo conſiderable a trade of it that there are ſome who make 500 l. ſterling a year, from a ſingle plantation of this valuable fruit; the trees being generally from 500 to 2000 in a plantation, and in full vigour when ſix years old.

There are two kinds of cocoa; the moſt common, which is likewiſe the beſt, being round, and of a dark colour, bordering on red; the other, called *Patlaxe*, is white, larger, thicker, flatter, and its quality deſiccative; but they are both brought to Europe in bags or in casks. Some druggiſts, however, ſell four kinds; the great and little cocoa of the Caraccas, and the great and little cocoa of the Caribbe iſlands, which may be probably reduced to the two kinds above mentioned; the greatneſs and ſmallneſs only multiplying the names and kinds.

The cocoa nuts are eſteemed by the Mexicans as anodyne, and uſed, eaten raw, to aſſwage pains of the bowels; they alſo procure a kind of butter, or oil, from them, as ſweet as that of almonds, and drawn in the ſame manner, which is excellent for burns.

In ſome parts of America, particularly in the bay of Campeachy, the cocoa-nuts are uſed by the Indians as money, 12 or 14 being held equivalent to a Spaniſh rial, or 5 d. halfpenny ſterling; and in the Caribbee iſlands they make ſweet-meats of cocoa.

Of this nut, with the addition of vanilla, and ſome other ingredients, the Spaniards, and other Europeans after their example, prepare a kind of conſerve, or cake; which diluted in hot water, makes that delicious wholſome drink called chocolate. See *Chocolate*, and *Vanilla*.

According to Dampier, the largeſt ſort of the cocoa-tree has a body about a foot and a half thick, and ſeven or eight feet high to the branches, which are large and ſpreading like an oak, with a pretty thick, ſmooth, dark, green leaf, ſhaped like that of a plumb-tree, but larger. The nuts are incloſed in cods, as big as both a man's fiſts put together; at the broad end of which there is a ſmall tough limber ſtalk, by which they hang from the body of the tree, in all parts of it, from top to bottom, ſcattered at irregular diſtances, and from the greater branches a little way up, eſpecially at the joints of them, or partings, where they hang thickeſt, but never on the ſmaller boughs. There may be ordinarily about 20 or 30 of theſe cods upon a well-bearing tree; and they have two crops of them in a year, one in December, but the beſt in June. The cods neither ripen, nor are gathered at once; but for three weeks, or a month, when the ſeaſon is, the overſeers of the plantation go every day about to ſee which are turned yellow, cutting at once, perhaps, not above one from a tree. The cods thus gathered, they lay in ſeveral heaps to ſweat; and then, burſting the ſhell with their hands, they pull out the nuts, being generally near a hundred in a cod; in proportion to the greatneſs of which, for it varies, the nuts are bigger or leſs

He alſo obſerves, that the cocoa tree grows no where about the north ſeas of America, but in the bay of Campeachy, on Coſta Rica, between Porto Bello and Nicaragua, chiefly up Carpenter's river, and on the coaſt of Caraccas, as high as the iſland of Trinidada. In the South ſeas, he ſays, it grows on the river of Guiaquil, a little to the ſouthward of the line, and in the valley of Colima, on the ſouth-ſide of the continent of Mexico. Beſides theſe, Dampier is confident there is no part in the world where the cocoa grows, except in Jamaica; of which there are now but few remaining, of many and large walks or plantations of them, found there by the Engliſh at their firſt arrival, and ſince planted by them: but even theſe, though there is a great deal of care and pains beſtowed upon them, ſeldom come to any thing, being generally blighted.

The King of Spain, taking into conſideration the ruin of the cocoa trade, between that kingdom and the Indies, in the flotas, galeons, and regiſter-ſhips, owing to the exceſſive duties chargeable at the port of Cadiz, and afterwards the inland duties, which were the cauſe that this conſiderable branch of commerce had been engroſſed by foreigners; who exported it to their reſpective countries, and afterwards brought it back to the Spaniſh ports, nay, ſometimes directly from the Indies, and could introduce it there by an advantage in the admeaſurement and indulgencies in the duties, excluſive of fraud; being privileges, which the Spaniards had not, as they imported it regiſtered, from the Indies to Cadiz, under an obligation to conſign it there, according to the tenor of the regiſter: his majeſty therefore ordered a reduction of thoſe duties, and made other proviſions, in order to bring back this branch of commerce, as may be ſeen in the diſpatch dated the 20th of September 1720, ſigned by his own hand; the ſubſtance whereof contains many uſeful obſervations upon the good conduct of trade, being to the following purport.

His Majeſty reflecting upon the vaſt quantities of cocoa wanted, and conſumed in Spain; as alſo of its being the readieſt, and, as it were, the only freight of the galeons, and regiſter ſhips, on their return, ordered the Marquis de Campo Florido, preſident of the council of the revenue, to give him an account of the duties chargeable on every pound of cocoa brought to Cadiz from the Indies, in the flotas, galeons, and regiſter-ſhips. Whereupon the marquis, in obedience to the royal mandate, repreſented, that, upon cocoa imported for the inland conſumption as far as Madrid, the duties would amount to 135 maravedis, or 10½ d. ſterling *per* pound; ſixteen of which were generally demanded at the cuſtomhouſe, where it was collected and regiſtered, that is, ten for the almoxarifargo of the Indies at entry; and the remaining ſix maravedis, impoſed by the ſtates of the kingdom, in the year 1632, upon every pound that ſhould be entered and conſumed, without excepting preſents; 8 maravedis and a half, impoſed in 1672, on the ſame terms; 34 maravedis, which, in 1693, were ordered to be charged for a time upon every pound of cocoa, and chocolate, that ſhould be expended; 59½ maravedis chargeable in the cuſtomhouſe at Madrid, of which 34 were appropriated to their exciſes, 8½ were lately impoſed for the building of barracks, and the remaining 17 for the alcavala and cientos, paid at the time of ſale. Beſides, that every pound of cocoa pays 75½ maravedis, in the manner aforeſaid, at its going out of the cuſtomhouſe of Cadiz; which amount, with the ſums above, raiſed it ſo high, that when an account was drawn out of what every pound coſt the Spaniſh merchants in the place where they bought, or bartered for it, the duties paid there, freight, and the other charges of entry and ſale, which were alſo increaſed in the inland parts, where there were arbitrios, and an alcalvala, it not only left the proprietors no profit; but, after it had exhauſted the whole of what it was ſold for, he had money to pay to make up the ſurplus of the duties: for the amount of the firſt coſt, and the charges, exceeded the value of the cocoa a third part; which loſs obliged the Spaniſh merchants to abandon this commerce, and reſign it to foreigners.

To prevent theſe, and other injurious conſequences, his Majeſty was pleaſed to reſolve, and decree, by the above ordinance, That all the cocoa imported from America, by his Majeſty's natural ſubjects, ſhould be chargeable at entry in Cadiz, and his cuſtomhouſe, at the rate of 33 maravedis, or 2¾ d. ſterling, *per* pound, 10 of them to the almoxarifargo of the Indies, with a declaration, that as this ſum is nearly equivalent to the two dollars charged *per* quintal, by the ordinance of April 5. in the ſame year 1720, it ſhould be underſtood, that the above two dollars were comprehended in the 10 maravedis, laid upon every pound, and ſhould be ſo appropriated, and aſſigned over to the chamber of the Indies; ſix maravedis for the almoxarifargo mayor, and the other 17 which the ſtates granted in 1632, upon which impoſts the penſions were charged: but that the impoſition of 51 maravedis, the 8½ in the year 1672, the 34 in 1693, and the remaining 8½, which the corn-magazine at Madrid received formerly, but were at that time appropriated to the building of

of barracks, upon which there were no penſions, or any other claims, ſhould be entirely ſuppreſſed; it being underſtood, that after the ſaid 33 maravedis were paid at Cadiz by the proprietor, under the diſtinctions already explained, no other duty ſhould be demanded on account of the crown; and they might freely diſpoſe of it in any part of the kingdom, without being ſubject to any further impoſition, ſave the arbitrio, if any ſhould be, where it ſhould be ſold; and the alcavala and cientos that ariſe from the ſale.

As a further encouragement to this commerce by the hands of the Spaniards, his Majeſty reſolved, that ſuch natives of the kingdom as were inclined to go from Cadiz, under a regiſter directly to the Caraccas, Cumana, Maracaybo, and other provinces, which produce this fruit, on the terms his Majeſty ſhould judge convenient to grant them licences, ſhould be exempt from paying any duty or gratuity, on account of a permit, or for tonnage, with certain precautions to guard againſt abuſes; beſides which, there are other proviſions, calculated to revive and improve this commerce in Spain, more largely ſet forth in the above royal ordinance.

The Spaniards pretend to confiſcate all European ſhips in America with cocoa on board; though this fruit is produced by the Engliſh in Jamaica, and by the French in Martinico. But as chocolate has ſuch a great conſumption in Europe, perhaps it may be for the advantage of the Britiſh colonies to cultivate cocoa, which is very profitable, 20 negroes being ſufficient to manage a plantation of 50,000 cocoa-trees; and theſe trees, one year with another, may produce 100,000 lb. of nuts, which, at $4\frac{1}{2}$ d. a pound, the loweſt price in America, would produce 1874 l. 19 s. 8 d. ſterling.

The cocoa of the Caraccas is ſold at Amſterdam for $8\frac{1}{2}$ ſtivers, or 9 d. ſterling, the pound; and the cocoa of Martinico is ſold for about 7 d. ſterling the pound.

By the ſtatute of the 10th of Geo. I. it was enacted, That no chocolate ready made, or cocoa-paſte, ſhould be imported into Great Britain, on pain of forfeiture thereof, together with double the value, and the package; and an inland duty of 1 s. 6 d. is to be paid for every pound of chocolate made or ſold in Great Britain, to be paid by the makers or ſellers; with other regulations for putting chocolate-makers under the laws of exciſe; whereby all chocolate ſhould be tied up with thread in papers, containing one pound of chocolate each, and ſhould have ſuch a mark or ſtamp affixed as the commiſſioners of exciſe ſhould appoint: and all chocolate found in the cuſtody of any maker or ſeller thereof, without ſuch a mark, except ſuch for which the duties ſhould not become due, ſhould be forfeited, and ſuch maker or ſeller ſhould forfeit 20 s. for every pound ſo found in his cuſtody; all chocolate found removing from one place to another without ſuch mark ſhould be forfeited, together with the package; and if any perſon ſhould counterfeit ſuch mark, or knowingly ſell any chocolate with ſuch counterfeit mark, he ſhould forfeit 500 l. and be committed to the next county-goal for twelve months: and it was alſo enacted, That no perſon ſhould be permitted to make into chocolate for private uſe any quantity of cocoa-nuts, leſs than half an hundred weight at a time. See *Chocolate*.

By the ſtatute of the 12th of Geo. I. it was enacted, That no dealer in cocoa-nuts ſhould ſell or deliver out leſs than 28 pounds weight at one time, on forfeiture of 20 l. for every pound of cocoa-nuts ſold or delivered out in any parcel not amounting to 28 pounds: but for other regulations, ſee *Coffee*.

Cocos, or *Coco*, is alſo a name for a nut, whoſe ſhell is frequently uſed by turners, carvers, and others, for ſeveral works; the tree of which yields fruit twice a year, and thoſe ſometimes as big as a man's head; inſomuch that many travellers aver, that from a ſingle cocos tree, and its fruit, a ſhip might be built, equipped, and laden with merchandiſe and proviſion.

The cocos of the Antilles are not ſo large as thoſe of the Eaſt Indies, Africa, and Arabia; the trees ſeldom exceeding 25 feet in height, and the fruits in proportion, which are thoſe generally uſed in England.

The cocos fruit, dried, and emptied of its pulp, ſerves in the kingdom of Siam, as a meaſure both for things liquid and dry: but as theſe ſhells are not all of the ſame capacity, ſome being more, and others leſs, their content is firſt meaſured with coris, thoſe little Maldivia ſhells, which ſerve as ſmall money in ſeveral ſtates of the Indies; ſome cocos containing 1000 coris, others 500.

COCULUS *Indiæ*. See *Cuculi*.

COD *Cape*, lies on the coaſt of New England, near the entrance into the harbour of Boſton.

Code, or *Codex*. A collection of the laws and conſtitutions of the Roman Emperors, made by order of Juſtinian. See *Civil Law*.

Cod-*fiſh*, and *Cod-fiſhery*. See *Cod-fiſhery*.

COFFEE. A ſeed, or berry, brought from Arabia Felix and Turky, uſed for making a drink of the ſame name, very familiar in Europe for the laſt century, and among the Turks almoſt a century before; which is alſo produced in ſeveral parts of the Britiſh colonies in America; for the raiſing whereof the parliament has given proper encouragement: however, that from the Levant is moſt eſte med; being greener, heavier, and appearing riper and plumper than that from Mocha, which is larger, lighter, and whiter. The tree that produces the coffee, is a kind of Arabic jeſſamin; and the berry, when ripe, is found as hard as horn; which occaſioned an opinion that the people of the kingdom of Yemen in Arabia Felix, where it is cultivated, ſteeped in boiling water, or baked in a furnace, all the coffee they ſold abroad, to prevent its growing any where elſe.

For coffee-berries, ſome ſubſtitute peas, beans, rye, and barley; which, when roaſted, yield an oily matter, reſembling coffee in flavour, but leſs agreeable; though the oily matter that ſeparates from the coffee, and appears on its ſurface when roaſted, and its particular ſmell, readily diſtinguiſh it, and are to be real indications of its effects.

Coffee is ſaid to yield a very conſiderable revenue to the Grand Signior; for in Great Britain and Ireland there are annually expended 100 ton of coffee-berries, and in England alone 70; which, at 300 l. *per* ton, a moderate price, amounts to 21,000 l. ſterling.

By the ſtatute of the 5th of George I. if any perſon ſhould, at the roaſting of coffee, or before or after, make uſe of water, greaſe, butter, or other material, which will increaſe the weight, or damnify the coffee, he ſhould forfeit 20 l.; and if any dealer in coffee ſhould knowingly buy or ſell ſuch coffee, he ſhould forfeit 20 l. The inland duty on coffee is hereby declared to be 2 s. the pound, over and above cuſtoms payable upon importation: and the regulations are made for putting this branch of trade, as alſo thoſe of tea, chocolate, and cocoa, under the regulations of exciſe; whereby none of theſe commodities, exceeding 6 pounds weight, are to be removed, by land or water, without a permit: that all coffee imported ſhould be rated at 7 l. for every hundred weight, and all cocoa nuts at 50 s. for the like weight, and the ſubſidy at 12 d. *per* pound ſhould be paid according to ſuch rates; as alſo, ſhould the further ſubſidy, the one third, the two third ſubſidies, and additional impoſt, payable over and above the inland duties.

By the ſtatute of the 11th of George I. it was enacted, That every perſon keeping a public houſe, ſhop, cellar, or warehouſe, for ſelling of brandy or ſtrong waters, and ſhould have in his cuſtody any coffee, tea, or chocolate, or cocoa-nuts, exceeding ſix pounds of any of the ſaid commodities, ſhould be deemed a dealer therein within the act made in the preceding year.

By the ſtatute of the 5th of George II. it was enacted, That coffee of the growth of the Britiſh plantations in America ſhould, in lieu of the inland duty of 2 s. a pound, pay only an inland duty of 1 s. 6 d. a pound: that no commander of any ſhip ſhould take in at America, or at ſea or ſhould land in any of the ſaid plantations, any coffee of the growth of any foreign country, except ſuch as ſhould be exported from Great Britain, on pain of forfeiting ſuch coffee, and 200 l. and likewiſe twelve months impriſonment. And, by the ſtatute of the 19th of Geo. II. this act was continued to the year 1753.

COFFILA. One of the weights uſed at Mocha for merchandiſe; 10 of which make a tuckea, and 40 tuckeas make a maund, or 3 lb. Engliſh avoirdupois.

COGE. See *Denmark*.

COGMORIA. A very fine muſlin brought from the Eaſt Indies, about 16 ells in length, and 7-8ths in breadth.

COGNIAC. A town of France, 44 miles S. E. of Rochelle, remarkable for its excellent brandy. See *France*, and *Brandy*.

COHI. A corn-meaſure, uſed in the kingdom of Siam, containing about 5000 lb. Engliſh avoirdupois.

COIN is generally uſed for a piece of metal, converted into money by the impreſſing of certain marks or figures thereon; which may be defined a ſpecies of money, ſtruck either with a hammer, or mill. Hence coin differs from money, as the ſpecies does from the genus; money being any matter, as metal, wood, leather, glaſs, horn, paper, fruits, ſhells, or kernels, which have courſe as a medium in commerce: but coins are a particular branch of monies, ſuch as are made of metal, gold, ſilver, or copper, and ſtruck according to a certain proceſs called coinage; the ſtandard, weight, and other circumſtances of which are ſo intimately connected with commercial affairs, that this important matter requires an ample diſcuſſion.

The preciſe epocha of the invention of money is unknown; it is too antient for the Britiſh annals; and, to argue from the obviouſneſs and neceſſity of the thing, muſt be nearly coeval with the world: but whether coins be of equal antiquity, may admit of ſome doubt; eſpecially as moſt of the antient writers are ſo frequent and expreſs in their mention of leathern monies, paper-monies, and wooden-monies. In effect, the very commodities themſelves were the firſt monies, which were current for one another by way of exchange; and it was the difficulty of cutting, or dividing, certain commodities, and the impoſſibility of doing it without great loſs, that firſt put men on the expedient of a general medium: however, thus much may be aſſerted in behalf of coins, that, on this view, it was natural for men to have their firſt recourſe to metals, as being almoſt the only things whoſe goodneſs is not diminiſhed by partition; beſides, their firmneſs, neatneſs, cleanlineſs, durableneſs, and univerſality; as alſo the conveniencies of melting, and returning them again into a maſs of any ſize or weight.

It was probably, then, this property of metals which firſt accuſtomed people, who trafficked together, to account them in lieu of quantities of other merchandiſes in their exchanges, and at length to ſubſtitute them entirely in their ſtead; from whence came the original of money, as it was their other property to preſerve any mark or impreſſion a long time, which confirmed them in the right, and thus became the firſt riſe of coins.

In the firſt ages, each perſon cut his metal into pieces of different ſizes and forms, according to the quantity to be given for any merchandiſe, or according to the demand of the ſeller, or the quantity ſtipulated between them; for which end they went to market, loaden with metal, in proportion to the purchaſe to be made; being furniſhed with inſtruments for portioning it, and with ſcales for dealing it out, as occaſion required.

By degrees it was found more commodious to have pieces ready weighed; and as there were different weights required, according to the value of the different wares, all thoſe of the ſame weight began to be diſtinguiſhed with the ſame mark or figure.

At length, the increaſing commerce of money beginning to be diſtributed with frauds, both in the weights and the matter, the public authority interpoſed; and hence came the firſt ſtamps or impreſſions of money; to which ſucceeded the names of the moniers, and at length the effigy of the prince, the date, legend, and other precautions, to prevent the alterations of the ſpecies; by which coins were completed.

The current ſpecies in the four quarters of the earth, at this day, are either made of metals, or are ſhells, and fruits; the metals being gold, ſilver, copper, tin, and lead; to which may be added billon, a mixture of ſilver and copper in a certain proportion. Europeans uſe only gold, ſilver, copper, and billon; but, in ſome parts of the Eaſt Indies, they alſo uſe tin and lead; though, as to ſhells and fruits, they are the ſmall money of ſeveral nations in Aſia, Africa, and America.

In the time of King Richard I. money coined in the eaſt parts of Germany came in ſpecial requeſt in England, on account of its purity, and was called *eaſterling money*, as all the inhabitants of thoſe parts were called eaſterlings: and, ſoon after, ſome of thoſe people ſkilled in coining, were ſent for to London, to bring the coin to perfection; which ſince has been called ſterling, for eaſterling. King Edward I. eſtabliſhed a certain ſtandard for the ſilver coin of England; but no gold was coined till the reign of King Edward III. who, about the year 1320, when the ſtates of Europe firſt began to coin gold, cauſed ſeveral pieces to be coined called Florences, becauſe they were coined by Florentines; afterwards he coined nobles; then roſe-nobles, current at 6 s. 8 d; half-nobles, at 3 s. 4 d. called half-permies of gold; and quarters, at 20 d. called farthings of gold. The ſucceeding Kings coined roſe-nobles, and double roſe-nobles, great ſovereigns, and half Henry nobles, angels, and ſhillings. King James I. coined unites, double crowns, and Britain crowns; then crowns, half-crowns, ſhillings, ſix-pences, and other inferior pieces; and King Charles II. converted moſt of the antient gold coins into guineas.

On the foot whereon the Engliſh money now ſtands, it is divided into real coin, or effective money; and imaginary money, or money of accompt. See *Money of accompt*.

The current value of a guinea is 1 l. 1 s. and the weight about 5 dwts $9\frac{1}{3}$ grains, 12 ounces of bullion being coined into $44\frac{1}{2}$ guineas. The ſtandard-value of the guinea, at 22 carats fine, is 1 l. and the value of the ſame as bullion, at 4 l. *per* ounce, is 1 l. 1 s. $6\frac{3}{4}$ d. The current value of half a guinea coined, is 10 s. 6 d. the weight about 2 dwts $16\frac{5}{6}$ grains; the ſtandard-value is 10 s. and the value of the ſame as bullion, at 4 l. *per* ounce, is 10 s. $9\frac{7}{8}$ d.

Twelve ounces of bullion ſilver are coined into 62 ſhillings; at which rate the crown-piece weighs about 19 dwts 8,516,129 grains; the current value is 5 s. and the value of the ſame as bullion, at 5 s. *per* ounce, is 4 s. $10\frac{1}{16}$ d. The current value of the half crown coined is 2 s. 6 d. the weight, 9 dwts $16\frac{1}{4}$ grains, and the value of the ſame as bullion 2 s. $5\frac{1}{32}$ d. The current value of a ſhilling is 12 d. the weight 3 dwts $20\frac{8}{10}$ grains; and the value in bullion is $11\frac{1}{2}\frac{9}{10}$ d. The current value of a ſixpence is 6 d. the weight 1 dwt $22\frac{8}{10}$ grains, the value in bullion being $5\frac{3}{4}\frac{9}{20}$ d.

Or the modern coins, or ſpecie, current in Europe, Aſia, Africa, and America, and equivalent to ſterling money, are as follow.

COINS *of Great Britain*, are the guinea and half guinea of gold; the crown, half-crown, ſhilling, and ſixpence, of ſilver; the halfpenny, and farthing of copper.

Guinea	Crown	Shilling	Sixpence	Halfpenny	Farthing	l.	s.	d.
1	$4\frac{1}{5}$	21	42	504	1008	1	1	0
	1	5	10	120	240		5	0
		1	2	24	48		1	0
			1	12	24			6
				1	2			$\frac{1}{2}$
					1			$\frac{1}{4}$

Beſides theſe, there have been alſo pieces of 5 guineas, of 2 guineas, and of a quarter of a guinea; likewiſe broad pieces of 25 s. called the Jacobus, and of 23 s. called the Carolus, or laureat, with their halves and quarters in gold; as alſo 4 pences, 3 pences, 2 pences, and pence, of ſilver; though all of them are now much out of uſe.

In Scotland, by the articles of the Union, it was appointed that all the coins ſhould be reduced to the Engliſh ſtandard: for, till then, Scotland had its pounds, ſhillings, and pence, as in England; but the Scotch pound was only 20 pence Engliſh, and the others in proportion; accordingly their mark was $13\frac{1}{3}$ ſhillings Scotch, current in England at $13\frac{1}{2}$ d. and their noble in proportion.

Beſides theſe they had their turnorer, pence and halfpence; the penny being the $\frac{1}{12}$ of that of England: as alſo baſe money of achiſons, babees, placks, and bodles.

In Ireland the coins are the ſame as in England, with this

difference, that the Engliſh ſhilling paſſes for thirteen pence, and the other coins in proportion, in Ireland, where there is no mint; though halfpence, called harps, or harpers, are peculiarly coined for this country in the tower of London.

In the Iſle of Man there is a particular kind of copper halfpence, coined in the iſland.

And in the Britiſh plantations, where ſeveral foreign coins are current, their different values are regulated by ſtatutes, and proclamations of council: for there are few coins circulating there but French and Spaniſh pieces; though in New England they coin a ſhilling of ſilver, called the New England ſhilling, which is much of the ſame value as the ſhilling of Old England. See *Plantations.*

The COINS *of Holland and the other United Provinces*, are the rixdoller, guilder, or florin, and skilling, of ſilver; the ſtiver, or ſol, of billon; the grote, duyt, and pening, of copper.

Rixdol.	Guilder	Skilling	Stiver	Grote	Duyt	Pening	s.	d.
1	$2\frac{1}{2}$	$8\frac{1}{3}$	50	100	400	800	4	$4\frac{1}{2}$
	1	$3\frac{1}{3}$	20	40	160	320	1	9
		1	6	12	48	96		$6\frac{3}{10}$
			1	4	8	16		$1\frac{1}{20}$
				1	4	8		$\frac{21}{40}$
					1	2		$\frac{21}{160}$
						1		$\frac{21}{320}$

There is alſo the gold ducat of Camphen in Holland, worth 9 s. 3 d. ſterling.

Beſides, there are other Dutch coins of ſilver, as the ducatoon of Holland, or piece of 63 ſtivers, worth 5 s. 5 d. The 3 guilder piece of Holland, or piece of 60 ſtivers, worth 5 s. 2 d. The 10 skilling piece of Zealand, or piece of 60 ſtivers, worth 5 s. 2 d. The lion dollar of Holland, worth 3 s. 7 d. Alſo 3 ſorts of gout guldens, or florin d'ors, worth 2 s. $9\frac{15}{100}$ d. 1 s. $2\frac{72}{100}$ d. and 1 s. $2\frac{26}{100}$ d.

The COINS *of Flanders, and the Auſtrian Netherlands*, are the imperial of gold; the guilder, or gulden, and ſkilling, of ſilver; the ſtiver, blank, grote, and orties of copper.

Imperial	Guilder	Skilling	Stiver	Blank	Grote	Orties	s.	d.
1	7	20	140	$186\frac{2}{3}$	280	560	11	3
	1	$2\frac{6}{7}$	20	$26\frac{2}{3}$	40	80	1	$7\frac{2}{7}$
		1	7	$9\frac{1}{2}$	14	28		$6\frac{3}{4}$
			1	$1\frac{1}{3}$	2	4		$\frac{27}{28}$
				1	$1\frac{1}{1}$	3		$\frac{81}{112}$
					1	2		$\frac{27}{30}$
						1		$\frac{27}{72}$

There are alſo the ſilver ducatoon of Flanders, worth 5 s. $6\frac{14}{100}$ d.

And the ſilver patagon of Flanders, or croſs dollar, worth 4 s. 5 d.

COINS *of France*, are the louis d'or, piſtole, or the Lewis of gold, with its diviſions, which are the $\frac{1}{2}$ and $\frac{1}{4}$; and its multiples, which are the double and quadruple louis; tho' till the year 1700, they had gold lys, and crowns, which are now aboliſhed. The ſilver coins are the crown or ecu, with its fractions. The ſol is of billon, and the liard and denier are of copper.

Louis d'or	Crown Specie	Crown Exch.	Sol	Liard	Denier	s.	d.
1	4	8	480	1920	5760	19	6
	1	2	120	480	1440	4	$10\frac{1}{2}$
		1	60	240	720	2	$5\frac{1}{4}$
			1	4	12		$\frac{39}{80}$
				1	3		$\frac{32}{320}$
					1		$\frac{39}{1280}$

The louis d'or was firſt ſtruck at 10 livres, but has ſince riſen as high as 30.

The fractions of the crown are the $\frac{1}{2}$, $\frac{1}{3}$, or frank, $\frac{1}{4}$, $\frac{1}{2}$ frank, and the $\frac{1}{4}$ frank: beſides, there is alſo another ſilver piece called une-petite piece, current for about a halfpenny ſterling.

There is alſo the double of copper, worth 2 deniers, but the denier is only current in the ſouthern parts of France.

COINS *of Spain*, are the piſtole of gold; the piaſtre, dollar, perſo, or piece of eight, with the piſtarine, rial, and quarto, of ſilver; the ochavo and maravedi of copper.

Piſtole	Piaſtre	Piſtarine	Rial	Quarto	Ochavo	Maravedi	s.	d.
1	5	20	40	680	1360	2720	17	11
	1	4	8	136	272	544	3	7
		1	2	34	68	136		$10\frac{3}{4}$
			1	17	34	68		$5\frac{3}{8}$
				1	2	4		$\frac{43}{136}$
					1	2		$\frac{43}{272}$
						1		$\frac{43}{544}$

There are alſo the old double dubloon of gold, worth 3 l. 7 s. 1 d. ſterling; and the old double piſtole, worth 1 l. 13 s. $6\frac{7}{10}$ d.

There are likewiſe ſix ſorts of piaſtres; the old Seville, new Seville, Mexico, Peru, pillar, and croſs dollars.

The old Seville and Mexico piaſtres are of equal value, and better than the new Seville ones, about 19 l. 18 s. $1\frac{7}{10}$ d. *per cent.*

Than the Peru dollar about 1 l. 17 s. $\frac{4}{9}$ d. *per cent.*

Than the croſs dollars about 2 l. 6 s. $3\frac{7}{9}$ d. *per cent.*

And the pillar dollars are worth more than the old Seville and Mexico dollars about 1 l. 7 s. $6\frac{47}{73}$ d. *per cent.*

Than the new Seville dollars about 20 l. 10 s. $11\frac{37}{73}$ d. *per cent.*

Than the croſs dollar 3 l. 13 s. $\frac{52}{73}$ d. *per cent.*

Than the old dollar of Peru 3 l. 3 s. $11\frac{9}{73}$ *per cent.*

Two rials of Veillon make but one rial of plate; and there muſt be 16 rials of Veillon to make 1 piaſtre of 8 rials.

COINS *of Portugal*, are the moidore, or moeda d'ore, and the pataque, or piece of eight, of gold; the cruſade, or crown, and the teſtoon, of ſilver; the vintin, and reas, of copper.

Moidore	Pataque	Cruſade New	Cruſade Old	Teſtoon	Vintin	Reas	l.	s.	d.
1	8	10	12	48	240	4800	1	7	
	1	$1\frac{1}{4}$	$1\frac{1}{2}$	6	30	600		3	$4\frac{1}{2}$
		1	$1\frac{1}{5}$	$4\frac{4}{5}$	24	480		2	$8\frac{2}{5}$
			1	4	20	400		2	3
				1	5	100			$6\frac{3}{4}$
					1	20			$1\frac{7}{20}$
						1			$\frac{27}{400}$

Beſides theſe there are other coins both of gold and ſilver in Portugal; as——*Of* GOLD

The 25 mill 600 reas piece worth 7 l. 4 s. ſterling.

The 24 mill, or 5 moidore piece 6 l. 15 s.

The 12 mill 800 reas piece, or johannes, 3 l. 12 s.

The 12 mill, or $2\frac{1}{2}$ moidore piece, 3 l. 7 s. 6 d.

The 6 mill 400 reas piece, 1 l. 16 s.

The 3 mill 200 reas piece, 18 s.

The 2 mill 400 reas, or $\frac{1}{2}$ moidore, 13 s. 6 d.

The 1 mill 600 reas piece, 9 s.

The 1 mill 200 reas, or $\frac{1}{4}$ moidore piece, 6 s. 9 d.

Of SILVER.

The 800 reas or 8 teſtoon piece, worth 4 s. 6 d.

The 12 vintin piece, worth 1 s. 6 d.

The 5 ditto, $8\frac{3}{4}$ d.

The $2\frac{1}{2}$ ditto, $4\frac{1}{4}$ d.

Coins of ITALY.

Rome, has the piſtole of gold; the crown, or eſcudi ecu, teſtoon, and julio, of ſilver; the bayoc, and quatrin, of copper.

Piſtole	Crown Stamp	Crown Cur.	Teſtoon	Julio	Bayoc	Quatrin	s.	d.

Beſides theſe there are ſeveral other Italian coins, both of gold and ſilver; as, of gold,

The double piſtole of Pope Urban 1685, which weighs 8 dwt. $14\frac{1}{2}$ gr.

———————— of Placentia 8 dwt. 10 gr.

———————— of Genoa, of 1621, 8 dwt. 16 gr.

———————— of Milan 8 dwt. $13\frac{1}{2}$ gr.

The half piſtole of Innocent II. 1685, 2 dwt. 4 gr.

The ſtandard weight of theſe is uncertain; but the ſingle piſtole of gold of Rome, Milan, Venice, Florence, Savoy, and Genoa, is worth about 16 s. 6 d. ſterling: the double ducat of Genoa, and Venice, are worth 18 s. 7 d. ſterling; and the ſingle ducat of Genoa is worth 9 s. 3 d. ſterling.

The other ſilver coins of Italy are the cruſado, croiſat, or St. Mark of Venice, which weighs 20 dwt. 6 gr.

The half ditto 10 dwt. 3 gr.

The quarter, 5 dwt. $1\frac{1}{2}$ gr.

The piaſtre ecu, or crown of Milan, 17 dwt. 21 gr.

The Philip of Milan 20 dwt. 20 gr.

Coins of SWITZERLAND.

Zurich, has the rix-dollar, gulden, batz, or batzen, and ſhilling, of ſilver; the cruitzer, phening, and heller, of copper.

Coins *of Turky*, are the zeriff, otherwiſe called the ſcheriff, or the ſequin, or ſultanin, which is of gold; the caragrouch, ſolota, oſlic, beſlic, parac, and aſper of ſilver; the mangurs of copper.

Zeriff	Cara-grouch	Solota	Oſlic	Beſlic	Parac	Aſper	Mangurs	s.	d.

							1		$\frac{3}{20}$

Coins *of Egypt, and the coaſt of Barbary.* The coins current at Alexandria and Cairo in Egypt, are the gold ſultany, xeriff, and chequeen; being all of them about the ſame value, and each of them worth about 9 s. 4 d. 5 d. or 6 d. ſterling. The ſilver coins current, are the Spaniſh dollars, and the Turkiſh meidin; the Spaniſh dollar paſſes from 30 to 40 meidins, and the meidin is about three half pence ſterling.

In Barca, Tripoli, and Tunis, the gold coins current are the ſultany, the Venetian chequeen, and the Spaniſh piſtole; the two firſt paſs for about 9 s. ſterling, and the laſt for about 16 s. ſterling; but they are often changing their value, according to the neceſſities of the people, or the plenty or ſcarcity of the money.

In Algier, and Oran, the current gold coins are the ſultany and chequeen, valued at about 7 s. 6 d. ſterling; and the Spaniſh piſtole, valued at about 13 s. ſterling. The ſilver coins are the Spaniſh piece of eight, which paſſes for about 3 s. 4 d. ſterling

There are alſo gold coins ſtruck in Barbary; as the rubie, equal to 3 s. ſterling; the median, equal to 4 s. 1 d. ſterling; the ziam, equal to 8 s. 2 d. ſterling; and the ducat, with Arabic letters on both ſides in ſquare tablets, worth 9 s. 3 d. ſterling. There are likewiſe ſilver coins

ſtruck there, as the blanquille, equal to $2\frac{1}{4}$ d. ſterling. The copper coins ſtruck there are the felour, 3 of which make the blanquille; and the barba, which is equal to the 12th part of a halfpenny.

Coins *of Morocco.* The gold coin ſtruck at Fez, is the metecal, which is a kind of ducat of different fineneſs, from whence ariſe ſeveral difficulties in commerce; becauſe, as there is no eſtabliſhed mint, the Jews and goldſmiths ſtrike the metecals after their own manner in their ſhops; but they are generally worth about 9 s. ſterling. The ſilver coin is the blanquille, worth about 2 d. ſterling; and the copper coin is the fluce, 20 of which make a blanquille.

Coins *of Guinea, and other parts of Africa.* In Sofala, and the kingdom of Monomatapa, the gold coin is the merigal, worth about 18 s. ſterling; and the ſilver coin is the pardo, which is current in Moſambique, for about 1 s. 3 d. ſterling. In Guinea, and other parts of Africa, they have no coins among the natives, who deal with Europeans, and among themſelves, only by way of bartering one ſort of goods for another. They commonly make payment with ſmall pieces of gold by weight, and where they have not the art of melting it down, they make their payments in gold-duſt, or with kacorawns, which is gold drawn into a ſmall wire, and cut afterwards into very ſmall pieces. In ſome places they make payments with ſmall pieces of iron ſtamped with particular marks; as alſo in cowries; and in Ethiopia pepper paſſes for money.

Perſian Coins, are the abaſſi, worth 1 s. 4 d. ſterling; the mamodie, worth 8 d. ſterling; and the ſhahee, worth 4 d. ſterling, all of ſilver: the caſbaghis or kabeſqui of copper, worth about 4 d. ſterling. The biſti is ſometimes reckoned among the Perſian coins, and is worth 5 farthings ſterling. Beſides, the tela, or cheraſis, is generally ſtruck at the acceſſion of a new King, and at the beginning of every year, though its weight and value are various.

Arabian Coins, are the larins of ſilver; or dollars, and chequeens, of 100 aſpers, or 4 s. ſterling.

Coins *of the Eaſt Indies.* The principal, and thoſe moſt generally current on the continent of India, and its iſlands, are the pagoda, rupee, and fanam, both of gold and ſilver. They have alſo ſeveral little pieces of copper-money, among which is the peca, or pice.

At Surat, 16 pices make the ana of $7\frac{1}{2}$ d. ſterling, and 4 anas make a rupee of 2 s. 6 d. ſterling.

At Bombay, 72 pices make the rupee of 2 s. 6 d. ſterling.

At Goa, the xeraphim is worth 240 Portugal reas, or about 16 d. ſterling; 2 reas make a baſaraco, 15 baſaracos a vintin, 42 vintins a tangus, 4 tangus a paru, $2\frac{1}{2}$ parues a pagoda of gold, or between 3 and 4 l. ſterling.

At Carwar, 6 pices make the juttal, and 48 juttals a pagoda.

At Tellicherry and Calicut, 16 viſims make a fanam; $4\frac{1}{2}$ fanams of Calicut, and 5 of Tellicherry, make a rupee of 2 s. 6 d. ſterling.

At Anjengo, and other parts of the Malabar coaſt, 16 viſims make a fanam, and $5\frac{1}{4}$ fanams make a rupee of 2 s. 6 d. ſterling.

At Madras, or fort St George, and other parts of the coaſt of Coromandel, 80 caſches make a fanam, or 3 d. ſterling; and 36 fanams a ſilver pagoda, or 7 s. 8 d. ſterling.

In Bengal, 12 pices the ana, or $1\frac{7}{8}$ d. ſterling; and 16 anas the rupee of 2 s. 6 d. ſterling.

In Pegu, the fiano of gold weighs about 7 grains, worth 1 s. $5\frac{1}{2}$ d. ſterling; and there is a ſilver coin, worth about 10 d. ſterling.

In Siam, there is a gold coin worth about 10 s. 7 d. ſterling; and a ſilver coin, about the largeneſs of a hazle nut, worth 2 s. 5 d. ſterling.

At Bantam, in the iſland of Java, the coins are pieces of copper minted, with a hole in the middle to hang them on a ſtring, which they call petties, and 1000 petties make 5 s. ſterling.

At Bencoolen, in the iſland of Sumatra, a ſettalee is worth $7\frac{1}{2}$ d. ſterling; 2 ſettalees make 1 ſocoo, or 1 s. 3 d. ſterling; and 4 ſocoos make 1 real, or 5 s. ſterling.

But there are three kinds of ſilver rupees current in India; the rupees Siccas worth 2 s. 11 d. ſterling at Bengal; the rupees of Surat, worth 2 s. 3 d. ſterling; and the rupees

of Madras worth 2 s. 6 d. ſterling: which is to be underſtood of the new rupees, the old ones of each kind being leſs in value; thoſe of Madras being but 1 s. 11 d. ſterling, thoſe of Surat 2 s. and the Siccas 2 s. 4 d.

There are alſo ſeveral other coins ſtruck by the princes of India, tributary to the Mogul, and by the powers bordering on his territories; particularly a ſmall ſilver coin ſtruck by the King of Matucha, whoſe country lies to the north of Agra, 72 of which are equal to a rupee of 2 s. 6 d. ſterling. The Raja of Parta-jajamoula, to the north of Patna, likewiſe ſtrikes ſome little pieces, both ſilver and copper, of ſmall value. The Raja of Ogden, who commands between Brampour, Seronge, and Amadabat, ſtrikes a ſmall ſilver coin equal to 6 d. ſterling; and another of copper, equal to a halfpenny ſterling. The King of Cheda and Pera has a tin-money called cheda. The King of Achen has little ſlight gold pieces, worth about 15 d. ſterling; and tin pieces, 80 of which are equal to the Engliſh penny, current in the iſle of Sumatra. The gold coin of the King of Macaſſar and Celebes, is taken by the Dutch for a florin, or 1 s. 9 d. ſterling. The King of Cambaya ſtrikes only pieces of ſilver and copper; his gold, wherein he abounds, being negotiated by weight.

In China and Tonquin, they have properly no coins of gold or ſilver; payments being made by lumps, or bits, of gold and ſilver by weight, or the tale and mace; the gold being reckoned worth 3 l. 3 s. ſterling an ounce. However, they have a ſmall copper coin, called a candarin; and a ſmall coin of lead, mixed with the ſcum of copper, called caxas, having holes in the middle to ſtring them for the eaſe of numbering. Ten caxas is one candarin, or $\frac{4}{5}$ of a penny ſterling; ten candarins make a mace, or 8 d. ſterling; and 10 mace make a tale, or 6 s. 8 d. ſterling.

COINS *of Japan*. The Japaneſe coins are of gold, ſilver, and copper. The gold coupant is of two kinds; the one worth 61 l. 11 s. 3 d. ſterling, and the other about 21 l. 3 s. 9 d. ſterling; their gold being worth 63 s. an ounce. The ſilver coupant is worth about 4 s. 6 d. ſterling; and they have alſo ſilver in ingots, as in China, worth about 5 s. an ounce. The copper money is like the Chineſe caxas, 600 of which make the tale, or 6 s. 8 d. ſterling. Beſides which, they have a ſmall ſilver coin, in form of a bean, of no determinate weight or value.

Shells current for COINS. Theſe ſerve in many places for money; being brought from the Maldives, and called in the Eaſt Indies *cowries*, or on the coaſts of Africa *bouges*.

In America they take the name of porcelains; but theſe are not the ſame with thoſe of the Maldives, there being ſhells found in the Weſt Indies, much like thoſe of the Eaſt.

In the kingdom of Congo, in Africa, is another kind of ſhells, called zimbi; though ſome will have them the ſame with the coris.

Coris, cowrie, or bouges, are white ſhells, current particularly in the ſtates of the Great Mogul, dug out of the ground by the Maldivians; 65 of which are uſually reckoned equivalent to the pone, a ſmall copper coin worth about a halfpenny ſterling:

Porcelains are nearly on the ſame footing with the coris.

The zimbi are current particularly in the kingdoms of Angola and Congo; 2000 of theſe make what the negroes call a macoute, which is no real money, but uſed for a manner of reckoning: thus two Flemiſh knives they eſteem a macoute; a copper baſon, two pound weight, and 12 inches diameter, 3 macoutes; a fuſee, 10, &c.

Fruits current for COINS. There are three kinds of fruits uſed for coins; two in America, particularly among the Mexicans, which are the cocoa and maiſe; the other in the Eaſt Indies, that is, almonds, brought thither from Lar in Perſia, and growing in the deſarts of Arabia.

Fifteen cocoa-nuts are eſteemed equivalent to a Spaniſh rial, or $5\frac{3}{8}$ d. ſterling.

Maiſe has ceaſed to be a common money, ſince the diſcovery of America by the Europeans.

Almonds are chiefly uſed where the coris are not current; as the year proves more or leſs favourable to this fruit, the value of the money is higher or lower; in a common year forty almonds are ſet againſt a pecha, or halfpenny ſterling, which brings each almond to $\frac{1}{20}$ of a farthing.

National coin ought to be preſerved as pure and inviolable as religion; it is the eye of the republic, and ſhrinks at the gentleſt touch of a hand. No penetration can be aware of the injuries that ariſe from innovations in this caſe, till experience points them out; for as it is the rule and meaſure of all tranſactions of buſineſs, when this is diſconcerted, every body is a ſufferer, trade is diſordered, and the commonwealth, as it were, out of itſelf. On this account, it was a wiſe ſtep in the kingdom of Aragon, after the renunciation of King Peter II. to form an oath, and oblige all their future princes to take it before their coronation, that they would make no alteration in the coin. This is the obligation of a prince, as Pope Innocent III. wrote to the ſame King Peter, when that kingdom was in rebellion about it; and the reaſon is evident; becauſe a prince is ſubject to the law of nations, and ought, as being ſecurity for the public faith, to take care there be no alteration in the current coin, which may be made either in the matter, form, or quantity; for no kingdom can be under good œconomy, where the coinage is not pure and juſt. See *Bullion*, *Gold*, and *Money*.

COINAGE, or *Coining*, is the art or making of money, performed either by the hammer or the mill; the whole coinage of England being now performed in the tower of London, where there is a corporation under the title of The mint; there is alſo a royal mint in Scotland, but none in Ireland, or any of the plantations; and no hammered ſilver coin is reputed to be lawful in Great Britain.

Formerly there were in England, as there are ſtill in other countries, the rights of ſiegnorage and braſſage; but ſince the 18th of King Charles II. there is nothing taken, either for the King, or for the expences of coining; it having been ſettled, by act of parliament, that all money ſhould be ſtruck at the public expence; for which there is a proviſion made on the duties of wines; ſo that weight is returned for weight, to all perſons who carry their gold and ſilver to the Tower; but the ſpecies coined in England are eſteemed contraband goods, and not to be exported: however, there are no ſpecies coined of pure gold or ſilver, but always a quantity of alloy of copper is mixed with them, upon account of the ſcarcity of thoſe two metals, the neceſſity of making them harder by ſome foreign admixture, and to defray the expences of coining, which muſt be conſiderable; for, from the 17th of October 1713 to the 20th of March 1726, the gold coined in the tower of London amounted to 9,105,950 l. and the ſilver to 236,325 l. 8 s.

The rules and proportions in the Engliſh coinage are as follow. 1ſt, The weight of fine gold is to that of fine ſilver, bulk and bulk alike, as 1 to 183,896. 2d, Fine ſilver is to fine gold, according to the ſtandard, as 1 to 14,49; the pound weight of fine gold being worth 48 l. 10 s. 6 d. and the pound weight of fine ſilver worth 3 l. 6 s. $11\frac{1}{4}$ d. 3d, Sterling ſilver is to crown gold, as 1 to 15,431. 4th, Sterling ſilver, at 5 s. *per* ounce, is to the crown gold at 4 l. *per* ounce, as 1 to 16. 5th, Sterling ſilver is to crown gold, according to the current value, as 1 to 15,045. 6th, Fine gold is in value to crown gold, as 1 to, 9167. 7th, Fine ſilver is in value to ſterling ſilver, as 1 to, 9260.

Hammered money was the only current coin of England, till the year 1663, when the pernicious cuſtom of clipping money reduced it to one half its value; therefore another ſort, called milled money, was firſt fabricated to be current in England; which money was, and is now coined in the following manner.

Firſt, the gold or ſilver is caſt out of the melting pot into long flat bars, which are drawn through a mill wrought by a horſe, to produce the juſt thickneſs of the ſeveral pieces; then, with forcible engines called cutters, anſwering exactly to the reſpective diviſions of the money to be made, the ſame pieces are cut from the flat bar; the reſidue whereof, called ſizel, is melted again; when every piece is weighed, and made to agree exactly with the intended weights; after which it is carried to other engines, wrought ſecretly, which put the letters upon the edges of the reſt with a graining. The next thing is the blanching the money, which is making it white or refulgent by nealing or boiling. And, laſtly, every piece is brought

brought to the preſs, which is called the mill, wrought by men, and there receives the impreſſion, which makes it perfect milled money.

The Engliſh ſtandard for gold, is 22 carats of fine gold, and 2 carats of copper; which being melted together, is eſteemed the true ſtandard for gold coin; that is, if any quantity of fine gold, be divided into 24 equal parts, and 22 of thoſe parts be mixed with two of the like parts of copper, the mixture is called ſtandard gold; a ſtandard ounce of gold, when a guinea is valued at 21 s. being worth 3 l. 18 s. $1\frac{81}{1139}$ d. and the pound weight of gold is worth 46 l. 17 s. $8\frac{132}{1139}$ d. which in the reign of Edw. III. was coined only into 14 l. ſterling. The ſtandard for ſilver is eleven ounces and two penny-weight of fine ſilver, melted with eighteen penny-weight of copper, which is called ſterling ſilver. Fine gold is that which loſes nothing of its primitive weight in aſſaying; but if the loſs be $\frac{1}{24}$ part, it is called 23 carats fine, or one carat better than ſtandard; if it loſes $\frac{2}{24}$ parts, it is 22 carats fine, or ſtandard; if $\frac{3}{24}$ parts, it is called one carat worſe than ſtandard, and ſo in proportion as it happens to be better or worſe: but the loſs on aſſaying ſilver is computed by penny-weights, and other ſubordinate denominations.

The coinage of Portugal is the moſt ſimilar to the ſtandard of England, where it is allowed to paſs current; but the French is below the Britiſh ſtandard, and therefore not current.

The Spaniſh coinage is eſteemed one of the moſt imperfect in Europe; being ſettled at Sevil and Segovia, the only cities where gold and ſilver are ſtruck in thoſe dominions; but ſuch vaſt quantities of pieces of eight, and other ſpecies, both of gold and ſilver, are brought from Mexico, Peru, and other provinces of Spaniſh America, that, in this reſpect, it muſt be owned there is no ſtate in the world where ſo much money is coined as in Spain.

The Ruſſian coinage is ſtruck in the cities of Peterſburgh, Moſcow, Novogrod, Twere, and Pleſcou; where the coinage is let out to farm, and makes part of the royal revenue.

The Perſian coinage is all ſtruck with the hammer; and the ſame may be underſtood of the reſt of Aſia and America, the coaſts of Africa, and even Muſcovy; the invention of the mill not being yet gone out of Europe, nor even eſtabliſhed in every part of it.

The coinage of Fez and Tunis is not under any diſcipline; each goldſmith, Jew, and even private perſon, undertaking it at pleaſure; which renders their money exceſſively bad, and their commerce very unſafe.

By the ſtatute of the 1ſt and 2d of Philip and Mary, it was enacted, That if any perſon ſhould bring into the realm of England, or any of its dominions, any falſe and counterfeit money being current within the realm, knowing the ſame to be falſe and counterfeit, to the intent to utter or make payment of the ſame within the realm; ſuch perſons ſo offending, their counſellors and abettors, ſhould be deemed offenders in high treaſon.

By the ſtatute of the 5th of Elizabeth, it was enacted, That clipping, waſhing, rounding, or filing the monies of the realm, or of the dominions thereof, or of the monies of any other realm ſuffered to be current, ſhould be adjudged treaſon; and, by the 18th of the ſame Queen, it is alſo declared treaſon, to impair, diminiſh, falſify, ſcale, or lighten the ſame.

By the ſtatute of the 13th and 14th of Charles II. it was enacted, That no perſon ſhould melt any current ſilver money, upon pain of forfeiture of the ſame, and of the double value; and the perſons offending, if freemen of any city or corporation, ſhould be disfranchiſed; and if they ſhould not be freemen, they ſhould ſuffer ſix months impriſonment.

By the ſtatute of the 6th and 7th of William III. it was enacted, That if any perſon ſhould, at any time, receive or pay any ſilver money unclipt, for more than the ſame ought to go for, he ſhould forfeit 10 l. for every 20 s. and ſo in proportion for any greater or leſſer ſum; and that if any perſon ſhould buy or ſell, and knowingly have in his cuſtody, any clipping, or filings, of the coin; he ſhould forfeit the ſame, and 500 l. and ſhould be alſo branded in the right cheek with the letter R.

By the ſtatute of the 8th and 9th of William III. proper penalties are inflicted upon ſuch as ſhould counterfeit the utenſils of the royal mint; and againſt perſons marking, diminiſhing, or counterfeiting the current coin; as alſo againſt any perſon that ſhould blanch copper for ſale, or mix blanched copper for ſilver; or knowingly buy or ſell, or offer to ſale, blanched copper alone, or mixed with ſilver; or ſhould knowingly and fraudulently buy or ſell, or offer to ſale, any malleable compoſition, which ſhould be heavier than ſilver, and look, and touch, and wear like gold, but be worſe than ſtandard; or ſhould pay, or put off, any counterfeit, or melted money unlawfully diminiſhed, at a lower rate than the ſame ſhould import.

By the ſtatute of the 9th and 10th of Will. III. it was enacted, That it ſhould be lawful for any perſon to whom ſilver money ſhould be tendered, (any piece whereof ſhould be diminiſhed, otherwiſe than by reaſonable wearing; or that by the ſtamp, colour, or weight thereof, he ſhould ſuſpect to be counterfeit), to cut or deface ſuch piece; and if it ſhould appear to be counterfeit, the perſon tendering the ſame ſhould bear the loſs; but if the ſame ſhould be of due weight, and lawful money, the perſon that broke or defaced the ſame, ſhould take it at the rate it was coined for.

By the 4th and 19th of George II. 15,000 l. a year is allowed for the expences of the mint for England and Scotland, payable out of the duties on wine.

By the ſtatute of the 25th and 26th of George II. it was enacted, That if any perſon ſhould waſh, gild, or colour any lawful or counterfeit ſhilling or ſixpence, or add to, or alter, the impreſſion or any part, of either ſide of ſuch lawful or counterfeit coin, with intent to make ſuch ſhilling or ſixpence reſemble a guinea or half guinea; or ſhould any ways alter, or colour, halfpennies or farthings, to make them reſemble a lawful ſhilling or ſixpence, the offenders and their abettors ſhould be adjudged guilty of high treaſon. That if any perſon ſhould tender in payment any counterfeit coin, knowing it to be ſo, the offender ſhould ſuffer ſix months impriſonment, and find ſureties for good behaviour for ſix months longer; for a 2d offence he ſhould ſuffer two years impriſonment, and find ſureties for two years more; and for a 3d offence, ſhould be adjudged guilty of felony, without benefit of clergy. That if any perſon ſhould tender in payment any counterfeit money, knowing it to be ſo; and ſhould either the ſame day, or within ten days after, knowingly tender other falſe money in payment, or at the time of tendering have more in his cuſtody; the offender ſhould ſuffer a year's impriſonment, and find ſureties for good behaviour for two years more; and being convicted a ſecond time, ſhould be adjudged guilty of felony, without benefit of clergy. That if any perſon coin, or counterfeit, braſs or copper halfpence or farthings; the offenders, and their abettors, ſhould ſuffer two years impriſonment, and find ſureties for their good behaviour for two years more. That whoever ſhould apprehend offenders for crimes thereby made high treaſon, and proſecute them to conviction, ſhonld receive 40 l. for every offender, and for every perſon convicted of counterfeiting the copper money, 10 l. within a month after conviction; for the expences of which proſecutions 600 l. a year is allowed out of the coinage-duties on wines; but the copper coin of late years has been greatly counterfeited, and wants the interpoſition of the legiſlature, to remedy ſo public a grievance, eſpecially to the trading part of the kingdom.

COLBERG. A port-town of Pomerania, in Germany, ſituated on the Baltic, in 16 deg. of E. lon. and 54 deg. 15 min. of N. lat.

COLCHESTER. A large borough-town of Eſſex, ſituated in 1 deg. of E. lon. and 51 deg. 55 min. of N. lat. having the greateſt manufacture of bays of any town in England, and allowed to have the beſt way of improving oyſters. See *Great Britain*, and *Oyſter-fiſhery*.

COLCOTHAR, is of two kinds, natural and factitious: the natural, otherwiſe called chalcitis, is a red vitriol, brought from Germany, formed from the common green vitriol, calcined naturally by ſome ſubterraneous fire. See *Chalcitis*.

The artificial colcothar is a green vitriol, calcined a long time by an intenſe fire, and ſo reduced to the redneſs of blood; though common ſulphur being mixed with iron filings, and expoſed to the air, both unite and form a colcothar,

cothar, perfectly like that procured by calcination from vitriol.

Colcothar vitrioli, is a term alſo uſed for the caput mortuum, or remains left at the bottom of the veſſel, after the diſtillation of vitriol. See *Vitriol*.

COLDING. See *Kolding*.

COLIMA. A port-town of North America, in the province of Mexico, and territory of Mechoacan, ſituated in 109 deg. of W. lon. and 19 deg. of N. lat. at the mouth of a river near the Pacific ocean. See *Spaniſh America*.

COLLAR. An ornament wore by the knights of ſeveral military orders, generally conſiſting of a chain of gold enamelled.

COLLAR, is alſo a piece of braſs, or other metal, to put round the necks of dogs, or for other purpoſes. Collar is likewiſe a term uſed for hoops, put to ſeveral inſtruments; and likewiſe for the collars of carriage-horſes.

COLLAR-*maker*, is a perſon whoſe buſineſs conſiſts in making collars for horſes, of wood and leather; as alſo in ſome other neceſſaries for horſes of carriage; as waggoners whips, traces, and other harneſs. He uſes horſes hides for moſt of his work; and is beſides a kind of dog-butcher, by ſelling the horſe-fleſh to ſuch perſons as keep dogs in and about London.

COLLECTOR. A perſon nominated by the commiſſioners of any duty, company of trade, the inhabitants of a pariſh, or the like, to raiſe, gather, or collect any tax, or ſum of money, as the collectors of exciſe, land-tax, and window-lights.

COLLEGE. An aſſemblage of ſeveral bodies, or ſocieties, or even of ſeveral perſons into one ſociety; and among the Romans it was extended to the mechanical arts, or trades; ſo that the word properly ſignified what we call a corporation, or company. Thus in England, our univerſities conſiſt of ſo many colleges or halls. The college of civilians, or Doctors Commons, was founded by Dr. Harvey, dean of the arches, for the profeſſors of the civil law reſiding in London: and the college of phyſicians was incorporated by Hen. VIII. In Holland, the board of admiralty is called the college of the admiralty; and in other countries they have colleges of merchants, particularly in the Hans towns, where they give their exchanges the name of colleges.

Sir Francis Brewſter, who was a very eminent merchant of London in 1690, laments the inattention of the Engliſh gentlemen to trade, and has propoſed to have this remedied by erecting a college in each maritime city, and conſiderable port of the kingdom, in which there may be ſome perſons of experience in trade, to direct and teach others in the myſtery of it to all parts of the world; and that they may have the practice, as well as theory, that every perſon entering himſelf into the ſociety may be obliged to bring in 1000 l. ſtock, which will make a capital of perhaps 20 or 30,000 l. ſterling to traffic with in 30 cities or places in the kingdom: that they be obliged to ſpend five years in the ſociety, and at the end of that term to receive the principal they brought, allowing the caſualty of profit and loſs as it happens; by which means trade will fall into the hands of gentlemen, perſons of learning, and conſideration in the nation. See *Commerce*, *Merchant*, and *Trade*.

COLLIER. One who works in the coal-pits; alſo a dealer in coals; beſides, it is a name commonly given to ſuch ſhips as are employed to carry coals from one place to another, eſpecially from Newcaſtle and Whitehaven to London.

COLLIERY. The pit, mine, or place where coals grow, and out of which they are dug; alſo a ſtore houſe, where large parcels of coals are kept for ſale or uſe.

COLOCHINA. A port-town of Turky in Europe, ſituated in 23 deg. of E. lon. and 36 deg. 30 min. of N. lat. on the coaſt of the Morea. See *Turky*.

COLOGNE. The capital of the archbiſhopric of Cologne, and of the circle of the Lower Rhine in Germany, ſituated on the Rhine, in 6 deg. 40 min. of E. lon. and 50 deg. 50 min. of N. lat. being one of the moſt extenſive and elegant cities of Germany; and having a great trade, eſpecially in wines. See *Germany*.

COLONY. A company of people, of all ſexes and conditions, tranſported into a remote province, to cultivate and inhabit it. Colonies have three kinds of diſtinction: the firſt, are thoſe ſerving to eaſe, or diſcharge the inhabitants of a country; where the people are become too numerous, ſo that they cannot any longer conveniently ſubſiſt: the ſecond are thoſe eſtabliſhed by victorious princes and people, in the middle of vanquiſhed nations, to keep them in awe and obedience: and the third are diſtinguiſhed by the name of commercial colonies, becauſe, in effect, trade is the ſole occaſion and object of ſuch ſettlements.

It was by means of the firſt kind of colonies, that, ſome ages after the deluge, the eaſt firſt, and ſucceſſively all the other parts of the earth, became inhabited; and, without mentioning any thing of the Phænician and Grecian colonies, ſo much celebrated in antient hiſtory, it is notorious that it was for the eſtabliſhment of ſuch colonies, that, during the declenſion of the Roman empire, thoſe torrents of barbarous nations, iſſuing for the generality out of the north, over-run Gaul, Italy, and the other ſouthern parts of Europe; where, after ſeveral long and bloody military contentions, they divided the country with the antient inhabitants.

For the ſecond kind of colonies, the Romans uſed them more than any other people, and principally to ſecure the conqueſts they had made from the weſt to the eaſt.

The colonies of commerce are thoſe eſtabliſhed by the Engliſh, French, Spaniards, Portugueſe, and other nations, within theſe two laſt centuries, and which they continue ſtill to eſtabliſh in ſeveral parts of Aſia, Africa, and America, either to keep up a regular commerce with the natives, or to cultivate the ground by planting ſugar-canes, indico, tobacco, and other commodities. The principal of this kind of colonies are on the northern and ſouthern continents, and the iſlands of America; particularly Peru, Mexico, Canada, Virginia, New England, Carolina, Louiſiana, Acadia, Hudſon's bay, the Caribbee iſlands, Jamaica, Cuba, Domingo, and other iſlands. Theſe colonies in Africa are at Madagaſcar, Cape of Good Hope, Cape Verd and its iſlands, and all thoſe vaſt coaſts extended thence as far as to the Red ſea. And in Aſia there are the famous Batavia of the Dutch; Goa and Diu of the Portugueſe; with Pondicherry, Madras, and ſome other leſs conſiderable places of the Engliſh, French, and Danes.

Though ſome of the Britiſh colonies in America, as Carolina, Penſilvania, New York, and New England, are productive of many of the ſame commoditities with which our other continent and iſland colonies are ſupplied from their mother-country; yet they greatly contribute to that general intereſt of trade which reſults from all our American plantations; whereby we export to thoſe colonies goods to the value of about 850,000 l. a year, and import from thence to the value of 2,600,000 l. a year, gaining about 1,750,000 l. upon the balance, which remains in the hands of the people of Great Britain.

The Britiſh colonies in America are of great extent, and contain near a million and half of white inhabitants: they have ſtruggled through many impediments from their firſt eſtabliſhment under Sir Walter Raleigh; and therefore they ſhould be now carefully encouraged in their different branches of trade, and protected from all their neighbouring enemies, eſpecially the French, who of late years have become extremely potent in America. The ſugar, rum, cotton, and ginger of our iſland colonies, are important articles of trade; ſo are the tobacco, rice, and furs, of our plantations on the continent, as well as the Newfoundland fiſhery: beſides, our northern colonies may in time ſupply us with all kinds of naval ſtores, iron, and pot-aſhes; while our iſlands may be made to afford indico, cochineal, and cocoa, as well as ſilk, both here and in the ſouthern colonies on the continent; all of which greatly increaſe the maritime ſtrength of Great Britain, as they employ near 2000 ſhips, and are a continual nurſery for ſeamen.

From theſe conſiderations, the Britiſh colonies ought to be the principal care of the Britiſh government, eſpecially as the French are become our rivals in the ſugar-trade, are now ſupplanting us in the fur-trade, have long ſince excelled

ɛlled us in the cod-fiſhery, and perhaps may endeavour o make their Canada rival our Virginia in tobacco. But for a more particular account of the eſtabliſhments, trade, and intereſt, of the Britiſh colonies, ſee *Plantations*; as alſo Britiſh America under *Great Britain*, French America under *France*, and Spaniſh America under *Spain*.

COLOPHONY. A reſinous ſubſtance, prepared of turpentine, by boiling it in water till cold, when it becomes of a hard conſiſtence. See *Turpentine*.

The chief uſe of this drug is for the cure of venereal diſorders, and ſeminal imbecilities; when apothecaries make it into pills, which they roll in liquorice-powder, or cover over with gold leaf, and call them *turpentine pills*.

The common colophony, or black reſin, is ſaid to be procured from the turpentine of the mountain-pine; the oil whereof being drained from it by diſtillation, what remains in the ſtill is the colophony; which, to be good, muſt be ſhining and odoriferous; and, when thrown on the fire, ſhould render a ſmoke like that of frank-incenſe.

Colophony took its name from Colophon, a city of Ionia, from whence it was firſt brought; but it is frequently called Spaniſh wax, or Grecian reſin, being brought from Greece and Spain; it is found to warm, dry, ſoften, and agglutinate; it uſually enters the compoſition of plaiſters and unguents; though it is alſo uſed by muſicians to rub the hairs of their bow for the violin.

COLOQUINTIDA, or *Colocynthis*, uſually called bitter apple, is the fruit of a plant of the ſame name brought from the Levant, about the bigneſs of a large orange; its colour being a ſort of golden brown, and its inſide full of kernels, to be taken out before uſe; but both the ſeed and pulp are intolerably bitter. It is of conſiderable uſe in medicine, but moſtly in officinal compoſitions; the violence of its operation rendering it unſafe to be given inwardly in extemporaneous preſcriptions, except with great caution.

COLOUR, in dying. There are five ſimple, primary, or mother colours uſed by the dyers; from the mixture whereof all the other colours are formed; which are blue, red, yellow, brown, and black.

Of theſe colours, variouſly mixed and combined, they form the following colours: panſy, blue and red: from the mixture of blue and ſcarlet, are formed amaranth, violet, and panſy: from the ſame mixture of blue and crimſon, are formed the columbine, or dove-colour, purple, crimſon, amaranth, panſy, and crimſon-violet; but it may be obſerved that they give the name crimſon to all colours made with cochineal: of blue and red madder, they likewiſe make purple, pepper colour, tan-colour, and dry roſe: blue and half red crimſon compoſe amaranth, tan-colour, a dry roſe, a brown panſy, and ſurbrun.

Blue and yellow. Theſe two colours mixed together, compoſe a yellow green, ſpring-green, graſs-green, laurel-green, brown-green, dark-green, ſea-green, parrot-green, and cabbage-green; which three laſt colours ought to be leſs boiled than the firſt. With regard to green, there is no ingredient, or drug in nature that will dye it; but the ſtuffs are dyed twice, firſt in blue, then yellow.

Blue and brown. Theſe two colours are never mixed alone; but with the addition of red, either of madder or cochineal, they form ſeveral colours.

Red and yellow. All the ſhades compoſed of theſe two colours, as gold-yellow, aurora, marigold, orange, nacarat, granat-flower, flame-colour, and the reſt, are made with yellow, and red of madder; ſcarlet being leſs proper, as well as too dear.

Red and brown. Of theſe two colours are formed cinnamon-colour, cheſnut, muſk, bear's-hair, and even purple, if the red be that of madder.

Yellow and brown. The colours formed from theſe two are all the ſhades of feuille-morts, and hair-colours: but though it is ſaid there are no colours, or ſhades, made from ſuch and ſuch mixtures, it is not that none can be made, but only that they are more eaſily formed from the mixture of other colours. See *Dying*.

COLOUR, in painting, is applied both to the drugs, and to the tints produced by thoſe drugs, variouſly mixed and applied.

The principal colours uſed by painters, are red and white lead, or ceruſs; yellow ochres, ſeveral kinds of earth, as umber, and the like; orpiment, black lead, cinnabar, gumbooch, lake, vice, verdeter, indico, vermillion, verdigreaſe, ivory, black biſtre, lamp-black, ultramarine, and carmine.

Of which colours, ſome are uſed ground in oil, others only in freſco, others in water, and others for miniature.

Dark and light colours. Under theſe two claſſes the painters reduce all the colours they uſe: under light colours are comprehended white, and all thoſe which approach neareſt it; and under dark colours black, and all thoſe which are obſcure and earthy, as umber, biſtre, and ſuch like.

Simple and mineral colours, is another diviſion among the painters: under ſimple colours they range all thoſe uſed by limners, illuminers, and the like, extracted from vegetables, and which will not bear the fire; as the yellow made of ſaffron, of French berries, lacca, and other tinctures extracted from flowers. The reſt are minerals, drawn from metals, and able to bear the fire, which are uſed chiefly in enamelling.

COLOURING *of ſtrangers goods*, is when a freeman allows a foreigner to enter goods at the cuſtom-houſe in his name. See *Alien*.

COLOURING, and *non-colouring drugs*, are diſtinctions made by dyers among their materials.

The firſt are applicative, and communicate their colours to the matters boiled in them, or paſſed through them; as woad, ſcarlet, grain, cochineal, indico, madder, turmeric, and others.

The other ſerve to prepare and diſpoſe the ſtuff, and other matters; as alſo to extract the colour out of the colouring ingredients; as allum, ſalt, or cryſtal of tartar, arſenic, realgal, ſalt petre, common ſalt, ſal armoniac, ſal gemmæ, agaric, ſpirit of wine, bran, peaſe, flour, wheat, ſtarch, lime, and aſhes. See *Dying*.

COLOURS, at ſea, are flags, or enſigns, on board a ſhip or fleet; each nation having its particulars colours. See *Flag*.

COLT. A young horſe, mare, aſs, or mule.

COLUMBO. A ſea port-town on the S. W. coaſt of the iſland of Ceylon, ſituated in 78 deg. of E. lon. and 7 deg. of N. lat. ſubject to the Dutch. See *Ceylon iſlands*.

COLUMNS, in accompts, are the ſeveral diviſions thereof in the ſame page.

COLURI. A little iſland in the gulph of Engia, in the Egean ſea, ſituated in 24 deg. of E. lon and 38 deg. of N. lat. being ſeparated from the continent by a ſtrait about a mile over, and ſubject to Turky.

COMASSES. Small coins, current at Mocha in Arabia, which are more or leſs in value, according to the neceſſities of the ſtate.

COMB. An inſtrument for diſentangling, adjuſting, and clearing hair, flax, or wool.

Combs are made of ſeveral materials, and of different faſhions; ſome of which are of box, ivory, and tortoiſe-ſhell; there are likewiſe lead combs; as alſo combs made of bones dug out of the ground in ſeveral parts of Muſcovy, which are not in the leaſt inferior to thoſe of ivory.

COMB-*makers company of London*, is a ſociety incorporated by letters-patent of Charles I. dated the 4th of April 1636, by the title of The maſter, wardens, and fellowſhip of the comb-makers of London; conſiſting of a maſter, 2 wardens, and 13 aſſiſtants; but they have neither hall nor livery.

Combing of wool, in trade, is the drawing or paſſing it acroſs the teeth of a kind of card, or comb, to diſpoſe it for ſpinning.

COME. The ſmall fibres, or tails of malt, on its firſt ſhooting forth.

COMFITS. Such ſweet meats, or confections, as are preſerved dry.

COMMANA. A port-town, ſituated in 64 deg. 30 min. of W lon. and 10 deg. 10 min. of N. lat. on the coaſt of the Caraccas, in South America. See *Spaniſh America*.

COMMANDANT. The governor, or commanding officer, of a ſea-port, or port-town.

COMMANDER, is a term differently applied at ſea; as the commander in chief, or admiral, or commodore, of a fleet of men of war, or the captain of a man of war, or privateer. But the term of commander is alſo applied to captains of merchant-ſhips, or veſſels, who have the chief command of the ſhip, and direction of the cargo. See *Captain*.

COMMERCE. The exchange of commodities, or the buying, ſelling, or trafficking of merchandiſe, money, or even paper, for the acquiſition of profit.

As the opulence and potency of every ſtate are dependant on the induſtry of the people, and the extenſion or compaſs of their foreign trade by a continual exchange of all kinds of commodities, it is demonſtrable, from the experience of every man, that buſineſs of this nature cannot be proſecuted, without a due proportion of ſome medium, to be univerſally received among mankind, as the certain meaſure and permanent value of every periſhable commodity they have occaſion to deal in; whereby each individual is enabled to preſerve from decay, and increaſe his own particular ſhare of property and wealth. For this purpoſe, all the civiliſed nations in the world have agreed to put an eſtimate on ſuch goods as they have occaſion to exchange in trade, equal to ſome portion of ſilver or gold of a certain determined fineneſs, which is called the value of the commodity; becauſe it is thereby rendered capable of being every moment compared with all other commodities of any ſpecies or denomination, when their values in like manner come to be reduced to the ſame ſtandard of gold and ſilver; ſo that, when merchants barter and exchange one ſort of goods for another, they complete the bargain according to their reſpective values in money; and when there happens to be any difference, the ballance is paid to the owner in caſh; which, in a trading country, makes it abſolutely neceſſary, that every dealer be conſtantly provided with ſuch a proportion of caſh as is requiſite to tranſact and finiſh ſuch affairs as are continually in a fluctuating uncertain market, where the mercantile profit is dependent on a judicious and nimble exchange of periſhable goods; becauſe frequently he cannot diſpoſe of them without the aſſiſtance of ready money to accommodate the wants of other people, and force the exchange neceſſary to preſerve and meliorate the condition of his eſtate, which is the principal end of all trade.

It is an indubitable fact, that the antiquity of commerce is almoſt coeval with the world: neceſſity was its parent, the deſire of conveniency improved it; while vanity, luxury, and avarice, have brought it to its preſent maturity. At firſt, it only conſiſted in the exchange of things neceſſary for life; the plowman gave his corn, and his pulſe, to the ſhepherd; who returned milk and wool in exchange; which method of commerce is ſtill ſubſiſting in ſeveral places; particularly about the coaſts of Siberia, and the Daniſh and Muſcovite Lapland, among ſeveral nations on the coaſts of Africa, among moſt of thoſe of America, and many of Aſia. See *Coin*, and *Money*.

It is not preciſely known when the commerce by buying and ſelling began; nor when coins, and the ſeveral ſpecies of gold, ſilver, and copper, had their riſe. The firſt monies were wood, leather, or iron; and, even at this day, it is the cuſtom in ſome places of both Indies, to give a certain value in ſea-ſhells and cocoa-nuts, for merchandiſes. The firſt inſtance of this kind of commerce in the ſacred writings, is in the time of the patriarch Abraham. Profane authors uſually fix its epocha to the reign of Saturn and Janus in Italy; and the antient authors, according to Cæſar, attribute its invention to the god Mercury. However, the Egyptians, Phœnicians, and Carthaginians, who were a Tyrian colony, were the firſt, the moſt daring, and moſt experienced traders of all antiquity; at leaſt, it is evident they were the firſt who undertook long and hazardous voyages, and eſtabliſhed a traffic by ſea between coaſts very remote.

Among the antients, commerce did not appear unworthy the applications of perſons of the firſt rank; for Solomon frequently joined his merchant-fleets with thoſe of the King of Tyre, for their voyage to Ophir, and by this means rendered himſelf, though in a little kingdom, the richeſt ſovereign in the univerſe. Under the Aſiatic and Grecian empires, antient hiſtory conveys, from time to time, the traces of a commerce cultivated by ſeveral nations: but it flouriſhed more conſiderably under the dominion of the Romans; which is apparent from the great number of colleges and companies of merchants in the ſeveral cities mentioned in hiſtorians, and antient inſcriptions.

The deſtruction of the Roman empire by the irruptions of the Barbarians, occaſioned the declenſion of commerce, for ſome time ſuſpending its ordinary operation; till, by degrees, it began to recover itſelf, and made a new progreſs, eſpecially in Italy; where the Piſans, Florentines, Genoeſe, and Venetians, who abounded in ſhipping, took occaſion to ſpread themſelves through all the ports of the Levant and Egypt; bringing from thence ſilk, ſpices, and other merchandiſes, with which they furniſhed the greateſt part of Europe: and thus was the modern commerce founded on the ruins of that of the antient Greeks and Romans to the ſame places; by which thoſe famous Italian republics acquired their luſtre and potency.

The Germans, however, had a long time carried on a ſeparate commerce; which, as it was independent of the Romans, ſtill exiſted when theirs was aboliſhed. Towards the end of the twelfth century, the German cities ſituated on the coaſt of the Baltic, and the rivers diſemboguing themſelves into that ſea, had a conſiderable traffic with the neighbouring ſtates; but as their commerce was much interrupted by pirates, 72 of theſe cities united together for their mutual defence, and were thence called hanſeatic, or hans towns, who flouriſhed till the end of the fifteenth century; when a diviſion ariſing among them, the antient Italian and hanſeatic commerce ſunk; which was the more ſpeedily fruſtrated on the diſcovery of a new paſſage to the Eaſt Indies by the Portugueſe, and the ſettlements made on the coaſts of Africa, Arabia, and the Indies; by which means the principal trade came into the hands of the Portugueſe.

The crown of Portugal, being ſubjected to Spain, had not poſſeſſed thoſe different trades above 100 years, when, about the beginning of the 17th century, the Dutch, who had revolted from the Spaniards, began to participate that valuable branch of commerce; and, in a little time, almoſt excluded the Portugueſe from the whole; ſince which time, the Engliſh, French, Danes, Swedes, and Hamburghers, excited by the ſucceſs of the Hollanders, have likewiſe made ſettlements in the Indies, and on the coaſts of Africa; though much leſs conſiderable ones, excepting thoſe of the Engliſh and French.

Laſtly, America, diſcovered by the Spaniards ſoon after the Portugueſe had eſtabliſhed themſelves in the Eaſt Indies, likewiſe became the object of a new, vaſt, and important commerce, for all the nations of Europe, whereof Cadiz and Seville were made the centre. It is true, the firſt conquerors of this new world ſtill poſſeſs the moſt extenſive and opulent parts of it, preſerving their commerce there entirely to themſelves, with extraordinary jealouſy: yet, beſides that the Engliſh, French, Portugueſe, and Dutch, have ſeveral rich and flouriſhing colonies, both in the iſlands and on the continent; it is certain that other nations receive the moſt conſiderable part of the Mexican and Peruvian treaſures, annually conveyed to Europe by the Spaniſh flotas.

The trade of Europe ſuffered no diminution by this new one to America, the north and ſouth having ſtill the ſame occaſion for each other as before. The navigation from the Baltic to the Mediterranean was tedious and difficult: the ſituation of Flanders, and the manufactures which flouriſhed there from the 10th century, together with the free fairs of that country, engaged the merchants, both of the north and ſouth, to eſtabliſh their magazines firſt in Bruges, and then at Antwerp: but the eſtabliſhment of the United Provinces, the favourable reception that republic gave to ſtrangers, and the refuge it afforded to religionaries, drew numbers of manufacturers there, as well as ſtores of manufactures, which ſoon ſunk the commerce of Antwerp; and, for the ſame reaſons, together with the convenience and multitude of the ports of England, the goodneſs of the wool, and the induſtry of the workmen,

a conſiderable part of the European commerce is centered in the Britiſh dominions.

In general, commerce is a profeſſion not leſs honourable than uſeful; and even the French, who ſtick at ſo many punctilios in point of birth, think that commerce derogates nothing from nobility.

The Engliſh very prudently allow the younger ſons of the moſt illuſtrious houſes to enrich themſelves by all ſorts of lawful commerce, for the upholding of a title which would otherwiſe become burdenſome; and a neighbouring nation, more knowing as it thinks in the point of honour, but leſs intelligent in its real intereſt, has often perceived the effects of this inconveniency.

It may be alſo added, to the honour of commerce, that ſome Italian princes look upon themſelves as the principal traders of their ſtates, not diſdaining to uſe their own palaces as ware-houſes for the richeſt manufactures; and even ſeveral Kings of Aſia, as alſo the greater part of thoſe who command on the coaſt of Africa, promote a trade with Europeans, either by their commiſſioners, or themſelves.

Commerce, according to its preſent eſtabliſhment, is divided into commerce by land, and by ſea; which have alſo the further diſtinctions of long voyages and ſhort; inland or domeſtic, and foreign; as alſo wholeſale and retail.

Commerce by land, is that which is carried on from town to town, from province to province, or from kingdom to kingdom, by carts, waggons, and other vehicles; or upon the backs of horſes, mules, camels, and ſuch like animals; or in boats, and barges in rivers, lakes, pools, and canals; or, in northern countries, upon the ice, or thro' ſnows, by rein-deer; or laſtly, in the eaſt, by caravans.

Commerce by ſea, is that which is carried on in all the parts of the world, where ſhips may arrive by ſea, either in the ocean, or Mediterranean, or in particular ſeas; which, however, are but parts of the ocean; ſuch are the Red ſea, the White ſea, the Black ſea, the Baltic, the Frozen ſea, and others.

Commerce of long and ſhort voyages, explain ſufficiently their own nature; ſo alſo does that of domeſtic and foreign.

Commerce by wholeſale, is that when merchandiſes are ſold only in cheſts, bales, or at leaſt in entire pieces.

Commerce by retail, is that when merchandiſes are ſold in ſhops, or even in warehouſes, by the ell, the yard, the pound, the buſhel, the gallon, or their diminutions, purſuant to the different ſpecies, and qualities of things traded in.

Commerce of money, is that of bankers, or merchants, who remit money to diſtant places, in conſequence of ready money received; in lieu whereof, they give a writing, ſigned by them, called a bill of exchange, drawn upon their correſpondents in the ſeveral commercial towns of Europe; that the ſum received ſhould be paid to the bearer of the bill, a deduction being nevertheleſs made of the exchanges, rechanges, or other bank fees.

There is another ſort of money-commerce, prohibited by divine and human laws, called *uſury*; which, without alienating the fund, is lent upon exorbitant intereſt.

Commerce of paper, is that which is carried on without any current ſpecie, in notes, bills of exchange, ſubſcriptions, ordonances, bank-bills, aſſignations, ſhares, or actions of companies, or other ſuch like papers, which the debtor cedes to his creditor, and the creditor conſents to receive willingly, and without loſs, for the payment of what is due to him.

Precarious commerce, is that carried on by two nations at war with each other, by the means of a third which is neuter: thus the Engliſh trade with the Spaniards, when engaged in a war with each other, by the interpoſition of the Portugueſe, if neuters: but this kind of commerce is not very advantageous, upon account of the number of correſpondents, and ſtaples neceſſary to uphold it, which are very expenſive, and conſume moſt of the profits.

All commerce is founded upon the wants, natural or artificial, real or imaginary, which the people of different countries, or the different claſſes of inhabitants of the ſame country, are deſirous, in defect of their own ſingle abilities, to ſupply by mutual intercourſe; and if this commerce be carried on between the inhabitants of the ſame country, with the growth or manufacture of that country only, it is called *home conſumption*; which is ſo far ſerviceable, as it preſerves the ſeveral profeſſions and ſtations of life in their due order; or as it promotes arts and ſciences, with a rotation of induſtry, wealth, and mutual good offices between the members of any community: therefore traffic merely of this kind, is of great importance, though it neither increaſes nor diminiſhes the public ſtock of national treaſure. But providence having intended that there ſhould be a mutual dependence and connection between mankind in general, it is almoſt impoſſible for any particular people to live with tolerable comfort, and in a civiliſed ſtate, independent of all their neighbours: beſides, it is natural for men to extend their views and their wiſhes beyond the limits of a ſingle community, and to be deſirous of enjoying the produce or manufactures of other countries, which they muſt purchaſe by ſome exchange; and this intercourſe with other nations is called *foreign trade*; the whole ſcience of which conſiſts in bringing the ballance of trade in favour of any particular nation. See *Ballance of trade*.

It is notorious, that without an extenſive and profitable commerce, there are not to be found either in monarchies, kingdoms, or republics, a country well peopled, plenty, or ſplendour; nor armies, fleets, or fortreſſes, to protect and render them conſiderable: nor can an extenſive and profitable commerce ſubſiſt, without the concurrence of many good manufactures of ſilk and wool in particular: nor, in moſt countries, can ſuch manufactories be ſet on foot, and preſerved, unleſs favoured by indulgencies and exemptions from duties; at leaſt upon ſome of the eatables conſumed by the working hands, and the materials employed in woven and other commodities, as well as in the ſale of them: to all theſe muſt be added, a well-adjuſted book of rates for the duties upon exports and imports; and, unleſs theſe prudent regulations are made, no nation can experience the neceſſary vent at home and abroad. Commerce is the only thing that can draw gold and ſilver, the main ſprings of action, into any ſtate; which is ſo glaring a truth, that Spain, in whoſe dominions theſe are found in plenty, is in great want of both, from having ſlighted traffic and manufactories; the mines of America being ſcarce ſufficient to pay for the merchandiſe and commodities which other European nations carry to Spain: and, from theſe conſiderations, all commercial governments have granted ſalutary privileges and encouragements to the mercantile and manufacturing parts of the community: becauſe the return of commerce is riches and plenty, which fortifies countries with ſtrength and reputation. See *Treaty* for the ſeveral regulations ſubſiſting between Great Britain and other European powers for the ſecurity and encouragement of commerce. See alſo *Merchant*, *Navigation*, and *Trade*.

COMMISSION, the authority, or power, whereby one perſon tranſacts buſineſs for, or under another. In trade, it ſometimes means this power of acting for another; and ſometimes the premium or reward that a perſon receives for ſo doing, which is $\frac{1}{2}$, 1, 2, 3, or more *per cent.* according to the nature or circumſtance of the affair. See *Broker*, and *Factor*.

COMMISSION *of Bankruptcy*, is a commiſſion under the great ſeal, directed to five or more commiſſioners, to inquire into the particulars of the circumſtances of a perſon who hath failed, or broke, in trade; and to act according to certain ſtatutes made in that behalf. See *Bankrupt*.

COMMISSIONER, he who has a commiſſion; that is, a patent, or other legal warrant, to execute any public office: ſuch as the commiſſioners of the admiralty, treaſury, trade and plantations, cuſtoms, exciſe, navy, victualing office, ſtamps, wine-licences, bankrupts, and hawkers and pedlars. It is alſo uſed for ſuch perſons as are authoriſed by princes, or ſtates, to ſettle any conteſted matters of a public nature: and it is likewiſe privately uſed among merchants for their factor. See *Factor*.

COMMITTEE, in trade, a ſelect number of perſons, to whom any buſineſs or matter is referred, by any particular company,

company, or body of merchants, to inquire into, order, or manage, and report the ſtate thereof to the proprietors, or others empowered to receive the ſame.

COMMODE. A particular ſort of fine head-dreſs for women.

COMMODITIES, uſed as merchandizes by merchants and traders, may properly be diſtinguiſhed into two kinds, being either natural or artificial.

Natural commodities are ſuch as the earth, or animal creation, naturally produce of themſelves, either with or without the labour and induſtry of man: of which kinds are wines, oils, cottons, wools, fruit, grain, raw ſilk, ſpices, drugs, gems, gold, ſilver, and other ſubſtances.

Artificial commodities, are ſuch as are either wrought, or perfected by art or myſtery; of which kind are all fabrics of woollen, linnen, ſilk, and all handicraft utenſils, as well as other goods from their different manufactures.

Theſe natural and artificial commodities may be again diſtinguiſhed into two other ſorts; which are either ſuch as are ſtaple, and laſting commodities, or impairing and periſhable ones: the former being ſuch as continue in their true ſtate, and primitive condition of goodneſs; as gems and metals: the latter being ſuch as are either ſubject to leakage or corruption; as corn, wines, oils, fruits, and fiſh.

To underſtand the different natures, and real qualities, of theſe commodities, requires all the exertion of human ſagacity: the eye, above all the other ſenſes, claims a particular intereſt and prerogative in this diſtinction; for ſeveral things are frequently found ſaleable only on their agreeable appearance to the ſight; which in colours muſt be the ruling principle: other commodities require the ſenſe of feeling for an aſſiſtant to the eye; as where the hand is of neceſſity to be employed in cloth, and ſuch commodities: ſome require the ſenſe of hearing, as where the ear gives aſſiſtance to the eye in metals and minerals: ſome alſo require the ſenſe of ſmelling; as in drugs and perfumes: and, laſtly, ſome have a neceſſity for the ſenſe of taſting; as ſpices, wines, and oils.

A thorough diſtinction of theſe commodities is only acquired by experience, the true mother of knowledge; which is to be obtained by frequently viewing, and carefully examining the qualities and properties of theſe commodities; eſpecially of the beſt and principal ſort: for which purpoſe it is neceſſary to procure, and keep, patterns and ſamples; thereby imprinting the very idea in the mind, that, at the ſight of any thing ſimilar, the ſame may be inſtantly diſcerned: beſides, the ſooner to obtain this knowledge, a perſon muſt be very inquiſitive with men of experience, capable of inſtructing him in the neceſſary commodities; to learn from ſuch what are the principal obſervations requiſite thereto, either in their colours, goodneſs, ſubſtance, virtue, taſte, ſight, or feeling; of which it will be highly material to take proper memorandums; as alſo of their prices, marks, and charges.

COMMODORE, in the navy, an under-admiral, or a captain commiſſioned by an admiral, to command a ſquadron of ſhips in chief.

COMMON-STOCK *of a company*, in trade, ſignifies the whole ſtock common to all.

COMMON *Council*, in a city or town, is a court or aſſembly, of the mayor, aldermen, and common council, wherein are made all by-laws relating to the corporation.

COMMUTATION, the bartering, or exchanging of one thing for another.

COMORIN-*Cape*, the moſt ſouthern promontory of the Hither India, lying in 76 deg. of E. lon. and 8 deg. of N. lat. north weſt of the iſland of Ceylon.

COMORRA, or *Gomorra Iſlands*, near the eaſtern coaſt of Africa, are four in number, called Johanna or Anjouan, Nangaſia, Majota, and Moelie, lying between the coaſt of Zanquebar, and the north end of the iſland of Madagaſcar, from 10 to 15 deg. of S. lat.

The iſland of Johanna is moſt frequented by Europeans, whoſe ſhips generally touch for refreſhment in their paſſage to Bombay, and the Malabarian coaſts of India: the iſland being 30 miles long, and 15 broad: beſides, the people, who are negroes of the Mahometan religion, are extremely hoſpitable, eſpecially to the Engliſh, and live under a monarchical form of government.

The other iſlands of Comorra are much about the ſame dimenſions, and inhabited by the ſame kind of people; producing rice, cocoa-nuts, as alſo roots; and affording fleſh proviſions for ſhipping.

COMPAN. A ſilver coin, current in ſome parts of the Eaſt Indies, worth about 4½ d. ſterling.

COMPANY. A collective term, underſtood of ſeveral perſons aſſembled together in the ſame place, or with the ſame deſign: but is more particularly adapted as a commercial term, ſignifying an aſſociation of ſeveral merchants, or others, united in one common intereſt, contributing by their ſtock, their council, and ſtudy, to the ſetting on foot, or ſupporting, of ſome commercial or lucrative eſtabliſhment.

Though company, and ſociety, or fellowſhip, are, in effect, the ſame thing, yet cuſtom has made a difference between them; ſociety, or partnerſhip, being underſtood of two or three dealers, or not many more, and company of a greater number.

A ſecond difference between companies and partnerſhips is, that the firſt, eſpecially when they have excluſive privileges, cannot be eſtabliſhed without the conceſſion of the prince or ſtate, and require letters-patent, charters, or other public inſtruments, for their formation: whereas it is ſufficient, in partnerſhips, to have the conſent of the members fixed, certified by acts and contracts, and authoriſed by by-laws.

Laſtly, the word company ſeems more peculiarly appropriated to thoſe grand aſſociations, ſet on foot by ſeveral nations, for the commerce of the remote parts of the world; as the ſeveral Eaſt India companies, and Weſt India companies, African companies, Turky companies, South Sea companies, Ruſſia companies, North companies, and Fiſhery companies; as alſo of ſome other inferior bodies, as the merchant-adventurers, Hamburgh company, Eaſtland company, Aſſiento company, Miſſiſippi company, Baſtion company of France, and Iceland company of Denmark; as likewiſe of ſeveral more particular incorporations in England, abſtracted from any commercial intereſt; ſuch as the bank of England, the different inſurance offices, companies for carrying on waterworks, charitable corporation, copper company, lead company, mine company, and river Dee company; as alſo the ſeveral companies of guilds of the city of London: all of which are particularly explained under their reſpective heads.

It has been aſſerted, that public companies, and corporate charters, with excluſive privileges of trade, are the bane and deſtruction of a free commerce; becauſe they are abſolute monopolies: but many ſpecious reaſons have been alſo offered in favour of excluſive companies, which therefore ſeem to require ſome examination.

There are caſes that render an aſſociation, and joint ſtock, of ſeveral wealthy merchants, convenient and neceſſary, to ſettle and proſecute a commerce to advantage; when, for inſtance, their king has no ſovereignty in diſtant countries, where the traffic is to be; nor men of war, or other means, to convoy the merchant ſhips; or he does not think proper to employ his armaments in remote expeditions, and in favour of a trade ſo far off and hazardous: in theſe circumſtances, it is uſually apprehended neceſſary for a certain number of merchants to unite, and raiſe a common fund, to enable them to purchaſe, or build ſhips; to man, victual, and fit them out; to levy troops, and pay them; to purchaſe the proper commodities for the trade; to ſettle colonies by carrying out families; to fortify and ſupply them with ammunition and ſtores; and for other large diſburſements, which cannot be provided for without the opulent funds of ſuch companies.

That ample powers, and moſt extenſive privileges, were, and ſtill are, requiſite to cheriſh, and preſerve the flouriſhing branch of trade belonging to the Dutch Eaſt India company, muſt be readily conceded to; becauſe the proprietors juſtly merited them by their vigilance, fatigue, and expence, in conquering and preſerving all the countries they poſſeſs in thoſe parts of Aſia where their ſettlements are eſtabliſhed; and their fortreſſes on the coaſt of Africa, for

for refreſhment, refitting, and protection of their ſhips. But ſuch extraordinary powers, indulgences, and privileges, though neceſſary for the ſupport of ſo rich a vein of commerce, could not, without great inconvenience, be diſpenſed in monarchies, and other great kingdoms, where companies ſhould be eſtabliſhed with an excluſive right of trade in thoſe provinces, which their ſovereigns and lawful maſters are in peaceable poſſeſſion of: for the ſcheme of ſetting theſe up, with power or permiſſion to plant colonies, and carry on trade in foreign parts, as the Dutch Eaſt India company projected and ſucceeded in, raiſing itſelf upon the ſpoils of the Portugueſe, and afterwards at the expence of the Engliſh, might be attended with great danger and inconvenience; eſpecially if the trade projected on this plan, ſhould prove ſo extenſive as to raiſe the jealouſy of other powers. To theſe may be added other conſiderations, that credit has ſuffered much from theſe commercial aſſociations in many parts of Europe; particularly the Miſſiſippi company in France, and the South Sea company in England: for as both theſe were raiſed to an exceſſive and vain height of expectation by the weakneſs of many, the blind avarice of ſome, and the ſubtile villainy of others, they terminated in a tragedy, that cauſed the clamours, impoveriſhment, and ruin of many, with a deſpair that brought others to a fatal end. Several other companies, of an inferior degree, and leſs character, have alſo miſcarried, eſpecially in England and France, either for want of a ſufficient capital, or becauſe the directors, agents, and other dependents, abuſed the truſt repoſed in them; from whence enſued the ruin of above 30 companies formed in France at ſeveral times, in different provinces, and upon various plans.

The Engliſh, French, Portugueſe, and Dutch, have their reſpective trading companies to Aſia, Africa, and America; but the Spaniards have hitherto eſtabliſhed no ſuch companies; becauſe his moſt Catholic Majeſty employs his maritime force to convoy, and protect, the trade of his ſubjects, in flotas, and galeons, to America, and the Philippine iſlands in the Eaſt Indies; where, from the number and conveniency of the ports, they find reception, ſecurity, and all other encouragements they could deſire, without any expence: ſo that the capital motives for an eſtabliſhment of companies are wanting in Spain, for the navigation and commerce of the Weſt Indies; and the Spaniſh miniſtry have only thought it adviſeable to allow an aſſociation of merchants, diſpoſed to ſettle a navigation, and a limited traffic to the Eaſt Indies, along the coaſts of Africa and Aſia, by means of the Philippine iſlands, at their own charge, and without any riſk to the royal armaments, or treaſury, in a navigation ſo diſtant, and an undertaking ſo precarious; for which a plan had been projected by ſome Spaniſh merchants, though never carried into execution.

It is alſo to be obſerved, that the principal commerce of the French is conducted at the ſole riſk and charge of private perſons; as are alſo many conſiderable branches of the Dutch trade, and not by companies, eſpecially with Spain, France, Germany, England, and other parts of Europe. It is the ſame with the large commerce of the Dutch to the Levant, which has been obſerved to take in moſt of their Mediterranean trade, from the ſtreights of Gibraltar to the right and left, all along the coaſts of Africa and Europe, to thoſe of Aſia in Paleſtine, Syria, and Natolia, where they even trade very largely: for though moſt of their ſhips make theſe remote voyages, under convoy of ſhips of war to certain diſtances, and ſubject to the rules and direction of a chamber eſtabliſhed in Holland for this purpoſe, it is well known that every native or inhabitant of Holland poſſeſſes the privilege of embarking in this commerce at any time, of doing it at his own riſk, and withdrawing whenever it ſhall be convenient, or agreeable to him: and, in this reſpect, they are upon the very footing of the Spaniſh flota, which ſail always under the orders and inſtructions given to the commandant general; every perſon trades upon his own bottom and riſk, without being ſubject to any company; unleſs a few merchants aſſociate by choice for a ſingle voyage, and a determinate quantity of merchandiſe; which they ſometimes do for one or more regiſter ſhips, that ſail independent of the flotas and galeons; eſpecially thoſe that uſually trade to Buenos-Ayres, having firſt obtained a patent from his moſt Catholic Majeſty. See *Monopoly*.

COMPANY *of ſhips*, is uſed for a fleet of merchant veſſels, who make a kind of charter-party among themſelves, whereby, under ſeveral clauſes, and conditions, tending to their common ſafety, they engage not to quit one another, but to defend each other reciprocally during their voyage; though theſe aſſociates in the Mediterranean are called *conſerves*; the chief condition of the charter-party being, that ſuch and ſuch ſhall be owned admiral, vice-admiral, and rear admiral; that thoſe which bear no guns ſhall pay ſo much *per cent.* of their cargo, for the expences of the admiral and the others; that ſuch and ſuch ſignals ſhall be obſerved; and that, if they are attacked, the damages ſhall be reimburſed by the company in general.

COMPASS. The mariners, or nautical compaſs, is an inſtrument uſed by pilots to direct the courſe of their ſhips, conſiſting of a box, which includes a magnetical needle, that always turns to the north, excepting for a little declination, which is various in different places, and even at various times in the ſame place. In the middle of the box, a perpendicular pivot is fixed, which bears a card, or paſte-board, on whoſe upper ſurface are deſcribed ſeveral concentric circles, the outermoſt of which is divided into 360 deg. and the other into 32 points, anſwering to the 32 winds. In the center of this card is fitted a braſs cone, or cap, a little concave, which plays at liberty on the pivot; and along, in the thickneſs of the card, is fitted the needle, which is covered over with a glaſs, that its motions may be obſerved. The whole is encloſed in another box, where it is ſuſtained by braſs hoops to keep the needle horizontal.

The needle, which is, as it were, the ſoul of the compaſs, is made of a thin plate of ſteel, in form of a lozenge: the middle being cut out, ſo as to have nothing but the extremities and an axis in the middle, to which the cap is fitted. To animate, or touch it, it muſt be rubbed on a good loadſtone; the end intended for the north point, on the north pole of the ſtone; and that for the ſouth point on the ſouth pole: but, in rubbing it, care muſt be taken to begin firſt in the middle of the lozenge; drawing it gently to the acute angle of the lozenge intended for the north, never ſuffering it to ſtay at the end when arrived there, nor drawing it back again from the end to the middle; but rubbing it a ſecond, and even a third time, in the ſame manner as the firſt, only beginning a little further and further from the north point.

The invention of the compaſs is uſually aſcribed to Flavio de Melfi, or Flavio Gioia, a Neapolitan, about the year 1302: and hence it is, that the territory of Principato, which makes a part of the kingdom of Naples, where he was born, bears a compaſs for its arms.

Others ſay, that Marcus Paulus, a Venetian, making a journey to China, brought back the invention with him in 1260: and what confirms this conjecture is, that, at firſt, they uſed the compaſs in the ſame manner the Chineſe do now; that is, they let it float on a little piece of cork, inſtead of ſuſpending it on a pivot: it is added, that their emperor Chiningus, a celebrated aſtrologer, had the knowledge of it 1120 years before Chriſt; but the Chineſe divide their compaſs into 24 points only.

Fauchet relates ſome verſes of Guyot de Provence, who lived in France about the year 1200, which ſeem to make mention of the compaſs, under the name of *marinette*, or *mariner's ſtone*: from whence it is inferred, that it was uſed a hundred years before either the Melfite or Venetian: and the French even lay claim to the invention, from the flower de lis, wherewith all nations ſtill diſtinguiſh the north point of the card.

With as much reaſon Doctor Wallis aſcribes it to the Engliſh, from its name compaſs, whereby moſt nations call it, and which, he obſerves, is uſed in many parts of England to ſignify a circle.

The uſe of the compaſs is obvious: for the courſe a ſhip is to ſail in being known by the chart, and the compaſs ſo placed, as that the two parallel ſides of the ſquare box

be diſpoſed according to the length of the ſhip; that is, parallel to a line drawn from the head to the ſtern; the rudder is to be directed accordingly: ſo, if the courſe be found on the chart between the S. W. and S. S. W. that is ſouth-weſt ¼ to the ſouth; the ſtern muſt be turned ſo as that a line from the S. W. ¼ S. exactly anſwer the mark on the middle of the ſide of the box; which is all that is required. See *Sailing*, *Chart*, and *Navigation*.

Some conſiderations towards the Improvement of the mariners compaſs.

The diſcovery of the mariners compaſs has probably been of more general and important uſe to human ſociety, than the invention of any one inſtrument whatſoever: and yet ſo far have they been from ſtudying the improvement of it, that there would be no abſurdity in ſuppoſing, that the firſt which was made might be as much ſuperior to thoſe at preſent in common uſe, as the moſt improved inſtrument we have is ſuperior to its firſt contrivance.

Almoſt all the compaſſes, uſed on board merchant ſhips, have their needles formed of two pieces of ſteel wire, each of which is bent in the middle, ſo as to form an obtuſe angle; and their ends being applied to each other make an acute one: for if a number are examined, they will rarely, if ever, be all found in the ſame direction; but they will all vary more or leſs, not only with regard to the true direction, but from one another.

Theſe irregularities are owing to the ſtructure of the needle; for the wires of which it is compoſed are only hardened at the ends: now if theſe ends are not equally hard, or if one end be hardened up higher than the other, when they come to be put together, in fixing them to the card, that end which is hardeſt will deſtroy much of the virtue of the other; by which means the hardeſt end will have the moſt power in directing the card, and, conſequently, make it vary towards its own direction. And, as the wires are diſpoſed in the form of a lozenge, theſe cards can have but little force; ſo that they will often, when drawn aſide, ſtand at the diſtance of ſeveral degrees on either ſide the point from whence they are drawn; for all magnetical bodies receive an additional ſtrength by being placed in the direction of the earth's magnetiſm, and act proportionably leſs vigorouſly when turned. Wherefore, when theſe kind of needles are drawn aſide from their true point, two of the parallel ſides of the lozenge will conſpire, more directly than before, with the earth's magnetiſm, and the other two will be leſs in their direction; by which means the two firſt ſides will very much impede its return; and the two latter will have that impediment to overcome, as well as the friction, by their own force alone.

The needle uſed on board the men of war, and ſome of the larger trading ſhips, are made of one piece of ſteel, of a ſpring temper, being broad towards the ends, but tapering towards the middle, where a hole is made to receive the cap. At the ends they terminate in an angle, greater or leſs, according to the ſkill or fancy of the workman. Theſe needles, though infinitely preferable to the other, are, however, far from being perfect: for every needle, of this form, has ſix poles inſtead of two; one at each end, two where it becomes tapering, and two at the hole in the middle, which is owing to their ſhape; for, the needle part being very ſlender, it has not ſubſtance enough to conduct the magnetic ſtream quite through, from one end to the other; and all theſe poles appear very diſtinctly, when examined with a glaſs that is ſprinkled over with magnetic ſand. This circumſtance, however, does not hinder the needle from pointing true; but as it has leſs force to move the card, than when the magnetic ſtream moves in large curves from one end to the other, it is certainly an imperfection.

A needle that is quite ſtraight, and ſquare at the ends, has been found to have only two poles; but, about the hole in the middle, the curves are a little confuſed. Theſe, after vibrating a long time, will always point exactly in the ſame direction; and, if drawn ever ſo little on one ſide, will return to it again, without any ſenſible difference. It may therefore be concluded, that a regular parallelopiped is the beſt form for a needle, as well as the ſimpleſt; the holes for the caps being as ſmall as poſſible.

And, as the weight ſhould be removed to the greateſt diſtance from the centre of motion, a circle of braſs of the ſame diameter of the card may be added; as it will ſerve alſo to ſupport the card, which may then be made of thin paper, without any thing to ſtiffen it; ſo that this ring being fixed below the card, and the needle above it, the centre of gravity is placed low enough to admit of the cap being put under the needle, whereby the hole in the needle becomes unneceſſary.

By this means the mariners compaſs may be rendered as free as poſſible from error; as, by the following contrivance, it may be made to ſerve the purpoſes of an azimuth and amplitude compaſs in a manner preferable to any thing contrived.

To make the compaſs uſeful in taking the magnetic amplitude, or azimuth, of the ſun and ſtars, as alſo the bearings of the headlands, ſhips, and other objects at a diſtance; the braſs ring deſigned to ſupport the card, and throw the weight to the greateſt diſtance from the centre of motion, is divided into degrees and halfs, which may be eaſily eſtimated into ſmaller parts if neceſſary. The diviſions are determined by means of a cat-gut line, ſtretched perpendicularly with the box, as near the braſs edge as poſſible; that the parallax ariſing from the different poſition of the obſerver, may be very ſmall.

Underneath the card are two ſmall weights, ſliding on two wires, placed at right angles to each other, which, being moved nearer to, or farther from the centre, counterbalance the dipping of the card in different latitudes, or reſtore the equilibrium of it.

There is alſo added an index on the top of the inner box, which may be put on, or taken off, at pleaſure, and ſerves for all altitudes of objects, conſiſting of a bar, equal in length to the diameter of the inner box, each end being furniſhed with a perpendicular ſtyle, with a ſlit parallel to its ſides: one of the ſlits is narrow, to which the eye is applied; and the other is wider, with a ſmall cat-gut ſtretched up the middle of it, and from thence continued horizontally from the top of one ſtyle to the top of the other. There is alſo a line drawn along the upper ſurface of the bar; and theſe four, the narrow ſlit, the horizontal cat-gut thread, the perpendicular one, and the line on the bar, are in the ſame plane, which diſpoſes itſelf perpendicular to the horizon, when the inner box is at reſt, and hangs free: but this index does not move round, being always placed on ſo as to anſwer the ſame ſide of the box.

When the azimuth of the ſun is deſired, and the rays are not ſtrong enough to caſt a ſhadow, the wooden box ſhould be turned about, till the ſhadow of the horizontal thread; or, if the ſun be too low, till that of the perpendicular thread in one ſtyle, or the light through the ſlit in the other, falls upon the line on the index-bar, or vibrates to an equal diſtance on each ſide of it, gently touching the box, if it vibrates too far, obſerving, at the ſame time, the degree cut on the braſs edge by the cat-gut line. In counting the degree for the azimuth, or any other angle that is reckoned from the meridian, uſe ſhould be made of the outward circle of figures upon the braſs edge; and the ſituation of the index-bar, with regard to the card and needle, will always direct upon what quarter of the compaſs the object is placed.

From what has been ſaid, the other obſervations may be eaſily performed, only care muſt be taken, if the diſtance of the object from the eaſt or weſt be deſired, to reckon the degrees on the inner circle of the card, which are the compliments of the outer, to 90 degrees.

Azimuth COMPASS, differs from the mariners compaſs in this, that there is faſtened on the round box wherein the card is, a broad circle, one half whereof is divided into 90 degrees, and thoſe ſubdivided diagonally into minutes. There is a moveable index, having a ſight moving on a hinge. From the upper part of the ſight, to the middle of the index, is faſtened a fine hypotenuſal luteſtring, to give a ſhadow on a line in the middle of the index. The circle is croſſed at right angles with two threads, from the extremities whereof are drawn four lines on the inſide of the round box; and there are alſo four lines drawn at right angles to each other on the card.

The

The uſe of the azimuth compaſs is for finding the ſun's magnetical azimuth, or amplitude; and thence the variation of the compaſs.

COMPASSES, or *Pair of Compaſſes*, a mathematical inſtrument, uſed for the deſcribing of circles, and meaſuring lines; of which there are ſeveral kinds and contrivances, accommodated to the various uſes they are intended for: but the firſt invention of compaſſes is aſcribed to Talaus, nephew of Dædalus.

COMPLEMENT, at ſea, ſo much as is wanting to compleat the number of men requiſite for the manning or navigation of the ſhip.

COMPLEMENT *of the courſe*, in navigation, is the number of points the courſe wants of 90 degrees, or eight points; that is, of a quarter of the compaſs. See *Courſe*.

COMPOSITION, or *Compounding*, in trade, is the contract between an inſolvent debtor and his creditor, whereby the latter agrees to accept a part of the debt in compenſation for the whole, and give a general acquittance accordingly.

COMPOST, in agriculture and gardening, a compound, or mixture, of earths, dungs, &c. applied by way of manure, for the meliorating and improving of ſoils, or aſſiſting the natural earth in vegetation.

COMPOSTELLA *New*, a city of North America, ſituated in 110 deg. of W. lon. and 21 deg. of N. lat. in the province of Mexico, and territory of Xaliſco, near the Pacific ocean. See *Spaniſh America*.

COMPOSTELLA. A large, elegant, trading city of the province of Galicia in Spain, ſituated in 9 deg. 15 min. of W. lon. and 43 deg. of N. lat. being 300 miles N. W. of Madrid, and 47 miles E. of Cape Finiſterre. See *Spain*.

COMPOUND, the reſult, or effect, of a compoſition of different things; particularly of medicines, being uſed in contradiſtinction to ſimple: thus apothecaries prepare ſeveral compounds in phyſic; as alſo compound fomentations, and compound waters.

COMPRINT, to make a piratical impreſſion of a copy, or book, contrary to the conſent or knowledge of the proprietor.

COMPROMISE, in trade, to bring a matter to arbitration, for reconciling any diſputes between traders, ſo as to prevent litigation, by leaving the matter to the reference and award of diſintereſted perſons.

COMPTING-HOUSE, or *Counting-houſe*, an office, room, or place, appointed to take in and ſettle the accompts of a merchant, or company.

COMPTROLLER. See *Controller*.

COMPUTATION, the manner of accompting and eſtimating time, weights, meaſures, and monies.

COMPUTER, or *Computiſt*. See *Accomptant*.

CONCEPTION. A city of Chili, in South America, ſituated in 79 deg. of W. lon. and 37 deg. of S. lat. having a good harbour, and ſubject to Spain. See *Spaniſh America*.

CONCEPTION, is alſo the capital of the province of Veragua, in Mexico, in North America, ſituated in 83 deg. of W. lon. and 10 deg. of N. lat. 100 miles W. of Porto Bello. See *Spaniſh America*.

CONCESSION, in point of commerce, ſignifies, in general, the extent of a country, wherein a company is permitted to eſtabliſh themſelves, or to trade excluſively of all others: but, in particular, it is ſaid of a country allotted to inhabitants for grubbing, cultivating, and planting.

CONCHI. A kind of cinnamon, brought from the Eaſt Indies, by the Red ſea, and making a part of the commerce of Cairo; where there are alſo two other ſorts ſold; the ceylani, which is the real cinnamon of the iſland of Ceylon; and the malabari, which is the grey cinnamon of the Portugueſe, ſold for leſs than the ceylani, and little eſteemed. See *Cinnamon*.

COND, *Con*, or *Conn*, in the ſea-language, ſignifies to conduct a ſhip in her right courſe; the perſon that conds her ſtanding aloft with a compaſs before him, who gives the word of direction to him at the helm how to ſteer. See *Courſe*, and *Steering*.

If the ſhip go before the wind, or, as mariners call it, betwixt the ſheats, the word is either *ſtarboard*, or *port the helm*, according as the conder would have the helm put to the right or left ſide of the ſhip; upon which the ſhip always goes the contrary way.

If he ſays, *helm amid ſhip*, he would have the ſhip go right before the wind, or directly between her two ſheats.

If the ſhip ſails by a wind, or on a quarter wind, the word is, *a loof*, *keep your luff*, *fall not off*, *veer no more*, *keep her to*, *touch the wind*, *have a care of the lee latch*: all which expreſſions are of the ſame import, implying that the ſteerſman ſhould keep the ſhip near the wind.

On the contrary, if he would have her ſail more large, or more before the wind, the word is, *eaſe the helm*, *no near*, or *bear up*.

If he cries *ſteady*, it means keep her from going in and out, or making yaws, as they call it, howſoever ſhe ſails, whether large or before a wind: and when he would have her go juſt as ſhe does, he cries, *keep her thus*, *thus*.

CONDECEDO *Cape*, lies in the province of Yucatan, in North America, in 93 deg. of W. lon. and 21 deg. of N. lat. 100 miles W. of Merida.

CONDERS, are perſons who ſtand on high places, near the ſea coaſt, during the ſeaſon of the herring-fiſhery, to make ſigns, with boughs, and other things, to the fiſhers, which way the ſhoal of herrings paſſes; their courſe being more diſcernable to thoſe who ſtand on high cliffs, by means of a blue colour they occaſion in the water, than to thoſe aboard the veſſels: but theſe conders are alſo called huers, balkers, and directors. See *Herring fiſhery*.

CONDORE, or *Pulo Condore*. A little iſland in the Indian ocean, ſituated in 106 deg. 30 min. of E. lon. and 9 deg. 30 min. of N. lat. being a fruitful country, with a commodious harbour; which induced the Engliſh Eaſt India company to make a ſettlement here, in 1702; but, not agreeing with the natives, moſt of their factors were murdered by the Cochin-chineſe, and the reſt were expelled from thence in 1705. See *Indian Iſlands*.

CONDORIN, or *Candarin*. A ſort of ſmall weight, uſed by the Chineſe, particularly thoſe of Canton, for weighing and ſelling ſilver, being about 12 Engliſh drams. It is alſo a coin worth about ¾ of a penny.

CONDURI, in the Malayeſe language, or *Loga* in that of Java, is a kind of bean, of a beautiful red, with a black ſpot on the ſide, growing in ſome parts of the Eaſt Indies, and uſed by the Javaneſe and Malayeſe, as a weight for gold and ſilver.

CONES, the fruit of the cypreſs tree. See *Cypreſs*.

CONFECTIONER. A perſon whoſe trade conſiſts in making confects or ſweet-meats.

CONFECTS, *Comfits*, or *Confectionaries*, a denomination given to fruits, flowers, herbs, roots, and juices, when boiled, and prepared with ſugar, or honey, to diſpoſe them to keep, or render them more agreeable to the taſte. The ancients only confected with honey; but ſugar is more frequently uſed at preſent, by which are produced liquid confects, marmalades, jellies, paſtes, dry confects, conſerves, candies, and dragees or ſugar plumbs.

Liquid confects are thoſe whoſe fruits, either whole, in pieces, in ſeeds, or in cluſters, are confected in a fluid tranſparent ſyrup, which takes its colour from that of the fruits boiled in it: there is a good deal of art in preparing theſe well; for if they are too little ſugared they turn; and if too much they candy: the moſt eſteemed of the liquid confects are plumbs, eſpecially thoſe called mirabels; as alſo berberies, quinces, apricots, cherries, orange-flowers, little green citrons from Madeira, green caſſia from the Levant, mirobalans, ginger, and cloves.

Marmalades are a kind of paſtes, half liquid, made of the pulp of fruits, or flowers, that have ſome conſiſtence; as apricots, apples, pears, plumbs, quinces, oranges, and ginger; the laſt of which is brought from the Indies by way of Holland, and is eſteemed good to revive the natural heat in old men.

Jellies, are juices of ſeveral fruits, wherein ſugar has been diſſolved, and the whole, by boiling, reduced into a pretty thick conſiſtence, which are made of various kinds of fruits, eſpecially gooſeberries, apples, currants, and quinces:

ces: however, there are other jellies, made of flesh, fish, and hartshorn; but they are not to be kept, being very subject to corrupt.

Pastes, are a kind of marmalades, thickened to that degree, by boiling, as to assume any form, when put into little molds and dried in the oven: the most in use are those of gooseberries, quinces, apples, apricots, and orange-flowers; those of pistachoes are much esteemed, and those of ginger are brought from the Indies.

Dry confects, are those whose fruits, after having been boiled in the syrup, are taken out again, drained, and put to dry in an oven; which are made of many kinds of fruits, particularly of citron and orange-peel, plumbs, pears, cherries, and apricots.

Conserves, are a kind of dry confects, made with sugar, and parts of flowers, or fruits; the most usual being those of betony, mallows, rosemary, capillary herbs, orange-flowers, violets, jessamin, pistachoes, citrons, and roses.

Candies, are ordinarily entire fruits candied over with sugar, after having been boiled in the syrup, which renders them like little rocks crystallized, of various figures and colours, according to the fruits inclosed within them; but the best sort are brought from Italy.

Sugar-plumbs, are a kind of little dry confects, made of small fruits or seeds, little pieces of bark, or odoriferous and aromatic roots, incrusted and covered over with a hard sugar, commonly very white; of which there are several kinds, distinguished by various names, some being made of rasberries, others of berberries, melon-seeds, pistachoes, filberds, or almonds; and others of cinnamon, orange-peel, corianders, aniseed, and carroways.

These confectionaries cause a great consumption of sugar, and give good encouragement to the sugar manufactures in most countries, especially in Genoa, Portugal, and such other places as supply the consumption of Spain in these commodities, which pays annually above a million of dollars, or 175,417 l. sterling, for sugar, conserves, and other confectionaries.

CONGO, is a division of the western coast of Africa, situated between 10 and 20 deg. of E. lon. and between the equator and 18 deg. of S. lat. comprehending the countries of Loango, Angola, and Benguella. See *Guinea*.

CONQUERNA, or *Conquee*. A port-town of Britanny in France, situated in 3 deg. 50 min. of W. lon. and 47 deg. 55 min. of N. lat. on the bay of Biscay. See *France*.

CONQUET. A little port-town of France, in the province of Britany, situated in 4 deg. 46 min. of W. lon. and 48 deg. 26 min. of N. lat. being 8 miles W. of Brest.

CONSERVE, in pharmacy and confectionary, a dry confect, or form of medicine or food, contrived to preserve the flowers, leaves, roots, peels, or fruits of several simples, as near as possible to what they were when fresh gathered, and to give them an agreeable taste. See *Confect*.

CONSERVANCY, or *Court of Lord Mayor of London*, for the conservation of the river Thames. See *Thames*, and *River*.

CONSIGNMENT, or *Consignation*, the depositing any sum of money, bills, papers, or commodities, in sure hands, either by order of a court of justice, in order to their being delivered to the persons they are adjudged to; or voluntarily, in order to their being remitted to the persons they belong to, or sent to the places they are destined for.

CONSIGNMENT *of goods*, is the delivering or making them over to another; and thus goods are said to be consigned to a factor, when they are sent to him to be sold; or when a factor sends back goods to his principal, they are said to be consigned to him. See *Factor*.

CONSTANCE *Lake*, or *Lake of Constance*, in the circle of Suabia in Germany, is 21 miles long, and 8 or 10 broad; having the river Rhine running through it, with a very violent current.

CONSTANT *winds*. See *Wind*.

CONSTANTINOPLE, the metropolis of the Turkish empire, and called by way of eminence the Porte, being one of the secureſt and most commodious harbours in Europe, situated in 29 deg. 15 min. of E. lon. and 4 deg. 30 min. of N. lat. See *Turky*.

CONSUL, was formerly a name given to the chief magistrates of the Roman commonwealth; but, at present, is used for an officer established, by virtue of a commission from a sovereign prince, or state, in the ports and factories of the Levant; as also on the coasts of Barbary, Portugal, Spain, Italy, and other foreign countries of any considerable trade. These commissions are seldom granted to persons under the age of 30 years: they are to keep up a correspondence with the ministers of their country residing in the courts where their consulates depend; their business being to support the commerce, and the interest of the nation; to dispose of the sums given, and the presents made, to the lords and principals of places; to obtain their protection, and prevent the insults of the natives on the merchants of the nation: but when the consulate is vacant, the most ancient of the deputies or factors of the nation are to discharge the function thereof, till the vacancy be filled up.

The consul ought to be a native of the country he represents, and not to have the permission of merchandising: because, in the first place, if they are strangers, they have in general too little regard for the nation to be entrusted with its interests; and, in the latter, they are appointed to be judges in many concerns of trade and navigation; as also to take care that captains, and other mariners, as well as traders, who are subjects, observe the orders and instructions of their sovereign; and, therefore, ought not to be judge and party, as they would be, if they were allowed to trade, or act as agents. From this inconsistence, and for no other reasons, Lewis XIV. of France gave repeated orders, in the year 1691, prohibiting all sorts of trade to the French consuls, their officers, domestics, and other dependants, directly or indirectly, under the penalty of losing their places, and a fine of 3000 livres.

The consuls are to call to the assemblies, which they shall hold for the affairs of commerce, all the merchants of their nation, captains, and patrons, upon the place; and, as to their jurisdictions, they are to act in conformity to the customs and treaties made with the princes where they reside; the French consuls are also to keep exact memoirs of the important office of their consulship, and send them once a year to the secretary of state who has the management of maritime affairs.

The principal consuls belonging to the British nation, are those of Lisbon in Portugal; Madrid, Cadiz, and Alicant, in Spain; Naples, and Leghorn, in Italy: the consulship of Lisbon is worth 2000 l. a year; but the vice-consulship of Madeira is now rendered independent of the consul at Lisbon, whose salary arises out of a duty charged on all the British commodities imported into the Portuguese dominions, which is generally the case with all the other British consuls; but the French consuls are allowed a certain sum from the government. There are also British consuls at Algiers, Tunis, and Tripoli, in Barbary; at Grand Cairo in Egypt; at Smyrna, Aleppo, and other places of Turky; at Bergen, in Norway, and some other principal ports.

By the treaty of Utrecht, between Great Britain and Spain, it was agreed, that the British consul residing in any of the Spanish dominions, should be named by the British monarch, and should use, and exercise, the full power as any consuls ever had. The estates of British subjects dying intestate in Spain, were also to be inventoried by such consul, and put into the hands of two or three merchants nominated by him, for the security thereof, and benefit of the proprietors and creditors: which was also confirmed by the treaty of Aix la Chapelle.

CONSULS, also denote judges, elected among merchants and dealers, in ports and trading towns, particularly in France and Spain, to terminate on the spot, without fee or process, such differences and demands as arise relating to merchandises, bills of exchange, and other articles of commerce. The first jurisdiction of consuls established in France is that of Tholouse, the edict of whose establishment bears date in 1549, under the reign of King Henry II.: that of Paris followed 14 years afterwards, till, by degrees, they were established in most of the considerable trading towns in that kingdom, being a kind of court-

merchant; and if introduced in Great Britain may prove of great utility to its trading intereſt.

CONSUMPTION, in trade, implies the demand there is for any commodity, whether to be ſent abroad, or uſed at home, diſtinguiſhed by the terms of foreign and home conſumption.

CONTENT, in trade, is the capacity, or ſolid meaſure of a thing: thus a load of hewn timber has 50 cubic feet for its content: the content of a beer gallon is 282 cubic inches; of the wine gallon 231, and the gallon of dry meaſure 272. It alſo ſignifies the wares contained in a caſk or bale; and likewiſe the ſubſtance of a letter, order, or bill.

CONTESSA. A port-town of Turky, in the province of Macedonia, ſituated in 25 deg. of E. lon. and 41 deg. of N. lat. at the bottom of a bay in the European Archipelago. See *Turky*.

CONTINENT, in geography, is *terra firma*, main-land, or a large extent of a country, not interrupted by ſeas; uſed in contradiſtinction to an iſland.

The world is ordinarily divided into two grand continents, the Old and the New; the former comprehending Europe, Aſia, and Africa; and the latter North and South America: but ſome authors are of opinion, that the two grand continents are, in reality, no more than one; imagining the northern parts of Tartary to run out, and meet thoſe of North America: beſides, it is alſo doubted whether Japan be an iſland, or joined to the continent; and the ſame may be ſaid of California.

CONTRA, a Latin word, ſignifying on the other, or contrary ſide, which is much uſed in merchants accompts, where, when any perſon or accompt has been charged with a debt, to ſettle how much is due from him or it, they enquire what he has delivered or paid, with which they credit the contra or oppoſite ſide of the accompt, and then adjuſt it, by ſubtracting the amount of the leſſer ſide out of the amount of the greater.

CONTRABAND. A prohibited commodity, or a merchandiſe bought or ſold, imported or exported, in prejudice, and contrary to the laws and ordinances of a ſtate, or the public prohibitions of the ſovereign: the word being derived from the Italian *contrabando*, or contrary to edict.

CONTRABAND *goods*, are not only liable themſelves to confiſcation, but alſo ſubject thereto all other allowed merchandizes found with them in the ſame box, or bale, together with the ſhips, veſſels, horſes, and carriages, which conduct them.

There are contraband goods which, beſides confiſcation, are prohibited on pain of death; as India and China ſtuffs, linens, and other things, in France.

In England there are are two principal contrabands for exportation, wools and live ſheep, which all ſtrangers are prohibited from carrying out, on pain of having the right-hand cut off: the other, that of ſheeps ſkins, and calf ſkins, which all foreigners are prohibited from exporting upon pain of the ſame penalty, yet the ſubjects of England are allowed to tranſport the ſame from France to England. See *Wool*.

Other contrabands for exportation are raw horns, white-aſhes, utenſils for the woollen manufacture, ſtocking-looms, or any part thereof, fullers earth, and all raw hides or ſkins.

Of goods contraband as to the import, there are above fifty in the liſts made in 1662, and there are twenty-five of them which now ſtand in the book of rates; the non-execution of the acts of parliament whereby they were impoſed, ſeeming to have reſtored the others to the freedom of importation.

The chief of thoſe ſtill contrabanded, and not rated, are woollen caps, woollen cloths, ſaddles and harneſs, dice, billiards, all ſorts of tanned or dreſſed hides, dreſſed furs, all ſorts of ſhoemakers ware, locks, ſeveral ſorts of cutlers ware, all painted goods, except paper; wires, gold and ſilver leaf, and horns for lanthorns.

Since the year 1662 ſeveral other commodities have been made contraband, particularly ſilk and galloons, laces, embroidery, fringes, buttons, and other ſilk and thread manufactures; as alſo black taffeties, called *alamodes*, or luteſtring, and cambrics. See *Smuggling*.

The merchandiſe whoſe importation is prohibited in France, under the penalty of confiſcation, are gold, ſilver, and ſilk ſtuffs, ſtuffs of the bark of trees, cotton, and the bark of Indian trees; ſtuffs of thread dyed, or painted, looking-glaſſes of all ſorts, Venice points, linens, cottons, and muſlins; callicoes, either white, painted, dyed, or of all ſorts and faſhions; laſtly, foreign ſalt, and certain oils extracted from fiſh.

Gold and ſilver are prohibited exportation in Spain and Portugal: but, notwithſtanding, the greateſt part of them are conveyed into other countries.

In 1719 and 1720 an attempt was made in the Britiſh parliament to paſs a bill for putting gold and ſilver, whether in coined ſpecies or otherwiſe, among the number of contraband goods for exportation, but in vain, by reaſon of the ſtrong oppoſition made by thoſe who enriched themſelves by the export of theſe metals, which, by the laws of the kingdom, are allowed to be ſent away, upon entering them, paying the duty of the export, and making oath of their being foreign; that is, of their not being the coin, or the plate, of the Britiſh kingdom, melted down.

It may be judged whether thoſe who promoted the bill, were for the intereſt of the nation from this; that, in the ſingle month of September 1720, there were entered at the cuſtom-houſe in London 468,119 ounces of gold, and 4000 ounces of ſilver for Holland; 12,320 ounces of gold for France; 197 ounces of gold, and 5648 ounces of ſilver for Portugal; and 19340 ounces of ſilver for the Eaſt Indies, excluſive of what was exported fraudently, by private perſons, without paying the duties.

This ſhews, indeed, the plenty of gold and ſilver in England; but, at the ſame time, manifeſts the danger it is in of being at length exhauſted.

CONTRACT. A mutual conſent of two or more parties, who promiſe, and oblige themſelves, to perform ſome work or undertaking, pay a certain ſum, or the like: ſo that ſales, exchanges, and agreements, for furniſhing large quantities of goods, are ſo many different ſpecies of contracts.

CONTRACTATION. A court eſtabliſhed at Cadiz, in Spain, for managing the affairs and commerce of the Weſt Indies, being compoſed of a preſident, two aſſeſſors, a fiſcal, two ſecretaries, and an officer charged with the accompts.

CONTRACTION, in trade, is the ſame as abreviation, in writing words by parts, as *cent.* for *centum*, ℔ for *per*, and the like.

CONTRA-YERVA, or *Counter-poiſon*, a root brought from Peru, eſteemed an alexiterial, and a ſovereign antidote againſt poiſon; the root being ſmaller than that of the iris, reddiſh without and white within, knotty and fibrous: but to be good it muſt be new, heavy, and of a duſky red colour; in ſmell reſembling fig-leaves, and its taſte aromatic, accompanied with ſomewhat of acrimony.

There is an officinal compoſition, which takes its name from this root, prepared with teſtaceous powders, called *lapis contra-yerva*: both the root and lapis are of great efficacy in the ſmall pox, meaſles, fevers, and all caſes where either a diaphoreſis or perſpiration is required.

There is another kind of contra-yerva brought from Virginia, uſually called *Viperina*, very aromatic, ſeldom preſcribed, tho' ſaid to have the ſame ſucceſs againſt poiſons and venoms with the contra yerva of Peru.

CONTRIBUTION, the payment of each perſon's quota, or the part he is to bear in ſome expence; which is either voluntary or involuntary; the former being taxes and impoſts; the latter expences for carrying on ſome undertaking for the intereſt of the community; and, in trade, it implies the ſame as average. See *Average*.

CONTROL, *Comptrol*, or *Controle*, is properly a double regiſter kept of acts, iſſues, and receipts of money, by the officers, or commiſſioners, in the revenue, or navy, to perceive the true ſtate thereof; as alſo to certify the truth, and the due keeping of the acts ſubject to that enregiſterment. Hence,

CONTROLLER, or *Comptroller*, an officer eſtabliſhed to control or overſee public accompts, and to certify, on occaſion, whether things have been controlled or not; as the controller-general, and other controllers of the cuſtoms, controller of the exciſe, controller of the navy, and controller of the mint.

CONVENTION, in a commercial ſenſe, ſignifies a treaty, contract, or agreement, between two nations, preliminary to ſomething more material for adjuſting any differences relative to trade and navigation, and other public concerns; ſuch as the convention between the crowns of Great Britain and Spain, concluded, on the 3d of January 1739, at one of the palaces belonging to his Catholic Majeſty, called the Pardo, which was repugnant to the wiſhes and expectations of the generality of the Britiſh people, and brought on a war between the two nations that continued exactly eight years and eight months.

CONVOY, or *Eſcort*, a ſea-term, ſignifying one or more veſſels of war, intruſted with the conducting of a fleet of merchants, ſerving as a watch, and protection from the inſults of the enemies of the ſtate, or of pirates.

The men of war uſed as convoys, by the Engliſh, French, Portugueſe, and Dutch, are uſually from 40 to 50 guns, and ſeldom ſo large as a 60 gun ſhip: but it is neceſſary to determine the convoy by the ſituation of the times, as it is peace or war; for upon ſome occaſions a ſlight force is ſufficient; at another time a large ſquadron will not only be neceſſary, but even inſufficient, as it was found to be the caſe of the powerful French ſquadron, that was convoying a very rich Spaniſh flota in the year 1702, when it was obliged to quit its courſe to Andaluſia, whither it was bound, and was defeated by the Engliſh at Vigo, who plundered all the wealth of the galeons: ſuch alſo was the conſequence of the French ſquadron under Commodore M'Nemarra in the year 1745, when Vice-admiral Townſhend defeated him, and took 30 of the merchantmen under his convoy, in ſight of Martinico: the ſame happened to the French ſquadron commanded by Commodore Jonquiere, who was defeated in 1747, by the Britiſh admirals Anſon and Warren, as he was convoying a fleet to Canada: and ſuch alſo happened in the ſame year to another French ſquadron, under Commodore Letenduer, who, in conveying 252 ſail of merchant ſhips from France to the Weſt Indies, was intercepted, and defeated, by Rear-admiral Hawke, off Cape Finiſterre.

By the reſolutions of the Britiſh houſe of commons, the requiring or receiving of money, by the commanders of men of war, from ſhips under their convoy, is declared illegal, oppreſſive to merchants, and deſtructive to trade. In purſuance whereof the complaints of the London merchants againſt ſeveral commanders of ſhips for exacting money for convoys were heard at the bar of the houſe, on the 18th of November 1689, when captain Churchill, a member, was particularly charged with having exacted 40 l of Emanuel Hudſon, and others; and, the captain having been heard in his place, it was reſolved, that he was guilty of requiring and receiving money for convoys; and that he ſhould be committed to the Tower for the ſame; which was done the ſame day: but he was afterwards releaſed, on his petitioning the houſe, and acknowledging his fault, without any further puniſhment.

By the ſtatute of the 22d of George II. for explaining and reducing into one act of parliament, the laws relating to the government of the royal navy, it was enacted, That the officers and ſeamen of all ſhips appointed for convoy of merchant-ſhips, or of any other, ſhould diligently attend upon that charge, without delay, according to their inſtructions: and whoſoever ſhould be faulty therein, and ſhould not perform their duty, and defend the ſhips and goods in their convoy, without either diverting to other parts or occaſions; or refuſing, or neglecting, to fight in their defence, if they be aſſailed; or running away cowardly, and ſubmitting the convoy to peril and hazard; or ſhould demand, or exact, any money, or other reward, from any merchant or maſter, for convoying of any veſſels intruſted to their care; or ſhould miſuſe the maſters or mariners thereof, they ſhould be condemned to make reparation of the damage to the merchants, owners, and others, as the court of admiralty ſhould adjudge; and alſo be puniſhed according to the quality of their offences by death, or other puniſhment, according as ſhould be adjudged by the court-martial.

CONVOY-*loopers*, is a term at Amſterdam, for a kind of public factors, whoſe buſineſs it is to obtain from the convoy, or cuſtom-houſe, all the expeditions, acquitments, and paſſports merchants want for the entry, or going out of their merchandiſe; each merchant having uſually his convoy-looper; there being few, or ſcarce any merchants who trouble themſelves to go to the cuſtom-houſe. This term of convoy has ſeveral ſignifications in Holland; where it is applied to the chambers of the colleges of the admiralty, which diſtribute paſſports; and, in general, convoi-gelt implies the duties of importation and exportation paid to theſe colleges; in which ſenſe the term is alſo uſed at Bourdeaux in France.

CONWAY. A ſmall port-town of Carnarvonſhire, in North Wales, ſituated in 3 deg. 50 min. of W. lon. and 53 deg. 20 min. of N. lat. at the mouth of the river Conway.

COOK. A perſon that makes it his occupation to dreſs food for others, either plain, or according to the peculiar manner of different countries.

COOKS *company of London*, is a fraternity incorporated by letters-patent, of the 22d of Edward IV. dated the 11th of July 1480, by the name of The maſters, and governors, and commonalty of the myſtery of cooks in London; by which charter, every member of the company, before he is admitted into the freedom, is to be preſented to the Lord Mayor: the corporation having 2 maſters, 2 wardens, 25 aſſiſtants, and 78 liverymen; who, upon their admiſſion into the livery, pay each a fine of 10 l. and they have a convenient hall in Alderſgate-ſtreet, to manage their affairs in.

COOM, is a term for that ſort of ſoot which gathers over the mouth of an oven.

COOM, or *Coomb*. An Engliſh dry meaſure, for corn, peaſe, and beans; being 4 buſhels, each buſhel 4 pecks, and each peck 2 gallons, 8 lb. or pints the gallon.

COOPER. A perſon whoſe trade conſiſts in making barrels, tubs, and other wooden veſſels of capacity, for containing liquor, packing up goods, and other purpoſes.

COOPERS *company of London*, was incorporated by letters-patent of the 16th of Henry VII. in 1501, by the ſtyle of The maſter, wardens, and aſſiſtants, of the company of coopers of London, and ſuburbs of the ſame city; who, by an act of parliament in the ſucceeding reign, were impowered to ſearch, and gauge, all beer, ale, and ſoap veſſels within the city of London, and two miles round the ſuburbs of the ſame; for which they were allowed one farthing for each caſk.

The company is governed by a maſter, 3 wardens, and 20 aſſiſtants; who have a livery of 244 of their members, whoſe fine of admiſſion is 15 l. with a ſtately hall in Baſinghall-ſtreet, to tranſact their buſineſs in.

COOS, or *Longo*. An iſland of the Turkiſh Archipelago, ſituated in 27 deg. 30 min. of E. lon. and 37 deg. of N. lat. on the S. W. coaſt of Natolia, and ſubject to the Grand Signior. See *Turky*.

COPAL. A gum, or reſin, of an agreeable ſmell, reſembling that of frankincenſe, brought from New Spain, where it oozes from inciſions made in the bark of a large tree, much after the manner in which the vine yields its blood, when cut in the ſpring. The Indians uſe it to burn on their altars; but, among Europeans, it is uſed againſt diſorders of the heart, having a warming, reſolving, and humectating power. It is very ſcarce; and, when good, ſhould be of a fine tranſparent yellow, melting eaſily either in the mouth or fire: though, for want of this, another kind is brought from the Antilles, which is almoſt the only one known among druggiſts, its chief conſumption being in the making of varniſh.

COPALXOCOTL. A gum growing in New Spain, called by the Indians *pompoqua*, and by the Spaniards *arriſæ gommeuſo*; which is a ſpurious copal, having leaves like thoſe of the European cherry-tree, and fruit like the apple-

apple-tree. The apples it produces are ſweet, but aſtringent; from which there diſtils a kind of glutinous juice, whereof a topic remedy is made againſt the fever; tho' it is likewiſe proper for bloody emiſſions; its wood, which is eaſily cut, but never ſplits, ſmells and looks like the true copal.

COPARTNERS. Any number of perſons, who have an equal ſhare or intereſt in a joint ſtock, for the uſe of trade.

COPE. A term in mining, for the farm or duty paid for ore in the King's field in Derbyſhire; alſo the name of a bargain or contract, at a certain rate or price, by the load.

COPEAC, *Copec*, or *Copeke*, is a coin ſtruck and current in Ruſſia; of which there are two kinds, one of gold, and the other of ſilver.

The copeac of gold is worth about 1 s. 7 d. ſterling; but it is current in all the Ruſſian territories for ſomewhat more; which occaſions the merchants to think it not adviſable to export it from Muſcovy, though it is of a pretty good fineneſs; becauſe, upon the current footing, there would be ſometimes 20 *per cent.* loſs. But this coin is of a late date; for till the year 1636, when the ambaſſadors of Holſtein were at Moſcow, all the coins were either copeacs of ſilver, or other ſmall ſpecie.

The copeac of ſilver is of an oval figure, worth ſomewhat more than a halfpenny ſterling; though it is always current for about 3 farthings.

All theſe copeacs, whether of gold, or ſilver, are ſtamped the ſame way; having, on one ſide, the arms of the ſtate; and on the reverſe, the name of the monarch under whom they have been ſtruck, and that of the town where they have been coined; theſe places being Peterſburgh, Moſcow, Novogrod, Twere, and Pleſcow.

COPENHAGEN, is the capital of the kingdom of Denmark, ſituated in 13 deg. of E. lon. and 55 deg. 30 min. of N. lat. on the eaſtern ſhore of the iſland of Zealand, upon a fine bay of the Baltic ſea, near the ſtrait called the Sound; having a commodious harbour, not diſtant above 16 miles from the coaſt of Schonen in Sweden. See *Denmark*.

COPHTIS. A name given to the Chriſtian inhabitants of Egypt. See *Egypt*.

COPIAGO. A port-town of Chili, in South America, ſituated in 75 deg. of W. lon. and 25 deg. of S. lat. on the coaſt of the Pacific ocean, and at the mouth of a river of the ſame name. See *Spaniſh America*.

COPIVI, *Capivi*, *Copiapo*, or *Cupayba*. A balm, or balſam, of a thinner conſiſtence than common turpentine, but much more fragrant, oozing out of inciſions made in a tree, which grows near Copiapo in Chili, and in ſeveral places of Braſil; being of great uſe in medicine, eſpecially in ſeminal weakneſſes, diſtempers of the breaſt and lungs; as alſo in diarrhæas of long continuance; and the Jews uſe it to ſtop the flux of blood, after circumciſion: when good, it ſhould be thick, of an amber colour, and of an aromatic odour; when clear, and too liquid, it is a ſign that it has been extracted out of ſeaſon, or ſophiſticated by ſome other mixture; which is eaſily diſcovered by letting a drop fall into cold water; when, if the drop goes to the bottom without diſſolution, or keeps its figure, it is an infallible ſign of its goodneſs: if, on the contrary, it ſwims on the ſurface of the water, it is bad.

COPOU. A kind of Chineſe linen, made from an herb called *co*, found chiefly in the province of Fokien; which is a kind of ſerpentine ſhrub, or rather a kind of ivy; but with round, ſoft leaves, green within, whitiſh and cottonned without, and much larger than thoſe of European ivy.

The little ſtem making the body, and cottoned like the leaves, produces the hemp; which being ſteeped in water, is ſtripped of its firſt ſkin; though this is good for nothing: the ſecond, which is very fine, being what is uſed, by dividing it only with the hand, without beating or ſpinning.

The linen made thereof is tranſparent, and pretty fine; but ſo light, that it is ſcarce felt in wearing, and is worn in ſultry weather, with ſurtouts of the cha. See *Cha*.

COPPEL, *Copel*, or *Cuppel*. A veſſel uſed by refiners, and eſſayers, to try and purify their metals, otherwiſe called *teſt*. See *Refining*.

COPPER. A hard, dry, heavy, ductile metal, found in mines in ſeveral parts of Europe, but moſt abundantly in Sweden; being the moſt ductile and malleable of all metals, after gold and ſilver, abounding much in vitriol and ſulphur: being found in globes, or ſtones, of various forms and colours, which are firſt beaten ſmall and waſhed, and then ſmelted into ſalmons, or cakes of copper, which is the common metal.

Roſe COPPER, is the ordinary ſort, rendered more pure and beautiful, by melting it again once or twice, and adding a quantity of tin and antimony.

Virgin COPPER, is that which is ſometimes found native and pure in the mines, either in form of threads, or in flakes, plates, grains, or other maſſes and lumps.

Of a mixture of copper, and lapis calaminaris, is formed braſs, which the French call *cuivre jaune*, or yellow copper, in contradiſtinction to natural copper, which they call *cuivre rouge*, or red copper. See *Braſs*.

Bell-metal is made of copper, melted together with 22 or 23 pounds of fine tin to the hundred weight of copper; and copper melted in equal quantities with braſs, makes what the French call *bronze*, uſed for figures and ſtatues. See *Bell-metal*.

A great conſumption of copper and braſs ariſes from the manufacture of hard-wares, particularly candleſticks, buttons, nails, buckles, ſtoves, kettles, kitchen furniture, and other articles; of which the moſt conſiderable quantities are ſent from Germany, by the way of Holland, to ſupply the ſouthern parts of Europe: another great article in the conſumption of copper reduced to braſs, is in the foundery of artillery; and a third in the foundery of bells.

The Spaniards are plentifully ſupplied with this metal from New Spain, the iſland of Cuba, Porto Rico, and the kingdom of Chili, whence it comes over without farther improvement than that of the firſt fuſion, being formed by a mould into round cakes, each of them about three arrobs in weight, or 73 lb.; in which ſhape it is very conveniently, and without charge, brought over, ſerving as ballaſt for the ſhipping; and this the Spaniards affirm to exceed the Barbary copper, by coming up entirely to the ſtandard and perfection it ought to have for founding good braſs artillery; inſiſting that it equals, and may even excel that of Sweden and Hungary.

The copper-mines of Hungary are near a little town called Hem-ground; where the ore is ſo rich, that in 100 lb. they got from 20 to 60 lb. of copper. The beſt Engliſh mines of copper are in Coniſton-fells, near Keſwick, in Cumberland, where there are ten works; the ore being worth from 8 s. to 2 s. 6 d. the kibble, or horſe-load; it being firſt beaten very ſmall, waſhed and ſifted through an iron ſieve, then meaſured or weighed.

Swediſh copper in leaves is worth about 6 l. 2 s. 6 d. the hundred; and the plate copper, or copper money, is worth about 5 l. the hundred; Norway copper is worth about 5 l. 18 s. and Japan copper 6 l. 2 s. the hundred. By the ſtatute of the 9th and 10th of William III. it was enacted, That it ſhould be lawful for Britiſh ſubjects to export all ſuch copper-bars as ſhould be imported from foreign parts, as well as copper made of Engliſh ore, and upon exportation ſhould draw back all duties, ſaving half the old ſubſidy. But, by the ſtatute of the 12th of Queen Anne, no drawback is to be allowed on the exportation of any copper, except ſuch as ſhall be imported from the Eaſt Indies, and the coaſt of Barbary only; which act, by another of the 15th and 16th of George II. is continued till the year 1756. And, by the ſtatute of the 8th of George I. copper-ore of the production of the Britiſh plantations is reſtrained to be imported into Great Britain.

COPPER *companies*. *The Engliſh copper company* was incorporated by letters-patent, dated the 22d of September 1691, by the appellation of The governor and company of copper-miners in England; which was confirmed by Queen Anne in 1710; and, by ſubſequent grants, their power of working of mines was extended to all parts of

Ireland and New England; the corporation conſiſting of a governor, deputy-governor, and 18 aſſiſtants; who have their office in Birch-lane, Canon-ſtreet, London.

The Welch Copper company was incorporated in 1694, by the ſtyle of The governor and company of copper mines in the principality of Wales; by which charter they are allowed to purchaſe lands and tenements in mortmain, without limitation: but though this corporation, by their title, ſeem to be confined to the mines in Wales, they are now at work on ſeveral mines in England, and have their office in Philpot lane, London.

COPPERAS. A mineral formed in copper-mines, and properly a kind of vitriol. See *Vitriol.*

There is copperas of England, Germany, Cyprus, Hungary, and Italy; which only differ from each other in colour, richneſs, and perfection, being all the ſame mineral.

Copperas is purified and prepared in the ſame manner as allum and ſaltpetre, by paſſing through ſeveral lixiviums, till wholly reduced to cryſtal.

White copperas is that of Germany, which, before whitening, is of a bluiſh green, clear, and tranſparent, being formed in cakes of 40 or 50 lb. each: the Engliſh is of a fine green; that of Cyprus, and Hungary, of a ſky blue; that of Italy, likewiſe green, and as tranſparent as glaſs.

The ordinary Engliſh copperas is made of a kind of ſtone found on the ſea-ſhore, in Eſſex, Hampſhire, and ſo weſtward, abounding much with iron, and uſually called *gold ſtones*, from their colour; of which there are conſiderable works at Deptford in Kent; many chemiſts diſſolving this, and ſhooting it again, for the common ſalt of ſteel.

Copperas is of conſiderable uſe in many preparations, but eſpecially in dying of woollen cloths and hats black, in making ink, and in tanning and dreſſing leather. It alſo affords an oil, and a kind of Spaniſh brown for painters.

COPPICE, or *Copſe.* A little wood, conſiſting of underwoods, that may be cut at 12 or 15 years growth.

COPY, among bookſellers, is the manuſcript, or original of a book given to print from; the property, or copy-right, of which is in the author, or his employers, which is ſecured to them by acts of parliament. See *Books.*

COQUIMBO. A port-town of Chili, in South America, ſituated in 75 deg. 10 of min. W. lon. and 30 deg. of S. lat. at the mouth of the river Coquimbo, on the Pacific ocean. See *Spaniſh America.*

CORACLE, or *Curricle.* A ſmall boat, uſed by the fiſhermen on the river Severn, particularly thoſe of Shrewſbury; being made of oſiers, and covered with a bull's hide.

CORAL. A production of the ſea, uſually ranked among marine plants; the nature of which is very difficult to determine. The antients, without heſitation, took it for a ſtone; moſt of the moderns held it a vegetable; but of late days, M. de Reaumur maintains it to be partly plant, and partly ſtone; while another curious and able naturaliſt, who has much ſtudied the productions of the ſea, almoſt ranks it in the number of animals, as imagining it the work of certain ſea-inſects; which opinion is now ſo well eſtabliſhed, that all other ſentiments ſeem almoſt precluded. P. Kircher ſuppoſes entire foreſts of it at the bottom of the ſea; and M. Tournefort maintains, that it evidently multiplies by ſeed, though neither its flower nor ſeed are known: but the Count de Marſigli has diſcovered ſome parts therein, which ſeem to ſerve the purpoſe of ſeed and flowers.

There are properly but three kinds of coral, red, white, and black; the white is the rareſt, and moſt eſteemed; but the red is generally uſed in medicine, which muſt be choſen thick, ſmooth, ſhining, of a beautiful red, and not covered with any tartareous matter; its chief uſe being in chaplets, beads, and other toys; of which the Engliſh ſend great quantities to Guinea; and the Eaſt India company export coral to India.

There is a kind of white coral pierced full of holes, and a black coral, named *antipates*, appearing of a different nature from the reſt, but of no uſe.

Artificial CORAL, is made of cinnabar well beaten; a layer whereof is applied on a piece of wood, well dried and poliſhed, firſt moiſtened with ſize; the whole is again poliſhed, and for varniſh rubbed over with the white of an egg.

Coral gives title to an officinal compoſition, called *ſyrup of coral*, ſometimes preſcribed by phyſicians; as is likewiſe the powder of coral, finely ground, levigated on a marble, and made up in a proper form.

The virtues attributed to coral, and its preparations, are, that it is cardiac, and therefore of uſe in diarrhæas, too large fluxes of the menſtrua, of ſervice in the fluor albus, and to prevent miſcarriages: beſides, it is uſed in common as a teſtaceous powder in the diſeaſes of children; and there is alſo a magiſterial tincture, and a ſalt, extracted from it by chymiſts.

CORAL *company*, or *Baſtion company of France.* See *African companies.*

CORAL *fiſhery.* The time for fiſhing coral, is from April to July: the places are the Perſian gulph, Red ſea, coaſts of Africa towards the Baſtion of France, the iſles of Majorca and Corſica, and the coaſts of Provence and Catalonia; the method of fiſhing being nearly the ſame in all places; and that uſed at the Baſtion of France, where there is an eſtabliſhed fiſhery, under the direction of a company at Marſeilles, is as follows.

Seven or eight men go in a boat, commanded by the patron or proprietor; the caſter throws his net, if the machine wherewith he tears up the coral from the bottom of the ſea may be ſo called, and the other ſix manage the boat. The net is compoſed of two beams tied acroſs, with a leaden weight to preſs them down; to the beams is faſtened a great quantity of hemp looſely twiſted round, among which they mix ſome ſtrong nets: in which condition the machine is let down into the ſea; and when the coral is pretty ſtrongly embarraſſed in the hemp and the nets, they draw it out with a rope, which they unwind according to the depth, and which ſometimes requires half a dozen boats to draw; but if this rope happens to break, the fiſhermen are in great danger of drowning. Before the fiſhermen go out, they agree on the price of the coral, which is ordinarily at the rate of 4 s. 6 d. *per* pound; and when the fiſhery is over, which in a ſeaſon uſually amouts to 25 quintals of coral each boat, it is divided into 13 parts; the patron whereof, or maſter coraller, has four, the caſter two, and each of the ſix companions one, the 13th being reſerved for the company.

There is alſo a kind of wood growing in the Antilles iſlands called coral-wood, which is uſed in turnery and inlaid work.

CORALLINE, or *Sea-moſs.* A plant found adhering to rocks, ſhells, and even to coral; having no ſtem, but its branches ſhooting immediately out of the root.

Its uſe in medicine is not very conſiderable; though it is ſuppoſed to be of ſome effect to deſtroy worms in children, when taken in powder: it is alſo uſed as an ornament in rock-work; the beſt is greeniſh, the worſt aſh-coloured, and the red is not much better.

CORD, or *Chord.* An aſſemblage of ſeveral threads of hemp, cabled, or twiſted together, by means of a wheel. See *Cordage.*

CORD *of wood.* A certain quantity of wood for burning; ſo called, becauſe formerly meaſured with a cord, but is now meaſured between two ſtakes of wood, four feet high, and eight feet apart, being four feet broad, or deep; and all burning wood not exceeding 18 inches circumference, is deemed cord-wood, which is properly new wood; and, when brought by water, comes aboard a veſſel, in oppoſition to that which is floated.

CORDAGE, in the ſea-language, is uſed in general for all the ropes and cords, big and ſmall, uſed in the rigging and fitting out of a veſſel; but the word is alſo uſed for the art of preparing and manufacturing of ropes, and hemp-cables. See *Cable*, and *Stores.*

The number of ropes required in fitting out a veſſel is almoſt inconceivable, each having its particular name and uſe; but the commerce of cordage is more conſiderable at Amſterdam than at any other place; where they are ſold by weight; that made of Coningſberg hemp being valued at 20 *per cent.* more than that made of Ruſſia hemp, which is worth 1 ruble 20 copeacs the pood, or 4 s. 6½ d. ſterling for 36 lb. Engliſh avoirdupois. The eſchippont of cordage of neat hemp, or 300 lb. avoirdupois, is worth at Amſterdam 56 florins, or 4 l. 18 s. ſterling; that of Coningſberg

Coningſberg about 58 florins, or 5 l. 12s. 6d.; that of Ruſſia from 30 to 47 florins, or from 2 l. 12s. 6d. to 4 l. 12s. 6d.

Cordage is ſaid to be baked, when, having paſſed a ſtove, or other hot place, it is drained of all its moiſture. White cordage is that unpitched. Cordage pitched in the ſtove, is that which is paſſed through hot pitch as it comes out of the ſtove. Cordage remade, is that which is made of ropes uſed before. Change cordage, is what is kept in reſerve, in caſes of neceſſity; and cordage, when very old, is uſed in caulking of ſhips.

Cordage is ſometimes pitched in the thread, and each hundred of cordage may take up about 20 lb. of pitch.

The northern nations produce moſt hemp, and make the greateſt quantity of cordage: but cordage is alſo made of Britiſh hemp; and it is to be hoped that Great Britain will ſoon be ſupplied with great quantities of hemp or cordage from New England, and the other northern colonies of America.

The Spaniards make a kind of cordage, which they call *alpargates*; whereof they uſe great quantities at home, and yet drive a very conſiderable commerce with it to the Indies, ſo as to ſend away whole ſhip-loads; but the Indians make their cordage of the bark of cocos, maguay, and other trees.

CORDIAL, or *Cardiac*, in medicine, a comforting or refreſhing remedy, that gives a ſudden ſtrength and chearfulneſs, by raiſing the ſpirits when depreſſed by too much exerciſe, ſome diſeaſe, or the like cauſe; ſuch are ſpirit of lavender, brandy, cinnamon-water, and ſal volatile oleoſum, or ſpirit of hartſhorn.

In officinal compoſitions, the four cordial flowers are burrage, bugloſs, roſes, and violets: the four cordial waters are thoſe of burrage, bugloſs, endive, and chicory; but ſome add thoſe of carduus benedictus, ſcorzonera ſcabioſa, ſorrel, and others.

CORDOUA. A large and populous city of Spain, in the province of Andaluſia, ſituated in 4 deg. 45 min. of W. lon. and 37 deg. 45 min. of N. lat. on the river Guadilquiver, 72 miles N. E. of Seville, and 75 N. of Malaga, having a good trade in wine, ſilk, and cordouan leather.

CORDOUAN *tower*. A remarkable light-houſe at the mouth of the river Garonne in France, in the province of Guienne.

CORDOUAN *leather*, is a kind of marroquin, or morocco leather; with this difference, that the cordouans are tanned, and the real marroquins are paſſed in ſumac, or galls. Several authors are of opinion, that the cordouan leather has taken its name from Cordoua, a town of Andaluſia in Spain, where great quantities are prepared; though this leather comes chiefly from Cyprus, Aleppo, Smyrna, and other places in Turky. See *Leather*.

CORDWAINER, or *Cordiner*. The term whereby the Engliſh ſtatutes denominate ſhoe-makers; being a word formed from the French *cordonnier*, which Menage derives from Cordouan, a kind of leather brought from Cordoua, whereof they formerly made the upper-leathers of their ſhoes.

CORDWAINERS *company of London*, was incorporated by letters-patent of the 11th of Henry IV. in 1410, by the name of Cordwainers and coblers; the latter whereof, at that time, was no deſpicable epithet, as it is at preſent; for the genuine meaning thereof then was, that it not only ſignified a ſhoe-maker, but likewiſe a ſeller or dealer in ſhoes, for it does not appear that the word ſhoe-maker was then in uſe.

But the title of this company, by a late charter, is The maſter, wardens, and commonalty of the myſtery of cordwainers of the city of London; the fraternity being governed by a maſter, 4 wardens, and 16 aſſiſtants, to whom belong 108 liverymen, whoſe fine of admiſſion is 10 l. with a commodious hall in Diſtaff-lane, to manage their affairs in.

COREA. A peninſula on the N. E. of China, ſituated between 120 and 130 deg. of E. lon. and between 36 and 42 deg of N. lat. reputed to have good mines of gold and ſilver. See *China*.

CORFU. An iſland in the Mediterranean, near the entrance of the Adriatic, about 35 miles long, and 10 broad, lying about 4 miles W. of the coaſt of Epirus, and ſubject to the Venetians. See *Italian iſlands*.

CORIANDER. The ſeed of a plant of the ſame name; both the taſte and ſmell of the ſeed being very agreeable, but in the plant extremely nauſeous.

Beſides the confections made of the coriander-ſeed, it is uſed in medicine as a carminative, and a corrective to ſome parts of cathartics: it is alſo much uſed by brewers, both in England and Holland, to give a flavour to their ſtrongeſt beer.

CORIENTES *Cape*, or *Cape Corientes*. A promontory on the W. coaſt of Mexico, in North America, ſituated on the Pacific ocean in 111 deg. of W. lon. and 20 deg. of N. lat. 100 miles S. of Xaliſco.

CORINTH. A city of European Turky, called by them Gereme, ſituated in 23 deg. of E. lon. and 37 deg. 30 min. of N. lat. near the iſthmus, the narroweſt part of which is about 6 miles over, between the gulphs of Engia and Lepanto. See *Turky*.

CORINTHS. See *Currants*.

CORIS, *Cowries*, or *Cauris*, are ſmall, and exceeding white ſhells, brought from the Maldivia iſlands, and uſed as money in the greateſt part of the Eaſt Indies, particularly in the ſtates of the Grand Mogul; but though theſe ſhells are, in all appearance, a production of the ſea, they are however found on land, where they are dug for pretty deep by the Maldivians, and exchanged by them for rice, or ſome coarſe cotton cloths, which the Indian or European merchants import yearly to their country.

From 50 to 60 coris are uſually given for the pecha, or peſſa, a ſmall copper coin, about the value of an Engliſh farthing; but the more or leſs diſtant from the ſea, the more or leſs is the price of the ſhells, being dearer up the country, than near or upon the coaſts.

There are coris alſo fiſhed for about the Philippine iſlands, called by the Spaniards ſigueies, and by the Siameſe bia, who give 800 for a fanam, or 3 d. ſterling.

The coris of the Maldives are uſed alſo in the commerce which Europeans carry on along the coaſt of Guinea, where the negroes call them bouges.

The Dutch, for the general part, furniſh ſuch European nations as trade for ſlaves, with the coris; and the vaſt quantities they ſell will be no matter of ſurprize, upon conſidering that, in the kingdom of Juda alone, the French give ſometimes 80 pounds weight of coris, or bouges, for a negro; and for gold, ivory, wax, and other commodities of the country in proportion.

The coris coſt uſually between 12 and 15 d. the pound: formerly only 12,000 pounds weight were required for a cargo of 5 or 600 negroes; but now they are bought at ſo dear a rate, and the coris are ſo little eſteemed in Guinea, that upwards of 25,000 pounds weight are at preſent requiſite for ſuch a cargo.

The coris are meaſured on the coaſts of Africa, in a ſort of large braſs buſhel, like a large baſon, or chaldron, which contains about the weight of 108 pounds.

The negroes not only uſe the coris for money, but alſo for collars and bracelets for adorning themſelves; which has no diſagreeable effect, by the contraſt of the negroes black ſkin, and the whiteneſs of the ſhell.

CORK. The capital city of the county of Cork, in the province of Munſter, in Ireland, ſituated on the river Lee, in 8 deg. 25 min. of W. lon. and 51 deg. 40 min. of N. lat. being a port-town; and, in point of trade, inferior to none in the kingdom. See *Ireland*.

CORK. The outward bark of a tree of the ſame name, much reſembling the holm-tree; its leaves being green above, and white underneath; producing a real acorn, which feeds much more than that of the oak; and is found, in great abundance, in Spain, Italy, France, and ſome other places.

To take off the bark, an inciſion is made from the top to the bottom of the tree; and, at each extremity, another round the tree perpendicular to the firſt. When ſtripped from the tree, which does not therefore die, the bark is piled up in a pond or ditch, and loaden with heavy ſtones to flatten it, and reduce it into tables; from hence it is taken to be dried, and, when ſufficiently dry, put in bales for carriage; but if care is not taken to ſtrip the

bark, it ſplits and peels off from itſelf, being puſhed up by another bark formed underneath.

Cork ſhould be choſen in fine boards, all of a piece, of a moderate thickneſs, yellowiſh without and within, not full of knots, and even when cut.

The bark of cork, as well as the acorn, are of ſome uſe in medicine; being both reputed aſtringents, after being burnt and powdered, when uſed externally; but the chief employ of the former is to put in ſhoes, ſlippers, and to ſtop bottles; though the Spaniards alſo burn it, to make that light kind of black called Spaniſh black, uſed by painters. See *Spaniſh Black*.

CORK-CUTTER. A perſon whoſe buſineſs conſiſts in cutting out corks for bottles; in which women are frequently employed.

CORMANDEL, or *Choromandel coaſt*, is the eaſtern coaſt of the Hither India, ſituated in 80 deg. of E. lon. and between 10 and 20 deg. of N. lat. on which coaſt lie Madras, Pondicherry, Fort St. David, and many other European forts and factories; from whence chints, callicoes, and muſlins, with ſome diamonds, are imported into Europe. See *India*.

CORN. A plant, or rather genus of plants, producing a grain fit for bread; but it is alſo uſed for the grain, or ſeed, of that plant, ſeparated from the ſpica, or ear.

In the commerce of grain they diſtinguiſh three kinds; as corn, properly ſo called, or wheat; rye, which is a ſpecies very different, and of a quality far inferior; and a 3d kind, reſulting from a mixture of the two, called maſlin, or monk corn. The farmers, indeed, rank among the number of corns ſeveral of the grains ſowed in March; as barley, oats, and even pulſe, or beans, peas, and vetches; which however they ſometimes diſtinguiſh by the denomination of *ſmaller corn*; beſides, maiſe and ſarraſin are numbered among the corns; the firſt called Turky and Indian corn; the ſecond French or black corn; millets, rice, and lentils, are alſo called corn. See *Wheat*, *Rye*, *Maſlin*, *Barley*, *Oats*, *Peaſe*, *Vetches*, *Maiſe*, *Grain*, *Pulſe*, and *Sarraſin*.

Europe, in every part of it; Egypt, and ſome other cantons of Africa, particularly the coaſts of Barbary; as alſo ſome parts of America cultivated by the Europeans, particularly New England, Penſylvania, and New France, are the places chiefly productive of corn; other countries having maiſe and rice in lieu of it; and ſome parts of America, both in the iſlands and on the continent, ſimple roots, ſuch as yams, potatoes, and manioc.

Egypt was antiently the moſt fertile of all other countries in corn, being called the dry nurſe of Rome and Italy; but England, France, Poland, Sicily, and Hungary, ſeem now to ſerve in the place of Egypt; ſupporting, with their ſuperfluities, a great part of Europe.

For the preſervation of corn, it muſt be well dried and cleaned, the granary have its openings to the north or eaſt, and vent-holes on the top: for the firſt ſix months it muſt be well ſtirred every fifteen days; afterwards it will be ſufficient to ſift it once a month; but, after two years, it heats no more; nor is there any thing to fear, but from the air and foreign moiſture. England is too redundant in corn to have any neceſſity for a granary; but this has been frequently practiſed in other countries, to be ready provided with ſuch a neceſſary article of life in times of ſcarcity; particularly at Metz and Chalons, in France; as alſo at Dantzick, the principal granary in the world, which ſupplies the Dutch with many thouſand tons of corn annually.

By the ſtatute of the 22d and 23d of K. Charles II. it was enacted, That if any perſon ſhould ſell or buy corn in ſacks, bags, or any other thing, without meaſuring, being thereunto required, ſuch perſon ſhould forfeit the corn, or the value thereof: that there ſhould be only the Wincheſter buſhel allowed for meaſure; and if any perſon ſold by any other, he ſhould forfeit 40 s.: that a braſs buſhel ſhould be chained to a poſt, or public place, in the market-place, at the charge of the perſon taking toll, for the public uſe of meaſuring, upon penalty of forfeiting 5 l. and if the clerk of the market ſhould refuſe to ſeal ſuch meaſure as ſhould be full gauged, he ſhould forfeit 5 l. for the firſt offence, and 10 l. for the ſecond:

By the ſtatute of the 11th and 12th of William III. it was enacted, That the ſubſidy, and duties payable upon exportation of wheat, rye, malt, beans, peaſe, and other corn ground or unground, bread, biſcuit, and meal, ſhould ceaſe.

By the ſtatute of the 1ſt of James II. the juſtices of peace for the ſeveral counties wherein foreign corn may be imported, are required at their quarter-ſeſſions after Michaelmas and Eaſter yearly, by the oaths of two ſubſtantial perſons of the counties, being neither merchants nor factors for importing corn, nor intereſted in the corn imported, and each having a freehold-eſtate of 20 l. or a leaſe-hold of 50 l. a year, and by ſuch other ways as they ſhall ſee fit, to determine the common market-prices of middling Engliſh corn; and to certify the ſame to the chief officer and collector of the cuſtoms reſiding in the ports where corn is imported, to be hung up in the cuſtom-houſe; and the cuſtom of foreign corn imported is to be paid according to the prices contained in ſuch certificate. It was alſo enacted, That all that is to be done by the juſtices in the counties, ſhall be done in like manner in London, in October and April yearly, by the mayor, aldermen, and juſtices: ſo that the perſons making ſuch oaths ſhould be no corn-chandler, mealman, factor, merchant, or perſon intereſted in ſuch corn to be imported, and ſhould be ſubſtantial houſekeepers in Middleſex or Surry, qualified as aforeſaid. But, by the ſtatute of the 2d of George II. it was enacted, That if the juſtices ſhould neglect to determine the prices of corn, and to certify the ſame, in purſuance of the above mentioned act; in ſuch caſe the collector of the cuſtoms at the port of importation is empowered to receive the duties of the corn imported, according to the loweſt price of the ſame ſort of corn mentioned in the 22d of Charles II.

By the ſtatute of the 5th of George II. it was enacted, That no warrant, cocket, or other writing, ſhould be granted for carrying to ſea, from any port within South Britain to any port of the ſame, any foreign corn after importation thereof; and no perſon ſhould tranſport any foreign corn, or foreign corn mixed with Engliſh, under penalty that all ſuch corn that ſhould be tranſported, or laden, contrary to this act, ſhould be forfeited, and every offender ſhould forfeit 20 s. for every buſhel of ſuch corn, and the ſhip upon which ſuch corn ſhould be laden ſhould be forfeited; and the maſter and mariners of ſuch ſhip wherein ſuch offence ſhould be committed, knowing ſuch offence, and aſſiſting thereunto, ſhould be impriſoned three months.

The other regulations for the ſale and exportation of corn, are made by the ſtatutes of the 12th of William III.; as alſo the 1ſt, 5th, 6th, and 7th of Queen Anne; and, by the 24th of K. George II. regulations are made for the admeaſurement of wheat-meal, or other corn, or grain ground, for which a bounty is payable upon exportation.

The bounty on CORN *exported.*

	Prices per qr. Winch. meaſ. l.	s.	d.	Bounty per qr. Winch. l.	s.	d.
By the ſtatute of the 1ſt of William and Mary,						
Wheat - -	2	8	0	0	5	0
Rye - -	1	12	0	0	3	6
Barley - -	1	4	0	0	2	6
Malt - -	1	4	0	0	2	6
But the exciſe of 6 d. *per* buſhel muſt not be reckoned into the price of the malt, by the 13th and 14th Will. III. cap. 5. ſect. 31. and the 12th Anne, cap. 2. ſect. 3.						
By the 5th of Anne, cap. 8. ſect. 6. & cap. 29. ſect. 10. 15.						
Beer, alias bigg - -	1	4	0	0	2	6
Malt made of wheat -	2	8	0	0	5	0
And oat-meal, when oats do not exceed -	0	15	0	0	2	6

When the above ſorts of corn, either ground or unground, do not, at the port of exportation, exceed the reſpective prices in the firſt column, and ſhall be ſhipped on board any Britiſh ſhip, lawfully manned, in order to be exported, the exporter is to be allowed the reſpective bounties in the ſecond column, who is to give a bond in the penalty of 10 l. for every ton of oat-meal, or 40 buſhels of

of bigg, and in the penalty of 200 l. at leaſt, or 8 s. *per* quarter for every 100 tons of all the other ſorts, that the ſame ſhall be exported into parts beyond the ſeas, and not be relanded in Great Britain, or the iſlands of Guernſey or Jerſey; which bond may be delivered up to be cancelled, on producing a certificate under the common ſeal of the chief magiſtrate in any place beyond the ſeas, or under the hand and ſeal of two known Britiſh merchants, teſtifying that the corn was there landed; or on proof by creditable perſons, that the corn was taken by enemies, or periſhed in the ſea.

In order to adjuſt the quantity for which the bounty is to be paid, the corn is to be admeaſured by the proper officers of the cuſtoms, who, for the greater expedition, may make uſe of a tub or meaſure, containing four Wincheſter buſhels; or, if the corn is intended to be exported in ſacks, they are to chuſe two out of any number not exceeding 20 ſacks, and ſo in proportion, thereby to compute the quantity; but, if exported from London, it may be meaſured by the ſworn meters, from whoſe certificate the ſearchers may certify the quantity ſhipped for exportation.

But the bounty on malt is to be allowed after the rate of 30 quarters, for every 20 quarters of barley, or other corn or grain entered and made into malt for exportation. The bounty is to be paid by the collector of the ports, upon demand made by the exporter, unleſs he has not ſufficient money in his hands; and then, except for bigg and oat-meal, he is to certify the ſame to the commiſſioners of the cuſtoms, who are to cauſe the money to be paid by the receiver-general within three months.

	Wheat ſold for l. s. d.	and malt for l. s. d.
In 1646,	2 8 0 the qr.	1 9 0 the qr.
In 1656,	2 3 0	1 4 0
In 1666,	1 16 0	1 6 0
In 1676,	1 18 0	1 6 0
In 1686,	1 14 0	1 5 4
In 1696,	3 11 0	1 8 0
In 1706,	1 6 0	1 2 0
In 1716,	2 8 0	1 8 0
In 1726,	2 6 0	1 8 0
In 1736,	2 0 4	1 4 0
In 1746,	1 19 0	1 2 4

It is to be obſerved, that there are two prices of corn every year, the one at Lady day, the other at Michaelmas; both which are put together, and the half is taken for the common price of that year: alſo, in the price of malt, it muſt be obſerved, that the tax of 6 d. *per* buſhel is not charged, which is an addition of 4 s. to every article of the malt from the commencing of the malt tax.

The corn-trade is very advantageous to Great Britain, which is chiefly owing to the bounty; for from the 25th of December 1734 to the 25th of December 1735, there were exported from ſeveral ports in England the quantities following.

Barley. qrs. b.	Malt. qrs. b.	Oat-meal. qrs. b.	Rye. qrs. b.	Wheat. qrs. b.
57,520 3	219,781 7	1920 6	1329 4	153,343 5¾

	by malt - -	26434	18	0¼
	by oat-meal -	240	1	10½
	by rye -	232	13	3
	by wheat -	38333	18	6
	Total	72433	12	7¼

Great Britain ſupplies Spain and Portugal with great quantities of corn, ſending ſome years to the amount of 200,000 l. to the latter: but as corn is liable to periſh by the wevil, and other accidents, the merchant ought to receive the benefit and continuance of the bounty; eſpecially as the Spaniards and Portugueſe are alſo ſupplied with large quantities of corn from Barbary and Sicily, which countries can afford to ſell it cheaper than Great Britain; beſides, Denmark and Hamburgh, as well as Dantzic, export great quantities of corn; as alſo do the Britiſh colonies in North America.

CORN, is alſo to ſeaſon, preſerve, or to prepare fleſh, by rubbing or covering it with ſalt, or brine made for that purpoſe, to keep it from tainting or ſtinking.

CORNADOS. A ſmall money of accompt, uſed in Spain, being the fourth part of a maravedie, or $\frac{43}{136}$ of a penny.

CORNELIAN, otherwiſe *Sardonyx*. A precious ſtone, uſually red, but inclining to an orange-colour; which is eaſily engraved; and the moſt beautiful engravings of antiquity are on this ſtone; which is now ſeldom uſed, but for making of ſeals. The fineſt cornelians are thoſe brought from Babylon; the next are thoſe of Sardinia; the laſt thoſe of the Rhine, Bohemia, and Sileſia. See *Sardonyx*.

CORNU *Cervi*, or *Hartſhorn*. See *Hartſhorn*.

CORO. A port-town on the Caracca coaſt, in the province of Terra firma in South America, ſituated in 69 deg. of W. lon. and 11 deg. of N. lat. at the bottom of the gulph of Venezuella. See *Spaniſh America*.

CORO, is alſo a duty paid to the King of Spain, for the gold and ſilver of the mines of Chili and Peru; the duty of gold being a 20th, and that of ſilver a 5th.

CORON. A port-town of European Turky, in the territory of Belvidere in the Morea, ſituated in 22 deg. of E. lon. and 36 deg. 30 min. of N. lat. on a bay of the Mediterranean. See *Turky*.

COROURE. A kind of money of accompt, uſed in ſeveral parts of the Eaſt, particularly in the territories of the Mogul, for calculating large ſums, ſuch as millions in England; a coroure of rupees containing 10 millions of rupees. See *Rupee*.

CORPORAL *of a ſhip*, is an officer who has the charge of ſetting the watch and centries, and relieving them: he ſees that all the ſoldiers and ſailors keep their arms neat and clean; he alſo teaches them how to uſe their arms, and hath a mate under him.

CORPORATION. A body politic, or incorporate; ſo called becauſe the ſeveral members thereof are formed into one body, being qualified to take, purchaſe, or grant lands, have a common ſeal, ſue, and be ſued, with other privileges, in their joint capacity; which may be eſtabliſhed either by preſcription, letters-patent, or act of parliament: of which there are two diſtinctions, eccleſiaſtical, or lay; the former being thoſe of univerſities, colleges, or hoſpitals; and the latter being thoſe of cities, towns, mayoralties, bailiwicks, and companies or communities of commerce. See *Charter*.

CORPORATIONS, or *Corporate towns*. By the ſtatute of the 19th of Henry VII. it was enacted, That no maſter, wardens, and fellowſhip of crafts, nor rulers of guilds and fraternities, ſhould make any acts, or execute any trade, in diſinheritance or diminution of the prerogative of the King or any other, nor againſt the common profit of the people; except the ſame acts be examined and approved by the chancellor, treaſurer, or chief juſtices of either bench, or three of them, or before both the juſtices of aſſiſe in their circuit, upon pain of forfeiture of 40 l. And none of the ſame bodies corporate ſhould make any acts, or ordinances, to reſtrain any perſon to ſue to the King, or any of his courts, for due remedy, nor put nor execute any penalty or puniſhment for ſuch ſuit, upon pain of forfeiture of 40 l.

CORRECTORS, in medicine, ſuch ingredients in a compoſition as guard againſt, or abate the force or dangerous qualities of others.

CORRESPONDENT, in trade, the perſon that a merchant, or other perſon, traffics with in a diſtant town or country; from whom he receives, or to whom he gives advice, concerning the riſe or fall of commodities.

CORSAIR. A pirate, or perſon who ſcours the ſeas, eſpecially the Mediterranean, with a veſſel armed for war, without commiſſion from any prince or power, to plunder merchant-veſſels; a corſair being diſtinguiſhed from a privateer in this, that the latter does it under a commiſſion, and only attacks the veſſels of thoſe at war with the ſtate whence his commiſſion is derived; and the puniſhment of a corſair is to be hanged, without remiſſion: whereas privateers are to be treated as priſoners of war; and all

corſair veſſels are good prizes. See *Pirate*, *Privateer*, *Capture*, and *Prize*.

The word *corſair* is now generally applied to the ſhips employed by the piratical ſtates of Barbary and Morocco, to commit their depredations on European ſhips, in the Mediterranean; where they can eaſily ſally out of their numerous ports of Tangier, Tetuan, Saliee, Tripoli, and others. The part moſt infeſted by the corſairs is the very channel, or ſtreights of Gibraltar, which they eſteem the likelieſt cruize for picking up prizes; where their greateſt depredations are committed, from the beginning of November to the end of March, by barks, and other ſmall craft with oars, that wait only to pick the coaſting veſſels of ſuch nations as are excluded from the amity of theſe infidels: however, they have ſhips of conſiderable force, particularly ſeveral of 54 guns; and, by their long practice of piracy, have been improved in their manner of building as well as fighting their ſhips of war; whereby they are enabled, not only to interrupt the freedom of navigation, but alſo to appear in formidable bodies ſufficient to invade the coaſts of Italy and Spain, where they frequently make deſcents; taking priſoners, and dragging into captivity, many inhabitants of both ſexes; for whoſe redemption theſe barbarians procure ſuch large ſums of money, as empower them to increaſe their maritime force, and commit ſtill greater injuries on the Europeans. See *Barbary*, and *Morocco*.

CORSICA. An iſland in the Mediterranean, ſituated between 8 and 10 deg. of E. lon. and 41 and 43 deg. of N. lat. 100 miles S. of, and ſubject to Genoa. See *Italian Iſlands*.

CORTEX. A Latin name, denoting the bark, or outer coat of a tree or ſhrub. See *Bark*.

CORTEX *thuris*. See *Frankincenſe*.

CORTEX *Peruvianus*. See *Quinquina*.

CORTEX *winteranus*, or *Winteri*. The bark of a tree brought from the ſtreights of Magellan, by Captain Winter, in his voyage with Sir Francis Drake; which Cluſius calls *Magellanica aromatica arbor*.

The bark is aromatic, and found of good uſe at ſea againſt the ſcurvy; half a dram of it, boiled with other carminative ſeeds, ſweating and relieving ſcorbutic patients: it has alſo proved an antidote againſt a poiſonous ſort of ſeal, called a ſea-lion, frequent in thoſe parts. The bark ſold in the ſhops, under the name of cortex winteranus, or wild cinnamon, Sir Hans Sloane obſerves, is not the true cortex winteranus: they grow on different trees, in different countries, and their appearance is very different; yet they are ſo like in taſte, that he thinks they may be uſed as ſuccedaneums to each other. See *Coſtus Indicus*.

CORVED *herring*. See *Herring*.

CORUNNA, or the *Groyne*. A port-town of Galicia in Spain, ſituated in 9 deg. of W. lon. and 43 deg. 10 min. of N. lat. on a fine bay of the Atlantic ocean, where the Engliſh packet-boat always goes in time of peace. See *Spain*.

CORVO, or *Cuervo*. The moſt weſterly of the iſlands of Azores, ſituated in 32 deg. of W. lon. and 40 deg. of N. lat. in the Atlantic ocean, between Europe and America; where it is obſerved the needle has no variation. See *Azores*.

CORZOLA, or *Curſcola*. An iſland of the gulph of Venice, ſituated in 18 deg. of E. lon. and 42 deg. 35 min. of N. lat. divided from Raguſio in Dalmatia, by a narrow ſtrait.

COSMETICS, are ſuch preparations as ſerve to beautify and embelliſh the face, or to preſerve and improve the complexion; ſuch as ceruſs, and the whole tribe of fucus's, waſhes, cold creams, and lip-ſalves, uſed by ladies.

COSSACKS. People inhabiting the banks of the rivers Nieper and Don, near the Black Sea, and the frontiers of Turky; whoſe country is uſually called the Ukrain, being for the moſt part ſubject to Ruſſia. See *Ruſſia*, and *Tartary*.

COSSAS. A ſort of fine and plain muſlin, brought from the Eaſt Indies; being about 16 ells long, and 3-4ths broad: but there are alſo torps, ſeer coſſas, doms coſſas, and bords coſſas; which are muſlins of different manufactures, though of the ſame meaſure with the plain coſſas.

COSSE. A kind of fruit found in ſome parts of the Guinea coaſt, particularly upon the banks of the river Sierra-leon; which in figure reſembles the Indian cheſnut; having even a ſmatch of its bitterneſs, but only ſo much as ſlightly to pique the palate, without irritating it.

There are two ſorts of this fruit; the white, and the red, equally eſteemed by the negroes and Portugueſe; for the latter, by tranſporting it to ſuch parts of the river of Sierra leon, where it does not grow, make a part of their trade with the negroes, from whom they get carpets in exchange; which, in going down the river, they truck with other negroes for the commodities of the country; ſuch as wax, honey, and gum; or even ſell to other Portugueſe not converſant in this trade.

COST. The charge, expence, or price of any thing; thus, in trade, prime coſt is the original price given for any commodity.

COSTARDMONGER. A trader, or dealer, in apples.

COSTUS *Arabicus*. The root of a tree reſembling elder, brought from Arabia, from whence it is denominated; being chiefly uſed in medicine, and as an ingredient in Venice treacle: the beſt ſort of which is heavy, of a cineritious colour on the outſide, a reddiſh one within, difficult to break, of a ſtrong ſmell, and an aromatic taſte.

COSTUS *Indicus*, is a root, called alſo coſtus blavo, coſtus corticoſus, coſtus corticus, or winter's bark, principally found in the iſland of Madagaſcar in Africa, and in thoſe of Domingo and Guardaloupe in America. See *Cortex Winteranus*.

COTTON, or *Coton*. A ſort of wool, or rather flax, encompaſſing the ſeed of a tree of the ſame name; which grows common in ſeveral places of the Levant, and of the Eaſt and Weſt Indies, eſpecially in the Antilles; the fruit being of an oval form, about the ſize of a nut; which, as it ripens, grows black on the outſide; and, by the heat of the ſun, opens in ſeveral places, diſcovering the cotton through the clefts, of an admirable whiteneſs; and in each fruit are found ſeveral little beans, which are the ſeed of the tree.

There is another kind of cotton plant, called by botaniſts *goſſipium herbaceum*, which creeps along the ground, as the vine would do if unſupported; the cotton whereof is in the moſt eſtimation: and the late relations from South America mention two other kinds; the one in the Terra firma of Braſil, the other in the iſle of St. Catharine.

The ſeed of the cotton being mixed in the fruit, together with the cotton itſelf, occaſioned the invention of little machines; which being played by the motion of a wheel, the cotton falls on one ſide, the ſeed on the other; and thus they are ſeparated.

Cotton makes a very conſiderable article of commerce, being diſtinguiſhed into cotton in the wool, and ſpun cotton; the former being uſed for various purpoſes, as to be put between two ſtuffs, in quilts, night-gowns, and other furniture or apparel: but the latter is more general, furniſhing various cloths, muſlins, callicoes, dimmities, and hangings, beſides being frequently joined with ſilk and flax in the compoſition of other ſtuffs.

Cotton in the wool is uſually brought from Cyprus and Smyrna, being produced in greater quantities in the neighbourhood of the latter place than any where elſe: they ſow the ſeed in June, and gather it in October, the ſoil being ſo favourable, that they can have three crops a year: ſo that, notwithſtanding there are generally brought from Smyrna 10,000 bales of cotton annually, there is at leaſt as much more ſpent in the manufactures of the country.

The beſt wool cotton is that of the plain of Darnamas, being the moſt beautiful, and whiteſt of all thoſe ſold at Smyrna; the price of which is uſually from 1 l. to 1 l. 5 s. the quintal of 44 ocos; riſing, however, or falling, according as the ſale of ſpun cotton is more or leſs conſiderable. For the ſpun cottons, they are diſtinguiſhed by ſeveral names; but the beſt are thoſe from Jeruſalem, called *bazacs*; and thoſe of Damaſcus, called *cottons of the ounce*; the reſt being diſtinguiſhed by the names of demi bazacs, baladins, payas, cottons joſeph genegunſo, and others.

The ſpun cottons of the Eaſt Indies, known by the names of Tutucorin, Java, Bengal, and Surat, are divided into four or five ſorts, diſtinguiſhed by A, B, C, and

and are ſold in ſacks; one pound and a half being deducted for each ſack, for the ſpun cottons of Tutucorin, which are deareſt, and two pounds for the two other ſorts.

Beſides the common cotton, which grows in abundance throughout all Perſia, there are two other ſorts; one of which is a kind of wad, and the other reſembling the cotton of the Antilles.

The manufactures of cotton are now become ſo great an employment for the poor of Great Britain, as to bring an additional wealth to the kingdom; where, after being curiouſly picked and ſpun, it makes dimities, tapes, ſtockings, and gloves; beſides ſeveral things wove fit for uſe, as waiſtcoats, petticoats, and drawers, of different ſtripes and fineneſs; with all which Great Britain ſupplies her plantations, and other foreign markets; nor is it doubted but the workmen in England would equal thoſe in the Eaſt Indies for callicoes, had they encouragment. See *Plantations*, for regulations on importing this commodity.

COTTA. A kind of meaſure, uſed in the Maldives for meaſuring the coris, of which it contains 12,000.

COTTIMO. A commercial term, uſed in the port-towns of the Levant, ſignifying a conſular duty impoſed at ſo much *per cent.* on ſhipping, either for the payment of ſome Turkiſh extortions, or other common national affairs.

COVERLET, or *Coverlid.* An ornamental covering, for bed-furniture, thrown over all the other cloaths.

COVERON. A ſmall port of France. See *France.*

COULAN, or *Quilon.* A fort or factory belonging to the Dutch, ſituated in 75 deg. 30 min. of E. lon. and 8 deg. 30 min. of N. lat. on the Malabar coaſt of the Hither India. See *India.*

COUNCIL. An aſſembly, or meeting, of the moſt conſiderable perſons, or officers, in the nation, to concert meaſures for the adminiſtration of public affairs.

The Privy COUNCIL, is a council of ſtate held by the King, to concert matters for the ſafety, honour, and welfare of the public; ſuch as, negotiations, or treaties, with foreign princes, iſſuing out proclamations, and determining important controverſies.

COUNCIL *of war*, at ſea, is an aſſembly of the principal officers, convened by the admiral, or other commanding officer, to conſult in what manner to regulate their actions. See *Admiral.*

Common COUNCIL. See *Common Council.*

COUNTER-*bond*, is a bond given to indemnify a perſon who has given his bond for another, which is alſo called *counter-ſecurity.*

COUNTER-*change.* A mutual exchange between two parties. See *Exchange.*

COUNTER-*mark.* A word applied, in commerce, to the ſeveral marks put on a bale of goods belonging to ſeveral merchants, that it may not be opened but in the preſence of them all, or their agents.

In goldſmiths works, the counter-mark is the mark or puncheon of the hall, or company, to ſhew the metal is ſtandard, added to that of the artificer who made it.

COUNTER-*part*, in law, is the duplicate, or copy, of any indenture or deed.

COUNTER-*poize*, any thing ſerving to weigh againſt another; particularly a piece of metal, ordinarily braſs or iron, making a part of the *ſtatera Romana*, or ſteelyard; which is contrived to ſlide along the beam; and, from the diviſion in which it keeps the ballance in equilibrio, the weight of the body is determined. But it is alſo called the *pear*, on account of its figure; and *maſs*, by reaſon of its weight. See *Ballance.*

COUNTER-*poiſon.* An antidote, or remedy, preventing the effect of poiſon; of which kind are Venice treacle, mithridate, and orvietan. See *Mithridate*, and *Theriaca.*

Counter-poiſons are either general or ſpecific: to the general kind belong angelica, rice, carduus benedictus, the vince-toxicum, dittany, ſcorzonera, citrons, bezoar, hartſhorn, and others: for ſpecificks, citron-bark is a counter-poiſon to nux vomica, Venice treacle to the bite of a viper, oil of ſcorpion to the bite of ſcorpions, oil of pine-apples to orpiment, and gentian to the cicuta.

COUNTER *ſigning.* The ſigning an order, or patent, of a ſuperior, in quality of ſecretary, to render the thing more authentic: thus charters are ſigned by the King, and counterſigned by a ſecretary of ſtate, or Lord Chancellor.

COUNTER-*tally*, one of the two tallies whereon any thing is ſcored. See *Tally.*

COUNTING-*houſe.* See *Compting-houſe.*

COUPANT. A Japaneſe piece of gold or ſilver, of an oval figure.

There are ſome gold ones that weigh one ounce, ſix drams, being worth about 3 l. 12 s. 6 d. ſterling: but theſe pieces are extremely long and broad, their greater diameter being upwards of 4 inches, and the ſmaller of 2 inches and a half: though there are other gold coupants about a third of the large ones, both in form and weight, amounting to about 1 l. 4 s. 2 d. ſterling.

The coupant of ſilver is worth 1 s. 2 d. ſterling: but theſe are not properly coins, being generally taken by weight.

COUPANT, is alſo a ſmall weight, uſed in the iſland of Borneo, for weighing diamonds; 10 coupants weighing between 30 and 40 carats.

COUPLE, in trade, is a pair, or two things of the like kind or ſort; particularly of fowl and rabbits.

COURANT. See *Current.*

COURLAND *Duchy*, is ſituated between 21 and 26 deg. E. lon. and between 56 deg. 30 min. and 57 deg. 30 min. of N. lat. bounded by the river Dwina, which divides it from Livonia, in Ruſſia, on the north; by Lithuania, in Poland, on the Eaſt; by Samogitia on the ſouth; and by the Baltic ſea on the weſt; being 130 miles long, and 30 broad.

This dutchy is uſually reckoned a province of Poland; but the Courlanders elect their own princes, and are governed by their own laws: however, they are influenced in their choice, either by the Poles or the Ruſſians: though the latter ſeem to have the greateſt influence on them at preſent, as they are the moſt powerful nation; and having ſent Count Biron, the late Duke of Courland, into baniſhment in Siberia, ſince which time the ducal dignity has been ſuſpended.

The capital of this country is the city of Mittau, ſituated on the river Muſſa, about 30 miles S. of Riga; the other principal places are, Goldingen, and Windaw; but they are not remarkable for any kind of commerce. See *Ruſſia*, and *Poland.*

The only port belonging properly to Courland is Libaw, on the Baltic; tho' Memel, at the entrance of the gulph of Courland, belonging to Ducal Pruſſia, might be ſaid to ſerve it alſo for a port; and to be the ſtaple with the former of all its commerce, which conſiſts chiefly in corn, linſeed, flax, hemp, yarn, timber, maſts, tar, honey, wax, pot-aſhes, tallow, and goat-ſkins.

The linſeed and hempſeed brought from this dutchy in great quantities, are the moſt eſteemed of all other kinds in the north; a great conſumption whereof is made either in Holland for oil; or in France, Flanders, Ireland, and Great Britain, for ſowing: the Dutch alone employing in this commerce to the amount of 25 ſhips yearly.

COUROU. A money of accompt uſed in the territories of the Mogul. The courou of rupees making 100,000 lacks of rupees, and the lack 100,000 rupees, or 12,500 l. ſterling.

COURSE, in navigation, the point of the compaſs, or horizon, on which a ſhip ſteers. See *Point*, and *Compaſs.*

When a veſſel begins its courſe, the wind wherewith it is driven makes a certain angle with the meridian of the place; and, as it is here ſuppoſed, the veſſel follows exactly the direction of the wind, making the ſame angle with the meridian which the wind makes: the wind is likewiſe ſuppoſed the ſame; and becauſe each point, or inſtant of a courſe may be regarded as the firſt, every moment of the courſe it makes the ſame angle with the wind.

Now a wind that is N. E. in England, and by conſequence makes an angle of 45 degrees with our meridian, is N. E. wherever it blows, making the ſame angle of 45 degrees with all the meridians it meets. The courſe of a veſſel therefore driven by the ſame wind makes the

ſame angle with all the meridians on the ſurface of the globe. If the veſſel run N. and S. it makes an angle infinitely ſmall with the meridian, being parallel to it, or never going from it; if it run E. and W. it cuts all the meridians at right angles; in the firſt caſe deſcribing a great circle; in the ſecond either a great circle, which is the equator, or a parallel. But if the courſe lies between the two, it does not then deſcribe a circle, becauſe a circle drawn in ſuch a manner would cut all the meridians at unequal angles; it therefore deſcribes a ſpiral, or curve, the eſſential condition whereof is, to cut all the meridians under the ſame angle, called the *loxodromic curve*, or *loxodromy*, popularly rhumb. See *Rhumb*.

The ſhip's courſe therefore, except in the two firſt caſes, is always a loxodromic curve; and the hypotheneuſe of a rectangle triangle, whoſe two other ſides are the ſhip's way in latitude and longitude.

The latitude is uſually had by obſervation; and the rhumb, or angle of the courſe, is had by the compaſs, together with the one or other of the two ſides; what remains to be calculated in ſailing being the quantity of the longitude, and of the rhumb or courſe. See *Sailing*, and *Chart*.

Complement of the COURSE. See *Complement*.

COURT-*martial*, is a court conſiſting of officers belonging to the royal navy, for trial of delinquents acting contrary to the maritime laws.

By the ſtatute of the 22d of George II. it was enacted, That no court-martial ſhould conſiſt of more than thirteen, or of leſs than five perſons; and no member of a court-martial, after trial is begun, ſhall go on ſhore till ſentence be given, except in caſe of ſickneſs, upon pain of being caſhiered. But no commander in chief of any fleet, or ſquadron, of his Majeſty's ſhips, or detachment thereof, conſiſting of more than five ſhips, ſhall preſide at any court-martial in foreign parts; becauſe the next officer in command is to hold ſuch court-martial, and preſide thereat; though if any material objection occurs againſt the ſecond officer, the third is to be appointed.

General COURT, in companies of commerce, ſuch as the Eaſt India and South Sea companies, are thoſe aſſemblies where every ſtock-holder has a right to appear, and interfere in the deliberations of the day, which is only upon extraordinary occaſions.

COURT *of Pie-pouder*. See *Pie-pouder*.

COUTANCES. A port-town of Normandy, ſituated in 1 deg. 32 min. of W. lon. and 49 deg. 10 min. of N. lat. See *France*.

COW, or what in the country language is called a kine, that female well-known creature which produces much milk, both for immediate uſe and to make butter and cheeſe; or that alſo brings forth young, called calves, of which, as they grow up to maturity, the males are again called bulls, or oxen, and the females heifers, or cows; whoſe fleſh when killed for food is called beef. See *Beef*, *Butcher*, and *Butter*.

COWES. A town and harbour on the N. coaſt of the Iſle of Wight, ſituated in 1 deg. 25 min. of W. lon. and 50 deg. 45 min. of N. lat. See *Britiſh Iſles*.

COZUMEL. An iſland near the W. coaſt of Jucatan, in America, ſituat d in 89 deg. of W. lon. and 19 deg. of N. lat. where Cortez landed and refreſhed his troops, before he entered on the conqueſt of Mexico. See *Spaniſh America*.

CRAB. A ſea ſhell-fiſh, both large and ſmall; as alſo a wild and ſour apple, which produces verjuice; and likewiſe an engine with claws to heave ſhips off or on the ſtocks, to launch or repair them.

CRABS-*Eyes*, *Oculi Cancorum*, or *Lapides Cancorum*, are little white round ſtones, uſually flat, ſo called becauſe taken out of the craw-fiſh, or river-lobſter; and tho' bearing no great ſimilarity to eyes, yet reſembling them more than any other part; which are much uſed in medicine as a powerful alkali or abſorbent.

CRADLE. A convenience made by baſket-makers, of oziers, for children to ſleep in; and among ſhipwrights it is the wooden frame in which a ſhip is either built or repaired for the convenience of launching her with eaſe and ſafety.

CRACOW, ſometimes reckoned the capital city of Poland, is ſituated in 19 deg. 30 min. of E. lon. and 50 deg. of N. lat. near the banks of the Viſtula. See *Poland*.

CRAFT, ſignifies a trade; but in the ſea-language it implies all manner of lines, nets, hooks, and the like, which ſerve for fiſhing: hence, as thoſe who uſe the fiſhing-trade uſe ſmall veſſels, ſuch as ketches, hoys, ſmacks, and boats, they call ſuch little veſſels ſmall-craft.

CRAMP-*iron*. A piece of iron bent at each extreme, ſerving to bind together pieces of wood, ſtones, or other things.

CRANAGE. A liberty to uſe a crane, for drawing goods out of a ſhip, hoy, or other veſſel, at a wharf, and to make profit thereof: but the word ſignifies the money taken or paid for the ſame. See *Wharfage*.

CRANE. A machine uſed in building and commerce, for the raiſing of large ſtones and other weights, conſiſting of ſeveral members or pieces; the principal whereof is a ſtrong perpendicular beam, firmly fixed in the ground, and ſuſtained by eight arms, coming from the extremities of four pieces of wood laid acroſs; through the middle whereof the foot of the beam paſſes, the arms meeting about the middle of the beam, where they are mortiſed into it. Its top ends in an iron pivot, whereon is bore a tranſverſe piece, advancing out to a good diſtance, in manner of a crane's neck, whence it is denominated. The middle and extremity of this is again ſuſtained by arms from the middle of the beam; and over it comes a rope, or cable, to one end whereof the weight is fixed; the other is wound round the ſpindle of a wheel, which when turned draws the rope, and that heaves up the weight, to be afterwards applied to any ſide or quarter, by the mobility of the tranſverſe piece on the pivot.

CRANE-*lines*, in a ſhip, are lines going from the upper end of the ſprit-ſail-top-maſt, to the middle of the fore-ſtays, ſerving to keep the ſprit-ſail-top-maſt upright and ſteady.

CRANGANOR. A Dutch factory, ſituated in 75 deg. 5 min. of E. lon. and 10 deg. of N. lat. on the Malabar coaſt, in the Hither India. See *India*.

CRANK, is a term uſed in the ſea-language: thus a ſhip is ſaid to be *crank-ſided* when ſhe cannot bear her ſails; or can bear but ſmall ſail for fear of overſetting: ſhe is alſo ſaid to be *crank by the ground*, when her floor is ſo narrow that ſhe cannot be brought on ground without danger.

CRAPE. A light tranſparent ſtuff, in manner of gauze, made of raw ſilk, gummed and twiſted on the mill; wove without croſſing, and much uſed in mourning, being either craped, that is criſped, or ſmooth: the firſt double, expreſſing a cloſer mourning; the latter ſingle, uſed for that leſs deep; both of which are generally black: the white being reſerved for young people, or thoſe devoted to virginity: but they are all dyed raw.

The ſilk deſtined for the firſt is more twiſted than that for the ſecond; it being the greater or leſs degree of twiſting, eſpecially of the warp, which produces the criſping given it when taken out of the loom, ſteeped in clear water, and rubbed with a piece of wax for that purpoſe.

The invention of this ſtuff came originally from Bologna, in Italy; but its chief manufacture is ſaid to be at Lyons, in France.

CRAVATS, is a term for a certain muſlin uſed in the making of cravats for the neck, which is brought from the Eaſt Indies, particularly from Bengal, and is of two ſorts: the one edged with white cotton thread, and the other ſtriped with the ſame. The edged is of eight cravats the piece, each cravat being about 1 ell $\frac{3}{8}$ long, and $\frac{7}{16}$ broad: the ſtriped is of ten cravats the piece, each cravat of 1 ell $\frac{1}{3}$, 1 ell $\frac{1}{4}$, and 1 ell $\frac{3}{8}$ long, and of different breadths, from $\frac{6}{16}$ to $\frac{1}{2}$ an ell $\frac{1}{16}$, or $\frac{9}{16}$.

CRAYON. A general name for all coloured ſtones, earths, or other minerals, uſed in deſigning, or painting in paſtel, whether they have been beaten and reduced to a paſte; or are uſed in their primitive conſiſtence of a ſtone, after ſawing or cutting them into long narrow ſlips: in which laſt manner red crayons are made, of blood ſtone, or red chalk; as black ones are of charcoal

coal and black lead: crayons of all colours being compoſitions of earths reduced to paſte.

CREAM, the thickeſt and fatteſt part of milk, of which butter is made. See *Butter*.

CREAM *of Tartar*, in pharmacy, is a preparation of tartar, otherwiſe called *cryſtal of tartar*, reputed a great ſweetner of the blood; its operation being by ſtool; and, by reaſon of its ſaline particles, pretty much alſo by urine. See *Tartar*.

CREDIT, in commerce, a mutual truſt, or loan, of merchandiſes or money; on the reputation of the probity and ſolvability of a dealer.

Trade cannot be carried on without credit; the manufacturer muſt truſt his employer, the employer his merchant, the merchant his tradeſman, and the tradeſman his cuſtomer: ſo that trade is chiefly ſupported in England by this circulation of credit, which has been complained of, as contrary to the firſt principles of trade, and prejudicial to its intereſt: for by the merchant giving large credit to young tradeſmen, without proper capitals, many bankrupts have aroſe; whereby the manufactures have ſunk in their ſtaple and reputation; for bad credit produces bad commodities.

Letters of CREDIT, are thoſe given to perſons in whom a merchant can truſt, to take money of his coreſpondent abroad, in caſe he happens to have neceſſity for it.

CREDIT, is alſo uſed for the currency which papers, or bills, have in the public, and among dealers: for, in this ſenſe, credit is ſaid to riſe, when, in negociating the ſhares of a company, they are received and ſold at prices above par, or the ſtandard of their firſt creation.

Diſ-CREDIT is oppoſed to credit, being uſed where money or bills fall below par.

National, or public CREDIT, ariſes from the probity, and is dependant upon the honour and exact performing of national engagements: ſuch are the ſeveral mortgages of the Britiſh revenues, on the loans advanced to the government by public companies, or paid in to the exchequer by private perſons as annuitants: ſuch was the mortgage of Sileſia to the Britiſh merchants, by the Emperor of Germany: and ſuch was the mortgage of the Piedmonteſe revenues, for 200,000 l. advanced to his Sardinian Majeſty by the Britiſh ſubjects. This ſort of credit is the conſequence of honourable, juſt, and punctual management in the matter of funds and taxes, or loans upon them; and is wholly depending upon the King and parliament in Great Britain; the latter in eſtabliſhing ſufficient funds; and the former in placing able officers, and obliging them to an honourable management. This credit of the Britiſh nation received a violent ſhock in the year 1720, when many families were impoveriſhed by the fatal bubble of the South Sea company; the like happened in France on failure of the Miſſiſippi ſcheme; but the methods taken for reſtoring public credit in England have ſo happily ſucceeded, that the national credit is now firmly eſtabliſhed. See *National Debt*, and *Fund*.

Votes of CREDIT, were frequent in the firſt year of King William III. when, at the beginning of a ſeſſion, money was wanting for providing for the ſervices of the next year, before the ſupplies were granted, or any money-bills could paſs, the houſe of commons came to votes and reſolutions, that gave the crown a power to borrow any money, to a certain ſum, and at a certain rate, to be repaid out of the ſupplies to be granted that ſeſſion: which cuſtom was followed in the ſucceeding reigns.

CREDITOR. A perſon to whom any ſum of money is due, either by obligation, promiſe, contract, or otherwiſe, who, by the laws of the twelve tables, which were the foundation of the Roman juriſprudence, was allowed to tear or cut his debtor to pieces, in caſe he proved inſolvent; and by the Engliſh laws he has too arbitrary a power in caſes of inſolvency. See *Bankrupt*, and *Debtor*.

CREEK, or *Crick*, a ſmall bay, or part of a haven, where any thing may be landed from the ſea. See *Port*.

CREW, the company of ſailors belonging to a ſhip, boat, or other veſſel: thoſe ſailors that are to work and manage a ſhip being regulated by the number of tons it may carry; the crew of a Dutch ſhip from 80 to 100 ton is ſeven ſailors, and a ſwabber; from 100 to 120 the crew conſiſts of eight men and a ſwabber; and thus increaſes at the rate of one man for every 20 tons; ſo that a ſhip of 200 tons has 12 men: but Engliſh and French crews are uſually ſtronger than Dutch, though always in about the ſame proportion.

In a ſhip there are ſeveral particular crews or gangs; as the boatſwain's crew, the carpenter's crew, and the gunner's crew. See *Gang*.

CREWEL. A fine ſort of worſted, commonly made from the thrums or ends of the ſtuff of weavers canes, uſed for making or finiſhing curious needle-works.

CREWET, *Cruſe*, or *Cruet*. A ſmall glaſs veſſel, commonly uſed for containing oil or vinegar.

CRIER. An officer in market-towns, that goes up and down the ſtreets to make proclamation of things loſt, found, or to be ſold.

CRIMATI. One of the Sunda iſlands. See *Sunda Iſlands*.

CRIMP. An agent, or factor, for thoſe merchants who trade in coals, or are concerned in ſhipping for that trade.

CRIMSON. One of the ſeven red colours among dyers. See *Red*.

The ſtuffs to be dyed in crimſon, after they have been cleared of their ſoap, and ſtrongly allomed, are put in a decoction of cochineal, each according to its colour. See *Purple*.

CRIM-TARTARY. The ancient *Taurica Cherſoneſus*, a peninſula, ſituated near the Black ſea, between 33 and 37 deg. of E. lon. and 44 and 46 deg. of N. lat. ſubject to the Turks. See *Tartary* and *Turky*.

CROATIA. A frontier province of Germany, bounded by Sclavonia on the N. and E. by Boſnia on the S. and by Carniola on the W. ſubject to the houſe of Auſtria. See *Germany*.

CROCCEUS, or *Hoambo*, a river of China, in Aſia, riſing in the mountains on the weſt of the province of Suchuen, and running along the frontiers of Tartary beyond the great wall, which it re-enters; and then runs ſouth between the provinces of Xanſi and Xenſi, paſſing on eaſt through the provinces of Honan, Xantum, and Nankin; and, after a courſe of about 2000 miles, falls into the bay of Nankin, carrying with it a yellow ſort of ſlime or mud, from whence it is ſometimes denominated the yellow river.

CROCHE, or *Groſs*. A ſmall braſs coin, ſtruck at Baſil, in Switzerland, and current only in that canton, being worth 7 rapen and a half, or 1½ d. ſterling.

CROCK. A coarſe earthen pan; alſo the carcaſs of a dead ſheep.

CROCUS. A term uſed for ſaffron. See *Saffron*.

CROCUS, in chemiſtry, is a name given to ſeveral different preparations, for their red or ſaffron colour: as *crocus martis*, a preparation of iron, which is of two kinds; *crocus martis aperiens*, and *crocus martis aſtringens*.

CROCUS *metallorum*. A kind of impure opake glaſs of antimony, of a liver colour; hence frequently called *liver of antimony*, made by firing equal parts of powder of antimony and ſalt-petre, well mixed in an iron mortar, covered with a tile: its chief uſe being in making the *vinum emeticum*, or *benedictum*, by infuſing an ounce or two of the crocus powdered, in a quart of wine for 24 hours. See *Vinum Emeticum*.

CROISAT, or *Genouin*. A ſilver coin ſtruck at Genoa, and current in ſome other towns of Italy, being worth 7 livres 10 ſoldi, or 6 s. 6 d. ſterl.

CROMER. A port-town of Norfolk, much frequented by fiſhermen, eſpecially for lobſters.

CRONENBURG. A fortreſs of Denmark, ſituated on the iſland of Zealand, at the entrance of the Sound, in 12 deg. 5 min. of E. lon. and 56 deg. of N. lat. where the Danes take toll of ſuch ſhips as are bound for the Baltic. See *Denmark*.

CRONSLOT, or *Crown-caſtle*. A caſtle and harbour, in the little iſland of Cronſlot, in the mouth of the river Neva, and entrance of the gulph of Finland, in Ruſſia, ſituated in 30 deg. of E. lon. and 60 deg. of N. lat. where the Ruſſians ſtation their men of war, and keep great magazines of naval ſtores, docks and yards for building of ſhips.

CROP. The gathering, or collection of corn or hay, which any piece of ground affords.

CROSS-*Staff*. See *Fore-ſtaff*.

CROU, or *Carroa*. A kind of money of accompt uſed at Amadabat, and in almoſt all the Mogul's territories, being about 1,250,000 l. ſterling: one lac is 100,000 rupees; 100 lacs is a crou; a crou makes 4 arebs, and the areb is 312,500 l. ſterling.

CROUPER, that part of a horſe's furniture which goes under his tail, to keep the ſaddle ſteady.

CROUTAC. A ſilver coin current at Dantzick, Riga, Koningſberg, and ſome other towns of the North, being worth about 5 ½ d. ſterling.

CROW, in the ſea-language, a machine with an iron hook, for faſtening hold, and grappling with the enemy's veſſel in an engagement.

CROW's-*Feet*, in a ſhip, are ſmall ropes, or lines, ſometimes ſix, eight, or ten, reeved thro' the deadman's eye; but of little other uſe than to make a ſhew of ſmall rigging.

CROWN, in commerce, is a general name for coins both foreign and domeſtic, of, or near the value of 5 s. ſterl. In its limited ſenſe, the crown is only applicable to that popular Engliſh coin which bears the name, and is equivalent to ſixty Engliſh pence, or 5 ſhillings: but, in its extenſive ſenſe it includes ſeveral others; as the French ecu, or French crown, ſtruck in 1641 for 60 ſols, or 3 livres; alſo the patagon, dollar, ducatoon, rixdollar, and piaſtre, or piece of eight. See *Coin*, and *Money*.

CROWN-*glaſs*, denotes the fineſt kind of window glaſs. See *Glaſs*.

CRUCIBLE. A veſſel, uſually of earth, ſometimes iron, without any handle, uſed by chemiſts, coiners, glaziers, and other artificers, to melt and calcine gold, ſilver, or other metals, whereon they work.

CRUDE, ſomething that has not paſſed the fire, or has not had the degree of heat requiſite to prepare it for eating, or ſome other uſe.

CRUDE *Antimony*, is that which comes immediately from the mines, without any preparation. See *Antimony*.

CRUDE *Sugar*. See *Sugar*.

CRUISE, or *Cruize*, in the ſea-language, ſignifies to croſs to and fro; or to ſail up and down for guard of the ſeas, and protection of trade, or in ſearch of an enemy; the word being derived from the German kruis, a-croſs.

CRUISERS, or *Cruizers*, are ſuch veſſels as are employed by a government to ſail, or cruiſe about, in appointed ſtations, for the interception of ſmugglers, the ſecurity of trade, the intimidating of enemies, and the ſuppreſſion of pirates: but in Spain ſuch veſſels are called guarda coſtas. See *Guarda coſtas*.

In the war againſt France, during the reign of Q. Anne, 43 men of war were employed as cruizers, over and above the ſhips of war for the line of battle, and convoys for remote parts, conſiſting of ſix third-rates, twenty fourth-rates, 13 fifth-rates, and four ſixth rates; 9 of which were employed on the N. E. coaſt of Great Britain, and 3 on the N. W. coaſt thereof, the others being, by act of parliament, to cruize in ſuch ſtations as the commiſſioners of the admiralty ſhould direct. See *Convoy*, and *Smuggler*.

CRUSADE, or *Cruſado*. A ſilver Portugueſe coin, of two ſorts, old and new; the old being worth 2 s. 3 d. and the new 2 s. 8 ⅖ ſterling.

CRUSTACEOUS *fiſhes*, are thoſe covered with ſhells, conſiſting of ſeveral pieces or ſcales; as thoſe of crabs and lobſters, being uſually ſofter than the ſhells of the teſtaceous kind, which conſiſt of a ſingle piece, uſually much thicker and ſtronger than the former; ſuch as thoſe of the oyſter, ſcallop, and cockle. See *Fiſh* and *Teſtaceus*.

CRUYS DAELDER. A ſilver coin ſtruck at Koningſberg, a city of ducal Pruſſia, current in the ſtates of the King of Pruſſia, and in ſeveral others, particularly at Dantzick and Riga, being worth about 5 s. 3 d. ſterling.

CRUZ, or *St. Croix*, one of the Caribbee iſlands, in America, ſituated in the Atlantic ocean, in 64 deg. of W. lon. and 17 deg. 30 min. of N. lat. ſubject to France. See *French America*.

CRUX-*herring*. See *Herring*.

CRYSTAL, *Chryſtal*, or *Rock-cryſtal*. A kind of foſſil tranſparent ſtone, white like the diamond, but much inferior thereto in luſtre and hardneſs; being uſed for vaſes, urns, mirrors, and other things.

The Alps, and ſeveral other mountains of Europe, as alſo ſome of Aſia, produce rock-cryſtal; and, if we believe the French relation of Madagaſcar, that iſland yields more than all the world beſide.

Each cryſtal is encompaſſed and cloſed round with ſix others, whereby it becomes modelled into a hexagonal body, conſiſting of equal and ſquare ſides: its perfection lying in its luſtre and tranſparency; that with ſtraws, duſt, and clouds, being little valued.

It is of ſome uſe in medicine, being reputed an aſtringent, and, as ſuch, is uſed in diarrheas, and dyſenteries: it is alſo uſed to encreaſe the milk of nurſes; and is eſteemed a good antidote againſt arſenic.

Boerhaave takes cryſtal to be the proper matter or baſis of all gems or precious ſtones, which aſſume different forms and colours, from the different admixture of mineral and metallic fumes, with the primitive cryſtalline matter. See *Gem*.

CRYSTAL, is alſo uſed for a factitious body, caſt in the glaſs-houſes, called alſo *cryſtal-glaſs*; which in effect is only glaſs carried in the melting, and in the matter whereof it is compoſed, to a degree of perfection beyond the common glaſs: the beſt artificial cryſtals being reputed to be thoſe of Moran, near Venice, called *Venice cryſtal*, which are far inferior to the whiteneſs and vivacity of the natural cryſtal. See *Glaſs*.

CRYSTALS, in chemiſtry, expreſs ſalts, or matters ſhot, or congealed, in manner of cryſtal: thus cryſtal of allum is allum purified, and reduced into cryſtals in the ſame manner as tartar; in which manner vitriol, nitre, and other ſalts are cryſtallized. Cryſtals of allum are quadrangular, and brilliant like diamonds; thoſe of nitre white and oblong; thoſe of vitriol green, quadrangular, and ſhining.

CRYSTAL, *or cream of Tartar*. See *Cream of Tartar*, and *Tartar*.

CRYSTAL *of Tartar chalybeated*, is when it is impregnated with the moſt diſſoluble parts of iron.

CRYSTAL *of Tartar emetic*, is when it is charged with the ſulphureous parts of antimony, to render it vomitive.

CRYSTAL *mineral*, called alſo *mineral anodyne*, and *ſal prunella*, is ſalt-petre prepared with ſulphur; which is eſteemed good againſt the ſquinancy, whence its name of *ſal prunella*; *pruna*, or *prunel'a*, expreſſing that diſeaſe.

CRYSTAL *of ſilver*, denotes ſilver penetrated and reduced into the form of ſalts, by the pointed acids of ſpirit of nitre; which is uſed by ſurgeons for making eſchars, by way of cauſtics, on applying it to any part: but it is alſo of uſe internally, in dropſies and diſeaſes of the brain.

CRYSTAL *of Mars*, called alſo *ſalt*, or *vitriol of Mars*, is iron reduced into ſalts by an acid liquor, uſed in diſeaſes ariſing from obſtructions.

CRYSTAL *of Venus*, called alſo *vitriol of Venus*, is copper reduced into the form of vitriol by ſpirit of nitre, very cauſtic, and uſed to eat off proud fleſh.

Iceland CRYSTAL, a tranſparent fiſſile ſtone, brought from Iceland; ſoft as talc, clear as rock cryſtal, and without colour, famous among optic writers for its unuſual refractions.

It bears a red heat without loſing its tranſparency; and, in a very intenſe heat, calcines without fuſion: ſteeped a day or two in water it loſes its natural poliſh; rubbed on cloth it attracts ſtraws like amber, appearing in effect a kind of talc, being found in form of oblique parallelepipeds, with ſix parallelogramatic ſides, and eight ſolid angles. See *Talc*.

CRYSTAL *of arſenic*. See *Arſenic*.

CRYSTALLIZATION, in chemiſtry, a kind of congealation befalling ſalts, both eſſential, fixed, and volatile; when, being ſet free from the greateſt part of their humidity, they are left to harden, dry, and ſhoot into cryſtal.

CUBA, an iſland of North America, ſituated in the Atlantic ocean, between 74 and 87 deg. of W. lon. and between 20 and

20 and 23 deg. of N. lat. being 800 miles and upwards in length from E. to W. and generally about 60 miles broad. See *Spaniſh* America.

CUBAGUA. An American iſland, ſubject to Spain, ſituated between the iſland of Margaretta, and Terra Firma, in 64 deg. of W. lon. and 10 deg. 15 min. of N. lat. See *Spaniſh America*.

CUBEBS. A fruit brought from the iſland of Java, in grains, or ſeeds, reſembling pepper both in form and ſize; whence it has been called *wild pepper*: which fortify the ſtomach, brain, and other viſcera; and enter as an ingredient in ſeveral officinal compoſitions: but the natives are ſaid to boil it before exportation, to prevent its being ſown in other countries.

CUBIC *meaſure*. See *Meaſure*.

CUCULI *of the Levant*, or *Coculus Indiæ*, a kind of fruit ſomething bigger than a large pea, half red, and in figure reſembling a ſmall kidney, brought from the Levant and the Indies.

This fruit, adhering ſtrongly by a little ſtalk to the branch of the tree which produces it, has, in the middle, a little nut called the *coculus*, very ſubject to grow worm-eaten, which, when that is the caſe, makes them light and of no great value; ſo that they ſhould be choſen as heavy as poſſible, new, large, and high in colour.

Their uſe is for killing vermin; but they have alſo the property, mixed with a bait whoſe compoſition is eaſy, to intoxicate fiſh, eſpecially in ſtill water.

CUDDY, in a firſt-rate man of war, is a place lying between the captain's and the lieutenant's cabin, and the poop; being divided into partitions for the maſter and other officers.

CUERVO. See *Corvo*.

CULM. The powder or duſt of coal. See *Coal*.

CULVERIN, or *Culvering*. A long ſlender piece of ordnance or artillery, ſerving to carry a ball to a great diſtance: of which there are three kinds; the culverin extraordinary, the ordinary, and the leaſt ſized.

CULVERIN *extraordinary*, has 5 ½ inches bore; its length 32 calibers, or 13 feet, weighs 4800 pounds; its load above 12 lb. and carries a ſhot 5 inches ½ diameter, weighing 20 pounds.

CULVERIN *ordinary*, is 12 feet long, carries a ball of 17 pounds 5 ounces; caliber 5 ½ inches; its weight 4500 pounds.

CULVERIN *of the leaſt ſize*, has its diameter 5 inches, is 12 feet long, weighing about 4000 pounds; carries a ſhot 3 inches ¾ diameter, weighing 14 pounds 9 ounces.

CUMMIN, the ſeed of a plant of the ſame name, much like that of fennel; growing abundantly in the Iſle of Malta, where it is ſown and cultivated after the manner of corn; which is uſed with ſucceſs in vertigos, wind cholics, tympanies, and other diſorders: it is alſo eſteemed excellent to retrieve natural heat in ſtallions and bulls: pigeons are likewiſe exceedingly fond of it; whence ſome uſe it to people their dove-houſes, incorporating it with an earth naturally ſaline, or ſome other earth that has imbibed urine.

This ſeed, as well as the common aniſe, yields by expreſſion a kind of oil, eſteemed ſovereign in rheumatiſms, provided it is uſed with precaution and in ſmall quantities.

CUR, or *Cyrus*, a river of Aſia, riſing in Mount Caucaſus: it runs S. through Georgia and the province of Chirvan in Perſia, where it unites its waters with the river Araxes, and continues its courſe E. to the Caſpian ſea.

CURACOA, or *Curraſſow*, an iſland of the Leſſer Antilles, ſubject to the Dutch, ſituated in the Atlantic ocean, oppoſite to Coro, in 68 deg 30 min. of W. lon. and 12 deg. 30 min. of N. lat. See *Dutch* America.

CURNOCK, or *Comb*, an Engliſh corn meaſure, containing one ſack.

CURRANTS, *Corinths*, or *Currans*. A kind of little raiſins, or dried grapes, of different colours, black, white, or red, brought from ſeveral places of the Turkiſh Archipelago, and among others, from the iſthmus of Corinth, whence their name currants, or corinths; which muſt be choſen new, ſmall, and in large maſſes; but care ſhould be taken that the little Spaniſh currants are not mixed with them: and, when made up in bales, they may keep two or three years, without ſtirring or giving them air.

Their uſe is in ſeaſoning ſeveral viands, and in ſome medicinal compoſitions, where they ſerve in lieu of raiſins.

Sir George Wheeler's account of theſe fruits, and the manner of preparing them, is very curious. The iſland of Zant, he obſerves, is the chief place whence currants are brought; the Morea, or iſthmus of Corinth, which was anciently the principal plantation, now produces no more; being much neglected, and the jealouſy of the Turks not allowing large veſſels to enter the gulph to take them off of their hands. They grow not on buſhes, like gooſeberries, tho' that is the common opinion; but on vines, like other grapes, except that the leaves are ſomewhat thicker, and the grapes ſomewhat ſmaller; they have no ſtone, and in this country are all red, or rather black.

They gather them in Auguſt; diſpoſe them in couches on the ground till they dry; then clean them, and lay them up in magazines, which the natives call ſeraglio's, pouring them in at a hole, till the magazine is full; when they cling ſo faſt together, by their own weight, that they are forced to be dug out with iron inſtruments.

To barrel them for ſending abroad, they have people who greaſe their feet and legs, and tread them cloſe, that they may keep the better; they are ſold for about 3 l. ſterling the thouſand weight, and pay as much cuſtom to the ſtate of Venice.

Zant annually produces a ſufficiency to load five or ſix veſſels, Cephalonia three or four, and the other iſlands one. The Engliſh have a factory at Zant, the Dutch two or three merchants, and the French one; the Engliſh conſuming more than ſix times the quantity that both France and Holland do together: but the inhabitants of Zant know little of the uſe made of them in England; being perſuaded they only ſerve in dying of cloth, and being entirely ignorant of the luxury of Chriſtmas pyes, and Engliſh puddings.

CURASSOW. See *Curacoa*.

CURRENCY, in commerce, is that uninterrupted freedom, or paſſage of money, bills, or any thing elſe, that goes from one to another, without objection; and, in the Britiſh American colonies, paper-bills have the ſame currency as money. The exchange between England and Jamaica, is about 40 *per cent.* or 140 l. currency for 100 l. ſterling; between England and Barbadoes, about 30 *per cent.*; between England and the Leeward iſlands, about 60 *per cent.*; between England and Bermudas, about 30 *per cent*; between England and Virginia, about 25 *per cent.*; between England and Maryland, about 100 *per cent.*; between England and New York, the Jerſeys, and Penſylvania, from 65 to 70 *per cent.*; between England and Carolina, it has been at 700 *per cent.*; and between Old England and New England it has been 400 *per cent.* See *Paper*-bills, and *Paper*-money.

CURRENT, *Courant*, or *Currant*. A term uſed to expreſs the preſent time; thus the 21ſt current, is the 21ſt day of the preſent month.

With regard to commerce, the price-current of any merchandiſe, is the known or ordinary price accuſtomed to be given for it.

CURRENT, is alſo uſed for any thing that has courſe, or is received in commerce; in which ſenſe it is ſaid, *current coin*.

CURRENT *accompts*, or *Book of accompts current*. See *Book*-keeping.

CURRENT, in hydrography, a ſtream, or flux of water, in any direction.

Currents in the ſea, are either natural and general, as ariſing from the diurnal rotation of the earth on its axis; or accidental and particular, cauſed by the waters being driven againſt promontories, or into gulphs and ſtreights; where, wanting room to ſpread, they are driven back, and thus diſturb the ordinary flux of the ſea. See *Tides*.

The currents are ſo violent under the equator, where the motion of the earth is the greateſt, that they carry veſſels very ſpeedily from Africa to America, but abſolutely prevent their return the ſame way; ſo that ſhips are obliged to run as far as the 40th degree of lat. to find a paſſage into Europe.

In the ſtreights of Gibraltar, the currents almoſt conſtantly drive to the eaſtward, and carry ſhips into the Mediterranean; they are alſo uſually found to drive the ſame

way in St. George's channel: but the great violence and danger of the ſea in the ſtreights of Magellan, is attributed to two contrary currents ſetting in, one from the South, and the other from the North ſea.

CURRENTS, with reſpect to navigation, may be defined certain progreſſive motions of the water of the ſea, in ſeveral places, either quite down to the bottom, or to a certain determinate depth; by which a ſhip may happen to be carried forward more ſwiftly, or retarded in her courſe, according to the direction or ſetting of the current, in, with, or againſt the courſe or way of the ſhip. See *Navigation*.

The buſineſs of currents making a conſiderable article in navigation, the way they ſet, toge her with their ſtrength, is to be carefully obſerved; which ſome do by the ripplings of the water, and by the driving of the froth along the ſhore, when in ſight; but the more uſual, as well as moſt accurate way, is thus:

They firſt fix their boat, by throwing out a triangular piece of wood, with a piece of lead faſtened to it, and to the ſtem of the boat with a cord, and letting it ſink 60 fathom, or more; or ſometimes by a kettle tied by the bowl, and ſunk as the other: by either of theſe means, the boat is brought to ride at anchor; which done, the log is caſt over the glaſs turned; and as the log line veers out, the drift of the log is ſet with the compaſs. See *Log-line*. This ſhews whether there be any current or not, and, if any, which way it ſets, and at what rate it drives; obſerving, however, to add ſomething to the drift, for the boat's drift; for though ſhe appears to ſtand ſtill, yet in reality ſhe is found to move. This addition experience has thus determined; if the line ſhe rides by is 60 fathom, a third part of the drift to be added; if 80 fathom, a fourth; if 100, a fifth.

If a ſhip ſail along the direction of a current, it is evident the velocity of the current muſt be added to that of the veſſel: if her courſe is directly againſt the current, it muſt be ſubtracted: if ſhe ſail athwart the current, her motion will be compounded with that of the current, and her velocity augmented or retarded, according to the angle of her direction with that of the direction of the current; that is, ſhe will proceed in the diagonal of the two lines of direction, and will deſcribe or paſs through that diagonal in the ſame time wherein ſhe would have deſcribed either of the ſides by the ſeparate forces.

Under CURRENTS. Dr. Halley makes it highly probable, that, in the Downs, the ſtreights of Gibraltar, and ſuch other parts of the ſeas, there is an under current, whereby as much water is carried out as is brought in by the upper current.

This he argues from the offing between the North and South foreland, where it runs tide and half tide; that is, it is either ebb or flood in that part of the Downs three hours before it is ſo off at ſea: a certain ſign, that though the tide of flood runs aloft, yet the tide of ebb runs under foot cloſe by the ground; and ſo at the tide of ebb it will flow under foot: which he confirms by an experiment in the Baltic ſound, communicated to him by an able ſeaman preſent at the making of it. Being there then with one of the King's frigates, they went with their pinnace into the mid ſtream, and were carried violently by the current. Soon after that they ſunk a baſket, with a large cannon bullet, to a certain depth of water, which gave check to the boat's motion, and ſinking it ſtill lower and lower, the boat was driven a-head to the windward, againſt the upper current; the current aloft, not being above four or five fathom deep. He added, that the lower the baſket was let down, the ſtronger the under current was found.

From this principle, it is eaſy to account for that vaſt draught of water continually pouring in with the current out of the Atlantic into the Mediterranean, through the ſtreights of Gibraltar, a paſſage about 20 miles broad; yet without any ſenſible riſing of the water along the coaſts of Barbary, or any overflowing of the lands, which there lie very low.

CURRIED *hide*. See *Hide*.

CURRIER, is a perſon exerciſing the trade of dreſſing or preparing leather for ſeveral uſes after it is tanned.

CURRIERS *company of London*, is a ſociety that appears to be of conſiderable antiquity, by their having founded a guild, or religious fraternity, in the conventual church of White Friers in Fleetſtreet, in the year 1367: however, they were only incorporated by letters-patent of James I. dated the 30th of April 1605, by the appellation of The maſter, wardens, and commonalty, of the art or myſtery of the curriers of the city of London; the company conſiſting of a maſter, 2 wardens, 12 aſſiſtants, and 103 liverymen; who have a handſome hall at Cripplegate, in which they tranſact their buſineſs; and, upon their admiſſion, pay a fine of 9 l. 13 s. 4 d.

CURRYING. A method of preparing leather, with oil or tallow; which raiſes, on the hair or wool ſide, a kind of grain, not unlike that of Morocco; though there is alſo a kind of curried leather without grain. See *Leather*.

Currying is the laſt preparation, putting the leather in a condition to be uſed for ſhoes, ſaddles, harneſs, and other things, which is equally practiſed on ſheep, calf, and bullocks ſkins; the colours given in currying being black, white, red, yellow, and green: the other colours are given by the ſkinners, who differ from the curriers in this, that they apply their colours on the fleſh-ſide, the curriers on the hair-ſide. See *Skinner*.

By the ſtatute of the 12th of Geo. II. it was enacted, That if any currier ſhould not curry any leather brought or ſent to him by a dealer in leather, within ſixteen days, between the 28th of September and 25th of March in any year, and within eight days the remaining part of the year, after the leather is delivered to him, he ſhould forfeit 5 l.

CUSCO. The capital city of Peru, in S. America, during the reigns of the Incas, or Indian emperors, ſituated in 70 deg. of W. lon. and 13 deg. of S. lat. See South *America*.

CUSTOMER, is a term in trade, uſed as well for a cuſtom-houſe officer, as for the purchaſer of goods from a tradeſman.

CUSTOM-*Houſe*. An office, eſtabliſhed on the frontiers of a ſtate, or in ſome chief city, or port, for the receipt of the cuſtoms, and duties on importation and exportation, impoſed on merchandiſes, by the authority of the ſovereign, and regulated by tariffs, or books of rates. There are ſeveral cuſtom-houſes in the ſeveral ports of England: but the moſt conſiderable is that of London; which is under the direction of ſeven commiſſioners appointed by patent: who have the charge and management of all the cuſtoms in all the ports of England, excepting the petty-farms. Other officers are, a ſecretary, ſolicitor, receiver-general, comptroller of the iſſues and payments of the receiver general, comptroller general, inſpector of the out port collectors accompts, inſpector-general of the exports and imports, regiſter-general of all ſhips of Great Britain, ſurveyor-general, ſurveyor of the out-ports, regiſter of the ſeizures, and ſome other officers, holding their places by patent; with other inferior officers appointed by warrant from the board of treaſury: but Scotland and Ireland are under the direction of ſeparate commiſſioners.

CUSTOMS, in commerce, the dues, duties, tolls, or tax, paid by merchants to the King, or ſtate, for carrying out and bringing in of merchandiſes; which, in Great Britain, are duties, certain and perpetual, payable to the crown for goods exported and imported, being due to the King of common right; firſt, becauſe the ſubject hath permiſſion to depart the kingdom, and to export its commodities; ſecondly, for the intereſt and dominion which the King hath in the ſea, and as he is guardian of, or maintainer, of all the ports wherein the commodities are imported, or exported; and laſtly, for that the King protects merchants upon the ſeas, againſt enemies and pirates. See *Tax*, *Duty*, and *Exciſe*.

Though by the law of nature all things were common, and all perſons equal, there being neither property, King, nor ſubject; yet when the law of nature came to be limited by the law of nations, and ſuch a thing as property came to be claimed, it naturally cauſed trade and commerce; whereupon kings or rulers became abſolutely neceſſary, to maintain and defend ſuch property and commerce: and, in order to ſupport thoſe kings or princes in their offices of government; to defray the expences they muſt neceſſarily be at in maintaining ambaſſadors at foreign courts, chiefly to procure juſtice to be done to merchants; their charges of procuring treaties with foreign princes for the advancement of trade, and of maintaining a navy of ſhips for

for the defence of the merchants, by a protection at ſea from enemies and pirates; and alſo their charges in ſupporting a court of admiralty for the deciding of maritime cauſes; they ſeem originally to have taken tributes, or cuſtoms, by virtue of the prerogatives inherent to their crowns, as given to them by the law of nations; which having been paid cuſtomarily, time out of mind, were accounted as an eſtate of inheritance, annexed to their reſpective crowns.

The antiquity of cuſtoms is very great; becauſe hiſtorians mention, that, 60 years before the Chriſtian æra, when the Jews became tributary to Rome by the conqueſts of Pompey, cuſtom-money, or tribute, was exacted by the ſenate; and the antient Britons alſo paid cuſtoms to the Emperor Auguſtus, on exporting or importing any commodities to or from Gaul. Cuſtoms, ſubſidies, tolls, impoſts, and other duties upon commodities, imported or exported, are due to princes and ſtates by the general law of nations; they have a right to them by their prerogatives; and though a King of Great Britain cannot impoſe any duties on merchandiſe without conſent of the parliament; yet, by his prerogative, he may reſtrain merchants from trading without his royal licence.

Theſe cuſtoms differ, according to the ſituation and neceſſity of different countries: but it has been an adopted rule among them all, to lay the higheſt duties on the importation of goods from other countries, to diſcourage their coming in; while the duties on the exportation of their own goods are very low, often none at all, notwithſtanding they are to be paid by foreigners, in order to facilitate the exportation of them; having always this eſſential point in view, that as much as the commodities exported exceed thoſe imported, ſo much more money will come into the kingdom, and be detained there; and, from the contrary circumſtance, the miſery, depopulation, and ruin of the ſtate, will neceſſarily proceed. The merchant, therefore, intending to negotiate and traffic into any kingdom, ought firſt diligently and carefully to learn and obſerve the ſum and quantity payable upon all commodities in different places, and then honeſtly to ſatisfy the ſame, according to the ordinances and proceedings uſed reſpectively in thoſe countries; partly to avoid the danger of loſing the commodities, the non-payment being in many places the forfeiture; and partly the better to enable him to make his calculation either to buy or ſell to profit. In this material branch of buſineſs, the merchant may obtain information from a ſettled rate, by book, or particular tariff, in print or writing, to be generally found in places of trade; but in ſome places this cannot be had, and the trader muſt then learn what the duty and cuſtom of the place is; wherein much care and circumſpection are neceſſary; for the frauds practiſed in ſeveral cuſtomhouſes, where no ſuch books are public, are exceſſive, when either the cuſtomers collect the ſame to the immediate uſe of the prince, or to the uſe of ſuch as farm the revenue by his authority; many merchants being deceived by their artifices, which are not only detrimental to the merchant, but alſo to the prejudice of the prince, and of commerce in general. And as theſe variable cuſtoms require ſome explanation, the principal of them are repreſented as follows. 1ſt, A far greater cuſtom is paid in Spain, than in France, Italy, Turky, and ſome other places. 2dly, Some difference is alſo found in regard of times, as in privileged towns, enjoying free fairs, marts, and markets; ſuch as are obſerved by immemorial uſe in Rouen, Francfort, Meſſina, and other places, where the cuſtoms are then inconſiderable to what they are at other times. 3dly, Somewhat again in reſpect of cities, enjoying a more particular privilege and continued freedom in trade in ſeveral countries, where little or no cuſtom is paid upon any commodities, either during a year after importing the goods, or for a certain limited time; as at Leghorn, Marſeilles, and in ſeveral other free cities, eſpecially the hans towns. 4thly, In regard of commodities, as in England, and ſeveral other places, where ſome commodities are higher rated in the cuſtom than others; ſome paying after the rate of 5 *per cent.* ſome 10, ſome 15, and ſome 20. 5thly, In reſpect of the weight, as at Rouen by the vicont, in Lyons by the king's beam, in Stockholm by the merchant's weight, and ſo in other places where a large weight is uſed in favour of the merchants to pay their cuſtom by, and another leſs to buy and ſell. The knowledge of all theſe things are neceſſary to commerce; for in Ruſſia, Sweden, and Denmark, the law is, that if a merchant does not declare all his goods in the cuſtomhouſe; which he either intends for importation or exportation, but conceals ſome part of his merchandiſe; all the reſt of the ſame commodities are forfeited to the prince, without favour or redemption: in Spain, the commodities concealed are only forfeited, unleſs they are contraband, and then all is loſt: in Great Britain and Ireland, the goods concealed are only forfeited: in France, Germany, the Netherlands, and ſeveral places in Italy, the ſame rule is obſerved: and in Conſtantinople, Smyrna, and ſeveral places of Turky, the goods concealed are not all forfeited, but are to pay double the impoſed cuſtom, if taken, and then to be reſtored.

In England, the moſt ancient and principal tribute, or duties, that were paid to the ſovereign, ſeem to have been upon the exportation of merchandiſes croſſing the ſeas; which were of two different ſorts, and diſtinguiſhed by two different names, as cuſtoms, and priſes or priſage.

Cuſtoms were the duty payable for native commodities exported, particularly wool, wool-fells, and leather after certain rates; which were advanced or reduced at the King's pleaſure, as occaſion required; which duty having probably been payable from the beginning of the Britiſh monarchy, has been always diſtinguiſhed by the title of The great and antient cuſtoms: but now, according to the preſent acceptation of the word cuſtoms, it is uſed to ſignify the ſeveral duties which are payable on the importation, as well as exportation, of all commodities, goods, and merchandiſe whatſoever.

Priſes, or priſage, was the antient duty payable, or taken, for foreign commodities imported, not at any certain ſum of money, but by taking ſuch a part thereof in ſpecie as the kings thought ſufficient for their own proper uſe, paying for the ſame ſuch a price as they thought reaſonable, which was called the King's price. For wines, it was the practice to take one ton in ten, or two in twenty, paying no greater price than 20 s. *per* ton; and it may be ſuppoſed the priſage of other goods was in proportion. But K. Edw. I. by a charter made in the 31ſt year of his reign, called *charta mercatoria*, remitted this duty of priſage, to all merchant-ſtrangers, who, in lieu thereof, granted him a duty of 3 d. in the pound, commonly called petty-cuſtom, upon all native commodities exported, over and above the great cuſtoms before paid, and alſo upon all merchandiſes imported, except wines; and upon all wines imported 2 s. for every ton, being the duty that has been ſince called the butlerage.

Beſides the aforeſaid duties, there were in the reigns of Edward I. Edward II. Edward III. Queen Mary, Queen Elizabeth, K. James I. and K. Charles I. collected by virtue of their prerogatives only, ſeveral occaſional or temporary impoſitions, after ſeveral different rates, upon wines, and ſeveral other goods imported; as alſo on wool, cloths, and ſeveral other goods exported; which they cauſed to be levied, by only ſending their writs to the collectors of the cuſtoms in every port: but theſe impoſitions were ſometimes remitted, upon petition of their ſubjects in parliament; eſpecially when they would grant other aids, or ſubſidies, of greater value; yet when thoſe were ſpent, they have been oftentimes again renewed, or others of the like nature impoſed:

But, in proceſs of time, this abſolute and unlimited prerogative of the crown, of impoſing and levying the aforeſaid duties, came to be reſtrained, and in a great meaſure yielded up by the crown to the parliament: for, upon the frequent petitions of the ſubjects for the remiſſion thereof, and their free offers of ſufficient ſupplies by parliament, for all neceſſary occaſions, K. Edward III. and the ſeveral ſucceeding Kings and Queens, by his example, were contented to ſuſpend their antient and hereditary duties; which being very much decreaſed, were grown deficient; and, in lieu thereof, to accept of either ſuch temporary ſubſidies or aids by parliament, as ſhould be thought ſufficient to aſſiſt them upon any extraordinary occaſions or emergenies, or of ſuch fixed and ſettled ſubſidies as ſhould

be

be ſufficient for the ſupport of the honour and dignity of the crown, the defence of the realm, and the ſafeguard of the ſeas, during their reſpective lives; and thoſe parliamentary ſubſidies were always compoſed of two ſeveral and diſtinct parts, a tonnage, and a poundage.

Tonnage was originally granted by parliament to K. Edward III. being payable upon all wines imported, after the particular rates, and according to the particular methods preſcribed by the ſeveral laws which granted this duty to the reſpective Kings and Queens; being at firſt no more than 2 s. *per* ton, though in ſucceeding reigns it was very much increaſed.

Poundage was firſt granted to Henry VI. for life, being payable on all other merchandiſe, imported and exported, according to the particular rates and values preſcribed by the ſeveral laws which granted this duty to the reſpective kings and queens, being at firſt no more than 6 d. in the pound. And to this ſubſidy of tonnage and poundage there was likewiſe, in the latter reigns, annexed a ſubſidy of woollen cloth or old drapery, which was payable upon all woollen cloths exported, after the particular rates, and the particular proportions preſcribed in the reſpective books of rates; for every grant of parliament is properly a ſubſidy. But, after the reſtoration of K. Charles II. the aforeſaid ſubſidies, which before had underwent ſeveral different regulations, were ſettled and eſtabliſhed upon the foundation they now ſtand, and granted to his ſaid majeſty during his life, for the defraying his neceſſary expences in guarding and defending the ſeas againſt all perſons intending the diſturbance of his ſubjects in the intercourſe of trade, and the invading of this realm, which were ſettled by an act paſſed in the 12th year of his reign, entitled, A ſubſidy granted to the King, of tonnage and poundage, and other ſums of money payable upon merchandiſe exported and imported, referring to, and enforcing a book of merchandiſe, according to which the ſaid duties were to be levied and collected. See Book of *Rates*.

Beſides, upon the model of, and with reference to this ſubſidy of tonnage and poundage granted to K. Charles II. there has, for the defraying the expences of wars, and other neceſſary and extraordinary occaſions, been granted by ſubſequent acts of parliament, ſeveral additional ſubſidies, impoſitions, and new duties; which being to be levied and collected after the manner of the aforeſaid ſubſidy, upon the importation and exportation of ſeveral ſorts of goods and merchandiſes, are uſually, tho' improperly, comprehended under the general name of cuſtoms.

For the cuſtoms are now really become a perfect ſcience, there having been no leſs than 30 additional branches, or particular duties, impoſed ſince the reſtoration of King Charles II.; and the laws preſcribing the manner and means for the levying and collecting of thoſe duties, with thoſe that were thought neceſſary to be made for the preſervation and ſecurity of the revenue in general, within theſe fifty years paſt, have ſo encreaſed the number, that the body of cuſtomhouſe laws is now ſwelled to above ten times its former bulk. But as they are ſo numerous, and many of them often made with an eye only to ſome particular purpoſe, without regard to the circumſtances and regulations preſcribed in former acts, it muſt naturally happen, that they will ſometimes claſh and interfere; ſo that in many caſes it is very difficult to know whether a law is in force, or not: therefore it is no wonder that they are no better underſtood by too many, whoſe buſineſs it is to execute them; and much leſs by moſt others, whoſe intereſt it is to know the privileges to which they entitle them, and the penalties to which they ſubject them, that they may reap the benefit of the one, and avoid the puniſhment of the other.

In the reign of Edward III. the great charter for free traffic was confirmed; though it was then enacted, by a particular ſtatute, that no new cuſtoms ſhould be levied, nor antient increaſed, but by authority of parliament: however, it has been reſolved, upon a reference to the judges, that where a foreign prince lays a duty on merchandiſes imported by Engliſh merchants abroad; in ſuch caſe, the King may lay a duty upon the goods belonging to the ſubjects of ſuch foreign prince imported in England, to make an equality for the benefit of trade; though ſuch duty cannot have any certain continuance, but is to be augmented, decreaſed, or quite taken away, upon juſt occaſion, for the advancement of trade, and the public good; theſe impoſitions being for the profit of the common people, and not to their charge. See *Duty*.

The cuſtoms in England are very numerous, and very high, perhaps beyond what any other trading nation knows, amounting annually to 1,300,000 l. on an average; whereof thoſe of the port of London make a third part; the whole conſiſting of the following branches.

The ſeveral particular branches of the revenue, at preſent payable to his Majeſty in Great Britain, upon goods and merchandiſes imported, exported, and brought coaſtways, are diſtinguiſhed by the following denominations.

No.	No.
1	Cuſtoms, I. Old ſubſidy.
	II. Petty cuſtom.
	III. Additional duty.
	IV. One *per cent.* inwards.
	V. Compoſition on petty ſeizures.
2	New ſubſidy.
3	One third ſubſidy.
4	Two thirds ſubſidy.
5	Impoſt on wines and vinegar.
6	Impoſt on tobacco.
7	Impoſt 1690.
8	Impoſt 1692-3.
9	New duty on whalefins.
10	Fifteen *per cent.* on muſlins.
11	New duty on ſpice and pictures.
12	Additional duty on ſpice and pictures; and new duty on drugs, white callicoes, dimities, and other manufactures of cotton; and China ware.
13	Second 25 *per cent.* on French goods.
14	Coinage.
15	New duty on pepper and raiſins; and a further duty on ſpice.
16	New duty on candles imported.
17	New duty on coals, culm, and cinders.
18	Subſidy, and 1 *per cent.* outwards.
19	Additional duty on coals, culm, and cinders.
20	Additional duty on candles imported.
21	New duty on hops imported.
22	New duty on hides, ſkins, parchment, vellum, cards, and dice, imported.
23	Additional duty on hides, ſkins, parchment, and vellum; and new duty on ſtarch, and gilt and ſilver wire, imported.
24	New duty on ſoap, paper, millboards, paſteboards, ſcaleboards, and linens chequered, ſtriped, &c. imported.
25	Additional duty on ſoap, paper, millboards, paſteboards, ſcaleboards, linen chequered, ſtriped, &c. and ſtarch, imported.
26	New duty on coals exported.
27	New duty on ſail-cloth imported.
28	New duty on wrought plate imported.
29	New duty on apples imported.
30	New duty on cambrics imported.
31	Exciſe on ſalt imported.
32	Exciſe on liquors imported.
33	Inland duty on coffee, tea, and chocolate.
34	Unrated goods.
35	Priſage and butlerage.

1. The branch of *cuſtoms*, comprehending the following particular duties: *Old ſubſidy*, or *ſubſidy inwards*; *Petty cuſtom*; *Additional duty*; *One* per cent. *inwards*; and *Compoſition on petty ſeizures*; was firſt granted, except the 1 *per cent.* to King Charles II. in 1660, and continued for ever by the 11th year of King George I.

By 6th Anne, the one half of the cuſtoms was appropriated to annuities for 96 years; but, by 1ſt George I. was, after the expiration thereof, together with the ſurplus, made part of the general or aggregate fund, and continued to the bank of England: and, by the 3d, 5th, and 11th of Geo. I. the whole was continued to the bank of England for ſecurity of the payment of one annuity of 71,001 l. 2 s. 3¾; and one other annuity of 80,000 l. till redeemed by parliament; being after the rate of 4 l. *per*

cent. per annum on the principal of 1,775,027l. 17s. 10½d. and 2,000,000l.

But by 9th George II. ſo much as ſhall be raiſed on brandy, and other ſpirits, is to be wholly applied to the aggregate fund; as are all the other branches that the ſaid commodities are liable to. See *Bank of England.*

N° 1. *Old ſubſidy*, or *ſubſidy inwards*,—is a duty conſiſting of two diſtinct parts, tonnage, and poundage.

Tonnage is payable in ready money upon all wines, except priſage-wines; and alſo upon perry, rape of grapes, cyder, cyder-eager, and vinegar, imported, as follows.

		The groſs ſubſidy *per* ton.
Rheniſh or Hungary wines imported into any port,		
	By Britiſh - - -	6 0 0
	By ſtrangers, or in ſhips not belonging to Great Britain or Ireland, or foreign built	7 10 0
Levant wines imported to London, Briſtol, or Southampton,	By Britiſh - -	4 10 0
	By ſtrangers, or in ſhips not belonging to Great Britain or Ireland, or foreign built -	6 0 0
Other ports,	By Britiſh - -	3 0 0
	By ſtrangers, or in ſhips not belonging to Great Britain or Ireland, or foreign built	4 10 0
All other wines imported into London,	By Britiſh - - -	4 10 0
	By ſtrangers, or in ſhips not belonging to Great Britain or Ireland, or foreign built -	6 0 0
Other ports,	By Britiſh - - -	3 0 0
	By ſtrangers, or in ſhips not belonging to Great Britain or Ireland, or foreign built	4 10 0

But when wines are firſt landed and entered in the out-ports, and are afterwards brought to London by certificate, the difference of the duties, or what they paid ſhort of the duty due in London muſt be there paid, being what is uſually called the *London duty.*

	The groſs duty *per* ton.
Perry, rape of grapes, cyder, cyder-eager, and vinegar imported,	
By Britiſh - - -	4 10 0
By ſtrangers - - -	6 0 0

But, in conſideration of any leakage which may happen during the voyage, if the ſaid liquors are imported in caſks, and entered as unfilled up, the merchant is to be allowed 12 *per cent.* out of the aforeſaid groſs duties: but if he thinks ſuch allowance not to be equal to the leakage, and ſhall chuſe to enter them as filled up, he loſes the ſaid allowance, and pays duty for no more than is actually contained in the caſks.

Though, in ſtrictneſs, when wines are brought into London by certificate from the out-ports, they ſhould pay only the difference of the duty, or what they have paid ſhort of the duty due in London, according to the nature of the entry; yet it is the practice always to take the ſaid difference as if the wines had been entered filled, and ſo not to allow this 12 *per cent.* for leakage, notwithſtanding the wines may have been at firſt entered as unfilled.

And upon the importation of wines in caſks, there is alſo the following allowances to be made out of the groſs duty.

	Diſcount.
Rheniſh wines, or wines of the growth of Germany, or which pay duty as ſuch, -	2 *per cent.*
French wines, or wines of the growth of any of the French King's dominions -	6 *per cent.*
Spaniſh, Portugal, and all other wines -	10 *per cent.*

Poundage is payable in ready money upon all goods and merchandiſes imported, except theſe following:

Wines, perry, *&c.* as being liable to tonnage.
Fiſh, Britiſh, taken and brought by Britiſh bottoms.

Freſh fiſh.
Beaſtial.
All goods mentioned in the book of rates to be cuſtom-free.
Diamonds, pearls, rubies, emeralds, jewels, and precious ſtones.

It is to be levied and collected according to the particular rates affixed upon the reſpective goods in the firſt or ſecond column of rates inwards; or, if there not rated, according to the real value and price of the goods, to be aſcertained by the oath or affirmation of the merchant, in the preſence of the cuſtomer, collector, comptroller, and ſurveyor, or any two of them; except upon ſuch goods as are of the growth product, or manufacture of the Eaſt Indies, or China, and are not particularly rated in the firſt column of rates; the ſubſidy whereof is to be charged according to the groſs price, at which they ſhall be fairly ſold by auction, or inch of candle, after a deduction of ſo much as the neat duties amount to, and ſo much as the company allow to the buyers for prompt payment, and alſo 6 l. *per cent.* to the company for their charges in keeping the goods till the time of ſale; from which rates, values or prices, this ſubſidy of poundage is to be taken as follows. See Book of *Rates.*

	Groſs duty.
Earthern ware not particularly rated in the firſt column of rates; as China-ware; and all other ſorts rated in the 2 column of rates, 7½ *per cent.* of the rate, or reduced value of the price at the candle; being for every 20 s. of ſuch rate or value - - -	0 1 6
Glaſs-manufactures, not any where particularly rated in the 1ſt column of rates, or rated in the 2d column of rates, 7½ *per cent* of their value upon oath, or of their rate in the 2d column of rates; being for every 20 s. of ſuch value or rate - - -	0 1 6
Fiſh dried or ſalted, and cod-fiſh or herrings, unleſs prohibited, not caught in Britiſh or Iriſh veſſels, and cured by Britiſh or Iriſh, 10 *per cent.* of the rate, or double ſubſidy; being for every 20 s of ſuch rate - -	0 2 0
Toys for children, not any where particularly rated in the 1ſt column of rates, or rated in the 2d column of rates, 6⅔ *per cent.* of their value upon oath, or of their rates in the 2d column of rates; being for every 20 s of ſuch value or rate - - -	0 1 4
All other goods chargeable with the ſubſidy of poundage, 5 *per cent.* of the rate, value, or price; being for every 20 s. thereof -	0 1 0

But out of the aforeſaid groſs-ſubſidy of poundage, there are to be allowed the following diſcounts.

	Diſcount.
Tobacco of the Britiſh plantations -	25 *per cent.*
Tobacco not of the Britiſh plantations	5 and 8 *per cent.*
Which allowance of 8 *per cent.* is not to be deducted on exportation.	
All other goods - -	5 *per cent.*

Except
Barley hull'd, or pearl-barley.
Corn, when taken at the high rate, as by the act of tillage, 22d Cha II.
Fiſh ſalted or dried, *&c.* all which have no diſcount.

This duty of poundage is alſo payable, after the rate of 5 *per cent.* of the value upon oath, for ſhips taken as prize, and regularly condemned in the court of admiralty; but it is the practice not to charge them with any other duty whatſoever.

The aforeſaid ſubſidy of tonnage and poundage having been duly paid at importation; if the goods ſhall be afterwards exported to foreign parts, within three years, from the maſter's report of the ſhip, the exporter is entitled to the drawback or repayment, either of the whole, or ſome proportionable part thereof, except in ſome particular caſes; as he is alſo in all the other duties.

N° 2. *Petty cuſtom*, or *Alien's duty*,—is a duty payable by merchant-ſtrangers; that is, aliens born, or denizens; on all goods imported liable to the ſubſidy of poundage, unleſs where the original old ſubſidy has been entirely taken away; but not on thoſe liable to the ſubſidy of tonnage, becauſe an equivalent is included in the old ſubſidy.

And it is alſo payable by Britiſh upon the following goods, though of Britiſh property, when imported in foreign ſhips.

Aqua vitæ,	Olive oil,
Boards,	Pitch,
Brandy,	Pot-aſhes,
Corn or grain of all ſorts, when the old ſubſidy is taken at the original rate,	Prunes,
	Raiſins,
	Roſin,
Figs,	Salt,
Flax,	Sugar,
Hemp,	Tar,
Maſts,	Timber,

And all goods of the growth, production, or manufacture of Ruſſia; that is, if theſe goods are imported in ſhips not belonging to the people of Great Britain or Ireland, and whereof the maſter, and at leaſt 3-4ths of the mariners, are not Britiſh; or in foreign-built ſhips, although owned or manned by Britiſh, unleſs ſuch as are taken as prize.

Alſo currants, and Turky commodities, when imported in ſhips not Britiſh built, and whereof the maſter, and at leaſt 3-4ths of the mariners, are not Britiſh.

It is to be levied according to the reſpective rates or values of the goods, as affixed or aſcertained for the old ſubſidy, after the following rates.

	The duty.
Fiſh dried or ſalted, and cod-fiſh or herring, unleſs prohibited, not caught in Britiſh or Iriſh veſſels, and cured by Britiſh or Iriſh, $2\frac{1}{2}$ *per cent.* of the rate, or double petty cuſtom, being $\frac{1}{2}$ part of ſuch rate, or for every 20 s. thereof - - - -	0 0 6
All other goods chargeable with the ſubſidy of poundage, $1\frac{1}{4}$ *per cent.* of the rate or value, being $\frac{1}{4}$ part thereof, or for every 20 s.	0 0 3

To be paid in ready money, without diſcount.

N° 3. *Additional duty*,—is a duty, as well as the old ſubſidy, conſiſting of a tonnage and poundage, payable on the importation of the following goods only.

Wines, except priſage wines.
Linens, except Iriſh, by certificate, and callicoes printed, painted, &c.
Wrought ſilks, except Eaſt Indian.
Tobacco of the Britiſh plantations.

Tonnage is payable for all wines, except priſage wines, imported, as follows.

	The groſs duty *per* ton.
Wines of the growth of France, Germany, Hungary, Portugal, or Madeira - - - -	3 0 0
All other places, - - - -	4 0 0

To be paid within nine months from the importation; upon the importer's giving good ſecurity for the ſame.

But out of the aforeſaid groſs duty, there is to be deducted the 12 l. *per cent.* for leakage, and the 2, 6, or 10 *per cent.* on wines in caſks, according to the particular ſpecies, and the nature of the entry, as directed for the old ſubſidy.

And as this duty may be ſecured for nine months, if the importer chuſes to pay down the ſame at entry, he is, in conſideration thereof, to have an allowance of 10 l. *per cent. per annum*; which for the ſaid nine months is $7\frac{1}{2}$ *per cent.*

Poundage is payable for the other goods imported, liable to this duty as follows.

	Groſs duty.
Linens, except Iriſh, by certificate, and callicoes printed, painted, &c.	One half of the neat old ſubſidy.
Wrought ſilks, except Eaſt Indian,	
Tobacco of the Britiſh plantations, the pound weight - - -	0 0 1

Linens and wrought ſilks are to be allowed twelve months time from the importation for the payment of this duty, upon the importer's giving ſecurity for the ſame: but if he chuſes to pay ready money, he is to be allowed 10 l. *per cent.* out of the ſaid duty for prompt payment.

Tobacco of the Britiſh plantations, is, upon the importer's becoming bound, with one or more ſufficient ſureties, approved of by the collector, with the conſent of the comptroller, to be allowed eighteen months time for the payment of this duty, to commence at the end of thirty days from the maſter's report of the ſhip, or from the entry of the goods within thoſe thirty days, which ſhall firſt happen, and to have an allowance of 15 *per cent.* out of the ſame: but if the importer chuſes to pay down the duty at entry, he is to have an allowance of 25 l. *per cent.*

Upon due exportation, as directed for the old ſubſidy, a drawback, or repayment of this duty, muſt be allowed, or the ſecurity vacated, on all goods except alamodes and luſtrings; tobacco of the Britiſh plantations in ſhips under 20 tons, in any package but caſks of 3 hundred weight, or more, except cut or rolled; or tobacco to be uſed on board ſhips of war in any part of Europe; tobacco ſtalks ſeparated from the reſt of the leaf exported by themſelves; wine-lees, which pay duty as wine; and all goods to the Iſle of Man.

N°. 4. *One per cent. inwards*,—is a duty firſt granted to K. Ch. II. but afterwards continued for ever; which, as well as the old ſubſidy and additional duty, conſiſts of a tonnage and poundage, being payable in ready money upon all goods and merchandizes liable to thoſe duties imported from any port or place of the Mediterranean ſea beyond the port of Malaga, into any port of Great Britain, in any ſhip or veſſel that hath not two decks, and carries leſs than ſixteen pieces of ordnance mounted, together with two men for each gun, and other ammunition proportionable: unleſs one moiety of her full lading outwards was fiſh, taken and cured by Britiſh ſubjects only, exported from any of the Britiſh dominions; in which caſe, the goods or merchandizes imported in the ſame ſhip for that voyage, are not liable to this duty.

The practical method of computing this duty, is by taking $\frac{1}{3}$ part of the neat old ſubſidy and additional duty, which is not drawn back on exportation; the deſign of this tax being to oblige Britiſh merchants to make uſe of defenſible ſhips, to prevent their mariners from falling into ſlavery among the Barbary pirates.

N°. 5. *Compoſition on petty ſeizures*.—Tho' all goods ſeized by the officers of the cuſtoms are to be proſecuted to condemnation, either in the court of exchequer, or before the juſtices of the peace; and the King's moiety or ſhare paid in to the proper officers, before any writ or order of delivery may be granted, except in the caſe of periſhable goods; yet when the ſeizure is ſo ſmall, that the cuſtom thereof does not exceed 40 s. it may be compounded for by the commiſſion of the commiſſioners, and the King's part be paid in to the collector of the port of ſeizure, who is to account for it by the name of the compoſition on petty ſeizures, which he is to comprehend under the general head of cuſtoms.

Out of the branch of the cuſtoms are likewiſe to be paid, corn debentures, the bounty on Britiſh manufactures of ſilk, the allowances on tobacco and wine, portage-bills, &c. and formerly all ſalaries and incident charges attending the management of the revenue of the cuſtoms: but now, when this branch falls ſhort, the ſaid ſalaries and incidents are paid out of any of the following branches; impoſt on wines and vinegar, impoſt on tobacco, impoſt 1690, impoſt $1692\frac{2}{3}$, and new duty on whalefins.

N°. II. *New or further ſubſidy*,—was firſt granted to King Will. III. and afterwards continued during the reign of his preſent majeſty.

By the 1ſt of Geo. II. this duty, except ſo much as ſhall be raiſed on brandy or other ſpirits, which by 9th Geo. II. is to be applied to the aggregate fund is, with ſeveral others, granted towards the raiſing of 800,000 l. *per annum*, for the ſupport of his Majeſty's houſhold, and of the honour and dignity of the crown; and is to be raiſed, levied, and collected by the ſame rules and methods, and under

under the ſame penalties and forfeitures as the cuſtoms. This duty, as well as the old ſubſidy, conſiſts of a tonnage and poundage.

Tonnage, is payable in ready money upon all wines imported, as follows.

	Groſs New Subſidy *per* ton.
Rheniſh or Hungary wines imported into any port,	
By Britiſh - - -	6 0 0
By ſtrangers, or in ſhips not belonging to Great Britain or Ireland, or foreign built	7 10 0
Levant and all other wines imported into London, By Britiſh - -	4 10 0
By ſtrangers, or in ſhips not belonging to Great Britain or Ireland, or foreign built	6 0 0
Any other port, By Britiſh - -	3 0 0
By ſtrangers, or in ſhips not belonging to Great Britain or Ireland, or foreign built	4 10 0

But if wines are firſt landed and entered in the out-ports, and are afterwards brought into the port of London by certificate, the difference of the duty, or what they paid ſhort of the duty due in London, muſt be there paid; being what is uſually called the London duty.

Out of the aforeſaid groſs new ſubſidy of tonnage, there are to be deducted the ſame allowances and abatements, under the ſame reſtrictions, and in the ſame manner and form as is directed for the old ſubſidy: ſo that in all caſes, except Levant wines imported into Briſtol and Southampton, the neat new ſubſidy will be the ſame as the neat old ſubſidy.

Poundage is payable in ready money, except for tobacco of the Britiſh plantations upon all goods and merchandize imported, except theſe following;

Wines, as being liable to tonnage.
Fiſh, Britiſh taken, and brought by Britiſh bottoms.
Freſh fiſh.
Beaſtial.
And all goods mentioned in the book of rates, to be cuſtom free.

As alſo goods commonly uſed in dying, as

Allum of all ſorts.	Grain or ſcarlet powder.
Antimonium, except Crudum.	Grains of Portugal, or Rota.
Britiſh berries from the plantations.	Grains, of Sevil in berries.
Cake-lack.	Litharge of all ſorts.
Caſſumba.	Platain.
Copperas of all ſorts.	Salt-petre.
French berries.	Weld.
	Woad.

Wrought ſilks, bengals and ſtuffs mixed with ſilk or herba, of the manufacture of Perſia, China, or Eaſt India; and all callicoes, painted, dyed, printed, or ſtained there.

Whalefins, oil and blubber, of Britiſh fiſhing, taken in the ſeas of Newfoundland, or any of the ſeas belonging to his Majeſty's plantations, and imported by Britiſh, in Britiſh ſhipping.

It is to be levied and collected according to the reſpective rates, or values following;

Corn.	Rates or values for the New ſubſidy.
Beans, —not exceeding the price of 28 s the quarter, at the place of importation, the quarter - - -	1 6 8
—exceeding 28 s. and not exceeding 40 s. *per* quarter, the quarter -	0 5 0
Buck-wheat —not exceeding the price of 44 s. *per* quarter, the quarter -	2 0 0
Malt and Barley —not exceeding the price of 28 s. the quarter, at the place of importation, the quarter -	1 6 8
—exceeding 28 s. and not exceeding 32 s. *per* quarter, the quarter	0 5 0

	Rate.
Oats, —not exceeding the price of 16 s. *per* quarter, the quarter - - -	0 4 0
Peaſe, —not exceeding the price of 40 s. *per* quarter, the quarter - - -	0 4 0
Rye, —not exceeding the price of 36 s. *per* quarter, at the place of importation, the quarter - - -	1 6 8
—exceeding 36 s. and not exceeding 40 s *per* quarter, the quarter -	0 5 0
Wheat, —not exceeding the price of 44 s *per* quarter, at the place of importation, the quarter -	2 0 0
—exceeding 44 s. and not exceeding 41. *per* quarter, the quarter - -	0 6 8

Drugs rated in the firſt column of rates.

Barley hulled, or French barley, or pearl barley, the 112 lb.	
Of the growth, &c. - - -	0 6 8
Not of the growth, &c. - - - -	1 0 0

Other drugs.

Imported not directly from the place of their growth, or not in Britiſh-built ſhipping; one third part of the reſpective rates, as they ſtand in the firſt column of rates; being for every 20 s. thereof - -	0 6 8
Imported directly from the place of their growth, and in Britiſh-built ſhipping; one ninth part of the aforeſaid rates; or after the ſaid rates have been reduced to the one third part thereof, by virtue of the clauſe at the end of drugs, in favour of a direct importation, one third part of ſuch reduced rates, being for every 20 s. thereof -	0 6 8
Meal of wheat or rye, the laſt containing 12 barrels - - -	3 0 0
Train-oil, of foreign fiſhing, the ton	5 0 0
Rape of grapes, the ton -	3 0 0
Cyder and cyder-eager, the ton -	4 0 0
Vinegar, the ton - -	5 0 0
Whalefins of foreign fiſhing, the ton -	100 0 0

All other goods liable to this duty, whether rated or unrated, are to pay the ſame as for the old ſubſidy.

From which rates, values, or prices, this new ſubſidy of poundage is to be taken as follows;

	Groſs duty.
Earthen ware not particularly rated. Glaſs manufactures not particularly rated in the former rates, or rated in the additional rates. Toys not any where particularly rated	The ſame as the old ſubſidy.

Fiſh dried or ſalted, and codfiſh or herring, unleſs prohibited, not caught in Britiſh or Iriſh veſſels, and cured by Britiſh or Iriſh: as alſo all other goods chargeable with the new ſubſidy of poundage; five *per cent.* of the rate, value, or price, being for every 20 s. thereof 1 s.

But out of the aforeſaid groſs new ſubſidy of poundage, there are to be allowed the following diſcounts.

	Diſcount.
Tobacco of the Britiſh plantations, being under the ſame regulations as for the additional duty thereon,	
If paid down - - -	25 *per cent.*
If ſecured - - -	15 *per cent.*
Tobacco not of the Britiſh plantations	5 and 8 *per cent.*
All other other goods - -	5 *per cent.*

Upon due exportation, as directed for the old ſubſidy, drawback, or repayment of this duty, muſt be allowed, or the ſecurity vacated, except on alamode and luſtrings, books bound, cable-yarn; copper-bars not imported from Eaſt India or Barbary, and not exported by Britiſh; cordage, hemp unwrought, to the Britiſh plantations; foreign

hops

hops to Ireland; foreign iron and ſteel, and foreign iron and ſteel wares, to the Britiſh plantations; French oyſters, foreign paper, pictures, foreign ſails or ſail-cloth, tobacco, &c. as in the additional duty numb. 3.

N°. III. *One third ſubſidy*,—was firſt granted to Queen Anne, and by the 11th of Geo. I. continued for ever.

By the 1ſt Geo. I. this duty, which by the 4 and 5 Anne was made part of the general funds of credit, was after the expiration thereof made part of the aggregate fund, and continued to the bank, for the purpoſes therein mentioned.

And by the 3d, 5th, and 11th of Geo. I. was again continued to the bank of England, for ſecurity of the payment of one annuity of 71,001 l. 2 s. 3 d. and one other annuity of 80,000 l. till redeemed by parliament.

But by the 9th Geo. II. ſo much as ſhall be raiſed on brandy and other ſpirits is to be wholly applied to the aggregate fund.

This duty, as well as the former ſubſidies, conſiſts of a tonnage and poundage, being an additional ſubſidy of one third part of the new ſubſidy, payable in all caſes where that is due; to be raiſed, levied, collected, ſecured, and paid by the ſame ways, means, and methods, under ſuch penalties and forfeitures, and ſubject to ſuch rules and directions, as before directed for the new ſubſidy.

Therefore the duty muſt be computed by taking one third part of the neat new ſubſidy of tonnage and poundage.

Upon due exportation, as directed for the old ſubſidy, &c. drawback, or repayment of this duty, muſt be allowed, as for the new ſubſidy.

N°. IV. *Two thirds ſubſidy*,—was firſt granted to Q. Anne; and by the 11th of Geo. I. was continued for ever.

By the 1ſt, 3d, 5th, 11th Geo. I. this duty was appropriated to the ſame uſes with the cuſtoms; conſiſting, as well as the former ſubſidies, of a tonnage and poundage, to be raiſed, levied, collected, ſecured, and paid by the ſame ways, means, and methods, under ſuch penalties and forfeitures, and ſubject to ſuch rules and directions, as before directed for the new and one third ſubſidies; being an additional ſubſidy of two third parts of the new ſubſidy, upon all goods liable thereto, except theſe following:

Tobacco.
Currants in Britiſh-built ſhipping, legally navigated.
Sugar from the Britiſh plantations.
Goods exempted from the new, and one third ſubſidies.
Currants in ſhips belonging to the republic of Venice.
European linens.
Siſters thread.
Tapes or incle.
Linſeed.
Flax.
European unwrought incle, commonly call'd ſhort ſpinnal: all which are exempted from this duty.

Therefore the duty muſt be computed, by taking double the one-third ſubſidy for all goods liable thereto, unleſs theſe before exempted; or two third parts of the neat new ſubſidy of tonnage and poundage.

Upon due exportation as directed for the old ſubſidy, &c. drawback, or repayment of this duty, muſt be allowed as for the new and one third ſubſidies.

N°. V. *Impoſt on wines and vinegar*,—was firſt granted to King James II. and by the 3d of Geo. I. continued for ever.

By 1ſt and 3d Geo. I. this duty was appropriated to the South-Sea company, towards the payment of their increaſed fund of 500,000 l. *per annum*, being after the rate of 5 l. *per cent. per annum*, on their joint or capital ſtock of 10 millions, and of 8000 l. *per annum* for charges of management; which duty is to be levied by the ſame ways and means, and under the ſame penalties as the cuſtoms, &c. upon the importation of the following goods.

	The groſs impoſt *per* ton.
All vinegar, French wine	8 0 0
All other wines	12 0 0

To be paid down in ready money upon entry, either by the merchant, or by the perſon enjoying the benefit of the priſage; or elſe the importer, to become bound with two or more ſufficient ſureties, or procure three other perſons to become bound for payment thereof, at 3 months, that is by three ſeveral and equal payments, each at three months diſtance.

But out of the aforeſaid groſs duties, there muſt be deducted the following allowances, according to the nature and circumſtances of the entry.

	Diſcount.
1. For leakage, as out of the old ſubſidy -	12 *per cent.*
2. For prompt payment, if the duty be paid down in ready money, 10 *per cent. per ann.* which for the 3 months is - - -	5 *per cent.*
3. For any defect or damage which may happen by keeping, or by any other accident; provided oath be made by the importer, not being a vintner or retailer, who is to pay the full duty, that the ſaid liquors are imported by way of merchandize, and with intent to ſell again - -	8 *per cent.*
4. Out of the groſs duty of all wines imported in caſks, according to the reſpective ſorts thereof, as out of the old ſubſidy	2, 6, or 10 *per cent.*

Upon due exportation, as directed for the old ſubſidy, &c. drawback, or repayment of this duty, muſt be allowed, or the ſecurity vacated; except vinegar and wine-lees, which pay duty as wine; the drawback on wines being two thirds.

N°. VI. *Impoſt on tobacco*,—was firſt granted to King James II. but, by the 3d of Geo. I. continued for ever; being from time to time continued, and appropriated to the ſame uſes with the impoſt on wines and vinegar.

By the 1ſt Ja. II. there was a duty granted on ſugars, as well as tobacco; but by 2d Will. and Mary the duty on tobacco only was continued, and by 12th Anne and 9th Geo. I. ſubjected to a different regulation.

It is to be raiſed, levied, collected, and ſecured in the ſame manner and form, and by ſuch rules, means, and ways, and under ſuch penalties and forfeiture, as directed for the cuſtoms.

Upon the importation of all tobacco, as follows;

	The groſs impoſt *per* pound weight.
Tobacco of the Britiſh plantations in America	0 0 3
Spaniſh or foreign tobacco, not of the Britiſh plantations - - -	0 0 6

For the payment thereof, the importer may be allowed 18 months, to commence from the end of thirty days from the maſter's report of the ſhip, or from the entry of the goods within thoſe thirty days, which ſhall firſt happen; upon his giving ſufficient ſecurity for the ſame.

But out of the aforeſaid groſs duty, there are to be allowed the following diſcounts.

Tobacco of the Britiſh plantations, being under the ſame regulations as the additional duty thereon—If paid down 25 *per cent.*—If ſecured 15 *per cent.*

Tobacco not of the Britiſh plantations.—Whether paid or ſecured, 8 *per cent.* which is not to be deducted on exportation. And beſides, if the duty be paid down on entry within thirty days from the report, or at any time within any of the firſt fifteen of the eighteen months, to commence at the end of thirty days from the report, a farther allowance, for the whole fifteen, or ſo many entire months as ſhall remain unexpired, 10 *per cent. per annum*. But no allowance after the end of fifteen months, nor for leſs than one month.

Upon due exportation, as directed for the old ſubſidy, &c. drawback, or repayment of this duty, muſt be allowed, or the ſecurity vacated by debentures, except as in the additional duty N°. 3.

N°. VII. *Impoſt* 1690,—was granted to King William and Queen Mary; and, by the 3d of Geo. I. continued for ever; being applicable to the ſame uſes and purpoſes with the impoſt on wines and vinegar. Thi

This duty is, over and above all other duties and impositions, to be paid upon the importation of the following goods, in the proportion and manner following; and to be raiſed, levied, and collected in the ſame manner and form, with ſuch advantages, and by ſuch rules, means and ways, and under ſuch penalties and forfeitures, as directed for the cuſtoms.

		The groſs Impoſt 1690.
1	Alum, the hundred weight, containing 112 lb.	0 2 6
2	Anvils wrought, the hundred weight, containing 112 lb. - - -	0 9 3

43	Silk raw, from China, or the Eaſt Indies; for every 20 s. of the rate - -	0 1 0
44	Silks wrought, from any other place than India or China; for every 20 s. of the rate or value - - -	0 2 0
45	Starch, the hund. weight, containing 112 lb.	1 0 0
46	Steel, the hundred weight, containing 112 lb.	0 5 6
47	Tallow, the hundred weight, containing 112 lb. - - -	0 5 0
48	Tin, the hundred weight, containing 112 lb.	1 10 0

Wood.

49	Deal-timber, or other timber-boards, wainſcot, pipe-ſtaves, box-wood, and other wood, from any part of Europe, except Ireland; for every 20 s. of the rate or value	0 2 0
50	Wool, called *beaver-wool*, cut and combed, except combed in Ruſſia, and imported from thence in Britiſh ſhips the pound -	0 15 0

Wire.

51	Iron-wire, foreign of all ſorts, except card-wire, and all ſorts of iron-wire ſmaller than the ſorts called or known by the names of fine-fine, and ſuper-fine, and all wool cards,	

		The groſs Impoſt 1690.
	or any other wares made of iron wire; the hundred weight, containing 112 lb. - -	1 2 6
52	Steel-wire, the pound - -	0 0 1½
53	Braſs, copper, or latten wire, the hundred weight, containing 112 lb. - -	0 15 0
	Yarn.	
54	Cable-yarn, the hundred weight, containing 112 lb. - - -	0 5 0
55	Of flax or hemp, except cable yarn, for every 20 s. of the rate - -	0 1 0

And ſo in proportion for any greater or leſſer quantities; obſerving, that where this duty is to be levied according to the rate or value, the meaning is, according to the reſpective rates of the goods in the firſt and ſecond columns of rates; or if not there rated, according to their value and price upon oath, &c. as for the old ſubſidy of poundage, &c. and that this duty is not to be reckoned into the ſaid value. See Book of *Rates*.

Which ſaid impoſt duty, muſt be paid and ſecured in the following manner:

Pepper to be paid down at entry ⅓ part.

Ditto, to be ſecured by bond, payable at 12 months ⅔ parts.

But by the 8th Anne, pepper may be warehouſed at importation, upon paying down only half the old ſubſidy.

All other goods to be paid at ⅔ months from the importation, that is, at 4 equal and quarterly payments; upon the importer's giving ſecurity accordingly.

But if the importer chuſes to pay down the duty at entry, he is to be allowed diſcount after the rate of 10 *per cent. per annum.*

Upon due exportation, as directed for the old ſubſidy, a drawback or repayment of this duty muſt be allowed, or the ſecurity vacated, except on alamodes and luſtrings, cable-yarn, cordage, foreign hops to Ireland, foreign iron and ſteel, and foreign iron and ſteel wares, to the Britiſh plantations, foreign paper, pepper, foreign ſails or ſail cloth, and all goods to the Iſle of Man.

N°. VIII. *Impoſt* 1692,—was granted to King Will. and Queen Mary, and continued by 3d Geo. I. for ever; being applicable to the ſame uſes and purpoſes with the impoſt on wines and vinegar.

This duty is, over and above all other duties and impoſitions, to be paid upon the importation of the following goods, in the proportion and manner following; and to be raiſed, levied and collected in the ſame manner and form, and by ſuch rules, means and ways, and under ſuch penalties and forfeitures, as directed for the cuſtoms, &c.

		The groſs Impoſt 1692.
1	Amber beads for every 20 s. of the rate -	0 4 0
2	Amber oil, or oil of amber, for every 20 s. of the rate of the new ſubſidy, whether of the growth, &c. or not of the growth, &c.	0 2 0
3	Amber rough, for every 20 s. of the rate	0 2

70	Wire of latten, braſs or copper, the hundred weight, containing 112 lb. -	0 6 6
71	All goods not particularly rated in the firſt column of rates, except mum, and ſuch goods as are particularly charged with the impoſt 1690, or this duty; for every 20 s. of their reſpective rates in column the ſecond, or of their values upon oath, or of their prices at the candle, as directed for the old ſubſidy - -	0 1 0

And ſo in proportion for any greater or leſſer quantities.

Which ſaid additional impoſt-duty, may be paid at ¾ months from the importation, that is, at 4 equal and quarterly payments, upon the importer's giving ſecurity for the ſame: but if he chuſes to pay down the duty at entry, he is to be allowed diſcount after the rate of 10 l. *per cent. per annum*, which being equated to the times of payment, reduces it to 6¼ l. *per cent.*

Upon the importation of French tobacco, there is likewiſe to be a further allowance of 8 l. *per cent.* as out of the other duties; which is not to be deducted on exportation.

And upon the importation of French wines in caſks, there is alſo to be a farther allowance of 6 l. *per cent.* out of this groſs duty.

Upon due exportation, as directed for the old ſubſidy, a drawback or repayment of the groſs duty muſt be allowed, or the ſecurity vacated; except on alamodes and luſtrings, copper bars not imported from India and Barbary, and not exported by Britiſh; hemp unwrought to the Britiſh plantations, French oyſters, foreign paper, pictures, foreign ſails or ſail-cloths, wine-lees, beaver ſkins only half, and all goods to the Iſle of Man.

Lapis calaminaris exported, is charged with this duty at 2 s. *per* ton.

N°. IX. *New duty on whaleſins*,—was granted to King Will. III. and by the 3d Geo. I. continued for ever; being appropriated to the ſame uſes and purpoſes, with the impoſt on wines and vinegar.

This duty is, over and above all former duties and impoſitions, to be paid or ſecured at the cuſtom-houſe on the importation of all whaleſins, but ſuch as are particularly excepted; and to be under the management of the commiſſioners of the cuſtoms, who are to cauſe the ſame to be raiſed, levied, collected and paid to the receiver-general of the cuſtoms, &c.

	Groſs duty.
Whaleſins taken and imported in and by ſhips belonging to any of his Majeſty's ſubjects, the pound weight - - - -	0 0 3

But by 5th Geo. II. whaleſins taken in the Greenland ſeas, or in Davis's ſtreights, or any parts of the ſeas adjoining, in Britiſh ſhips legally navigated, may be imported by Britiſh free.

	Groſs duty.
Whaleſins taken and imported by foreigners, or by ſhips not belonging to the ſaid ſubjects, the pound weight - - - - - -	0 0 6

Which ſaid duty may be paid at ¾ months from the importation, that is, at 4 equal and quarterly payments; upon the importer's giving ſecurity for the ſame: but if he chuſes to pay down the duty at entry, he is to be allowed diſcount after the rate of 10 l. *per cent per annum*, which being equated to the time of payment, reduces it to 6¼ l. *per cent.*

Upon due exportation, as directed for the old ſubſidy, &c. this duty is wholly drawn back, or the ſecurity vacated.

N°. X. *Fifteen per cent. on muſlins*,—was granted to K. Will. III. and by 11th King Geo. I. continued for ever; being applicable to the ſame uſes and purpoſes with the cuſtoms. This duty is, over and above all former duties, to be paid for all muſlins imported; by which are to be underſtood the following ſpecies:

Abrowahs	Mahumadhiates, plain and flower'd
Addaties	Mulmuls, plain and flower'd
Aprons	Neckcloths.
Betelles, plain and ſtriped	Nightrails
Callico lawns	Oringal
Callicoes of all other ſorts, commonly called *muſlins*.	Podavets
Commetvilles	Rehings
Coſſaes, plain and flower'd	Rowallew
Doreas	Sallows
Golcanda	Seerbands
Jamdannes	Tanjebs, plain and flower'd
Jecolſies	Tirindams
Junays	

To be under the management of the commiſſioners of the cuſtoms, who are to cauſe the ſame to be raiſed, levied, collected and paid to the receiver-general of the cuſtoms, &c. in the manner following.

	Groſs duty.
For every 20 ſhillings of the true and real value of the ſaid muſlins, according to the groſs price at which they ſhall be ſold, 15 *per cent.* or -	0 3 0

The importer, before the landing of the goods to become bound with two or more ſufficient ſureties, for payment of the ſaid duty, as ſoon as the goods ſhall be ſold, and for expoſing them to ſale openly and fairly, by way of auction, or by inch of candle, within the city of London, within three years after the importation thereof.

And if after the ſaid goods have been duly and fairly ſold, the importer ſhall pay down the duty within twenty days after the ſale, he is to be allowed after the rate of 5 *per cent.* diſcount.

Upon due exportation, as directed for the old ſubſidy, &c. this duty is wholly drawn back, or the ſecurity vacated.

Note, under this branch was alſo comprehended a like duty of 15 *per cent.* on all wrought ſilks, bengals, and ſtuffs made of or mixt with ſilk or herba, of the manufacture of Perſia, China, or the Eaſt Indies, and callicoes painted, dyed, printed or ſtained there after the weaving, or made of yarn or other materials, painted, dyed, or ſtained before the making: but by 11th and 12th Will. III. they are prohibited to be worn in Great Britain, and are to pay only the half ſubſidy.

N°. XI. *New duty on ſpice and pictures*,—was granted to King Will. III. and by the 11th of Geo. I. continued for ever; being appropriated to the ſame uſes and purpoſes with the cuſtoms.

This duty is, over and above all former duties to be paid upon

upon the importation of the following goods, in ready money, without diſcount.

	The duty.
Cinnamon, Cloves, Mace, Nutmegs } for every 20 s. of their reſpective rates	0 1 0
Pictures, whether for private uſe or for ſale, for every 20 s. of their value	0 4 0

Upon due exportation as directed for the old ſubſidy, &c. a drawback or repayment of two thirds of this duty muſt be allowed, except on pictures.

N°. XII. *Additional duty on ſpice and pictures, and new duty on drugs*,—was granted to Queen Anne, but by the 11th of Geo. I. continued for ever; being appropriated to the ſame uſes and purpoſes as the cuſtoms.

This duty is, over and above all other former duties and impoſitions whatſoever, to be paid upon the importation of the following goods:

	The duty.
Cinnamon, Cloves, Mace, Nutmegs } for every 20 s. of their reſpective rates	0 1 0
Pictures, whether for private uſe, or for ſale, for every 20 s. of their value	0 4 0

To be aſcertained, ſecured, raiſed, levied, recovered, anſwered, paid and accounted for, by ſuch rules, ways, means and methods, under ſuch penalties and forfeitures, and in ſuch manner and form, as directed for the former duty, N°. XI.

Drugs, except thoſe for dyers uſe, which are exempted from the new ſubſidy.

	The duty.
Rated in the firſt column of rates; for every 20 s. of their reſpective rates for the new ſubſidy, whether of the growth, &c. or not of the growth, &c. 10 *per cent.* or	0 2 0
Rated in the ſecond column of rates; for every 20 s. of ſuch their reſpective rates, 4 *per cent.* or	0 0 $9\frac{12}{20}$
Not rated in the firſt column of rates, and imported from Eaſt India, China, or Perſia; for every 20 s. of the true and real value thereof, according to the groſs price at which they ſhall be ſold at the candle, 4 *per cent.* or	0 0 $9\frac{12}{20}$
Not at all rated, and imported from any other places; for every 20 s. of their values upon the oath or affirmation of the importer, as for the old ſubſidy, 4 *per cent.* or	0 0 $9\frac{12}{20}$
Porcelain, commonly called China or Japan-ware made of earth; for every 20 s. of the true and real value thereof, according to the groſs price at which they ſhall be ſold at the candle 12 *per cent.* or	0 2 $4\frac{16}{20}$

This duty on porcelain and unrated drugs from Eaſt India, &c. is to be ſecured, aſcertained, valued, raiſed, levied, collected, anſwered and paid by ſuch ways and means, and with ſuch allowances, and in ſuch manner and form, &c. as directed for the old ſubſidy on unrated Eaſt India goods.

	Groſs duty.
White callicoes, which do not pay duties as muſlins; dimities, and all other manufactures made of cotton; for every 20 s. of the true and real value thereof, according to the groſs price at which they ſhall be ſold at the candle 15 *per cent.* or	0 3 0

To be ſecured, aſcertained, valued, raiſed, levied, collected, anſwered and paid by ſuch ways and means, and ſubject to ſuch allowances, and in ſuch manner and form as directed for the 15 *per cent.* on muſlins, N°. X.

Upon due exportation, as directed for the old ſubſidy, &c. a drawback or repayment of this duty muſt be allowed, as follows:

	The drawback.
Borax refined in Great Britain	as Unrefined.
Camphire refined in Great Britain	as Unrefined.
Spice	Two thirds.
Pictures	Nothing.
The reſt	All.

N°. XIII. *Second 25 per cent. on French goods*,—was granted to King William III. and by the 11th of King George I. continued for ever; being made part of the aggregate fund, and continued to the bank of England, as are the cuſtoms.

This duty is, over and above all former duties and impoſitions, to be paid upon the importation of the following goods, and to be raiſed, levied, collected and paid in the ſame manner and form, and by ſuch rules, means and ways, and under ſuch penalties and forfeitures, as directed for the cuſtoms.

French goods, except brandy and ſuch as are really ſeized and condemned as prize, without connivance or colluſion.

	The duty. *per* Ton. l. s. d.	*per* Gallon.
Vinegar	15 0 0	,059523
Wine	25 0 0	,099206
All other goods of the growth, product or manufacture of France; for every 20 s. of their reſpective rates for the new ſubſidy or values upon oath, as for the old ſubſidy	0 5 0	

Which duty is to be paid in ready money, without any deduction; except upon French wines imported in caſks, out of which muſt be deducted 6 l. *per cent.* as out of the former duties.

Alſo except upon French tobacco; out of which there muſt be deducted 8 l. *per cent.* as out of the other duties.

	Per Ton.	*Per* Gallon.
So that this duty neat upon French wines, imported in caſks will be	23 10 0	,093253
Upon exportation		Not drawn back.

N° XIV. *Coinage*,—was granted to King Cha. II. and continued by the 12th of Geo. II.

This duty, which is over and above all former duties, to be paid on the importation of the following goods, in ready money, without diſcount, is to be applied, except ſo much as ſhall be raiſed on brandy or other ſpirits, which is to be applied to the aggregate fund, to the defraying the expences and charges of the mint, and of the aſſaying, melting down, waſte and coinage of gold and ſilver; and as a further encouragement for the bringing in of gold and ſilver to be coined into the current coin of this kingdom: and is to be levied, collected, and paid at the cuſtom-houſe, to the collectors of the cuſtoms, under the ſame pains, penalties and forfeitures as directed for the cuſtoms; and to be by them anſwered and paid to the receiver-general of the cuſtoms, whoſe acquittance is to be their ſufficient diſcharge for the money ſo paid; and a certificate of the due payment thereof obtained, yearly or oftener, from the comptroller-general, with the allowance of the commiſſioners of the cuſtoms, or any three of them, is to be a quietus, and free them from all other accounts and trouble.

	The duty. *per* Ton.	*per* Gallon.
Wines, except priſage-wines which are exempted by practice, Vinegar, Cyder, Beer	0 10 0	—,001984
Brandy, Strong waters	1 0 0	—,003968

For the collection of which duty, the treaſury may allow the officers of the cuſtoms, a ſalary or allowance not exceeding 12 d. for every pound collected.

Upon due exportation as directed for the old ſubſidy, &c. drawback or repayment of this whole duty muſt be allowed for all except wine-lees.

N° XV. *New duty on pepper and raiſins, and a further new duty on ſpice*,—was granted to Queen Anne; but by the

6th of Geo. I. continued for ever; being appropriated to annuities for 32 years; and by 7th Geo. I. continued to the South Sea company, upon the annuitants ſubſcription into their capital ſtock.

This duty is, over and above all former duties, to be paid upon the importation of the following goods: to be aſcertained, ſecured, raiſed, levied, recovered, and anſwered by ſuch rules, ways, means, and methods, and under ſuch penalties and forfeitures, as the other duties upon the ſame reſpective goods.

	The groſs duty.
Cinnamon, Cloves, Mace, Nutmegs	As much as all the reſpective former duties.
Raiſins of all ſorts, the hundred weight containing 112 lb. - - -	0 5 0
Pepper, except long pepper,	
Not imported directly, from the place of its growth in Britiſh built ſhipping, the pound - - -	0 1 6
Imported directly from the place of its growth in Britiſh-built ſhipping, the pound - - -	0 0 3

But as pepper at importation is to be warehouſed, upon payment of the half ſubſidy, and, if exported, is liable to no further duty, this duty muſt be paid only for what ſhall be delivered out of ſuch warehouſes, in order to be conſumed in Great Britain.

For the payment of this duty on all the aforeſaid goods, except pepper, the importer is to be allowed 12 months, upon his giving ſecurity at the cuſtom-houſe: but if he pays down the ſame in ready money, he is to be allowed 10 *per cent.* prompt payment.

Upon due exportation as directed for the old ſubſidy, &c. drawback or repayment of the whole duty muſt be allowed, or the ſecurity vacated on all, except pepper.

XVI. *New duty on candles imported*,—was granted to Queen Anne, and by the 3d Geo. I. continued for ever; being appropriated to the ſame uſes and purpoſes with the impoſt on wines and vinegar, Nº 5.

This duty is, over and above all former cuſtoms, ſubſidies, or other duties, to be paid before landing, in ready money, without diſcount, upon the importation of all candles; to be aſcertained, ſecured, raiſed, levied, recovered, and anſwered by ſuch rules, ways, means, and methods, and under ſuch penalties and forfeitures, and in ſuch manner and form, as the former duties upon candles imported.

	The duty.
Candles made of wax, or uſually called or ſold for wax-candles, notwithſtanding the mixture of any other ingredients therewith, the pound - - - -	0 0 4
Candles made of tallow, and all other candles, the pound - - -	0 0 0½

Upon due exportation, as directed for the old ſubſidy, &c. and alſo upon giving ſufficient ſecurity before ſhipping, that every part thereof ſhall be exported, and not relanded in Great Britain, this duty is to be wholly repaid or drawn back.

XVII. *New duty on coals, culm, and cinders*,—was granted to K. William III. and by the 5th of Geo. I. continued for ever; being appropriated to the payment of annuities for 32 years; and afterwards applied to the South Sea company, upon a voluntary ſubſcription of the proprietors, into their capital ſtock.

This duty is, over and above all former duties, to be paid upon the following goods; and to be under the management of the commiſſioners of the cuſtoms, who are to cauſe it to be raiſed, levied, collected, and paid into the exchequer, diſtinct from all other branches.

Due entries of the ſhips and goods muſt be made at the cuſtom-houſe in the port of diſcharge; and the duty be anſwered and paid to ſuch collector as ſhall be appointed by his Majeſty, or any four or more of the commiſſioners of the cuſtoms; before bulk of the ſhip be broken, or any of the goods unladen, meaſured or weighed.

	Groſs duty.
Coals, except charcoal made of wood,	
Imported from beyond the ſeas,	
If ſuch as are uſually ſold by weight; for every ton containing 20 C. weight	0 3 0
If ſuch as are uſually ſold by the chalder, or any other meaſure reducible to the chalder; for every chalder containing 36 buſhels Wincheſter meaſure -	0 4 6
To be paid by the importers.	
Brought coaſtways, or from port to port of Great Britain,	
If ſuch as are uſually ſold by weight; for every ton containing 20 C. weight	0 2 0
If ſuch as are uſually ſold by the chalder, &c. for every chalder containing 36 buſhels Wincheſter meaſure -	0 3 0
Culm brought coaſtways; for every chalder, containing 36 buſhels Wincheſter meaſure	0 0 7⅕
Cinders made of pit-coal, brought coaſtways; for every chalder, containing 36 buſhels Wincheſter meaſure - -	0 3 0

To be paid at the ports of landing, and to be charged upon the owners or maſters of the ſhips.

But for ſuch of the ſaid coals, culm, or cinders, as are carried from the bridge of Stirling, within the firth of Forth, to the town of Dunbar, or to any port betwixt them, or from Ellen foot to Bank-end in the county of Cumberland, this duty is not to be taken.

	Diſcount.
For payment of the aforeſaid duty, the owner is to be allowed three months time, upon his giving good and ſufficient ſecurity; but if he chuſes to pay ready money, he is to be allowed 10 *per cent. per annum*; which for the ſaid three months is - -	2½ *per cent.*

If, after payment or ſecurity of this duty, the goods ſhall be carried to any other place of this kingdom, it ſhall not be again demanded or paid.

Upon due exportation, as directed for the old ſubſidy, &c. or upon due proof by oath before the collector, that they have been uſed in melting of copper and tin ore within the counties of Cornwal and Devon, or in fire-engines for draining tin or copper-mines in Cornwal, this duty is to be wholly repaid, or the ſecurity vacated, or an allowance made out of the over-ſea duties.

Note, The aforeſaid duties are but 3-5ths of what was granted and continued to the 30th of September 1710, that part only being continued by 8th Anne, cap. 4. But the other 2-5ths are continued, under the title of an additional duty, as in branch Nº XIX.

Nº XVIII. *Subſidy and* 1 per cent. *outwards*,—was granted to King Charles II. and by the 3d of George I. continued for ever.

Subſidy outwards was appropriated to the bank of England, as part of a general fund, for payment of annuities.

This duty was originally granted upon the exportation of moſt native commodities, and manufactures thereof; but, for the encouragement of theſe manufactures, &c. it was afterwards repealed on ſeveral ſorts of goods, particularly woollen; though the following were excepted.

Allum,	Lapis calaminaris,
Lead,	Skins of all ſorts,
Lead ore,	Glew,
Tin,	Coney hair, or wool,
Leather tanned,	Hares wool,
Copperas,	Hair of all ſorts,
Coals,	Horſes,
Wool cards,	Litharge of lead.
White woollen cloths,	

Provided that due entries of the goods ſo exempted from duty, be firſt made in the cuſtom-houſe in the port of exportation, in the ſame manner and form, expreſſing the quantities and qualities, as was before practiſed; and that they be ſhipped by the proper officer; on failure whereof, the goods are to be liable to the ſame duty as before.

The duty.

This duty, except on tanned leather, and white woollen cloths, is to be levied and collected according to the particular rates affixed thereon, in the column of rates outwards; or, if not there rated, according to their real value and price, to be aſcertained upon the oath or affirmation of the merchant, in the preſence of the cuſtomer, collector, comptroller, and ſurveyor, or any two of them; from which rates, values, or prices, this ſubſidy is to be taken for every 20 s. thereof, 5 *per cent.* or - - 0 1 0

Being for leather of all ſorts, ſheep-ſkins, and calve-ſkins, tanned, tawed, or dreſſed, the hundred weight, containing 112 lb. - 0 1 0

This duty on white woollen cloths, by the 6th Anne, was granted without limitation, being for every white woollen broad cloth - 0 5 0

And, during the continuance of the aforeſaid ſubſidy of poundage on native commodities, there is alſo, under the ſame regulations, to be paid a ſubſidy on the exportation of the following foreign goods uſed in dying, which had been imported duty free.

Agaric,	Litmus,
Annatto,	Logwood,
Antimonium crudum,	Madder of all ſorts,
Aqua fortis,	Madder-roots,
Argol,	Nicoragua-wood,
Arſenic,	Orchal,
Bay berries,	Orchella,
Brazil, or Fernambuck wood,	Pomegranate peels,
	Red, or Guinea wood,
Braziletto, or Jamaica wood,	Red ſaunders,
	Safflore,
Cochineal,	Sal armoniac,
Cream of tartar,	Sal gem,
Fuſtic,	Sapan-wood,
Galls,	Shoemack,
Gum Arabic, or	Sticklack,
Gum Senega,	Turnſole,
Indico of all ſorts,	Valonia,
Iſinglaſs,	Verdigreaſe.

The ſubſidy on the aforeſaid dying goods, is to be levied and collected according to their reſpective rates in the column of rates outwards; for every 20 s whereof they are to pay 2½ *per cent.* or 0 0 6

One per cent. outwards, is payable in ready money, without diſcount, upon all goods and merchandiſes liable to ſubſidy, exported from any port of Great Britain, capable of a ſhip or veſſel of two hundred tons upon an ordinary full ſea, to any part or place of the Mediterranean ſea, beyond the port of Malaga, in any Britiſh ſhip or veſſel that hath not two decks, and carries leſs than ſixteen pieces of ordnance mounted, together with two men for each gun, and other ammunition proportionable.

The duty.

It is one fifth part of the aforeſaid ſubſidies outwards, or for every 20 s. of the reſpective rates or values of the goods, 1 *per cent.* or 0 0 2$\frac{4}{20}$

N° XIX. *Additional duty on coals, culm, and cinders*,—was granted to King William III. and by the 3d of Geo. I. continued for ever; being appropriated to the ſame uſes as the ſubſidy outwards.

This duty is, over and above all former duties, to be paid for the following goods.

Coals, except charcoal made of wood, The groſs duty.

Imported from parts beyond the ſeas,

If ſuch as are uſually ſold by weight, for every ton containing 20 C. weight - 0 2 0

If ſuch as are uſually ſold by the chalder, or any other meaſure reducible to the chalder; for every chalder containing 36 buſhels Winchester meaſure - - 0 3 0

Groſs duty.

Brought coaſtways, or from port to port of Great Britain,

If ſuch as are uſually ſold by weight, for every ton containing 20 C. weight - 0 1 4

If ſuch as are uſually ſold by the chalder, &c. for every chalder containing 36 buſhels Winchester meaſure - - 0 2 0

Culm, brought coaſtways, for every chalder containing 36 buſhels Wincheſter meaſure 0 0 4½

Cinders made of pit-coal, brought coaſtways, for every chalder containing 36 buſhels Wincheſter meaſure - - - 0 2 0

But for ſuch of the ſaid coals, culm, and cinders, as are carried from the bridge of Stirling, which is on the firth of Forth, to the town of Dunbar, or to Redhead, or to any part betwixt them, or from Ellen-foot to Bank-end in the county of Cumberland, this duty is not to be taken.

And it is to be raiſed, levied, collected, and recovered in ſuch manner and form, and ſubject to ſuch allowances and repayments, and under ſuch penalties, forfeitures, diſabilities, and according to ſuch rules, methods, and directions, as directed for the former duty, N° XVII.

N° XX. *Additional duty on candles imported*,—was granted to Queen Anne, and by 3d George I. continued for ever; being appropriated to the ſame uſes as the ſubſidy outwards.

This duty is, over and above all other duties, to be paid in ready money, without diſcount, upon the importation of all candles.

The duty.

Candles made of wax, or uſually called or ſold for wax-candles, notwithſtanding the mixture of any other ingredients therewith, the pound 0 0 4

Candles made of tallow, and all other candles, the pound - - - 0 0 2½

To be raiſed, levied, recovered, collected, and paid by ſuch ways and means, and under ſuch penalties and forfeitures, and ſubject to ſuch allowances, drawbacks, rules, and directions, and in ſuch methods, form, and manner, as directed for the former new duty, N° XVI.

N° XXI. *New duty on hops imported*,—was granted to Queen Anne, and by the 11th of George I. continued for ever; being 3 d. the pound avoirdupois, and appropriated to the ſame uſes with the cuſtoms; which duty is, over and above all other duties, cuſtoms, and ſubſidies, to be paid down in ready money upon the importation of all hops; to be aſcertained, ſecured, raiſed, levied, recovered and anſwered by ſuch rules, ways, means, and methods, and under ſuch penalties and forfeitures, and in ſuch manner and form as the former duties on hops imported, and not to be drawn back on exportation.

N° XXII. *New duty on hides, ſkins, &c. imported*,—was granted to Queen Anne, and by 3d George I. continued for ever; being appropriated to the ſame uſes as the ſubſidy outwards, No. XVIII.

This duty is, over and over all former duties, cuſtoms, and ſubſidies, to be paid in ready money without diſcount, upon the entry, and before the landing of the following goods imported; to be aſcertained, ſecured, raiſed, levied, recovered and anſwered by ſuch rules, ways, means, and methods, and under ſuch penalties and forfeitures, and in ſuch manner and form as directed for the cuſtoms.

Hides. The duty.

Upon due exportation, as directed for the old ſubſidy, *&c.* and alſo upon ſufficient ſecurity given before ſhipping, that the goods ſhall not be relanded in Great Britain, drawback of this duty muſt be allowed as follows, *viz.*

	The drawback.
Hides and calve-ſkins	Two thirds.
Starch	All.
Gilt and ſilver wire	All.
All the reſt	Nothing.

N° XXIV. *New duty on ſoap, paper, &c. imported,*—was granted to Queen Anne, and by the 3d of George I. continued for ever; being applied with the ſubſidy outwards. This duty, over and above all former duties, cuſtoms, and ſubſidies, to be paid by the importer in ready money, without diſcount, upon the entry, and before the landing of the following goods imported.

	The duty
Soap, the pound	0 0 2

By the 10th Anne, which granted this duty on paper, thoſe ſorts only which have no rates prefixed to them in the firſt column, were particularly charged; and all other paper was to pay the ſaid duty, after the rate of 20 *per cent.* according to the real value or worth of ſuch paper, to be ſold at the port of importation, upon the oath of the importer, without any abatement for this or any other former duty. But, by 11th George I. inſtead of the ſaid value upon oath, the following reſpective rates were aſſigned for payment of the faid duty, which is here charged in the ſecond column, to make it correſpond with thoſe ſorts which were particularly and expreſsly charged.

Millboards, Paſteboards, Scaleboards,	the hundred weight	0 5 0

To be aſcertained, ſecured, raiſed, levied, recovered and anſwered by ſuch rules, ways, means, and methods, and under ſuch penalties and forfeitures, and in ſuch manner and form as the former duties on the ſame commodities.

Linens chequered, ſtriped, printed, painted, ſtained or dyed after the manufacture, or in the thread or yarn before the manufacture, in any foreign parts, except lawns, ſtriped or chequered linens being all white, neckcloths ſtriped at the ends only, barras or packing canvas, and buckrams; for every 20 s. of the true and real value or worth to be ſold at the port of importation, upon the oath of the importer, without any abatement for this or any former duty, 15 *per cent.* or 0 3 0

To be raiſed, levied and collected in the ſame manner and form, and by ſuch rules, ways, and methods, as the aforeſaid duty on paper.

Upon due exportation, as directed for the old ſubſidy, *&c.* and alſo upon ſufficient ſecurity given before ſhipping, that the goods ſhall not be relanded in Great Britain; this duty, except on paper, which on exportation is to have no drawback, is to be wholly drawn back or repaid: and for ſuch paper as ſhall be uſed in printing books in the Latin, Greek, oriental or northern languages, in the univerſities of Oxford and Cambridge, or in Scotland, upon the amount of the duties paid, aſcertained by the oath of the chief manager of the preſs, before the vice-chancellor, expreſſing the kinds and quantities certified by the ſaid vice-chancellor, a warrant or order of the treaſury, to the commiſſioners, muſt be made out for the repayment of this duty.

N° XXV. *Additional duty on ſoap, paper, &c. imported*,—was granted to Queen Anne, and by the 6th of George I. continued for ever; which was made a fund for the payment of an annuity of 105,000 l. for thirty-two years, and the annual ſurplus was reſerved for the diſpoſition of parliament; but by 7th George I. was continued to the South ſea company upon the annuitants ſubſcription into their capital ſtock. And by 2d George II. the ſurplus was appropriated to the bank of England, for payment of an annuity of 50,000 l. purchaſed by them for the ſum of 1,250,000 l. being after the rate of 4 l. *per cent. per annum*. This duty is, over and above all former duties, cuſtoms, ſubſidies, and rates, to be paid by the importer in ready money without diſcount upon the entry, and before the landing of the following goods imported.

	The duty.
Soap, the pound - -	0 0 1
Paper, Millboards, Paſteboards, Scaleboards, } Half of the duty N° 24.	
Linens chequer'd, ſtriped, printed, painted, ſtained, or dyed, after the manufacture, or in the thread or yarn before the manufacture, in any foreign parts, except buckrams, lawns, canvas, barras, and Sileſia neckcloths, and which may be lawfully uſed in Great Britain; for every 20 s. of the true and real value or worth to be ſold at the port of importation, upon the oath of the importer, without any abatement for this or any other duty, 15 *per cent.* or - -	0 3 0
Starch, the pound weight - -	0 0 2

To be raiſed, levied, aſcertained, ſecured, collected, anſwered and paid by ſuch ways, means, and methods, and under ſuch penalties and forfeitures, with the like allowances and drawbacks, and in ſuch manner and form as the former duties charged on the like commodities, in the branches N° XXIII. and XXIV.

N° XXVI. *New duty on coals exported*, — was granted to Q. Anne, and by the 6th of George I. continued for ever; being appropriated to the ſame uſes and purpoſes as the additional duty on ſoap, *&c.* N° XXV.

This duty is, over and above the former duties, to be paid on the entry, and before the ſhipping of coals outwards.

	The duty.
Coals ſhipped to be exported to parts beyond the ſeas, except to Ireland, the iſle of Man, or the Britiſh plantations; for every chalder, Newcaſtle meaſure, in foreign bottoms - -	0 5 0
Ditto in Britiſh bottoms - -	0 3 0

To be raiſed, levied, aſcertained, ſecured, collected, anſwered and paid by ſuch ways, means, and methods, and in ſuch manner and form, as the former duties on exportation.

N° XXVII. *New duty on ſail-cloth imported*,——was granted to Queen Anne, and continued by 15th of George II. being appropriated to the payment of a reward of 2 d. for every ell of Britiſh made ſail-cloth or canvas fit for, or made into ſails, exported by way of merchandiſe.

This duty is, over and above all former ſubſidies, duties, impoſitions, and payments, to be paid upon the importation of the following goods.

	The duty.
Foreign made ſails, and ſail-cloth, or canvas, uſually entered as hollands-duck, or vitry canvas, which ſhall be fit for making of ſails for navigat-	

The duty.

ing ſhips, and imported into Great Britain by way of merchandiſe, except canvas of the product and manufacture of Ireland, for every ell 0 0 1

To be raiſed, levied, collected, and recovered by ſuch ways, means, and methods, and in ſuch manner and form, as any ſubſidy for any other goods imported, and not to be drawn back on exportation.

XXVIII. *New duty on wrought plate imported*, ——was granted to King George I. for ever, and appropriated for payment of annuities.

This duty is, over and above all former cuſtoms, ſubſidies, and duties, to be paid down by the importer, in ready money without diſcount, upon the entry, and before the landing of

The duty.

Silver-plate imported, for every ounce troy 0 0 6

To be raiſed, levied, recovered, and paid by ſuch rules, ways, and methods, and in ſuch manner and form, as the duties on gilt and ſilver wire imported, under branch N° 23.

Upon due exportation as directed for the old ſubſidy, *&c.* and alſo upon ſufficient ſecurity given before ſhipping, that the ſame ſhall not be relanded in Great Britain, this duty is to be wholly drawn back or repaid.

XXIX. *New duty on apples imported*, ——was granted to King George I. and by the 10th of George II. continued without limitation, being appropriated towards making good the ſupply granted to his Majeſty for the year 1722.

This duty is, over and above all former cuſtoms, ſubſidies, and duties, to be paid down by the importers in ready money without diſcount, upon the entry, and before the landing of

The duty.

Apples imported, for every buſhel - 0 2 0

To be raiſed, levied, recovered and paid by ſuch rules, ways, means, and methods, and in ſuch manner and form as the former duties on apples imported, and not to be drawn back on exportation.

XXX. *New duty on cambrics imported*, — was granted to King George II.; but they are now prohibited.

This duty was appropriated to the payment of a bounty on Britiſh and Iriſh linens exported; and alſo, by order of the lords of the treaſury, or commiſſioners of the cuſtoms, to anſwer all charges attending the collection of this duty, or payment of the bounty: but if more money roſe by this duty than anſwered the bounty, *&c.* the ſame was, by directions of the treaſury, to be paid into the exchequer towards the ſinking fund.

This duty was, over and above all former ſubſidies, duties, impoſitions, and payments, to be paid upon the importation of

The duty.

Foreign cambrics, the half piece, containing ſix and an half ells - - 0 1 5

Ditto, the whole piece, containing thirteen ells 0 2 10

XXXI. *Exciſe on ſalt imported*,—was granted to K. William and Q. Mary, but continued by the 14th of King George II. being for

The buſhel, formerly 8 gallons, now 84 lb. 0 6 8

For the payment of this duty, the importer may be allowed ſix months time from the importation, upon his giving ſufficient ſecurity for the ſame to the collector upon entry, and before landing; and if he pays it in ready money, he muſt be allowed a diſcount after the rate of 10 l. *per cent. per annum*, which for the ſaid ſix months is 5 *per cent.*

For the ſalt may, upon landing, be weighed, cellared, and locked up in the preſence of an officer, at the importer's charge, and under the cuſtody of the officer and importer; and the importer may, in the preſence of, and by warrant under the ſaid officer's hand and ſeal, take away what quantity he pleaſes, not under a wey or 40 buſhels at a time, upon giving ſecurity for payment of the duty within ſix months after the delivery, or upon payment of the duty in ready money at the delivery; in conſideration whereof he muſt be allowed the aforeſaid diſcount for prompt payment.

But if the whole quantity imported in any one ſhip does not amount to 40 buſhels, it may not be cellared, but the whole duty muſt be paid down or ſecured.

And if the ſalt is deſigned for the curing of any fiſh for exportation, or herrings for home-conſumption, it may be landed, weighed, and warehouſed, under the locks of the officers and the proprietor, ſo to remain during the ſeveral intervals of each fiſhing ſeaſon, without payment of this duty; an entry being made of the reſpective quantities ſo lodged: but at the next fiſhing ſeaſon, when the importer wants to take the ſaid ſalt away, he muſt make oath to the quantity, and that it is intended to be only ſo uſed, and give ſecurity to account for the ſame.

Upon due exportation, this duty is to be wholly repaid, or the ſecurity vacated.

By the 8th article of the union, there was a duty payable in Scotland, and under the management of the commiſſioners of the cuſtoms there, for ſo much Scotch ſalt as was uſed in curing fleſh exported from thence to foreign parts, or to England: and likewiſe for proviſions uſed by ſhips trading thence, either to foreign parts, to England, or from port to port in Scotland, according to the exciſe payable in England, till 1ſt May 1714, which was 3 s. 4 d. *per* buſhel, but thenceforward after the rate of 2 s. 4 d. only, becauſe from that time all Scotch ſalt became chargeable with 12 d. *per* buſhel.

N° XXXII. *Exciſe on liquors imported*, — was granted to King Charles II. and continued by 6th of George II. being a duty, both in England and Scotland, under the management of the commiſſioners of the exciſe reſpectively, who generally empower the collectors of the cuſtoms at the ſeveral ports to levy it for them; being payable on the following liquors. See *Exciſe*.

From foreign parts.			
Ale, or beer, the barrel -	0	15	0
Brandy, aqua vitæ, ſpirits or ſtrong waters, ſingle, the gallon - -	0	4	8
Ditto double, or above proof, the gallon	0	8	8.
Mum, the barrel - -	1	5	0
Cyder, or perry, the ton - -	12	10	0
From Guernſey, Jerſey, Sark, or Alderney.			
Brandy, aqua vitæ, ſtrong waters or ſpirits, the gallon - - -	0	8	0
Vinegar, the barrel - -	0	8	9
Cyder, or perry, the hogſhead -	0	10	8
Beer, ale, and mum, the barrel -	0	6	0

All other exciſeable liquors, the ſame duties as paid in this kingdom.

Which is the total exciſe, except on rum, or ſpirits of the Britiſh plantations in America.

Note, *This duty was extended to Scotland by the act of union.*

To be paid by the importer in ready money, without diſcount, upon entry before landing, by 12th Charles II. and the other acts which granted the ſeveral duties; but by 15th George II. rum or ſpirits of the Britiſh ſugar plantations may be warehouſed ſix months before payment of the exciſe.

Not to be landed, before due entry be made with the collector of exciſe at the port of importation, or before the exciſe be fully ſatisfied and paid, and a warrant for the landing or delivering ſigned by the ſaid collector, or without the preſence of an exciſe-officer, upon forfeiture of the value, by 15th Charles II. and the 2d William and Mary.

Before the landing of any liquors from Guernſey, Jerſey, *&c.* oath muſt be made by the importer, before the collector of the cuſtoms, that they are of the growth and manufacture of the ſaid iſlands, and not made from or mixed with any foreign liquors, or materials, by 2d William and Mary; but there is no drawback on exportation.

N° XXXIII. *Inland duty on coffee, tea, and chocolate*, — was granted to King George I.

Coffee and tea having upon entry at the cuſtomhouſe, and payment of the cuſtoms at importation, been put into warehouſes at the importer's charge, and approved of by the commiſſioners of the cuſtoms, muſt, upon delivery

thence, with intent to be consumed in Great Britain, pay the following duty.

	The duty.
Coffee of the British plantations in America, the pound avoirdupois weight -	0 1 6
Ditto of other places, the like pound -	0 2 0
Tea, the like pound - -	0 4 0

To be paid down in ready money by the proprietor, at the next office for that division, for so much as he intends to take out of the warehouse for home-consumption; the warehouse-keeper, upon producing a warrant from the collector, testifying the receipt of the duty, to deliver the goods with a permit signed by himself, and a proper officer attending the warehouse, to prevent seizure.

But if intended for exportation, may be delivered upon sufficient security given to the commissioners of the customs accordingly.

Chocolate, made or sold in Great Britain, the pound avoirdupois weight -	0 1 6

To be paid by the maker, if within the bills of mortality, within one week, and in any other part of Great Britain within six weeks after entry.

To be under the management of such commissioners as his Majesty or the treasury shall appoint; who are to have and exercise the like jurisdiction as the commissioners of excise on liquors, and their judgments to be final.

This duty to be levied by the powers, and under the penalties of the laws of excise on liquors, and all penalties to be sued for and recovered by the same ways and means.

N° XXXIV. *Unrated goods imported, undervalued.*

Goods paying duties *ad valorem*, having, after examination, and upon demand made by the customer, collector, and comptroller, been delivered up for the use and benefit of the crown, and the value sworn or affirmed to, paid to the importer, together with the duties by him paid, and an addition of 10 l. *per cent.* and the said goods having been fairly and publicly sold to the best advantage, the neat produce or overplus, if any, after a deduction of all disbursements, must be paid into his Majesty's exchequer towards the sinking-fund, by the title of this branch.

The aforegoing duties are such as are at present payable to his Britannic Majesty upon goods and merchandises imported, exported, and brought coastways into Great Britain: but there being two other duties, which originally were also payable to the crown, though now they are by particular grants become a private right, the nature whereof is proper to be known by the officers of the customs, in regard the wines liable thereto are exempted from payment of part of the customs, *&c.* it has been thought proper to give a short account of the said duties.

N° XXXV. *Prisage and butlerage.*

These duties were originally the only custom that was payable upon the importation of wines, and were taken and received by virtue of the regal prerogative, for the proper use of the crown: but for many years past there having been granted by parliament, subsidies, or aids, to the kings of England, and those duties not repealed but confirmed; they have been pleased to grant the same away to some nobleman, who by virtue of such grant or patent is to enjoy the full benefit and advantage thereof, and may cause the same to be levied and collected in the same manner as the kings themselves might and were formerly wont to do.

Prisage is a certain taking or purveyance of wines to the King's use, out of every ship bringing in wines belonging to the natives of England, except the merchants of London, the cinque ports, Southampton, and Chester, which are exempted by particular charters; to be taken upon the breaking of bulk, or unloading any part of the ship's cargo, according to the whole quantity on board, though there be not more than one ton landed.

This duty is either single or double.

Single prisage is one ton, and is due in kind, when the quantity imported amounts to or exceeds ten tons, but is under twenty tons; for if under ten tons, there is not any prisage due.

Double prisage is two tons, and is due in kind, when the quantity imported amounts to, or exceeds twenty tons, which is the most due out of any one ship; one ton to be taken before, and the other behind the mast, at the pleasure of the King's butler or prisage-master, who may take the whole cargo, and chuse the best wines, and fill up the vessels, or chuse those that are the fullest, and take them away, allowing only 20 s. *per* ton for freight; or, if the owners had rather, he may compound with them for the whole quantity, at a certain price, as is the practice in London.

But as there is a difference in favour of the prisage-master between the customs and other duties due to the crown, which are to be paid by him and the merchant; the officer of the customs must carefully observe, that there be always a sufficient quantity imported, to allow the full prisage.

Butlerage is a duty of 2 s. for every ton of wines imported by merchants strangers; being a composition in lieu of the duty of prisage payable in kind by English only, in consideration of the liberties and freedoms granted to them by King John, and King Edward I. by a charter called *charta mercatoria.*

Besides these, there are what are called the plantation-duties imposed by the 25th of Charles II. for ever; being duties of several kinds upon several sorts of goods shipped in the British plantations, and not to be brought to Great Britain; as also the Barbadoes duty, which is 4 l. 10 s. *per cent.* payable in Barbadoes and the Leeward islands, on goods exported from thence, which is now all brought into Great Britain, instead of being applied towards the support of those islands, as it was intended when granted by the inhabitants. See *Duty.*

To which were added during the reigns of King George I. and King George II. the following duties.

1. A new additional duty of tonnage upon all wines imported, and granted for ever.
2. A new duty on glass imported, granted for ever.
3. The second, or rather third new subsidy of poundage granted in 1748, being 1 s. in the pound on all goods imported, and after that rate for goods *ad valorem*; but unrated East India goods to pay 5 *per cent.* of the gross price for which they are sold at the candle.

But the customs in Ireland are established according to a particular book of rates made for that kingdom; being as well as the excise, under the government of commissioners appointed for that country. See *Ireland.*

But for a more particular account of the other parts of the British customs, see book of *Rates*, and the table of *Scavage.*

Certain rules, orders, directions, and allowances, for the advancement of trade, and encouragement of the merchant, also for the regulating as well of the merchants in making due entries and just payments of their customs, as of the officers in all the ports of Great Britain, in the faithful discharge of their duty; annexed to the book of rates referred to in the act of tonnage and poundage passed in the 12th year of K. Cha. and signed by Sir Harbottle Grimstone, bart. speaker of the house of commons. See *Book of* Rates.

I. Every merchant shall have free liberty to break bulk in any port allowed by the law, and to pay custom and subsidy for no more than he shall enter and land; provided that the master or purser of every such ship, shall first make declaration upon oath, before any two principal officers of the port, of the true content of his ship's lading; and shall likewise after declare, upon his oath, before the customer, collector, comptroller, or surveyor, or two of them, at the next port of this kingdom, where his ship shall arrive, the quantity and quality of the goods landed at the other port, where bulk was first broken, and to whom they did belong.

II. All foreign goods and merchandise, except wines, currants, and wrought silks, first imported, shall be again exported by any merchant, within three years; and the merchant or merchants as shall export any such foreign goods or merchandises, except those before excepted, shall have allowance, and be repaid by the officer who received the same, the one moiety of the subsidy [illegible]

was paid at the firſt importation of ſuch foreign goods and merchandiſes, or any part thereof, ſo as due proof be firſt made by certificate from the officers, of the due entry and payment of the cuſtom and ſubſidy of all ſuch foreign goods and merchandiſes inwards, together with the oath of the merchants importing and exporting the ſame, affirming the truth thereof, and the name of his Majeſty's ſearcher or under-ſearcher in the port of London, and of the ſearcher of any other of the out-ports, teſtifying the ſhipping thereof to be exported. After all which duly performed in manner before expreſſed, the moiety of the ſubſidy firſt paid inwards, ſhall, without any delay or reward, be repaid unto ſuch merchant or merchants, who export ſuch goods and merchandiſes, within one month after demand thereof: as alſo the whole additional duty of ſilks, linen, and tobacco, in manner as before is directed.

III. And if there be an agreement now in force, which was formerly made by the late commiſſioners of the cuſtoms and ſubſidies, with the merchants ſtrangers, or their factors, or ſhall hereafter be made by any commiſſioners, or farmers of the cuſtoms and ſubſidies, or any other power, except by conſent of parliament, with any merchant or merchant-ſtrangers, or their factors, for any foreign goods or merchandiſes to be brought into the port of London, or any other port or haven of this kingdom of Great Britain, and to be exported again by way of compoſition; all other merchants being his Majeſty's ſubjects, ſhall be admitted into the ſame compoſition, and not to be excluded from any other privilege whatſoever, granted to the ſtranger by any private agreement, or compoſition, under the ſame conditions, and with the ſame reſtriction as ſhall be made with the merchant-ſtranger.

IV. Every merchant, as well Britiſh as ſtranger, that ſhall ſhip and export any kind of wines, which formerly have paid all the duties of tonnage inwards, ſhall have repaid, or allowed unto them all the duties of tonnage paid inwards: except to the Britiſh man twenty ſhillings the ton, and except to the ſtranger five and twenty ſhillings the ton, upon due proof of the due entry and payment of the tonnage inwards, and of the ſhipping thereof to be exported, to be made in manner as in the ſecond article is mentioned and expreſſed.

V. If any merchant, denizen, or ſtranger, ſhall export any Spaniſh or foreign wools, he ſhall have liberty ſo to do; with this further condition, that ſuch Spaniſh or other foreign wools whatſoever be not exported in any other ſhip or veſſel whatſoever, with intent to be carried beyond the ſeas, out of the kingdom of Great Britain, than only in Britiſh ſhipping, upon pain of confiſcation.

VI. Every merchant, as well Britiſh as ſtranger, which ſhall ſhip and export any currants, which formerly were duly entered, and paid the ſubſidy and cuſtom inwards, ſhall have allowed or repaid unto them reſpectively, all the cuſtom and ſubſidy paid inwards for the ſame, except eighteen pence for every hundred weight to the Britiſh, and two and twenty pence halfpenny for every hundred weight to the ſtranger; upon due proof of the due entry and payment of the cuſtom and ſubſidy thereof inwards, and of the ſhipping thereof to be exported, to be made in manner as in the ſecond article is declared.

VII. If any merchant having duly paid all duties inwards for foreign goods, and in regard of bad ſales, ſhall be inforced to keep the ſame, or any part thereof, in his hands, after the ſpace of three years ſhall be elapſed; in this caſe, he, or any other perſon, is to be permitted to ſhip the ſame out for the parts beyond the ſeas, if they think it, without payment of any ſubſidy for the ſame outwards, upon due proof that the ſame was duly entered, and ſubſidy paid inwards.

VIII. Every merchant bringing in any ſort of wines into this kingdom, by way of merchandiſe, and ſhall make due entries of the ſame in the cuſtomhouſe, ſhall be allowed 12 *per cent.* for leakage.

IX. Every hogſhead of wine which ſhall be run out, and not full ſeven inches, or above, left therein; and every butt or pipe not above nine inches, ſhall be accounted for outs, and the merchant to pay no ſubſidy for the ſame.

X. If any wines ſhould prove corrupt and unmerchantable, and fit for nothing but to diſtil into hot-waters, or to make vinegar, then every owner of ſuch wines ſhall be abated in the ſubſidy, according to ſuch his damage in thoſe wines; by the diſcretion of the collectors of the cuſtoms, and one of the principal officers. But, by 6th George I. this is repealed.

XI. If any tobacco, or other goods or merchandiſe brought into this kingdom, ſhall receive any damage by ſalt water, or otherwiſe, ſo that the owner thereof ſhall be prejudiced in the ſale of ſuch goods, the principal officers of the cuſtomhouſe, or any two of them, whereof the collector for the time being to be one, ſhall have power to chuſe two indifferent merchants, experienced in the values of ſuch goods; who, upon viſiting the ſaid goods, ſhall certify and declare upon their corporal oaths, firſt adminiſtered by the ſaid officers, what damage ſuch goods have received, and are leſſened in their true value, and according to ſuch damage in relation to the rates ſet on them in the book of rates, the ſaid officers are to make a proportionable abatement unto the merchant or owner of the ſubſidy due for the ſame. But, by 12th Anne, and 9th George I. repealed as to tobacco.

XII. The merchant-ſtrangers, who, according to the rates and values in the book of rates contained, pay double ſubſidy and lead, tin, woollen cloths, ſhall alſo pay double cuſtom for native manufactures of wool, or part wool; and the ſaid ſtrangers are to pay for all other goods, as well inwards as outwards, rated to pay the ſubſidy of poundage, three pence in the pound, or any other duty payable by *charta mercatoria*, beſides the ſubſidy. But, by 25th Charles II. and 9th Anne, repealed as to goods imported.

XIII. That the merchants trading in the port of London, have free liberty to lade and unlade their goods at any the lawful keys, and places of ſhipping and landing of goods, between the Tower of London, and London bridge, and between ſun riſing and the ſun ſetting, from the 10th day of September, to the 10th day of March; and between the hours of ſix of the clock in the morning, and ſix of the clock in the evening, from the 10th day of March to the 10th day of September, giving notice thereof to the reſpective officers appointed to attend the lading and unlading of goods. And ſuch officer as ſhall refuſe, upon due calling, to be preſent, he ſhall forfeit for every default five pounds, the one moiety unto the King, and the other moiety to the party grieved and ſuing for the ſame. For the lawful keys, ſee *Keys*, and *Wharfs*.

XIV. The merchants of York, Kingſton upon Hull, Newcaſtle upon Tyne, and the members thereof, ſhall be allowed free of cuſtom and ſubſidy, two of the northern cloths, and kerſies in ten, to be ſhipped in thoſe ports in the names of double wrappers, as formerly hath been there allowed them. But, by 11th and 12th William III. all woollen manufactures are free.

XV. The merchants of Exeter, and other weſtern parts, ſhall be allowed free of ſubſidy, one perpetuana in ten, for a wrapper, and three Devon dozens in twenty, for wrappers; the ſame to be ſhipped out of the ports of Exeter, Plymouth, Dartmouth, Barnſtable, Lime-Regis, or the members thereof. But, by the 11th and 12th Will. III. all woollen manufactures are free.

XVI. All merchants tranſporting any ſorts of woollen, whether new or old drapery, as alſo bays and cottons, ſhall be allowed one in ten for a wrapper, free of cuſtom and ſubſidy. But, by 11th and 12th William III all woollen manufactures are free.

XVII. Every merchant ſhall be allowed upon all other goods and merchandiſes appointed to pay to any the ſubſidy of poundage, according to the rule of the book of rates, to be imported, five in the hundred of all the ſaid ſubſidies of poundage ſo appointed to be paid.

XVIII. The officers, who ſit above in the cuſtomhouſe of the port of London, ſhall attend the ſervice of their ſeveral places, from nine to twelve of the clock in the forenoon; and one officer, or one able clerk, ſhall attend with the book in the afternoon, during ſuch time as the officers are appointed to wait at the water-ſide, for the better deciding of all controverſies that may happen concerning merchants warrants. All other the officers of the out-ports ſhall attend every day in the cuſtomhouſe of every reſpective port for diſpatch of merchants and ſhippers,

ſhippers, between the hours of nine of the clock and twelve in the morning, and two and four of the clock in the afternoon.

XIX. Every merchant making an entry of goods, either inwards or outwards, ſhall be diſpatched in ſuch order as he cometh; and if any officer, or his clerk, ſhall, either for favour or reward, put any merchant, or his ſervant duly attending, by his turn, or otherwiſe delay any perſon ſo duly attending, and making his entries aforeſaid, to draw any other reward, or gratuity, from him, than is limited in the act for tonnage and poundage, and the book of rates; if the maſter-officer be found faulty herein, he ſhall, upon complaint to the chief officers of the cuſtomhouſe, be ſtrictly admoniſhed of his duty; but if the clerk be found faulty therein, he ſhall, upon complaint to the ſaid chief officers, be preſently diſcharged of his ſervice, and not be permitted to ſit any more in the cuſtomhouſe.

XX. The Lord Mayor, commonalty, and citizens of the city of London, their officers, or deputies, for, and touching the offices of package, ſcavage, baleage, or portage of any goods, or merchandiſe of aliens, or their ſons born within this kingdom, or unfreemen, imported or exported into, or out of the city of London, or the liberties or ports thereof, unto or from the parts beyond the ſeas, for or concerning the receiving, or taking of any fees, or rates heretofore uſually taken, for, or in reſpect of the ſaid offices, or any of them, might, and may receive and take the ſame, any thing in the act for tonnage and poundage, or the book of rates, or any former act to the contrary notwithſtanding. See *Scavage*.

XXI. All antient duties heretofore lawfully taken by any city, or town-corporate, their farmers, deputies, or officers, under the name of town-cuſtom, or the like, for the maintenance of bridges, keys, harbours, wharfs, or the like, ſhall and may be received and enjoyed as formerly; any thing in the ſaid act, or any other act or book, to the contrary notwithſtanding.

XXII. The under-ſearcher, or other officers of Graveſend, having power to viſit and ſearch any ſhip outward-bound, ſhall not, without juſt and reaſonable cauſe, detain any ſuch ſhip, under colour of ſearching the goods therein laden, above three tides after her arrival at Graveſend, under pain of loſs of their office, and rendering damage to the merchant or owner of the ſhip. And the ſearcher, or other officer of the cuſtomhouſe in any of the out-ports, having power to ſearch and viſit any ſhip outward-bound, ſhall not, without juſt and reaſonable cauſe, detain any ſuch ſhip under colour of ſearching the goods therein laden, above one tide after the ſaid ſhip is fully laden and ready to ſet ſail, under pain of loſs of the office of ſuch offender, and rendering damage to the merchant and owner of the ſaid ſhip. See *Thames*.

XXIII. *Note*, That all timber in balks, which ſhall be of eight inches ſquare, or upwards, that ſhall be imported, or brought from any part beyond the ſea into the realm of Great Britain, ſhall be rated according to the meaſure of timber, the foot ſquare three pence for the value thereof, and according to that rule ſhall pay for ſubſidy, twelve pence in the pound according to poundage; and all under eight inches ſquare, and above five inches ſquare, ſhall pay for ſubſidy according to the rates mentioned in the book of rates for middle balks, and all of five inches ſquare, or under, ſhall pay according to the rate of ſmall balks.

XXIV. For avoiding all oppreſſion by any of the officers of the cuſtoms, in any port of this kingdom, in exacting unreaſonable fees from the merchant, by reaſon of any entries, or otherwiſe, touching the ſhipping and unſhipping of any goods, wares, and merchandiſe; it is ordered, that no officer, clerk, or other belonging to any cuſtomhouſe whatſoever, ſhall exact, require, or receive any other, or a greater fee, of any merchant or other whatſoever, than ſuch as are, or ſhall be eſtabliſhed by the commons in parliament aſſembled: if any officer, or other, ſhall offend contrary to this order, he ſhall forfeit his office and place, and be for ever after uncapable of any office in the cuſtomhouſe.

XXV. All fees appointed to be paid unto the cuſtomer, comptroller, ſurveyor, or ſurveyor-general, in the port of London, for any cocket or certificate outwards, ſhall be paid all together in one ſum to that officer from whom the merchant is to have his cocket or certificate above, in the cuſtomhouſe; and after the merchant hath duly paid his cuſtom and ſubſidy, and other duties above, in the cuſtomhouſe; as is appointed in the book of rates, he is to be maſter of, and keep his own cocket or certificate, until he ſhall ſhip out his goods ſo entered; when he is to deliver the ſame to the head-ſearcher, or his Majeſty's under-ſearcher in the port of London, or other ports, together with the mark and number of the goods.

XXVI. The officers of the cuſtomhouſe for the time being, ſhall allow and make good unto all perſons, all ſuch monies as are, or ſhall be due unto them for the half ſubſidy; and alſo the Algier duty of foreign goods formerly exported, now due and unpaid.

XXVII. The duties and ſums of money appointed to be paid by the act of ſubſidy of tonnage and poundage paſſed this parliament, and by the book of rates therein mentioned, and no other, ſhall be paid to his Majeſty's officers during the continuance of the ſaid act, upon goods imported, or exported, any law, ſtatute, or uſage to the contrary notwithſtanding. Nevertheleſs, it is declared, that priſage of wines, the duty called butlerage, and the duty of twelve pence upon every chalder of ſea-coal exported from Newcaſtle upon Tyne, to any other port or ports of this realm, ſhall be continued.

Rules, orders, and regulations; annexed to the additional book of rates referred to in an act paſſed in the 11*th year of King George* I. *and ſigned by the Honourable Spencer Compton, Eſq; ſpeaker of the houſe of commons. See Book of* Rates.

I. Any of the rates aforeſaid, or any thing contained in the additional book of rates, is not to extend to alter the methods preſcribed by law for aſcertaining the values upon ſuch unrated goods, wares, and merchandiſes imported, as are of the growth, product, or manufacture of the Eaſt Indies, China, or other the parts within the limits of the charters granted to the united company of merchants of England trading to the Eaſt Indies.

Or, II. To the charging any duty upon ſuch ſort of wood, plank, or timber wrought, or unwrought, or any of the goods called lumber, which are to be imported duty-free, by virtue of the act made in the eighth year of his preſent Majeſty's reign, on the conditions therein mentioned, during the continuance of the ſaid act.

Or, III. To the charging any duty upon ſuch drugs, or other goods uſed in dying, which are to be imported duty-free, by virtue of another act made in the eighth year of his preſent Majeſty's reign, on the conditions therein mentioned.

IV. And whereas it may happen, that ſeveral goods and merchandiſes may be imported, which are omitted to be rated in the book of rates made in the twelfth year of the reign of King Charles II. or in the additional book of rates, or in ſome particular act of parliament; in ſuch caſe, the value and price of ſuch goods and merchandiſes for the old ſubſidy, other than of thoſe of India, Perſia, or China, ſhall be aſcertained by the oath or affirmation of the merchant, in the preſence of the cuſtomer, collector, comptroller, and ſurveyor, or any two of them; and the better to prevent frauds, and that all merchants may be upon an equal foot in trade, the collector and comptroller, or other proper officers of the cuſtoms, may open, view, and examine ſuch goods and merchandiſes, paying duty *ad valorem*, and compare the ſame with the value and price thereof ſo ſworn to, or affirmed; and if, upon ſuch view and examination, it ſhall appear that ſuch goods or merchandiſes are not valued by ſuch oath or affirmation, according to the true value and price thereof, according to the true intent and meaning hereof; that then, and in ſuch caſe, the importer and proprietor ſhall, on demand made in writing by the cuſtomer, or collector and comptroller of the port where ſuch goods or merchandiſes are entered, deliver, or cauſe to be delivered, all ſuch goods and merchandiſes into his Majeſty's warehouſe at the port of importation, for the uſe and benefit of the crown; and upon ſuch delivery, the cuſtomer and collector of ſuch port,

ort, with the privity of the comptroller, ſhall, out of ny money in the hands of ſuch cuſtomer or collector, riſing by cuſtom, or other duties belonging to the crown, ay to ſuch importer or proprietor, the value of ſuch oods and merchandiſes ſo ſworn to, or affirmed, for the aid old ſubſidy, as aforeſaid, together with an addition f the cuſtoms and other duties paid for ſuch goods, and f ten pou ds *per centum* to ſuch value, taking a receipt or the ſame from ſuch importer or proprietor, in full ſaisfaction for the ſaid goods, as if they had been regularly ſold. And the reſpective commiſſioners of the cuſtoms ſhall cauſe the ſaid goods to be fairly and publickly ſold for the beſt advantage, and out of the produce thereof, the money ſo paid, or advanced as aforeſaid, ſhall be repaid to ſuch cuſtomer, or collector, with the privity of the comptroller, to be replaced to ſuch funds from whence the ſame was borrowed, and the overplus, if any, ſhall be paid into his Majeſty's exchequer, towards the ſinking fund, by the title of unrated goods imported, under valued.

Fees and allowances due and payable to the officers of his Majeſty's cuſtoms and ſubſidies in the port of London, and the members and creeks thereunto belonging; ſigned by Sir Edward Turner, ſpeaker of the houſe of commons in the 13*th year of King Charles* II. *and afterwards confirmed and continued by ſeveral ſubſequent acts of parliament.*

	Cuſtomer. s. d.	Comptroller. s. d.	Surveyor. s. d.
For every bill of portage	0 6	0 3	0 3
For a ſecond or parcel cocket outwards -	0 2	0 2	0 2

To the King's Majeſty's waiters, being in number eighteen.

s. d.

Received in the cuſtomhouſe, above ſtairs,

For ever Britiſh man's foreign goods or merchandiſes, of what nature ſoever, paying cuſtom or ſubſidy inwards in the port of London, or coming thither from any place or port by cocket 1 0

For every ſtranger's foreign goods in like manner, paying cuſtom or ſubſidy inwards in the ſame port, or coming thither by cocket - 1 6

For certifying every cocket of Britiſh goods brought up to London - - - 0 6

Received at the water-ſide by the ſaid King's waiters, and others attending, to be divided as formerly,

For a bill of ſtore or portage for any thing above 10 s. cuſtom - - 1 0

For a bill of ſight, bill of ſufferance, or any other imperfect warrant - - 1 0

For woolls, woollfells, leather, hides, and prohibited goods from the out-ports by cocket 1 0

Regiſter of the King's Majeſty's warrants.

s. d.

For every Britiſh warrant for the goods inwards 0 1

For every ſtranger's warrant - 0 4

For every certificate foreign - - 0 4

For all goods not paying 20 s. cuſtom, whether in or out, there ſhall be but half fees taken, whether for warrants, cockets, tranſires, debentures, or certificates.

To the uſher of the cuſtomhouſe.

For every oath adminiſtered by the King's officers outwards - - 0 2

Rules which may ſerve for the ports in general.

Whereas ſome ſocieties and companies of merchants trade in a joint ſtock, and enter the whole lading and cargo of a ſhip inwards, in one ſingle entry, when the adventurers therein concerned are many, the officers and waiters may take and receive ſuch gratuity as the ſaid company ſhall hereafter voluntarily conſent to pay unto them; any thing in this order or table of fees, or any other act or proviſion to the contrary notwithſtanding.

All goods under the value of 5 l. in the book of rates, paying ſubſidy the ſum of 5 s. or leſs, ſhall paſs without payment of any fees.

No Britiſh merchant that ſhall have goods of his own, to be landed out of one ſhip or veſſel at one time, although the receipt of the ſubſidy be diſtributed into ſeveral offices, ſhall be charged to pay any more or other fees for a ſingle entry.

Goods in partnerſhip to paſs as if the proprietors were one ſingle perſon.

Fiſh by Britiſh in Britiſh ſhipping or veſſel inwards or outwards, or along the coaſt, to pay no fees.

Foreign coin and bullion inwards, may be landed by any perſon, without warrant or fee.

Diamonds, precious ſtones, jewels, and pearls of all ſorts, to paſs inwards and outwards, without warrant or fee.

Poſt-entries inwards to paſs without fee, under 5 s. above 5 s. and under 40 s. then 6 d.: but if the cuſtom to be paid exceed 40 s. then it ſhall pay the full fees that was paid for the firſt warrant.

The merchant ſhall pay for all goods opening that ſhall be ſhort entered, above 10 s. cuſtom.
The merchant ſhall pay for weighing of all goods that ſhall be ſhort entered above 20 s. cuſtom.
The merchant not to be at any charge if duly entered.
Whereas by an act of parliament, intitled, *An act for encouraging and increaſing of ſhipping and navigation*, there are granted unto the King's moſt excellent Majeſty, ſundry duties upon ſtrangers veſſels importing commodities not of their growth; and thereby it is ordered, That ſuch ſhipping as pretend to enjoy the privilege of Engliſh ſhipping, muſt be manned accordingly; whereby there is a neceſſity of an officer to be employed every tide downwards towards Graveſend, to viſit all ſhips whether they be manned according to the ſaid act; as alſo to gauge French ſhips, and take an account of their tonnage, and to give certificates for making of foreign ſhips free, and taking bond for ſuch as go to the plantations; for effecting of which buſineſs, the following fees are ſet and appointed by the authority aforeſaid, to be paid as well in all outports, as in the port of London, and creeks thereunto belonging.

	Collector. s.	d.	Comptroller. s.	d.
For gauging every French veſſel in lieu of the like fee paid in France for gauging Britiſh veſſels there, as long as they continue this duty -	5	0		
But this ceaſed by the 11th article of the treaty of commerce with France, concluded at Utrecht in 1713.				
For making a certificate to make a foreign ſhip free, with ſealing and regiſtering the ſame - -	10	0		
For a bond for ſhips going to the plantations - -	0	6		
For every entry of French veſſels, and for bills to charge the 5 s. *per* ton on ſuch veſſel - -	0	6	0	6
For a certificate of payment of tonnage	0	6		
For every entry of goods liable to duties by the act of navigation, which this collector receives - -	0	4	0	4

The fees of the chief ſearcher, and of his Majeſty's five under-ſearchers in the port of London.

Duties between the chief ſearcher, and his Majeſty's five under-ſearchers that attend at London.

	s.	d.
For every ſhip that paſſeth to foreign parts, Spain, Portugal, the Streights, Weſt Indies, Guinea, or the Weſtern iſlands - -	6	0
Eaſt India - - -	10	0
All other Britiſh ſhips into foreign parts	4	0
For every ſtranger's ſhip or bottom -	6	8

Duties of his Majeſty's five under-ſearchers that attend at London.

Britiſh and aliens,

For every certificate for ſhipping out goods formerly imported - - -	2	0
But if the half ſubſidy to be received back amounts only to 40 s. then - -	1	0

To be paid by Britiſh and aliens, for goods that pay ſubſidy, and paſs out by cocket or warrant,

Pipe, puncheon, or butt - -	0	4
Hogſhead or bag - -	0	2
Tin, the block or barrel - -	0	1
Beer-eager, wood of all ſorts, copperas, allum, and all ſuch groſs goods, the ton -	0	4
Corn the laſt, ſea-coal the chalder, beer the ton	0	2
Lead, the fodder - -	0	2
The maund, fatt, or pack - -	0	6
The bundle, bale, cheſt, or caſe -	0	3
Raiſins and figs, the 20 frails, or barrels	0	3
Butter, and ſuch goods, the barrel -	0	2
For every coaſt certificate or cocket -	1	0

To be paid by Britiſh and aliens, for goods that pay ſubſidy, and paſs out by cocket or warrant,

	s.	d.
Tranſires for the coaſt, free		
For every horſe, mare, or gelding -	1	0
For certifying every debenture for receiving back half ſubſidy, *&c.* - -	0	6
For every piece of ordnance - -	1	0
For the indorſement of every cocket	1	0
For every certificate out of their books of goods loſt at ſea, taken by the pyrates, or returned, whereby ſo much may be ſhipped cuſtom free	1	0
For every bill of ſufferance, or ſtore above 10 s. in the book of rates - -	1	0
If under - - -	0	6
The fardle or truſs, by Britiſh, of three hundred weight, or upwards - -	0	6
Woollen cloth, the bale not exceed in five cloths, or three hundred weight, ſtuffs, bays, or ſays	0	3

Merchants ſtrangers, unfreemen of London, or ſuch as ſhip on ſtrangers ſhips or veſſels,

The fardle or truſs - -	1	0
The bale - -	0	6

The fees of his Majeſty's two ſearchers at Graveſend.

For every ſhip that paſſeth over the ſeas for Spain, Portugal, Streights, the Weſt Indies, Guinea, or the Weſtern iſlands - -	6	0
For every ſhip to the Eaſt Indies -	10	0
For all other ſhips into foreign parts -	4	0
For every ſtranger's ſhip or bottom -	8	0
For every ſhip having a coaſt-cocket -	0	4
For paſſengers outwards, not being merchants or mariners - - -	0	6

Sabbati 17° Maii 14° Caroli Regis ſecundi.

The general table of fees for the port of London, with the members and creeks thereunto belonging, being this day read,

The queſtion being put,

That for all goods not paying one pound cuſtom, in or out, there ſhall be but half fees taken for all cockets, warrants, debentures, tranſires, or certificates;

It was reſolved in the affirmative.

Reſolved upon the queſtion,

That the ſaid table of fees, as it was reported and read, with the alterations aforeſaid, be agreed to, and that the ſame be engroſſed, and Mr. Speaker is authoriſed to ſign the ſame,

WILL. GOLDESBROUGH,
Cler' Dom' Com'

A breviate of the fees of his Majeſty's officers of the cuſtoms and ſubſidies in the port of London, reducing the particulars, as they are ſet in ſeveral paragraphs, under ſeveral titles, into totals or entire ſums.

For the officers of the petty cuſtoms outwards.

	s.	d.
For a cloth cocket by Britiſh freemen of London, paid to the principal officers and their clerks	2	6
For a ſtranger's cocket, or unfreemen -	3	2
For a cloth certificate by Britiſh or ſtrangers	2	8
For a ſhip's entry croſſing the ſeas -	1	8
For a ſhip's entry to the Streights, Canaries, or Weſtern iſlands - -	4	4
For clearing of ſhips, and examining the books	2	6
For every endorſement - -	0	4
For making a bond to the King's Majeſty's uſe	0	6
For every entry in the certificate-book -	0	2

Subſidy outwards.

For every ſhip's entry within the Levant, or beyond the Streights mouth; to the officers and their clerk - - -	4	4
For every ſhip's entry going to any other foreign parts - - -	1	8
For every ſhip's entry going to the out-ports, and for a coaſt cocket and bond -	4	9

	s.	d.
For clearing of every ſhip, paſſing to foreign parts, and examining the ſhip's contents -	2	6
For every Britiſh cocket, by freemen -	2	6
For every ſtranger's cocket, or unfreemen of London - - -	3	4
For every certificate, cocket, *&c.* -	2	6
For every certificate, upon warrant from his Majeſty, or the Lord Treaſurer, paying no duties	4	4
For indorſement of all warrants and licences	0	8
For a foaring bill - - - -	2	0
For diſcharging a bond, and filing the certificate	0	4
For making a certificate of return -	2	0
For a debenture for repayment of half ſubſidy, *&c.* to the principal officers 2 s. to the ſearchers 6 d. for the oath 2 d. examining 4 d. caſting up and paying the money 8 d. in all - -	3	8
For making and entering a certificate or let-paſs	0	6
For a bill or ticket to the Lord Mayor -	0	4

Petty cuſtom inwards.

For every ſtranger's warrant inwards, ſee ſubſidy inwards.

For taking every bond - -	0	6
For every bill at ſight - -	2	0
For diſcharging every bond - -	0	6
For every great employment -	2	6

Subſidy inwards.

For every warrant by Britiſh freemen of London; to the principal officers, the King's waiters, and regiſter - - - -	2	6
For every warrant for ſtrangers -	4	6
for unfreemen	3	2
For every certificate of foreign goods coming from the out-ports, to London -	2	4
For goods ſent by ſea, by the importer thereof, to any of the out-ports, from London -	1	0

All the reſt of the fees under this title of *Subſidy inwards*, are ſingle, and paid to particular perſons. See the table.

Great cuſtoms.

For a cocket for calve-ſkins; to the officers and packet - - -	3	6
For woolls, wooll-fells, ſkins, and hides	3	0
For a bond to his Majeſty's uſe -	1	0
For filing the return - -	0	6
For a return and diſcharge outwards -	3	4

Fees inwards and outwards concerning the clerks.

For every bill of portage - -	1	0
For a ſecond, or parcel cocket outward -	0	6

The King's waiters, for the firſt three articles. All theſe are reckoned together with the former entries.

All other fees in the table not herein before compriſed, except only two concerning the act of navigation; the fees of the chief ſearcher, and his Majeſty's five under-ſearchers at London, and two at Graveſend, are ſingle, and do not admit of abbreviation.

For all goods not paying 20 s. cuſtom, whether in or out, there ſhall be but half fees taken.

All goods under the value of 5 l. in the book of rates, ſhall paſs without payment of any fees.

Coin and bullion inwards, precious ſtones, jewels, and pearls outwards, paſs without warrant or fee.

The merchants ſhall pay for all goods opening that ſhall be ſhort entered, above 10 s. cuſtom.

The merchants ſhall pay for weighing of all goods that ſhall be ſhort entered, above 20 s. cuſtom.

The merchant not to be at any charge, if duly entered.

By an order of the houſe of commons, made in the 13th year of King Charles II. it was ordered, That if any merchant, maſter of a ſhip, or other perſon or perſons whatſoever, ſhould refuſe to pay all or any of the above fees, it ſhould be lawful for any officer to make ſtay of every bill of entry, cocket, or other warrant, that ſhould be tendered, or given in, for paſſing of any ſhips, goods or merchandiſes whatſoever, exceeding the value of 5 l. in the book of rates, for which the above fees ſhou'd be detained, and denied to be paid; and copies of this order, and table of fees, were directed to be ſet up in public view in the cuſtomhouſe of London, and in all other offices and places where any of the ſaid fees were to be paid or received.

Trade, as it is now become the ſtrength of Great Britain, by the ſupply it breeds of ſeamen, ſo it is the living fountain from whence its inhabitants draw all their nouriſhment; for it diſperſes that blood and ſpirit through all the members, by which the body politic ſubſiſts. The price of lands, value of rents, commodities and manufactures, riſe and fall, as it goes well or ill with foreign trade: for it is not ſufficient to have great exportation, and great importation, unleſs a nation gains upon the ballance; becauſe the profit of trade is not the advantage the merchant makes at home; but what the whole nation gets clear and neat, upon the ballance in exchange with other countries of its commodities and manufactures.

Taxes which are laid unequally, that affect trade, that conſume a ſtate with uſury, that diſaffect the people, that prejudice the crown-revenue, and burthen a nation with perpetual intereſt, may be made uſe of now and then, to piece out and anſwer a ſingle and ſhort neceſſity; but ſhould not be repeated often, and made uſe of as the conſtant ways and means of ſupplying the government, in a buſineſs of length, without great hazard and damage to the ſtate: for taxes of this nature beget public and private property, make the people deſperate, render government uneaſy to the rulers, and may be rather ſaid to fight ſecretly againſt the prince, than to give him any true aſſiſtance; yet, from the revolution, the Britiſh trade has been loaded with many impoſitions, while almoſt every branch of the revenue has been devoted to anticipations, whereby the national debt has ſo much increaſed; for giving the government money by anticipating the cuſtoms, or by credit, upon diſtant funds, apparently conſumes the public with uſury; and the new funds entail a heavy debt of perpetual intereſt. See *Fund*

High cuſtoms ſpoil induſtry, diſcourage the merchant, and may in time drive trade to take ſome other channel; which is an alarming circumſtance to a maritime ſtate; becauſe there is hardly an inſtance to be given of a nation, perhaps not of any ſingle city, that having once loſt trade, could ever recover it; of which the kingdom of Portugal, and the city of Antwerp, afford ſufficient inſtances.

In nations, where the government cannot ſubſiſt without charging every thing, they ſometimes impoſe great cuſtoms: but where-ever the public can otherwiſe be maintained, the cuſtoms are low, for the encouragement of the merchant, who deſerves all favour, as being the beſt, and moſt profitable member of the commonwealth.

Of all the new impoſitions in the Britiſh cuſtoms, nothing was once thought to lie ſo heavily on trade, as the duties upon the tonnage of ſhips; which, it was apprehended, ſeemed to pull down at once a great part of what the nation had been ſo carefully rearing up by the act of navigation: and that tax was repreſented as an inſtance, how much compaſſion for private caſes prevailed more than the ſenſe of public good; for it was once deſigned to raiſe the money, by laying a new duty upon wine; but becauſe that was complained of as very burthenſome to the Spaniſh and Portugal merchants, a charge on tonnage was pitched upon; which, it was dreaded, might have proved very pernicious to the general trade of all England in its conſequence.

War, and the ſcarcity of money, are ſufficient diſcouragements to foreign commerce, without burthening it with new impoſitions; for, inſtead of loading that part of the national ſtrength, it ought to be courted and cheriſhed with all imaginable art and care; becauſe ſhe is a coy and fantaſtical lady, being hard to win, and quickly loſt. Some people, who contemplated the greatneſs of England, and the figure it made in the world during the former part of Queen Elizabeth's reign, and ſome time before, were led to think, that England was ſtronger without trade than with it. Perhaps trade in general may have been hurtful to mankind, becauſe it has introduced luxury and

d avarice, and ſupplanted the innocence and plainneſs our anceſtors: but the circumſtance of time, and the ſture other nations are in, may render things abſolutely ceſſary, which are not good in their own nature. For, ce France, Italy, and Holland, have addicted themſelves much of late years to trade, wherein they are now fol- ved by other ſtates, Great Britain, without that naval ce which trade produces, would be continually ex- ſed to the inſults and invaſions of her neighbours; refore, it is now become indiſpenſably her intereſt to courage foreign commerce, and enlarge it as much as ſible, which is to be moſt effectually done by an abate- nt of high duties on trade; for theſe at laſt fall upon d; though all reaſonable men muſt grant, that if the vernment can be otherways ſupplied, it would be ex- dient to let land breathe a little, to give the country ntlemen opportunity to repair the breaches which any traordinary grants on land may have made in their tunes.

e Britiſh cuſtoms are now of ſo comp'icated and in- cate a nature, that they are extremely difficult to be htly underſtood; and the multiplicity of regulations the collection of them, has not only thrown great and preſſive burthens on trade, but alſo thrown the trader der great inconveniencies, eſpecially the great number oaths to which he is ſubject.

he method of entering goods at the cuſtom-houſe in reat Britain, on *importation*, is as follows. When eign goods are imported, the maſter of the veſſel, on arrival, muſt report his cargo, on oath, at the cuſtom- uſe; for which report the fee to the deputies is a ſhilling. he merchant may enter and land his goods any time thin 20 days from the day of the maſter's report: for hich purpoſe, he ſhould write and ſign five bills of try; one whereof muſt be in words at length, and is led the warrant; but the other four may be in figures: fee on an inward entry being 8 d. and for writing ſe entries there is charged, at ſome of the out-ports, the collector, ſometimes 6 d. ſometimes 2 s. which merchant ſaves if he writes them himſelf.

he merchant ſhould deliver theſe five bills of entry to collector, or his clerk, who will compute the duties, hich muſt be paid, before the goods are landed; and en the duties are paid, the warrant is duly perfected, d delivered to the land-waiters appointed to attend the livery, together with blue books, wherein an accompt the delivery is to be entered; after which the goods are nded, examined, and the quantities taken. The tideſ- n on board the ſhip keep a tally-accompt of the de- very in blue books; the land-waiters upon the keys, der the inſpection of the land-ſurveyors, enter in their ue books not only the number and quality, but alſo the antity of the goods delivered. The deſign of the de- very is to aſcertain the quality and quantity of the goods, hich is chiefly incumbent on the land-waiters, who are obſerve that the quantities and qualities of the goods livered agree with thoſe entered. The qualities of goods e always known to the merchants; the officers, in de- rmining them, muſt rely on experience, and the de- riptions in the book of rates. The quantities are to be termined, either by number, weight, or meaſure, ac- rding as the goods are rated in the book of rates. See *ale*, *Weight*, and *Meaſure*.

hen an Engliſh maſter reports his ſhip, he is to ſub- ribe two copies of the report; one of which is to be ken in a book to be kept at the port for that purpoſe, d the other on looſe paper, which muſt be preſerved a file till the end of each quarter; when they are to tranſmitted to the *regiſter-general of all ſhips belonging Great Britain*, for him to examine whether they are ly ſworn and atteſted, and the ſhips lawfully manned. efore a ſhip has been duly entered or reported, no en- ies of any merchandiſes ſhould be taken, unleſs the ip is deſigned for another port, and was forced in by me neceſſity; when entries only for ſmall matters are be taken, upon the maſter's oath, that they are only ſupply neceſſaries for the ſhip: but when the ſhip is to eliver the whole, or any part of the cargo, at that port, r which purpoſe the maſter has made a regular report of his ſhip, there may be then accounted an importation of all the goods on board, deſigned to be delivered in any port of Great Britain, ſo that the duties payable to the crown, on the importation of ſuch goods, are actually become due; and therefore, on making ſuch report at each reſpective port, every perſon who has any goods on board ſuch ſhip, muſt, as ſoon as poſſible, and before the ſame are unladen, make proper entries thereof with the collector, and pay or ſecure all the duties to which ſuch goods are liable; and ſuch entries muſt not, on any pre- tence, be delayed, but muſt be actually made from the time of the maſter's report of the ſhip, for tobacco; and for all other goods, within 20 days; and as the duties become due on the importation of all goods, whether an entry thereof is made or not; therefore, on refuſal or neglect of entry, within the aforeſaid times, an informa- tion, in the nature of an action of debt, may be brought againſt the importer for the duties.

In making theſe entries it muſt be obſerved, that there are expreſſed the ſhip's name, the maſter's name, the place from whence arrived, and the importer's name, with the particular kinds and quantities of goods: and on the warrant muſt be likewiſe expreſſed the marks, numbers, and contents of every parcel of ſuch goods as are rated to pay by the piece or meaſure, and the weight of the whole parcel of ſuch goods as are rated to pay by the weight; which will be only a copy of the merchant's invoice, and may be inſerted either on the face of the warrant, as is uſual at the port of London; or on the back thereof, as is practiſed at many of the out-ports: and, laſtly, the warrant being thus compleated by the merchant, the ſame is to be ſigned by himſelf, or his known ſervant, factor, or agent, to teſtify that the goods are not on aliens or denizens account; in which caſe they would be liable to extraordinary duties: but when the goods are declared to be imported by, or on account of an alien or denizen, ſuch ſubſcription is not neceſſary; becauſe ſuch goods are then liable to the higheſt duties that can be paid. Though, with reſpect to the making and ſubſcribing of merchants entries at the cuſtom-houſe, it muſt be obſerved, that any Britiſh man may cuſtom, in his own name, the goods of another Britiſh man; ſo may one merchant ſtranger enter the goods of another merchant ſtranger: but he that ſo enters the goods of an- other perſon, that the King loſes his duty, forfeits the goods to the King, and likewiſe all his own goods and chattles for ever.

When the bill of entry is perfected, and produced to the collector, cuſtomer, and comptroller, they are each of them to take copies thereof, for computing the duties, if any due; which copies are to be cloſed and numbered in courſe, beginning a new number each quarter. Theſe officers having computed the duties on their reſpective bills or copies, and having argeed the ſame, the collector is to receive the duties, and inſert them on the bill ſubſcribed by or for the merchant; which having been dated and numbered as the ſaid officers copies were, he is to ſign his name thereto, and then deliver ſuch ſubſcribed bill to the cuſtomer and comptroller, to be likewiſe ſigned by them: after which the ſaid bill is to be directed to the ſurveyor, and the particular land-waiters appointed to the ſhip, as a warrant for their examination and delivery of the goods; which copies, or duplicates of the entries, taken by the collector, cuſtomer, and comptroller, are to be preſerved on ſeparate files, to be entered daily in proper and diſtinct books, to be kept by each of them for that purpoſe. See Book of *Rates*.

Such wearing apparel, and baggage, as appear to be worn, and to belong to the paſſengers, are to be delivered with- out any entry if not of prohibited goods: but ſuch cloaths, or ſmall parcels, as have not been worn, and are cuſtom- able, muſt be entered; and ſuch as are prohibited muſt be proſecuted.

After the entry of goods imported, the method to be ob- ſerved in the examination and delivery of them is as fol- lows. When entered, and the warrants, &c. granted for the landing and delivery, produced to the land-waiters, who are appointed by the collector by noting their names in the report book, or a particular one for that purpoſe;

they are to accept it as an authority to permit the landing and delivery; though they are not to examine the goods on board, but order them on ſhore at the merchant's charge; certifying the entry to the tideſmen on board the ſhip, before they permit them to be unladen. And, if there is ſufferance to permit landing them at any other place than the lawful keys, it muſt be mentioned in the order: but, that land-waiters may be prepared to take an accompt of the examination and delivery, when the ſhip is reported, a blank book, containing 12 leaves, is to be delivered to each whom the collector ſhall appoint to ſee each ſhip diſcharged; though as to ſhips that do not report, every land-waiter muſt have a general pocket-book delivered to him, containing 100 leaves, to enter all warrants directed to him for delivery of goods.

In the landing, examining, and delivery of all goods and merchandiſes, it muſt be carefully obſerved;

1. That none be landed, or delivered without a proper warrant, otherwiſe they are liable to ſeizure.

2. That no more be delivered than what the land-waiters have perfect warrants for; and if, on examination of ſuch dry goods as pay duty by tale or meaſure, the importer appears to have endorſed ſhort, they muſt be ſeized: but, in caſe of ſhort entries upon goods paying duties by weight or gauge, the land waiters muſt give the merchant an accompt in writing, that he may make a poſt or additional entry of it, before the goods are taken off the keys: unleſs the quantity ſhort entered is very ſmall, which may be entered in a book kept for that purpoſe in the cuſtom-houſe, that the collector may know the quantity and quality, to demand the duties of the merchant, which the land-waiters are to ſee poſted the next day at fartheſt; though, in ſtrictneſs, they are not to give any credit; and, to prevent it, the ſurveyor muſt, 14 days after the expiration of every month, deliver to the collector and comptroller, a liſt of all ſhips cleared the preceding month, with the poſt entries that were ſtanding out ſix days after the ſhips were cleared; who are to enquire into the reaſons, and charge the officers concerned in giving ſuch credit, and ſend their anſwers to the commiſſioners with their obſervations.

3. That the accompt of all goods muſt be taken in the proper books, at the time of examination, &c. and not in any other books or looſe papers.

4. That the marks and numbers of all caſks, &c. muſt be carefully obſerved, and placed to the proper merchants accompts; as alſo each days work compared with the accompt taken by or for the merchant.

5. That goods are not to be brought to the warehouſe without bill of ſight, or other warrant, or conſent of the ſurveyor, under his hand in the land-waiter's book.

6. That, on any miſtake in taking accompt of any goods, the land-waiters are not to eraſe their book, but ſtrike the pen through the error, and make true figures, &c. and write the reaſon.

7. That the land-ſurveyor duly attend at the water ſide, and frequently every day inſpect the land-waiters.

8. That, after payment of the new duties, and before delivery of any hides and ſkins liable to thoſe duties, the ſame are to be ſtamped with a hammer and ſtamp, to be kept, when not in uſe, under ſeparate locks of the collector and comptroller.

9. That, after payment of new duties, and before delivery of linens chequered, ſtriped, printed, painted, ſtained, or dyed, they are to be ſtamped with a proper ſeal, to be kept as before; and, after entry, and being ſtamped, the land waiter is to keep an accompt in his book, which is to be marked by the land-ſurveyor.

10. If, on examination of goods at delivery, the merchant appears to have over-entered, the following regulations muſt be obſerved to procure repayment: on the face of the warrant at bottom, muſt be certified the quantity over-entered; and on the back of the warrant, the merchant, his ſervant, or agent, muſt make oath to the quantity of goods received, and the occaſion of the over-entry; underneath which oath, the land-waiters muſt certify the over-entry; whereupon a certificate muſt be made out by the ſurveyor and land-waiters for repaying the duties on the goods over-entered; on the back whereof muſt be wrote the particular duties to be repaid, with the merchant's receipt: but, before the duties are repaid, the entry inwards muſt be diſcharged for the over-entered goods, by writing them off in the margin of the book; and the whole entered in books to be kept for that purpoſe by the collector and comptroller. Though if the merchant ſhould be over-entered on ſome goods, and ſhort on others, the one muſt not be deducted from the other; but a poſt entry ſhould be made for what is ſhort, and the over entry obtained as before-mentioned.

11. That all goods are to be entered as found: if therefore on examination of any poundage goods, except tobacco, they appear to have received damage; ſo as to prejudice the merchant in the ſale of them, proper allowance muſt be made, but never in conſideration of the meanneſs; though, if the merchant is not ſatisfied with the allowance, the collector, and any other principal officer with him, may appoint two indifferent merchants on their oaths, to adjuſt the allowance: when the officers or other perſons who have adjuſted the damage, are to certify the ſame on the back of the warrant; which allowances for damage muſt be always made on the keys, or in the King's warehouſe, immediately after the landing of the goods, and before taken into the merchant's poſſeſſion.

12. That tho' no allowance be made to the importers of tobacco, for damage or quality; yet if, on delivery, any part appears to be damaged, and the merchant is not willing to enter and pay, or ſecure the duties, he may refuſe the whole, or ſeparate the damaged part, but cut the ſtalk from the leaf, by cutting off from the hogſheads, &c. what he refuſes to enter, &c. which any three or more principal officers may cauſe to be burnt or deſtroyed; of which they are to make a certificate.

It ſometimes happens, that goods are ſent by merchants to ſell by commiſſion, and arrive before the invoice. In this, and ſuch like caſes, when the merchant cannot make any tolerable conjecture at the quantities, and perhaps knows not the ſpecies, or proper denomination of the goods, the law permits the goods to be landed by bills at ſight or view, for which the fee is one ſhilling or 2 ſhillings. The merchant makes a depoſit in the hands of the collector, of as much money as the duties are imagined to amount to, or rather more: then the bill of ſight is made out, and given to the proper officers, who muſt examine and take the quantity of the goods, and make their report to the collector the next day, or render themſelves liable to the penalty of 100 l. in caſe of failure. According to the report the entries are paſſed, and the duties paid, in the ſame manner as they would have been had there been no occaſion for a bill at ſight. If the officers cannot go through the examination in one day, they muſt report their days work to the collector, as being part of the ſight; for which the merchant muſt paſs entries, and pay duty, as alſo proceed till the whole bill at ſight is compleated.

Of exportation. When a merchant intends to export goods to foreign parts, he muſt write four bills of outward entry; for writing of which ſometimes 6 d. and ſometimes 1 s. is charged for the collector; tho' the merchant ſaves it by writing them himſelf. He muſt deliver them to the collector, or his clerk, at the cuſtom-houſe, who will compute and demand what duties are due; upon payment whereof, an over-ſea cocket will be made out and delivered to him, for which the fee is 3 s. 6 d.; this cocket certifying the payment of duty, or the regular entry of the goods, if not liable to duty; which the merchant is to keep till he intends to ſhip the goods. Before ſhipping the merchant muſt deliver the cocket to the ſearcher, and give him notice of the time he intends to ſhip them; for no goods are to be landed, or ſhipped, but in the preſence of a proper officer. The ſearcher will attend and examine, and count, weigh, or meaſure the goods; after which they are put on board, and the ſearcher certifies the quantity ſhipped on the back of the cocket, which is then returned to the principal officers, with whom it remains till the maſter comes to clear, when the cockets for all the goods on board are collected, and entered in what is called a report outwards, the fee to

to the deputies for which is 2 s. 6 d. for a Britiſh man, and 3 s. 4 d. for a foreigner, upon the maſter's declaring the ſaid cockets to contain a true accompt of his whole cargo. To this report the maſter makes oath before the collector and comptroller, pays his clearing charge, has his cockets delivered, and is at liberty to proceed on his voyage.

When goods intitled to bounty are exported, the merchant after entering them, and taking out a cocket, is to give bond for the exportation; and the officers ought to be more than ordinarily careful and exact in taking the quantities, and examining whether the goods have all the legal requiſites to intitle them to bounty; after which, when the ſhip is ſailed, and clear of the coaſt, the exporter may apply to the collector and comptroller for the debenture; which being duly ſigned, the bounty will be paid. See *Bounty*.

Of re-exportation. If foreign goods and merchandiſes are exported within 3 years from the importation, reckoning from the time of the maſter's report, the greateſt part of the duties firſt paid are drawn back. See *Drawback* and Book of *Rates*.

The manner of proceeding at the cuſtom-houſe in this caſe is, that a certificate muſt be obtained of the payment of the duties inwards from the collector and comptroller, and proof is to be made, that the goods to be exported are the very ſame goods mentioned in the certificate, by the oaths of the exporter, and the merchants through whoſe hands they have paſſed. The exporter then enters the goods outwards, as in the common way of exportation. The cocket granted on this occaſion is called a certificate-cocket, the fee for which is 3 s. 6 d. and differs a little in form from common over-ſea cockets. Notice of the time of ſhipping is to be given to the ſearcher, who attends the ſhipping, examines and aſcertains the quantity, and returns the cocket endorſed to the officers who granted it; but all other proceedings at clearing the veſſel are the ſame as before-mentioned.

Some time after the departure of the veſſel, the merchant-exporter may apply to the collector and comptroller for the drawback, who will thereupon make out a debenture, on an eighteen penny ſtamp, containing a clear and diſtinct narrative of the whole proceeding, with the merchant's oath, that the goods are really and truly exported to parts beyond the ſeas, and not relanded, nor intended to be relanded, or brought on ſhore again; and alſo the ſearcher's certificate of the quality and quantity of the goods, and the time of ſhipping underwrote. The debenture being thus duly made out and ſworn to, the branches of duty to be repaid are endorſed, the merchant's receipt taken below, and the money due paid.

When foreign goods, which have been regularly imported, have been afterwards exported, and are, for want of ſale, the great ſcarcity of ſuch goods at home, or other accidents, deſired to be returned, or again imported, into any port of Great Britain; notwithſtanding there is no law for ſuch *re-importation*, yet, on payment of the like duties that were due on the firſt importation, it is the practice to indulge the merchant in ſuch re-importation; though the goods may have been exported out of time, and therefore not intitled to any drawback; and though ſuch goods may be prohibited to be originally imported from that place: but the merchant is to ſignify to the ſearcher, &c. the time when, and the ſhip in which they were exported; who will have recourſe to their books, and, if they find ſuch outward entry was duly made, will grant a certificate, or duplicate thereof; on the back of which proof muſt be made, by the oath of the merchant, that the goods then returned are the ſame therein mentioned, whereupon an entry muſt be made, as for other goods imported, and the duties paid, or ſecured, being inſerted beneath the merchant's oath; the collector, cuſtomer, and comptroller, are to ſubſcribe their names thereto, and direct it to the ſurveyor, and proper land waiter, as a warrant for their delivery of the goods. Alſo, when goods of the product, or manufacture of Great Britain, which have been exported to foreign parts, are, for want of ſale, or any other occaſion, deſired to be returned into any port of Great Britain, a bill of ſtore may be granted for the landing and delivery of the ſame; which is to be obtained by procuring a certificate from the ſearcher, &c. of the entry outwards, and other proceedings as for foreign goods. But, as it may ſometimes happen that the entry outwards cannot be fixed upon, by reaſon of the diſtance of time, or other accidents; in this caſe, as there cannot be any other proof, the oath of the merchant only muſt be deemed ſufficient; when an entry muſt be made in the books inwards, and this oath muſt be ſubſcribed and directed as a warrant for the delivery of goods, in the ſame manner as when the particular entry is proved.

For the greater eaſe and encouragement of trade, part of the duties on ſeveral ſorts of goods are not obliged to be paid down at entry; but ſecurity may be taken for payment of the ſame, at certain periods of time; as for the additional duty on linens and wrought ſilk imported; the additional duty on wines imported; the impoſt on wines and vinegar imported; the new duty on pepper, raiſins, &c. the additional duty, new ſubſidy, $\frac{1}{3}$ ſubſidy, and impoſt on tobacco. But the collector is to endeavour, with the privity and approbation of the comptroller, to take good and ſufficient ſecurities, by one, two, or more perſons beſides the importer, for the ſeveral bondable duties; which approbation he may ſignify, either by being a witneſs to the bond, or by a proper certificate under his hand. Theſe bonds, beſides being inſerted in diſtinct columns in the entry-book inwards, are to be entered by way of charge on the left-hand ſide of a ſeparate accompt, which is to be erected for every importer, in two particular books, which are to be kept for that purpoſe; the one by the collector, and the other by the comptroller: and, after the bonds are ſo entered, they are to be locked up in the King's cheſt, to remain there under the diſtinct locks of the collector and comptroller, till duly diſcharged, either by payment in money, or by debentures, or certificates; when they are to be delivered up to the obligors. See *Bond*, and *Bonded Goods*.

All goods exported or imported into Great Britain, are accounted by weight, meaſure, gauge, and tale: but, in weighing of goods, care ſhould be taken, that the number of weights, which are uſually half hundreds, are properly told when in the ſcales; for weighers and porters are frequently as culpable for negligence as they are for impoſition; to prevent which the trader ſhould go himſelf, or ſend a perſon he can confide in, to look after them. There are four things neceſſary to be obſerved in the weighing of goods. 1ſt, The groſs, which is the weight of the goods, with the cheſt, caſk, or box, containing the ſame. 2. Tare, which is the weight of ſuch cheſt, caſk, or box; or an allowance for their weight, according to the cuſtom of trade: but, if tare is marked on the out-ſide of the cheſt, caſk, or box, they call it invoyce-tare; that is, tare according to the factory; and, ſometimes, three, ſix, or ten pounds are allowed on a draught for break, beſides invoyce-tare: though ſome goods always allow a certain rate for each hogſhead or barrel; and others ſo many pounds for every hundred. 3d. Trett, which is an allowance of four pounds in every hundred and four pounds, made to the freemen of London, out of all goods bought by them, except the contract expreſſes the contrary. 4th, Clough, which is an allowance in every draught of the ſcale, that the weight may hold out in caſe they are re-weighed: but tare, trett, and clough, are to be deducted out of the groſs weight, and the remainder is the neat weight of the goods. See *Groſs*, *Tare*, *Trett*, and *Clough*.

Goods by tale are accounted ſingle, as 3, 4, or 5; or by the dozen of 12; or by the groſs of 12 dozen; or, by the great groſs of 144 dozen.

Goods by meaſure are either liquid or dry: liquids, as wine and brandy, are gauged on the keys, where proper officers attend for that purpoſe: dry, are meaſured by the buſhel, by meters; or by the yard, or ell.

Theſe are the methods of buying and ſelling goods, which are eaſily attained, excepting the firſt, which requires a ſtrict application and attention; for if the tare, and other allowances on goods by weight, are not rightly computed, the trader may be greatly injured.

After

After weighing the goods, and deducting the tare, and gauging, meaſuring, or telling them, according to the commodities dealt in; the next thing to be done is, to take a particular account of them to prevent miſtakes.

When the goods are brought home, or carried to any place purſuant to order, there are neceſſary charges attending the ſame; as cuſtom, weighage, cranage, porterage, wharfage, cartage, and lighterage; a ſhort explanation of which is as follows.

Cuſtom, as above-mentioned, is a duty paid to the ſtate, to ſecure the trade thereof: weighage, is a fee paid to the proper officer for weighing the goods: cranage, is a rate paid for the craning goods into, or out of, any cart, lighter, boat, or ſhip: porterage, is a rate to be paid the porters at the water ſide for loading and unloading: wharfage, is the rate due to the wharfinger, or carman, for carrying goods to and from the water ſide; and lighterage, is a rate due to the lighterman, for carrying goods to and from any ſhip.

All theſe perſons have certain rates by law allowed them, which they ſhould not exceed; but they are too apt to impoſe upon ſtrangers; for which, when known, a remedy againſt them is eaſily obtained.

For the landing and ſhipping of goods, there are lawful keys, fitted with cranes and proper tackle, at the water-ſide, to raiſe or let down any weight, to or from any of the lawful wharfs. The wharf, is the land where the crane ſtands, and is capable of holding large quantities of goods, to be examined there by the ſearchers if exported, or by the landwaiters if imported; the owner of which is called the wharfinger, who keeps lighters to carry goods to and from any ſhip.

There are four ſorts of porters at the water ſide, who have each their proper buſineſs allotted them, and muſt not interfere with one another: firſt, the companies porters, ſo named becauſe they are choſen by the 12 principal companies of London, each appointing 2, 3, or 4. The porters are called by the name of the company that chuſes them, and their buſineſs is to ſhip off, or land, all ſorts of goods and merchandize, imported or exported, from or to all ports on the ſouthward of the Belt, near the weſt-ſide of the Baltic ſea; or to Turky, Italy, Germany, Holland, Spain, or France.

1. The vintners porters are employed in loading wines to and from the ſeveral buyers.

2d, Ticket porters, at the water-ſide, are employed to land or ſhip off goods exported or imported from America, and the ports and places on the north-ſide of the Belt.

3d, Tackle-porters, are particular ſocieties of ticket-porters, that weigh goods between buyer and ſeller, and are furniſhed with ſcales, weights, and ropes, for that purpoſe; who form themſelves into ſeveral bodies for particular commodities; as iron, tin, and ſuch like: their buſineſs being to ſhip off goods for America, and other places.

4th, Fellowſhip-porters, are thoſe who are employed to ſhip or load goods, meaſured by dry meaſure; as coals, corn, and the like.

In a ſhip where ſeveral owners are concerned there is uſually a perſon appointed to take accompt of the goods belonging to each perſon delivered out, in order to adjuſt the affairs between the owners, and to ſettle the damage and freight; which perſon is called the ſhip's-huſband, and is appointed by the owners; who likewiſe tranſacts other buſineſs if required, and pays the wharfage, lighterage, and porterage, of tobacco, from Virginia and Maryland.

Beſides the huſband, there is another officer appointed to account for the freighters, called the book of the ſhip, who is appointed by and out of the tackle-porters, as follows: when a ſhip from America arrives at one of the keys, to be unladen, and the King's weighers and land-waiters are ready, a tackle-porter, and ſome ticket-porters, ſet immediately to work upon her, and land ſeven draughts, or hogſheads; but none are permitted to partake of the profits of unlading that ſhip, except ſuch as come before the ſaid ſeven draughts are landed and weighed; this finiſhed, the tackle-porters preſent, chuſe the book, who takes an accompt of the quantities and marks of each perſon's goods, and ſees them put into warehouſes or ſent home. See *Scavage*.

French CUSTOMS. The chief of theſe duties are of three kinds; thoſe of the five large farms, including the duties of importation and exportation, both of the kingdom, and the provinces reputed foreign; thoſe of the *gabelles*, or the duties upon ſalt; and thoſe of the *aids*, that regard particularly the vent wholeſale and retail, of all ſorts of French and foreign wines, beer, cyder, perry, and other liquors, either for the conſumption of the kingdom, or to be exported, as alſo their importation to Paris, and to the other towns ſubject to theſe duties: which duties of importation and exportation were regulated in conſequence of the tariff of Lyons in 1632, and of the tariffs of 1664 and 1667.

It is really a ſcience, and no eaſy one, to know the names, numbers, and quality of the French taxes; which are ſo many, ſo various, and ſo heavy, that one of their own writers calls them, *inventions proper to impoveriſh the people, and to enrich the dictionaries.*

Spaniſh CUSTOMS. Duties of importation are called in Spain duties of *alcavala*, which amount to about 5 *per cent.* of the value of the goods: and the duties of exportation are much upon the ſame footing.

Portugueze CUSTOMS. The duties of importation in this kingdom were formerly equal with regard to all kinds of merchandiſe; that is, 18 *per cent.* of their value: but, ſince the year 1667, ſilk ſtuffs have been diſtinguiſhed by the general tariff, and the duties were regulated at 15 *per cent.* the duties of exportation being at 6 *per cent.* By treaty, Engliſh goods are never to exceed 23 *per cent.* on their valuation for the payment of duties; yet crapes, long ells, ſhalloons, and ſome other Engliſh ſtuffs have been raiſed to more than 30 *per cent.* duties on their fair valuation.

Dutch CUSTOMS. In the United Provinces, the duties of importation and exportation are both at 5 *per cent.* of their value: but ſome French commodities have been moderated by the 7th article of the tariff, made at Paris in the month of May 1699, between the commiſſioners of the French King and thoſe of the States General: and there is now a plan laid before the ſtates for making free ports throughout all the provinces.

The CUSTOMS *in the kingdoms of the North, the Baltic ſea, and the Hans towns.* The duties of importation and exportation at the city of Bremen, amount to about half a dollar *per cent.* the dollar being 4 s. 6 d. ſterling; and thoſe of Hamburgh are alike: but the duties of Lubeck are not ſo much as thoſe of Bremen; thoſe of importation being only to the amount of 3-4ths of a dollar *per cent.* and 2-3ds of a dollar on exportation.

In the ports of Denmark and Norway, the duties of importation aud exportation are generally according to eſtimation, from one and a half to 2 and a half *per cent.*

In Sweden, the duties are much the ſame as in Denmark; but for the ſalts, brandies, and wines, of France, they are exceſſive, being the higheſt of all thoſe of the North.

At Riga the duties were formerly as at Stockholm; but now they are upon the footing of thoſe of Ruſſia; that is, 5 *per cent.* except wines and brandy, which are according to the eſtimation of the cuſtom-houſe officers.

CUSTOMS *of Italy.* In Venice the duties of importation are paid only by land, the port being declared free in that reſpect, about the year 1660: thoſe of exportation are raiſed both by ſea and land, without any diſtinction of citizen and foreigner: both duties being paid according to the eſtimation of the goods; with this difference, that the eſtimation is always more upon exportation than importation: but when goods are not appraiſed, the merchant ſwears to their value, and then no compoſition is granted.

Citizens pay only 6 and 3 4ths *per cent.* of importation; but foreigners 10 and 11 thirds: however the Germans have their tariffs there, for the commodities of their produce and manufacture, whereupon ſome allowance is made; the duties of exportation being for all 9 *per cent.* with ſome ſmall duties included.

The

The manufactures of cloths, wool, gold and ſilk ſtuffs, pay 7 *per cent.* and that only when they export them on their own account.

At Leghorn, the duties of importation and exportation ſeem inconſiderable, being only at 10 ſoldi, or 4 ½ d. *per* bale, for ſtallage duty in the cuſtom-houſe; but if other ſmall duties are added, as the duty of ſale, thoſe of the patents of the Levant, Weſt Indies, St. James, and others, they are as conſiderable as thoſe of Venice.

That which is called duty of ſale, is what is paid by the laſt purchaſer; a regiſter of importation and exportation being kept at the cuſtom-houſe, wherein there is an obligation of inſerting all the goods at the time of their reception and ſale, that the officers may know who is liable to the duty; which accompt of ſale is annually ſtated.

As to the rate of the duty of ſale, it is regulated purſuant to the quality and nature of merchandiſes: thus ſilks pay 1 ½ *per cent.* pepper 2 *per cent.* cotton ½ *per cent.* large goods 2 piaſtres, or 8 s. 8 d. *per* bale; leathers 4 *per cent.* lead 1 ½ *per cent.* wax 2 *per cent.* and other goods in proportion.

CUSTOMS *in the ports of the Levant.* The duties of importation and exportation are almoſt upon an equal footing in all the ſtates of the Grand Signior, ſituated on the Mediterranean; at leaſt with regard to the Chriſtians, who trade there; except Cairo, Alexandria, Roſſetta, and ſome other towns of Egypt, where they differ from other ports of the Levant.

Two kinds of duties of importation are raiſed at Cairo; the firſt upon the goods from Europe in Chriſtian veſſels: the ſecond upon thoſe that arrive there from Aſia, in the caravans of Suez. The firſt, without any regard either for the nature and quality of the goods, or for the capitulations obtained by Chriſtians from the Porte, are 20 *per cent.* of their value: the ſecond, called the cuſtom-houſe of the divan, are arbitrary; but always very high, except what is paid for pepper, coffee, cottons, porcelains, China and Japan varniſh, ſilks, brocades, and other China ſtuffs, which have their peculiar tariff.

Beſides theſe two duties, there is a golden duty, which is the 10th of what has been paid for the firſt taxation. But the duties of exportation are very inconſiderable; being rather the ſalary of the cuſtom-houſe officers, than a duty belonging to the ſovereign: it is alſo called golden duty, as well as that of importation.

The duty of conſulſhip at Cairo, may be alſo ranked among other duties; which is more, or leſs, purſuant to the regulation made by Chriſtians.

What has been ſaid of Cairo, except the duties of the cuſtom-houſe of the divan, may ſerve for the duties of Alexandria and Roſetta.

At Conſtantinople, Smyrna, Alexandretta, Aleppo, Siden, and Cyprus, the duties of importation and exportation, are called duties of ermin.

The French, tho' the moſt antient allies of the Porte, have a conſiderable time paid them upon the footing of 5 *per cent.* and it is only ſince the year 1673 that Monſieur Nointel, ambaſſador of France to the Grand Signior, obtained a reduction of 3 *per cent.* upon which footing the Engliſh, Hollanders, and Genoeſe pay the duty of ermin: but the Venetians ſtill pay 5 *per cent.* which extends alſo to Jews.

The golden duty is alſo paid both for exportation and importation.

The duties of conſuls differ, according to their reſpective nations and places; though they are for the moſt part 2 *per cent.* except thoſe of the Dutch conſul, who raiſes only 1 ½ *per cent.* upon the ſhipping of his own nation, and 2 *per cent.* upon thoſe that trade under the Dutch flag.

In Barbary the duties are 10 *per cent.* on importation, and 5 *per cent.* on exportation. Along the coaſt of Guinea the cuſtoms are differently raiſed; tho' generally very moderate: and throughout all Aſia they are under proper regulations; but goods are ſubject to no duty in Japan.

CUT *a feather*, in the ſea-language, is when a well-bowed ſhip ſo ſwiftly preſſes the water that it foams or froths.

To cut the ſail, is to unfurl it, and let it fall down.

CUT *water*, the ſharpneſs of the head of a ſhip under the beak.

CUTLER. A perſon whoſe trade conſiſts in cutlery, or the making and vending all ſorts of inſtruments for cutting; ſuch as ſwords, razors, ſciſſars, knives, forks, lancets, fleems, and the like. It is a very ingenious buſineſs: the chief difficulty lies in the juſt temper of the ſteel; and the juſt poliſhing of theſe inſtruments is the next difficulty; both of which are acquired by practice.

The goods of this kind made in London come to a very great price; though goods of the ſame quality may be had from Birmingham and Sheffield at a much lower price: they are indeed neatly finiſhed, and turned out in a workmanlike manner: but the country goods, tho' not ſo taking to the eye, prove ſometimes as good in the metal as thoſe more expenſive; from which places moſt of the ſhops are furniſhed, and cutlers, who have a great demand for goods, frequently have them made in the country, put their own marks upon them, and ſell them for London made.

The ſword-cutler, beſides dealing in the before-mentioned goods, is concerned in mounting ſwords, making ſcabbards, &c. The blades come moſtly from abroad, none of them being made by the ſword-cutler, who buys them up in parcels, and is only employed in mounting them. The handles, if of plate, are made by a claſs of ſilverſmiths who make nothing elſe: if of braſs are caſt by the founder. The ſword-cutler is ſomething related to the ſmith, as he uſes the file and hammer in putting on his hilts; and to the ſhoemaker, as he uſes the awl in finiſhing his ſcabbards.

There is alſo another kind of cutlers, being the chirurgical inſtrument-makers, who differ nothing from the common cutler, except that they deal more in the chirurgical inſtruments than the other; ſuch as knives, lancets, trepans, biſtoras, ſciſſars, cupping-caſes, ſpatulas, and ſeveral other inſtruments peculiar to the ſurgeon: he is ſuppoſed the better tradeſman, uſes better ſteel, and finiſhes his inſtruments with a neater poliſh than the common cutler.

CUTLERS *company of London*, was incorporated by letters-patent of Henry V. in 1417, by the name of The maſter, wardens, and commonalty of the myſtery of cutlers of London; and being united to the haft and ſheath-makers ſome time after, their arms were granted by Clarencieux, King at arms, in the year 1477; which is a fraternity governed by a maſter, 2 wardens, and 21 aſſiſtants, to whom belong a livery of 110 members, who, upon their being admitted, pay a fine of 10 l. each; having a commodious and beautiful hall in Cloak lane, where they tranſact their affairs.

CUTLESS, or *Cutlaſs*, a broad, and bent ſword, ſometimes called a ſcymeter; chiefly uſed as a weapon for ſeamen.

CUTTER. A light veſſel for ſailing, generally employed in the detection of ſmugglers.

CUTTER *of the tallies*, an officer of the exchequer, who provides wood for the tallies, and cuts the ſum paid upon them. See *Tally*.

CUTTING *in coinage*, when the laminæ, or plates of the metal, be it gold, ſilver, or copper, are brought to the thickneſs of the ſpecies to be coined, pieces are cut out of the thickneſs, and nearly of the weight of the intended coin; which are now called *planchets*, till the King's image is ſtamped on them.

The inſtrument wherewith they are cut conſiſts of two pieces of ſteel, very ſharp, and placed over one another; the lower a little hollow, repreſenting a mortar, the other a peſtle: the metal, being put between the two, is cut out in the manner deſcribed.

CUTTING *in wood*, is a particular kind of ſculpture, or engraving, denominated from the matter wherein it is employed; being uſed for various purpoſes; as, for initial or figured letters, head and tail-pieces of books, and even for ſchemes and other figures, to ſave the expences of engraving on copper; as alſo for prints and ſtamps, for paper, callicoes, and linens.

The invention of cutting in wood, as well as that in copper, is aſcribed to a goldſmith of Florence; but it is to Albert Durer, and Lucas, they are both indebted for their perfection: the art of cutting in wood was certainly

carried to a very great pitch 150 years ago; and might even vie for beauty and juſtneſs with that of engraving on copper: but at preſent it is in a low condition, as having been long neglected, and the application of artiſts wholly employed on copper, as the more eaſy and promiſing province: not but that wooden cuts have the advantage of thoſe in copper on many accounts; chiefly for figures and devices in books; as being printed at the ſame time, and in the ſame preſs as the letters: whereas, for the other, there is required a particular impreſſion.

CYCLADES. A name given to certain iſlands that lie about the iſle of Delos, in the Turkiſh Archipelago, ſituated between Europe and Aſia; and at length extended to all the little iſlands in thoſe ſeas.

CYDER, *Cider*, or *Syder*, a briſk, tart, cool liquor, prepared from the juice of apples; for which the counties of Hereford, Worceſter, Glouceſter, and Devon, are the moſt remarkable places in England. See *Apples*.

It is obſerved that a mixture of fruit is of great advantage to cyder; the worſt apples mixed together making as good cyder as the beſt alone; always obſerving, however, that they are of equal ripeneſs.

The beſt mixture, according to Mr. Worlidge, is that of redſtreaks, with golden rennets: bitter apples ſpoil the cyder; but the juice of them, and of crabs, yield as good ſpirits as the beſt apples when fermented; neither the ſour nor the bitter taſte ariſing with the ſpirit upon diſtillation.

Cyder is generally extracted by bruiſing the apples in a trough, and then preſſing them in a kind of wine-preſs: but if the apples are pounded in a ſtone mortar, which is the cuſtom of ſome, the kernels and ſtalks are bruiſed with them, which gives the liquor an ill flavour.

Normandy, Auvergne, and ſome other provinces of France, are fruitful in apples, and make great quantities of cyder, which ſerves them inſtead of wine; of which thoſe countries are little productive.

CYDER *vinegar*. See *Vinegar*.

CYDERKIN, or *Purre*, is a liquor made of the groſs matter, after the cyder is preſſed out.

CYPHER, or *Cipher*, one of the numeral characters, or figures, formed thus, 0; which of itſelf implies a privation of value; but when diſpoſed with other characters on the left, in the common arithmetic, it ſerves to augment each of their values by ten; and in decimal arithmetic, to leſſen the value of each figure to the right, in the ſame proportion.

CYPHI. A term in the Arabian pharmacy, ſignifying a kind of cordial perfume; the cyphi being compoſed of raiſins, or dried grapes, turpentine, bdellium, ſpica, nardi, caſſia, lignea, aſpalathum, ſaffron, and other things, tempered into a maſs, with honey, and a little wine.

CYPRESS, *Cupreſſus*, a precious ſort of wood, the produce of a tree of the ſame name, frequent in the iſland of Cyprus; being very compact and heavy, and its ſmell as agreeable as that of ſantal: it ſcarce ever rots, decays, or is worm eaten, no more than cedar, or ebony, for which reaſon the antients uſed it to make the ſtatues of their gods. In Candia, and particularly about Mount Ida, the plant is ſaid to riſe ſpontaneouſly, wherever the earth is a little dug; but is exceeding difficult to raiſe by art: and the fruit, called *Cones*, is uſed in aſtringent decoctions, againſt hernias, and hæmorrhages.

CYPRUS. An iſland ſituated in the moſt eaſterly part of the Levant, or Mediterranean, between 33 and 36 deg. of E. lon. and 34 and 36 deg. of N. lat. 60 miles S. of the coaſt of Caramania, or Cilicia, and 30 W. of the coaſt of Syria, being about 150 m. long, and 70 broad. See *Turkiſh* Iſlands.

CYSTHEOLITHRE. A kind of marine ſtone, found in large ſpunges.

D.

DAM

DAALDER, *Daler*, or *Daelder*, a coin current at Cologne, in Germany, where it is worth about 2 s. 4 d. ſterling. The Hamburgh Daalder is worth about 2 s. 9 d. ſterling; and the Dutch daalder is worth about 2 s. 7 ½ d. ſterling.

ABB. A flat ſea-fiſh, ſomewhat like a plaiſe.

ABAS. A term for the cloths and woollen ſtuffs manufactured at Bas in Languedoc, in France.

ABOUIS. A white cotton cloth manufactured in the Eaſt Indies, ranked among the baffetas; and taking its name from the place where it is manufactured.

ABUL. A port-town in the province of Decan, on the W. coaſt of the Hither India, ſituated in 72 deg. 30 min. of E. lon. and 17 deg. 30 min. of N. lat. See *India*.

ACCA, or *Daca*, a city of Bengal in the Eaſt Indies, ſituated on a branch of the Ganges, in 89 deg. of E. lon. and 23 deg. 30 min. of N. lat. where there is a Britiſh factory, ſubordinate to the governor of Fort William. See *India*.

ACE. The name of a very good eating freſh water fiſh.

ACHE. A term uſed by the Africans for the preſents made them by the Europeans for trading with them.

AEZAJIE, or *Daezagie*, a ſilver coin current in Perſia, being worth about 3 s. 4 d. ſterling.

AGGER. A ſhort ſword; alſo a term for unlawfully inſuring ſhips.

AGOT, or *Dagerwort*, the capital of the iſland of Dago, ſituated in the Baltic ſea, near the coaſt of Livonia, in 21 deg. 30 min. of E. lon. and 58 deg. 45 min. of N. lat. and ſubject to Ruſſia.

AHGESTAN. A country of Aſia, bounded by Circaſſia on the north; by the Caſpian ſea on the eaſt; by Chirvan, a province of Perſia, on the ſouth; and by Georgia on the weſt: of which the chief towns are Tarku and Derbent; but the generality of the natives live in tents, wandering from place to place: and, though they are but a ſmall ſtate, none of the neighbouring ſtates have been able to ſubdue them; the country being mountainous, and of difficult acceſs. See *Tartary*.

AHOME. A kingdom of Africa, which lies N. of Whidah, or Fida, on the Guinea coaſt; the King whereof lately made a conqueſt of Whidah, and very much diſturbed the Negroe trade of the Europeans. See *Guinea*.

ALECARLIA. A river which gives name to the province of Dalecarlia in Sweden, and riſes in the Dofrine mountains, dividing Norway from Sweden; and, running from the N. W. to the S. E. through the whole province, falls into the Bothnic gulph, between the provinces of Upland and Geſtricia.

ALL, or *Dalle*, a money of accompt uſed in ſeveral towns of Germany, for bank and mercantile books; being worth about 1 s. 7 ½ d. ſterling.

ALLER, or *Dallet*. See *Dollar*.

AMAGE. Any loſs, hurt, or inconvenience, happening to goods, or traders. Damages on goods imported into Great Britain, except tobacco and wines, are to be adjuſted by two indifferent merchants on oath, to be choſen by the principal officers of the cuſtoms.

AMAN. A port-town of the Hither India, in Aſia, in the province of Guzarat, or Cambay, ſituated on the W. coaſt of India, 80 miles S. of Surat, in 72 deg. 20 min. of E. lon. and 20 deg. of N. lat. ſubject to the Portugueſe. See *India*.

AMARAS. An Indian taffeta, being a kind of armoiſin.

AMASK. A ſort of ſilk ſtuff originally brought from Damaſcus in Syria; having ſome parts raiſed above the ground, repreſenting flowers, or other figures: but it is properly a ſort of mohair and ſattin intermixed, in ſuch a manner as that what is not ſattin on one ſide is on the other: the elevation which the ſattin makes on one ſide is the ground on the other: the flowers have a ſattin grain, and the ground a grain of taffetas.

DAN

DAMASK *Caffart*. A French ſtuff which imitates the true damaſk; but whoſe woof is of hair, ferret, thread, wool, or cotton: which ſorts of damaſks have three different breadths; namely, half an ell leſs than a ſixteenth, half an ell entire, and half an ell with a ſixteenth.

DAMASKS *of China*, or *the Indies*, are ſo called, becauſe really for the greater part brought from China, or purchaſed by the Eaſt India companies from the Indians; being uſually 7, 11, and 12 ells in length, and ⅜ and $\frac{7}{16}$ in breadth.

DAMASKUS, *Damaſcus*, or *Scham*, the capital city of the S. part of Syria, ſituated in 37 deg. 20 min. of E. lon. and 33 deg. 15 min. of N. lat. See *Turky*.

DAMASCUS-*ſteel*. A very fine kind of ſteel, made in ſome parts of the Levant, and particularly at Damaſcus, remarkable for its excellent temper; and principally uſed in the making of ſword-blades: but ſome authors aſſert that it comes from the kingdom of Golconda, in the Eaſt Indies, where the method of tempering with allom, which the Europeans have never been able to imitate, was firſt invented.

DAMASKEENING. The art, or act, of adorning ſteel, iron, and other metals, by making inciſions therein, and filling them up with gold or ſilver wire, chiefly uſed in enriching ſword-blades, guards, and gripes, locks of piſtols, and ſuch ſort of goods. Its name ſhews the place of its origin; or, at leaſt, the place where it has been practiſed in the greateſt perfection; which is the city of Damaſcus: though M. Felibien attributes the perfection of the art to his countryman Curſinet, who wrought under the reign of King Henry IV. in the year 1602.

This art is partly moſaic work, partly engraving, and partly carving; as moſaic work, it conſiſts of pieces inlayed; as engraving, the metal is indented, or cut in creux; and as carving, gold or ſilver are wrought therein by relievo.

DAMASQUETE. A kind of ſtuff manufactured at Venice; being proper for the Levant trade, particularly that of Conſtantinople: of which there are two ſorts; damaſquettes with flowers of gold, whereof the piece contains 18 ells; and damaſquettes with ſilk flowers of the ſame length: thoſe with gold flowers being manufactured much after the manner of the gold and ſilver cloths which were formerly made at Lyons.

DAMASSE. A kind of wrought linen made in Flanders, having large flowers like thoſe of damaſks.

DAMASSIN. A damaſk with gold and ſilver flowers.

DAMBEA. The capital of Abyſſinia, or Ethiopia, ſituated at the head of a lake to which it gives name, in 34 deg. of E. lon. and 15 deg. of N. lat.

DAMELOPRE. A Dutch veſſel like a bilander, uſed for carrying goods on the canals.

DAMIETTA. A port-town of Egypt, in Africa, ſituated in 32 deg. of E. lon. and 31 deg. of N. lat. on the eaſtern mouth of the river Nile.

DAMMER. A kind of pitch, uſed by the Indians in cementing the planks of their ſhips.

DAMSIN, or *Damſon*. A pleaſant fruit, or plumb, often uſed for making damſon brandy.

DANK, or *Danek*. A ſmall ſilver coin, current in Perſia, and in ſome parts of Arabia, for about a halfpenny ſterling.

DANK, is alſo a ſmall weight, uſed by the Arabs, for precious ſtones, and drugs, when the latter are to be employed in the compoſition of remedies, being the ſixteenth part of the Arabic drachm; that is, 8 grains of Engliſh weight.

DANISH *America*, and *Daniſh* iſlands. See *Denmark*.

DANTZICK. The capital of regal Pruſſia, in the kingdom of Poland, ſituated in 19 deg. of E. lon. and 54 deg. of N. lat. on the weſtern ſhore of the river Weſel, or Viſtula, which a little below falls into the Baltic ſea; being an excellent harbour, and having the beſt foreign trade of any port within the Baltic. See *Poland*.

DANTZICK-

DANTZICK-HOR, or *Oort*. A ſilver coin ſtruck at Dantzick; being alſo current at Riga, Koninſburg, and almoſt throughout the North, worth eighteen groſs, or 10½ d. ſterling.

DANUBE. One of the fineſt rivers in Europe, riſing in the Black foreſt, in the province of Suabia, in the S. W. part of Germany, and running N. E. through Suabia viſits Ulm, the capital; then running E. through Bavaria and Auſtria, paſſes by Ratiſbon, Paſſau, Ens, and Vienna; then entering Hungary, it runs S. E. from Preſburg to Buda, and ſo on to Belgrade; after which it divides Bulgaria from Walachia and Moldavia, then diſcharges itſelf by ſeveral channels, into the Black ſea, through the province of Beſſarabia. This noble river is ſo deep between Buda and Belgrade, that the Turks and Chriſtians have fleets of men of war upon it, which frequently engaged during the late wars between the Ottoman Porte and the houſe of Auſtria: but the cataracts below render it unnavigable to the Black ſea; and there are alſo ſeveral cataracts above Buda. The whole navigation of this river is fully repreſented by the author of this dictionary in his memoirs of the life of the late Earl of Crauford.

DAPPLE. A colour peculiarly applied to horſes, in which appear divers ſpots, ſhades, or degrees of the ſame colour.

DARDANARIUS. A monopoly. See *Monopoly*.

DARDANELLS, are two caſtles at the entrance of the Helleſpont, where all ſhips going to Conſtantinople are examined; being the ſame places that formerly had the caſtle of Seſtos on the European ſide, and Abydos on the Aſian ſide; the ſtreight being about two miles over. See *Helleſpont* and *Turky*.

DARIABANUS. A white cotton ſtuff made at Surat, in India.

DARIDAS. A kind of taffeta, made of ſilk drawn from plants in India.

DARIEN *company*, was a Scotch company eſtabliſhed with a good proſpect at Edinburgh, in 1699, for the commerce of South America, who ſent an armament and a colony, with an intention to form a ſettlement in the iſthmus of Darien, which ſeparates North and South America: but the Engliſh miniſtry not thinking proper to avow and ſupport the firſt ſucceſſes of the company, which had alarmed the court of Spain, ever jealous of this part of her territories, the Scotch colony was diſperſed by the Spaniards in 1700: and thus vaniſhed the beſt project that ever was formed, for diſputing with Spain the poſſeſſion of thoſe countries, from which ſhe pretends to exclude all other nations.

DARN, to mend a garment, by ſewing a hole croſswiſe, in imitation of weaving.

DARNAMAS, is the beſt kind of cotton brought from Smyrna; being ſo called from a plain near this town, where it is cultivated in ſuch large quantities, that, one year with another, to the amount of ten thouſand bales may be had from thence; tho', at leaſt, as much is conſumed in the manufactures of the country.

DARTMOUTH. A borough, and port-town of Devonſhire, ſituated on the Engliſh channel, near the mouth of the river Dart, in 4 deg. of W. lon and 50 deg. 25 min. of N. lat. remarkable for its pilchard fiſhery.

DATE. An addition, or appendage in writings, acts, inſtruments, or letters, expreſſing the day and month of the year when the act or letter was paſſed or ſigned; together with the place where the ſame was done. In writings of importance the date ſhould be written in words at length; but in letters the date is uſually in figures; in the calculation of which ſeveral nations differ, as to their conformity either to the Julian or Gregorian calendar. See *Stile*.

An antedate is a falſe date, prior to the real time when the inſtrument was paſſed, or the letter ſigned: and a poſtdate is that after the real time.

DATE, is alſo the fruit of the palm-tree, brought from Egypt, Syria, Africa, Perſia, and the Indies: there are ſome in Italy, or the moſt ſouthern parts of Spain; but they never come to full maturity; and yet there are tolerable dates in Provence, only they are corruptive and breed worms.

This fruit is gathered in autumn, before it is ripe, and bears a near reſemblance to the Engliſh bullace; being of a green colour, very ſharp and aſtringent; when ripe it becomes ruddy, having a hard, longiſh ſtone, cloven at the bottom, and encompaſſed with a thine white pellicle or ſkin.

Some dates are black, ſome white, ſome yellow, and ſome brown; ſome are no bigger than a chick-pea, and others as big as a pomegranate, ſome having ſtones, and others none; but they are ordinarily oblong, fleſhy, yellow, about the bigneſs of an acorn, and very agreeable to the taſte: the beſt are thoſe called royal dates; though there is another ſort called caryotæ, which are very good. They are preſerved three different ways; ſome preſſed and dry, others preſſed leſs and moiſtened with their own juice, and others not preſſed at all, but moiſtened with the juice of older dates as they are packed up, which is done in baſkets or ſkins; but the latter are the beſt.

DAUCUS. A medicinal plant, growing in the iſland of Candia; found alſo in Germany, and ſome parts of the Alps; but phyſicians uſe only that of the Levant, which has a pretty near reſemblance to the parſnep, whereof ſome take it to be a ſpecies. Its ſtalk riſes to a foot and a half, and puſhes forth ſeveral branches which bear on their ſummits white bloſſoms; the grains that iſſue out of theſe bloſſoms are of a pale green, hairy, longiſh, and not unlike thoſe of cummin, excepting that their ſcent is leſs, and of a more agreeable taſte; being excellent againſt the ſtone, and therefore ranked by botaniſts among lithontriptics.

DAVIDS St. A town and fort, ſituated on the coaſt of Coromandel, in the Hither India, 80 miles S. of Fort St. George, in 79 deg. 40 min. of E. lon. and 11 deg. 45 min. of N. lat. being one of the ſtrongeſt fortreſſes the Engliſh have in India, from whence they import chints, callicoes and muſlins; but it is ſubordinate to the government of Fort St. George. See *India*.

DAVIS's *quadrant*. See the article *Back-ſtaff*.

DAVIS's *ſtreights*, run N. W. from Cape Farewel, in 60 deg. N. lat. to Baffin's bay in 80 deg. ſeparating Greenland from N. America; which were paſſed by Captain Davis, in 1585, when he was endeavouring to find a N. W. paſſage. See *North Weſt paſſage*.

DAUPHINE *Fort*. A fort built by the French on the E. coaſt of the iſland of Madagaſcar, in Africa, ſituated in 48 deg. of E. lon. and 24 deg. of S. lat. which occaſioned the French to call that iſland by the name of Dauphine. See *Madagaſcar*.

DAY, is begun by mariners at 12 o'clock at noon; ſo that all the time till after the expiration of 11 o'clock on Monday forenoon, is included in Sunday, and ſo in the ſame manner of the other days.

DAYS *of grace*, in commerce, are a number of days allowed by cuſtom, for the payment of a bill of exchange, after the ſame becomes due; that is, after the time it was accepted for is expired. In England three days of grace are allowed; ſo that a bill accepted to be paid ten days after ſight, is not to be paid till thirteen days. Throughout France they allow ten days of grace; as many at Dantzick; eight at Naples; ſix at Venice, Amſterdam, Rotterdam, and Antwerp; four at Frankfort; five at Leipſic; twelve at Hamburgh; ſix in Portugal; fourteen in Spain; and thirty in Genoa; including Sundays and holidays in the number of days of grace. See *Exchange*.

DEAD-*ſea*, the lake Aſphalites, in Paleſtine, into which the river Jordan runs; being about 70 miles long, and 20 broad; ſuppoſed to be the place where Sodom and Gomorrah ſtood, affording a bitumen exactly reſembling pitch, from which it can only be diſcovered by its ſulphurous ſmell and taſte.

DEAD-MAN's-*head*. A cape, or point of land, near Tregony in Cornwal, between St. Mawes and Fowey.

DEAD-*reckoning*, at ſea, is that eſtimation, judgment, or conjecture, which mariners make of the place where a ſhip is, by keeping an account of her way by the log, by knowing the courſe they have ſteered by the compaſs, and by rectifying all, with allowance for drift, leeway, and other things, according to the ſhip's trim; ſo that this reckoning is without any obſervation of the ſun, moon

moon, and ſtars; and is to be rectified as often as any good obſervation can be had. See *Log*.

DEAD-*water*, is the eddy water juſt behind the ſtern of a ſhip; being ſo called becauſe it does not paſs away ſo ſwiftly, as the water running by her ſides; and, if a ſhip has a great eddy following her ſtern, they ſay ſhe makes much dead water.

DEAL, to parcel out goods; to trade in, to traffic, or utter wares and merchandiſes.

DEAL. A port-town of Kent, between which and the Goodwin-ſands, the ſhipping uſually ride in the Downs, on going out, or coming home; being ſituated in 1 deg. 30 min. of E. lon. and 51 deg. 16 min. of N. lat. 67 miles E. of London.

DEALER. A trader, or one that buys and ſell commodities.

DEALS, is a name for ſuch boards or planks of the fir-tree, as are uſed for flooring; being brought chiefly from Norway and Sweden. See *Fir*.

By the ſtatute of the 13th and 14th of Cha. II. deal-boards, fir-timber, pitch, tar, and pot-aſhes, are not to be imported into Great Britain, from the Netherlands or Germany, on forfeiture of the ſhip and goods. But, by the 6th of Geo. I. deal-boards, fir-timber, fir-planks, and maſts of the growth of Germany, may be imported from thence only by Britiſh ſubjects, in Britiſh-built ſhips, owned by Britiſh ſubjects, upon payment of the like duties as if from Norway.

DEAR, is ſaid of any thing in trade which is advanced beyond the uſual or common price, in contradiſtinction to any thing that is cheap.

DEAURATION, the covering any thing with gold, or gilding it, as apothecaries do their pills, to prevent the nauſeous taſte of their phyſic being diſagreeable to the patient.

DEBARK, to come from on board a ſhip; or to put on ſhore.

DEBASE, to bring down, make worſe, or qualify too much, as is done to gold or ſilver, by mixing it with too great a quantity of alloy: and it alſo ſignifies the under-valuing of any commodity in price.

DEBENTURE. A kind of writing, in the nature of a bond; firſt given in England in the year 1649, to charge the commonwealth to ſecure the ſoldier-creditor, or his aſſigns, the ſum due, upon auditing the accompts of his arrears.

The word is alſo uſed in the exchequer, and in the royal houſhold, where debentures are uſually given to the ſervants for payment of their wages.

But, in commerce, it properly ſignifies an inſtrument, or certificate, from the proper officer at the cuſtom-houſe, of the duty paid inwards, which the merchant upon exporting thoſe ſame commodities, and giving bond that they ſhall not be relanded, is to be repaid. Thoſe debentures muſt, before written or printed, be ſtamped, upon payment of 8 d. for every ſkin, ſheet, or piece of vellum, parchment or paper; which it is felony to counterfeit. See *Bounty*, *Drawback*, and *Entry*.

By the ſtatute of the 4th and 5th of Will. and Mary, debentures for duties to be drawn back upon the re-exportation of goods, muſt be ſworn to by the true exporter only, as being either intereſted in the propriety and hazard of the goods, or ſo employed by commiſſion in the direction of the voyage, as to be able to judge whether the goods be really, and *bonâ fide*, exported.

By the ſtatute of the 6th and 7th of Will. III. and others, when debentures are for cinnamon, cloves, mace, and nutmegs, oath is to be made thereon by the exporter, that all the goods entered and ſhipped as there certified, are really and truly exported for parts beyond the ſeas, on his own account, if he acts for himſelf; or if he acts by commiſſion, then on the account of ſuch perſon or perſons for whom the deponent acts in the direction of the voyage; and that none of the ſaid goods have been ſince landed, or are intended to be relanded in Great Britain, or the Iſle of Man.

Debentures for tobacco may be made in one or more parchment or parchments, and the oath printed thereon, to be ſigned and ſworn to by the exporter, that all the tobacco entered and ſhipped as there certified, is really and truly exported for parts beyond the ſeas, on his own account, if he acts for himſelf; or if he acts by commiſſion, then on the account of ſuch perſon or perſons for whom the deponent acts in the direction of the voyage, and that none of the ſaid tobacco has been ſince landed, or is intended to be relanded in Great Britain, or the Iſle of Man, or Ireland; unleſs for tobacco regularly ſhipped for that place.

By the ſtatute of the 13th and 14th of Cha. II. allowances on damaged goods, and diſcounts made inwards, are to be rebated, or defaulked on debentures.

Drawbacks, for which debentures are made, are granted on corn, malt, Britiſh manufactures of ſilk, or mixed with ſilk; Britiſh made gun-powder, Britiſh refined ſugar, Britiſh made ſail-cloth, hides and calves ſkins tanned, tawed, or dreſſed, tanned leather, gold and ſilver lace, thread and fringe, Britiſh wrought plate, printed callicoes, printed linens and ſilks, Britiſh ſtarch, ſoap, paper, and candles; fiſh, beef, and pork; coals, foreign goods, and tobacco of the Britiſh colonies.

When a ſhip is regularly cleared out, and diſcharged, according to the manner deſcribed under the article of *Cuſtoms*, and actually ſailed out of the port on her intended voyage, debentures may be made out from the exporter's entries, in order to obtain the drawbacks, allowances, bounties, or premiums, that are due on the exportation of any goods on board; which debentures for foreign goods are to be paid within one month after demand. See the ſecond rule annexed to the book of rates, made in the 12th year of King Cha. II. intitled rules, &c. for the advancement of trade, and which are fully ſet forth under the article of *Cuſtoms*.

DEBET, in a mercantile ſenſe, ſignifies the remainder of ſuch debts as have been paid on account; or the ſums due to merchants for goods ſold on credit, with which the journal or ledger is charged.

DEBIT, among book-keepers, is uſed to expreſs the left-hand page of the ledger; to which all articles ſupplied or paid on the ſubject of an accompt, or charged to that accompt, are carried.

DEBT. A thing due to another, being taken in the mercantile acceptation, to conſiſt of money and goods; of which there are ſeveral kinds; as, active debts, are thoſe whereof a perſon is creditor; paſſive debts, thoſe whereof he is debtor; beſides which there are in law real debts, perſonal debts, and mixed debts.

By the ſtatute of the 7th of King James I. it was enacted, That no tradeſman, or handicraftſman, keeping a ſhop-book, his executors or adminiſtrators, ſhould be admitted to give his ſhop-book in evidence in any action, for money due for wares delivered, or for work done, above one year before the action brought; except they ſhould have gotten a bill of debt, or brought ſome action for the debt within one year after the money due: but this act did not extend to any intercourſe of trading between merchants and tradeſmen, for any thing directly falling within the compaſs of their mutual trades.

DEBT, *bill of*, or *Bill obligatory*, is an inſtrument of acknowledgment from one merchant to another, of a debt, for wares and merchandiſe, bought and received; for payment of which this bill is paſſed, in a promiſſory way, within a limited time. Theſe bills are frequently uſed in ſome countries of trade; where the perſons to whom they are made, may go to another man, and buy other commodities therewith, as though it were with ready money, the time of payment only conſidered: but if a common bill of debt be made beyond the ſeas, by two or more perſons, as having bought a commodity as partners together, wherein they bind themſelves all as principal parties or debtors; yet every man is bound only to pay his part; and on ſuch a joint bill in England, an acquittance to one debtor will diſcharge the others.

DEBT-*book*. See *Book*-keeping.

DEBT-*national*, or the *National Debt*, which is now ſo onerous an incumbrance upon the ſhoulders of Great Britain, was inſtituted immediately after the revolution, with a political view to eſtabliſh Will. III. on the throne: for, before his acceſſion to the crown, there was not one ſhilling that could properly be called a national debt, be-

cauſe not contracted by authority of parliament; the 664,263 l. being the debt due to the ſervants of King Cha. II. and what was called the banker's debt, having no proviſion for payment till after the revolution, when it was charged upon the hereditable exciſe. But ſo liberal were the members of the conventionary parliament to their new ſovereign, that large ſums were granted, which empowered the government to obtain large loans, whereby additional duties were laid upon commerce and manufactures, and poverty entailed upon future generations. Under the ſucceeding monarchs, Great Britain found no diminution of this national debt; even during the more than twenty years of that pacific adminiſtration which ſucceeded the treaty of Utrecht, this incumbrance was but inconſiderably leſſened; for, on the commencement of the war with Spain in 1739, the national debt amounted to above 45 millions; a ſurpriſing load on a nation ſo long lulled in the boſom of tranquility! eſpecially as the free revenue had, for near 20 years, been a great deal more than ſufficient for anſwering the annual expence, if the miniſtry had kept up no greater armies than were neceſſary, paid no unneceſſary penſions, nor fitted out any uſeleſs ſquadrons: for the land-tax, malt-tax, and civil liſt, which properly compoſe the free revenue, generally amounted to 2,500,000 l. annually; and two millions have been thought ſufficient for the whole neceſſary annual expence of the nation: ſo that, upon this calculation, for many years paſt, inſtead of encroaching upon the ſinking fund, 500,000 l. might have been added to it yearly; and, inſtead of increaſing the national debt, great part of it might have been paid off, without laying any new and heavier taxes upon the people. However, the late war with France and Spain ſo greatly augmented this national debt, that what is now publickly provided for by parliament amounts to 57,703,675 l. 6 s. 4 d. beſides 16,597,487 l. 3 s. 11 d. more; of which 57 millions there are 312,000 l. due to the proprietors of certain annuities, payable at the exchequer: 8,486,400 l. to the governor and company of the bank of England; and to the proprietors of certain annuities transferable there 18,402,472 l. 0 s. 10 d. to the Eaſt India company 3,200,000 l. and to the South Sea company, and to the proprietors of the old and new South Sea annuities, 27,302,203 l. 5 s. 6½ d. all of which, on the ſubſcription of the creditors, purſuant to an act of parliament, paſſed in the year 1750, were to carry intereſt at the rate of 4 *per cent.* until the 25th of December 1750; and from thence 3 l. 10 s. *per cent.* untill the 25th of December 1757; and then to carry only 3 *per cent.* redeemable by parliament: but, till ſuch time, no part of the ſame, except what is due to the Eaſt India company, is liable to redemption: however, 1,026,476 l. 4 s. 6 d. was not ſubſcribed; upon which the creditors on that ſum were paid off by the bank of England, who advanced 1,013,148 l. 4 s. 6 d. for that purpoſe into the exchequer, and took the remaining 13,328 l. in bank annuities. See *Bank*.

Beſides, in the year 1751, the government alſo borrowed 2,100,000 l. chargeable upon the ſinking fund: of which 1,400,000 l. was to be paid into the South Sea company for the purchaſe of annuities at 3 *per cent. per annum*; and the remaining 700,000 l. was raiſed by a lottery, for the purchaſe of annuities at the ſame rate. See *Lottery*, and *South* Sea Company.

And, in the ſame year, the government alſo borrowed 176,893 l. 11 s. 7 d. on exchequer bills at 3 *per cent. per annum*, chargeable on the ſinking fund: which, together with the above 2,100,000 l. augmented the 57,703,675 l. 6 s. 4 d. to 59,980,568 l. 17 s. 11 d. but as the government, in the ſame year, paid off 2,276,893 l. 11 s. 7 d. for the unſubſcribed old and new South Sea annuities; this reduced it again to 57,703,675 l. 6 s. 4 d. which was the national debt provided for by parliament in the year 1752, when the whole national debt amounted to 74,300,562 l. 10 s. 3 d. the annual intereſt whereof amounted to 2,722,052 l.

So inſcrutable are public deſigns, that a man may as well calculate the very moment the general conflagration will begin, as to prognoſticate the certain time when Britain may hope to ſee the abolition of ſuch taxes, which ſerve only to impoveriſh the whole nation: therefore, how dearly have the Britiſh inhabitants paid, how dearly muſt their poſterity pay, for this error of their anceſtors, in not ſupplying, or not properly employing, a ſufficient yearly revenue for anſwering the yearly expence? See *Credit*, *Exchequer*, *Fund*, *Bank*, *Eaſt* India, and *South* Sea companies.

Navy DEBT, or the debt of his Majeſty's navy, may alſo be deemed a part of the national debt, though not generally included in it; this being a debt contracted for naval ſtores, freight of tranſports, premiums allowed by parliament on naval ſtores, for his Majeſty's yards for ſhipping and rope-yards; for ſeamens wages, bounties to widows, and orphans of men ſlain at ſea; for victualling the navy, for the quarters and care of ſick and wounded ſeamen ſet on ſhore, and for other neceſſary expences belonging to the royal navy; which, on the 31ſt of December 1751, amounted to 1,665,493 l. 6 s. 1¼ d. See *Navy*.

DEBTOR. Any perſon, or accompt, that owes any thing to another.

By the ſtatute of the 2d of King George II. mutual debts between plaintiff and defendant; or if either party ſue or be ſued, as executor or adminiſtrator between the teſtator or inteſtate, and either party; one debt may be ſet againſt the other, and matter given in evidence on the general iſſue, or pleaded in bar, as the caſe ſhall require, if notice be then given of the ſum to be inſiſted on, and on what account due.

By the ſtatute of the 8th of Geo. II. mutual debts may be ſet againſt each other, by being pleaded, or in the general iſſue, though deemed of a different nature, unleſs either accrue by penalty contained in a bond or ſpecialty; in which caſes, it muſt be pleaded in bar, ſetting forth what is juſtly due on either ſide.

Debtors to the crown were not diſcharged out of priſon, by virtue of the late acts for the relief of inſolvent debtors.

DEBTOR and CREDITOR, or the art of book-keeping, is that whereby merchants and eminent traders keep their accompts. See *Book-keeping*.

DECANTER. A fine flint-glaſs bottle, to put wine, ale, or beer in, for the more eaſy pouring it into glaſſes.

DECIMAL *arithmetic*, is that part of arithmetic which conſiders units, or whole numbers, made in decimal fractions; which are thoſe whereof the denominators are decuples of one or ten times as much, or are a 1 with one or more cyphers; as 10, 100, 1000, 10,000; thus $\frac{6}{10}$, $\frac{46}{100}$, $\frac{869}{1000}$, are decimal fractions: but as the denominators of this ſort of fractions are always known, they are ſeldom expreſſed in writing; the fraction being diſtinguiſhed by a point placed before it, thus, .6, .46, .869; and as cyphers placed after integers increaſe their value decimally; ſo being placed before a decimal, they decreaſe its value decimally; but being placed before integers, and after fractions, neither of them is increaſed or diminiſhed.

DECK *of a ſhip*. A kind of planked floor, from ſtem to ſtern, whereon the guns are laid, and the men walk backwards and forwards; ſerving alſo as a cieling to ſeparate the ſtories of the ſhip, or other veſſel.

A ſhip is ſaid to have two or three decks, when it contains two or three ſtories: the middling ſort of veſſels have two decks; and the biggeſt three, diſtant from each other about five feet. The bottom deck is called the firſt deck; the ſecond deck, anſwering to the ſecond ſtory from the ground in houſes, contains an equal number of guns with the firſt, abating that there is none over the ſtern, which is the captain's apartment; the third deck is only in large veſſels, where there is a third battery.

Some veſſels have alſo a half deck, which reaches from the main-maſt to the ſtern of the ſhip; as likewiſe a quarter deck, which is from the ſteerage aloft to the maſter's round-houſe. Sometimes alſo there is a ſpare deck, which is the uppermoſt of all, being between the main-maſt and the miſſen, called alſo the *cirlope*.

A Rope-DECK is that made of cordage interwove, and ſtretched over a veſſel that has no deck, through which it is eaſy to annoy the enemy who comes to board her

and has leaped thereon; but they are little uſed, except in ſuch merchant-veſſels as want to be defended from the corſairs.

DECLENSION, in trade, implies the decay of the whole, or ruin of ſome particular branch or manufacture.

DECLINATION *of the needle*, among mariners, is the variation of the compaſs from the true meridian. See *Compaſs*, and *Meridian*.

DECOCT. To ſeethe, boil, or ſtew any thing over the fire, in ſome proper liquor.

DECOCTION. A boiling over the fire, particularly applied to phyſical preparations, either for diet drinks, or other uſes.

DECORTICATION. The peeling, or taking off the ſhell, bark, or huſk, of any ſeed, plant, or tree.

DECREPITATION, in chemiſtry, the drying, or calcining ſalt over the fire, till it ceaſes to crackle.

DEE. A river riſing out of the mountain of Barduvaure, on the eaſt-ſide of Merionethſhire in Wales; which flows to Cheſter, from whence it is navigable to the bar of that city, and is a port generally frequented by paſſengers to and from Ireland.

The river DEE *company* were incorporated, by act of parliament, in the 14th year of King George II. by the name of The company of proprietors of the undertaking for recovering and preſerving the navigation of the river Dee; being empowered to do all ſuch acts as Nathaniel Kinderly gentleman, his heirs and aſſigns, might have done, purſuant to an act paſſed in the 6th year of King George II. whereby he was authoriſed to undertake the navigation of the river, from the ſea, to a point within the liberties of the city of Cheſter, called Wilcox point, in ſuch manner that there ſhould be 16 feet water in every part of the river, at a moderate ſpring-tide. By this act of incorporation, it was enacted, That the joint ſtock of the company ſhould be 52,000l.: that the direction of the affairs of the company ſhould be in a committee conſiſting of a chairman, and ten other members, to be choſen annually by a plurality at a general court; but no perſon ſhould be choſen chairman, or committee-man, without having 500l. ſtock in his own right: that at all general courts every member ſhould have in his own right 100l. joint ſtock of the company for one vote, and ſo in proportion for every 100l. provided that no member ſhould have more than ten votes at ſuch general court: that any nine members of the company, having at leaſt 200l. ſtock in their own right, might apply, by writing, to the chairman and committee to call a general court, who ſhould give notice in the London Gazette of the moſt convenient place of meeting within 15 days after ſuch application: that the general court ſhould appoint what dividends ſhould be paid to the company, out of the clear profits of the duties and tonnage, or otherwiſe.

As the tonnage rates and duties, impoſed by the company, for all goods brought into or loaded in the river Dee, were found to be too high, and a diſcouragement to the trade of the city of Cheſter; it was, by another act of parliament, paſſed in the 17th year of King George II. enacted, That the former rates ſhould be repealed; and that there ſhould be paid to the company, in lieu thereof, for every ſhip, ſloop, hoy, bark, barge, lighter, boat, or other veſſel, coming into, or going out of, or navigating in the river and new channel, with any goods or merchandiſe, excepting lead, oyſters, ſlates, and paving ſtones, by the maſter or owner of ſuch ſhip or other veſſel, the ſeveral rates, tonnage, keelage, or duties, according to the full of their reach and burden, therein particularly deſcribed. But as theſe duties are long, and the port not very material, they have been omitted in this dictonary.

DEEP. The third quality of the dimenſion of body; being the ſame with thick, in contradiſtinction to long and broad.

DEEP-*colour*, in manufactures, is a ſtrong well grounded colour.

DEEP-*ſea line*, or *Dip-ſea line*, among mariners, a ſmall line to ſound with, when a ſhip is in very deep water at ſea. At the end of this line is a piece of lead, called the deep ſea lead; at the bottom of which is a coat of white tallow, to bring up ſtones, gravels, ſhells, or the like, from the bottom, in order to learn the differences of the ground; which being entered from time to time in their books, by comparing of obſervations, they gueſs, by their ſoundings, what coaſts they are on, though they cannot diſcover land. See *Sounding*.

DEER. Thoſe wild beaſts of the chace, whoſe fleſh when dead is called veniſon, which are commonly kept in Europe in the foreſts and parks of princes, noblemen, and gentlemen; but, in other countries, particularly the northern parts of America, they are very common and numerous in the woods and plains, where the Indians deſtroy them principally for their ſkins, which they ſell to the Britiſh, French, and Spaniſh traders.

DEFALCATION. An abating, or deducting ſomething in an account; and, in gardening, it is the pruning, trimming, or cutting vines and other trees.

DEFECATE. To clarify or refine liquors from dregs and ſediment.

DEFECT, in manufactures, a blemiſh or imperfection in the goods.

DEFLAGRATION, in chemiſtry, the ſetting fire to a body which has been firſt mixed with ſome ſulphureous matter, in order to purify it.

DEGREE, in geography, a diviſion of a circle, including a 360th part thereof; every circle, great and ſmall, being ſuppoſed to be divided into 360 parts called degrees; the degree ſubdivided into 60 leſſer parts, called minutes; the minutes into 60 others called ſeconds; and the ſecond into 60 thirds; thus the globe being divided into 360 degrees, the places of the earth are ſaid to be ſituated in ſuch a degree of longitude and latitude.

DEGREE *of latitude*, is the ſpace of 365,184 Engliſh feet included between two parallels of latitude. See *Latitude*.

DEGREE *of longitude*, is the ſpace between two meridians; the quantity of which is variable, according to the longitude. See *Longitude*.

Theſe expreſſions are borrowed from the antients, who were acquainted with a very large extent of earth, from eaſt to weſt, which they accounted the length; and a much leſs from north to ſouth, which paſſed with them for the breadth of the earth.

DEKER. A term in Holland, in the commerce of leather, for a certain number of ſkins; upon the footing whereof bargains are made, and the duties of importation and exportation paid: but it is more particularly ſaid of the ſkins of goats, and conſiſts of ſix ſkins.

DELAL. A term among the Perſians, for certain perſons who act for them in the purchaſe, and ſale of their merchandiſe, anſwering the ſignification of the Engliſh word broker. See *Broker*.

DELEGATES. A court, in England, conſiſting of certain perſons delegated, or appointed, by the royal commiſſion under the great ſeal, to ſit upon an appeal to the King, in the court of chancery in three caſes; one of which is, upon a ſentence given in the admiralty-court in ſuits civil and marine, by order of the civil law.

DELEGATION, in the civil law, denotes a ſort of ſurrender, whereby a perſon ſubſtitutes another in his place; which differs from transferring; becauſe three perſons intervene in a delegation, being the creditor, the debtor, and a third who himſelf is indebted to the debtor, and on whom the debtor transfers the obligation he was under to pay the creditor, delegating him, as it were, for that purpoſe: but, in a ſimple transfer, it is ſufficient that the transferer and transferee be preſent.

DELF. A quarry, or mine, where ſtone or coal is dug; a delf of coal denotes lying in veins under-ground, before it is dug up; and it is alſo a certain quantity dug out of a mine or pit.

DELFT. The capital of Delftland, in the province of Holland, ſituated in 4 deg. 5 min. of E lon. and 52 deg. of N. lat. where is made the beſt ſort of earthen ware, from hence called Delft-ware. See *United* Provinces.

DELIQUIUM, in chemiſtry, is the cauſing a ſalt to melt into water, by putting it into a moiſt place; alſo a diſtillation by fire.

DELLY. The capital of the province of Delly, and at preſent of all the Hither India, ſituated in 79 deg. of E. lon. and 28 deg. of N. lat. See *India*.

DELMONHURST, or *Delmenhurſt*, is a county of Germany, ſubject to Denmark. See *Denmark*.

DELOS. The chief iſland of the Cyclades, in the Turkiſh Archipelago; but the leaſt of them all, not being more than 6 miles in circumference, and deſtitute of inhabitants, ſituated in 25 deg. 50 min. of E. lon. and 37 deg. 26 min. of N. lat.

DEMER. A river of the Auſtrian Netherlands, in the province of Brabant, flowing beneath the city of Mechlin, and afterwards falling into the Scheld. See *Scheld*.

DEMI. The half, or diminutive of a thing.

DEMI-*cannon*. A piece of ordnance, uſually about 6 inches bore, 5400 lb. weight, 10 or 11 feet long, and carrying a ſhot of 30 or 32 lb. weight, point blank, 150 paces; its charge of powder being 14 lb. weight. See *Cannon*.

There are alſo two ſizes of demi-cannon above this, which are ſomething larger; as the ordinary demi-cannon, which is $6\frac{1}{8}$ inches bore, 12 feet long, weighs 5600 lb. its charge of powder 17 lb. 8 oz. and carries a ſhot 6 inches and a half diameter, whoſe weight is 32 lb. 162 paces point blank. Demi-cannon of the largeſt ſize, is $6\frac{6}{8}$ inches bore, 12 feet long, 6000 lb. weight, whoſe charge is 18 lb. of powder, and carries 180 paces.

DEMI-*culverin*, is a piece of ordnance commonly $4\frac{1}{2}$ inches bore, 10 feet long, 2700 lb. weight, its charge 7 lb. 4 oz. of powder, and carries a ſhot of 10 lb. 11 oz. and ſhoots point blank 175 paces. See *Ordnance*.

Demi-culverin, of the leaſt ſize, is $4\frac{1}{4}$ inches bore, 10 feet long, and 2000 lb. weight, carries a ball of 4 inches diameter; its charge is 6 lb. 4 oz. of powder, and its level-range is 174 paces. Demi-culverin of the largeſt ſize, is $4\frac{6}{8}$ inches bore, and 10 feet long; its charge of powder 8 lb. 8 oz. the ball is $4\frac{1}{2}$ inches diameter, weighs 12 lb. 11 oz. and the point blank ſhoot 178 paces. See *Culverin*.

DEMITTEES. A kind of cotton ſtuff made in the iſle of Cyprus, and brought from Smyrna.

DEMURRAGE, in commerce, an allowance made to the maſter of a ſhip by the merchants, for continuing in a port longer than the time firſt appointed for his departure.

DENIA. A port-town of Spain, in the province of Valencia, ſituated on the coaſt of the Mediterranean, in 20 min. of W. lon. and 39 deg. of N. lat. See *Spain*.

DENIER was formerly a general name for all French money.

DENIER *Tournois*. A ſmall copper coin, of great currency formerly in France, and even as yet received in ſome provinces beyond the Loire; but they have been ſeldom coined ſince the year 1649

The denier tournois is now held a money of accompt of Paris, and in ſeveral other towns of France; being ſubdivided into 2 mailles, the maille into 2 pites, and the pite into 2 ſemi-pites. The denier tournois is the 12th part of a ſol tournois, the ſol tournois the 20th part of the livre tournois, and the 60th of the ecu: ſo that the ſol tournois is compoſed of 12 deniers tournois, the livre tournois of 240 deniers tournois, and the ecu of 720; each denier being equal to $\frac{39}{1280}$ of a penny ſterling, or 12 of them are ſomewhat leſs than a halfpenny.

DENIER *Paraſis*. A ſmall imaginary money, uſed in France, being one fourth more than the denier tournois. There are at preſent in France ſeveral little copper pieces, which, having no proper name, are diſtinguiſhed only by their value in deniers, as the pieces of 36, 30, 24, 18, 12, 6, 4, and 2 deniers.

DENIER *de gros*. A money of accompt uſed in Holland, Flanders, and Brabant; 12 of which are about $1\frac{1}{2}$ d. ſterling. But there is ſome difference between the denier de gros of Holland, and the denier de gros of Flanders and Brabant; the livre de gros being not of equal value in both countries.

DENIER *de fin*, or *de loy*, ſignifies, among French goldſmiths and coiners, the ſtandard of ſilver, as the caract is that of gold.

This denier, anſwering the Engliſh penny weight, is a weight, or eſtimation, conſiſting of 24 grains, and divided into halves, quarters, and eighths. The fineſt ſilver is at 12 deniers, or penny weights; the French coined ſilver is to be at leaſt 10 penny weights fine; and goldſmiths ſilver 11, purſuant to the ordonance of 1640. When ſilver is at this ſtandard, it is called King's ſilver, becauſe the King remits his 24th part in favour of ſtrangers who bring this metal into his kingdom.

DENIER *de poids*, in France, is the 24th part of an ounce.

DENIZEN, or *Deniſon*, in law, an alien enfranchiſed in England, by the King's charter and donation; whereby he is, in ſome reſpects, enabled to act like the natives of the land; that is, to purchaſe eſtates, bear offices or dignities, but cannot inherit lands by deſcent: whereas a ſtranger who is naturaliſed may. Beſides, in the charter whereby a perſon is made a deniſon, there is uſually a clauſe which abridges him of that full benefit enjoyed by natural ſubjects. See *Merchant*, *Alien*, *Naturalization*, *Scavage*, and *Cuſtoms*.

DENMARK and Norway are at preſent under the dominion of one prince; though formerly they were diſtinct kingdoms.

Denmark, including the duchy of Holſtein, in which his Daniſh Majeſty hath an undivided moiety, is bounded by the Categate ſea, or entrance into the Baltic, towards the north; by the Baltic ſea, towards the eaſt; by the river Elbe, which divides it from the duchy of Bremen, towards the ſouth-weſt; and by the duchy of Saxelawenburgh, towards the ſouth-eaſt; extending from 54 deg. 30 min. to 58 deg. 20 min. N. lat. lying between 8 and 13 deg. of E. lon. being 240 miles long, and 180 broad; compoſed of the peninſula of Jutland on the continent, ſeparated from the iſlands by the Leſſer Belt, and a part of Holſtein in Germany; the iſlands being Zealand, Funen, Langland, Laland, Falſter, Mona, Femeren, Bornholm, Alſen, and ſome others; all lying at the entrance of the Baltic ſea: beſides which, Oldenburgh and Delmonhurſt, two counties in Germany, ſeparated from the reſt of Denmark by the duchy of Bremen, belong to the crown of Denmark.

The kingdom of Norway is ſeparated from Denmark by the Categate ſea, extending from 59 to upwards of 71 deg. of N. lat. and from 4 to 30 degrees of E. lon. being bounded by the ocean towards the weſt; by the kingdom of Sweden, and Swediſh Lapland, towards the eaſt; and alſo by the Categate ſea, towards the ſouth: this country is long and narrow, incloſed by the ocean on one ſide, and by thoſe high barren mountains, called Dofrine hills, covered with ſnow, which divide it from Sweden on the other, being about 1000 miles long, and only 100 broad. The ſeas bordering upon the Daniſh dominions, are the German ocean, which flows between Great Britain on the weſt, and Denmark and Norway on the eaſt; the northern, or frozen ocean; and the Baltic, in which is that remarkable ſtrait, or paſſage into the eaſt ſea, called Ore ſund, or generally the ſound of the Baltic. This ſtrait, called the ſound, is about 4 miles over, having the iſland of Zealand on the weſt, and the continent of Schonen on the eaſt: in the narroweſt part of the ſtrait on Zealand, or Denmark-ſide, ſtands the town of Elſenore, and the ſtrong caſtle of Cronenburgh, before which there is a tolerable road for ſhipping. On the ſide of Schonen, in the poſſeſſion of the Swedes, is the town of Helſingburgh, and a ſmall battery of guns, ſerving only to ſalute the ſhips that paſs by it; and between theſe two places all the ſhipping ſail which are bound to the Baltic. The Danes, however, only receive the toll of all merchant-men who paſs by; though the Swedes are maſters of the oppoſite ſhore, by virtue of the treaty concluded when the Danes yielded up Schonen to them: but the Swedes themſelves were exempted from paying any duties till the laſt peace, in the year 1721, when the affairs of the Swedes were in a very deſperate condition, and then they condeſcended to pay a toll to Denmark, as other nations did, on their paſſing the Sound. This duty claimed by the Danes, is ſuppoſed to have ariſen from the mutual conſent of the merchants trading to the eaſt country; who willingly, at firſt, contributed a ſmall ſum towards the maintaining of light houſes on the coaſt fr

their own ſecurity, and the direction of their pilots; and thereupon this paſſage of the Sound came to be more generally uſed than that of either Belt to the weſtward of the iſle of Zealand, which in other reſpects ſeem to be as commodious as this. From ſome ſuch beginning, the Danes proceeded to demand larger ſums; and that as their indubitable right, being then in poſſeſſion of both ſhores: but the Emperor Charles V. in behalf of his ſubjects of the ſeventeen provinces of the Low Countries, came to an agreement, at Spire, with the Dane, that every ſhip of 200 tons and under, paſſing the Sound, ſhould pay two roſe nobles going and coming from the Baltic, and every ſhip above that burthen three roſe nobles, each roſe noble being worth 18 s. ſterling; which agreement remained in force till the United Provinces revolted and ſet up for independent ſtates; though afterwards the Danes obliged the Dutch to pay extravagant rates. However, the Hollanders and Lubeckers oppoſing theſe exactions about the year 1600, compelled the Danes to accept of more moderate duties. The firſt ſolemn treaty the Dutch, as independent ſtates, made with the Danes concerning this toll, was in the year 1647, wherein they agreed to pay about 25 l. for every ſhip of 200 tons paſſing the Streight for 40 years, at the expiration of which the firſt agreement with the Emperor at Spire was to be in force; and the Engliſh, in their treaties with Denmark, agreed to pay toll, as the Dutch, and other nations in amity with them, did. As to the grand fleets of England and Holland, they aſk no permiſſion of his Daniſh Majeſty to paſs the Sound, who has never been in a condition to diſpute it with them; for the caſtles on the ſhores are at too great a diſtance to prevent it; and if the Danes had not a ſquadron of men of war ready to compel merchantmen to pay the toll, they might paſs by unhurt. Beſides, the paſſage called the Great Belt, between the iſlands of Zealand and Funen, is conſiderably wider; and that of the Leſſer Belt, between Funen and the continent of Jutland, is not impracticable. It is alſo obſervable, that his Daniſh Majeſty is now in poſſeſſion but of one part of the Sound, Schonen being under the dominion of Sweden; ſo that the King of Denmark ſeems to have no more reaſon to demand a toll here at preſent, than the Engliſh have to demand a duty of all ſhips paſſing the Streights of Dover or Gibraltar. Nor have the Engliſh and Dutch ever entirely yielded up this point to the Danes; for though they conſented to pay a ſmall toll on merchandiſe, they never ſuffer their ſhips to be detained or ſearched; but the Danes are obliged to take the word of the maſter of the ſhip for the quality and quantity of his lading.

There are a great number of fine lakes in Denmark, but not one navigable river, either in Zealand, or Jutland, till towards the ſouth of Holſtein, where are the Elbe, the Eyder, the Tron, and the Trave; and in Norway, the only conſiderable rivers are the Glammon and Drammen.

The territories of Denmark are extremely well ſituated, in the German and Baltic ſeas, for foreign traffic; but the two imperial cities of Hamburgh and Lubeck ſeem to have monopoliſed moſt of the commerce on this ſide. The Danes, indeed, have ſome trade with Guinea and the Weſt Indies, as well as in the Eaſt Indies, where they have ſome good ſettlements, particularly in the latter; and their royal navy is eſteemed ſuperior to that of Sweden or Ruſſia: but affairs in the Baltic are abſolutely governed by the maritime powers.

The grand diviſion of the Daniſh dominions are, 1. Denmark, properly ſo called, conſiſting of the iſlands of Zealand and Funen, with ſome other iſlands lying about them, and of that part of the continent called North Jutland. 2. The dutchy of Sleſwick, or South Jutland. 3. The dutchy of Holſtein. 4. The German provinces of Oldenburgh and Delmonhurſt. 5. The kingdom of Norway. And, 6. Iceland, with the other iſlands lying in the northern ſeas.

Denmark, properly ſo called, of which the iſland of Zealand may be well reckoned the principal part, on account of the capital city of Copenhagen, ſituated upon it, which is the moſt beautiful, and has the beſt trade, of all thoſe in the Baltic. Zealand is about 60 leagues in circumference, extending from north to ſouth, but is not much longer than it is broad. It is divided from Schonen by the Sound, from the iſland of Funen by the Streight called the Great Belt, and by a very narrow channel from the iſlands of Mona, Falſter, and Laland, which lie to the ſouthward of it. There are no navigable rivers in the iſland, and very few brooks, big enough to turn a mill. The country is in ſome places prettily diverſified with little hills, woods, and lakes. The chief town of this iſland, and of the whole kingdom, is Copenhagen, ſituated in the latitude of 56 degrees odd minutes, and in 12 deg. 53 min. of N. long. reckoning from the meridian of London. It ſtands in a plain on the weſtern ſide of the Sound, not above 5 leagues diſtant from Schonen, and is computed to be about the bigneſs of Briſtol; but the walls incloſe a great deal more ground than is built upon. Its ſituation at the entrance of the Baltic muſt have been very advantageous on account of trade, if it had not been a fortified place, and awed continually by a numerous garriſon; for it is a general obſervation, that ſoldiers and merchants never agree together. The trading part of the world wiſely withdraw from military men, who they know cannot want pretences to inſult and oppreſs them, eſpecially in arbitrary governments, where the military power is always ſuperior to the civil. The town is ſtrong, ſtanding in the middle of a marſhy ground, and fortified after the modern way. The harbour is ſurrounded by the fortifications, and the entrance of it ſo narrow, that not above one ſhip can paſs in at a time; and a citadel on one ſide, and a block-houſe on the other, commands the entrance of it. A wooden gallery runs round the whole, cloſe to which every ſhip has its ſtation, and the port will contain near 500 ſail, where they may ride in the greateſt ſecurity from ſtorms and enemies, the very name of the city implying the merchant's haven. Theſe ſeas, in ſome winters, are ſo hard frozen, that the Swedes have marched over a great army, with a train of artillery, and actually beſieged Copenhagen, without the aſſiſtance of a fleet: and as the town ſtands in a moraſs, cut through with dykes, poſſibly it may be more eaſily approached in the winter-ſeaſon during the froſts, than in the ſummer. The buildings are generally mean; and even the King's palace, the worſt and moſt inconvenient in Europe. Copenhagen cannot boaſt much of its antiquity; a caſtle was built on the iſland by Archbiſhop Wide, about the year 1168, for a protection againſt the pirates which then ſwarmed in thoſe ſeas; whereupon many people reſorted hither, and it ſoon grew up into a pretty large town. It was an archbiſhopric; but the Danes, like the Swedes, have reduced their biſhops to ſuperintendents, and ſtripped them of great part of their epiſcopal power. The little iſland of Finak, joined to Copenhagen by a bridge, is well furniſhed with all ſorts of fowl, veniſon, corn, milch cattle, and garden-ſtuff; from whence the markets of Copenhagen are ſupported. This iſland was ſome years ago given to a colony of North Hollanders, who were invited hither to make butter and cheeſe for the court; and their poſterity ſtill retain the habit, language, and cuſtoms of their anceſtors, with their cleanlineſs, and induſtry, refuſing to intermarry or mix with the Danes, and have privileges conferred on them, on account of their being uſeful to the court. 2. About 15 miles to the northward of Copenhagen ſtands Elſinore, or Helſingor, on the narroweſt part of the ſtreight called the Sound, oppoſite to the caſtle of Helſinburgh, on the Schonen ſhore, where a conſiderable trade is carried on, and where every ſhip that paſſes the Sound muſt ſtrike ſail before the caſtle of Croonenburg, and come to the town to compound for the cuſtoms, under penalty of forfeiting veſſel and cargo. 3. Frederiſkburgh, twelve miles to the weſtward of Elſinore. 4. Roſchild, ſituated at the bottom of a gulph of the ſea, 20 miles to the weſtward of Copenhagen, which was antiently the metropolis of Denmark, but declined upon the building of Copenhagen, and is now an inconſiderable town. 5. Holbeck, ſituated at the bottom of a bay, which affords it ſome trade. 6. Kallenburg, ſituated near the ſea, 60 miles to the weſtward of Copenhagen, which has a pretty good trade. 7. Coge, a ſmall

town ſituated on the Sound, about 20 miles to the ſouthward of Copenhagen. 8. Preſtoe, a place of ſome trade on the ſouth-coaſt of Zealand, over againſt the iſland of Mona. 9. Warienburgh, 10 miles ſouth-weſt of Preſtoe, over againſt the iſland of Falſter. 10. Skelſkor, ſituated on the weſt-ſide of Zealand, on the ſhore of the Great Belt, 30 miles north-weſt of Warienburgh. 11. Korſor, 10 miles to the northward of Skelſkor, on a promontory over againſt Funen, which forms a good harbour on the north-ſide of it. Beſides theſe towns, which are none of them larger than a common Engliſh market-town, it is computed there are upwards of 300 villages in the iſland.

Funen, the next moſt conſiderable iſland of Denmark, hath Samſoe on the north; the Great Belt, a ſtreight of 20 miles over, which ſeparates it from Zealand, on the eaſt; the Baltic ſea on the ſouth; and the Leſſer Belt, a ſtreight which divides it from the continent of Jutland, on the weſt; being about 40 miles long, and 35 broad; the chief town whereof is Odenſee, ſituated about the middle of the iſland, and 80 miles to the weſtward of the city of Copenhagen; being formerly a flouriſhing little city, but now very much upon the decliné, though remarkable for brewing excellent beer. 2. The town of Nyburg, or Nuburgh, ſituated on the eaſt-ſide of the iſland, over againſt Korſor in Zealand; where is a good harbour for ſhips of the largeſt burthen; and the town, which is well fortified, was once the reſidence of the antient Daniſh kings. 3. Schwinburg, ſituated on the ſouth-weſt part of the iſland, is eſteemed a pretty good harbour, where the Swedes paſſed over the ice, in the year 1658, when they marched to beſiege Copenhagen. 4. Middlefar, ſituated on the weſt-ſide of Funen, being the common paſſage to Kolding in Jutland. Beſides theſe towns, there are about 250 villages in the iſland of Funen.

The iſland of *Langland*, ſo called from its long narrow form, lies on the ſouth-eaſt of Funen, being about 30 miles long, and 8 broad; the chief town whereof is Rudkoping, ſituated on the weſt-ſide of it, over againſt Schwinburg in Funen; beſides which place there are about 16 villages in the iſland.

The iſland of *Laland* hath Zealand on the north, Falſter on the eaſt, the Baltic on the ſouth, and Langland on the weſt; being about 30 miles long, and 20 broad; the chief town whereof is Nankow, ſituated on the weſt-ſide of the iſland.

The iſland of *Falſter* hath Zealand on the north, from whence it is ſeparated by a narrow ſtreight; Mona on the north-eaſt; and Langland on the weſt; being about 20 miles long, and 16 broad; the chief towns whereof are, 1. Nykopping, ſituated on the weſt-ſide of the iſland; and Sudkopping, ſituated towards the north, being the common paſſage to Zealand.

The iſland of *Mona* hath Zealand on the north-weſt, and Falſter on the ſouth-weſt, from whence it is ſeparated by a narrow ſtreight; being about 15 miles long, and 5 broad.

The iſland of *Arroe* lies to the ſouthward of Funen; the chief place in which is Kopping, on the ſouth-part of the iſland.

Bornholm lies the moſt to the eaſtward of any of the Daniſh iſlands, about 20 miles to the ſouthward of the continent of Schonen; being about 20 miles long, and 12 broad, and hath been the ſubject of much contention between the Swedes and Danes. The chief towns are, Sendwick on the north-coaſt, Rottum on the ſouth-weſt part of the iſland, and Nexia, a little diſtance from Rottum.

To the northward of Funen, and eaſt of the continent of Jutland, lies the iſland of *Samſoe*; and farther to the northward, the iſlands of *Anhout* and *Leſſow*: beſides which, there are a vaſt number of little iſlands in theſe ſeas; and to the iſland of Funen only, there belong no leſs than 90 other inhabitable iſlands.

From Zealand and Funen, and the reſt of the Daniſh iſlands in the Baltic, it is proper to proceed to the province of North Jutland, the country of the antient Jutes, confederates of the Angles, who made a conqueſt of South Britain, and gave it the name of their own country, Angleland, or England; which people were, by the Romans, called Cimbri, and their country, with Sleſwick and Holſtein, Cimbrica Cherſoneſus, or the peninſula of the Cimbri.

North Jutland is bounded by the German ocean on the weſt and north, by the Baltic on the eaſt, and by the duchy of Sleſwick on the ſouth; being uſually divided into the four governments of Alburg, Wiburg, Arhuſen, and Ripen. Alburg is the extreme north-part of Jutland. The chief towns are, 1. Alburg, ſituated on the Lymford gulph, 15 miles to the weſtward of the Baltic ſea; 2. Nicopping, ſituated in the iſland of Mors, which is formed by the Lymford, on the weſt-ſide of Jutland: 3. Tyſted, a little to the northward of Mors iſland, near the Lymford bay; 4. Seeby, a port-town on the Baltic, about 20 miles to the northward of Alburg; 5. Scagen, ſituated on the moſt northern promontory of Jutland; a place of good trade, where the ſhipping frequently touch in their voyage to or from the Baltic; and in this province are contained 13 bailiwicks, with upwards of 160 pariſhes.

Wiburg is an inland province; the chief towns of which are, 1. Wiburg, ſtanding about the middle of the province of North Jutland, 35 miles ſouth of Alburg, which is ſtill a town of ſome figure; being ſuppoſed to have taken its name from the pirates who uſed to reſort thither, and were called wigs. 2. Harkier, about 20 miles to the northward of Wiburg. 3. Nybye, 10 miles to the north-eaſt of Wiburg, remarkable for the great fairs of fine horſes, which are annually held there. In this province there are 16 bailiwicks, and upwards of 200 pariſhes.

Arhuſen, about 60 miles long, and 30 broad; the chief towns whereof are, 1. Aarhus, which has a good harbour, near the Baltic ſea, 30 miles north of the iſland of Funen: 2. Randers, ſituated about 15 miles to the north of Aarhus, near the Baltic; which is a town of good trade, and remarkable for ſalmon; beſides which there are upwards of 300 villages in this province.

Ripen, the chief towns whereof are, 1. Ripen, ſituated on the river Nipſick, which, dividing itſelf into three branches, runs thro' the town, dividing it into as many parts, and a little below falls into the German ocean, forming a pretty good harbour; which is a place of conſiderable trade, particularly for black cattle; from whence great numbers are exported to Holland and Germany. The town has good buildings; and the cathedral, which is a magnificent ſtructure, built of hewn ſtone, hath a ſteeple of an extraordinary height, which ſerves as a ſea-mark to mariners. 2. Kolding, ſituated on a bay of the Baltic ſea, over againſt Funen; a place of good trade, where all horſes, cattle, and other merchandiſe, are embarked for Holſtein, and other countries in the Baltic, which is defended by a ſtrong caſtle named Aruſburg. 3. Frederickſodde, a ſmall port, 20 miles to the eaſtward of Kolding, ſituated on the weſt-ſide of the Little Belt, memorable for the King of Sweden's paſſing over the ice here with his army, in the year 1658, when he invaded Funen and Zealand, and laid ſiege to Copenhagen. Weil, ſituated on a bay of the Baltic ſea, about 15 miles to the northward of Kolding; a little, compact, trading city, and a very good harbour. 5. Warde, ſituated about 20 miles to the northward of Ripen, near the mouth of a river, which falls into the German ſea. Ringkopping, ſituated about 30 miles to the northward of Warde, on a bay of the German ſea, eſteemed a pretty good harbour.

II. The duchy of *Sleſwick*, or South Jutland, is bounded by North Jutland, towards the north, by the Baltic ſea towards the eaſt, by Holſtein on the ſouth, and the German ocean towards the weſt; being about 60 miles long and 45 broad; over which the King of Denmark and the Duke of Holſtein are joint ſovereigns: only there are ſome towns and bailiages, in which they have a ſeparate and diſtinct juriſdiction; particularly the baliages of Hadder, Sleben, Ripen, Flenſburg, the territory of Christianpris, the iſles of Roem, and Mandoa, and the weſt-part of the iſland of Foer, are ſubject to the King of Denmark ſolely. The bailiages of Gottorp, Tonderen, Apenrade, Huſum, Eyderſtede, and Lhom Cloſter, the iſle of Femer

Femeren, North Strandſylt, and the eaſt-ſide of Foer, are ſubject to the Duke of Holſtein ſolely. The chief towns are, 1. Sleſwick, ſituated on the river Sley, which a little lower falls into the Baltic, and ſtands about 20 miles north-weſt of Kiel; being a town much reſorted to formerly by foreign merchants. 2. Gottorp, where ſtands the palace of the Duke of Holſtein, ſituated in the middle of a lake about 15 miles to the weſtward of the city of Sleſwick. Here is a toll-booth, or cuſtom-houſe, where toll is paid for ſuch black cattle as paſs from Jutland. 3. Ekrenford, ſituated at the bottom of a bay of the Baltic ſea, in the midway between Sleſwick and Kiel; a good harbour, and a place of ſome trade. 4. Frederickſtat, a litttle town ſituated on the river Eyder, about 30 miles to the weſt of Ekrenford; where Frederick Duke of Holſtein endeavoured to ſettle a trade for Perſian and Indian ſilks, and for that purpoſe ſent a famous embaſſage to Perſia in the laſt century. 5. Tonninghen, ſituated on the ſame river Eyder, about 5 miles below Frederickſtat, and 4 or 5 leagues from the German ocean, one of the ſtrongeſt fortreſſes belonging to the Duke of Holſtein. 6. Huſum, ſituated on a bay of the German ocean, about 10 miles north of Frederickſtat, having a good harbour, remarkable for oyſters. 7. Flenſburg, ſituated on a bay of the Baltic ſea, 20 miles north-eaſt of Huſum; a fine city, conſiſting of one large ſtreet two miles in length, and ſubject to Denmark; the harbour being ſo convenient, that the merchants lade and unlade their ſhips at their own doors. 8. Luxburgh, or Gluxburg, a little town with a caſtle adjoining, from whence the Dukes of Holſtein-Gluxburg take their title. 9. Haderſleban, a port town, ſituated on a bay of the Baltic ſea, 30 miles to the northward of Flenſburg, and ſubject to Denmark, remarkable for corn and fiſh. 10. Tunderen, a port-town, ſituated on the German ocean, 25 miles to the northward of Huſum, but the harbour is now choaked up. 11. Lhom Cloſter, 10 miles to the northward of Tunderen. 12. Sunderburg, ſituated on the ſouth-part of the iſland of Alſen in the Baltic ſea, the uſual reſidence of the Dukes of Holſtein, eſteemed a very ſtong town. 13. Nordburg, ſituated on the north-part of the ſame iſland, from whence the Duke of Holſtein-Nordburg takes his title. There are ſeveral iſlands alſo belonging to Sleſwick in the German ocean, particularly Norſtrant, ſituated over againſt Huſum; Fora, and Amron, a little to the northward of it; Sylt, over againſt Tonderen, with Rom and Mindo farther northward, and ſeveral other leſſer iſlands which lie about theſe already mentioned.

III. The duchy of *Holſtein*, like that of Sleſwick, hath the King of Denmark, as well as the Duke of Holſtein-Gottorp, for its ſovereign; but it is here only neceſſary to obſerve, that Holſtein is a fief of the German empire; upon which account the King of Denmark is deemed a prince of the empire, as well as the Duke of Holſtein: whereas Sleſwick is a fief of the crown of Denmark. The duchy of Holſtein is bounded by the duchy of Sleſwick on the north; by the duchy of Saxlawenburg, and the Baltic, towards the eaſt; by the Elbe towards the ſouth; and by the German ocean towards the weſt; extending about 100 miles in length from eaſt to weſt, and 50 miles in breadth from north to ſouth; within which limits are included Ditmarſh, Wagerland, and Stormar.

Holſtein, properly ſo called, conſiſts chiefly of the inland parts of this country, lying between Stormar and Jutland; the chief towns whereof are, 1. Kiel, ſituated on a bay of the Baltic ſea, in the latitude of 54 degrees odd minutes, 50 miles to the northward of Hamburgh, and 40 north-weſt of Lubeck; having a good harbour, defended by a caſtle, and is a populous, trading town; in which is held the annual aſſembly of the ſtates of Holſtein, and is ſubject to the Duke of Holſtein. 2. Renſburg, or Reinolſburg, ſituated on the Eyder, by which it is almoſt ſurrounded, 20 miles to the weſtward of Kiel; eſteemed one of the ſtrongeſt fortreſſes in Holſtein. 3. Wilſter, a pretty well built town, ſituated on a river which falls into the Stoor, about 30 miles ſouth-weſt of Renſburg. 4. Itzehoa, a little to the eaſtward of Wylſter, ſituated on the river Stoor. And, 5. Newmunſter, which lies near the mouth of the river Stoor.

The province of *Ditmarſh* is ſituated between Holſtein proper and the German ocean; being bounded by the river Elbe towards the ſouth, and the river Eyder towards the north; the chief towns whereof are, 1. Meldorp, a town of good trade, ſituated on the German ocean, about 30 miles ſouth-weſt of Renſburg. 2. Lunden, ſituated near the mouth of the river Eyder, 15 miles to the northward of Meldorp; the former ſubject to Denmark, and the latter to the Duke of Holſtein.

The province of *Stormar* is a low marſhy country, bounded by the river Stoor, which divides it from Holſtein, towards the north, and by the river Elbe and Lunenburg towards the ſouth, very much reſembling Holland in its dykes and banks made to keep out the ſea; but the flats are frequently nevertheleſs overflowed. They have great advantages in trade, on account of the neighbourhood of the river, and the city of Hamburg, which ſtands cloſe to the boundaries of this province, but is one of the Hans towns, and governed by its own magiſtrates. The chief towns of Stormar are, 1. Altena, formerly a very pretty town, within leſs than a mile of Hamburg, belonging to the King of Denmark, which hath been greatly encouraged by the Dane, in hopes that it might in time participate of the trade and wealth of Hamburg; but it was burnt to the ground in the laſt war with the Swedes, and, as ſome ſuggeſt, at the inſtigation of the Hamburghers, who apprehended this town might one day become their rival in commerce: however, Altena is now rebuilt, and more beautiful than ever. 2. Gluckſtat, or Geluckſtat, a ſmall city, ſituated on the Elbe, about 30 miles north-weſt of Hamburg, which is eſteemed a place of ſtrength; and it was here the Danes had formed a project, of compelling all veſſels to pay a toll, in their paſſage to and from Hamburg; but the ſubjects of ſo many conſiderable powers were concerned in this impoſition, that the Daniſh monarchs have not yet carried their point: they have, however, frequently obliged the Hamburgers to raiſe them conſiderable ſums, under pretence that they have a right to the dominion of that city; which was formerly, it is true, reckoned to be within the duchy of Holſtein; but is now a free imperial city. 3. Krempe, or Crempen, about 6 miles to the northward of Gluckſtat. 4. Pennyburg, ſituated about 10 miles to the northward of Hamburg, and only remarkable for giving name to the diſtrict about it.

The province of *Wageren*, or Wagerland, encloſed on three ſides by the Baltic ſea, and the river Trave, and bounded by Holſtein proper towards the weſt, is about 50 miles in length from north to ſouth, and 30 in breadth from eaſt to weſt; the chief towns whereof are, 1. Segeburg, ſituated on the river Trave, 12 miles to the weſtward of Lubeck. 2. Odelſloe, or Oldeſloh, a good town, ſituated on the ſame river Trave, almoſt in the midway between Lubeck and Segeburg. 3. Ploen, ſituated on a lake, which almoſt ſurrounds it; ſtanding about 20 miles to the northward of Segeburg, and gives title to one of the branches of the houſe of Holſtein, who are ſtiled Dukes of Holſtein-Ploen.

IV. The other German territories ſubject to the crown of Denmark, are the counties of *Oldenburg* and *Delmonhurſt*, which lie on the ſouth-ſide of the Elbe, and are ſeparated from the reſt of the Daniſh territories, by the whole duchy of Bremen; being bounded by a bay of the German ſea, towards the north; by the river Weſer, towards the eaſt; by the biſhopric of Munſter, towards the ſouth; and by the county of Emden, on the weſt; together about 60 miles in length, and 30 in breadth: the chief town of Delmonhurſt is of the ſame name, and ſtands on the river Delm, 10 miles to the weſtward of Bremen; and the only conſiderable town in Oldenburg, is alſo of the ſame name as the county, and ſituated on the river Hund, not far from the place where it falls into the Weſer; the river being navigable as far as the town, which makes it a place of ſome trade.

V. The kingdom of *Norway* is ſeparated from Denmark by the ſea called the Categate, and is uſually divided into four governments, or dioceſes. 1. The government of the Wardhuys, or Finmark; 2. The government of Dronthiem;

Dronthiem; 3. The government of Aggerhuys; and, 4. The government of Bergen.

1. The government of Wardhuys, or Finmark, or, as it is frequently called, the Norwegian Lapland, is bounded by the ocean on the north and weſt, by Muſcovite Lapland towards the eaſt, and by Swediſh Lapland on the ſouth. The only place which can pretend to the name of a town in this country, is Wardhuys, ſituated at the north eaſt part of an iſland, about 15 miles in circumference; where is an old caſtle, the ſeat of the governor, and a ſtreet of cottages: as to the reſt of the Norwegian Lapland, there are only cottages diſperſed here and there, ſeldom more than two or three together, as in Swediſh and Muſcovite Lapland; only in the iſland of Maggero, the land whereof makes the north cape, well known to mariners who uſe the Ruſſian trade; and, upon two or three little iſlands near it, there are churches built by the Danes, and the people make ſome pretenſions to chriſtianity; but the natives, who live on the continent, are ſtill for the moſt part Pagans.

2. The government of Drontheim is bounded by Wardhuys on the north; by ſome provinces of Sweden, and the Swediſh Lapland, towards the eaſt; by the province of Bergen on the ſouth, and the ocean towards the weſt; being about 500 miles in length, and 100 in breadth; which country was yielded to the Swedes, by the treaty of Roſchild, in the year 1651, but reſtored to the Danes by the treaty of Copenhagen, in the year 1660. The chief towns are, 1. Drontheim, or Truntheim, ſituated at the mouth of the river Nyder, which falls into a bay of the northern ocean, in 64 deg. odd minutes northern latitude, and 10 deg. of E. lon. and was antiently named Nidroſia, from the river on which it ſtands. It was formerly an archbiſhop's ſee, and the ſeat of the Kings of Norway; but is at preſent a very mean town: there is, however, a caſtle ſtill remaining, where the governor reſides. 2. Opdale, ſituated at the bottom of a very narrow bay, about 10 leagues weſt of the ocean, and 100 miles ſouth of Drontheim. 3. Romſdale, ſituated on another bay about 30 miles to the ſouthward of Opdale. 4. Solendale, ſtanding on another bay of the ocean, 30 miles ſouth-weſt of Romſdale.

3. The government of Aggerhuys, is bounded by Drontheim, on the north; by Sweden, towards the eaſt; by the Baltic, towards the ſouth; and by the province of Bergen towards the weſt, extending about 200 miles in length from north to ſouth, and 50 in breadth from eaſt to weſt; the chief towns whereof are, 1. Obſto, or Anſlo, at preſent generally called Chriſtiana, ſituated at the bottom of a bay of the Baltic ſea. Here are held the chief courts of juſtice for the kingdom of Norway. 2. Aggerhuys, from whence the province takes its name, ſituated on the oppoſite ſide of the bay on which Chriſtiana ſtands, and but a few leagues to the weſtward of it, eſteemed a ſtrong fortreſs, having held out a long ſiege againſt the Swedes, in the year 1567. 3. Frederickſtat, ſituated at the mouth of the river Glammon, which falls into another bay of the Baltic ſea, about 60 miles ſouth-eaſt of Chriſtiana. 4. Frederickſhall, a ſtrong fortreſs on the borders of Sweden, a little to the eaſtward of Frederickſtat; in the ſiege whereof the late King of Sweden, Charles XII. the greateſt hero of the age, was killed in the year 1718. 5. Saltzburg, ſituated on the river Drammen, about 20 miles north-weſt of Chriſtiana, which the neighbouring copper and iron mines render a town of pretty good trade. 6. Tonſburg, ſituated on the bay of Obſto, to the weſtward of Chriſtiana. 7. Hollen, ſituated on the bay of the lake Nordſee, 15 miles north-weſt of Tonſburg. And, 8. Hammer, 80 miles to the northward of Chriſtiana.

4. The province, or government of Bergen, containing the ſouth-weſt part of Norway, is bounded by Drontheim, on the north, by Aggerhuys on the eaſt, by the entrance of the Baltic on the ſouth, and by the ocean on the weſt; extending from the Naze point in the ſouth, to the latitude of 63 north; the chief towns whereof are, 1. Bergen, an antient ſea-port on the German ocean with a commodious harbour, to the northward of Naze point, and almoſt ſurrounded with mountains, though eſteemed one of the largeſt, as well as the moſt populous and trading towns in Norway, and is the reſidence of the viceroy. 2. Eyde, 15 miles to the eaſtward of Bergen. 3. Staffenger, ſituated in a peninſula, on a bay of the ocean, 90 miles to the ſouthward of Bergen; a ſmall city, with an indifferent harbour, defended by a caſtle.

The kingdom of Denmark, in the year 1660, was ſuddenly changed from its ancient ariſtocracy to an abſolute monarchy, under the reign of Frederick III. when the commons were extremely diſcontented with the taxes and other oppreſſions of the nobility and gentry, which they had ſuffered during a long war with Sweden, and concluded that their condition could not be worſe under the government of a ſingle perſon, than under ſuch a variety of tyrants: ſince which time, Denmark ſeems leſs conſiderable than their neighbour crown, from a fainter ſpirit which appears of late in their people, and in their government itſelf, as well as a great inequality of number in their forces, both at ſea and land: for this laſt change of their government, from elective to hereditary, has made it ſeem hitherto of leſs force, and unfitter for action abroad. The change in Denmark was the ſafer, by having to deal with a ſoft, eaſy people, and with nobles grown to have ſmall power or intereſt among them, and of whom many were gained by the crown; beſides that, nothing ſeemed to concern property in the change of ſucceſſive for elective; the example of all Chriſtian powers, except that of Poland, made way for it; and yet it is certain that Denmark has continued ever ſince weak and unſpirited, bent only upon ſafety, and enjoying the revenues of the Sound, which are the chief belonging to that crown: ſo as their great intereſt is their defence againſt Sweden; and, for the reſt, a general peace, by which traffic increaſing they may come in for a ſhare, and ſee their cuſtoms grow in the Sound and Norway.

In our age, ſays Puffendorff, the Danes have loſt much of their antient glory; becauſe the preſent nobility and gentry, which are all one there, are rather for enjoying their revenues in eaſe and luxury, than for undergoing the fatigues of war, and the commonalty have followed their example. The Norwegians, ſays the ſame author, undergo all kinds of hardſhips with more courage and vigour, to which they are inured by the climate they live in: but the Danes, ever ſince they have been maſters of Norway, have endeavoured to depreſs and keep that people under, by taking from them all opportunities of exerting their vigour; aud there are now very few of the antient nobility left in Norway.

The nature of the ſoil in dominions ſo far extended and disjoined by ſeas, as thoſe of Denmark are, muſt be various. The iſland of Zealand, wherein the capital city of Copenhagen ſtands, produces no bread-corn, but rye, of which moſt of their bread is made: of this they have enough for the ſubſiſtence of the inhabitants, but none to export. There is not much meadow or paſture ground in the iſland; but what they have is a ſhort, ſweet food. One fourth of the country is foreſt, and reſerved for the King's game, ſuch as ſtags, wild boars, and the like; which no ſubject can meddle with, tho' he finds whole herds of them devouring his corn; and the farmers are generally great ſufferers by them. In a wet ſeaſon, they have the greateſt plenty of graſs in Zealand. Their cattle are ſmall and lean in the winter, kept within doors 7 or 8 months in the year, and fed with grains, roots, weeds, or ſuch other ſtuff as their owners can provide; but, in ſummer, when there is graſs to be had, their beef is pretty good. Near Copenhagen the ſea is not well ſtored with fiſh, which is ſuppoſed to proceed from the water not being ſo ſalt as that in other ſeas.

The iſland of Funen produces corn and wood ſufficient for the natives, with cattle for their uſe; but affords nothing for exportation, except ſome few horſes. Laland is a plentiful iſland, and produces all ſorts of corn in abundance, particularly wheat, with which it ſupplies Copenhagen, and all other parts of Denmark, in ſmall quantities; for wheat is a very great rarity among them: The iſlands of Falſter, Langland, and Mona. are reckoned

ed very fruitful. Arroe and Alſen produce aniſe-ſeeds, which they mix with their bread, and uſe in the ſeaſoning their meat.

Jutland hath corn enough for the natives, and abounds in cattle. The horſes and hogs of this country are reckoned very good; and black cattle are exported lean from hence to Holland, where they grow fat in a ſhort time, of which the Dutch make a conſiderable profit.

The country of Sleſwick hath a ſufficient quantity of corn, horſes, and cattle, with which they furniſh their neighbours.

Holſtein is a pleaſant fruitful country, reſembling England in its variety of hills, woods, rivers, meadows, and corn fields.

Stormar and Ditmarch lye low, near the Elbe, being a rich ſoil, compared to Holland, for its fertility, and the improvement of its lands, which are ſometimes overflowed by the neighbouring ocean. Oldenburgh alſo is a flat country, much expoſed to inundations, but abounds in cattle, and hath a breed of horſes, much eſteemed for their being of a cream colour, though they have generally tender feet, and laſt but a little while. Delmonhurſt is a more hilly country than Oldenburgh, and pretty well wooded.

Norway is a very barren country, having neither corn nor cattle ſufficient for the ſuſtenance of the inhabitants; becauſe a ridge of mountains runs along it from S. to N. dividing it from Sweden; beſides which, the country is full of hills and rocks, producing ſcarce any food for man or beaſt; and being almoſt continually covered with ſnow. As to Lapland, the moſt northerly part of it differs not from the Swediſh and Muſcovite Lapland.

The principal commodities exported from Norway are beautiful maſts, and the beſt timber in the North for the building of ſhips, deal boards, copper in great quantities, iron, ſtock-fiſh, round-fiſh, ſkins, furrs, tallow, butter, and aſhes.

Commodities imported there are ſpices, wines, ſalt, brandy, vinegar, cheeſe, tobacco, woollen and linen cloths, ſilks, and a great ſtore of old rix-dollars.

The Dutch have engroſſed almoſt all the Norway trade; and there are ſcarce any of its mercantile towns they do not annually reſort with a great number of ſhips.

In time of peace ſuch of their ſhips deſtined for this part of the North, depart when they pleaſe, either alone, or with a convoy: but, in war time, they proceed with a fleet of 150 or 200 ſhips; and always convoyed by ſome ſhips of war allowed them by the admiralty.

The Dutch maſters, and captains of ſhips, ſent to Norway, have uſually the whole management of all the trade carried on there, buying and ſelling ſuch commodities as they think proper for the profit of their employer; being permitted even to take in their cargoes in the ports which are not of their deſtination, if the cargo is not ſo good in thoſe where they firſt arrived.

There is a ſilver mine in Norway, at two leagues diſtance from the copper mines, but of no ſervice to trade, as belonging to the King: hence it may be conjectured, that ſilver, as it is in reality, is very ſcarce in Norway; and therefore, that coined ſilver is the beſt commodity which can be brought there; for tho' one commodity may be bartered againſt another, at a very reaſonable rate, yet a better bargain is generally had in ſpecie, which are moſt commonly rix-dollars and ducats.

The commodities of Denmark are ſmall maſts, deal-boards, pitch and tar, horſes, black cattle, butter, tallow, ox hides, goat-ſkins, hemp, ſtock-fiſh, and corn; but the exportation of carpenters timber from Zealand is prohibited.

The goods that ſell beſt in Denmark are ſalts, wines, brandy, paper, gold and ſilver ſtuffs, ſilks, woollen cloths, ſpices, medicinal drugs, tobacco, and pepper: but a conſiderable part of the Daniſh trade is in the exchange of rix-dollars brought there in ſpecie.

The Dane hath generally been reckoned to abound more in ſhipping than the Swede; the reaſon whereof may be, that Norway furniſhes Denmark with a conſiderable number of hardy ſeamen, who are uſed to fiſhing in thoſe boiſterous ſeas; and the Dutch alſo maintain great numbers of the Norwegians in their fleets, where they live better than on their own barren coaſts; which makes this people apply themſelves more to the ſea-ſervice than any other ſubjects of Denmark; and there is always a conſiderable number of them ready to man the royal navy, which leads on an enquiry into the ſtrength and forces of the Danes by ſea and land.

At preſent, the northern and German princes eſtimate their wealth, not by the fertility or extent of their territories, by the trade or induſtry of their people, but by the numbers of horſe and foot in their ſervice; for the ſubſiſtance of which, after they have eaten up their own ſubjects, they make uſe of many cruel and unjuſt pretences to ruin and encroach upon their neighbours; and, when they cannot accompliſh ſuch deſtructive projects, foment quarrels among other princes, that they may have an opportunity of letting out their troops to cut throats for hire, which they are not able otherwiſe to maintain; whereby they have found out the art of receiving pay, without intereſting themſelves in the quarrel, which hath been the conſtant practice of the Danes, and ſome neighbouring princes, for many years. Theſe practices, however, have been very pernicious to Denmark; nor hath the Dane ſucceeded in any of his attempts, either againſt the city of Hamburg, the Duke of Holſtein, or the Swedes; but in the laſt war indeed, taking advantage of the diſtreſs the Swedes were reduced to by a potent confederacy, the Dane made himſelf maſter of Bremen and Verden, which he afterwards conveyed to the Elector of Hanover.

It is computed that Denmark, Holſtein, and Oldenburgh, maintain 5450 horſe, 1500 dragoons, and 17000 foot. Norway maintains 1256 horſe and dragoons, and 14,300 foot, making in all a body of near 40,000 men.

For the ſea ſervice, 3000 mariners are conſtantly maintained at Copenhagen, as well in peace as war; having a weekly allowance of ſalt fleſh, ſtock-fiſh, meal, and grout for themſelves and their families, with about eight rix-dollars a-year in money; and there are ſeveral ſtreets of little houſes, or barracks, near the walls, where they live, and where there wives and children remain while they are at ſea. Their buſineſs, in time of peace, is to work in the King's yards and docks, which are over againſt the palace in Copenhagen, where they take it by turns to ſerve in all laborious employments relating to the ſhipping; and once a year, it is uſual to equip a ſmall ſquadron of men of war, and ſail out of the harbour with them two or three months, for exerciſing the ſailors. All the officers of the fleet are in conſtant pay, as well in peace as war; and the Danes compute that they can rig out thirty ſail of men of war and upwards, at a very ſhort warning.

The King's revenue ariſes, 1. From the duties paid by his own ſubjects. 2. By the cuſtoms paid by foreigners. 3. By the crown lands, fines, and confiſcations.

The taxes paid by his ſubjects are either fixed or variable; that is, the prince in ſome caſes chuſes to follow a certain rule, eſtabliſhed by himſelf, which he may, however, alter if he ſees fit; and in others he frequently varies. Of the firſt ſort are the duties of import and export, and the exciſe, commonly called the conſumption, laid upon every thing that is either eat or drank in the kingdom. There are alſo duties paid for marriage licences, duties of ſtamped paper, on which all bargains, contracts, grants, and proceedings at law are written: ſome of theſe duties amounting to ſeveral rixdollars *per* ſheet. Duties are alſo laid upon brewing, and all malt and corn that is grinded in mills. Theſe duties are certain, or ſeldom altered. The uncertain duties are, 1. The taxes on land, which are not aſſeſſed by the acre, but according to the annual value of the farm. 2. Poll-money, impoſed upon every one according to the perſonal eſtate he is ſuppoſed to have; which is ſometimes levied twice a year. 3. Money levied for erecting or repairing the fortifications. 4. An occaſional tax raiſed only when a daughter of Denmark is to be married, whoſe portion is uſually 100,000 crowns. 5. A tax laid upon every tradeſman, for the liberty of exerciſing his calling, and the gain he is ſuppoſed to make by it; who is obliged alſo to quarter ſoldiers. 6. The ground

rents in all cities and towns, with the King's taxes according to the value of the houſe, or the ability of the poſſeſſor. In Holſtein, the lands are taxed according to the number of the ploughs, each plough paying a certain ſum every month. Not many years ſince, a valuation was made of all the houſes in the cities and towns of the King's dominions, and all the lands in the country were admeaſured, that the crown might better underſtand their value; and the ground-tax in the cities and towns were aſſeſſed at 4 *per cent.* of the whole value the ground was rated at, if it was to be purchaſed. For example, a vintner, the ground of whoſe houſe was valued at 900 dollars, was obliged to pay 36 yearly for the ground tax; and the like proportion was obſerved toward others, in regard to their houſes and poſſeſſions. The moſt moderate aſſeſſment of their poll-tax is according to the following proportion: a citizen, worth 8, or 10,000 rixdollars, pays 4 rixdollars for himſelf, 4 for his wife, 2 for every child, and one for each ſervant, and for every horſe one rixdollar. An alehouſe-keeper pays one rixdollar for himſelf, another for his wife, 24 ſtivers for every child, and 16 for every ſervant. The fortification tax is uſually laid ſo high, that a merchant worth 6 or 8000 rixdollars, hath ſometimes paid 68 dollars; an ordinary citizen 8 or 10, and others in proportion.

In Norway, the revenue ariſes from the tenths, or tythes of timber, tar, fiſh, and oil, with the cuſtoms ariſing thereby; and there is ſomething ariſes from their mines. The exciſe, and other taxes laid on the inhabitants, are the ſame as in Denmark. The laſt, and moſt inconſiderable branch of the revenue, ariſes from the crown-lands and confiſcations; for notwithſtanding the King's demeſnes are daily increaſed by confiſcated eſtates, he is ſometimes the poorer for them; becauſe he no ſooner becomes poſſeſſed of them, but the labour ceaſing which was formerly applied to cultivate and improve them, the lands are frequently converted to foreſt, and ſerve for little but his Majeſty's diverſion; and if they happen to yield any thing, they are uſually conferred on ſome courtiers, who have the government of the King's houſes, or care of his demeſnes, boors, and tenants. Upon the whole, the revenues of the crown of Denmark are computed as follows: the toll of the Sound at 65,000 rixdollars; the conſumption, or exciſe, of Copenhagen, farmed at 140,000 rix-dollars; the ſmaller taxes of Denmark at 100,000 rixdollars; poll-tax, fortification-tax, ground rents, and land-tax, at 100,000 rixdollars. The whole revenue of Norway at 700,000 rix-dollars; the crown lands, and confiſcations, at 200,000 rixdollars; the revenue of Iceland, farmed at 27,000 rixdollars; Oldenburgh and Delmonhurſt 8000; and the toll upon the Weſer 5000 rixdollars: ſo that the whole revenue of Denmark amounts to 2,622 000 rix-dollars, or 589,950 l. ſterling *per annum.* But the poll-tax and fortification-tax are never raiſed the ſame year, upon which account, if 400,000 rix-dollars are deducted out of the ſum total, the whole revenue will then amount to 2,222,000 rix-dollars; or about 500,000 l. ſterling, which, in that part of the world, will go near as far as three times that ſum in England, conſidering the cheapneſs of proviſion and labour, in Denmark and Norway.

It is computed alſo, that there is not the hundredth part of ready caſh in Denmark, as there is in England. Very few have any caſh by them; for trading people, through whoſe hands it runs, being men of ſmall ſubſtance, and deeply in debt to their creditors in Holland and Hamburgh, they no ſooner receive any caſh but they pay it away again. The nation is alſo perpetually drained of its ſpecie by the officers of the army, who are generally foreigners, and if they lay up any thing, place it out in the banks of other countries; as many of their miniſters of ſtate do whatever they can ſcrape together. The over-balance of trade alſo carries off a great deal; for they conſume more foreign commodities than their product can countervail; all which would incline a man to believe, that they have but little running caſh, and great part of this is copper money, as it is in Sweden, where, if a perſon has an ordinary ſum to receive, he takes a wheel-barrow or two along with him to bring it home; and merchants who trade to Sweden and other northern countries have conſtantly a certain ſum ſet down in their accompts for wheel-barrows, which are uſed in tranſporting their caſh from place to place.

Denmark, at this day, ſeems to be much the weakeſt of the three northern powers. Ruſſia, which 30 years ago looked upon with contempt, by the conſtant war it hath maintained with the Swedes, hath ſo improved in military diſcipline, as to become a terror to all its northern neighbours; and that large extent of country, with the ports they have made themſelves maſters of in the Baltic, have let them into a conſiderable ſhare of trade with moſt of the nations in Europe; yet, notwithſtanding Denmark is in itſelf become a very inconſiderable kingdom, as there are ſo many powers whoſe intereſts are bound up with that of Denmark, who can never, with any good policy, ſee the Holſtein, and conſequently the Ruſſian arms, make any progreſs in Germany, the Dane ſeems to be as well ſupported as he can wiſh at preſent; eſpecially ſince he hath nothing to fear from Sweden, which is exceeding poor, having loſt great part of its beſt territories in the late war with Ruſſia, and in continual danger of being itſelf attacked by the ſame power. For, however, theſe powers may be ſeemingly reconciled, by the mediation of other princes for the preſent, they will probably one day ſet all Europe in a flame: the trade of the Baltick will again be interrupted, and want a fleet of men of war to protect it, which may be an expence equivalent to what Great Britain can propoſe to get by that commerce: how happy, therefore, would it be for Great Britain if naval ſtores might be had from its own plantations in America; and the kingdom had no reaſon to concern itſelf in the quarrels of the northern crowns? Honour may be procured by fitting out royal fleets, and viſiting annually every diſtant coaſt; but that the wealth or trade of the nation will be encreaſed by ſuch expeditions is not equally certain.

In caſes of ſhipwreck, the Daniſh ſubjects are required to give all imaginable aſſiſtance to thoſe in diſtreſs, and to preſerve the goods for the owner's uſe. The ſhips which guard the coaſts are directed to ſave what effects they can; for which they have a very moderate reward, and the owners are permitted to ſell them in the country, or embark them on other veſſels. If a ſhip, or goods, be driven on the coaſt, and no body appears to claim them, the King's officers, or the lord of the manor, as the caſe is, takes care to preſerve them; or, if they are periſhable goods, to ſell them to the beſt advantage, and to reſtore them to the owner; but, if they are not reclaimed within a year and a day, they become the property of the King, or the lord of the place. If the maſter of a ſhip finds goods floating on the ſea, he is to take care of the ſame, and deliver them to the next magiſtrate, who muſt keep them a year and a day, to ſee if any one can claim them; and if no body owns them, they belong to the King: but if any one conceals or embezzles ſuch wrecked goods, he is to be puniſhed as a felon; and the law is much the ſame where a perſon finds goods, or cattle, upon the road; for he is obliged to publiſh it in the court of the diſtrict, and can have no property in the goods till a year and a day be paſſed, where no body comes in to reclaim them. If any perſon is known to ſend his effects or money out of the kingdom, to be lodged in foreign banks, the King claims a fourth part of the whole, and the perſon is alſo obliged to pay a tenth to the magiſtrates of the town, or the lords of the ſoil, where he reſides: even foreign merchants have been obliged to ſubmit to theſe exactions on their returning home, notwithſtanding their reſpective ſovereigns have inſiſted upon an exemption; and when they have by importunity, or threats, been induced to make ſatisfaction in ſome particular caſes, they have nevertheleſs ſoon after proceeded to extort the like ſum from others.

There are a great number of iſlands on the coaſt of Norway, and others belonging to that kingdom at a diſtance from it; the moſt remarkable of which is *Iceland*, ſituated between 10 and 20 deg. of W. lon. and 63 and 67 deg. of N. lat. about 500 miles W. of the coaſt of Norway, and almoſt as many N. of Scotland, being about

300 miles long, and 150 broad. The native inhabitants are pagans; but the Danes have ſeveral colonies on the coaſt, where they trade with the natives for their wool, hides, tallow, butter, whale-oil, and bone, dried fiſh, ſea-horſe teeth, which are eſteemed equal to ivory, and the ſkins of ſeveral beaſts, as foxes, bears, and ſuch like. Whales, and other fiſh, are very plentiful on the coaſt, which gives an invitation to the Dutch to come and fiſh there; though the Danes claim the ſole dominion of theſe ſeas. The chief towns of the iſland are Skalholt, Hola, Beredit, and Hammer: but the Daniſh Viceroy reſides at the caſtle of Beſted, which ſtands at the S. W. part of the iſland.

The commodities imported to Iceland by the Danes, which they give in exchange to the natives, are tobacco, corn, beer, wine, brandy, iron, woollen cloth, and linen.

Before the Danes had eſtabliſhed a company for this commerce, the Hamburgers, and ſome other German merchants, imported great quantities of Noremberg toys, and hard-ware, which the Icelanders ſeemed very fond of; and during the whole time of the ſale continual troops of both ſexes might be ſeen, even before they left the ſhore, drinking the different liquors, either beer, brandy, or wine, which they took in exchange for their commodities, and of which the Germans made the beſt part of their cargo.

The *Faro*, or Ferro iſlands, lying between Iceland and Scotland, in 7 deg. of W. lon. and 64 of N. lat. are ſubject to Denmark, being ſituated 200 miles N. W. of the Orcades, and as many S. W. of Iceland: but are no ways conſiderable.

DANISH *Greenland*. Eaſt Greenland is ſituated between 10 and 30 deg. of E. lon. and 76 and 80 deg. of N. lat. claimed by Denmark, but uninhabited.

Weſt Greenland is ſituated between the meridian of London, and 50 deg. of W. lon. and between 60 and 75 deg. of N. lat. being 4 or 5 days ſail to the northward and weſtward of Iceland; inhabited by a ſavage people, among whom the Danes have lately ſent miſſionaries to convert them to Chriſtianity.

Both theſe countries, though productive on land of nothing beneficial to trade, are held in the greateſt eſtimation for the plenitude of whales reſorting thoſe frozen ſeas; and may poſſibly be upon the ſame continent: but as the extent from Cape Farewel, the S. W. part of it, in the latitude of 60 deg. 30 min. to the N. E part in the latitude of 80 and higher, is a prodigious tract of land, if contiguous, they may very well be looked upon as diſtinct countries.

The maps, and moſt of the geographers, called the weſtern ſide Groenland, and the Eaſt ſide Greenland; but it is certain the Weſt, which was firſt diſcovered, went by the name of Greenland long before the other was known; and, probably, the latter was ſo denominated, as imagining it to be the continent with Weſt Greenland: but the Dutch called the E. part of it Spitſbergen, from the craggy rocks and mountains appearing on the coaſt.

The King of Denmark looked upon this N. E. country, on the firſt diſcovery, to be part of old Greenland; of which he pretends to the ſovereignty, and accordingly claimed the dominion of thoſe ſeas, endeavouring to exclude the Engliſh from the whale-fiſhery there. See *Greenland*.

Knives, ſcizars, needles, looking-glaſſes, and ſome inſtruments of iron or ſteel, are what the inhabitants of Greenland eſteem moſt; and for which they readily give, in exchange, blubber, train-oil, ſea dogs and calves ſkins, and the teeth of a fiſh called *towak*, in higher repute than ivory for whiteneſs.

When the inhabitants trade with Europeans, who frequently viſit them upon account of the whale-fiſhery, they make a lump of the commodities they have to barter, and another of thoſe brought them; and by augmenting or diminiſhing either lump, 'till both parties ſeem content, they thus, by mutual ſigns and tokens, put an end to their exchange and bargain: the fiſhermen who cut up their fiſh, and melt their blubber on land, being the occaſion of keeping up this kind of little traffic. See Whale-*Fiſhery*, and *North*-weſt paſſage.

DANISH *America*, conſiſts of the iſland of St. Thomas, ſituated in the North ſea, 15 leagues from Porto-rico, which is the only colony the Danes have in the Weſt Indies.

The productions of this iſland are inſignificant; and altho' ſome ſugar and indigo are manufactured there, yet the inhabitants could not well ſubſiſt without carrying on a good trade with the Spaniards, conſiſting chiefly in negroes, which the Danes tranſport there from their eſtabliſhments on the coaſts of Africa; the Spaniards coming from Porto-rico to receive them, giving in exchange the richeſt goods of their iſland, which is what principally induces the Danes to hold it; for otherwiſe it would be more burdenſome than advantageous.

DANISH *companies of trade*. See *Eaſt* India Company, and *North* company. For Daniſh coins, money, weights, and meaſures. See *Coin*, *Money*, *Weight*, and *Meaſure*.

DENTALIS *Lapis*, *Dentalium*, or the dog-like tooth, is a kind of ſhell, which the apothecaries pulveriſe, and uſe in ſeveral medicaments, as an excellent alkali. The genuine dentalis, deſcribed by M. Tournefort, is of a tubular or conical form, about three inches long, of a ſhining, greeniſh-white colour, hollow, light, and divided lengthways by parallel lines, running from top to bottom; being about the thickneſs of a feather, and bearing ſome reſemblance to a dog's-tooth. It is very ſcarce; and therefore, in lieu of it, they uſually ſubſtitute a ſhell of ſeveral colours, found among the ſand when the ſea is withdrawn; but not channelled or fluted like the dentalis. Doctor Liſter, in the philoſophical tranſactions, makes mention of two ſpecies of dentalia; the firſt commonly enough found about the iſland of Guernſey, being a long, ſlender, round pipe, a little bending and tapering, and hollow at both ends: the other, properly called *entalium*, longer and thicker than the former; and beſides, ſtreaked with ridges, which occaſions the Italian term *intaglia*.

DENTRIFICE. A medicine, or powder, proper to ſcour, cleanſe, and beautify the teeth.

DENUNCIATION, in a maritime ſenſe, ſignifies a ſolemn promulgation of any thing; particularly a proclamation of war, after which all veſſels taken from the enemy are lawful prize.

DEPART. A method of refining, or ſeparating gold from ſilver, by means of aqua fortis, which is the moſt uſual way; though gold is alſo refined by antimony, and ſublimate. See *Gold*, and *Refining*.

DEPARTURE, in navigation, is the eaſting, or weſting, of a ſhip, with reſpect to the meridian it departed, or ſailed from: or, it is the difference of longitude, either eaſt or weſt, between the preſent meridian the ſhip is under, and that where the laſt reckoning or obſervation was made. This departure any where, but under the equator, muſt be accounted according to the number of miles in a degree proper to the parallel the ſhip is under.

DEPHLEGMATE, to purge, or clarify, any diſtilled liquor from phlegm, or water.

DEPILATORY, in phyſic, are ſuch medicines as cauſe the hair to fall of.

DEPOSIT. A thing committed to the charge of a perſon for the uſe of another, as a ſecurity for the performance of ſome contract: thus, when ſales of goods are made by auction, the purchaſer pays in, or depoſites, ſo much *per cent.* for what he buys.

DEPRECIATE, in trade, is to undervalue, or beat down the price of a commodity.

DEPREDATION, is a robbing, ſpoiling, or plundering of ſhips at ſea; particularly applied to the Barbary corſairs, and the Spaniſh guarda coſtas in America.

DEPRESSION *of the viſible horizon*, denotes its ſinking or dipping below the true horizontal plane, whether cauſed by ſome variation in the atmoſphere, or by the different height of the obſerver's eye above the ſurface of the ſea. The eye being one foot above the ſurface of the ſea, the viſible horizon, or edge of the ſea, will be thereby depreſſed one minute; at the height of 3 feet the dip will be 2 minutes; at 7 feet 3 minutes; at 12 feet 4 minutes; at 18 feet 5 minutes; and at 27 feet 6 minutes.

DEPRESSION *of the pole*. So many degrees as mariners ſail, or travel, from the pole to the equator; ſo many they are

ſaid to depreſs the pole; becauſe it becomes, reſpectively, ſo much lower, or nearer to the horizon.

DEPTFORD. A town in Kent, ſituated on the river Thames, 3 miles E. of London, conſiderable on account of its fine docks for building of ſhips, and the King's yard there.

DEPUTATION, the authoriſing or empowering one or more perſons to do certain acts for, and in behalf of another, as his deputy or deputies.

DEPUTATION, is alſo the inſtrument, writing, commiſſion, or warrant, which is given to the cuſtom-houſe or exciſe officers, by virtue of which they make ſeizures, and act in their ſeveral places.

DERHEM. A ſmall Perſian weight, being about the 50th part of a pound avoirdupoiſe, and eſteemed by the Perſians as their drachm.

DERIBANDS. White cotton cloths brought from the Eaſt Indies, which are either narrow or broad; but more of the firſt than ſecond ſort: the length of it being 9 ells, and breadth $\frac{5}{8}$.

DERLINQUI. A ſilver coin ſtruck at Venice, and impreſſed on one ſide with a Chriſt upholding by his hand a globe, and on the reverſe a St. Mark, worth about 7 $\frac{1}{2}$ d. ſterling.

DERWENT. A river which riſes in the N. riding of Yorkſhire, and running S. falls into the Ouſe.

DERWENTWATER. A river which runs thro' Cumberland, from the S. E. to the N. W. and, forming ſeveral lakes in its paſſage, falls into the Iriſh ſea, below Cockermouth.

DESEADA, or *Deſiderada*, one of the Caribbee iſlands in the Atlantic ocean in America, ſituated in 61 deg. of W. lon. and 16 deg. 30 min. of N. lat. to the E. of Guadalupe, and ſubject to France.

DESEADA *Cape*, or *Cape Deſire*, the moſt weſterly cape of the ſtreights of Magellan, in America, at the entrance of the South Sea; ſituated in 84 deg. of W. lon. and 53 deg. 30 min. of S. lat.

DESERT. A large uninhabited country; alſo ſuch fruits and ſweet-meats as are ſerved up at the concluſion of a feaſt.

DESERT, among ſeamen, is to run away from their ſhip, whereby they loſe all their wages.

DESIGN, in the manufactories, expreſſes the figures wherewith the workman enriches his ſtuff, or ſilk; and which he copies after ſome painter, or draughtſman. See *Tapeſtry*, and *Weaving*.

DESIGN, in navigation, is the drawing or planning of any particular country, coaſt, haven, or place.

DESK. A conveniency for merchants and traders to write on, or put papers in.

DETINUE. A writ which lies againſt a man, who having goods or chattels delivered to keep, refuſes to re-deliver them; whereby the action is brought to recover the thing detained, not the damages ſuſtained by the detinue.

DEVA. A port-town of Spain, in the province of Biſcay, ſituated on the bay of Biſcay, in 2 deg. 10 min. of W. lon. and 43 deg. of N. lat. See *Spain*.

DEVASTAVERUNT, or *Deviaſtavit*, *bona teſtatoris*, a writ lying againſt executors, and adminiſtrators, for paying legacies and debts on ſimple contract, before debts on bonds and ſpecialties; in which caſe, the executors are as liable to actions as if they had notoriouſly waſted the goods of the teſtator, or converted them to their own uſe, and are compellable to pay ſuch debts by ſpecialty out of their own effects.

DEY. The title of the ſovereign prince of the ſtate of Algiers; and the governors of the ſeveral provinces under him are called beys. See *Bey*, and *Barbary*.

DIACODIUM, is a term given to the juice expreſſed from the heads of white and black poppies.

DIAGLYPHICE. The art of engraving, cutting, or otherwiſe working hollow, or concave figures, in metals, ſuch as ſeals, intaglia's, and the matrices or coins for medals.

DIAGRYDIUM, in pharmacy, is ſcammony, prepared or corrected for medicinal uſe. See *Scammony*.

DIAMOND, in natural hiſtory, by the ancients called *Adamant*, is a precious ſtone, the firſt in rank, value, hardneſs, and luſtre, of all gems: the goodneſs of diamonds conſiſting in their water, or colour, luſtre, and weight; the moſt perfect colour being the white: and their defects are veins, flaws, ſpecks of red or black ſand, and a bluiſh or yellowiſh caſt. In Europe the lapidaries examine the goodneſs of their rough diamonds, their water, and points, by day-light. In the Eaſt Indies they do it by night; in order to which, a hole is made in a wall a foot ſquare, and therein a lamp placed, with a thick wick, by the light whereof they judge of the ſtone, holding it in their fingers.

The water called *cæleſtis* is the worſt of all, and yet is ſomewhat difficult to diſcover in a rough diamond: but the only infallible way is to examine it in the ſhade of ſome tufted tree. As to the diſtinguiſhing of diamonds from other ſtones, Dr. Wall, in the philoſophical tranſactions, ſeems to have found an infallible method: a diamond, with an eaſy ſlight friction, in the dark, with any ſoft animal ſubſtance, as the finger, woollen, ſilk, or the like, appears luminous in its whole body: nay, if kept rubbing, and then expoſed to the eye, it will remain ſo for ſome time. If the ſun be 18 deg. below the horizon, holding up a piece of bays, or flannel ſtretched tight between both hands, at ſome diſtance from the eye, and another rubbing the other ſide of the bays, or flannel, pretty briſkly with a diamond, the light is much more vivid and pleaſant than any other way. But what Dr. Wall judges moſt ſurpriſing is, that a diamond being expoſed to the open air, in view of the ſky, gives almoſt the ſame light of itſelf without rubbing, as if rubbed in a dark room: but if, in the open air, the hand, or any thing is put over it, to prevent its immediate communication with the ſky, it gives no light, which is a diſtinguiſhing criterion of a diamond.

Rough DIAMOND, is that not yet cut, but juſt as it comes out of the mine.

Brilliant DIAMOND, is that cut in faces both a-top and bottom; and whoſe table, or principal face a-top, is flat.

Roſe DIAMOND, is that quite flat underneath, but its upper part cut in ſeveral little faces, uſually triangles, the uppermoſt whereof terminate in a point.

Table DIAMOND, is that which has a large ſquare face a-top, encompaſſed with four leſſer.

Diamonds are only found in the Eaſt and Weſt Indies; in the former in the kingdoms of Golconda, Viſapour, Bengal, and the iſland of Borneo; in the latter, in Brazil. In the Eaſt Indies there are four mines, or rather two mines, and two rivers whence diamonds are drawn. The mines are, 1ſt, that of Raolconda, in the province of Carnatica, five days journey from Golconda, and eight from Viſapour, which has been diſcovered about 200 years. 2d, That of Gani, or Coulour, ſeven days journey from Golconda, eaſtwardly, which was diſcovered 120 years ago by a peaſant, who, digging in the ground, found a natural fragment of 25 caracts. 3d, That of Soumelpour, a large town in the kingdom of Bengal, near the diamond-mine; which is the moſt ancient of them all, and ſhould rather be called that of Goual, being the name of the river, in the ſand whereof theſe ſtones are found. Laſtly, the fourth mine, or rather the river, is that of Succudan, in the iſland of Borneo.

DIAMOND *mine of Raolconda*. In the neighbourhood of this mine the earth is ſandy and full of rocks, and copſe. In theſe rocks are found ſeveral little veins, of half, and ſometimes a whole inch broad, out of which the miners, with a kind of hooked irons, draw the ſand, or earth, wherein the diamonds are, breaking the rocks when the vein terminates, that the track may be found again, and continued. When a ſufficient quantity of earth, or ſand, is drawn forth, they waſh it two or three times, to ſeparate the ſtones therefrom: the miners working quite naked, except for a thin woollen cloth before them; and, beſides this precaution, have likewiſe inſpectors to prevent the concealing of ſtones; which, notwithſtanding all the care, they frequently find means to do, by watching opportunities when they are not obſerved, and ſwallowing them down.

DIAMOND *mine of Gani, or Coulour*. In this mine are found a great number of ſtones from 10 to 40 caracts, and even

more. It was here that famous diamond of Aureng-Zeb, the great Mogul, was found, which, before it was cut, weighed 793 carats. The ſtones of this mine are not very clear, their water is uſually tinged with the quality of the ſoil, being black where that is marſhy, red where it partakes of red, ſometimes green and yellow, where the ground happens to be of thoſe colours. Another defect of ſome conſequence is a kind of greaſineſs appearing on the diamond when cut, which takes off part of its luſtre. There are uſually no leſs than 60000 perſons, men, women, and children, at work in this mine; who, on finding a place where they intend to dig, level another ſomewhat bigger in the neighbourhood thereof, and incloſe it with walls about two feet high, only leaving apertures, from ſpace to ſpace, to give paſſage to the water. After a few ſuperſtitious ceremonies, and a kind of feaſt, which the maſter of the mine makes for the workmen, to encourage them, every one goes to his buſineſs; the men digging the earth in the place firſt diſcovered, and the women and children carrying it off to the other walled round. They dig 12 or 14 feet deep, and till ſuch time as they find water, when they ceaſe digging; and the water, thus found, ſerves to waſh the earth two or three times; after which it is let out at an aperture reſerved for that end. This earth being well waſhed and well dried, they ſift it in a kind of open ſieve, or riddle, much in the ſame manner as corn is ſifted in Europe, then threſh it, and ſift it a-freſh, and laſtly ſearch it well with the hands, to find the diamonds. They work naked here as in the mines of Raolconda, and are alſo watched by inſpectors.

DIAMOND *mine of Soumelpour*, or river *Goual*. Soumelpour is a large town built all of earth, and covered with branches of cocoa-trees: the river runs by the foot thereof, in its paſſing from the high mountains towards the ſouth to the Ganges, where it loſes its name; and the fine diamond points, or ſparks, called natural ſparks, are brought from the Goual. They never begin to ſeek for diamonds in this river till after the great rains are over, that is after the month of December; and they uſually even wait till the water is grown clear, which is not before January. When the ſeaſon approaches, eight or ten thouſand perſons, of all ages and ſexes, come out of Soumelpour, and the adjacent villages: the moſt experienced among them ſearch and examine the ſand of the river, going up it from Soumelpour to the very mountains whence it ſprings: and a great ſign there are diamonds in it, is, the finding thoſe ſtones which Europeans call thunder-ſtones. When all the ſand of the river, which at that time is very low, has been well examined, they proceed to take up that wherein they judge diamonds are moſt likely to be found; which is done after the following manner: they dam the place round with ſtones, earth, and faſcines; and, lading out the water, dig about two feet deep: the ſand thus got is carried into a place walled round on the bank of the river: the reſt is performed after the ſame manner as at Coulour, and the workmen are watched with equal ſtrictneſs.

DIAMOND *mine in the iſland of Borneo*, or river of *Succudan*. Europeans are but little acquainted with this mine, the prince who reigns in that part of the iſland not allowing ſtrangers to have any commerce in theſe ſtones; though there are fine ones to be bought at Batavia, brought thither by ſtealth, which were anciently imagined to be ſofter than thoſe of the other mines; but experience ſhews they are in no reſpect inferior to them.

Beſides theſe four diamond mines, there have been two others diſcovered; one of them between Coulour and Raolconda, and the other in the province of Carnatica; but they were both cloſed up almoſt as ſoon as diſcovered: that of Carnatica, by reaſon the water of the diamonds was always either black or yellow; and the other on account of their cracking, and flying in pieces, when cut and ground. See *India*.

The diamond mines of Brazil belong to the King of Portugal; it being about the year 1710 that ſome precious ſtones were brought to the city of Sebaſtian, the capital of the Brazils, taken out of a ſmall river lying weſtward of that city, which were judged to be fine pebbles at firſt; ſome of them being very large, but moſt of them of a black or yelloviſh caſt, which highly prejudiced their ſplendour, and depreciated their value: however, many of the yellow ſtones were brought to Liſbon and ſold for topazes.

The King of Portugal finding that the Brazilian planters had employed their ſlaves in getting larger quantities of theſe ſuppoſed pepples by digging for them, his Majeſty prohibited the working of the mines; though, notwithſtanding the prohibition, they were brought in conſiderable quantities to Europe: it being ſometimes reported they were found in other rivers, and not dug from any mine: at other times they received new names, and being ſent to St. Salvador, were from thence exported to Europe, under a notion of their coming by the Goa fleet from the Eaſt Indies; which involuntary fraud augmented their value; ſo that the crown of Portugal became convinced that they had been deceived in taking theſe ſtones for pebbles, and that ſome of theſe Brazil diamonds were ſcarce to to be diſtinguiſhed from thoſe of the Eaſt Indies: whereupon the court altered their meaſures, and it was permitted by the royal authority to ſend over rough diamonds in the Rio Janeiro fleet, under certain reſtrictions; which permiſſion rendering the value of their jewels ſtill more and more apparent, the King of Portugal reſolved to put this trade under a new regulation, which commenced in the year 1740, when his majeſty lett theſe mines to a company at Rio Janeiro, for the annual rent of 138,000 cruſades, or 18,687 l. 10 s. ſterling, upon condition that the company employed no more than 600 ſlaves at theſe mines.

The introduction of the Brazilian diamonds into Europe, has conſiderably diminiſhed the price of theſe ſtones; and they have been brought in ſuch great quantities, that his Portugueſe Majeſty has lately publiſhed a ſevere edict for the prevention of any frauds in this trade; of which the following are ſome of the articles.

Article 2. I eſtabliſh alſo a ſtanding law, that this prohibition, and the penalties hereby ordained, be put in force, without any difference, not only againſt the principal tranſgreſſors, ſuch as buyers, ſellers, bearers or remitters, but alſo againſt all, and whatever other perſons who may concur with them in it, whether by land or ſea, either by being brokers, contrivers or abettors of the perſons concerned in ſuch ſmuggling, or by ſuffering it to be put in their houſes, carriages, ſhipping or lading, &c.

Article 3. That this law may be the more effectually obſerved, it is my pleaſure to ordain, that the informations be taken in private, according to the ſtile practiſed in the office of the fiſcal for the abſent: and that if the informers be ſlaves, a competent part of the reward due to them for informing, ſhall be applied to the purchaſe of their freedom, and the remainder ſhall be given to themſelves, to employ as they ſhall think fit.

Article 4. With this proviſo always, that in all the abovementioned caſes, if the tranſgreſſors of the preſent law be foreigners, the puniſhment of baniſhment to my dominions of America, or Africa, ſhall not take place againſt them; but rather, inſtead of the ſaid penalty, they ſhall be puniſhed with impriſonment during my pleaſure, and with the confiſcation of all the effects they ſhall be found poſſeſſed of within my dominions, to be finally driven out of them, without ever being admitted into them again. And in caſe they be not poſſeſſed of effects equivalent to the value of what has been ſmuggled, and of double thereof, as above ordained, then they ſhall remain in priſon till the ſaid pecuniary penalty be effectually diſcharged, by the full payment of the perſons therein intereſted.

Article 5. The pecuniary condemnations which I have here eſtabliſhed, together with the effects of tranſgreſſors, ſhall paſs to their heirs and ſucceſſors, to be charged on the ſaid effects as a royal debt, provided the tranſgreſſor be detected, and the penalty be ſued for at any time within the ſpace of twenty years, computed from the time in which the ſame was committed.

But a worthy merchant, who honours me with his friendſhip, has publickly delivered it as his opinion to the world, in his excellent letters on the Portugal trade, "That this diamond law can never be carried into execution; as hardly

any made by the preſent King of Portugal have been, from, the abſurd, rigorous and impracticable exactions that are in them: although, he ſays, the law was manifeſtly calculated to make good a contract which has drawn ſevere reflections, on many accounts, from people of all nations; and the Portugueſe were particularly diguſted at it, as a thing greatly prejudicial to their kingdom." Yet this gentleman obſerves, that this rigorous edict is enacted by, and tranſacted under ſo mild and gracious a King, that he is ſaid never to have ſhewn anger in his life. See *Portugal.*

The diamond, as already obſerved, is the hardeſt of all precious ſtones; being only to be cut and ground by itſelf, and its own ſubſtance. To bring it to that perfection which augments its price ſo conſiderably, they begin by rubbing ſeveral againſt each other while rough; after having firſt glued them to the ends of two wooden blocks, thick enough to be held in the hand; which powder, thus rubbed off the ſtones, and received in a little box for the purpoſe, ſerves to grind and poliſh the ſtones.

Diamonds are cut and poliſhed by means of a mill, which turns a wheel of ſoft iron ſprinkled over with their own duſt, mixed with oil of olives. The ſame duſt, well ground, and diluted with water and vinegar, is uſed in the ſawing of diamonds; which is performed with an iron or braſs wire, as fine as a hair. Sometimes, inſtead of ſawing the diamonds, they cleave them, eſpecially if there are any large ſhivers therein; but the Europeans are not uſually daring, or expert enough, to run the riſque of cleaving, for fear of breaking.

A rough diamond muſt be choſen uniform, of a good ſhape, tranſparent, not quite white, and free of flaws and ſhivers. Black, rugged, dirty, flawey, veiny ſtones, and all ſuch as are not fit for cutting, are uſed to pound in a ſteel mortar, made for that purpoſe; and, when pulveriſed, they ſerve to ſaw, cut, and poliſh the reſt.

Shivers are occaſioned in diamonds by this means; the miners, more eaſily to get them out of the vein, which winds between two rocks, break the rocks with huge iron leavers, which ſhakes, and fills the ſtone with cracks and ſhivers.

The antients had two miſtaken notions with regard to the diamond; the firſt, that it became ſoft, by ſteeping it in hot goats-blood; and the ſecond, that it is malleable, and bears the fire. Experience ſhews us the contrary; there being nothing capable of mollifying the hardneſs of this ſtone; though its hardneſs is not ſuch, that it will endure being ſtruck at pleaſure with the hammer.

The fineſt diamonds now in the world, are that of the Great Mogul, weighing 279 caracts; that of the Great Duke of Tuſcany, weighing 139 caracts; and that known in France under the name of grand ſancy, which is one of the crown jewels, weighing 106 caracts, whence its name ſancy, which is a corruption of cent. ſix, that is, 106; to which may be added the famous diamond ſold by Mr. Pits to the regent of France, for the preſent King, which weighed 547 grains compleat, and coſt 2,500,000 livres; or about 105,000 l. ſterling.

Tavernier, by a rule which he had made for eſtimating the value of diamonds, computes that of the Great Mogul at 11,723,278 French livres, equivalent to 779 244 l. ſterling, and that of the Duke of Tuſcany at 2,608,335 livres, or 195,374 l. ſterling; but this calculation is greatly above the preſent value of the French money.

The following is a rate, or manner of eſtimating the value of diamonds, drawn up by a perſon well verſed in ſuch matters; and which for its curioſity, as well as the uſe it may be of to perſons who deal in precious ſtones, may not be unacceptable.

Table of diamonds.

Dutch cut.

A diamond weighing	l.	s.		l.	s.
1 grain, is worth from	1	0	to	1	1
1½	1	16	to	1	17
2	2	15	to	3	0
2½	3	12	to	3	15
3	4	15	to	5	0
4	7	17	to	8	0

Dutch cut.

A diamond weighing	l.	s.		l.	s.
5 grains, is worth from	15	0	to	15	15
6	22	0	to	25	0
7	30	0	to	34	0
8	42	0	to	45	0
9	60	0			
10	75	0			
12	112	0	to	120	0
15	187	0	to	220	0
19	330	0	to	380	0
24	450	0			
30	700	0	to	735	0
40	1500	0	to	1800	0
50	3500	0	to	4500	0
60	4500	0	to	5620	0

Antwerp cut.

A diamond weighing	l.	s.		l.	s.
1 grain, is worth from	0	15	to	0	18
1½	1	6	to	1	10
2	2	2	to	2	5
3	3	12	to	3	15
4	6	0	to	6	7
5	10	10	to	11	5
6	13	10	to	15	0
7	18	15	to	20	10
8	24	0	to	26	0
9	33	15			
10	37	0	to	40	0
12	55	0	to	58	0
15	112	0	to	130	0
18	247	0			
24	315	0			
40	900	0	to	970	0
50	2200	0	to	2300	0
60	3500	0	to	4500	0

But this calculation is conſiderably more than that publiſhed by Monſieur Savary, who makes a diamond of the Dutch cut, weighing 1 grain, worth about 7 s. and a diamond of the Antwerp cut, weighing 1 grain, to be worth about 9 s. ſterling, and the reſt, as mentioned in the foregoing table, in proportion.

It muſt be obſerved, however, that defects in the water, or ſhape, red or black ſpots, ſhivers, and other failings, frequently found in the ſtones, reduce the price by one third, and ſometimes more.

As to *brilliant* DIAMONDS of very ſmall cut, the price is always leſs by one third, than that of diamonds of a larger cut, tho' the weights are the ſame, by reaſon the latter ſhew themſelves a great deal more, when ſet in their collets, than the former.

Diamonds, and other precious ſtones, may be imported to, and exported from Great Britain, in any ſhip or veſſel, without warrant or fee.

Attempts have been made to produce artificial diamonds, but with no great ſucceſs; for the factitious diamonds made in France, called temple-diamonds, on account of the temple at Paris, where the beſt of them are made, fall vaſtly ſhort of the genuine ones; accordingly they are but little valued, tho' the conſumption of them is pretty conſiderable for the habits of the actors on the ſtage.

Baffa DIAMONDS are ſo called from Baffa, a little town of the iſland of Cyprus; whoſe neighbouring mountains produce a kind of beautiful ſtone, which may eaſily pass for diamonds, among thoſe who are not judges of the real ſtone.

The diamonds of Alençon are alſo another kind of ſpurious diamonds; being ſtones, or cryſtals, found near Alençon, a town of Normandy in France; where the ſoil abounds with a ſhining ſand, and hard and gritty rocks; ſome of theſe diamonds being ſo clean and brilliant, that perſons have been often deceived in them.

Certain hard and tranſparent pebbles are likewiſe met with on the coaſts of Medoc; which, being cut properly, diſtinguiſh themſelves among falſe diamonds, by proving exceeding hard, and brilliant.

DIAMOND-*glaſs.* See *Glaſs.*

DIAMOND-*weights*. See *Weight*, and *Carat*.

DIAMOND, is alſo an inſtrument of conſiderable uſe in the glaſs-manufactory, for ſquaring the large plate or pieces; and among glaziers, forcutting their glaſs; but theſe diamonds are differently fitted up, being only little ſparks: that uſed for looking-glaſſes, and other large pieces, is ſet in an iron ferril two inches long, and a quarter of an inch diameter: the reſt of the cavity of the ferril, is filled with melted lead, which keeps the diamond firm in its place. The glaziers have a handle of box, or ebony, fitted into the ferril to hold it by: but, in the former, there is a little piece of box croſſing the ferril, in form of a little plane, covered at bottom with a thin copper-plate.

DIAMOND-*cutter*, is a perſon whoſe buſineſs conſiſts in cutting diamonds into what figure the jeweller pleaſes; which is done by the help of an engine, and diamond-powder. The mechanic part of cutting requires little art, as it depends on the engine: but his ſkill lies in determining the manner of cutting the diamond, ſo as to conceal what flaws it may have, giving it the full luſtre, and cutting it in ſuch manner as it may make the greateſt ſhow.

DIAPER, is a kind of linen wrought much after the manner of faſhioned ſtuffs, with a variety of deſigns, ſome of flax, others of hemp; having different names according to the places of their manufactures, or the different deſigns appearing on them; whoſe invention is attributed to the Venetians.

The places where they are chiefly manufactured, are in Germany, and Ruſſia, the French and Auſtrian Netherlands, Picardy, Normandy, Beaujolois, and Bayonne, in France; as alſo in the United Provinces, and in Venice, with ſome other parts of Italy.

Of late years, the Iriſh have applied themſelves to this manufacture with ſome ſucceſs, in imitation particularly of a colony of Palatines ſettled in a town called Dunleckney, in the county of Carlow, by Mr. Bagwell.

Damaſk and diaper napkening and towelling of Ruſſia, if above half an Engliſh ell in breadth, is to pay duty *ad valorem*, on importation.

Damaſk and diaper of Sileſia and Holland, are uſually imported in pieces; the napkening ſufficient to make 6 half dozens of napkins, and the tabling ſufficient to make ſix table-cloths, though they are ſometimes imported in ſingle table-cloths; the piece of tabling is about 11 or 12 yards long, and about an ell wide. The piece of towelling and napkening is from 37 to 39 yards long, and under an ell wide. The piece of clouting, if half yard wide, is about 14 yards, and, if yard wide, about 7 yards long. See *Linen*.

DIARY. A journal, or day-book, wherein the occurrences, or tranſactions of every day, are ſet down or recorded.

DICE. See *Die*.

DICKER. A mechanic term, uſed by the tanners to expreſs a parcel or quantity of hides packed up together, containing ten in number.

DICTAMNUM, or *Dittany*. A medicinal plant, commonly called pepper-port, much valued among the antients; being eſteemed a ſpecific for wounds of arrows, which it drew out with wonderful eaſe, and, according to them, only grew in the iſland of Crete, now Candia. The modern dictamnus, called alſo white dittany, or fraxinella, from its leaves, which reſemble thoſe of the aſh, called by the Latins fraxinus, is ſcarce in leſs eſteem than that of the antients. Its root, wherein all its virtue is lodged, is about the thickneſs of a finger, and is frequently divided into a number of little branches: its colour is white, its taſte bitter, and its ſmell ſtrong, ſomewhat like the ſcent of a he-goat; being reputed excellent againſt the bitings of venemous beaſts, worms engendered in the human body, and the like. It muſt be choſen white, both inſide and outſide, not fibrous, and well cleaned. There are ſeveral other kinds of dittany, but of leſs value; as the baſtard dittany, and the wild dittany.

DIE. A cubical piece of ivory, on the ſix faces of which the ſix firſt digits are marked in dots; a pair of which are called dice; being uſed in ſeveral games of diverſion: but, by the ſtatute of Queen Anne, dice are prohibited to be imported into Great Britain.

DIE, in coining, is a ſteel inſtrument upon which the head, arms, or other device of the prince, or ſtate, is engraved, in order to ſtamp it on the metal prepared, and cut into ſmall round pieces, on purpoſe to receive it; by which it is known and diſtinguiſhed from all others, to be the current coin, or allowed money of any nation.

DIEPPE. A port-town of France, ſituated on the Britiſh channel, in 1 deg. 15 min. of E. lon. and 49 deg 55 min. of N. lat. 30 miles north of Rouen, oppoſite to the port of Rye in England; being a ſtation for French privateers, which occaſioned its being bombarded by the Engliſh in the reign of Queen Anne; but the harbour will not admit of ſhips of burden.

DIER. See *Dyer*.

DIGIT. A meaſure, containing 3-4ths of an inch; alſo a term applied to any of the numerical figures under ten.

DIMITY, or *Dimitty*. Ak ind of cotton cloth, or fuſtian, wove full of ridges, like cords, manufactured in the Eaſt Indies, and alſo in ſeveral European countries, but chiefly in ſome of the iſlands of the Turkiſh archipelago, the piece containing about 12 yards.

DINAR. A Perſian term, ſometimes ſignifying all the ſorts of gold ſpecie; and ſometimes a ſmall money of accompt, 6 of which are worth about a farthing ſtering.

DINAR-*cheray*, in Perſia, is the weight, or value, of the crown, or ducat of gold.

DING, is a term generally applied by the Siameſe to all kinds of weights and coins; which is to be underſtood of thoſe of ſilver, gold not being current as a coin, but bought and ſold as a merchandiſe, at twelve times the value of ſilver.

DINGLE. A port-town of Ireland, in the county of Kerry, aud province of Munſter, ſituated on Dingle bay, in 10 deg. 18 min. of W. lon. and 52 deg. of N. lat. See *Ireland*.

DIP-*ſea-line*. See *Deep*-ſea-line.

DIPPING-*needle*, or *Inclinatory needle*. See *Needle*.

DIPPINGS. A ſort of tanned hides. See *Hide*.

DIRECTION *of the load-ſtone*. That property whereby the magnet, or a needle touched by it, always preſents one of its ends towards one of the poles of the world, and the oppoſite end to the other pole: but the attractive property of the magnet was known long before its directive, aud the directive long before the inclinatory. See *Compaſs*, *Magnet*, *Needle*, and *Pole*.

DIRECTION. The government or conduct of a thing: thus, a director of any public company is ſaid to be in the direction of that company.

DIRECTION-*chamber*, is a court inſtituted in Spain, for the regulation of the commerce to the Weſt Indies; the commiſſioners of which appoint the ſhips to compoſe the armadas and flotas, inſpect all contracts, regulate the freight, and adjuſt all differences between the mariners and maſters of ſhips.

DIRECTOR. A perſon who has the regulation, power, or command of an affair committed to him.

DIRECTORS *of commercial companies*, are uſully conſiderable perſons, choſen by a plurality of voices, among the actioniſts, or proprietors of ſtock, who have a certain number of actions or ſhares, in the funds of a company, having the greateſt probity, reputation, and experience in the trade which the company undertakes. The directors of the Engliſh Eaſt India company are 24, of the bank 26, and of the South-ſea 31, including the governors. The directors of the Dutch Eaſt India company are 60, and of the French India company 21. See *Company*.

DIRHEM. A Perſian term, ſignifying ſilver; yet never ſaid of ſilver conſidered as metal, but of ſilver reduced into current ſpecie, whereof are the chaye, the mamoudi, and the abaſſi,

DISBURSE, is for a perſon to expend, or lay out money, for himſelf, or for the uſe of another.

DISBURSEMENT. The ſpending, or laying out money; alſo the charges, or expence of a thing.

DISCHARGE. To diſmiſs, or put a perſon out of his poſt, place, or office; particularly applied to workmen

when paid off, and diſmiſſed from their employment: it alſo ſignifies to pay a debt, or clear an accompt.

DISCHARGE, is likewiſe a receipt, or acquittance, for money.

DISCOUNT, in commerce, a ſum deducted, or retained in hand, upon paying a greater; particularly uſed for an allowance made on a bill of exchange, note, or any other debt, not become due, to induce the acceptor, debtor, or other perſon, to advance the money. See *Exchange*.

DISCOUNT is alſo uſed among merchants, when they buy commiſſions in truſt, with a condition, that the ſeller ſhall diſcount ſo much *per cent.* with the buyer, for each payment made before the expiration of the limited time. See Prompt *Payment*.

The Sieur de la Porte diſtinguiſhes between theſe two kinds of diſcount. The firſt, or that upon bills of exchange, is reckoned like the exchange, at the rate of ſo much *per cent.* whereby the diſcount at 2 *per cent.* on 100 l. reduces the payment to 98 l.: whereas that on commodities is not only laid on the hundred pounds, but on the hundred and diſcount added together: ſo that diſcounting for goods at 10 *per cent.* there is only 8 abated in 108, and not on the hundred, which, he ſays, is the true diſcount.

DISCOUNTS are alſo frequently given for the payment of dubious or bad debts; being likewiſe a term much uſed among mechanics, and manufacturers, who keep workmen, journeymen, and labourers, for the ſums advanced them before hand, which are diſcounted when the payments are made in courſe.

DISCOUNT is alſo uſed, with leſs propriety, for the tare or waſte of any ſum or commodity; when a merchant ſays of a leaky veſſel, there are ſo many gallons diſcount as have leaked; and a tradeſman ſays there are ſo many ſhillings diſcount in a bag exhauſted by changing of money.

DISCREDIT. To ſpeak ill, or give a bad character of a perſon, or goods, ſo as to leſſen their credit or eſteem in trade.

DISEMBARK. To go from on board a ſhip.

DISEMBOGUE, is generally applied to a river, when emptying itſelf into the ſea; and when a ſhip paſſes out of the mouth of ſome great gulph, or bay, the ſailors call it diſemboguing.

DISENFRANCHIZE, or *Diſfranchiſe*, to take away from a perſon his freedom, or deprive him of the privileges of a citizen.

DISFOREST. To grub up, cut down, or root out the trees of a foreſt.

DISH. A broad ſhallow veſſel, uſed at tables for holding victuals, commonly made of earthen ware, porcelain, or pewter, and ſometimes ſilver.

DISPATCH. To make haſte, to be quick or nimble at buſineſs; alſo a letter of ſtate, or mercantile affairs of importance, ſent by a courier expreſs; as is frequently done by the Engliſh Eaſt India company, over land, through Turky to Perſia and India.

DISPENSARY, or *Diſpenſatory*. A name given to ſeveral collections of compound medicines; wherein are ſpecified the ingredients, proportions, and chief circumſtances of the preparation and mixture; the ſame with what is otherwiſe called a pharmacopœia, or antidotary; ſuch as the diſpenſaries of Meſue, Cordus, Quincy, the college of phyſicians at London, and other places; which are of ſuch importance, that the apothecaries in and about London are obliged to make up their compound medicines according to the formulas preſcribed in the college-diſpenſary, and are enjoined to keep always ready in their ſhops all the medicines there enumerated.

DISPENSARY, is likewiſe uſed for a magazine, or office of medicines, kept ready to be diſpenſed at the prime coſt of the ingredients, for the benefit of the poor people labouring under any indiſpoſition; of which kind are, the college of phyſicians in London, firſt begun in the year 1696; and the diſpenſary in St. Peter's alley, Cornhill; where the beſt medicines are ſold for their intrinſic value; and patients are adviſed every day, but Sunday, at one of theſe places.

DISPOSE, is to ſell, or by any other method get off a commodity.

DISTANCE, in navigation, is the number of miles, or leagues, that a ſhip has ſailed from any point.

DISTILLATION, in chemiſtry and pharmacy, the art, or act of ſeparating or drawing off the ſpirituous, aqueous, oleaginous, or ſaline parts of a mixed body, from the groſſer and more terreſtrial parts, by means of fire, and collecting and condenſing them again by cold; which is of very great utility, it being by means hereof that waters, ſpirits, eſſences, and extracts, are chiefly made. See *Spirituous* liquors.

Diſtillation is uſually performed two ways, by means of fire, raiſed to a greater or leſſer degree, as circumſtances require. 1. By aſcent, when the matter to be diſtilled is above the fire, and the ſpirit, or other principle, is raiſed from it. 2. By deſcent, when the matter which is to be diſtilled is below the fire, and the vapour drawn from it precipitated to the bottom of the veſſel.

DISTILLER. A perſon who makes diſtillations; but, by this word, it is now commonly underſtood thoſe tradeſmen that draw off, or make brandy, rum, or Geneva, from malt, molaſſes, cyder, or the like.

DISTILLERY, or *Diſtilling*, is an art ſo exceedingly improved in England, that had it not met with diſcouraging laws, it would by this time have attained to a very great heighth, and brought great profit to the nation; for, next to making ſomething out of nothing, is the making ſomething that is valuable out of what would be otherwiſe worth nothing: therefore this art ought to have been handled tenderly, to have been trained up with a great deal of gentleneſs, and not loaded with taxes in its infancy; by which means it had like to have been diſcouraged in the beginning: however, it has ſtill bore up under all the weight laid upon it.

Mr. Carey ſays, it was a great miſtake to appoint meaſures, by act of parliament, to the diſtillers in their workings. Mens knowledge increaſes by obſervation; and this is the reaſon why one age exceeds another in any ſort of myſtery, becauſe they improve the notions of thoſe who went before them. Therefore, confining the diſtillers to corn only, was an error; though it is true, other things were allowed to be uſed, but on ſuch terms and reſtrictions as were next to a prohibition; for the diſtillers, by degrees, would have made experiments on that themſelves, uſing it with other mixtures, and thereby drawing from it a cleaner ſpirit than it affords of itſelf, which they might in time have rectified to ſuch a fineneſs, as to have increaſed very much its uſe.

No kingdom can give more encouragement to diſtillers than Great Britain, whoſe plantations being many, and well peopled, where thoſe ſpirits are ſo neceſſary and uſeful for the inhabitants; and theſe depending wholly on the mother-country for all things, would have cauſed a conſumption of very great quantities, beſides what is uſed in navigation. Great Britain has many materials of her own to work on, ſuch as, molaſſes, cyder, perry, barley, and others, all which in time the diſtillers would have uſed; for as they found their ſales increaſed, they would have made new eſſays: therefore, ſays the above author, it was a very wrong ſtep to diſcourage diſtilling from molaſſes, ſcum, tilts, and waſh; an error the Dutch, or any other trading nation, would not have been guilty of; and proceeded from ill advice given the parliament, by thoſe who, under pretence of advancing corn deſigned to diſcourage diſtilling, only offered it by that handle they thought it would be beſt received in the houſe. Trade and lands go hand in hand as to their intereſt; if one flouriſhes, ſo will the other: ſo that he makes this concluſion, 'Encourage diſtilling, and it will ſpend hundreds 'of things now thrown away.'

The malt diſtiller is the father of all the other claſſes, as he furniſhes them with the chief of their materials. The firſt production of malt diſtilled, is called low wines; theſe low wines are again put into the ſtill, and, being diſtilled a ſecond time, become pure ſpirits of malt.

The malt diſtiller proceeds no farther, but ſells his malt-ſpirits to the compound diſtillers, who put a quantity of juniper-berries, anniſeed, or other materials, with which they intend to flavour their ſpirits, into a ſtill, with a quantity of malt lowered with water; which being diſ-

tilled, produce thoſe pernicious liquors called gin, anniſeed, &c. Molaſſes ſpirits are diſtilled from treacle by the compound diſtillers; which, when fermented, is ſingled into low wines, and redrawn into ſpirits in the ſame manner as malt.

DISTILLERS *company of London*, was incorporated by letters-patent of Charles I. dated the 9th of Auguſt 1638, by the ſtile of The maſter, wardens, aſſiſtants, and commonalty of the trade, art, or myſtery, of diſtillers of London; which corporation conſiſts of a maſter, 3 wardens, 19 aſſiſtants, and 122 liverymen; whoſe fine, upon admiſſion, is 13l. 6 s. 8 d. See *Spirituous* liquors.

DITTANY. See *Dictamnum*.

DITTO, in books of accompts, wrote contracted by D°, ſignifies *the ſame*, or as the preceding article, being a corruptive derivation from the Italian *detto*.

DIU. A little iſland, and town, ſituated in 69 deg. of E. lon. and 21 deg. 15 min. of N. lat. on the coaſt of Guzurat, in the Hither India, and ſubject to Portugal. See *India*.

DIVAN. A council-chamber, or court, wherein juſtice is adminiſtered in the eaſtern nations, particularly among the Turks.

DIVAN-*beghi*. The appellation of one of the miniſters of ſtate in Perſia.

DIVER. A perſon who goes, or ſwims, under water, for fiſhing pearls, or getting up the wreck of a ſhip.

DIVIDEND. Something to be divided, or ſhared, among ſeveral perſons.

In public companies, it is the money divided among the proprietors, as intereſt upon the ſtock, proportionably to the particular ſhare of each perſon. See *Bank* of England, *Eaſt* India company, and *South* ſea company.

In trade, it is when a man fails, and makes a voluntary propoſal to ſurrender up and divide his effects among his creditors; or when his effects are taken by ſtatute, inventoried, and valued, and, after all charges are deducted, the amount is divided among the ſeveral creditors, in proportion to their debts. See *Bankrupt*.

DIVING-*bell*. A machine contrived to let down perſons to a great depth in water; by which means they can remain there a long time together, without being incommoded for want of air; during which time, they can ſee or do what is convenient towards getting up what has been loſt, or caſt away in a ſtorm, or ſhipwreck.

DIVING-*company*, is a ſociety of merchants, eſtabliſhed at Maſterland in Sweden, for fiſhing up wrecks at ſea; in which they are very ſucceſsful in the Baltic.

DIVISION, in arithmetic, that rule which ſhews how many times one number is contained in another.

DIVISION, in the ſea-language, is the third part of a naval army, or fleet, or of one of the ſquadrons thereof, under the command of ſome flag-officer. See *Fleet*.

DIUL. A port-town in the province of Tatta, or Sinda, in the Hither India, ſituated in 67 deg. of E. lon. and 25 deg. 15 min. of N. lat. weſt of the river Indus, on the Indian ocean, and lately transferred by the Mogul, with the reſt of the province, to Perſia.

DOCK, in the ſea-language, a pit, pond, or creek, by the ſide of a harbour, made convenient to work in, for the building or repairing of ſhips; being of two ſorts, a dry dock, and a wet dock: the former being where the water is kept out by great flood-gates, till the ſhip is built or repaired, but afterwards can be eaſily let in again to float, and launch her; and the latter is any place in the ouze, out of the way of the tide, where a ſhip may be hauled in, and ſo dock herſelf, or ſink herſelf, in a place to lie in.

DOCKET, ſometimes denotes a little bill tied to wares, or goods, being directed to the perſon and place they are to be ſent to.

DOCTORS *Commons*. See College of *Civilians*.

DODDER. See *Epithyme*.

DOE. A female deer. See *Deer*.

DOG. A four-legged animal, very familiar and uſeful to mankind, of whoſe ſkin gloves are frequently made.

DOGE. The chief magiſtrates in the republics of Venice and Genoa.

DOGGER. A ſmall ſhip, built after the Dutch faſhion, with a narrow ſtern, and commonly but one maſt, uſed in fiſhing for cod on the

DOGGER's *Bank*, a ſand between the Britiſh coaſt and Holland, where the cod-fiſhery is carried on by the Engliſh and Dutch. See *Fiſhery*.

DOIT. See *Duyte*.

DOLCIGNO. A port-town of the province of Albania, in Turky, ſituated on the gulph of Venice, in 19 deg. of E. lon. and 2 deg. 5 min. of N. lat. See *Turky*.

DOLLAR, or *Daller*. A ſilver coin, ſtruck in ſeveral parts of Germany and the north; as alſo in Holland, and Switzerland. They are not all of the ſame fineneſs and weight; but the Dutch dollar, or rix-dollar, is moſt common, being about 4 s. 4½ d. ſterling; the rix-dollar of Vienna and Cologne, are 4 s. 8 d. ſterling, of Hamburg 4 s. 6 d. of Dantzic and Poland 4 s. 6 d. of Denmark 4 s. 6 d. of Sweden 4 s. 8 d. of St. Gall 4 s. 6 d. the ſpecie-dollars of Saxony and Frankfort are 4 s. 8 d. ſterling each, the double dollar of Denmark 6 s. and the ſilver dollar of Sweden 1 s. 6⅔ d ſterling.

DOLLAR is alſo a money of accompt, in moſt of the above mentioned places, and valued as the coin.

DOLLART *bay*. A large gulph, ſeparating Eaſt-Frieſland, in Germany, from Groningen, one of the United Provinces.

DOLPHIN. A ſea-fiſh; alſo the handle to a piece of ordnance, becauſe uſually caſt in ſhape of this fiſh.

DOMEA. A great river of Tonquin, in Aſia, ſometimes called Chaule, upon which the capital city of Keccio, and moſt of their towns, are ſituated; the river riſing in the province of Yunan in China; and, running ſouth through the kingdom of Tonquin, diſcharges itſelf into the gulph of Cochin-China, in 106 deg. of E. lon. and 21 deg. of N. lat.

DOMINGO, or *St. Domingo*. The capital of the iſland of Hiſpaniola, in North America, ſituated in 70 deg. of W. lon. and 18 deg. 20 min. of N. lat. See *French America*.

DOMINGO, or *St. Domingo*, is alſo a river on the coaſt of Africa, 30 leagues diſtant from the Gambia.

DOMINGO, or *St. Domingo company*, was eſtabliſhed in France in 1698, for 50 years; but though it was carried on with honour to the year 1720, it was then united to the India company. See *India* company.

DOMINICA. One of the Caribbee iſlands, ſituated in 61 deg. of W. lon. and 61 deg. 20 min. of N. lat. ſubject to G. Britain, but very little cultivated. See *Britiſh* America.

DON, or *Tanais*. A river riſing in the province of Rezan, in Ruſſia; which running ſouth-eaſt, paſſes by Woronets; and, continuing its courſe ſtill ſouth eaſt, approaches near the river Wolga, where Peter the Great was cutting a canal for a communication between the two rivers: the Don afterwards turns to the ſouth-weſt, and, dividing Aſia from Europe, falls into the Palus Meotis, a little below the city of Aſoph. But though the Czar Peter did not live to finiſh the laſt canal, he had made another between the river Woronets, and another river which falls into the Wolga, whereby the Don had a communication with it; and both thoſe rivers are deep enough to carry ſhips of conſiderable burthen down to the Euxine and Caſpian ſeas: however, the loſing of Aſoph has made the navigation of the Ruſſians to the Euxine ſea impracticable.

DOORGUZZES. One of the kinds of callicoes imported by the Engliſh Eaſt India company, the piece being about 18 yards.

DOOSOOTIES. Another kind of callicoes imported by the ſame company, the piece being about 15 yards.

DORDONNE. A river of France, which riſes in the mountain of Auvergne; and, running weſt through the province of Guienne, falls into the river Garonne 12 miles below Bourdeaux. See *Garonne*.

DOREAS. A kind of muſlin, brought from the Eaſt Indies, particularly from Bengal, both coarſe and fine, ſtriped and chequered; the length of the piece being uſually about 16 ells long, and 7-8ths in breadth.

DOR-EMUL. A flowered muſlin, brought from the Eaſt Indies, being 16 ells long, and 3-4ths broad.

DORONICUM *Romanum*, is a ſmall root, yellowiſh on

the outſide, and white within; of a ſweet taſte, but aſtringent, and accompanied with ſome viſcoſity; its figure in the ground reſembling the ſcorpion's tail; and its leaves are broad, not unlike the plantane, or wild cucumber; being thought to be a ſovereign counter-poiſon for mankind, and a mortal poiſon for quadrupeds; its good choice conſiſting in its largeneſs, and being well cleared of filaments, not worm-eaten, and, when broken, of a very white colour; which is uſually brought from the mountains of Switzerland, Germany, Provence, and Languedoc.

DORSER. A pannier, or baſket, to carry goods on horſeback.

DORT, or *Dordrecht*. A city of the United Provinces, in the province of Holland, ſituated in 4 deg. 40 min. of E. lon. and 51 deg. 47 min. of N. lat. on an iſland in the river Maes, 10 miles E. of Rotterdam. See *United* Provinces.

DOUBLA. A ſilver coin ſtruck at Algiers, or Tunis, worth about 2 s. 5¼ d. ſterling.

DOUBLE. What is worth twice as much as another: thus a double piſtole, a double louis, a double rial, a double ducat, are gold or ſilver coins worth twice as much as the ſimple pieces.

DOUBLER. A perſon who works with a throwſter, and twines or doubles two or more threads of ſilk together, for the uſe of ſewing.

DOUBLING *a Cape*, or *Point*, in navigation, ſignifies the coming up with it, paſſing by it, and leaving it behind the ſhip.

The Portugueſe pretend to be the firſt that ever doubled the Cape of Good Hope, under their Admiral Vaſquez de Gama: but there are accounts in hiſtory, particularly in Herodotus, of the Egyptians, Carthaginians, and other nations, having done the ſame many centuries before.

DOUBLON, or *Doubloon*. A Spaniſh coin, being the double of a piſtole, or worth two piſtoles: but there are alſo double doublons current for 3 l. 12 s. See *Piſtole*.

DOUDOU. A copper coin, current in ſome parts of the eaſt, particularly at Surat and Pondicherry, 4 of which are worth about a halfpenny.

DOVER. An Engliſh borough, port-town, and caſtle, in the county of Kent, ſituated in 1 deg. 25 min. of E. lon. and 51 deg. 10 min. of N. lat. on a rock, oppoſite to Calais in France; for the repair of whoſe pier, and of Rye harbour, a duty of 1½ d. a ton is to be levied on all ſhipping, though not without ſome exceptions.

DOUGLAS. A port-town on the coaſt of the iſle of Man, ſituated in 4 deg. 25 min. of W. lon. and 54 deg. 7 min. of N. lat. equally diſtant from the Engliſh, Scotch, and Iriſh ſhores, being the beſt harbour in the iſland.

DOUILLARD. A meaſure uſed at Bourdeaux, and in moſt parts of Guienne, in France, for meaſuring Engliſh and Scotch coals, 9 of which make a ton.

DOULEBSAIS, or *Mulmuls*. A kind of muſlin. See *Mulmuls*.

DOUTIS. White cotton cloths, pretty coarſe, and brought from the Eaſt Indies, particularly from Surat, which are ſometimes confounded with the Sauvaguzes, or Sauvagogis; their length being 14 ells, or thereabouts, and the breadth from 5-16ths of an ell, to 1 ell and 1-16th.

DOWLASS. A coarſe, ſtrong ſort of linen, principally manufactured in Germany, and uſed to make ſhirts, or ſhifts, for hard-working people; the ſingle or demi-piece containing about 26 ells Engliſh, and the double piece about 52 ells; the former being 3-4ths wide, and the latter 7-8ths.

DOWN. The ſhorteſt, ſmootheſt, ſofteſt, and moſt delicate feathers of birds, growing on their neck, and a part of their ſtomach.

Though there are ſcarce any birds, but down may, and is in effect extracted from, particularly from thoſe called domeſtic birds; yet ſwans, geeſe, and ducks, are thoſe that furniſh moſt, and the beſt; which are carefully every year ſtripped off, without any perceptible prejudice; the down, on the contrary, becoming thereby more ſoft and thick.

Geeſe are plucked three times in the year; towards the end of May, about Midſummer, and at the latter end of Auguſt; but chiefly when the feathers are ripe, that is, when they are perceived to fall of themſelves.

The down of dead birds is in the leaſt eſteem, upon account of the blood imbibed by the quill; which putrifying, communicates an offenſive ſmell to the feather, and takes ſome time to evaporate; for which reaſon live birds ſhould not be ſtripped till their feathers are ripe, leſt the ſame ſmell might happen, and vermin be thereby engendered.

Down is a commodity of moſt countries: but that in moſt repute throughout Europe, either for fineneſs, lightſomeneſs, or warmth, is called ederdon, or edredon, which comes from Denmark, Sweden, and other northern countries. See *Ederdon*, and *Feather*.

Oſtrich's DOWN, called otherwiſe oſtriches hair, and ſometimes, but corruptly, oſtriches wool, is of two ſorts; whereof that called ſimply the *fine* of oſtrich is uſed by hatters in the manufacture of common hats; and that called *coarſe* of oſtrich ſerves for the making of liſt for fine white cloth, which are to be dyed black. See *Oſtrich*.

DOWNS. A bank, or elevation of ſand, gathered by the ſea, and formed along its ſhores, which ſerves it as a barrier. The Downs are particularly uſed for a remarkable road for ſhips on the Engliſh coaſt, along the eaſtern part of the county of Kent, from Dover to the North foreland, where the Britiſh fleets uſually aſſemble; the road having excellent anchorage, and being well defended by the caſtles of Sandwich, Deal, and Dover: but the Downs have been held to be neither port, place, or creek, of the realm, within the act of tonnage and poundage. See *Navigation*.

DOZEN, or *Doſen*, generally ſignifies the number 12; but ſeveral commodities have 13 or 14 to the dozen, and 12 dozen make a groſs. See *Tale*.

DRAB, among ſailors, a ſmall top-ſail; and it is alſo an extraordinary ſort of woollen cloth, chiefly worn in the winter-time.

DRABLER, among mariners, is a ſmall ſail, uſed where the courſe and bonnet are not deep enough to cloath the maſt.

DRACHM, or *Dram*. The 16th part of an ounce avoirdupois; but with apothecaries it is only the 8th part of an ounce, being equal to 3 ſcruples, or 60 grains.

DRAGEES, or *Sugar-plumbs*. See *Confects*.

DRAGOMAN, or *Drogman*. A term of general uſe through the eaſt, for an interpreter, whoſe office is to facilitate commerce between the Aſiatics and the Europeans.

DRAGON's *blood*, *Sanguis Draconis*, in medicine, a reſinous ſubſtance, brought from the eaſt, of conſiderable uſe as an agglutenant againſt fluxes. The genuine dragon's blood is the juice, or reſin, of a large tree, called dracoarbor, growing in Africa and America, as well as in China; the reſin being of a dark red, and eaſily diſſolving when brought towards the fire: if caſt into the fire, it flames, but diſſolves with much difficulty in any liquor. There is alſo a counterfeit dragon's blood, made of the gum of the cherry, or almond-tree, diſſolved and boiled in a tincture of Brazil wood; but this is of no uſe, except for external diſeaſes of horſes.

DRAGS. Pieces of timber faſtened together, more generally called floats, for carrying ſome ſorts of burthen down a river; alſo any thing that hangs over the ſide of a ſhip, as an impediment to her ſailing freely. See *Float*.

DRAM. A ſmall quantity of any ſpirituous liquor, uſually drank out of a glaſs, now prohibited to be retailed by diſtillers; it is alſo a weight, being the ſame as the drachm. See *Spirituous* liquors, and *Drachm*.

DRAP, or *Drab*. A particular kind of woollen cloth.

DRAP-*de-Berry*. A freeze, or thick, ſtrong, warm cloth, fit for winter-wear.

DRAPER. A vender, or ſeller of cloth, either linen or woollen. See *Linen* draper, and *Woollen*-draper.

DRAPERS *company of London*, was incorporated, by letters-patent of Henry VI. in 1439, by the title of The maſter, wardens, brethren, and ſiſters, of the guild, or fraternity, of the bleſſed Mary the Virgin, of the myſtery of drapers of the city of London: at which time their arms were granted by Sir William Brugges, garter king at arms, and confirmed by Clarencieux king at arms, in 1561. The

This fraternity is governed by a maſter, 4 wardens, and 30 aſſiſtants; the number of members upon the livery being 140, whoſe fine on admittance is 25 l. They have a magnificent hall in Throgmorton-ſtreet, to manage their affairs in, and they pay to charitable uſes about 4000 l. a-year.

DRAVE. A large navigable river, riſing in the archbiſhopric of Saltzburg, in Germany; it runs ſouth-eaſt through the province of Stirria, and, continuing the ſame courſe, divides Hungary from Sclavonia; after which it falls into the river Danube, at Eſſeck. See *Danube*.

DRAUGHT, in trade, is ſo much goods as are carried upon one carriage at a time: it is alſo an allowance made in the weighing of commodities; being the ſame as clough. See *Clough*.

It alſo implies ſo much goods as are carried upon one carriage at a time; likewiſe the demand, ſale, or diſpoſal, of any commodity is ſo called.

In navigation, it is the depth of a ſhip in the water, when under ſail.

DRAW. A ſhip is ſaid to draw ſo much water, according to the number of feet ſhe ſinks into it: thus, if 15 feet from the bottom of her be under water, or if ſhe ſink into the water 15 feet perpendicularly, ſhe is ſaid to draw 15 feet water; and according as ſhe draws more or leſs, ſhe is ſaid to be of more or leſs draught.

DRAW-*back*, in commerce, is the repaying to a merchant the duties or cuſtoms he has paid at the importing foreign goods, upon his exporting them again.

The intention of the Britiſh legiſlature in allowing of drawbacks, was certainly for the promotion of trade in the ſame manner as they granted bounties; for, by drawbacks, the merchant is encouraged to export ſuch Britiſh manufactures as are liable to duties, with a view to ſell them cheaper than foreigners: beſides, when foreign merchandiſes have continued here three years, the Britiſh merchant is alſo encouraged by the drawbacks, to export them to ſuch foreign countries where they are wanted; which makes the advantage of the freight ſo much clear profit to the kingdom, beſides the profit accruing to the merchant.

If foreign goods and merchandiſes, which have been regularly imported into Great Britain, and for which all duties have been duly paid, are again regularly exported to foreign parts, within three years from the importation, accounting from the maſter's report of the ſhip, they are intitled to a drawback, or repayment, either of the whole, or part of the duties paid, unleſs they are ſuch goods as are particularly excepted: and all allowances and abatements upon, or out of, any duties now in force, are to continue till thoſe duties ceaſe.

The oaths of merchants importing and exporting, required to obtain the drawback of foreign goods, affirming the truth of the officer's certificate of the entry and due payment of the duties, may be made by the agent or huſband of any corporation or company, or by the known ſervant of any merchant, uſually employed in making his entries, and paying his cuſtoms: but no allowance is made for any foreign goods exported to the iſle of Man.

If any foreign goods entered outwards, ſhould be fraudulently ſhipped out, being leſs in quantity and value than is expreſſed in the importer's certificate, the goods therein mentioned, or their value, are forfeited, and no drawback to be allowed for the ſame.

Foreign goods entered outwards by certificate, in order to obtain the drawback, not ſhipped and exported, or relanded in Great Britain, unleſs in caſe of diſtreſs, to ſave them from periſhing, which muſt be immediately ſignified to the officers of the cuſtoms, are to loſe the benefit of the drawback, and are forfeited, or their value, with the veſſel, and boats, horſes and carriages, employed in the relanding thereof: and the perſons concerned in the unſhipping and relanding, or to whoſe hands the goods ſhall knowingly come, or by whoſe privity, knowledge, or direction, they are relanded, are to forfeit double the amount of the drawback, to be ſued for within five years after the commiſſion of the offence.

Officers of the cuſtoms conniving at, or aſſiſting in any fraud relating to certificate goods, beſides other penalties, are to forfeit their office, be rendered incapable, and ſuffer ſix months impriſonment, without bail or mainprize. Maſters, or other perſons belonging to any ſhip, aſſiſting in, or conniving at the fraudulent relanding of ſuch goods, beſides other penalties, are to ſuffer ſix months impriſonment, without bail or mainprize.

Bonds given for the exportation of certificate goods to Ireland, muſt not be delivered up, nor drawback allowed for any goods, till a certificate under the hands and ſeals of the collector, comptroller, and ſurveyor of the cuſtoms, or any two of them, of ſome port in Ireland, is produced, teſtifying the landing: the condition of the bonds being to produce ſuch certificate in ſix months from the date thereof. All which different regulations were enacted by the ſtatutes of the 13th and 14th of Charles II. the 2d, 3d, and 8th of Anne, the 3d, 5th, 8th, 9th, 11th, and 12th of George I. and the 2d of George II.

For the computation of what is to be drawn back, ſee book of *Rates*; and for the proper regulations relating thereto, ſee the rules, &c. for the advancement of trade, &c. under the article of *Cuſtoms*, and alſo *Debenture*.

DRAWING *of a bill of exchange*, is the writing, ſigning, and giving it the perſon who has already paid the value, or content thereof, to receive it in another place; but a perſon ſhould never draw a bill of exchange, unleſs he is well aſſured it will be accepted and paid. See *Exchange*.

DRAWING-*table*. A board to put a ſheet of paper upon, for the more convenient making of draughts, being very uſeful in navigation for conſtructing charts.

DRAY. A ſtrong, low, open carriage, particularly uſed by brewers for carrying beer to their cuſtomers.

DRAYMEN. See *Carmen*.

DREDGER, or *Oyſter fiſherman*. See Oyſter *Fiſhery*.

DREGS. The bottom, ſettling, or waſte part of any liquid; likewiſe the dirty, waſte, or impure part of any commodity.

DRESDEN. A city of Germany, capital of the electorate of Saxony, ſituated on the river Elbe, in 13 deg. 36 min. of E. lon. and 51 deg. of N. lat. See *Germany*.

DRESS, is to prepare leather for uſe, by the leather-dreſſers.

DRESSER. A perſon who dreſſes any kind of commodity, ſuch as a leather-dreſſer, taw-dreſſer, or flax-dreſſer.

DRIBLET, in trade, is ſometimes ſaid, by way of deriſion, when a ſmall part is made in payment of a large ſum.

DRIED *fiſh*. See *Fiſhery*.

DRIFT, in navigation, ſuch things as float upon the water, without a perſon to guide them, or without being faſtened to any thing: thus a ſhip, when deſerted by her crew at ſea, is ſaid to be a-drift; and a boat is ſaid to be ſent a-drift, when put off from the ſhore without any perſon in her.

DRIFT-*ſail*, in a ſhip, a ſail uſed underwater, veered out right a-head, by ſheets, as other ſails are; its uſe being to keep the head of the ſhip right upon the ſea, in a ſtorm; and to hinder a ſhip from driving too faſt in a current; with which view it is generally uſed by fiſhermen, eſpecially in the north-ſea.

DRIFT-*way*, is the ſame with *Lee-way*.

DRILL, in the manufactures, is to pierce, bore, or make holes, in iron, ſteel, braſs, or any other metal, with an inſtrument called a drill.

DRILLING. A linen cloth, the piece containing about 17 ells Engliſh.

DRINO. A port-town of Turky, ſituated in 20 deg. of E. lon. and 42 deg. of N. lat. on a bay of the Adriatic, to which it gives name. See *Turky*.

DRIPPING. The fat that falls from meat roaſted before the fire, uſed for making candles.

DRIVE, in the ſea-language. A ſhip is ſaid to drive, when an anchor being let fall, it will not hold her faſt, but that ſhe ſails away with the tide, or wind; for the prevention of which, the beſt way is to veer out more cable, becauſe the more cable ſhe has, the ſurer and ſafer ſhe rides, or elſe to let fall more anchors. Alſo when a ſhip is a-hull, or a-try, they ſay, ſhe drives to leeward, or in with the ſhore, according to the way ſhe makes.

DRIVER. A perſon employed by graziers and drovers, for

for driving cattle from one town to another: but it is moſt particularly applied to waggoners, and the drivers of other carriages.

DROGHEDA. A port-town of Ireland, in the county of Lowth, and province of Leinſter, ſituated on the river Boyne, 5 miles W. of the Iriſh channel, in 6 deg. 30 min. of W. lon. and 53 deg. 45 min. of N. lat. See *Ireland*.

DROMEDARY. A kind of camel, ſmaller and weaker than the real camel. See *Camel*, and *Caravan*.

DRONTHEIM. A city and port-town of Norway, capital of the province of Drontheim, ſituated in 10 deg. 30 min. of E. lon. and 64 deg. of N. lat. on a bay of the northern ocean. See *Norway*, included under *Denmark*.

DROPS, in chemical medicines, are ſuch as are uſually taken by dropping 20, 30, or 40 particles at a time in any liquid; as hartſhorn and others.

DROSS. The waſte, or ſcum of metals in flux; alſo the ſediment, or dirty-part, of ſugar, tobacco, and other goods.

DROVE. A large number, flock, or herd of cattle, great or ſmall.

DROVERS. Such perſons as bring up cattle from Lincolnſhire, and other diſtant parts, to London, for the ſaleſmen, graziers, and butchers.

DRUG, or *Drugs*, in commerce, a general name for all ſpices, and other commodities, brought from diſtant countries, of uſe in the buſineſs of medicine, dying, and the mechanic arts.

The drugs uſed in medicine are very numerous, and make the principal part of the commerce of druggiſts; of which ſome of them grow in England, France, and other European countries; but the greateſt part are brought from the Levant, and the Eaſt Indies. A general liſt of all theſe commodities would be endleſs; but ſome of the moſt eſſential are, aloes, ambergreaſe, aſſa fœtida, antimony, balſams, bezoar, borax, benjoin, camphor, cantharides, cardamum, caſſia, caſtoreum, coloquintida, civet, coral, cubebs, coffee, cocoa, gums animæ, armoniac, adraganth, elemi, gutta, labdanum, opopanax, ſagapenum, ſandarac, jalap, lacca, manna, maſtic, myrrh, muſk, opium, pearls, quinquina, hellebore, galanga, zedoary, rhubarb, ſarſaparilla, ſtorax, galbanum, ſanguis draconis, ſenna, ſperma ceti, ſpica nardi, ſcammony, ſal ammoniac, tamarinds, tea, turpentine, turbith, tutia, and ſeveral others mentioned in the book of rates, under the article *Rate*. But for a particular deſcription thereof, reference muſt be had under their reſpective articles.

The drugs uſed by dyers are of two kinds; colouring, which give a dye or colour; and non-colouring, which only diſpoſe the ſtuffs to take the colours the better, or to render the colours more ſhining. Of the firſt kind are, paſtels, woad, indigo, kermes, cochineal, madder, tumeric, and others: of the ſecond kind are, allum, tartar, arſenic, realgal, ſaltpetre, common ſalt, ſal gemmæ, ſal ammoniac, cryſtal of tartar, agaric, ſpirit of wine, urine, pewter, iron, bran, ſtarch, lime, aſhes, and others.

There is a third ſort of drugs, which anſwer both intentions; as the root, bark, and leaf of the walnut-tree, galls, copperas, and other things. See *Dying*.

Drugs, in the Britiſh cuſtoms, are diſtinguiſhed by the names of *rated*, and *unrated*; the former being ſuch whoſe duties on importation are particularly ſpecified in the book of rates; and the latter are thoſe which are ſo called by the act of the 3d and 4th of Queen Anne, whereby they were to pay for every 20 s. of their values, according to the different circumſtances of importation therein mentioned; for it muſt be obſerved, that the Britiſh legiſlature have exempted moſt of the drugs uſed in dying from any duties of importation. See Book of *Rates*, and *Dying*.

DRUG, is uſed alſo to ſignify things of little value, expoſed to ſale; and it is alſo a term, among fan-makers, for a compoſition of gum arabic, and ſome other ingredients, uſed for laying gold or ſilver leaves on their fans, and for ſuch other uſes.

DRUGGET, is a ſort of ſtuff, very thin and narrow, uſually all wool, and ſometimes half wool and half ſilk, having ſometimes the whale, but more uſually without, and woven on a worſted chain. See *Stuffs*.

DRUGGIST, or *Druggſter*. A perſon who principally deals in foreign gums, roots, plants, and other drugs, for the uſe of phyſicians, apothecaries, and chemiſts. His buſineſs is to buy up all manner of uncompounded drugs, both foreign and domeſtic, in large quantities; which he ſells to the apothecary, who compounds them; yet the druggiſt generally compounds drugs for ſale in his own ſhop, like the apothecary. But the druggiſt is not ſuppoſed to know any thing of the uſes or properties of drugs; becauſe he only buys them as a merchant, and diſpoſes of them as a commodity, without any reſpect to their particular uſes. He is acquainted with the outward marks, and ſigns of good, and freſh drugs, what are proper to be bought, the quantities neceſſary for the market, and prices which are commonly given for them; tho' this varies, according to the demand, as in other commodities: but that the public may not be impoſed on, there is a printed bill weekly handed about in London, containing the common price of drugs, like the price of ſtocks and exchange. The druggiſts are under the inſpection of the college of phyſicians; and they not only ſupply the apothecaries of London with drugs, but the country-apothecaries are alſo chiefly ſupplied by the druggiſts of London.

DRY. Any thing that has none, or little moiſture: thus, in the Britiſh cuſtoms, dry goods are all kinds of drugs and cloths. See *Duty*.

DRY *confects*, See *Confects*.

DRY *dock*. See *Dock*.

DRY *ducking*. See *Ducking*.

DRY *goods*. See Dry *Goods*.

DRY *meaſure*. See *Meaſure*.

DRY *ſalter*, is a perſon whoſe buſineſs conſiſts in ſelling dyes or colours for the dyers moſtly, and ſometimes differ little from the oilman. The blue-maker alſo keeps a ſhop ſomewhat like the dry-ſalter, where he ſells dyes and ſtarch, particularly a ſpecies of blue dye moſtly uſed by the callico-printers.

DUBELTIES. A current coin of Holland, worth $\frac{1}{2}$ of a ſtiver, or a halfpenny and $\frac{1}{10}$ ſterling.

DUBLIN. The capital of the province of Leinſter, and of the kingdom of Ireland, ſituated in 6 deg. 25 min. of W. lon. and 53 deg. 16 min. of N. lat. at the mouth of the river Liffee, near the Iriſh channel, 60 miles W. of Holy-head in Wales, and 270 miles N. W. of London. See *Ireland*.

DUCAT. A coin, both of gold and ſilver, current in ſeveral ſtates of Europe, particularly Germany and Italy.

The gold ducat	Sterling. s.	d.
Of Holland, coined at *legem imperii*, and the ducats of Campen in Holland, are each of them worth - -	9	3.6
Of the Biſhop of Bamberg -	9	3.2
The double ducat of the Elector of Hanover	18	4.8
The ducat of ditto - -	9	2.7
Of Brandenburg - -	9	3.2
Of Sweden and Denmark, each -	9	3.2
Of Poland - - -	9	2.1
Of Hungary - -	9	3.6
Of Tranſylvania - -	8	11.6
The double ducats of Hungary, Caſtile, Portugal, Venice, Florence, and Genoa, each	18	7.7
Single ducats of the ſame places -	9	3.8
Double ducats of ſeveral forms in Germany	18	4
Single ducats of the ſame places -	9	2
Of Beſancon and Zurich - -	9	3.2
Of Barbary - -	9	3.5

Silver ducats.

	s.	d.
Ducat, or cruſado of Portugal, is worth	2	10. 3
The old ducat of Venice -	3	4.5
The half ducat of ditto - -	1	8.2
The ducat de banco of Naples -	3	4.4
The half ditto - - -	1	8.2
The ducat of Florence and Leghorn	5	4.6

DUCAT, is alſo a money of accompt in ſeveral cities of Italy; as at Naples, Venice, and Bergamo, being of the ſame value as the ſilver coin.

DUCATOON. A gold coin ſtruck and current in Holland, worth 20 guilders, or 1 l. 15 s. ſterling.

DUCATOON, is alſo a ſilver coin, ſtruck for the moſt part in Italy. There are likewiſe ſilver ducatoons of Flanders, and Holland; as alſo others of the Prince of Orange: all which are much about the ſame weight and fineneſs, weighing one ounce one pennyweight.

The ſilver ducatoon of Flanders is worth 5 s. 6 d. .15 ſterling; of Holland 5 s. 5 d. .69; of Cologne 5 s. 5 d. .2; and of Savoy 5 s. 3 d.

DUCATOON, is alſo a name in Holland for the pieces of 3 guilders, whereof there are two ſorts; the old worth 63 ſtivers, or 5 s. 5 ½ d. ſterling; and the new worth 60 ſtivers, or 5 s. 2 d. ſterling: theſe laſt having for diminutions halfs, thirds, and fourths; and were almoſt all coined from the bullion brought from England.

DUCK, or *Holland's Duck*, is a kind of Dutch ſail-cloth; the piece or bolt containing uſually about 28 ells Engliſh.

DUCKING, is a puniſhment for ſeamen; who are thrown into the ſea from the top of the yard of the main-maſt ſeveral times, according to the quality of their offence; and ſometimes a cannon-ball is faſtened to their feet, to make them fall with more rapidity. There is alſo a kind of dry-ducking, wherein the patient is only ſuſpended by a rope, a few yards above the ſurface of the water, which is a ſpecies of ſtrapada; and in both caſes the puniſhment is uſually made public by the diſcharge of a cannon.

DUE. What remains unpaid of a debt; alſo the right or property of a perſon for work done; likewiſe the fee or reward to be given to public officers, as thoſe of cuſtoms.

DUERO, or *Duro*. A river of Portugal, riſing in the N. E. of Old Caſtile in Spain, and running from E. to W. through that province by Valladolid: it then croſſes the province of Leon, paſſing by Toro and Zamora; and entering Portugal at Miranda, runs S. dividing the kingdoms of Spain and Portugal; then, turning W. croſſes Portugal, and falls into the Atlantic ocean at Oporto.

DUN. A ſort of brown colour.

DUN, in trade, is to teaze, or frequently go after a perſon for a debt.

DUNDALK. A port-town of Ireland, in the county of Lowth, and province of Leinſter, ſituated in 6 deg. 40 min. of E. lon. and 54 deg. 5 min. of N. lat. on a bay of the Iriſh ſea, to which it gives its name. See *Ireland*.

DUNG. A ſmall Perſian weight; 3600 dungs, or thereabouts, making the batman of Tauris, or 7 lb. Engliſh avoirdupoiſe; and near 7200 dungs make the batman of Chahi, or 13 lb. Engliſh avoirdupoiſe. See *Batman*.

DUNG, is likewiſe a ſmall ſilver coin ſtruck and current in Perſia, worth about 3 halfpence ſterling.

DUNG, is alſo ordure, filth, ſoil, or manure, ſo prepared that it is proper to lay or ſpread on the earth, to render it more fertile; being abſolutely neceſſary in agriculture and gardening.

DUNGARRES. White cotton cloths, or callicoes brought from Surat, the piece being 14 ells long, and ¾ broad.

DUNGARVAN. A port-town of the county of Waterford in Ireland, ſituated in 7 deg of W. lon. and 52 deg. of N. lat. on a bay of the ſame name.

DUNGENESS. A cape, or point of land, on the coaſt of Kent, 5 miles S. of Romney.

DUNKIRK. A port-town of the French Netherlands, ſituated in 2 deg. 20 min. of E. lon. and 56 deg. 36 min. of N. lat. on the Engliſh channel, at the mouth of the river Coln. See French *Netherlands*.

DUNNEGAL *Bay*, lies on the coaſt of Dunnegal in Ireland, ten miles N. of Baliſhannon.

DUNNOSE. A Cape on the S. coaſt of the Iſle of Wight.

DUODECIMO. A thing divided into 12 parts; as a ſheet of paper into 12 leaves, from whence this kind of books are named.

DUPLICATE. The exact copy or counterpart of a letter, or writing.

DURAZZO. A port-town of Turky, in the province of Albania, ſituated on the E. ſide of the gulph of Venice, in 20 deg. 10 min. of E. lon. and 41 deg. 37 min. of N. lat.

DURY-AGRA. A ſtriped blue and white cotton, brought from the Eaſt Indies; 11 ells in length, and half an ell in breadth.

DUST. The fine powder that any gum or herb is reduced to when dry and pulveriſed.

Lead DUST. See *Lead*.

DUTCH *Republic*, *Dutch America*, and *Dutch Iſlands*. See *United* Provinces.

DUTCH *companies of Trade*. See *Eaſt* India Company, *Weſt* India company, *North* company, and *Turky* company.

DUTCH *Netherlands*. See *Netherlands*.

DUTY, in policy and commerce, an impoſt or tax, laid by authority of a prince, or ſtate, on merchandiſes, and commodities, either exported from their own country, imported from abroad, or conſumed at home, towards ſupporting the expences of the government. The duties on various commodities are infinite: but the principal are thoſe of exportation and importation, paid on the bringing in, or carrying out, of the ſeveral kinds of goods, animals, and even perſons; agreeable to the tariffs ſettled between the reſpective nations. See *Cuſtoms* and *Exciſe*.

It is neceſſary that duties ſhould be levied for the maintenance of government; but then they ſhould be laid as tenderly as poſſible upon the articles of trade; and the labour of working people. Let it be conſidered, that it would be to no purpoſe for the rich and great men to ſay, that they have no obligation to thoſe who labour for them, becauſe their particular intereſt puts them in motion. This is true; but is their work therefore of leſs advantage to the ſuperior claſs? God, to whom only it belongs to produce good from evil itſelf, makes even uſe of the avarice of ſome men for the benefit of others. It is with this view providence has eſtabliſhed ſo wonderful a diverſity of conditions among men, and has diſtributed the goods of life with ſo prodigious an inequality. If all men were eaſy and opulent in their fortunes, who would give himſelf the trouble to till the earth, to dig in the mine, or to croſs the ſeas? Poverty, or avarice, charge themſelves with theſe laborious but uſeful toils. From whence it is manifeſt, that all mankind, rich or poor, powerful or impotent, kings or ſubjects, have a mutual dependance on each other for the demands of life; the poor not being able to live without the fortunes of the rich, nor the rich without the labour of the poor: but it is commerce, ſubſiſting from theſe different intereſts, which ſupplies mankind with all their neceſſities, and at the ſame time with all their conveniences: therefore it ſhould never be checked, eſpecially in a country entirely dependant upon trade, by heavy duties and impoſitions: for trade is certainly one of the parts of government, capable of contributing the moſt to the riches and plenty of a ſtate; and therefore merits the particular attention of princes and their miniſters.

A King who truly loves his ſubjects, and endeavours to plant abundance in his dominions, will ſpare no pains to make traffic flouriſh, and ſucceed in them without difficulty. It is a maxim generally received, that commerce demands only liberty and protection: liberty within wiſe reſtrictions, in not tying down ſuch as exerciſe it to the obſervance of inconvenient, burthenſome, and frequently uſeleſs regulations; protection in granting them all the ſupports they have occaſion for. An intelligent and well inclined prince will intermeddle only in commerce, to baniſh fraud and bad arts from it by ſeverity, and will leave all the profit to his ſubjects, who have the trouble of it; well convinced that he ſhall find ſufficient advantage from it, by the great riches it will bring into his dominions.

In treaties of commerce, whenever they are negotiated between Great Britain and other nations, care ſhould be taken that the duties and cuſtoms ſhould be reciprocal in both countries, and ſuch at leaſt as may make the Britiſh exports equal the imports from the other nation; ſo that a balance of money ſhould not be iſſued out of Great Britain to pay for the goods and merchandiſes of other countries; and that no greater numbers of landholders and manufacturers ſhould be deprived of their revenues ariſing from the product of the lands, and the labour of the people, by foreign importations, than in other countries by Britiſh exportations to thoſe countries.

We may perceive, that the ſame rules which help us to

judge by what trade we gain or loſe, will direct us what duties are neceſſary, and what treaties of commerce are gainful, or otherwiſe; and may be ſhortly ſummed up in this manner. If a treaty of commerce is likely to add to our capital ſtock; if it ſhall add to the rents of our landed gentlemen; if it ſhall increaſe the employments and ſubſtance of the poor; it muſt of courſe be beneficial. On the contrary, if it does not make the cuſtoms and duties reciprocal in both countries; if it diminiſhes our gold and ſilver; if it ſhall prove a means of introducing the product of other countries to interfere with our own; if it ſhall leſſen the demand of our own manufactures at our own or foreign markets, and bring our manufacturers to the pariſh and lands for their ſubſiſtence; ſuch a treaty muſt be pernicious to the intereſt of the kingdom, by laying duties on foreign goods erroneouſly.

The increaſe and ſupport of our foreign trade was the chief care of our wiſe anceſtors; from whence has aroſe all thoſe animal ſpirits, thoſe ſprings of riches, which have enabled us to ſpend ſo many millions for the preſervation of our liberties; and we ought rather to take meaſures for the ſake of our poſterity, than ſuffer any branches of our trade to be loaded with exceſſive duties, which muſt infallibly bring on the greateſt grievance to the Britiſh nation.

But how greatly have the Britiſh merchants and manufacturers, owners of ſhips and freighters, been burthened with high duties of cuſtoms and exciſes, is evident to any perſon who conſiders what duties were exiſting before the revolution, which is repreſented under the article of *Cuſtoms*: but it is ſtrange that the inſeparable affinity there is between the landed and the trading intereſt was never duly conſidered, when it is even a demonſtration, that it cannot go ill with trade but land will fall, nor ill with land but trade will feel it. They mutually furniſh each other with all the meaſures and conveniencies of life: the land ſupplies the traders with corn, cattle, wool, and generally all the materials either for their ſubſiſtance or their riches: the traders in return provide the gentlemen with houſes, cloaths, and many other things, without which their life at leaſt would be uncomfortable: yet theſe very intereſts have been always claſhing: the traders conſidered every high duty upon any part of their trade, as proceeding from jealouſy in the gentlemen of their rivalling them too faſt, and they were often enemies on this account: the gentlemen, on the other hand, thought they could never lay too great a burthen upon trade; though in every thing they eat, drink, and wear, they are ſure to bear the greateſt part themſelves.

It was long ago ſaid, by Doctor Davenant, that many in their debates and councils, ſeem to have no other view and aim, than to promote the immediate intereſt of land; and are always more warm in the concerns of it, and more indifferent and careleſs in what relates to trade, than perhaps is conſiſtent with the welfare and ſafety of this kingdom. Such perſons ſhould conſider, that when a nation is running to decay and ruin, the merchant and monied man will be ſure to ſtarve laſt. Obſerve it where they will, the decays that come upon, and bring ruin to any country, conſtantly firſt fall upon land; and though the country gentleman, (who, as Mr. Locke obſerves, uſually ſecurely relies upon ſo much a year as was given at his marriage-ſettlement, and thinks his land an immoveable fund for ſuch an income,) be not very forward to think ſo; yet this, nevertheleſs, is an undoubted truth, that he is more concerned in trade, and ought to take a greater care that it be well managed and preſerved, than even the merchant himſelf: for he will certainly find, when a decay of trade has carried one part of our money away out of the kingdom, and the other is kept in the hands of the merchants and tradeſmen, that no laws he can make, nor any little arts of ſhifting property among ourſelves, will bring it back to him again; but his rents will fall, and his income every day leſſen, till general induſtry and frugality, joined to a well-ordered trade, ſhall reſtore to the kingdom the riches and wealth it had formerly.

Theſe duties may be divided into cuſtoms, exciſes, and inland duties.

Cuſtoms, are thoſe duties which are paid by the importer of any commodities, and are under the management of the commiſſioners of the cuſtoms. See *Cuſtoms*.

Exciſes, are thoſe duties which are paid by the manufacturers, or retailers, of any commodities; being under the management of the commiſſioners, and governed by the laws of exciſe: or under particular commiſſioners armed with the powers of exciſe. See *Exciſe*.

Inland duties are thoſe which are paid by the retailers of any commodities; but are under the management of particular boards of commiſſioners, with officers appointed for collecting them.

The duties, or chief branches of the revenues, according to a computation delivered to the houſe of commons at the beginning of the revolution, ſtood clear of all charges in the annual collection as follows.

The tonnage and poundage, including the wood-farm, coal-farm, and ſalt-farm, was computed at - - -	600,000l.
The exciſe on beer and ale - -	666,383
The hearth-money, at 2 s. on every hearth, about - - -	245,000
The poſt-office, about - -	65,000
Impoſition upon wines and vinegar, about	10,000
New impoſitions upon wine and vinegar, about	172,901
Duty on tobacco and ſugar - -	148,861
Duty on French linen, brandy, ſilk, &c. produced - - - -	93,710
Small branches, as ſeizures, wine-licences, &c. about - - - -	60,000
In all	2,061,855

To which may be added the coinage duty, being 10 s. a ton on wine, vinegar, cyder, or beer, and 20 s. a ton on brandy-wines, or ſtrong waters imported. Alſo a duty of 1 s. 6 d. *per* chaldron or ton of coals imported into London, beſides all other duties then payable; which was appropriated to the finiſhing of St. Paul's church in London.

But ſoon after the revolution, the nation paid dearly to its protector; a war was commenced, money was wanted, and for raiſing it new burthens were thrown upon our trade and manufactures: thus, for one inſtance only, in 1696, a bill was rejected for laying a new duty of 12 l. 12 s. *per* ton upon all wines to be paid by the retailer; and, inſtead thereof, an additional ſubſidy of tonnage and poundage was impoſed, whereby the rich appear to have made it their choice to load our trade and manufactures with additional duties, difficulties, and dangers, rather than load a branch of luxury with any new duty: and though this duty was wholly drawn back on exportation, yet the paying or bonding it diſtreſſed the credit of the merchant, and prevented his extending his trade ſo far as he might otherwiſe have done; beſides, as he muſt export within a certain time, it often prevented his being able to wait for a proper market.

The public revenue, during the reign of King Will. III. from the 5th of November 1688 to Lady-day 1702, produced as follows:

Cuſtoms - - - -	13,296,833l.
Exciſe - - - - -	13,649,328
Hearth-money, &c. - - -	2,008,597
Land-taxes - - -	19,174,059
Polls - - - -	2,557,649
Promiſcuous taxes - - -	7,531,305
Divers other receipts - -	480,915
In all	58,698,686

It ſhould be obſerved, that of the eight branches of the revenue, or duties, ſubſiſting at the revolution, four only were conſiderable, or ſuch as could load the merchant with any great advance of money upon importation or exportation: for the coinage-duty, coal-duty of London, exciſe on foreign liquors imported, and the duties of prizage and butlerage were ſo inconſiderable, that they were hardly worth notice: but the many new branches added during the reign of King William, eſpecially the two impoſ-

impoſts of 1690 and 1692, made the buſineſs of a merchant a perfect myſtery in Great Britain, and put every merchant to ſuch an advance of money for paying the duties upon importation, that a much greater ſtock of ready money was required for carrying on an extenſive commerce, than was formerly neceſſary for the ſame purpoſe. It may be ſaid, that with reſpect to moſt of theſe duties, the merchant might give bond for the duty, which bond was to be vacated upon exportation: but as merchants are allowed at the rate of 10 *per cent.* for prompt payment, no merchant will ever give bond for the duties, if he has money of his own, or can raiſe it upon his credit at legal intereſt, for making prompt payment; therefore, the giving bond for the duty muſt be always an impeachment of a merchant's credit; and beſides, as he muſt have one or two friends to join with him in the bond, it ſubjects him to the inconvenience of troubling his friends, and the danger of being obliged to become ſecurity to others; for he who aſks muſt grant in his turn; and no man who ſtands ſecurity for others can ever be ſure of his own circumſtances, becauſe an extent may ſtrip him of all his property, when from his books he juſtly ſuppoſes himſelf to be in affluence.

Thus it is evident, that after theſe heavy duties were laid upon importation, no cautious dealer could carry on ſuch extenſive commerce as he might have done formerly upon the ſame ſtock of ready money. But to render this more plain, ſuppoſe a merchant has advice from a correſpondent in one foreign country, that a certain ſort of commodity is then very cheap in that country; and has advice, at the ſame time, from a correſpondent in another foreign country, that the ſame ſort of commodity is then, or ſoon will be, very dear in this country; ſo that 20 *per cent.* profit may be made in a year or two, by purchaſing in one country, and ſending it to be ſold in another: and ſuppoſe, that the merchant who has theſe advices, has 10,000 l. ready money at command, and that he may import this commodity into Great Britain duty free: in theſe circumſtances, he will of courſe inveſt his whole 10,000 l. in the purchaſe of this commodity; and, by exporting it again, he will in a year or two add 2000 l. to his own, and conſequently to the national ſtock of the kingdom. But if he muſt pay at the rate of 5000 l. for duties upon importation, he can inveſt but 6600 l. of his money in the purchaſe of that commodity, and conſequently can add but 1320 l. either to his own ſtock, or the ſtock of the nation; becauſe he muſt reſerve money in his hands for paying the duties on importation.

Theſe duties muſt, therefore, cramp and diminiſh the trade of every individual; and, as the public conſiſts of the collective body of individuals, they muſt conſequently cramp and diminiſh the trade of the nation. But this of laying high duties on importation, was not the only injury done to trade; for by making thoſe duties a fund for borrowing money at intereſt, we diminiſhed the national ſtock of money ready to be employed in trade, as we thereby furniſhed our rich monied men with an opportunity to get an intereſt for their money, without lending to merchants and others employed in trade. To illuſtrate this, ſuppoſe the above mentioned merchant to have no ready money of his own, beſides what is neceſſary for carrying on the projects of trade he is already engaged in; but that he can borrow 10,000 l. from a perſon who will be glad to let it lie in his hands for two years or more at common intereſt: in this caſe he will certainly borrow the money, and take advantage of the advice he has received; becauſe, at the end of two years, he can repay the principal with intereſt, and put 1000 l. clear into his own pocket, by which means he adds 1000 l. to the ſtock of the lender, 1000 l. to his own, and conſequently 2000 l. to the ſtock of the nation: but if the public funds have abſorbed the money of all the rich monied men, ſo that none can be borrowed for any long certain term upon perſonal credit, he can make no advantage of the advice he has received, and the nation thereby loſes the opportunity of having 2000 l. added to the ſtock of ready money. Theſe duties, at the end of the reign of Queen Anne, were greatly increaſed, as is repreſented under the article of cuſtoms; to which alſo may be added, many additional branches of exciſe; and alſo the following inland duties. See *Cuſtoms* and *Exciſe*.

1. The poſt-office revenue, or duty on letters by the poſt, firſt granted in the 12th year of King Cha. II. for ever; which is a duty of a great many kinds, according to the ſize of the letter, and the place it comes from, or is ſent to; the loweſt for a ſingle letter being 2 d. and the higheſt for packets being 6 s. *per* ounce. See *Poſt-office*, and *Letter*.

2. The ſmall branches and caſual profits ariſing to the crown by wine-licences, ſeizures, and other articles, which have been immemorially poſſeſſed by the crown, or granted by ſeveral ſtatutes.

3. The firſt ſtamp duty, granted in the 2d year of King Will. and Mary, and by the 2d of Q. Anne, continued to the 1ſt of Auguſt 1807, being a duty of different kinds upon every ſkin, ſheet, or piece of vellum, parchment, or paper, on which is written any authentic document, or law proceeding; except bills of exchange, and a few others.

4. The duty on hackney coaches and chairs, granted in the 2d year of King William and Queen Mary, being a tax of 5 s. *per* week on each of 800 hackney coaches, and 10 s. a year on each of 400 hackney chairs within the bills of mortality.

5. The duty on houſes and windows, granted in the 3d year of King William, and continued for ever; being a tax of 2 s. a year on every inhabited houſe, except cottages; and on every ſuch houſe having ten windows or more, and under twenty, 6 s. a year; and on every houſe having twenty windows or more, 10 s. a year.

6. An additional duty on houſes granted in the 3d year of Q. Anne; being an additional duty of 10 s. on every inhabited houſe having twenty windows or more, and under thirty; and an additional 20 s. on every houſe having thirty windows or more; which addition was granted for thirty-two years from Michaelmas 1710.

7. The duty on hawkers and pedlars, granted in the 1ſt year of Will. III. and by the 3d of Q. Anne continued to Midſummer 1807; being a tax of four pounds a year on every hawker or pedlar, and 4 l. a year more for every horſe, or beaſt, bearing or drawing burden, with which he travels.

8. A ſecond-ſtamp duty, at firſt granted for ever in the 2d year of William III. being an additional ſtamp duty, in moſt reſpects the ſame with the former.

9. The apprentice-duty, at firſt granted for five years by the 3d of Q. Anne, being a duty of 6 d. in the pound, for all ſums paid with cletks or apprentices; and if the ſum to be paid, or agreed to be paid, exceed 50 l. the tax is then 1 s. in the pound; but apprentices put out by the pariſh or by any public charity, are excepted.

10. A third ſtamp duty, granted by the 4th of Queen Anne for 32 years, from the 1ſt of Auguſt 1711; being a ſtamp duty on ſome things not before charged, as debentures 8 d. bills of lading 4 d. almanacks on one ſheet 1 d. if on more 2 d. a year; wine-licences 4 s. ale-licences 1 s. a year.

11. The duty on cards and dice, made or imported, granted by the ſame act for 32 years, from June 11th, 1711; being a duty of 6 d. a pack on cards, and 5 s. a pair for dice.

12. A fourth ſtamp-duty, firſt granted for 32 years from Auguſt 1. 1712, by the 4th of Anne; being a new duty of ſeveral kinds upon writings not before charged; as alſo upon papers, or pamphlets, and advertiſements; with an additional duty of 2 s. and 3 d. on every transfer of ſtock, in any company.

13. A fifth ſtamp-duty, firſt granted as before by the 4th of Queen Anne, being an additional ſtamp duty of 2 s. 4 d. upon every policy of inſurance whatſoever.

14. A ſixth ſtamp-duty, firſt granted for 32 years, from Auguſt 2. 1714, by the 4th of Queen Anne, being an additional ſtamp-duty of five different kinds, upon a great variety of deeds and writings therein mentioned.

15. The civil liſt tax; being a tax of 35,000 l. on the civil liſt revenue.

16. The land-tax; for though this tax was never for above a year at a time; yet as it was annually granted, and was ſubſiſting at the death of Queen Anne, it may be

be reckoned among our inland duties; and, perhaps, we may be ſubjected to it as long as we are liable to any tax whatever: the land-tax, when at 2 s. in the pound, producing about a million annually.

During the reigns of King Geo. I. and King George II. the following inland duties were added.

1. The 6 d. *per* pound on penſions, &c. which is mortgaged, and perhaps for ever.

2. The new ſtamp-duty on law proceedings, continued for ever.

3. The duty on licences to retail ſpirituous liquors, granted for ever.

4. The duty on all coaches, &c. granted for ever; and which, as it is charged on a branch of luxury, ought never to be repealed.

There are alſo duties payable in the Britiſh plantations in America, for all ſhips coming there, to take in the commodities of thoſe plantations; which duties are payable when bond has not been given to bring the ſame to Great Britain only; but with intent to carry the ſame to ſome other Britiſh plantation; and are as follows.

	l.	s.	d.
Sugar white, the hundred weight -	0	5	0
Sugar brown, and muſcavadoes, the hundred weight - - - - -	0	1	6
Tobacco the pound - - - -	0	0	1
Cotton wool the pound - - -	0	0	$0\frac{1}{2}$
Indico the pound - - - -	0	0	2
Ginger, the hundred weight - -	0	1	0
Logwood the hundred weight - -	5	0	0
Fuſtick, and all other dying wood, the hundred weight - - - - -	0	0	6
Cocoa nuts the pound - -	0	0	1

There are likewiſe the following duties to be paid on the following commodities, of the product of any plantation in America, not in the poſſeſſion of his Britannic Majeſty, imported into any of the Britiſh plantations in America; being to be paid in money of Great Britain, according to the value of 5 s. 6 d. *per* ounce in ſilver.

	l.	s.	d.
Rum, or ſpirits, the gallon - -	0	0	9
Molaſſes, or ſyrups, the gallon - -	0	0	6
Sugar, and paneles, the hundred weight	0	5	0

And ſo in proportion, for a greater or leſſer quantity, to be paid down in ready money, before landing. See *Plantations*.

When we conſider, that many of theſe cuſtoms, exciſes, and inland duties affect the neceſſaries, or at leaſt the indiſpenſible conveniencies of life, as well as many of the materials neceſſary for working up our manufactures; and that when a tax is laid upon any commodity, the dealers in that commodity always do, and indeed muſt raiſe the price a great deal more than the tax laid upon it, to make good the intereſt of the money they advance for paying that tax, and the hazard they run of loſing it by bad debts; we cannot be at a loſs to find the true cauſe of the increaſe of wages, and the advanced price of all manufactures in Great Britain, without maliciouſly imputing it to the idleneſs or extravagance of our people; for the labourer muſt live by his wages, and he that employs him by his profits; and if we increaſe the neceſſary expence of both by taxes, the former muſt have higher wages, and the latter greater profits; otherwiſe the one muſt ſtarve, and the other become a bankrupt.

However, we ſhould alſo conſider, that theſe taxes in the end fall on the conſumer: for the merchant firſt pays the duty; then he pays himſelf intereſt for the money he advances for that duty; then he pays fees ordinary and extraordinary; next he pays himſelf intereſt on theſe; he then ſells to the wholeſale man on credit, and pays himſelf intereſt on that credit: the wholeſale man, conſidering all this, raiſes his price on the retailer accordingly, and that retailer on the conſumer in courſe: ſo that the conſumer pays for duty and credit on an average at leaſt 60 *per cent.* on every commodity he conſumes; which has occaſioned ſeveral ſchemes for reducing the preſent multiplicity of taxes to one general tax, to be paid by the conſumer. See *Tax*.

DUYIVELAND, or *Diveland*, one of the iſlands of Zeland, in the United Provinces, E. of the iſland of Schonen, from which it is divided by a narrow channel.

DUYT. A ſmall copper coin, ſtruck and current in Holland, eight of which make the ſtiver, or about $1\frac{1}{10}$ d. ſterling.

DWARF-*trees*. A ſort of diminutive fruit-trees, frequently planted in the borders of gardens; thus called from the lowneſs of their ſtature: for they ſeldom grow above 4 or 5 feet high, and have uſually a hoop tied within the middle of the branches, to make them ſpread around.

Dwarf-trees are of ſpecial advantage for table fruit, whether pears, apples, plums, or cherries; the fruit they yield being uſually the fineſt and beſt; and as ſuch they make a conſiderable article in the gardeners province.

DWINA. A river which gives name to the province of Dwina in Ruſſia; and, running through it from S. to N. diſcharges itſelf into the White ſea, a little below Archangel.

DWINA, is alſo a river of Lithuania, in Poland, which, running N. W. divides Livonia from Courland, and falls into the Baltic ſea, at the Dunamunder fort, a little below Riga.

DYE, or *Dying*, the art or act of tinging cloth, ſtuff, ſilk, or other matter, with a permanent colour, which penetrates the ſubſtance thereof: or it may more particularly defined to be the art of colouring wool, linen, cotton, ſilk, hair, feathers, horn, leather, and the threads and webs thereof, with woods, roots, herbs, ſeeds, and leaves, by means of ſalts, linens, lixiviums, waters, heats, fermentations, macerations, and other proceſſes. See *Drug*.

Upon the art or myſtery of dying in ſilk and wool, a nation is dependent for one of the moſt eſſential recommendations of its woven goods, as what procures them the readieſt vent, both at home and abroad: for it will turn to ſmall account, that the materials are good, and well wrought up, unleſs the mixture and colours be anſwerable, and grateful to the eye of the purchaſer: becauſe it may be ſaid, that a piece of cloth, or any other ſort of goods ill dyed, is equally the ſame as if it was very much ſtained. The importance of a good dye is confirmed by experience: for the great eſteem and univerſal market, which the ſilks of Lyons have obtained in all the four quarters of the world, proceed more from the livelineſs of the colours, and a happy fancy in diſpoſing them, than all other things put together. Upon theſe conſiderations, the dyers have received conſiderable encouragement in moſt countries, by having a certain portion of dying ingredients exempted from all duties; which is alſo practiſed in England.

DYING, with regard to the manner of applying the colours, is divided into hot and cold.

DYING *hot*, is that wherein the liquors and ingredients are boiled, before the cloth is dipped therein; or even where the cloths themſelves are boiled in the dye.

DYING *cold*, is where the ingredients are diſſolved cold; or at leaſt ſuffered to grow cold before the ſtuffs are put in them.

The art of dying is of great antiquity, as appears from the traces of it in the oldeſt ſacred, as well as profane writers. The honour of the invention is attributed to the Tyrians; tho' what leſſens the merit of it is, that it is ſaid to have owed its origin to chance. The juices of certain fruits and leaves accidentally cruſhed, are ſuppoſed to have furniſhed the firſt hint: Pliny affirms, that, even in his time, the Gauls made uſe of no other dyes. Coloured earths, and minerals waſhed and ſoaked with rain, gave the next dying materials: but purple, an animal juice, found in a ſhell-fiſh, called murex, conchylium, and purpura, ſeems, from hiſtory, to have been prior to any of them. This, indeed, was reſerved for the uſe of kings and princes; for private perſons were forbidden, by law, to wear the leaſt ſcrap of it. The diſcovery of its tinging quality is ſaid to be taken from a dog, who having caught one of the purple fiſhes among the rocks, and eaten it up, ſtained his mouth and beard with the precious liquor; which ſtruck the fancy of a Tyrian nymph ſo ſtrongly, that ſhe refuſed her lover Hercules any favours till he had brought her a mantle of the ſame colour.

After

After the Phœnicians, the Sardinians ſeem to have arrived at the greateſt perfection in the dying art: inſomuch, that βαμμα Σαρδίνιακε, Sardinian dye, paſſed into a proverb among the Greeks. Till the time of Alexander no other ſort of dye is to be found in uſe, but purple and ſcarlet. It was under the ſucceſſors of that monarch that the Greeks applied themſelves to the other colours; when they invented, or at leaſt perfected, blue, yellow, and green; for the ancient purple has been long loſt; but the perfection to which the moderns have carried the other colours abundantly indemnify them of the loſs: in which the French, under the auſpices of that excellent miniſter Mr. Colbert, ſeem to have outſtripped moſt of their neighbours. See *Gobelins*.

There are three things requiſite, and demanded by the Greek chemiſts for a good dye; 1ſt, Opening or rariſying of the body to be dyed; to diſpoſe it to imbibe the colour. 2d, The tincture, or the dye itſelf, which was, by the Romans, called *alligatio*. 3d, The binding, or fixing of the colour, to prevent its fading, or being diſcharged. Some add a fourth condition, by the Latins called *lumen*; by the Engliſh luſtre, or brightneſs.

Among ſome, theſe three were done ſeverally, at three different operations, in different liquors, or decoctions: by the firſt, the ſtuff was prepared to receive the dye; by the ſecond, the deſired colour was given it; and by the 3d, the colour was fixed on it: but others performed all three at once, with one decoction and one dip.

The baſis of a juſt hiſtory of dying, muſt be a theory of light and colours; but it may be obſerved, that two things are chiefly aimed at in the enquiry of colours; 1ſt, to increaſe the *materia tinctoria*; 2d, to fix the known colours.—In order to theſe it may be remembered, that ſome colours are apparent; as thoſe of flowers, the juices of fruits, and the ſanies of animals: others are latent, and only diſcovered by the effects which the ſeveral ſpecies of ſalts and other things have on them.

DYING-*ingredients*, are beſt reduced under two heads: 1ſt, Thoſe which properly give the colour. 2d, And thoſe which are uſed to prepare the ſtuffs for better taking the dye, and to heighten the luſtre of the colours.

The colouring ingredients are of three ſorts; blue, yellow, and red. To the firſt ſort belong indigo, woad, weld, wood-wax, and logwood; to the ſecond fuſtic; to the third madder, brazil, cochineel, kermes, ſafflower, and anders. To which may be added annotto, and young fuſtic for orange colours; laſtly wood-ſoot.

For the colouring ingredients they are, 1ſt, Iron and ſteel, or what is made from them, which are uſed in dying blacks; tho' how they contribute thereto is not ſo obvious: it is known that green oaken boards become black by the affriction of a ſaw; a green four apple, cut with a knife, turns of the ſame colour; the white greaſe wherewith the wheels of coaches are anointed, becomes likewiſe black, by means of the iron boxes wherewith the nave is lined, and the friction between the nave and axle-tree; and that an oaken ſtick becomes black, by a violent friction againſt other wood, in a turning lath; and the black colour on earthen ware is given with ſcalings of iron vitrified. From all which it ſeems to follow, that the buſineſs of blacking lies in iron, and particularly in its uſtulation aud affriction. Be this as it will, copperas, the moſt uſual ingredient for dying black, is the ſalt of pyrites, wherewith old iron is incorporated; and wherever this is uſed, ſome of the aſtringents are to accompany it. 2. Red-wood chopped, and ground in a mill, is uſed for dying cloth, rugs, and the like of the coarſer ſort: its tincture, which is a ſort of brick-colour, being got out by long boiling it with alls, and the cloth along with it; and it ſtands better than brazil. 3. Brazil, chopped alſo, and ground, dyes a pink colour, or carnation, neareſt approaching cochineel; it is uſed with alum: with pot-aſhes it alſo ſerves for purples; but eaſily ſtains. 4. Madder gives a colour near approaching the bow dye, or new ſcarlet; and thoſe called baſtard-ſcarlets are dyed with it. It endures much boiling, and is uſed both with alum and argol, and holds well: the brighteſt dyes with madder, are made by overdying the ſtuff, and then deſtroying part of it by back-

boiling in argol; but it muſt be uſed with bran-water inſtead of white liquor. 5. Cochineel, uſed with bran-liquor in a pewter furnace, with aqua fortis, gives the dye, called, tho' improperly, ſcarlet in grain; but any acid takes off the intenſe redneſs of this colour, and turns it towards an orange, or flame colour; though with this colour, the Spaniſh leather and wool uſed by ladies are dyed. 6. Annotto gives an orange-colour, eſpecially to ſilks, linens, and cottons; being uſed with pot-aſhes, but does not penetrate cloth. 7. Weld, by the help of pot-aſhes yields a deep lemon-colour; tho' it is uſed to give all ſorts of yellows. 8. Wood-wax, or green wood, called alſo the dyers weed, has the ſame effect as weld; tho' its uſe is chiefly confined to coarſe cloths, being ſet with pot-aſhes, or urine. 9. Fuſtic, which is of two ſorts, young and old; the former, chopped and ground, yields a kind of orange-colour: the latter, a hair colour, diſtant ſeveral degrees of yellow from the former: it ſpends with or without ſalts, works either hot or cold, and holds firm. 10. Wood-ſoot, containing not only a colour, but a ſalt, needs nothing to extract its dye, or make it ſtrike on the ſtuff: the natural colour it yields is that of honey; but it is the foundation of many other colours on wool and cloth only. 11. Woad, ground or chopped, with a mill for the purpoſe, is made up into balls; which being broken and ſtrewed on lime, or urine, is uſed with pot aſhes, or ſea-weed, and gives a laſting blue: the lime, or calk, accelerates the fermentation of the woad, which, in three or four days, will work like a guile of beer, and be covered with a greeniſh froth or flower. An intenſe woad-colour is almoſt black; that is, of a damſon colour: but it is the foundation of ſo many colours, in its different degrees, or ſhades, that the dyers have a ſcale to compute the lightneſs and depth of this colour. 12. Indigo is of the like nature, and uſed for the ſame purpoſe as woad, only that it is ſtronger. 13. Logwood, chopped and ground, yields a purpliſh blue, and may be uſed with alum: formerly it was of ill repute, as a moſt falſe and fading colour; but, ſince it has been uſed with galls, it is leſs complained of.

The non-colouring ingredients are, certain aſtringent or binding materials; as galls, ſumac, alder bark, pomegranate-peel, walnut-rinds and roots, ſapling, and crab-tree bark. Certain ſalts; as alum, argol, ſalt-petre, ſal armoniac, pot-aſhes, lime, and urine. Liquors; as well-water, river-water, aqua vitæ, vinegar, lemon-juice, aqua fortis, honey, and molaſſes. Gums; as tragacanth, arabic, maſtic, and ſanguis draconis. Smectics, and abſterſives; as ſoap, fuller's earth, linſeed oil, and ox-gall. Metals; as ſteel-filings, ſlipp, and pewter; to which may be added copperas, verdegreaſe, antimony, litharge, and arſenic. Laſtly, bran, wheat-flower, yolks of eggs, leaven, cummin-ſeed, fenugreek ſeed, agaric, ſenna, and leaves.

Of moſt of theſe ingredients ſome account may be found under their reſpective articles; but, with regard to their uſe and effect in dying, it will be neceſſary to conſider them more particularly.

Among the non-colouring drugs brought from the mineral kingdom, are, 1ſt, Copperas, ſteel filings, and ſlipp, or the ſtuff found in the troughs of old grind-ſtones, whereon edge tools have been ground, which are uſed for all true, or Spaniſh blacks; though not for the Flanders blacks. 2. Pewter diſſolved in aqua fortis, uſed for the new ſcarlet, or bow-dye. 3 Litharge, though not owned or allowed, is uſed to add weight to dyed ſilks. 4. Antimony uſed chiefly for the ſame purpoſe; tho' it alſo contains a tingent ſulphur, which, by precipitation, affords a great variety of colours. 5. Arſenic uſed in dying crimſon, on pretence of giving a luſtre. 6. Verdegreaſe, uſed by linen dyers in their yellow and green colours. 7. Alum, much uſed, but with what intent is not agreed on; whether to render water a proper menſtruum to extract the tingent particles of certain hard drugs, or to ſcower the ſordes, which may interpoſe between the ſtuff and the dye, and hinder their due adheſion? Or to intenerate the hairs of the wool, and hair-ſtuffs, that they may better imbibe their colours? Or to contribute to the colour itſelf, as copperas does to galls in making blacks,

or juice of lemons to cochineel, or aqua fortis impregnated with pewter in the bow-dye; or, which ſeems moſt probable, to ſerve as a vinculum between the cloth and the colour, as clammy oils, and gum waters, do in painting; alum being a ſubſtance whoſe aculeated particles, diſſolved with hot liquors, will enter the pores of ſtuffs, and on which the particles of dying drugs will catch: tho' it may alſo ſerve another uſe, namely, to dry up certain particles, which diſagreed with the colour to be ſuperinduced: to which add, that it may alſo ſerve to brighten a colour, by incruſtating the ſtuff to be dyed with its cryſtals, on which the dye coming to be applied, has a finer effect than if it were applied on a ſcabrous matter, ſuch as is an unalumed cloth? 8. Bran, and bran-water, whoſe flower, entering the pores of the ſtuff, levigates its ſurface, and thus renders the colour laid on it more beautiful; much like the woods to be gilded, which are firſt ſmoothened over with white colours. 9. Salt-patre, uſed chiefly in aqua-fortis, in the bow-dye, to brighten colours by the boiling; for which purpoſe, 10thly, argol is more commonly uſed. 11. Lime, or calke, uſed in the working of blue fats.

Non-colouring ingredients of the animal kind, are, 1ſt, Honey. 2. Yolks of eggs. 3. Ox-gall: tho' theſe are only uſed by particular dyers, to ſcower, promote fermentation, and increaſe weight. 4. Stale urine, uſed as a lixivium to ſcower; as alſo to help the fermenting and heating of woad; though it is likewiſe uſed in the blue fats, inſtead of lime: in reality, as it diſcharges the yellow, wherewith blue, and moſt greens, are compounded, it is uſed to ſpend weld withal; yet it is known, that the urine, or old mud of piſſing places, will dye a well ſcowered piece of ſilver of a golden colour; it being with this that the Bath ſixpences and ſhillings are prepared, and not with Bath-water, as imagined by ſome people.

To the claſs of non-colouring ingredients may alſo be added water, by dyers called the white-liquor, which is of two ſorts; 1ſt, Well-water, uſed in reds, and in other colours wanting reſtringency, as well as in dying ſtuffs of a looſe contexture; as callicoes, fuſtians, and the ſeveral ſpecies of cottons; but it is bad for blues, and makes yellows and greens look ruſty. 2. River-water, ſofter and ſweeter than the former, and diſſolving ſoap better; uſed in moſt caſes, by the dyers, for waſhing and rinſing their cloths after dying. 3. Liquor, abſolutely ſo called, which is bran liquor, made of one part bran, and fine river-water, boiled an hour, and put in a leaden ciſtern to ſettle: four or five days in ſummer turn it too ſour, and unfit for uſe: its office is to contribute to the holding of the colour: it is known that ſtarch, which is only the flower of bran, makes a clinging paſte that will conglutinate paper, tho' not wood or metals. Accordingly, bran-liquors are uſed to mealy dying ſtuffs; as to madder, which is rendered clammy and glutinous by being boiled in bran-water, and thus made to ſtick better to the villi of the ſtuff dyed. 4. Gums, tragacanth, arabic, maſtic, and ſanguis draconis, are uſed in dying ſilk, chiefly to give it a gloſſineſs, which may make it ſeem finer, as well as ſtiffer; and to encreaſe the weight.

The dying materials are generally applied in decoctions made in water, more or leſs ſtrong, according to the occaſion; ſometimes by only dipping the ſtuff in the vat of dye; ſometimes by boiling it therein; and ſometimes by leaving it a day or more to ſteep: but alum, in dying ſilks, is always applied cold; in which ſtate alone it contributes to the brightneſs of the dye.

The art of DYING may be divided into as many branches as there are different colours to be communicated, and ſorts of different ſtuffs to be the ſubject of it.

DYING *of cloths, ſerges, ſtuffs, and other woollen manufactures.* For black, in cloths and ſtuffs of price, it is begun with a ſtrong decoction of woad and indigo, which give a deep blue; after which, the ſtuffs being boiled with alum, tartar, and pot-aſhes, are to be maddered with common madder, then dyed black with Aleppo galls, copperas, and ſumac, and finiſhed by back-boiling in weld. Scarlet is dyed with kermes and cochineel; with which may be alſo uſed agaric and arſenic. Crimſon, is given with cochineel, maſtic, aqua fortis, ſal armoniac, ſublimate, and ſpirit of wine. Violet-ſcarlet, purple, amaranth, and panſy-ſcarlets, are given with woad, cochineel, indigo, braziletto, brazil, and orchal. For common reds pure madder is uſed, without other ingredients. Crimſon reds, carnations, flame and peach-colours, are dyed according to their ſeveral hues, with cochineel mettle, without madder or the like. Crimſon red is prepared with Roman alum, and finiſhed with cochineel. Peach-colour, muſt be back-boiled a little with galls, copperas, or the like. Orange-aurora, or golden yellow, brick-colour, and onion-peel-colour, are given with weld and madder, tempered according to their reſpective ſhades. For blues, the darker are given with a ſtrong tincture of woad; the brighter with the ſame liquor, as it weakens in working. Dark-browns, minims, and tan-colours, are given with woad, weaker in decoction than for black, with alum and pot-aſhes; after which they are maddered higher than for black. For tan colours, a little cochineel is added. Pearl-colours are given with gall and copperas; ſome are begun with walnut-tree roots, and finiſhed with the former; though, to make them more ſerviceable, they are dipped in a weak tincture of cochineel. Greens, are begun with woad and finiſhed with weld. Pale-yellow, lemon-colour, and ſulphur-colour, are given with weld only. Olive colours of all degrees, are firſt put in green, and taken down again with ſoot, more or leſs, according to the ſhade required. Feulemort, hair-colour, muſk, and cinnamon-colour, are given with weld and madder. Nacarat, or bright orange-red, is given with weld and goats hair boiled with pot-aſhes: but fuſtic is forbid here, as a falſe colour.

DYING *of wools for tapeſtry*, is performed after the ſame manner as cloths; excepting blacks, which are only to be woaded, and then put in black, as above. Black wools, for cloths and ſerges, may be begun with walnut-tree root, or walnut-rinds, and finiſhed by dipping in a vat of black.

DYING *of ſilks*, is begun by boiling them with ſoap, then ſcowering and waſhing them out in the river, and ſteeping them in alum water cold: but for crimſon they are ſcowered a ſecond time before putting them in the cochineel vat. Red-crimſon is dyed with cochineel mettle, adding galls, turmeric, arſenic, and tartar, all put together in a copper of fair water, almoſt boiling: with theſe the ſilk is to be boiled an hour and half; after which, it is ſuffered to ſtand in the liquor till next day. Violet-crimſon is alſo given with pure cochineel, arſenic, tartar, and glaſs; but the galls in leſs proportion than the former: when taken out it is to be well waſhed, and put in a vat of indigo. Cinnamon-crimſon is begun like the violet; but finiſhed by back-boiling; if too bright, with copperas; if dark with a dip in indigo. Light-blues are given in a back of indigo. Sky blues are begun with orchal, and finiſhed with indigo. For citron-colours, the ſilk is firſt alumed, then welded, with a little indigo. Pale-yellows, after aluming, are dyed in weld alone. Pale and brown auroras, after aluming, are welded ſtrongly, then taken down with rocou diſſolved with pot-aſhes. Flame-colour is begun with rocou, then alumed, and dipped in a vat or two of brazil. Cinnamon-colour, after aluming, is dipped in brazil and braziletto. Lead-colour is given with fuſtic, or with weld, braziletto, galls, and copperas: but the galls, on theſe and other occaſions, are not to be overdoſed, which increaſes the weight to the damage of the purchaſer; for which reaſon it is puniſhed in France as a fraud: and, in reality, few but black ſilks require galls. Black ſilks, of the coarſer ſort, are begun by ſcowering them with ſoap, as for other colours; which done, they are waſhed out, wrung, and boiled an hour in old galls, where they are left to ſtand a day or two: after which, they are waſhed again with fair water, wrung, and put in another vat of new and fine galls; then waſhed and wrung again, and finiſhed in a vat of black. Fine blacks, are only put once into galls, of the new and fine ſort, which has only boiled an hour; then they are waſhed, and wrung out, and dipped thrice in black, to be afterwards brought down, by back-boiling with ſoap.

DYING *of thread*, is begun by ſcowering it in a lye of good aſhes; after which it is wrung, rinſed out in river-water, and wrung again.—For a bright blue, it is given with braziletto and indigo. Bright-green is firſt dyed blue, then back-boiled with braziletto and verdeter, and laſtly woaded. For a dark-green it is given like the former, only darkening more before woading.—Lemon, or pale-yellow, is given with weld mixed with rocou.—Orange, and iſabella, with fuſtic, weld, and rocou.—Red, both bright and dark, with flame-colour, are given with brazil, either alone, or with a mixture of rocou.—Violet, dry roſe, and amaranth, are given with brazil, taken down with indigo.—Feulemort, and olive-colour, are given with galls and copperas, taken down and finiſhed with braziletto wood.

DYING *of hats*, is done with braziletto, galls, copperas, and verdegreaſe, diſſolved, and boiled in a copper capable of receiving, beſides the liquor, 12 dozen of hats on their blocks, or moulds. Here the hats are ſuffered to boil ſome time, after which they are taken out and left to ſtand and cool, then dipped again; and thus alternately, oftener or ſeldomer, as the ſtuff is of a nature to take the dye with more or leſs difficulty.

Proof of dyes.—There are ſeveral ways of proving the truth of dyes, or examining the juſtneſs and legitimacy of their compoſition. To diſcover whether a cloth has been duly treated by the dyer, and the proper foundations laid, a white ſpot, of the bigneſs of a ſhilling, ought to be left; beſides a white ſtripe between the cloth and the liſt. Farther proof is had by boiling the dyed ſtuff in water, with other ingredients, different according to the quality of the dye to be proved: if the colour ſuſtains the teſt, that is, does not diſcharge at all, or very little, ſo that the water is not tinctured by it, the dye is pronounced good; otherwiſe falſe.

Proof of the dyes of ſilks.—For red crimſon, the proof is made by boiling the ſilk with an equal weight of alum. For ſcarlet-crimſon it is boiled with ſoap, almoſt the weight of the ſilk. For violet-crimſon, with alum of equal weight with the ſilk, or with white citron juice, about a pint to a pound of ſilk. Theſe ingredients are to be mixed, and put in fair water when it begins to boil; after which, the ſilks are alſo to be put in; and after boiling the whole for half a quarter of an hour, if the dye is falſe the liquor of the red-crimſon will be violet, in caſe it has been dyed with orchal; or very red, if with brazil: that of crimſon-ſcarlet, if rocou has been uſed, will become of an aurora colour; or, if brazil has been uſed, red: and that of violet crimſon, if brazil or orchal has been uſed, will be of a colour bordering upon red. On the contrary, if the three ſorts of crimſon are truly dyed, their liquors will diſcover but very little alteration. A ſtill ſurer way to diſcover if crimſon ſilks are rightly dyed, is by boiling a piece of ſtandard crimſon ſilk, kept for that purpoſe at dyers-hall, after the ſame manner, and then comparing the tinctures of the two liquors.

To diſcover whether other colours have been dyed with galls, the ſilk is put in fair boiling water, with pot-aſhes, or ſoap, nearly of the weight of the ſilk; after ſome time it is taken out, upon which, if it has been dyed with galls, the colour will be vaniſhed, and nothing but that of the galls left, which is a ſort of feulemort, or wood colour. The dying of ſilk with galls may alſo be detected by putting it in boiling water, with a gallon of citron juice; being taken out and waſhed in cold water, and then dipped in a black dye, if galls have been uſed it, it will turn black; if not, it will be of a brown-bread colour.

To diſcover if black ſilk has been over-doſed with galls, ſteel-filings, or ſlipp, it ſhould be boiled in fair water, with twice its weight of ſoap: if it is loaden with galls, it will turn reddiſh; otherwiſe it will keep its colour.

To diſcover whether black cloth has been firſt woaded and maddered, a ſample of it, and at the ſame time a ſample of ſtandard black, kept for that purpoſe for the dyers company, is to be taken; and then as much Roman alum as is equal in weight to both, together with a like weight of pot-aſhes, is to be put over the fire in a pan of bran-water; when it begins to boil, the two ſamples ſhould be put in, and after half an hour to be taken out and compared. The piece which has only been woaded, will be found bluiſh, with ſomewhat of a dull green; if it hath been both woaded and maddered, it will be of a tan, or minim colour; and if it has been neither woaded or maddered, its colour will be dunniſh, between yellow and ſallow.

For cloths dyed of a minim colour, the proof is to be made after the manner of that of blacks.

To know whether ſcarlet, or crimſon cloths, have been dyed with pure cochineel, they are to be boiled, with an ounce of alum to a pound of cloth. For cloths of other colours, the proof is to be made in the ſame manner as that of blacks and minims.

Theory of DYING. 1. All the materials, which of themſelves give colour, are either red, yellow, or blue; ſo that out of them, and the primitive fundamental colour, white, all that great variety, which is ſeen in dying ſtuffs, ariſes. 2. Few of the colouring materials, as cochineel, ſoot, woad-wax, or woad, are, in their outward and firſt appearance, of the ſame colour, which, by the ſlighteſt diſtempers and ſolutions in the weakeſt menſtrua, they dye upon cloth, ſilk, or ſuch like. 3. Many of the colouring materials will not yield their colours without much grinding, ſteeping, boiling, fermenting, or corroſion by powerful menſtrua; as red-wood, weld, woad, and annotto. 4. Many of the ſaid colouring materials will of themſelves give no colouring at all; as copperas, or galls; or with much diſadvantage, unleſs the cloth or other ſtuff to be dyed is firſt covered, or incruſtated, as it were, with ſome other matter, though colourleſs afore hand; as madder, weld, and brazil, without a gum. 5. Some of the colouring materials, by the help of other colourleſs ones, ſtrike different colours from what they would alone, and of themſelves; as cochineel, and brazil. 6. Some colours, as madder, indigo, and woad, by re-iterated tinctures, will at laſt become black. 7. Though green is the moſt frequent and common of all natural colours; yet there is no ſimple ingredient, which is now uſed alone, to dye green with upon any material; ſap-green, the condenſed juice of the rhamus-berry being the neareſt, and this only uſed by country-people. 8. There is no black thing in uſe which dies black; though both the coal and ſoot of moſt things burnt, or ſcorched, are of that colour; and the blacker, by how much the matter, before it was burnt, was whiter; as in the remarkable inſtance of ivory black. 9. The tincture of ſome dying ſtuffs will fade even with lying, or with the air, or will ſtain even with water; but very much with wine, vinegar, or urine. 10. Some of the dyers materials are uſed to bind and ſtrengthen a colour; ſome to brighten it; ſome to give luſtre to the ſtuff; ſome to diſcharge and take off the colour, either in whole or in part; and ſome out of fraud, to make the material dyed, if coſtly, to be heavier. 11. Some dying ingredients, or drugs, by the coarſeneſs of their bodies, make the thread of the dyed ſtuff ſeem coarſer; ſome, by ſhrinking them, ſmaller; and ſome, by levigating their aſperities, finer. 12. Many of the ſame colours are dyed upon different ſtuffs, with different materials; as red-wood, uſed in cloth, not in ſilks; annotto in ſilks, not in cloth; ſo that they may be dyed at ſeveral prices. 13. Scowering, and waſhing of ſtuffs, to be dyed, is to be done with appropriate materials, as ſometimes with oxgalls, ſometimes with fuller's earth, and ſometimes with ſoap; but this latter is pernicious in ſome caſes, where pot-aſhes will ſtain, or alter the colour. 14. Where great quantities of ſtuffs are to be dyed together, or where they are to be done with great ſpeed; and where the pieces are very long, broad, and thick, they are to be differently handled, both in reſpect to the veſſels, and ingredients. 15. In ſome colours, and ſtuffs, the tingent liquor muſt be boiling; in other caſes blood-warm; in others it may be cold. 16. Some tingent liquors are fitted for uſe by long keeping, and in ſome the virtue wears away by the ſame. 17. Some colours, or ſtuffs, are beſt dyed by re-iterated dippings ever in the ſame liquor, at ſeveral intervals of time; ſome by continuing a longer, and others a leſſer time therein. 18. In ſome caſes, the matter of the veſſel wherein the liquors are heated, and the tinctures prepared,

muſt

muſt be regarded, as that the kettles are pewter for bow-dye. 19. Little regard is had how much liquor is uſed in proportion to the dying drugs; the liquor being rather adjuſted to the bulk of the ſtuff, as the veſſels are to the breadth of the ſame; the quantity of dying drugs being proportioned to the colour, higher, or lower, and to the ſtuffs both; as likewiſe the ſalts are to the dying drugs.

Concerning the weight which colours give to ſilks, for in them it is moſt taken notice of, as being ſold by weight, and being a commodity of great price, it is obſerved, that one pound of raw ſilk loſes four ounces by waſhing out the gums, and natural ſordes; as alſo that the ſame ſcowered ſilk may be raiſed to above 30 ounces from the remaining 12, if it is dyed black with certain materials. The reaſon why black colour may be dyed the heavieſt is, that all ponderous drugs may be dyed black, being all of a lighter colour; whereas, perhaps, there ſeem to be few or no materials wherewith to increaſe the weight of ſilk, which will conſiſt with fair light colours; ſuch as will, having been uſed, as white arſenic to carnations.

Of things uſeful in dying, eſpecially black, nothing increaſes weight ſo much as galls; by means whereof black ſilks recover the weight which they loſt by waſhing out their gum: nor is it counted extraordinary, that blacks ſhould gain about 4 or 6 ounces in the dying upon each pound. But, next to galls, old fuſtic increaſes the weight about an ounce and an half in 12, madder an ounce, and weld half an ounce. The blue vat, in deep blues of the fifth ſtall, adds no conſiderable weight; neither does log-wood, cochineel, or annotto; nor even copperas of itſelf, without galls; though ſlipp adds much to the weight, and gives a deeper black than copperas, which affords a good excuſe for the dyers that uſe it.

DYING, in a more extenſive ſenſe, is applied to all kinds of colouring given to bodies of any ſort; in which ſenſe, dying amounts to the ſame with coloration, as it includes ſtaining, painting, gilding, marbling, and printing. The Chineſe are ſaid to practiſe the dying of tea with catechu, which gives the green tea leaf the colour, and its infuſion the tincture of bohea.

The ſorts of dying, or coloration, now commonly uſed in vulgar trades, are, 1. Whitening of wax, and ſeveral ſorts of linen, and cottons, by the ſun, air, and reciprocal effuſions of water. 2. Staining of wood and leather, by lime, ſalt, and liquors, as in ſtaves, canes, and marquetry. 3. Marbling of paper, by diſtempering the colours with ox-gall, and applying them upon a ſtiff gummed liquor. 4. Colouring, or rather diſcolouring, ſilks and tiffanies, by brimſtone. 5. Colouring iron and copper-work with oil. 6. Giving leather a gold colour, or rather dying ſilver leaves like gold, by varniſhes, and in other caſes by urine and ſulphur. 7. Staining of marble and alabaſter, with heat and coloured oils. 8. Colouring the barrels and locks of guns blue, and purple, with the temper of ſmall coal-heat. 10. Colouring-glaſs, chryſtals, and earthen wares, with the ruſts and ſolutions of metals; but glaſs dyed is the common matter of artificial jewels, the tinctures being given with zaffer, manganeſe, ferretto, and crocus martis. 11. Colouring live-hair, as in Poland, both horſe, and human hair, and alſo of furs: for the uſe of angling, white hair is dyed green, by boiling it in ale with alum; then ſteeping it in a decoction of copperas with wax and water. It is dyed yellow by boiling in alum and ale, with walnut-tree leaves ſtamped in it; and brown, by ſteeping in ſalt and ale. 12. Enamelling, and annealing. 13. Application of colours, as in printing of books, and pictures; the making of playing cards, and japanning. 14. Gilding, and tinning with mercury, block-tin, and ſal armoniac. 15. Colouring metals, as copper with calamine into braſs, and with zink or ſpelter into gold, or into ſilver with arſenic, and of iron into copper with Hungarian vitriol. 16. Making painters colours, by preparing of earth, chalk, and ſlates, as in umber, oker, and cullen's earth; out of the calces of lead, as ceruſs and minium; by ſublimates of mercury and brimſtone, as in vermilion; by tinging of white earths variouſly, as in verdeter, and ſome of the lakes; by concrete juices or fœculæ, as in indigo, pinks, ſap-green, and lakes; as alſo by ruſts, as in verdegreaſe. 17. The applying of theſe colours by the adheſion of ox-gall, as in the marbled paper; or by gum-water, as in limning; or by clammy, drying oils, as the oils of linſeed-nuts, ſpike, turpentine, and the like. And, laſtly, The watering of tabbies.

DYING *of leather and ſkins*. Blue is given by ſteeping the ſubject a day in urine and indigo, then boiling it with alum; or it may be given by tempering the indigo with red-wine, and waſhing the ſkins therewith. Red is given by waſhing the ſkins, and laying them two hours in galls; then wringing them out, dipping them in a liquor made with liguſtrum, alum, and verdigreaſe, in water; and, laſtly, in a dye made with brazil wood boiled with lye. Purple is given by wetting the ſkins with a ſolution of roche alum in warm water, and when dry again, rubbing them with the hand in a decoction of log-wood in cold water. Green is given by ſmearing the ſkin with ſap-green and alum-water boiled; but to darken the colour a little indigo may be added. Dark green is alſo given with ſteel filings and ſal armoniac ſteeped in urine till ſoft, then ſmeered over the ſkin, which is to be dried in the ſhade. Sky-colour is given with indigo ſteeped in boiling water, being the next morning warmed, and ſmeered over the ſkin. Yellow is given by ſmearing the ſkin over with aloes and linſeed-oil diſſolved and ſtrained, or by infuſing it in weld. Orange-colour, by ſmearing with fuſtic berries boiled in alum-water; or, for a deep orange, with turmeric.

DYING, or ſtaining of wood, for inlaying and veneering. Red is done by boiling the wood in water and alum; then taking it out, adding brazil to the liquor, and giving the wood another boil in it. Black, with bruſhing it over with log-wood boiled in vinegar, hot, then waſhing it over with a decoction of galls, and copperas, till it is the colour required. Any other colour may be given by ſqueezing out the moiſture of horſe-dung through a ſieve, mixing it with diſſolved roche alum and gum arabic, and to the whole adding green, blue, or any other colour deſigned: after ſtanding two or three days, pear-tree, or other wood, cut to the thickneſs of half a crown, is put into the liquor boiling hot, and there ſuffered to remain till it is ſufficiently coloured.

DYING of bone, horn, or ivory. Black is performed by ſteeping braſs in aqua fortis, till it is turned green; with which the bone, horn, or ivory, is waſhed, once or twice; then put into a decoction of log-wood and water, warm. Green is given by boiling the ſubject in alum-water; then with verdegreaſe, ſal armoniac, and white vinegar, keeping it hot therein till ſufficiently green. Red is begun by boiling it in alum-water, and finiſhed by decoction in a liquor compounded of quick-lime ſteeped in rain-water, ſtrained, and to every pint an ounce of brazil wood added; the bone, horn, or ivory, to be boiled therein till ſufficiently red.

By the ſtatute of the 13th of George I. it was enacted, That if any perſon ſhould within England, Wales, or Berwick upon Tweed, dye black any bays, or other woollen goods, as mather blacks, the ſame not being dyed throughout with woad, indigo, and mather only; or ſhould dye black any cloth, long ells, bays, or other woollen goods, for woaded blacks, the ſame not being woaded throughout, he ſhould forfeit for ſuch falſe mathered blacks, or woaded blacks, as follows:

For every long Bocking bays, containing 70 yards, 44 s.

For every Colcheſter bays, or ſhort bays, containing 35 yards, 22 s. and ſo in proportion for bays, or other woollen goods.

And for every cloth dyed black, without being woaded throughout, containing 44 yards, 40 s.

For every piece of bays falſely dyed as aforeſaid, containing 70 yards, 30 s.

For every Colcheſter, or ſhort bays, containing 35 yards, 12 s.

For every perpetuana, or ſtuff, falſely dyed, 4 s. and ſo in proportion for any other woollen goods dyed for woaded blacks.

It was thereby alſo enacted, That all woollen goods which ſhould be truly mathered black, ſhould be marked with a red roſe and a blue roſe; and all woollen goods which ſhould

ſhould be truly woaded black throughout, ſhould be marked with a blue roſe; and if any perſon ſhould counterfeit the ſaid marks, or ſhould affix any ſuch mark to any of the goods falſely dyed for mather or woaded blacks, ſuch offender ſhould forfeit 4 l. for every piece of goods to which the ſaid mark ſhould be affixed. That if any perſon ſhould uſe logwood in dying of blue, he ſhould forfeit 40 s. for every piece of cloth ſo dyed, containing 44 yards; 22 s. for every long piece of Bocking-bays, containing 70 yards; 12 s for every Colcheſter or ſhort bays, containing 35 yards; 4 s. for every perpetuana or ſtuff, containing 14 yards, and ſo in proportion for all other woollen goods. That all perſons occupying the trade of dying woollen manufactures within the city of London, or within 10 miles compaſs of the ſame, ſhould be ſubject to the inſpectors of the company of dyers of London; and it ſhould be lawful for the maſter, wardens, and court of aſſiſtants, of the ſaid company, by writing under their common ſeal, to appoint ſearchers within the ſaid limits; and out of the ſaid limits, it ſhould be lawful for the juſtices of peace, at their quarter-ſeſſions, to appoint ſuch ſearchers; and it ſhould be lawful for the ſearchers, taking to their aſſiſtance a conſtable, or other peace-officer, at all ſeaſonable times in the day, to enter into the ſhop, or workhouſe, of any perſons uſing the trade of dying, or concerned in the dying of woollen goods, to ſearch all cloths, and other woollen goods, to be dyed black or blue; and if any perſon ſhould oppoſe ſuch ſearch, he ſhould forfeit 10 l. but all proſecutions for offences againſt this act ſhould be commenced within 40 days after the offence committed.

As the art of dying is ſo very eſſential for the grand branch of the Britiſh trade, the woollen manufactory, the legiſlature have thought proper to give it ſome encouragement; for, by the ſtatutes of the 3d and 4th of Queen Anne, and 1ſt of George I. alum of all ſorts, antimony, except crude, Britiſh berries for the plantations, cakelack, caſſumba, copperas of all ſorts, French berries, grain or ſcarlet powder, grains of Portugal or Rota, grains of Seville in berries, litharge of all ſorts, platain, ſaltpetre, weld, and woad, are exempted from the new, one third, and two third ſubſidies, and the additional duty on ſpice. By the 3d and 4th of Q. Anne, and the 8th of George I. agaric, annotto, antimonium crudum, aquafortis, argol, arſenic, bay-berries, Brazil wood, Braziletto wood, cochineel, cream of tartar, fuſtic, galls, gum arabic, indico of all ſorts, iſinglaſs, litmus, logwood, madder of all ſorts, madder-roots, Nicaragua wood, orchal, orchelia or Spaniſh weed, pomegranate peels, redwood, ſafflore, ſal armoniac, ſal gem, ſapan wood, red ſaunders, ſhumac, ſticklack, turnſole, valonia, and verdigreaſe, may be imported free of all duties; provided entry, and other requiſites of law, are performed as before, elſe to pay as formerly: though, upon exportation of any of theſe foreign dying-goods, a ſubſidy is to be paid of 6 d. for every 20 s. of their rates, or $2\frac{1}{2}$ *per cent.*

As for indico, fuſtic, or other dying wood of the Britiſh plantations, ſee *Plantations.*

DYER. A perſon whoſe employment conſiſts in the trade of dying; of which there are ſeveral ſorts; ſome dye only in wool, others in ſilk: ſome confine themſelves to particular colours, ſuch as ſcarlet and blues; but the ſcarlet-dyer is by much the moſt ingenious and profitable branch of the dying buſineſs; and the beſt dyes ſtruck of that colour are done upon the river Severn, the water of this river having ſome influence upon the operation, which renders the cloths finiſhed there preferable to thoſe made any where elſe in Europe.

DYERS *company of London*, which was antiently one of the twelve, was incorporated by letters-patent of the 11th of Edward IV. in 1472, by the name of The wardens and commonalty of the myſtery of dyers, London; and, among other privileges granted this ſociety, there is one of keeping ſwans upon the river Thames.

This corporation conſiſts of 2 wardens, 30 aſſiſtants, and 147 liverymen, who pay a fine of 15 l. upon admiſſion; but their hall, which was ſituated near the Old Swan-lane, Thames-ſtreet, being deſtroyed by the conflagration in 1666; and the ſame not rebuilt, a number of ware-houſes are erected on the ſide thereof; wherefore the company has converted one of their houſes in little Elbow-lane, Dowgate-hill, into a hall to tranſact their affairs in.

At Paris, and in moſt of the great cities of France, the dyers are divided into three companies; being thoſe of the *great dye*, who are only to uſe the beſt ingredients, and ſuch as ſtrike the ſureſt and moſt permanent colours. *Dyers of the leſſer dye*, who are allowed to uſe the inferior ſorts of drugs, which only yield falſe and fading colours. And *dyers of ſilk, wool, and thread.* All the higher-prized cloths and ſtuffs are reſerved to the dyers of the firſt ſort; thoſe of leſs value, particularly ſuch as are rated at above 40 ſols the ell in white, are committed to the maſters of the leſſer dye. Blue, red, and yellow, are reſerved more peculiarly to thoſe of the great dye; browns, fallows, and blacks, are common to both ſorts; but as to black, it is begun by the dyers of the great dye, and finiſhed by thoſe of the leſſer.

DYERS *black.* See *Black.*

DYERS *blue.* See *Blue.*

DYERS *weed*, called alſo *Wood-way*, or *Geniſta tinctoria*, is an herb uſed by dyers for a green colour.

E.

EAR

E, On the compaſs, in ſea-charts, and maps, marks the eaſt point or wind; ſo that E. is eaſt, E. S. E. eaſt ſouth eaſt, N. E. north eaſt, and E. N. E. eaſt north eaſt.

EAGER, in reſpect of liquors, is the ſame as pricked, or turning ſour. See Eager *Beer*, and Eager *Wine*.

EARN, in trade, ſignifies what a labouring perſon can get by his work or buſineſs.

EARNE *lake*, or *Lough Earne*. A great lake of Ireland, in the county of Fermanagh, and province of Ulſter, extending 30 miles in length, joined by a narrow ſtrait, on which ſtands the town of Iniſkilling.

EARNEST, *Arrhæ*. Money advanced to complete, or aſſure, a verbal bargain, and bind the parties to the performance thereof. By the civil law, he who recedes from his bargain, loſes his earneſt; or if the perſon who received the earneſt give back, he is to return the earneſt double. But, according to the laws of England, the effect of earneſt is more: for the perſon who gave it, is, in ſtrictneſs, obliged thereby to abide by his bargain; and, in caſe he declines it, is not diſcharged upon forfeiting his earneſt, but may be ſued for the whole money ſtipulated.

EARTH, in geography, this terraqueous globe, or ball, whereon we inhabit, conſiſting of land and water; and, conſidered in different relations or habitudes, makes the ſubject of geography and geometry.

The antients entertained various opinions as to the figure of the earth; ſome, as Anaximander, held it cylindrical; and others, as Leucippus, in form of a drum. But the principal opinion was, that it was flat; that the viſible horizon was the bounds of the earth, and the ocean the bounds of the horizon; that the heavens and earth above this ocean made the whole viſible univerſe; and that all beneath the ocean was Hades, or the infernal region; which opinion was not only received by ſeveral of the antient poets and philoſophers, but alſo by ſome of the Chriſtian fathers, as Lactantius, St. Auguſtine, and others. However, modern philoſophy has ſufficiently demonſtrated the earth to be nearly ſpherical, for the inequalities on its ſurface prevent its being perfectly ſo: beſides, Huygens and Sir Iſaac Newton have ſhewn, that the earth is higher and bigger under the equator, than at the poles: ſo that its figures nearly, is that of an oblate ſpheroid, ſwelling out towards the equatorial parts, and flatted or contracted towards the poles, which has alſo been corroborated by the late obſervations of Monſieur Maupertuis, aſtronomer to his moſt Chriſtian Majeſty; who, by actually meaſuring a degree of the meridian in the ſouth of France, and a degree of the meridian at the polar circle, found the latter exceeded the former by 255 toiſes, or 510 yards; making the earth an oblate ſpheroid, or like a flat turnip, confirming what was before laid down by Sir Iſaac Newton, that the equatorial diameter exceeded the axis by 34 Engliſh miles. If the earth were in a fluid ſtate, its revolution round its axis would neceſſarily make it put on ſuch a figure, by reaſon the centrifugal force being greater towards the equator, the fluid would there riſe and ſwell moſt; and that it ſhould be ſo now, ſeems neceſſary to keep the ſea in the equinoctial regions from overflowing the earth thereabouts.

This ſphericity of the earth is further confirmed, by its having been frequently ſailed round. The firſt time was in the year 1519, when Ferdinand Magellan made the tour of the whole globe, in 1124 days; in the year 1557, Sir Francis Drake performed the ſame voyage in 1056 days; in the year 1586, Sir Tho. Cavendiſh made the ſame voyage in 777 days; Simon Cordes, of Rotterdam, in the year 1590, and Oliver Noort, in the year 1598, in 1077 days; William Cornelius Van Schouten, in the year 1615, in 749 days; James Heremites, and John Huygens, in the year 1623, in 802 days; and the Right Honourable George Lord Anſon, in the year 1744, in 1367 days: but Lord Anſon met with ſeveral extraordinary impediments in his voyage; for, beſides his continuance at Juan Fernandes, and the time he took up in the deſtruction of Paita, he was detained 67 days in cruizing about Acapulco, in expectation of that valuable ſhip which he afterwards took; he alſo continued 55 days at Tinian; and he ſpent 398 days, from his firſt arrival at Macao in China, before his final departure from thence for Europe. All of whom ſailing continually from eaſt to weſt, at length arrived in Europe, whence they ſet forth; and in the courſe of their voyages obſerved all the phænomena, both of the heavens and the earth, to correſpond to and confeſs this ſpherical figure: beſides, the accounts they have given of theſe voyages, particularly that elegant relation of Commodore Anſon's, have greatly promoted the important purpoſes of navigation, commerce, and national intereſt. And the natural cauſe of this ſphericity of the globe is, according to Sir Iſaac Newton, the great principle of attraction, which the creator has ſtamped on all the matter of the univerſe; whereby all bodies, and all the parts of bodies, naturally attract one another.

The magnitude of the earth, and the number of miles its diameter contains, have been variouſly determined by various authors, both antient and modern: but the beſt way to arrive at any certainty, is by finding the quantity of a degree of a great circle of the earth; though this degree is found very different, according to the different methods and inſtruments made uſe of, as well as the different obſervers. The method obſerved by Mr. Norwood, and the French aſtronomers Picard, Caſſini, and Maupertuis, by meaſuring the diſtance between two remote places on the ſame meridian, is undoubtedly the beſt; and, according to their obſervations, the ambit or circumference of the earth is 25,031½ Engliſh ſtatute miles: whence, ſuppoſing the earth ſpherical, its diameter muſt be 7967 ſtatute miles; and conſequently its radius, or ſemi-diameter, may be taken in a round number for 200,000,000 feet; its ſurface will be 199,444,206 miles; which being multiplied by one third of its ſemi-diameter, gives the ſolid content of the terreſtrial globe 264,856,000,000 cubic miles.

The terraqueous globe is now generally granted to have two motions; the one diurnal, around its own axis, in the ſpace of 24 hours, which conſtitutes the nycthemeron, or natural day; and other annual, round the ſun, in an elliptical orbit, or track, in 365 days, and 6 hours, conſtituting the year; the diverſities of night and day being derived from the former, and the viciſſitudes of ſeaſons from the latter. And whether the earth move, or remain at reſt; that is, whether it be fixed in the center, with the ſun, heavens, and ſtars, moving round the ſame from eaſt to weſt, according to Ptolemy; or whether the heavens and ſtars being at reſt, the earth moves from weſt to eaſt, according to Copernicus, is the great article that diſtinguiſhes the Ptolemaic from the Copernican ſyſtem, the latter of which is now univerſally received, being what was originally the doctrine of Pythagoras; and is reconcileable to the wiſdom of the divinity, that to ſuppoſe the earth at reſt, confounds and deſtroys all the order and harmony of the univerſe, annuls its laws, and ſets every part at variance with other, robbing the Creator of half the praiſe of his work, and mankind of the pleaſure of contemplating its beauties. See *Globe*, *Europe*, *Aſia*, *Africa*, and *America*.

EARTH, in natural hiſtory, is a foſſil, or terreſtrial matter, whereof our globe principally conſiſts; whoſe character is, neither to be diſſoluble by fire, water, nor air

not tranſparent, more fuſile than ſtone, and generally containing ſome degree of fatneſs.

Of ſuch earths, ſome are ſimple and immutable, others compound and fatty: of the firſt kind is chalk, pumice, and rotten ſtone: of the ſecond, or compound kind, are boles of all kinds, red, white, and brown; fuller's earth; the ſeveral kinds of medicinal earth, as lemnian earth, and terra ſigillata; to which claſs are likewiſe referred argillæ, or clay earths formed into potters ware. See *Earth*-black, *Fullers* earth, *Japan* earth, *Lemnian* earth, *Samian* earth, *Sigillata* terra, *Soap* earth; alſo *Clay*, *Loam*, *Lime*, *Sand*, *Chalk*, *Coal*, *Sulphur*, and *Alabaſter*.

ARTHEN *ware*, is a general name for all kinds of goods of the pottery manufacture. See *Clay*, *Pottery*, *Porcelain*, *Delft*, and *Fayance*.

ARTHEN-*ware dealer*, is a dependent on the pot-houſe. Theſe perſons buy their goods from ſeveral houſes in England, from Holland, and at the ſales of the Eaſt India company; they alſo frequently deal in tea, coffee, and chocolate.

ASE, in the ſea-language, ſignifies as much as ſlacken, or let go ſlacker: thus they ſay, eaſe the bowling, eaſe the ſheet; that is, let it go ſlacker.

AST, in coſmography, one of the cardinal points of the horizon; being the point wherein the prime vertical interſects that quarter of the horizon which the ſun riſes in. See *Cardinal* point, *Horizon*, and *Orient*.

ASTERN *ocean*, or *Indian ocean*, has its firſt name from its ſituation to the eaſt, as its latter from India, the chief country it waſhes; extending from the coaſt of Anian on the eaſtern part of Africa, to the Ladrone or Marian iſlands, about 1800 miles eaſt of Canton in China; theſe iſlands ſeparating it from the South or Pacific ſea; being about 2000 miles long, and 600 broad. See *Ocean*.

AST INDIES. The continent of India, ſo denominated from its eaſtern ſituation. See *India*, and *Weſt* Indies.

AST INDIA *companies*. A general term given to ſuch companies as trade to India, and other eaſtern parts; which are the moſt conſiderable of any throughout all the European ſtates, for the proſecution of commerce.

The trade to the Eaſt Indies was long carried on by the Iſraelites through the Red ſea, and the ſtreights of Babelmandel, not only to the coaſts of Africa on the weſt, but alſo to thoſe of Arabia, Perſia, and India, on the eaſt; who reaped a prodigious profit thereby. King David was the firſt who begun it; for having conquered the kingdom of Edom, and reduced it to be a province of his empire, he thereby became maſter of two ſea-port towns on the Red ſea, Elath, and Ezion-geber, which then belonged to that kingdom; and, ſeeing the advantage that might be made of theſe two places, he wiſely took the benefit of it, and there begun this traffic. After David, Solomon carried on the ſame commerce to Ophir, and had from thence, in one voyage, four hundred and fifty talents of gold. But the uſe of the compaſs being then unknown, the way of navigation was in thoſe times only by coaſting, whereby a voyage was frequently of three years, which now may be finiſhed almoſt in three months. However, this trade ſo far ſucceeded, and grew to ſo high a pitch under Solomon, that thereby he drew to theſe two ports, and from thence to Jeruſalem, all the trade of Africa, Arabia, Perſia, and India, which was the chief fountain of thoſe immenſe riches he acquired, and whereby he exceeded all the kings of the earth in his time, as much as by his wiſdom: but at length, the whole of this trade was engroſſed by the Tyrians; who managing it from the ſame port, made it by the way of Rhinocorura, a ſea-port lying between the confines of Egypt and Paleſtine; ſo that it centered all at Tyre; from whence all the weſtern parts of the world were furniſhed with the wares of India, Africa, Perſia, and Arabia, which thus, by the way of the Red ſea, the Tyrians traded to; who hereby exceedingly enriched themſelves during the Perſian empire, under the favour and protection of whoſe kings they had the full poſſeſſion of this trade. But when the Ptolemies prevailed in Egypt, they, by building Berenice, Myos-Hormos, and other places on the Egyptian or weſtern ſea, and by ſending forth fleets from thence to all thoſe countries to which the Tyrians traded, ſoon drew all this trade into that kingdom, and there fixed the chief mart of it at Alexandria, which was thereby made the greateſt mart in all the world; where it continued for a great many years after; all the marine traffic which the weſtern parts of the world had with Perſia, India, Arabia, and to the eaſtern coaſt of Africa, being wholly carried on through the Red ſea, and the mouth of the Nile, till a way was found, about 256 years ſince, of ſailing to thoſe parts by the way of the Cape of Good Hope. After which the Portugueſe for ſome time managed this trade; but now it is, in a manner, wholly got into the hands of the Engliſh, French, and Dutch.

The Portugueſe firſt ſailed round the Cape of Good Hope to the Eaſt Indies, in the year 1498; and the firſt ſettlement they made on the continent of India was at Cochin, on the coaſt of Malabar, in the year 1502. The Engliſh and Dutch did not attempt to trade to India, till about the year 1600, and then only to the iſlands at firſt; though it is true, ſeveral of their commanders had, before that time, been ſent out upon diſcoveries, and ſailed round the globe, through the ſtreights of Magellan, particularly Sir Francis Drake, in the year 1586, and Oliver Noort in 1598. Beſides, in the year 1595, the province of Holland fitted out four ſhips for diſcovery, which ſailed to Bantam, in the iſland of Java, and brought back with them ſuch ſamples of the goods of the eaſt, as induced the United Provinces to erect one general company for that trade, in the year 1594; but the Portugueſe had, for 100 years, engroſſed all the rich trade of India to themſelves, except that the Spaniards had a little interrupted their commerce, in the Moluccas and the Philippines, on their diſcovering a paſſage to the Indies through the South-ſea, in the year 1520; though, when the other European powers became ſenſible of the value and facility of this commerce, they ſoon began to participate the emoluments, by erecting the following companies.

The Dutch EAST INDIA *company* commenced in 1594, in the midſt of thoſe military confuſions attendant on the revolt of the United Provinces from the allegiance of Spain. The Spaniards having ſhut up all their ports againſt theſe new republicans, whom they looked upon as rebels, and having even prohibited them all commerce to the Eaſt and Weſt Indies, of which they were then, in ſome ſenſe, the maſters; neceſſity inſpired ſome Zealanders to go in queſt of a new paſſage for China and the Eaſt Indies by the N. E. and to coaſt, if poſſible, along Norway, Muſcovy, and Tartary.

This enterpriſe was undertaken in 1594, 1595, and 1596, by fitting out ſhips three different times, but all without any ſucceſs; the extreme colds of Nova Zembla, and the impenetrable ice of Weigats, having either deſtroyed the ſhips ſent there, or diſcouraged the adventurers.

Whilſt this paſſage was unſucceſsfully attempting, a ſecond company was formed at Amſterdam; which, under the direction of Cornelius Houteman, ſent four ſhips, in 1595, by the uſual way which the Portugueſe went, with orders to conclude treaties with the Indians, for the trade of ſpice and other commodities; but more eſpecially in the places where the Portugueſe were not as yet eſtabliſhed.

This ſmall fleet returned, two years and four months after its departure, with little or no gain in reality; but with good information, and large hopes.

The old company, and a new one juſt eſtabliſhed at Amſterdam, being incorporated, they fitted out a fleet of eight veſſels, which ſet ſail, under Admiral James Vaneck, from the Texel in 1598; and another fleet of three ſhips was fitted out, which weighed anchor the 4th of May 1599. Theſe were followed by ſeveral others; and ſo many new companies were erected at Amſterdam, Rotterdam, and other places, that the States-General apprehended they muſt prove detrimental to each other; which fear, juſtified by ſome ſad conſequences, cauſed the directors of all the different companies to aſſemble: the reſult of this meeting was the union of all, which was confirmed by the ſtates the 20th of March 1602; whoſe ſucceſs was very great, both on account of the immenſe riches brought into the United Provinces, or the kingdoms and ſtates which this company ſubdued in ſo many different countries of Aſia.

The firſt fund of this company conſiſted of 6,459,840 guilders, or 565,236 l. ſterling; of which Amſterdam advanced 3,674,915; Zealand 1,333,882, Delft 470,000, Rotterdam 177,400, Hoorn 266,868, and Enchuyſen 536,775: and the firſt grant of the ſtates was for 21 years, to commence from the date of the grant, which was the ſame with that of the confirmation.

The company is governed by ſixty five directors, divided into thirteen different chambers. The chamber of Amſterdam has 18 directors, the chamber of Zealand 12, the chambers of Delft and Rotterdam 14; thoſe of Enchuyſen and Hoorn 14; thoſe of Haerlem, Leyden, Dort, Tergow, the provinces of Guelderland, Frieſland, and Utrecht, each of them one director.

Seventeen directors were alſo choſen from among the ſixty-five, for the common affairs of the chambers; eight out of the chamber of Amſterdam, four out of that of Zealand, two out of thoſe of Delft and Rotterdam, and two out of thoſe of Enchuyſen and Hoorn, the ſeventeenth being choſen alternatively out of Zealand, the Meuſe, or North Holland; and it is this ſecond direction that regulates the number, the fitting out, and the departure of ſhips.

The company is privileged to contract alliances with the princes, whoſe eſtates are eaſtwards of the Cape of Good Hope, and in the ſtreights of Magellan, along the ſtreights, and beyond them; to build fortreſſes there, and to eſtabliſh governors, garriſons, and officers of juſtice and police; but the treaties are concluded in the name of the ſtates; in whoſe name all officers, both military and civil, take their oaths.

At the expiration of each grant, the company is obliged to obtain a new one, which has happened four times ſince the firſt was granted; but the renewal of grants coſt the company conſiderable ſums of money.

By the grant of 1698, which was alſo confirmed in 1717, all the ſubjects of the States-General are prohibited the ſending of ſhips, and ſailing throughout the whole extent of the company's conceſſion, or carrying on a trade therein, either directly or indirectly; as alſo aſſociating with ſtrangers for this trade, or ſerving in their veſſels.

Nothing can be more wiſely and prudently concerted, than the police and diſcipline, whereby every thing is regulated in this company, either for the election of the directors of the chambers, or for the fitting out, and returns of ſhips; the choice of the ſeventeen particular directors, the ſale of merchandiſes, and the dividends of the profits; or, laſtly, for the conduct of their ſovereignties in the Indies.

This company has ſeveral large ſettlements, and many factories, for the ſupport of their trade. They are in poſſeſſion of the Cape of Good Hope, which ſerves them as St. Helena does the Engliſh Eaſt India company, for ſupplying their ſhips with water and other refreſhments in their voyage. The iſland of Mauritius ſerves them alſo for the ſame purpoſe. They have a factory at Mocha in Arabia, and two others at Gombroon and Ormus in Perſia, as alſo one at Iſpahan, the capital of that empire. They have likewiſe factories at Barak, Choule near Bombay, Rigapore Dunde, Baſſaloco, or Baynenar, and Bodven, on the proper coaſt of India; at Cananore, Pamari, Crananera, Chochin, Porchatt, Carnapole, Quilon, and Tegapatan, on the coaſt of Malabar; at Negapatan, Porta Nova, Sadraſſapatan, Cabelon, Pellicat, Catelore, Petipoly, Maſualapatan, and Bimlipatan, on the coaſt of Coromandel; at Balaſore, and Pipley, farther up the coaſt towards Bengal; at Baſnagul, Malda, Huegly, and Dacca, in Bengal; and at Patna, up the Ganges.

They have alſo a ſettlement in the kingdom of Aracan: they trade along the coaſt up to Siam, where they have the city of Malacca; and from thence they trade up to China.

They engroſs the whole trade of the iſland of Ceylon; they have ſome trade in the iſlands of Sumatra, and Borneo: but the whole trade of Java, and the Molucca iſlands is in their poſſeſſion; as is alſo ſome part of the trade of the Celebes and Banda iſlands; beſides, they are the only perſons who trade to Japan: ſo that no leſs than 40 factories, and 25 fortreſſes, are reckoned belonging to this company in the Eaſt Indies; who employ in this long and painful navigation, above 150 ſhips, from 30 to 60 guns, manned with 25,000 ſailors, comprehending officers, ſoldiers, and mariners; beſides 12,000 troops of their own republic, to garriſon the forts.

Though all theſe factories are very conſiderable, they are not to be compared with Batavia, the center of the company's commerce; and the Cape of Good Hope, the ſtaple, or rather the place of refreſhment, for all its ſhipping, either going or coming.

The Dutch Eaſt India company carry out great quantities of ſpecie, and of European goods, but chiefly of the latter, to India. From China, they bring home ſilks, both raw and wrought, China and Japan ware, tea, and arrack; from Bengal and Patna, ſilks, raw and wrought, diamonds, indico, and coris; from the other ports of India, ſilks, calicoes, muſlins, and great variety of other manufactures of cotton and flax; alſo ſhell-lack, ſtick-lack, red-wood, ſalt-petre, dying ſtuffs, and many drugs; beſides coffee, and ſome drugs, from Perſia. See *Perſia*, *India*, and *China*.

From the iſland of Japan they bring home all kinds of Japan work, and lacquered ware; as alſo gold-duſt: from the Moluccas, they bring cloves: from the Banda iſlands, nutmegs and mace: from the Celebes, pepper, and opium: from the Sunda iſlands, pepper, gold, coffee, and canes: and cinnamon from Ceylon. See *Japan*, *Moluccas*, *Banda*, *Celebes*, *Sunda*, and *Ceylon* iſlands.

Theſe commodities being articles of luxury, and too great for the conſumption of the parſimonious Dutch, they export them to all parts of the world where they have any commerce; particularly to France, Spain, Germany, Italy, Turky, Dantzic, Denmark, Sweden, and Ruſſia.

This company has been ſo ſucceſsful, as to make the following dividends annually, from 1605 to 1720.

Years.	Months.	Dividends.	
In 1605,	in July,	15	*per cent.* in money.
1606,	March,	75	
1607,	July,	46	
1608,	April,	20	
1609,	June,	25	
1610,	Auguſt,	50	
1612,	December,	57½	
1615,	Auguſt,	42½	
1616,	February,	62½	
1620,	April,	37½	
1623,	November,	25	*per cent.* in cloves.
1625,	Auguſt,	20	*per cent.* in money.
1627,	March,	12½	
1629,	January,	25	
1631,	January,	17½	
1633,	January,	12½	
1633,	December,	20	
1635,	March,	20	
1635,	May,	12½	*per cent.* in cloves.
1635,	Auguſt,	12	
1636,	March,	25	
1636,	November,	12½	
1637,	March,	15	
1637,	November,	25	
1638,	October,	19	*per cent.* in ſpice.
1638,	November,	25	*per cent.* in money.
1640,	January,	15	*per cent.* in cloves.
1640,	November,	25	*per cent.* in money.
1641,	February,	15	*per cent.* in cloves.
1641,	November,	25	
1642,	December,	50	*per cent.* in money.
1643,	January,	15	*per cent.* in cloves.
1644,	November,	25	
1644,	December,	20	
1646,	January,	22½	
1646,	December,	25

1720,	May,	40

Total of the dividends 2602⅔ *per cent.* which amounts to about 22⅞ *per cent.* of the capital fund, one year with another.

This company is both rich in its funds, and formidable in its ſettlements: they carry on the greateſt trade of any company in Europe; and their Indian preſidency at Batavia, where they have a potent fleet, renders them ſo far maſters of the Indian navigation, that when Lewis XIV. over-run ſome of their provinces in 1672, many of the principal people belonging to the republic ſeemed inclinable to remove to Java with all their effects, where ſuch an acceſſion of ſtrength and opulence, muſt have made them the abſolute maſters of that part of the world.

Engliſh EAST INDIA *company.* The united company of merchants of England trading to the Eaſt Indies, is the moſt conſiderable and flouriſhing company of trade in Great Britain, and the greateſt in Europe for riches, power, and extenſive privileges; as appears by the many ſhips of burthen which they conſtantly employ; the very advantageous ſettlements they have abroad; their large ſtorehouſes and ſales of goods and merchandiſes at home; and the particular laws and ſtatutes made in their favour.

This company was originally formed in the laſt years of Queen Elizabeth, who granted letters patent to the London merchants that entered into an aſſociation for carrying on this trade; and the charter which ſhe granted them in 1599, has ſerved as a model for all thoſe the company has obtained from her royal ſucceſſors.

The Portugueſe and the Dutch were in poſſeſſion of ſeveral large territories along the coaſts of India, before this time; as alſo in ſeveral other parts of Aſia, proper for the proſecution of this trade: the former, indeed, had no company, which is ſtill the caſe: but the latter had formed ſeveral companies ſo early as the year 1596, which were afterwards incorporated together.

The firſt fleet the Engliſh ſent to the Eaſt Indies conſiſted of four ſhips, which ſet ſail in 1600, with Mr. John Mildenhal, who was employed as an agent to procure a trade, and carried a letter from Queen Elizabeth to the Great Mogul, in behalf of her ſubjects: which fleet returned ſo richly laden, that in a few years near twenty others were ſent there by the company.

After the death of Queen Elizabeth, James I. confirmed and augmented, by a new charter, all the privileges that had been granted the company in the preceding reign; and, to ſhew how much he had at heart this eſtabliſhment, he ſent ambaſſadors in 1608, and 1615, to the Mogul, the Emperor of Japan, the King of Perſia, and ſeveral other eaſtern princes, to conclude, in his name, and that of the company, different treaties of commerce, of which ſome are ſtill ſubſiſting.

It is well known how many privileges the King of Perſia granted the Engliſh company, for aſſiſting him in the expulſion of the Portugueſe from Ormus; who made uſe of that famous iſland, and its almoſt impregnable forts, as a citadel, to ſupport them in the uſurpation of the commerce of the Perſian gulph, which they engroſſed for almoſt an age to themſelves.

But it was in the reign of Charles II. that this company was complimented with the greateſt favours, when it was in the height of its ſplendor; tho' it might be ſaid to be a little upon the decline, towards the five or ſix laſt years of his reign: however, there were four charters of this prince, whereby the company were granted ſome new privileges.

The firſt was dated the 3d of April 1662, containing a confirmation of the former charters; or, it is rather a new one, which attributes to the company ſeveral rights it had not as yet enjoyed; and adds to, or ſets forth in a proper light, almoſt all thoſe granted to it by the charters of Elizabeth and James I. which will be more amply ſpoken of in the ſequel; becauſe it is properly the baſis of all the commerce of this company; and becauſe upon this charter are founded all the privileges and policy of the company eſtabliſhed in 1698.

The ſecond charter granted by Charles II. was dated the 27. of March 1669, whereby his Majeſty made a ceſſion to the company of the iſland of Bombay, with all its royalties, revenues, rents, caſtles, ſhips, fortifications, and enfranchiſements; ſuch as then belonged to him by the ceſſion of his Portugueſe Majeſty, reſerving only to himſelf the ſovereignty, to be held in fee from the royal hoſpital of Greenwich, in the county of Kent; and for all duty, rent, or ſervice, the ſum of 10 l. ſterling in gold, payable yearly on the 30th of September, at the cuſtom-houſe of London.

By the third charter, of the 16th of December 1674, the King likewiſe made a ceſſion to the company of the iſland of St. Helena, as belonging to him by right of conqueſt. This iſland, which afterwards ſerved as a ſtaple to the company's ſhipping, was diſcovered by the Portugueſe in their firſt navigations to the Eaſt Indies by the Cape of Good Hope; but having abandoned it, the iſland was poſſeſſed by the Dutch; who quitted it in their turn to eſtabliſh themſelves at the Cape of Good Hope, and

were ſucceeded by the Engliſh, who were expelled in 1672 by the Dutch company: but Captain Monday, who commanded a Britiſh ſquadron, retook it the year following; and this was the right of conqueſt that Charles II. made a ceſſion of to the company by the charter of 1674.

The fourth charter the company obtained from this monarch orders the erection of a court of judicature, compoſed of a civilian and two merchants, in all the factories and places poſſeſſed throughout the extent of its conceſſion, to judge of all caſes in ſeizures, and conteſtations, with regard to ſhips or goods going to the Indies, contrary to the excluſive privilege granted by the letters-patent of 1662; as alſo to take cognizance of all cauſes regarding merchandiſe, marine, navigation, purchaſes, ſales, exchange, inſurance, letters of exchange, and other things; even of all crimes and miſdemeanours committed at ſea, or in the countries, ſtates, and territories belonging to the company; the whole, notwithſtanding, purſuant to the uſages and cuſtoms of merchants, and the laws of England.

Theſe four charters were afterwards confirmed by James II. by a charter granted in the firſt year of his reign: but the charter of 1662 was the principal, and conſiſted of 28 articles, whereof the moſt material are as follow.

By the firſt his Majeſty erects the company into a corporation, or body politic, under the denomination of the governor and company of merchants trading to the Eaſt Indies.

The third grants it a common ſeal to ſerve in all its expeditions; with a power of breaking and changing it at pleaſure, and of making and engraving a new one.

The fourth eſtabliſhes a governor, and 24 aſſiſtants, choſe out of the proprietors, or ſtock-holders, of the company, to have the direction of affairs, and to give all neceſſary orders with regard to the freighting and ſending away of ſhips, together with all particulars belonging to the commerce carried on throughout the extent of its conceſſion.

The fifth, ſixth, ſeventh, eighth, and ninth, nominate, for the firſt time, the governor and directors; and regulate, for the future, the form to be obſerved in the election of the ſaid governor and directors, and a deputy-governor, or ſub-governor, to preſide in the abſence, or in caſe of the governor's death. They alſo ordain before whom the elected ſhall be obliged to make oath, and what this oath is to be; laſtly, they fix the time that all theſe officers are to continue in their poſt; and when the general courts of the company are to be held.

The tenth article fixes the extent of the conceſſion, and allows all thoſe that ſhall be of the company, their ſons of one and twenty years of age, their apprentices, factors, and domeſtics, to trade and negotiate freely by ſea in all the routes and paſſages already diſcovered, or that ſhall be ſo hereafter, in Aſia, Africa, and America, beyond the Cape of Good Hope, as far as the ſtreights of Magellan; and where any commerce can be exerciſed, ſo that it is before-hand concluded on by the company; and ſo that alſo the ſaid commerce is not carried on in the places already poſſeſſed by the ſubjects of ſome other prince.

The eleventh article empowers the company to enact all the laws and regulations it ſhall judge proper, to be obſerved by its factors, captains, maſters of ſhips, and other officers in its ſervice; to revoke them and make new ones; and, in caſe of contravention with regard to the ſaid laws, to ordain for offenders ſuch penalties, fines and puniſhments, as it ſhall judge to be juſt and reaſonable, without being accountable to any one whatſoever, not even to his Majeſty's officers; provided that the ſaid laws, and regulations, are not contrary to thoſe in England.

By the twelfth, his Majeſty wills that for all the duties and cuſtoms, on goods coming from the Eaſt Indies in the company's ſhips, a whole year ſhall be allowed for their intire payment; that is, ſix months for the firſt moiety, and ſix months for the other, by giving notwithſtanding a ſufficient ſecurity; which ſhall hold good alſo for the goods exported from England for the Eaſt Indies, which goods ſhall pay no duty, if loſt, before their arrival at the place of their deſtination; and, in caſe any duties are paid, a reſtitution ſhall be made, on the company making affidavit before the Lord High Treaſurer of the kingdom, of the amount of the ſaid loſs; provided that if the goods imported be exported again in the ſpace of 13 months, no duties ſhall be paid for ſuch export, if it be done aboard Britiſh veſſels.

The thirteenth article allows the exportation of foreign ſpecie out of the kingdom, to be employed in the commerce of the company; and even thoſe of England coined in the Tower of London, provided that the total ſum exceeds not 50,000 l. ſterling in each year.

By the fourteenth and fifteenth the company is allowed to have ſix large veſſels, and ſix pinks, laden and equipped with all kinds of ammunition and proviſion, together with 500 good Engliſh ſailors, to ſupport its commerce throughout the whole extent of its conceſſion; whereon his Majeſty cannot lay an imbargo upon any pretext whatſoever, unleſs he cannot abſolutely do without the ſaid veſſels in ſome preſſing and unforeſeen want in time of war to augment his fleet.

The ſixteenth grants to the company an excluſive privilege of trade to the Indies, ordaining the ſeizure and confiſcation of veſſels and goods which the other ſubjects of his Britannic Majeſty might ſend there; the impriſonment of the captains and maſters of ſhips who brought them there; and laſtly, a ſecurity of 1000 l. ſterling of going no more within the limits of the company's conceſſion, in contravention to this article.

The nineteenth obliges the company to bring back into England at leaſt as much gold and ſilver, as carried out every year; and aſſigns the ports of London, Dartmouth, and Plymouth, as the only places in the kingdom, from which it ſhall be for the future allowed to export the ſpecie it ſhall have occaſion for in its traffic, which ſpecie of gold and ſilver ſhall be entered in the ſaid ports, either going out or coming in; though without paying any duties.

By the twentieth the cuſtom-houſe officers are enjoined not to ſuffer the entrance of any goods coming from the places within the extent of the company's conceſſion, unleſs by a permit in writing.

The twenty-firſt fixes the ſum in the capital ſtock neceſſary to have a vote in the meetings at 500 l. ſterling, empowering, notwithſtanding, thoſe who ſhall ſubſcribe a leſs ſum to join ſeverally together, for the forming of one vote.

The twenty-fourth article allows the company to ſend ſhips of war, and ſoldiers; to build caſtles and forts in all the places of its conceſſion; to make peace or war with all kinds of people that are not Chriſtians; and to obtain ſatisfaction by the force of arms from all thoſe who prejudice them, or interrupt their commerce.

And the twenty-ſixth empowers it likewiſe to arreſt and ſecure all the ſubjects of his Britannic Majeſty who ſhall trade in Indian or Engliſh veſſels, or who ſhall dwell in any of the places of its conceſſion, without a ſpecial licence from the ſaid company.

After the publication of this charter the parliament ſeemed to diſlike the excluſive privilege granted by the ſixteenth article; which was no novelty, for it had been already agitated in the reign of James I. but this prince, fearing to riſque his authority, choſe rather to repeal a like privilege, which he granted to the colonies of Virginia, than to uphold the royal prerogative.

Charles II. was more reſolute, or more happy, than his grand father: the queſtion was debated in the court of Common Pleas, where it was decided in favour of the King; but, notwithſtanding this ſucceſs, the company benefited little by their privilege; for the indulgence ſhewn by this prince, joined to the conſiderable ſums which interlopers furniſhed him with from time, gave a ſanction to their trade in the Indies, which the company could not diſcontinue during his whole reign.

The meaſures of the company were better concerted in the reign of James II. for having repreſented to this prince how much it was to his intereſt, and to that of England, to ſupport it in the full extent of its rights, the company obtained, on the 1ſt of April 1685, the above-mentioned charter; whereby, beſides the confirmation of the ſeveral charters of his predeceſſor, his Majeſty ſo expreſſly and rigorou-

rigorouſly prohibited all his ſubjects, that were not of the company, from trading to the Indies, that interlopers ſeemed intirely excluded.

The proclamation for the execution of the charter of James II. with regard to the company's excluſive privilege, for the Eaſt India trade, is of the ſame date with the charter: and it will not be amiſs to remark, that the indulgence of Charles II. was of ſuch prejudice to the company, that, towards the end of his reign, its ſhares, which in 1682 were at 370 l. fell almoſt ſuddenly to 200 l.

The ſhares, or ſubſcriptions, of the company, were originally only 50 l. ſterling; but the directors having a conſiderable dividend to make in 1676, the profits of the ſtock, or the dividend, were added to the capital; ſo that the ſhares were doubled, and amounted to 100 l. ſterling. The firſt capital of this company amounted to 369,891 l. 5 s. which being doubled as above, amounted to 739,782 l. 10 s. which, with the company's profits to the year 1685, amounting to 963,639 l. 16 s. 1 d. makes the whole ſtock 1,703,422 l. 6 s. 1 d.

Before ſpeaking of the decay of this firſt company, and the eſtabliſhment of the new one with which it was incorporated in 1698, it may be proper to give an extract of its books ſtated in 1685, a time when it was in a flouriſhing condition; as alſo of the ſtate of the ſhipping ſent to the Indies, ſince the year 1684 to 1687, which will afford a ſufficient idea of its funds and commerce.

Extract from the books of the Engliſh Eaſt India company.

The capital of the company was 739,782 l. 10 s. but, by the above book of accompts, was increaſed to 1,703,422 l. 6 s. 1 d. wherein 111,417 l. 2 s. 6 d. of bad debts in Europe, and 719,464 l. 16 s. for Fort St. George, Bombay, St. Helena, and other places belonging to the company, are omitted.

State of the Engliſh ſhips ſent to the Eaſt Indies by the company, or with its permiſſion, from the 10th of April 1684 to the month of September 1687.

1684. Six ſhips; three for Surat; one for Fort St. George; one for Tonquin, and one for Mindanao.

1685. Six ſhips; one for St. Helena, two for Surat, two for the South Seas, and one for Priaman, and the coaſt of Coromandel.

1686. Nine ſhips; three for the coaſt of Coromandel, and the bay of Bengal; five for Bombay; one for Priaman, and the bay.

1687. Seven ſhips; four for Fort St. George; one for St. Helena, and Fort St. George, and two for Tonquin. All which ſhips were to make their returns into England. Four departed alſo in 1685, and two in 1686, which were to remain in the Indies to trade from coaſt to coaſt; being three for Fort St. George, two for Bombay, and one for Priaman.

There were alſo in 1686 five ſhips ſent out by permiſſion; four for Fort St. George, and one for Surat: and in 1687 three; one for Bombay, one for Madagaſcar and Bombay, and one for China.

The number of all theſe ſhips amounts to forty-four; twenty-eight upon the company's account, which were to return to Europe; ſix alſo upon its account to remain in the Indies; and eight upon the account of others, with the company's permiſſion, purſuant to a charter-party.

This firſt company had from time to time ſuſtained great loſſes: firſt in 1680, when it was obliged to retire from Bantam, where its ware-houſes were plundered by the Dutch, who, under the ſpecious pretext of aſſiſting Sultan Agui againſt Sultan Agom his father, ſeized upon this place, from whence they excluded all Europeans.

Secondly, in 1682, when the great number of interlopers, to whom Charles II. with too much facility, granted permiſſions, lowered the company's ſhares to more than *cent. per cent.* leſs than they were before.

Thirdly, in 1685, by the war which the company was obliged to maintain in the Indies, againſt the Mogul; during which time it was obliged to abandon its factory at Surat, and to retire to Bombay; however it always recruited its funds, and ſupported the reputation of its commerce; as may be ſeen from what has been ſtated above.

But, laſtly, the revolution that happened in England in 1688, and the war that followed it, during which the company ſuſtained incredible loſſes by the means of French privateers, expoſed it to a more perilous ſituation than ever before; a ſituation which proved ſo deſtructive, that its recovery was deſpaired of, and a new one eſtabliſhed; with which, ſome time after, the old company was incorporated.

The riſe of this new company was occaſioned by the great caſe of the old company being taken into conſideration by the parliament; which caſe had been depending ſeveral years, and, becauſe of its intricacy, had been firſt referred by the parliament to the King, and by him back to the parliament again in the year 1698, when the old company offered to advance 700,000 l. at 4 *per cent.* for the ſervice of the government, in caſe the trade to India might be ſettled on them, excluſive of all others; and the parliament ſeemed inclined to embrace their propoſal. But another number of merchants, of whom Mr. Shepherd was the chief, and who were protected by Mr. Montague, chancellor of the exchequer, propoſed to the houſe of commons, to raiſe two millions at 8 *per cent.* upon condition the trade to India might be ſettled on the ſubſcribers, excluſive of all others: they alſo propoſed, that theſe ſubſcribers ſhould not be obliged to trade in a joint ſtock; but if any members of them ſhould afterwards deſire to be incorporated, a charter ſhould be granted to them for that purpoſe. The houſe judged this new overture not only to be more advantageous to the government, but alſo very likely to ſettle this controverted trade on a better foundation than it was on before; a bill was therefore brought in for ſettling the trade to the Eaſt Indies, according to the limitations before mentioned, and the following reſolutions.

Firſt, that every ſubſcriber might have the liberty of trading yearly, to the amount of his reſpective ſubſcription; or might aſſign over ſuch his liberty of trading to any other perſon. Secondly, that his Majeſty be empowered to incorporate ſuch of the ſaid ſubſcribers as ſhould deſire the ſame. Thirdly, that the powers and privileges for carrying on the Eaſt India trade ſhould be ſettled by parliament. Fourthly, that the ſaid ſubſcribers ſhould enjoy the ſaid 8 *per cent.* and liberty of trading to the Eaſt Indies, excluſive of all others, for the term of ten years, and until the ſame ſhould be redeemed by parliament. Fifthly, that every perſon ſubſcribing 500 l. have a vote; and no perſon to have more votes than one. Sixthly, that all ſhips laden in the Eaſt Indies, ſhould be obliged to deliver in England. Seventhly, that no perſon that ſhould be a member of any corporation trading to the Eaſt Indies, ſhould trade otherwiſe than in the joint ſtock of ſuch corporation of which he was a member. Eighthly, that 5 *per cent. ad valorem*, upon all returns from the Eaſt Indies, be paid by the importer; to be placed to the accompt of the ſubſcribers, towards the charge of ſending ambaſſadors, and other extraordinary expences. And, ninthly, that over and above the duties then payable, a further duty of 1 s. 10 d. *per* lb. weight,

be

be laid upon all wrought ſilks imported from India and Perſia, to be paid by the importer.

The old Eaſt India company preſented a petition againſt this bill, which, notwithſtanding, was paſſed in favour of the new company, who obtained a charter of incorporation, dated the 5th of September 1698, by the name of "The general ſociety intitled to the advantages given by an act of parliament for advancing a ſum not exceeding two millions, for the ſervice of the crown of England:" whereby the ſum total of all the ſubſcriptions was made the principal ſtock of the corporation, and the new company was inveſted with the ſame privileges as were granted to the old company by the charter of King Charles II.

The fund of this new company became ſo conſiderable, and ſubſcriptions were carried on with ſuch facility, that, in leſs than two years, the company put to ſea 40 ſhips equipped for its trade; which was double the number employed by the old company in the moſt flouriſhing time of its commerce; and it ſent annually a million ſterling in ſpecie to the Indies; whereas the old company had never ſent above 500,000 l.

The two companies ſubſiſted a few years in a ſeparate ſtate; when, having a due regard to their common intereſt, and for the prevention of ſeveral inconveniencies that might otherwiſe have happened, both to themſelves and the nation in general, they agreed upon ſeveral articles for the union of the ſaid companies; whereby it was agreed, that the effects of each company ſhould be brought home, with all convenient ſpeed, for their ſeparate accompts, that the old company's 315,000 l. in the funds, ſhould be united to the capital ſtock of the new company; and that the old company ſhould purchaſe of the new company 673 500 l. in the capital ſtock and fund of 1,662,000 l. with the benefits to ariſe thereby; ſo that the old company might have 988,500 l. in the ſaid fund; which would make that company equal with the new in fund and title to the trade. That the old company's dead ſtock at home and abroad, ſhould be valued at 33,000 l. and the new company's dead ſtock, abroad and at home, at 70,000 l. and that the old company transfer all their dead ſtock to the new company, which ſhould pay the other 16,500 l. for one moiety thereof: and that the old company ſhould alſo pay the new company 35,000 l. for the moiety of their dead ſtock; whereupon the old company ſhould be intitled to a moiety of both the ſaid dead ſtocks, as members of the new company. That each company ſhould immediately deſiſt from any ſeparate exportation: and each company, during ſeven years, ſhould have an equal power in the adminiſtration and management of the fund and trade; to which end twelve perſons ſhould be yearly nominated by the general courts of each company reſpectively, out of the courts of committees and directors of the ſaid companies, who ſhould be called in the new charter, Managers of the united trade to India: and a new additional ſtock ſhould be raiſed for carrying on the future trade; and be advanced in ſuch proportions as the ſaid twenty-four managers, or the major part of them, ſhould appoint; the general courts of each company agreeing thereunto. That the old company, during ſeven years, ſhould preſerve their ſtock in their politic capacity, and for that time remain a ſeparate corporation, ſo as to transfer and aſſign in their own books, as they then did; and at the end of the ſaid ſeven years, the old company ſhould transfer and aſſign in the books of the new company, their ſhare in the fund to their ſeveral members, who ſhould be then intitled to the ſame; whereupon the ſaid members of the old company ſhould become, and be admitted members of the new company. That each company ſhould indemnify the other from their reſpective debts and demands, and a proper proviſion be made for that purpoſe: and that the new company ſhould not take up any money upon their common ſeal, or do any other act, without the concurrence of the old company. That the old company, within one month after the expiration of the ſaid ſeven years, ſhould ſurrender their charters and corporation; and that the King ſhould make a new grant of all ſuch eſtates and effects of the old company, as ſhould devolve upon the crown, by reaſon of the ſaid ſurrender. That immediately after ſuch ſurrender, the new company ſhould change its name, and be called, The united company of merchants of England trading to the Eaſt Indies. Nevertheleſs, the future management of the ſaid ſtock and trade, after the expiration of the ſaid ſeven years, ſhould be according to the new company's charter of 1698. That for the better attaining of the purpoſes aforeſaid, a tripartite indenture ſhould be executed by his Majeſty and both the ſaid companies; wherein ſuch covenants and proviſions might be made, as ſhould be thought reaſonable, with proper releaſes from his Majeſty to each company: ſo that, on the expiration of the ſaid ſeven years, allowed for the conveniency of affairs on both ſides, the two companies might be entirely one in name and effect. Accordingly, in 1702, a new charter of union was granted the two companies by Queen Anne, under the name of *The united company of merchants trading to the Eaſt Indies*; which was eſſentially the ſame with thoſe of King Charles and King William, and has been therefore omitted here; becauſe by the union of the two companies, they have adopted all the regulations made for the government of the old company: ſo that the united company ſhould rather be deemed the old company continued, than a corporation erected upon a different eſtabliſhment. This charter was renewed, with ſome new powers, in 1730; and, in the 20th year of King George II. was continued until the 25th of March 1780; when, on repayment of the capital ſtock, borrowed by the government, and the annuities, the company's right to the ſole and excluſive trade to the Eaſt Indies is to ceaſe and determine.

To the 2,000,000 l. advanced by the new company to King William III. the united company, in the 6th year of Queen Anne, lent the government 1,200,000 l. more, without intereſt; for which the government withdrew the duty of 5 *per cent.* on goods imported by the company, and authoriſed them to add the ſame ſum to their ſtock; whereby their whole loan to the goverment amounted to 3,200,000 l. being what may properly be called the capital ſtock of the company. The firſt loan of two millions was ſecured by the government out of the duties upon ſalt, and the additional ſtamp duties granted in the 9th and 10th year of King William III. chargeable with the payment of 160,000 l. as a yearly fund for keeping down the intereſt at 8 *per cent.* but, by the act of 3d the of Geo. II. this annuity of 160,000 l. was reduced to 128,000 l. and transferred as a charge upon the aggregate fund, which, in the year 1749, was reduced to 3½ *per cent.* till May 1757, and afterwards to 3 *per cent.* See National *Debt* and *Fund.*

By the ſtatute of the 1ſt of Queen Anne, it was enacted, That during the continuance of the union of the India companies, 494 tons and one quarter of good ſalt-petre, ſhould yearly, if demanded, be delivered into the royal ſtores, for the firſt coſt, freight, duties, and other charges, by the company out of the united trade; and 5 tons and 3 quarters by the other members of the general ſociety: the price, in time of peace, to be 45 l. *per* ton; and 53 l. in time of war; alſo, in any charter to be granted to the companies, they ſhould be obliged by covenant, to deliver their proportion of ſalt-petre.

By the 9th and 10th of William III. and 6th Anne, no perſon may trade thither till ſufficient ſecurity be given to the commiſſioners of the cuſtoms, that all the goods cauſed by them to be there laden, ſhall be brought without breaking bulk, to ſome port of England: which ſecurity the Engliſh Eaſt India company are to give under their common ſeal, after the rate of 2500 l. for every 100 tons they are lett at, for every ſhip by them ſent out.

But by the 13th of Geo. I. and 3d Geo. II. the South Sea company may, by conſent of the Eaſt India company, under their common ſeal, ſend yearly to Madagaſcar, four ſhips to take in negroes to be tranſported to Buenos-Ayres, having firſt given ſecurity to the Eaſt India company not to trade for any other goods.

By the 9th and 10th of Will. III. and 6th Anne, the goods imported from thence, muſt be brought to ſome port of Great Britain, and be there unladen, and be openly and publickly ſold by inch of candle, upon forfeiture, of their value.

By

By the 9th and 10th of Will. III. perſons not qualified, going or trading thither, forfeit the ſhip and goods, and double the value thereof; one fourth part to the ſeizer or informer, and the other three fourths to the uſe of the company, who are to bear the charges of proſecution; which was confirmed by three ſubſequent acts.

By the 5th, 7th and 9th of Geo. I. any of his Majeſty's ſubjects, not lawfully authorized, going to, or being found in the East Indies, ſhall be guilty of a high crime and miſdemeanor, and may be proſecuted within 6 years, and being convicted thereof, ſhall be liable to ſuch penalty as the court ſhall think fit. And every perſon ſo offending may be ſeized and brought to England, and committed to the next county-goal, by any juſtice of peace, till ſufficient ſecurity be given, by natural-born ſubjects or denizens, for their appearance to anſwer the proſecution; and not to depart out of the kingdom without leave.

By the 5th of Geo. I. perſons trading or going thither, under foreign commiſſions, forfeit 500 l. but the South Sea company's trade to any of the limits, to which they are entitled, not to be prejudiced by theſe acts.

By the 7th of Geo. I. goods traded for contrary to law, are forfeited with double the value: contracts for ſhips, in foreign ſervices, to trade thither, are void: goods not belonging to the company, or perſons licenſed by them, ſhipped on board ſhips bound thither, or taken out of ſhips from thence, before their arrival, are forfeited, with double the value; and the maſter privy thereto, forfeits 1000 l. and all his wages: bills of complaint may be exhibited againſt illegal traders, for diſcovery thereof, and recovery of the duty, and 30 *per cent.* to the company: officers are not to proſecute for forfeitures and penalties, without the conſent of the directors of the company: but by the 3d of George II. the Levant company's trade to the Levant ſeas, not to be prejudiced by theſe acts. Goods of the product of the East Indies, may not be imported into any place belonging to the Britiſh crown, unleſs ſhipped from Great Britain, on forfeiture of ſhip and goods, or their value; and officers of the cuſtoms conniving thereat, or delaying proſecution, to forfeit 500 l. and be rendered incapable.

By the the 9th of Geo. I. none of his Majeſty's ſubjects may contribute to, or promote the eſtabliſhing, or carrying on any foreign company trading to the East Indies, from any part of the Auſtrian Netherlands, or any other place, upon forfeiture of their ſhare in ſuch company, with treble the value: one third part thereof to the uſe of his Majeſty, and two thirds to the uſe of the company, if they inform or ſue, otherwiſe one third part of ſuch two thirds to the uſe of the informer or ſuer.

Bills of complaint may be exhibited for the diſcovery of offences, and recovery of the ſingle value only; one third part whereof for the uſe of his Majeſty, and the other two thirds for the uſe of the company: but if a common informer declares his intention of proſecution at law, and inſtead thereof, the directors ſhall chuſe to have it commenced by bills of complaint, they are to allow him one third of the aforeſaid two thirds: any of his Majeſty's ſubjects accepting of any ſhare in truſt, or knowing any other ſubject to have any intereſt or ſhare in any foreign company; not diſcovering the ſame to the united company, within ſix months, ſhall forfeit treble the value of ſuch ſhares, or one year's impriſonment. But making a voluntary diſcovery to the directors in writing, within the time afore-limited, to have a moiety of the forfeiture.

By the 7th of Geo. I. and 3d of Geo. II. the forfeitures and penalties inflicted by the acts of 9th and 10th Will. III. 6th Anne, and 5th Geo. I. and theſe acts, may be proſecuted by the attorney-general, the united company, or any officer of the cuſtoms: one third part to be for the uſe of his Majeſty, one third to the uſe of the company, and the other to the uſe of the officers.

By the 7th of Geo. I. the united company may export ſtores, proviſions, utenſils of war, and neceſſaries for their garriſons and ſettlements, free of duty, provided the duty would not have exceeded 300 l. in any one year.

By the 9th of Geo. I. a capias in the firſt proceſs may be iſſued for offences againſt any act for the encouraging and ſecuring the lawful trade thither.

By the 9th and 10th of Will. III. and 6th Anne, the duty of 5 l. *per cent.* for the maintenance of ambaſſadors, *&c.* is after 29th September 1714, repealed for goods imported from thence by the Engliſh company.

By the 11th and 12th William III. wrought ſilks, bengals and ſtuffs, mixed with ſilk or herba, of the manufacture of East India, China, or Perſia, and callicoes printed, ſtained, or dyed there, are prohibited to be worn in Great Britain; but, upon importation, to pay only the half ſubſidy. Such goods to be imported into the port of London only, and there regularly entered, upon forfeiture, and 500 l. After entry, to be ſecured in proper warehouſes, approved by the commiſſioners of the cuſtoms; and not to be taken thence, but in order for exportation, and until ſufficient ſecurity be given accordingly. Such ſecurity may be diſcharged, upon certificate under the common ſeal of the chief magiſtrate, or under the hands and ſeals of two known Britiſh merchants, at the place where landed, teſtifying the ſame, or upon proof that the goods were taken by enemies, or periſhed at ſea.

But by the 8th of Anne, ſuch bonds not proſecuted within three years, nor judgment obtained within two years after proſecution, are void; and officers refuſing to deliver them up accordingly, are to pay damage, and treble damages.

By the 11th and 12th of William III. proprietors may affix one lock to every warehouſe, and may view, ſort, or deliver ſuch goods for exportation, in the preſence of the warehouſe-keeper, who is to attend at all ſeaſonable times: but if they are found in any place, other than in the aforeſaid warehouſes, they are forfeited; and, upon ſeizure, muſt be carried to the next cuſtomhouſe, and, after condemnation, are to be publicly ſold by the candle for exportation, the buyers giving ſecurity accordingly; one third part of the produce of ſuch ſale, to be paid to the King, and the other two thirds to the ſeizer or proſecutor. The perſons knowingly harbouring or ſelling ſuch goods, are likewiſe to forfeit 200 l. one third to the King, and two thirds to the proſecutor.

If the place of the manufacture is diſputed, the proof to lie upon the owner.

Warehouſe-keepers are to enter in a book, every cheſt, bale, and number of pieces therein contained, brought into, and carried out of the aforeſaid warehouſes; and every ſix months tranſmit to the commiſſioners of the cuſtoms, upon oath, an exact account thereof, and of what are then remaining, in order to be by them laid before the parliament in the firſt week of every ſeſſion. Within one month after the aforeſaid account has been tranſmitted, the commiſſioners are to cauſe the books and warehouſes to be inſpected, and the account examined; and if it appears that any goods have been illegally delivered, the warehouſe-keeper is to forfeit the value thereof, and 500 l. and be diſabled from any public employment.

By the 2d and 3d, and 3d and 4th Anne, unrated goods, callicoes, China ware, and drugs of the product of East India or China, if landed or taken out of any ſhip before entry, and ſecurity of the duties, or without a warrant from the officers, are forfeited, or their value; two thirds to the uſe of his Majeſty, who is to bear the charges of proſecution, and one third to the ſeizer or ſuer.

By the 15th and 16th Geo. I. wrought ſilks, bengals, and ſtuffs, mixed with ſilk or herba, of the manufacture of Perſia, China, or East India, or callicoes painted, dyed, printed and ſtained there, imported into Great Britain, and ſecured in warehouſes, purſuant to 11th and 12th William III. and appearing, upon examination by the proper officer, to be ſtained or damaged, or unfit for foreign markets, unleſs cleaned and refreſhed, dyed, glazed, or calendered, may, by leave of the commiſſioners of the cuſtoms, be taken out to be ſo manufactured under the care, and in the cuſtody of an officer appointed by them; bond being firſt given, in double the value, to return them again within the time the commiſſioners ſhall think reaſonable to limit. The officer to be paid for his trouble by the perſon at whoſe requeſt the goods are taken out; and any diſpute ariſing about his allowance, is to be determined by the commiſſioners.

The warehouſe keeper, in the account of the goods received into, and delivered out of the warehouſes, which he is directed to keep and tranſmit to the commiſſioners upon oath every ſix months by 11th and 12th William III. is to inſert an account of all goods delivered out to be cleaned, &c. in purſuance of this act, and of what is returned to the warehouſe, with the days and times when, and of what is remaining in the care and cuſtody of the officer out of the warehouſe.

Any officer intruſted with the care and cuſtody of the goods delivered out, and not returning them again to the warehouſe, is to forfeit the value of the goods, and 500 l. and be for ever diſabled from any public employment for the future.

The method of aſcertaining the values of unrated goods imported by the Eaſt India company, was not to be altered by the additional book of rates. See *Cuſtoms*.

The company poſſeſſes, as its property, only a few ſmall veſſels, which are uſed for the coaſting trade of India; where of late they have alſo a 50 gun ſhip for the protection of trade; the other ſhips employed in its commerce from Europe, uſually belonging to ſome able traders or ſhip-builders of London, who purpoſely build them for letting out on freight to the company; for, by the by-laws of the company, no veſſel is to be hired, wherein any director is concerned, directly or indirectly, either as owner, or part-owner; a regulation which, it is ſaid, is not over ſtrictly obſerved.

The cargoes from England to the Eaſt Indies, conſiſt in ingots of gold, French louis-d'ors, Spaniſh piſtoles, a great quantity of piaſters, ſilver-bars, or even Engliſh money coined at the Tower of London, but according to the conditions of the 13th article of the charter. This gold and ſilver are uſually the 3-4ths, or 7-8ths, of the cargo of the ſhips which the company ſends; the other fourth conſiſting in lead, Swediſh and Spaniſh iron, iron cannon, gun powder, and matches, Engliſh cloths of ſeveral colours, particularly ſcarlet and blue; great parcels of ſerges, and other ſtuffs of the Britiſh manufacture, whereof are ſold to the amount of about 150,000 l. a year; as alſo cochineal, quickſilver, vermilion, brute coral of Italy, amber in grain, and ſome other ſmall works.

The returns from the Indies and China are, ſpun cotton, cotton cloths, callicoes, muſlins, ſilk ſtuffs, with gold and without, quantities of raw Perſian and Chineſe ſilk, Carmania wool, cabinets, folding-ſcreens, varniſhed works, porcelain, quickſilver, gold, common and long pepper, coffee, rice, frankincenſe, ſaltpetre, terra merita, three kinds of lacca, indigo, myrrh, tea, ſago, bezoar, oppoponax, vitriol, camphor, ſal armoniac, galbanum, galanga, ſagapenum, ſeveral kinds of aloes, red-wood, ſena, folium indum, rhubarb, and a variety of other drugs, beſides a great number of painted cloths, and ſtuffs mixed with ſilk, cotton, and herba, which the company's ſhips, for a conſiderable time, have made the principal object of their returns; all theſe returns generally amounting to about 1,000,000 l. a year.

The company alſo allows of the commerce of diamonds, in conſequence of a certain duty agreed upon for the freight; that is, 2 *per cent.* for the members of the company, 6 *per cent.* for the Engliſh who are not of the company, and 8 *per cent.* for foreigners.

The company has three principal eſtabliſhments in the Indies; Fort William, in the gulph of Bengal; Fort St. George, on the coaſt of Coromandel; and the iſland of Bombay.

The principal factories dependent on Fort William, are Caſſimbuzar, or Caſſumbazar, Patna, Dacca, Baliſore, or Ballaſore, and Jugdea: thoſe on Fort St. George are, Fort St. David, Vizagapatan, Ingeram, and Madipollam; as alſo Fort Marlborough, or Bencoolen, in the iſland of Sumatra: and thoſe dependent on the iſland of Bombay are, Gombroon, Surat, Anjengo, and Tellicherry; and they are alſo in poſſeſſion of St. Helena, an iſland in the Atlantic ocean: beſides which, they have a trade or factories at Muſcat, and other places, in Arabia Felix; at Gombroon, and other places in Perſia; at Canton, and other places in China; in Siam; at Achem, and other places in the iſland of Sumatra; and in ſome other of the iſlands of the Indian archipelago.

When the Engliſh quitted Bantam, they erected a new general eſtabliſhment at Priaman, in the iſland of Sumatra, which eventually appeared to be of no conſequence.

The ſhips which the company ſends to the gulph of Bengal, and the coaſt of Coromandel, depart uſually in the months of December and January; and when they proceed after the manner of a fleet, a commodore is nominated; but no ſhips for the Indies are armed like men of war, as none ſuch are commiſſioned by the company, tho', on their arrival there, if neceſſary, they are armed; when the commander upon the ſpot gives them a commiſſion, ſealed with the ſeal of the company, and authoriſed by the letters-patent of his Britannic Majeſty.

Laſtly, the company can make war upon the Indian kings and princes, who are not allies of England, without orders from the court of London, purſuant to the 24th article of the great charter of Charles II.

For the œconomy and policy of the united Eaſt India company, all perſons, without exception, are admitted members of it, native and foreigners, men and women; with this circumſtance, that 500 l. in the ſtock of the company gives the owner a vote in the general courts, and 2000 l. qualifies him to be choſen a director.

The directors are 24 in number, including the chairman and deputy-chairman, but may be re-elected for four years ſucceſſively; having each a ſalary of 150 l. a year, and the chairman of 200 l.; whoſe meetings, or courts of directors, are to be held at leaſt once a week; but they are commonly oftener, being ſummoned as occaſions require; and the general court is to be held once a year at leaſt, in the month of April.

Out of the body of directors are choſen committees, who have the particular inſpection of certain branches of the company's buſineſs; as the committee of correſpondence, committee of buying, committee of treaſury, committee of warehouſes, committee of ſhipping, committee of accompts, committee of private trade, committe of houſe, and committee to prevent the growth of private trade.

Other officers of the company are, a ſecretary, and aſſiſtant, with ſix clerks; two caſhiers, with five clerks; a chief accomptant, with three aſſiſtants, and twenty-two clerks; a head accomptant of the freight-accompts, with three clerks; a paymaſter, with two aſſiſtants, and one clerk: to which may be added a ſurveyor of ſhips, and two aſſiſtants; a ſhip's huſband, for receiving the company's goods at the water-ſide, with an aſſiſtant, and three elders; a ſolicitor for law-affairs; beſides warehouſe-keepers, elders, and labourers employed in the ſeveral warehouſes.

The warehouſes, or magazines of the company, are, 1. That for Bengal goods, which is managed by a warehouſe-keeper, and his aſſiſtant, with three elders, under whom are a number of porters employed at daily wages: 2. Helen's warehouſe, for coaſt and Surat goods; in which are two warehouſe-keepers, and four elders, beſides labourers: 3. The drug-warehouſe, for drugs, and China ware: 4. The pepper-warehouſe: and, laſtly, The private trade warehouſe; all officered much like the firſt.

Scotch EAST INDIA *company of commerce.* Though Scotland, for a conſiderable time paſt, makes no ſmall ſhare of Great Britain; yet a national jealouſy had almoſt always cauſed a diviſion, the intereſts either political or commercial of both people being ſeldom the ſame; as each nation had its parliament, ſo each nation had alſo its trading companies. But after ſeveral endeavours, all to no purpoſe, in the reign of James I. and eſpecially in that of William III. the union of the two kingdoms and their parliaments being made in 1707, the Scotch and Engliſh Eaſt India companies were united much about the ſame time.

French CHINESE *company.* Some perſons, in France, having entered to an aſſociation for this commerce, obtained letters-patent, in 1660; whereby the King granted them an excluſive privilege of ſending ſhips to China, Tonquin, Cochinchina, and the adjacent iſlands. But before this company was properly eſtabliſhed, it was in a manner abſorbed by that of the Eaſt Indies, eſtabliſhed in 1664; from which laſt, by a kind of reſtitution, a new Chineſe company proceeded, formed by the Sieur Jourdan, towards the end of 1697.

The firſt ſetting out of this company was attended with

great ſucceſs; for the Amphitrite, its firſt ſhip, departing in the month of March 1698, returned the 3d of Auguſt 1700, with a very rich cargo.

This veſſel ſet ſail a ſecond time in the month of March 1701, and was equally ſucceſsful, returning richly laden in the month of September 1703.

There were ſuch hopes of this company's ſupporting itſelf, that the King, after the firſt return of the Amphitrite, granted a new conceſſion for fifteen years; whereupon three ſhips were ſent: but the war for the Spaniſh ſucceſſion diſcouraged this company, which contented itſelf, or rather ceaſed, after theſe voyages, for fear of the Engliſh and Dutch fleets, which were then very powerful in the Indian and Chineſe ſeas: beſides, ſome diviſion among the aſſociates prevented them from taking any advantage of the union made with a company at St. Malo, formed by Monſieur Lepine-Danican; ſo that this company was afterwards united to the weſtern company.

French EAST INDIA *company.* The propoſals of this company in 40 articles, bearing date the 26th May 1664, were preſented to the King at Fountainbleau, who confirmed them, by his letters-patent, in form of an edict, and had them ratified in parliament the 1ſt of September following.

Their import, among other things, was, that the company ſhould be formed of his Majeſty's ſubjects, even of the nobles, without any dread of derogating from their nobility.

That each ſhare could not be leſs than a thouſand livres, nor the augmentations under 500.

That ſtrangers, of any prince or ſtate whatſoever, might be incorporated with the company; and that thoſe who ſhould have in it 20,000 livres, ſhould be reputed denizens, and in that reſpect ſhould enjoy all the privileges of real ſubjects.

That a chamber of general direction ſhould be eſtabliſhed, compoſed of 21 directors; whereof 12 ſhould be of the city of Paris, and 9 others of the provinces; and that the ſaid chamber might eſtabliſh particular ones, when and where it ſhould judge proper.

That his Majeſty empowered the company, to navigate ſolely, excluſive of his other ſubjects, in all the Indian ſeas, eaſt and ſouth, during the term of 30 years.

That it ſhould have for ever the poſſeſſion of the iſland of St. Laurence, or Madagaſcar, and of all the other lands, places, and iſles, it might conquer from the enemy, and the natives, to enjoy them in all property, ſeigneury, and juſtice, without reſerving any thing therein, but ſole fealty and liege-homage, with the duty, rent, or ſervice, of a crown and ſcepter of gold, weighing 100 marks, upon each demiſe of a king: granting him alſo the power of nominating and eſtabliſhing all officers, military and civil; though the company might have it in its power to nominate ambaſſadors in his Majeſty's name to the Indian kings and princes, and make treaties with them.

That the company might ſend the ſpecies of gold or ſilver it ſhould have an occaſion for in its commerce, notwithſtanding the prohibitions enacted by the laws and ordonances of the kingdom; and this by a particular permiſſion, and a writing granted in its favour.

That his Majeſty ſhould advance, or defray out of his own revenues, the fifth part of the expence neceſſary for the three firſt equipments; for which he was not to be reimburſed till the expiration of the firſt ten years, and without intereſt; and in caſe it ſhould be found, by a general accompt, that the company had ſuſtained a loſs in its capital, the loſs ſhould devolve upon the ſum advanced by his Majeſty.

That the Indian merchandiſes conſumed in France ſhould pay but the half of the duties regulated by the tariffs; and that thoſe deſigned for other countries, and the exempted provinces, either by ſea or land, ſhould pay no duties of importation or exportation; as alſo the timber, and other neceſſary articles for the building and fitting out of the company's ſhips.

Laſtly, That his Majeſty ſhould pay the company 50 livres *per* ton for the merchandiſe its ſhips ſhould carry into the countries of its conceſſion, and 75 livres for thoſe brought back and diſcharged in the kingdom.

His Majeſty alſo granted the company a ſeal, having for legend, *Ludovici* XIV. *Franciæ et Navarræ Regis ſigillum, Uſum ſupremi conſilii Galliæ Orientalis*; and for arms, an azure globe and flower de luce of gold, with this inſcription, *Florebo quocumque ferar*; the ſupporters being two figures, one repreſenting Peace, and the other Plenty.

The extraordinary funds eſtabliſhed, whereof the King advanced the greater part, and which amounted to no leſs than 7 or 8 millions of livres, though theſe were to have been 15; the departure of ſeveral fleets, either for the eſtabliſhment projected at Madagaſcar, which was to be the company's chief ſtaple, or for the eſtabliſhment of the factories it was deſirous of having in the Indies; and, laſtly, the union and aſſiduity with which the French directors endeavoured to uphold this enterpriſe, gave great ideas of this company, and vaſt hopes of ſucceſs.

But the ill choice of this firſt ſtaple in an unwholſome iſland, inhabited by cruel and unconquerable people, leſs rich, and leſs fruitful than it was believed to be upon exaggerated relations; the death of the moſt able and experienced directors ſent to the Indies, the diviſion of others; a breach of faith in M. Caron, a Dutchman, inconſiderately ſet over affairs in ſo diſtant a country; the wars of 1667 for the rights of the Queen, and of 1672 againſt Holland; the little ſucceſs of the ſquadron commanded by M. Deſhayes, whereof a part periſhed in 1672, at Trinquimale, in the iſland of Ceylon, where the ſaid Caron had unadviſedly engaged; and the other at the taking, defence, and ſurrrender of St. Thomas, in 1673 and 1674, brought affairs into ſuch a ſituation, that what ſubſiſted afterwards of this company, or rather thoſe formed out of its ruin, which the traders of St. Malo ſupported with ſome ſucceſs to 1719, were no ways conſiderable.

The company being thus incapacitated from fulfilling its engagements, and continuing its commerce, it was thought adviſable to give it a new form, whereby its credit, if poſſible, might be reanimated: to ſucceed wherein, a general aſſembly of the parties was held on the 29th of May 1684, purſuant to a *lettre de cachet* of the 17th of April preceding.

This *lettre de cachet* ordained the election of a ſufficient number of directors to fill the place of the deceaſed, or of thoſe who could no longer acquit themſelves of that function. It nominated commiſſioners, for the moſt part the ſame that had been nominated in 1675, to examine the company's books and accompts; ſignifying withal, that it was his Majeſty's intention a proviſion ſhould be made of ſuitable gratifications for the directors; both of the general chamber of Paris, and the particular ones of the provinces.

The new directors being choſen purſuant to the *lettre de cachet*, the company's books were laid before the King's commiſſioners, and the director's gratifications being debated upon, were fixed at 3000 livres for each director of the general chamber of Paris, and 1000 livres for each director of the particular ones.

But this aſſembly, and the examination of the company's books, having ſerved only to diſcloſe its deſperate condition, and the impoſſibility of ſubſiſting without being reduced to another form, his Majeſty ordained, by an arret of his council of the 3d September of the ſame year, a ſpeedy convocation of a new aſſembly; wherein, in preſence of his commiſſioners, the books of the Indian factories, as alſo the clerks of the ſaid factories newly arrived, ſhould be heard and examined; and that out of the ſaid books, and other memoirs, a new book of accompts of the quality and value of the company's effects ſhould be made; which, when inſpected into by his Majeſty, with the advice of his commiſſioners, he might be in a condition to reſolve upon what was to be done.

In conſequence of this aſſembly, it appeared, by the company's accompts, that its funds amounted in all only to the ſum of 3,353,966 livres, or about 136,255 l. ſterling; that only 80 actioniſts had afforded their fourths over and above; and that this, with the remainder of the company's

company's effects, was not ſufficient to uphold its commerce; whereupon the King iſſued out a declaration, in the month of February 1685, whereby it was ordained,

1ſt, That the edict of the month of September 1664, ſhould be executed, purſuant to its form and tenor, for the benefit of the antient actionaries, who ſhould have furniſhed their fourth over and above, as well for the fourth remaining of their actions, as for their new fund of the fourth over and above.

2d, That thoſe who had not paid the ſaid fourth, ſhould forfeit all the intereſt they had therein.

3d, That the ſum of 728,975 livres, to which the ſupplement amounted, and unpaid by the actioniſts, ſhould be advanced by thoſe nominated by his Majeſty, who were to take the place of thoſe that had not ſupplied the ſaid fourth, with the injunction of paying them a like ſum of 728,975 livres for the fourth, to which all the actions had been reduced.

4th, That thoſe who contributed new funds for this reimburſement, and for the continuation of the company's commerce, ſhould be paid the intereſt of their ſaid funds and reimburſements, upon the footing of payment uſed in maritime commerce, that is, upon the proviſo of profits that might iſſue from the ſaid commerce.

5th, That, to take care of the company, and its trade, 12 directors ſhould be choſen from among the actioniſts of the city of Paris, who ſhould have at leaſt furniſhed 30,000 livres of new funds.

6th, That, upon the deceaſe of any of the ſaid directors, others ſhould be nominated, by a plurality of voices, as well from among the ſurviving directors, as from among the actioniſts, who ſhould have furniſhed at leaſt 20,000 livres of actions.

7th, That the ſaid directors ſhould have the ſole management of the affairs, and commerce of the company; his Majeſty ſuppreſſing all the directors nominated in the general chamber of Paris, and in all the other chambers of the kingdom.

8th, That in caſe the company was willing to keep the iſland of Madagaſcar, it ſhould be held purſuant to the fealty, homage, and duties, owing to his Majeſty; or, on the contrary, ſhould be acquitted and diſcharged from the ſaid fealty.

But the company renounced its right to this iſland in 1686; when, by an arret of council of the 4th January of the ſame year, Madagaſcar was united to the crown.

It was upon this foundation that the company ſubſiſted, and was governed till 1719; at which time it was incorporated with the company of the weſt, known afterwards by the name of the *Indian company*.

In the month of April 1687, the number of directors was increaſed to twenty; which new directors were to pay for their reception 40,000 livres, if they had already 20,000 livres of actions in the company, and 60,000 livres, if they had no actions therein.

By this new form given to the company, its funds amounted to 2,100,000 livres, or about 104,000 l. ſterling; whereof the directors advanced 1,200,000, being 60,000 livres each, and the actioniſts about 900,000 livres.

It ſeemed, that, under theſe new directors, the company became ſomewhat vigorous; and, in effect, its commerce being proſperous, two dividends were made for its actioniſts in 1687 and 1691, amounting together to 30 *per cent.*

After 1691, its commerce was greatly interrupted by the war that followed the revolution in England, and that wherein France was engaged for the Spaniſh ſucceſſion.

Immediately after the peace of Ryſwick, the directors made more extraordinary efforts than ever before; but here may be properly dated the epocha of the company's fall, the war of 1700 having endangered it to ſuch a degree, that when it was incorporated 19 years afterwards with the company of the weſt, its debts, contracted both in the kingdom and in the Indies, amounted to upwards of ten millions of livres, or about 500,000l. ſterling.

It ſeems that, in 1701, the company having repreſented to the miniſtry its unhappy ſituation, obtained from his Majeſty a loan of 850,000 livres, provided that each of the directors would augment their fund to the amount of 40,000, and the actioniſts to 50 *per cent.*

The execution of theſe conditions cauſed great troubles among the directors and actioniſts; the former accepting them, and the latter refuſing to execute them, notwithſtanding two arrets of council, of the 21ſt February, and 16th May 1702, that authoriſed the reſult of the general aſſembly held the 24th January of the ſame year.

Laſtly, in 1704, all conteſtations were terminated by an arret of council, of the 1ſt of April; which, notwithſtanding all other arrets ſince that of the 16th of May 1702, ordained, that all the company's actioniſts ſhould be intereſted in its commerce, both for the dividing of profits, and the ſuſtaining of loſſes, each with regard to their fund, as well for the paſt, as for the time to come.

That to be acquainted with the ſtate of the company's affairs, the directors ſhould immediately, and above all things, give in the accompts of their commercial tranſactions.

That, for the future, the actioniſts need not be engaged in any new loans, unleſs the deliberations were ſigned by three actioniſts from among the five that ſhould be nominated by them for the examination of the ſaid accompts; and in caſe of refuſal, the parties ſhould refer the matter to the Sieur Pontchartrain, according to whoſe report his Majeſty would proceed to a deciſion.

This ſtating of accompts reviving the directors and actioniſts conteſtations, and the company's affairs being daily upon the decline; two arrets were iſſued out, one of the 6th, and the other of the 12th of November 1708.

The firſt arret ordained, that within two months time, a general aſſembly of the company's directors and actioniſts ſhould be held, in preſence of the *prevot de marchands*, to expedite whatever was neceſſary for the upholding and augmenting of the commerce of the ſaid company, that his Majeſty might be in a condition to know what regulations ſhould be made.

The ſecond ordained the execution of the former, and ſuperſeded all purſuits, compulſions, and executions, upon the company's effects, on account of its debts, and upon the perſons and goods of the directors. Yet the creditors might indemnify themſelves in the council, and might make therein whatever demand they ſhou d judge proper; with a prohibition of endeavouring to obtain juſtice by any other means, upon pain of nullity.

But things being not diſpoſed as yet, to erect a new *Eaſt India company* in France, and the miniſtry willing that the French ſhould continue their commerce there with ſome reputation, the court allowed the company's directors to treat with the rich traders of St. Malo, and to give up to them their privilege upon certain conditions: in whoſe hands it was that the French trade began to reflouriſh in the Indies, till this company was incorporated with that of the weſt in 1719. See French *Weſt* India company.

It ſhould be obſerved, that, for a conſiderable time, the Eaſt India company was allowed to ſhare its privilege with others, through the hopes that the profits accruing from its treaties might be a ſupport to its commerce, or at leaſt that it might have wherewithal to pay in France the intereſts of ſo many bills, and the credit of renewing them.

The firſt of theſe treaties was of the 4th January 1698 with the Sieur Jourdan, and his aſſociates, for the Chineſe trade; the ſecond w th the Sieur Crozat, and his company, in the month of December 1708, authoriſed by an arret of the 15th of the ſame month.

By this laſt treaty, the directors of the company allowed the Sieur Crozat to ſend to the Indies, in the ſaid company's name, two ſhips, upon proviſo that the company ſhould have 15 *per cent.* from the ſale of the effects brought back by theſe ſhips, without any deduction; as alſo 50 *per cent.* accruing from the prizes the ſaid ſhips might make beyond the line; with liberty for the ſaid company to bring back in theſe two ſhips, freight free, to the amount of ten ton of Indian goods; the company reſerving to itſelf the duty of tonnage, as well going as coming, granted by his Majeſty; that is, the duty of 50 livres

ton of the merchandiſes exported by theſe ſhips into the countries of its conceſſion, and 75 livres *per* ton for thoſe brought back to be unladen in the country; which his Majeſty acceded to by way of gratification for the company.

The conditions of the treaty with Jourdan were much the ſame with thoſe of the Sieur Crozat.

Ponichery, which the French uſually call Pontichery, or Pondicherry, is their chief Indian factory; the reſidence of the director-general of the company, and the center of their commerce: their other eſtabliſhments being only factories, where few clerks are left, very often but one, except that of Surat, which is pretty conſiderable.

The company ſecured Pondicherry, in 1688, by a fort flanked with four towers; upon which is a battery of 24 pieces of cannon, with a good garriſon.

The Hollanders beſieged it in 1693, and took, it after a long ſiege: during which the Sieur Martin, director-general, who, two years before, was complimented with letters of nobility from the King, and who was afterwards of the order of St. Michael, ſignaliſed himſelf greatly, aand obtained for himſelf and his garriſon a very honourable capitulation, beſides ſeveral advantageous articles for the company.

Pondicherry was four years after reſtored to the French by the treaty of Ryſwick, and is, to this day, their chief eſtabliſhment in the Indies: but the Engliſh, in the year 1748, under the conduct of Admiral Boſcawen, unſucceſsfully attempted the reduction of it. The commodities imported to France by the French Eaſt India company, are the ſame as thoſe imported into England by the Engliſh Eaſt India company.

Daniſh EAST INDIA *company*. It is but of late that the Danes undertook long voyages, at leaſt for the Indies; their flags making no appearance in the gulph of Bengal, and about the coaſts of Pegu, till near the middle of the 17th century. Their chief factory is at Tranguebar, or Trincombar, where they ſend two or three ſhips yearly, and where they have a conſiderable fortreſs; but they have lately extended their trade to China, and appointed Altena, near Hamburgh, for the port where the Eaſt India commodities are to be unloaded, and public ſales made of them.

Oſtend EAST INDIA *company*. As ſoon as the Spaniſh Netherlands were yielded to the Emperor by the treaty of Raſtadt, the merchants of Oſtend, Antwerp, and ſome other towns of Flanders and Brabant, thought of reaping ſome advantage from the protection and power of their new maſter, for the eſtabliſhment of their commerce in the Eaſt Indies.

Their firſt ſetting out was without authority and letters-patent; yet with the hopes, at their return, of being made a regular company, like the Engliſh, Dutch, and French.

But the infant commerce of this company was immediately troubled by the Dutch; who, the 19th December 1718, took, upon the coaſts of Africa, an Oſtend veſſel richly laden, though protected by a paſſport from the Emperor.

Towards the end of the year 1719, the Emperor allowed the directors to receive ſubſcriptions, and began to encourage the ſubſcription of actioniſts: he alſo granted a deduction of $2\frac{1}{2}$ *per cent.* of all the duties accruing to him from the commodities imported by the company's ſhips, beſides ſeveral other privileges they were made to expect; and, about the ſame time, he demanded ſatisfaction from the States-General for the ſeizure of the Oſtend ſhip; but to no purpoſe, for the Dutch Eaſt India company ſeized upon another.

The merchants of Oſtend, by commiſſion from the Emperor, fitted out privateers to protect their commerce, took a Dutch ſhip, would not make reſtitution, and, in deſpight of the Hollanders menaces, fitted out for the Eaſt Indies in 1720 five ſhips richly laden, and in 1721 ſix more; three for China, one for Mocha, one for Surat and the coaſt of Malabar, and the ſixth for Bengal; their principal ſtation in the Indies being at Coblon, 56 miles N. of Pondicherry, on the coaſt of Coromandel.

The Dutch, on their ſide, to ſtop their progreſs, confiſcated a ſhip fitted out for the Eaſt Indies by the traders of Bruges, notwithſtanding the remonſtrances of the imperial miniſter at the Hague.

The Engliſh pirates having taken, in the ſeas of Madagaſcar, an Oſtend ſhip richly laden, and bound for Europe, this new loſs ſeemed to diſcourage the Imperial company: but, upon the ſafe arrival of four others, in 1722, it found itſelf in a condition, not only to repair its loſſes, but alſo to continue its commerce with more ſucceſs and reputation.

At laſt his Imperial Majeſty granted this company his letters-patent, in a moſt ample and authentic manner; the duration of its conceſſion being 30 years, its limits the Eaſt and Weſt Indies, with all the coaſts of Africa, both beyond and on this ſide the Cape of Good Hope; as alſo all the ports, harbours, places, and rivers, where other nations had any freedom of trade.

The company's fund was fixed at ſix millions of guilders, or about 475,000 l. ſterling, and at 6000 actions, of 1000 guilders each.

The news of theſe letters-patent made the Engliſh and Dutch unite to obtain their revocation; and the Dutch Eaſt India company preſented two memorials on this head to the ſtates; in the latter whereof, of the 9th Auguſt 1723, a liberty of diſputing their rights by the force of arms was required. The Oſtend company founded themſelves upon the natural liberty which all nations have of trading where-ever it ſeems convenient, unleſs ſome particular convention might deprive them of it; and the Dutch pretended that there was ſuch a convention between them and thoſe of Oſtend, ſpecified by the treaties of barrier, and that of Munſter.

The courts of London and Paris, whoſe ſubjects had been allowed, by treaty, to import ſilks into Germany, and the Emperor's hereditary dominions, backed the remonſtrances of the republic; and France thought it neceſſary to hinder her traders to intereſt themſelves in this company; for which purpoſe the French monarch iſſued out a declaration, of the 16th Auguſt 1723, among other things, impoſing a penalty of 3000 livres, a confiſcation of all funds and effects in the ſaid company, and three years baniſhment in caſe of a ſecond offence; which example was followed in Great Britain. See *Engliſh Eaſt* India company.

The Emperor, continuing his utmoſt efforts to ſupport the new company, entered into a treaty with Spain in 1725, called the *Vienna alliance*; whereby the Spaniſh monarch engaged to allow greater advantages in trade to the Imperialiſts than to any other nation, particularly to the Oſtend company. Whereupon the French inſinuated, that there were ſtill ſome further ſecret articles, much more prejudicial to the trade of Britain than thoſe that appeared; which induced the Britiſh miniſtry to enter into an alliance with them, commonly called the *Hanover alliance*, in oppoſition to that of Vienna; whereby the contracting parties guarantied their reſpective rights and privileges in relation to trade, which ſtruck chiefly at the Oſtend company; and the Dutch were afterwards induced to accede to this treaty, with a view to prevent the trade of this company to the Eaſt Indies; while Great Britain commenced hoſtilities againſt Spain in the Weſt Indies: ſo that the Emperor being prevailed on by the Dutch, who acted as mediators, to conſent that the charter ſhould be ſuſpended for ſeven years, preliminaries for a general peace were ſigned at Paris, in May 1727, between the allies of Vienna, and thoſe of Hanover; ſince which time, the Oſtend company has never been revived.

EAST INDIA *company of Sweden*. In the year 1730, a Dutchman, named Van Aſper, who had projected the ſame thing in Denmark, propoſed the erecting of an Eaſt India company in Sweden; which being approved of, the King took upon himſelf to be its protector; and when the Dutch, who apprehended this would be as prejudicial as the Oſtend company had been to their trade, complained of it, they were given to underſtand that commerce was open to all nations, and that the Swediſh kingdom had an equal right to it with others; ſince which time the Swedes have ſent ſeveral ſhips to the Indies; and have been ſo ſucceſsful in this trade, as to be under

no neceſſity of purchaſing the merchandiſe of India from their European neighbours, as they formerly did, unleſs it be the fine ſpices; which the Swedes, and all other nations, are obliged to purchaſe of the Dutch, who have robbed the reſt of the world of them, and conſequently ſet what prices they pleaſe upon thoſe commodities.

Embden EAST INDIA, or *Pruſſian Aſiatic company*. His Pruſſian Majeſty, ſenſible of the advantages reſulting from a maritime intereſt, granted in 1751 a patent for 20 years, to Henry Thomas Stuart, and company, for eſtabliſhing a Pruſſian Aſiatic company at Embden, an Imperial city, and port-town of Germany, in the circle of Weſtphalia; empowering it to ſend an indefinite number of ſhips annually to Canton in China; which grant was ſolemnly regiſtered; and ſuch effectual means were concerted for the proſecution of the deſign, that the adventurers were perfectly ſatisfied; for his Majeſty not only iſſued his letters patent for making the port of Embden a free port, but ordered memorials to be preſented to the maritime powers, and ſuch other princes whoſe ſubjects traded to the Eaſt Indies, concerning the navigation of the ſhips belonging to the Embden company: upon which the States-General of the United Provinces declared, that his Majeſty's ſhips ſhould have the ſame liberty as thoſe of other nations, to trade to all the ports, except thoſe which the Dutch Eaſt India company have the ſole right of trading to: that they ſhould be alſo at liberty even to put into thoſe ports to refit, after bad weather, or to get proviſions and water, in caſe they were in diſtreſs for them: but that, as the ſubjects of the republic, employed in their India company, incur very ſevere penalties, by going into the ſervice of any other power, they hoped his Pruſſian Majeſty would not permit ſuch perſons to ſail in his ſhips to the Eaſt Indies, ſeeing, in ſuch caſes, the Dutch Eaſt India company could not avoid ſeizing them, and puniſhing them with the utmoſt rigour. The directors of this company reſolved to ſend only two ſhips to China for the firſt year; and, upon the ſucceſs of theſe, to regulate their future proceedings: accordingly one of their ſhips, called the King of Pruſſia, ſet ſail from Embden on the 17th of February 1752; and as the other powers granted the ſame conceſſions with the Dutch, this company has more reaſon to expect a ſucceſsful event than that of Oſtend, which was circumvented by thoſe very powers who, in complaiſance to his Pruſſian Majeſty, granted to the Embden company what the Emperor could never obtain for the other.

Remarks.

One of the reaſons why the Dutch Eaſt India company flouriſhes, and is become more rich and powerful than all the others, is its being abſolute, and inveſted with a kind of ſovereignty and dominion, more eſpecially over the many ports, provinces, and colonies, it poſſeſſes in thoſe parts. For it appoints magiſtrates, admirals, generals, and governors, ſends and receives embaſſies from Kings and ſovereign princes, makes peace and war at pleaſure, and by its own authority adminiſters juſtice to all, appoints tribunals to judge in their name, with plenary power and no appeal, puniſhes and remits offences, beſtows rewards becoming the dignity of Kings, ſettles colonies, builds fortifications, levies troops, maintains numerous armies and garriſons, fits out fleets, and coins money. And though there is acknowledged a dependance upon the States-General, it may be ſaid they ſeldom exert their power; and while the republic preſerves the right of ſovereignty, it tacitly leaves the exerciſe and poſſeſſion of it to the merchants of this company. Theſe vaſt powers were, and are ſtill, requiſite to cheriſh and preſerve this flouriſhing branch of trade: and the proprietors juſtly merited them; for, by their own vigilance, care, and expence, they conquered, and preſerve all the countries they poſſeſs in thoſe parts of Aſia, and their fortreſſes on the coaſt of Africa for the refreſhment, refitting and protection of their ſhips.

The power of the Dutch by ſea and land is very great in the Eaſt Indies; where, by force, addreſs, and alliances, they raiſed themſelves, and ſtill ſupport a great ſuperiority, in ſpite of the Engliſh, Portugueſe, and other Europeans, that have ſome trade there; but ſo inconſiderable, that, all together, is not equal to what the Hollanders ſingly enjoy, and who could give law to the very Engliſh in 1662, obliging them to a peace very advantageous to Holland, and their Eaſt India company in particular, after a bloody and expenſive war that aroſe from jealouſy and rivalſhip in commerce. Therefore it may be for the advantage of England, France, and even Portugal, to tolerate and encourage other companies, from reaſons of ſtate, and ſelf-preſervation, which put all princes and republics upon reducing the power of ſuch as aſpire after univerſal dominion, or have already acquired it; as the Aſſyrians, Chaldeans, Medes, Perſians, Greeks, and Romans did, and againſt whom thoſe neareſt to danger, uſually form conſpiracies, courting even diſtant alliances to ballance the great and ambitious power that threatens them; and to reduce it to an equality, or even lower, that all may live ſecure, and confined within their own limits. If the power of the Dutch, though great in Europe, does not put princes and ſtates upon their guard, they muſt poſſeſs a kind of univerſal monarchy or dominion in the ſouthern provinces, iſlands and ſeas of Aſia, from Arabia to Japan; ſubjecting, by all poſſible ways, many of the powers of Europe to their law, in every thing reſpecting that important branch of trade; a thing which, beſides the diſhonour of it, very much interferes with their intereſt. For, in thoſe parts, Holland commands and directs every thing at pleaſure, bringing ſovereigns under ſubjection, conquering or reducing large and plentiful provinces, after it laid the foundation of its empire upon the ſpoils of Portugal, and enlarged it by preſcribing narrow limits to the juriſdiction and commerce of the Engliſh, and diſappointing or reducing that of the French and other Europeans. For this, and other reaſons, good policy ſeems to ſuggeſt, that the Engliſh, French, and Portugueſe, intereſted and aggrieved, ſhould unite, and not only tolerate, but encourage any proper new company, and receive it as an auxiliary and confederate power, to aſſiſt in humbling the pride of the Dutch, and weakening their univerſal dominion in the Eaſt Indies, that all may live independent, and not under a ſubjection that bears hard upon their honour and commerce.

The Eaſt India trade, however, is in the opinion of Mr. Cary, very prejudicial to Great Britain, as it is now driven; becauſe it exports her bullion, ſpends little of her product or manufactures, and brings in commodities perfectly manufactured; which hinder the conſumption of her own, and diſcourage the wearing ſuch as are purchaſed with them; the chief profit thereof ariſing from underſelling the labour of the poor, becauſe it is bought there cheaper, than, by reaſon of the value of lands, and the prices of proviſions, they are able to work in England.

The parliament having been pleaſed by an act made in the 10th and 11th years of his late Majeſty King William III. to prohibit the wearing of wrought ſilks, Bengals, ſtuffs mixed with ſilk or herba, of the manufactue of Perſia, China, and India, and all callicoes painted, dyed, printed, or ſtained there; the reaſon of it is therein ſet forth to be, the great detriment the nation received, as the trade was then managed, by exhauſting the treaſure thereof, and taking away the labour of the people, whereby very many of the manufacturers were become exceſſively burthenſome and chargeable to their reſpective pariſhes, and others compelled to ſeek for employment in foreign parts. The making this law gave a new life to the Britiſh manufactures, and would have given more, if the true intent of the parliament had been anſwered. But it has ſince been found that it has not; for it neither keeps the treaſure at home, nor prevents thoſe commodities from being worn in Great Britain, which the parliament deſigned it ſhould; and Mr. Cary very much queſtions whether any thing leſs than a total prohibition of their importation will do it; for, he ſays, though they are directed to be exported again, yet there is great reaſon to believe that they are privately brought back, both from Ireland, the Britiſh plantations, and other places to which they are ſent, to the loſs of his Majeſty's cuſtoms, and the prejudice of the Britiſh ſtainers and painters, beſides the injur-

njury to the manufactures at home; otherwiſe, how ome ſuch great quantities to be worn and uſed in Eng- and, when the ſtock in hand hath been ſo long ſpent?

There are other commodities, which the company may rade in, and the tract of land within their charter is arge enough to afford an advantageous commerce there, he profits whereof might be returned in things no ways njurious to the Britiſh manufactures, ſuch as raw ſilk, ndigo, pepper, ſaltpetre, ſpices, drugs, china-wares, offee, tea, and many other things, if they were induſ- rious to make diſcoveries, as private merchants would do, f the trade lay open; and the ſame gentleman obſerves, t will not be diſputed that greater quantities of raw ſilk ave been brought thence ſince the making that law, than were uſed to be done before.

It hath been alledged, that, by the exportation of thoſe manufactures again, more bullion in ſpecie is brought into Great Britain, than is carried out for the buying them in India: but this was never yet made out, and it would be much to the ſatisfaction of the people, who daily ſee that bullion carried away, and alſo for the honour of the com- pany, that it was done.

As for white callicoes and muſlins, they have beat out the wearing of lawns, cambrics, and other thin German and Sileſia linens, which has been the occaſion of turning many of thoſe looms to the woollen manufactures there, that were formerly employed in the weaving them, and hath abated the exportation of great quantities of woollen cloth from England; beſides the hinderance callicoes give to the conſumption of Scotch linens, which being thin and ſoft, are as proper for dying, printing, and ſtaining, as they are, and may be made as white.

The Eaſt Indies is a bottomleſs pit for bullion, which can never circulate back to England; whereas, if it was ſent to any part of Europe, there might be ſome hopes, by the ballance of trade, to bring it back again; and when bullion fails, that trade muſt ceaſe of courſe, which it will ſoon do, if the company carry out yearly as much as other trades bring in.

It is to be wiſhed that the nobility and gentry of Great Britain would be in love with their own manufactures, and thoſe which are purchaſed with them; as alſo, that they would, by their examples, encourage the uſing them; which would be attended with the prayers of the poor, beſides the advantage it would bring to their eſtates.

And as to navigation, it will not be diſputed, that long voyages rather uſe ſailors than make them; both the em- ployers, and the employed, chuſing rather to make their firſt experiments on ſhort ones.

That this is the preſent ſituation of all the kingdoms of Europe, with reſpect to the trade which they carry on with the Eaſt Indies, is alſo aſſerted by the Marquis Je- rome Belloni, a celebrated merchant and banker at Rome; and this for no other reaſon than that immenſe gulph of paſſive commerce, wherein they are involved by means of the commodities which the European import from thoſe parts: for, according to this author, not only the great quantities of jewels and manufactures, with the number- leſs liquors and ſpices, the greateſt part whereof the lux- ury and pride of men have raiſed to high prices, render that trade ſo exorbitant, that the great advantage which the European kingdoms receive from the Weſt Indies, and the great quantities of gold and ſilver, and other uſe- ful things, which are brought from thence, are not ſuffi- cient to compenſate the loſs ſuſtained by that exceſſively expenſive trade; but even the many commodities which come from the Eaſt Indies to Europe, and thoſe inex- preſſibly vaſt ſums of money, beſides ſome few ſorts of European commodities, which are exhauſted by the im- portation of thoſe Eaſt Indian goods, give juſt ground to make it a queſtion, whether the money that is brought to Europe from the Weſt Indies, is more conſiderable than that which is exported from Europe to the Eaſt Indies.

The Baron de Monteſquieu, in his Spirit of laws, ſpeak- ing of the trade of Europe in general to thoſe parts, not only acknowledges this truth, but alſo gives reaſons for it. "We at preſent, ſays he, carry on the trade of the "Indies, merely by means of the ſilver we ſend thither, "which is exchanged for merchandiſes brought to the "weſt. Every nation that ever traded to the Indies, "has conſtantly carried bullion, and brought merchan- "diſes in return. It is nature itſelf that produces the "effect. The Indians have their arts adapted to their "manner of living. Our luxury cannot be theirs, nor "their wants ours. Their climate hardly demands, or "permits any thing which comes from ours. They go, "in a great meaſure, naked; ſuch cloaths as they have, "the country itſelf furniſhes; and their religion, which "is deeply rooted, gives them an averſion for thoſe "things which ſerve for our nouriſhment. They want, "therefore, nothing but our bullion, to ſerve as the me- "dium of value; and for which they give us, in return, "merchandiſes, with which the frugality of the people, "and the nature of the country, furniſh them in great "abundance."

Upon the whole, the Eaſt India trade is carried on from Perſia and Egypt, to Turky, by caravans; which alſo ſupport a trade between China and Ruſſia: but the gene- ral part of the trade is carried on by ſea, particularly by the European companies; as alſo by the Portugueſe and Spaniards, who have ſeveral ſettlements in India; the former on the continent of India, from whence, as well as from Macao on the coaſt of China, and their ſettle- ments on the coaſts of Mozambique and Zanguebar on the coaſt of Africa, they carry on a trade with their co- lonies in America; and the latter from the Philippine iſlands, from whence they carry on a trade with their poſſeſſions in America, acroſs the Pacific ocean. Beſides, there is alſo a conſiderable trade carried on from one part of India, and the other eaſtern countries, to another. See *India*, *China*, and *Perſia*.

EAST INDIA *fund*. See *Fund*.

EASTLAND was formerly a term for ſuch countries as lie up the Baltic: but for Eaſtland company, ſee *North* companies.

EASTONESS. The moſt weſterly point or cape, on the coaſt of Suffolk, north of Southwold bay.

EBB. The going out of the tide; alſo the decay of trade. See *Tide*.

EBONY, *Ebenum*, in natural hiſtory, a kind of wood, brought from the Indies, exceedingly hard and heavy, ſuſceptible of a very fine poliſh, on which account it is uſed in moſaic and inlaid works, toys, and other things. There are ſeveral kinds of ebony; of which the moſt uſeful are black, red, and green; all of them the product of the iſland of Madagaſcar; where the natives call them, indifferently, *hazon mainthi*, or black wood: but the iſland of St. Maurice, belonging to the Dutch, likewiſe furniſhes part of the ebonies brought to Europe. F. Plu- mier mentions a black ebony-tree, diſcovered by him at St. Domingo; and the iſland of Candia alſo bears a little ſhrub, known to the botaniſts under the name of *ebenus cretica*.

Pliny and Dioſcorides ſay, the beſt ebony comes from Ethiopia, and the worſt from India; but Theophraſtus prefers that of India. Black ebony is much more prefe- rable than the other colours; the beſt being a jet black, free of veins and rind, very maſſive, aſtringent, and of a ſharp pungent taſte; it yields an agreeable perfume, when laid on the coals; when green, it readily takes fire, from the abundance of its fat; if rubbed againſt a ſtone, it becomes brown; and its rind infuſed in water, is ſaid to purge pituita, and cure venereal diſorders; whence Matthiolus took guiacum for a ſort of ebony: but this ſort of ebony is now much leſs in uſe, among inlayers, and moſaic workmen, than antiently; becauſe of the diſcovery of ſo many ways of giving other hard woods a black colour. See *Marquetry*.

As to green ebony, beſides Madagaſcar and St. Maurice, it likewiſe grows in the Antilles, and eſpecially in the iſland of Tobago: beneath its bark is a white rind, about two inches think; all under which, to the very heart, is a deep green, approaching towards a black; though ſometimes ſtreaked with yellow veins: its uſe is not con- fined to Moſaic work; for, as yielding a fine green tinc- ture, it is likewiſe valuable among dyers.

As to red ebony, called alſo grenadilla, it is but imperfectly known.

The cabinet makers, inlayers, and other workmen, make pear-tree, and other woods, paſs for ebony, by ebonifing, or giving it a ſimilar black colour.

EBRO, antiently *Iberus*, is a river of Spain, riſing in the north-weſt part of Old Caſtile, upon the confines of Aſturia; it runs ſouth-eaſt through Old Caſtile and Biſcay; then dividing Old Caſtile from Navarre, continues its courſe through Arragon, viſiting the capital city of Saragoſa; from whence it runs ſouth-eaſt to the confines of Catalonia, where it receives the Cinca and Segra; then croſſing the ſouth-weſt part of Catalonia, paſſes by the city of Tortoſa, and diſcharges itſelf with great rapidity into the Mediterranean, 20 miles below that city. The Ebro is almoſt the only navigable river in Spain; and in this the navigation is very difficult, except between Tortoſa and the ſea; for though it will carry veſſels 250 miles down the ſtream, it runs with that violent force, that a boat cannot go up the ſtream higher than Tortoſa; and it is very dangerous going down, on account of the rocks, which lie in the channel for 50 or 60 miles below Saragoſa.

ECCLESIASTICAL *ſtate*, in Italy, is that which is ſubject to the Pope. See *Italy*.

ECLIPTIC, in aſtronomy, is a line, or circle, on the ſurface of the ſphere of the world, under which the center of the ſun proceeds in its proper motion; or a line, which the center of the ſun deſcribes in its annual progreſs.

ECLIPTIC, in geography, is a great circle of the globe, cutting the equator under an angle of 23 deg. 29 min. The terreſtrial ecliptic is therefore in the plane of the celeſtial ecliptic; like which, it has its equinoctial and ſolſtitial points, and is bounded by tropics.

ECU, or *Eſcu*. The French crown, being of two ſorts: the exchange ecu, and the ſpecie ecu; the former, whatever augmentation or diminution happens in the French coins, always paſſes for three livres, or 60 ſols tournois, or 2 s. $5\frac{1}{4}$ d. ſterling; the latter is taken for 6 livres, or 4 s. $10\frac{1}{2}$ d. ſterling. See *Coin*.

There are alſo other ecus, or crown-pieces, of other countries; as the Eſcudi ecu, or crown of Rome, worth about 6 s. ſterling; the piaſter ecu, or crown of Ferdinand II. Duke of Tuſcany, worth 4 s. 6 d. ſterling; the piaſter ecu, or crown of Milan, worth about 4 s. 6 d. ſterling; and the ecu d'argent of Genoa, worth about 6 s. ſterling.

EDAM. A town of North Holland, ſituated on the weſt ſhore of the Zuyder ſea, 12 miles north-eaſt of Amſterdam. See *United Provinces*.

EDDY *water*. See *Dead water*.

EDDY *wind*, is that which returns, or is beat back from any ſail.

EDEN. A river riſing in Weſtmoreland, on the confines of Yorkſhire; which running north by Appleby and Carliſle, falls into Solway frith, 6 miles weſt of that city.

EDERDON, or *Edredon*. A kind of very fine down, brought from the north, particularly from Swediſh and Daniſh Lapland, being plucked from the neck, belly, and under the wings, of falcons, or other birds of prey. See *Down*.

This rich down is ſold in Lapland for about 5 s. 6 d. ſterling the pound; and when brought to England or France, it is generally purchaſed from 15 to 25 livres, or from about 12 s. to 20 s. ſterling.

EDICT. An inſtrument, ſigned and ſealed by a prince, to ſerve as a law to his ſubjects. Edicts have no room in England, where the enacting of laws is not ſolely lodged in the King, but equally in the parliament; though, in the French law, edicts make a great figure, where they are much the ſame as proclamations in England; with this difference, that the former have the authority of a law in themſelves, from the power which iſſues forth; whereas the latter are only declarations of a law, to which they refer, and have no power in themſelves.

EDINBURGH. The capital city of Scotland, ſituated in 3 deg. of W. lon. and 56 deg. of N. lat. See Great *Britain*.

EDISTON *rock*, is a rock ſituated in the Engliſh channel, equally diſtant from the coaſts of Devon and Cornwall, 16 miles S. of Plymouth in Devonſhire; on which a light-houſe is erected, for the direction of ſhips going in or out of the channel. See *Trinity* Houſe.

EFFECTS, in commerce, the goods poſſeſſed by any perſon, whether moveable or immoveable; particularly thoſe which merchants and dealers acquire by trade: thoſe among merchants are uſually diſtinguiſhed into three claſſes, good, bad, and doubtful; and, by an ordonance of the French court, in 1673, every merchant is obliged to take an inventory, or review, every year of all his effects of every kind.

Vacant EFFECTS, *prædia Vacatia*, or *Vacua*, are ſuch as are abandoned for want of the heir, after the death or flight of the former owner.

EGEAN-*ſea*, now the Turkiſh Archipelago, is ſituated between Greece and the Leſſer Aſia.

EGRIPOS. See *Negropont*.

EGYPT. The name of Egypt, according to the claſſicks, is derived from Egyptus, the brother of Danaus, once ſovereign of this country: it is called Miſraim by the Hebrews and Arabs, which name, it is ſuppoſed to have obtained from Miſraim, the ſon of Cham and grandſon of Noah: it has alſo been known by the name of Copta, the capital city of Upper Egypt, from whence the natives were called Cophtis, as the Chriſtians of Egypt are at this day, who, notwithſtanding they are not the moſt numerous, are looked upon to be the true deſcendants of the ancient Egyptians. The Turks call this country Dekebit, or the over-flowed country, and a multitude of other names have been given to it; but by theſe it has been moſt generally known.

Egypt is ſituated on the north-eaſt part of Africa, being bounded by the Mediterranean ſea on the north; by the Red ſea, and the iſthmus of Suez, which divide it from Aſia, towards the eaſt; by the empire of Abyſſinia, and Nubia, towards ths ſouth; and by the deſart of Barca, towards the weſt; extending from the 21ſt degree of northern latitude, to the 31ſt and ſome odd minutes beyond; and conſequently muſt be about 600 miles in length from ſouth to north: but the breadth in many places does not ſeem to be near 200 miles.

The air of this country is not heathful, the ſituation being very low, and the mud which covers the beſt part of it after the overflowing of the Nile, ſending up a noiſome vapour. The ſandy deſerts alſo, which encloſe Egypt on three ſides, render it exceſſive hot: nor is there more than two ſprings in the whole country, to refreſh the parched inhabitants; ſo that they ſeem to be under a neceſſity of building their towns on the banks of the Nile. Accordingly, moſt of them ſtand near that river, on riſing ground, ſo made by art or nature; and, when the river overflows, appear like ſo many iſlands, which have no communication with each other only by boats.

This country is uſually divided into lower, middle, and upper Egypt. Lower Egypt is moſt part of it contained in a triangular iſland, made by the Mediterranean ſea and the two great branches of the Nile, which, dividing itſelf five or ſix miles below old Cairo, flows one part of it towards the north-weſt, falling into the ſea at Damietta, the ancient Peluſium: but there is a great extent of country both to the eaſtward and weſtward of this triangle, which is included under the name of Lower Egypt.

The chief towns of Lower Egypt are, 1ſt, Alexandria, the only tolerable harbour belonging to Egypt. This city, called by the Turks Sandria and Scanderick, was built, or enlarged by Alexander the Great, about 300 years before the incarnation of Chriſt; being ſituated about 100 miles to the northward of Cairo, and 40 miles to the weſtward of the moſt weſterly branch of the river Nile, upon a promontory, which runs into the Mediterranean ſea, and forms two harbours; but one of them is at preſent almoſt choaked up. The ground it ſtands upon is ſo extremely low that it can ſcarce be diſcerned by mariners, till they are just upon it, which was probably the occaſion of erecting the famous pharos, or high watch-tower, ſo frequently mentioned in hiſtory for a ſea-mark. The old town of Alexandria

andria ſtretched from eaſt to weſt, and was about 7 miles in circumference; but, excepting one long ſtreet indifferently built, and the houſes which face the harbour, the reſt is nothing but a heap of ruins at this day: ſcarce any thing antient is left ſtanding, except part of the walls, which are very magnificent, having great ſquare towers, at about 200 paces diſtant from each other, and a little tower between them.

The iſland of Pharos, on which the famous watch-tower or light-houſe ſtood, eſteemed one of the wonders of the world, was formerly ſeparated from Alexandria, by a channel a mile broad; but is now joined to the continent; and in the room of the pharos, a caſtle is built, called Pharillon, which ſerves as a ſea mark to mariners at this day.

The next conſiderable town to Alexandria is Roſetto, which ſtands 50 miles to the eaſtward of it; and was formerly the place of Cleopatra's reſidence; being ſeated upon the beſt branch of the river Nile, which falls into the ſea 5 miles below this town. There is a bar which prevents large veſſels entering the river, and is not a little hazardous for leſſer barks in ſtormy weather. The form of this city is almoſt round, being about 6 miles in circumference, and containing about 80,000 inhabitants; though there are not above 15,000 in Alexandria. Roſetto is reckoned one of the prettieſt towns in Egypt, having a fine piazza, and ſeveral fair hans, or caravanſeras: the private houſes alſo are well built, and encompaſſed with pleaſant gardens, which makes it look more like a village than a city, eſpecially as it is without walls. Here is a tolerable briſk trade, and plenty of all things; but their beſt manufacture is that of coarſe and ſtriped linen; and their chief buſineſs is to carry ſuch European merchandiſes as are brought there from Alexandria to Cairo in boats, which makes the Europeans have their vice-conſuls here. But they are put to very great inconveniencies for want of freſh water ſome months in the year, when the water of the river is brackiſh, being mixed with that of the ſea.

About 100 miles eaſtward of Roſetto, and as much N. E. of Cairo, ſtands the city of Damietta, or Peluſium, on the moſt eaſterly branch of the river Nile, about 8 miles diſtant from the ſea: it was anciently a conſiderable port, and it now contains about 30,000 inhabitants, who carry on ſeveral mechanic trades, particularly a manufacture of fine linen cloth. The country about it affords plenty of proviſions and fruits; but the other branch of the Nile, on which Roſetto is ſituated, is more frequented.

Seventeen miles to the ſouthward of Damietta, on the ſame branch of the Nile towards Grand Cairo, lyes the city of Manſoura, and on both branches of the Nile the towns and villages ſtand exceeding thick; ſome pretend to have counted no leſs than 300 between Roſetto and Grand Cairo, affirming that there are not much fewer on the other branch towards Damietta. This part of Egypt, which is encloſed by the two branches of the Nile, and the ſea, antiently called *Delta*, from its triangular figure, is much the moſt fruitful part of the country, and the moſt conveniently ſituated for foreign trade. Alexandria, which lies not far from the weſtern mouth of the river, is the only port on the coaſt, having the greateſt trade of any town in the world, when the rich merchandiſe of the Eaſt was brought hither by the Red ſea, and from hence diſperſed to all the kingdoms of Europe: but upon finding out the paſſage to India by the Cape of Good Hope, this, and all the towns in lower Egypt, found a ſenſible decay in their trade.

Middle Egypt lyes to the ſouthward of Lower Egypt; the capital city whereof is Grand Cairo, the ſeat of the Begler-beg, or Viceroy of the whole kingdom. It is ſituated in 32 deg. of E. lon and 30 deg. of N. lat. about a mile and a half diſtant from the eaſtern bank of the river Nile, and 100 miles S. of its mouth; being built upon a plain, at the foot of a mountain of a triangular form, about ten miles in compaſs, and containing above a million of inhabitants. There are ſcarce any wide ſtreets in Cairo, except thoſe of the great bazar, or market place; and the ſehalis, or canal, a low ſtreet, which runs through the middle of the city, from one end of it to the other, in which the water ſtands one half of the year, and is dry the other: it being into this canal, or ſtreet, they let the river Nile, when it is at the height; from whence they diſtribute the waters to their gardens, and the adjacent country. Cairo was formerly remarkable for its trade, and there are now ſeveral manufactures eſtabliſhed there; particularly that of Turky carpets: it is the ſtaple of trade for Egypt; which occaſions the Engliſh and other Europeans to have their conſuls here for the protection and management of the Turky trade in this quarter.

The next conſiderable town in middle Egypt is Baluc, or Bulac, ſituated on the eaſt ſide of the river Nile, about 5 or 6 miles above the place, where that river divides, and forms the Delta; and 2 miles to the weſtward of Grand Cairo; being the port town to that city, and by ſome reckoned a ſuburb to it. The town contains about 4000 houſes, or families, and has a pretty good trade; all veſſels going up the Nile making ſome ſtay, and paying their duties here. Old Cairo ſtands about 2 or 3 miles higher up the ſame river, over againſt the place where the famous city of Memphis ſtood, and is about half a league diſtant from Grand Cairo. This town makes no great figure at preſent, being for the moſt part in ruins; though the ſituation of it on the bank of the river renders it much cooler, and more commodious, than the new Cairo, in the opinion of moſt travellers. As for Memphis, which is ſuppoſed to have ſtood over againſt it on the weſt-ſide of the river, and was once the metropolis of the kingdom, there are ſcarce any ruins left to diſcover where it was, tho' it is thought to extend a pretty way to the weſtward of the Nile, on account of the burying-places or repoſitories of the mummies, which reach ſeveral leagues into the country, and are ſuppoſed to be the tombs of the antient inhabitants of Memphis.

Materea is ſituated about 5 miles north-eaſt of Grand Cairo.

Suez ſtands upon the Red ſea, about 80 miles to the eaſtward of Cairo; being the port where the Grand Seignor's galleys, in the Red ſea, rendezvous; and whither they bring coffee, drugs, and other merchandiſe, from Arabia, and India; which makes it crowded with people at ſome ſeaſons of the year; while at others it is almoſt deſerted, on account of the heats, and the ſcarcity of freſh water: but the haven is very ſhallow, and the town does not contain above 200 houſes at preſent; tho' it was formerly a conſiderable city, and is ſuppoſed to be the antient Arſinoe.

Fium is a large populous city, with a good trade in linen, leather, carpets, fine mats, and fruits, which it ſends to Cairo.

Upper Egypt, or higher Egypt, anciently called Thebais, or Thebaida, and at preſent Sayd, is bounded on the E. by the Red ſea; on the N by middle Egypt; on the W. by the Deſart of Barca; and on the S. by Nubia and the coaſt of Abex. The chief towns are, 1. Sayd, antiently Thebes, the capital of the kingdom: by Strabo called Dioſpolis, or the city of Jove; and by other writers Hecatompylos, or the city with a hundred gates.

Beneſoneffe, where there is a manufacture of carpets.

Minio, remarkable for an earthen manufacture.

Aboutic, famous for black poppies, which make the beſt kind of opium.

Aſna, or Sienna, in the ſouth of Egypt, ſituated on the weſt ſide of the Nile. The river is navigable to this place, but a little beyond are the cataracts, where all merchandiſe is put on ſhore, and carried by land till the veſſels are paſt them.

Girge, or Grege, on the weſt-ſide of the Nile.

Coptus, once a great city, and the capital of Egypt, from whence the natives obtained the name of Cophti, which lies upon the Nile: but moſt of the towns of Upper Egypt are now in ruins, or reduced to inconſiderable villages, and poſſeſſed by Arabs, or Cophti Chriſtians, the trade being diverted another way; eſpecially from thoſe which lye upon the Red ſea, where there is not one conſiderable town mentioned by travellers on the Egyptian ſide, except Suez, above deſcribed, and that ſeems to be very much upon the decline.

Egypt was made a province of the Ottoman Empire in 1517, ſince which time it has always been governed

by a Viceroy, ſtyled the Baſſa of Grand Cairo: but as this kingdom is ſub-divided into ſeveral inferior governments, theſe governors are not ſent from Conſtantinople, or appointed by the Viceroy; but are natives of Egypt, and ſeem to be veſted with ſovereign power in their reſpective diſtricts, and to have the command of the militia of the ſeveral provinces; many of them being of the race of the Mamalukes. It is true, the Viceroy has a conſiderable body of ſpahis and janiſſaries about Cairo to keep them in awe; and every one of theſe petty princes, it is ſaid, is obliged to mount the Viceroy's guard in his turn, with a body of national troops. There is a perpetual jealouſy between the Turkiſh baſſa, and theſe Egyptian royalets; ſometimes the Baſſa will take upon him to depoſe one of them, or, perhaps take his head; and there are inſtances, on the other hand, where they have depoſed the Baſſa, and compelled the Porte to ſend them another more acceptable to them; for the Grand Seignor has thought fit to humour them in it, rather than hazard the revolt of ſo rich a province, which is now eſteemed the granary of Conſtantinople, as it was anciently of Rome: for this is a ſoil ſo fertilized by the Nile, that it is not in the power of the Turks to render it barren But one great reaſon of its continuing to be manured is, that they are yet governed by their own princes, and have an inheritance in their lands; which are privileges very few of the ſubjects of Turky enjoy beſides: neither dare the Turkiſh government overload this people with taxes, for fear of a general revolt; inſomuch, that except what the Viceroy and his creatures illegally extort from them, the whole revenue raiſed by the government does not amount to a million ſterling, of which two thirds are ſpent within the kingdom; and not more than one third comes into the Grand Seignor's treaſury.

Egypt is as remarkable for camels, dromedaries, and fine horſes, as the neighbouring country of Arabia. Oxen, buffaloes, goats, and ſheep, are here alſo to be met with in great plenty, eſpecially the ſheep with fat tails, which weigh ſeveral pounds: they abound alſo with poultry, geeſe, and ducks; and a great variety of birds: but fiſh are ſcarce, unleſs in thoſe countries which lie on the ſea, and near the mouth of the Nile.

As to the huſbandry of the Egyptians, they have no more to do than to harrow their grain into the mud, on the retiring of the waters of the Nile into their proper channel, and in March following they ſeldom fail of a plentiful harveſt; but they reſerve water to let into their rice fields, from time to time, as they do in other countries; for this is a grain that grows in water till the harveſt every where. As to peaſe and beans, and other kinds of pulſe, they have them almoſt all the year round.

At preſent the Egyptian trade may be confined to Cairo, Alexandria, and Roſetto; the latter ſerving as ports to the former; it being at either one or the other of thoſe places that European ſhips arrive, to unload their merchandiſe, whereof the better part is deſtined for Cairo, from whence they have ſuch commodities as they want in return: for at Cairo all kinds of Aſiatic goods are to be had, except the Dutch ſpices.

The French have a conſul at Cairo, who is the moſt conſiderable they keep in the Levant; under whom are two vice-conſuls; one at Alexandria, and the other at Roſetto, who give him an account of the duties of conſulſhip, which they receive upon the footing of 3 *per cent.*

The Venetians, who next to the French have the moſt extenſive trade there, keep their conſul at Alexandria; this conſulſhip being one of the two which are conferred only upon noble Venetians. And the Engliſh have alſo a conſul at Cairo.

Whatever diminution there is in the commerce of Cairo, there is ſcarce a year but upwards of ſixty ſhips from Provence in France arrive at the port of Alexandria, and ſometimes even to the amount of ninety-four. Thoſe reſorting Roſetto are not ſo numerous, tho' pretty conſiderable for the number.

The duties of importation paid for European merchandiſe at Alexandria, Roſetto, and Cairo, are 20 *per cent.* and only one half *per cent.* for the exportation of merchandiſe of the country's growth, or which come from the Red ſea. The Turks, who paſs notwithſtanding for barbarians among Chriſtians, eaſily comprehended that the riches of a ſtate conſiſt in putting off its own merchandiſe, and manufactures; and in doing, if poſſible, without thoſe of others; beſides, that the ſale of Europeans cannot be equal to their purchaſe, upon account of the inequality of duties, which give the Egyptians a diſguſt for thoſe of Europe: ſo that there is a neceſſity for Europeans to make up the overplus in ready money, which remains in and enriches the country.

Beſides great quantities of corn ſent from Egypt to Turky, the Egyptians ſupply Europeans with theſe exports from Cairo: benjoin, bdellium, gum arabic, adraganth, lacca, turmeric, Abyſſinian myrrh, frankincenſe, ſtorax, aloes cicotrina, opium, indigo of three ſorts, powder-ſugar, loaf ſugar, ſugar candy, ſherbet, cinnamon, caſſia, cocoa, coriander, coffee, myrobolans, citrons, nutmegs, nux-vomica, cardamomum, tamarinds, coloquintida, pepper, cloves, flax of ſeveral ſorts, ſenna, ſpica nardi, ſaffron, cotton of ſeveral kinds, wax, ginger, rhubarb, ſalſaparilla, ivory, wool, oſtrich feathers, mummies, ſal armoniac, ſal nitre, rock allum, botargo, pearl, linens of ſeveral kinds, ſtuffs, carpets, muſk, hides, ſkins, and leather.

The European merchandiſe imported into Egypt is chiefly compoſed of agaric, arſenic, arquifow, orpiment, antimony, quick-ſilver, vitriol, vermilion, cinnabar, braſs-wire, tin, ſteel, lead, paper, ſilks, woollen cloths, caps, cochineel, coral rough and wrought, red tartar, and Brazil wood.

All theſe merchandiſes are bought or ſold, at Cairo, by French and Italian factors, who receive and ſell the European merchandiſe directed to them, and purchaſe thoſe they are ordered to buy; their duty of commiſſion being 2 *per cent.* for the ſale, and as much for the purchaſe.

There are alſo factors from theſe two nations at Alexandria, and Roſetto, for ſelling and buying ſome merchandiſe; but their principal employment is to receive thoſe which arrive from Europe on French, Venetian, and Leghorn bottoms, and to conduct them to Cairo, on barks up the Nile, and afterwards to reimbark thoſe ſent back to them by the factors of Cairo, or of which they themſelves have made the purchaſe in the places of their reſidence.

The greater part of the Cairo trade paſſes thro' the hands of Jews and Arabs; who, in conjunction with ſome Turkiſh merchants, carry on the trade of the Red ſea, whence they have the greater part of the above-mentioned merchandiſe.

Beſides the commodities exported by Europeans from Cairo and Alexandria, the Turks import great quantities into Conſtantinople, and other towns of the Ottoman empire, on board veſſels they call ſaicks, which are a kind of large tartans, carrying from 4 to 16 pieces of cannon. The Turks alſo load rice, flax, ſugar, and ſome other commodities; this trade being computed to amount to 500,000l ſterling yearly, and to employ from 100 to 120 of theſe ſaicks. See *Turky*.

EIGHT-*piece of*, or *Piaſter*. See *Piece* of Eight.

EKRENFORD. A port-town of the Dutchy of Sleſwick, ſituated in 10 deg of E. lon. and 54 deg. 50 min. of N. lat. on a bay of the Baltic ſea. See *Denmark*.

ELATCHES. An Indian ſilk and cotton ſtuff, being uſually in length from 4 to 12 ells, and ¾ breadth.

ELBA. An iſland in the Mediterranean, ſituated in 11 deg. 20 min. of E. lon. and 42 deg. of N. lat. 15 miles W. of the coaſt of Tuſcany in Italy; part whereof belongs to Spain, and part to Tuſcany.

ELBE. A river riſing in the confines of Sileſia, which after paſſing Koningsgratz in Bohemia, runs N. W. till it receives the Moldau, at Malnick, below Prague; and then, continuing its courſe N. paſſes through Saxony, viſiting Dreſden, Meiſſen, Wittenburg, and Madgeburg; then, running N. E. through Brandenburg, receives the river Havel; after which, it divides the Duchy of Lunenburg from Mecklenburg; then, running between the Dutchy of Bremen and Holſtein, viſits Hamburg; and paſſing on ſtill N. W. falls into the German ſea, a little below the fortreſs of Gluckſtat. It is navigable for

hips higher than moſt other European rivers; veſſels of
and 400 tons coming up to Hamburg, which is 70
niles from the ſea; whereby an incredible quantity of all
orts of merchandiſe is imported and exported to and
rom Germany.

BING. A city of regal Pruſſia, in the palatinate of Marienburg, ſituated in 20 deg. of E. lon. and 54 deg. 5 min. of N. lat. on a bay of the Baltic, called the Friſ-haff, near the mouth of the river Viſtula, 30 miles E. of Dantzick, being a large populous town, and a place of good trade, ſubject to the crown of Poland. See *Poland.*

BURG. A town of the United Netherlands, ſituated on the E. coaſt of the Zuyder ſea, in 5 deg. 40 min. of E. lon. and 52 deg. 30 min. of N. lat. See *United Provinces.*

CATIF. The capital of a territory in Arabia felix, lying on the weſtern ſhore of the gulph of Perſia, in 49 deg. of E. lon. and 25 deg. of N. lat. near which, not long ſince, was a very rich pearl-fiſhery. See *Arabia.*

lph of ELECATIF. See *Perſian* Gulph.

ECAMPANE, or the herb horſe-heal, is much recommended for colds.

ECAMPANE *wine.* See *Wine.*

ECTION, in pharmacy, is that part of it which teaches ow to chuſe the medicinal ſimples and drugs; and to iſtinguiſh the good from the bad: but ſome diſtinguiſh general election, which gives the rules and marks for all edicines in general; and a particular one for each me-icine in particular.

ECTRUM, is ſometimes uſed for amber. See *Amber.*

EGIT, in the Engliſh law, a judicial writ, which lies or him who has recovered debt or damages: or upon a ecognizance in any court, againſt one not able in his oods to ſatisfy; being directed to the ſheriff, command-ng him to make delivery of half the party's lands, and all is goods; oxen, and beaſts for the plough excepted: hen the creditor is to hold the moiety of the ſaid land ſo elivered to him, till his whole debt and dama es are ſa-isfied. and, during that time, he is tenant by elegit.

EMI, or *Elemy*, in pharmacy, a pellucid reſin, of a hitiſh colour, intermixed with yellowiſh particles, which ive it much the colour and conſiſtence of wax; of a retty briſk bitter t ſte, t ough not diſagreeable; and a mell like that of fennel. It is uſually called gum elemi, ut very improperly; becauſe it takes fire ready enough, nd diſſolves in olea inous liquors, which are the cha-acters of a reſin.

t flows from inciſions made in the trunk, and large ranches, of a kind of wild olive-tree, growing in Ethi-pia, and Arabia Felix: but it is alſo found in Apulia, province of the kingdom of Naples. Pomet, in his iſtory and Lemery, in his dictionary of drugs, deſcrib elemi as a white reſin bordering on green; odoriferous, nd brought from Ethiopia in cakes of 2 or 3 pounds a iece, wrapped up in the leaves of the Indian cane.

here are ſeveral ſpurious ſorts, ſome natural, and others actitious, frequently ſold for the true gum elemi. The ormer, obtruded for elemi, are, 1ſt, a gum brought from he American iſlands, in cags of different weights, covered p with the leaves of a plant unknown in Europe: the econd might be taken for roſin, but for its ſmell, which ſomewhat ſweeter, and more aromatic: and the third of an aſh colour, bordering on brown, brought over large pieces, very dry and friable: any of which Po-et does not take for natural gums; but rather ſuppoſes em to be originally elemi, only impure and coarſe ſince elted down, and made up by the fire. The latter, or ounterfeit elemi, is uſually made of roſin waſhed in oil aſpic; though the ill ſmell, and white colour of this, ight eaſily diſcover the fraud.

lemi paſſes for a natural balſam, being of extreme efficacy r the healing of all ſorts of wounds, and is therefore mployed in the compoſition of balſam of arſenic.

PHANT. A monſtrous animal, allowed the firſt rank mong quadrupeds, being uſually met with on the coaſts of frica, and in the Eaſt Indies; whoſe teeth, called ivory, e a conſiderable object of trade. See *Ivory* and *Caravan.*

VATION *of the pole*, denotes the altitude of the pole bove the horizon of any place; or an arch of the meridian, intercepted between the pole and the horizon. The elevation of the pole is always equal to the latitude of the place; that is, the arch of the meridian intercepted between the pole and the horizon, is equal to the arch of the ſame meridian intercepted between the equator and the zenith: thus the north pole is elevated 51 deg. 32 min. above the horizon of Lon on; and there is the ſame diſtance, or number of degrees, between London and the equator; ſo that London is alſo in 51 deg. 32 min. of northern latitude. See *Latitude.*

ELEVATION *of the equator*, is an arch of the meridian leſs than a quadrant, intercepted between the equator and the horizon of the place. The elevations of the equator and of the pole together, are always equal to a quadrant: conſequently, the greater the elevation of the pole, the leſs the elevation of the equator; and ſo on the contrary.

ELIXIR, in medicine, a compound extract, tincture, or eſſence, drawn from a mixture of ſeveral ingredients, by infuſing them in a proper menſtru m, being a ſtrong ſpirituous liquor, or juice, to be taken inwardly, containing the pureſt and moſt efficacious parts of ſeveral mixed bodies, communicated to it by infuſion and maceration; of which there are ſeveral kinds.

ELIZABETH *iſland.* An iſland in the Atlantic ocean, ſituated in 70 deg. of W. lon. and 41 deg. of N. lat. near the coaſt of New England, having Cape Cod on the north, the iſland of Nantucket on the eaſt, and the iſland of Martha's vineyard on the weſt, ſubject to Great Britain; the natives whereof are employed chiefly in fiſheries, particularly that of whales.

ELKHOLM. A port-town of Sweden, in the province of Gothland, and territory of Bleking, ſituated on the Baltic in 14 deg 30 min. of E. lon. and 56 deg. 15 min. of N. lat. See *Sweden.*

ELKS-*claws*, in pharmacy, a drug, ſuppoſed to be good againſt the epilepſy; known in the ſhops by the name of *ungula alcis:* the elk, which is the animal that yields it, being a wild beaſt in the foreſts of Muſcovy, Sweden and Pruſſia; but more abundantly in Canada, and moſt parts of North America.

The hunting of the elk is one of the principal and moſt agreeable employments of the Indians of Canada, and the adjacent countries: when they have killed beaſts enough with their fire-arms to feaſt for ſeveral days, they flea them, and ſend the ſkins to the French, who dreſs them in oil, like the buffalo ſkin. The Indians alſo take care to cut off the left hind foot of each beaſt; eſpecially if it be a female; the hoof whereof is that applauded remedy for the falling ſickneſs; of which Pomet gives the marks to diſtinguiſh the genuine ſort: but as the virtue of elks-claws is very equivocal, not to ſay abſolutely falſe, there is no great prejudice in being deceived.

ELL. A meaſure, which obtains under different denominations, in moſt countries, being the ſtandard whereby cloths, ſtuffs, linens, ſilks, and ſuch like are uſually meaſured, or eſtimated, anſwering in good meaſure to the yard of England, the canna of Italy, the vara of Spain, the palm of Sicily, and ſo forth.

The ells which occur moſt frequently in England are Engliſh and Flemiſh: the ell Engliſh contains three feet nine inches, or one yard one quarter Engliſh meaſure: the ell Flemiſh contains 27 inches, or $\frac{1}{4}$ of a yard; ſo that the ell Engliſh is to the ell Flemiſh as 5 to 3.

Mr. Ricard, in his treatiſe of commerce, reduces the ells thus: 100 of Amſterdam are equal to 98 ; of Brabant, Antwerp, and Bruſſels; to 58 and $\frac{1}{2}$ of England and France; to 120 of Hamburg, Francfort, Leipſic, and Cologne; to 125 of Breſlaw; to 110 of Bergen and Drontheim; and to 117 of Stockholm.

ELSIMBURG, or *Helſemburg*. A port-town of Sweden, in the province of Gothland, and territory of Schonen, ſituated on the Sound, in 13 deg. of E. lon. and 56 deg. of N. lat. See *Sweden.*

ELSINORE, or *Helſingor*. A port-town of the iſland of Zealand, ſituated in 13 deg. of E. lon. and 56 deg. of N. lat. on the ſound, or ſtreight, at the entrance of the Baltic, 22 miles N of Copenhagen, where it is that the Danes take toll of all merchant-ſhips, going to the ports in the Baltic. See *Denmark.*

EM-

EMBARCADERO, in commerce, a Spaniſh term, frequently uſed along the coaſts of America, particularly thoſe on the S ſide of the South Sea, ſignifying a place which ſerves ſome other conſiderable city further within land, for a port, or place of ſhipping, for embarking and diſembarking commodities: thus Calao is the embarcadero of Lima, the capital of Peru; Arica, the embarcadero of Potoſi, and ſeveral others; ſome of them being 40, 50, and even 60 leagues off the city which they ſerve in that capacity

EMBARGO, or *Imbargo*, a reſtraint, or prohibition, laid by a ſovereign, or government, on merchant veſſels, to prevent their going out of port; ſometimes their coming in, and ſometimes both, for a limited time: which are more uſually done in time of war, in apprehenſions of invaſions, in times of ſcarcity, or peſtilence abroad, and other extraordinary circumſtances: one great reaſon of embargoes being, that the government may make uſe of the merchant veſſels, with their equipage, in armaments, expeditions, and tranſporting of ſoldiers; but they are extremely prejudicial to commerce, except in caſes of quarentine See *Quarentine*.

By the ſtatute of the 9th of Queen Anne, ſhips belonging to the South Sea may not at any time be ſtopped, unleſs particularly mentioned in the embargo.

EMBASSADOR. or *Ambaſſador*, a public miniſter, ſent from one ſovereign prince, or ſtate, as a repreſentative of his perſon, or the ſtate, to another; of which there are embaſſadors either ordinary or extraordinary.

Embaſſador in ordinary, is he who reſides ſtatedly in the court of another prince, to maintain a mutual good underſtanding, look to the intereſts of his maſter, and tranſact ſuch affairs as may occur; and commonly to take the merchants of his own country under his protection. Theſe embaſſadors are but of modern invention; it being little more than 200 years ago ſince they were firſt heard of; for, till then, all embaſſadors were extraordinary, who retired as ſoon as they had diſpatched the affair they were ſent upon.

EMBASSADOR *extraordinary*, is he who is ſent to ſome foreign prince, or ſtate, on ſome particular and emergent occaſion: but there is no eſſential difference between ordinary and extraordinary embaſſadors; their errand is all, and they equally enjoy all the privileges and prerogatives which the law of nations decrees.

The name of embaſſador, Cicero obſerves, is ſacred and inviolable: David made war againſt the Ammonites, to revenge the injury done his embaſſadors: Alexander put the inhabitants of Tyre to the ſword, for having inſulted his embaſſadors: and the youth of Rome, for affronting the embaſſadors of Vallona, were delivered up into their hands, to be puniſhed at diſcretion; but, though all other nations pay the utmoſt reſpect to embaſſadors, the Turks cannot be perſuaded to do it; looking upon them rather as public meſſengers, than the repreſentatives of their princes or ſtates.

It is diſtinguiſhed by civilians, that an agent, or conſul, repreſents the affairs only; but an embaſſador ought to repreſent the greatneſs of his maſter and his affairs. See *Conſul*.

No ſubject, though ever ſo great, can ſend or receive an embaſſador; and embaſſadors may be warned not to come to the place where ſent; and if they then do it, they may be taken as enemies: but being once admitted, even with an enemy in arms, they are to have the protection of the laws of nations, and be preſerved as princes: their bodies are not to be arreſted: if they offend againſt penal laws and ſtatutes, their embaſſadorſhip will excuſe them; but not if the offence be in a caſe of high treaſon, which is an offence againſt the law of nature, and magiſtracy is by the law of nature. By the civil law alſo, the moveable goods of embaſſadors, which are accounted an acceſſion to their perſons, cannot be ſeized on, either as a pledge, or for payment of debt, nor by order or execution of judgment, although by permiſſion of the king or ſtate where reſident; for they ought to have full ſecurity, as well concerning their neceſſaries as their perſons; therefore, if any embaſſador contracts a debt, he is to be called upon kindly; and, on refuſal of payment, letters of requeſt may be ſent to his maſter: but Sir Edward Coke ſeems to be of another opinion, by aſſerting, that as for contracts and debts good, *jure gentium*, by the law of nations, embaſſadors muſt anſwer in England.

The Ruſſian embaſſador, in the reign of Queen Anne, being arreſted in London, taken by violence out of his coach in the ſtreet, and kept in cuſtody; it occaſioned the diſpleaſure of the Czar, whoſe reſentment was not abated till an act of parliament was paſſed, whereby it was enacted That all ſuits againſt his embaſſador ſhould be void, and the proceedings againſt him or his bail be vacated; and that proceſs, whereby the perſon of any embaſſador, or other public miniſter, or of his ſervants, might be arreſted and detained, or his or their goods diſtrained, ſhould be adjudged void for the time to come. It was thereby alſo enacted, That the perſons ſuing forth ſuch proceſs, their attornies and ſollicitors, and the officers executing the ſame, ſhould be deemed violators of the laws of nations; and alſo ſuffer ſuch penalties and corporal puniſhment as the Lord Chancellor, the chief juſtices, or any two of them, ſhould judge fit. But that no merchant, or trader, within the deſcription of any of the ſtatutes of bankrupts, putting himſelf into the ſervice of any embaſſador, ſhould have any benefit by this act: neither ſhould the ſervant of any embaſſador have any privilege, unleſs his name be regiſtred in the ſecretaries office, and tranſmitted to the ſheriffs of London and Middleſex; who muſt hang it up in ſome public place in their office.

EMBDEN. A port-town and city of Germany, in the principality of Eaſt Frieſland, and territory of Weſtphalia, ſituated in 6 deg. 45 min. of E. lon. and 53 deg. 40 min. of N. lat. on the Dollart bay, near the mouth of the river Ems, being an imperial city under the protection of the Dutch: but the King of Pruſſia took poſſeſſion of the adjacent country on the death of the laſt prince; which the Dutch lay claim to. See *Germany*.

EMBDEN *Aſiatic*, or *Eaſt India company*. See *Eaſt* India company.

EMBOSSING, or *Imboſſing*, the act of forming, or faſhioning works in relievo; whether caſt, moulded, or cut with the chiſſel; being that part of ſculpture which has to do with figures raiſed, or prominent from the plain, or ground of the other part, which makes figures indented, or cut in below the ground, is called engraving See *Engraving*.

EMBROIDERY, the enriching of a cloth or ſtuff, by working ſeveral figures thereon, with needle and thread of gold, or ſilver: but that done with ſilk, flax, or the like, is not now called embroidery; though anciently and properly, the word denoted all kind of figuring or flouriſhing. See *Broderer*.

There are ſeveral kinds of embroidery: as embroidery on both ſides, that which appears on both ſides, and only practicable on thin light ſtuffs, as taffetas, gawſe, muſlins: embroidery on the ſtamp, where the figures are very high and prominent, being ſupported on wool, cotton, and hair: and low embroidery, where the figures are low, without any enrichment between them.

The chief uſe of embroidery is in church-veſtments, cloaths, houſings, guidons, and ſtandards; and the invention of this art is attributed to the Phrygians, whom the Latins call embroiderers *phrygiones*.

As great quantities of foreign embroidery, gold and ſilver thread, lace, fringe, and brocade, continued to be brought into, and ſold within Great Britain; and great ſums were exported for the buying thoſe commodities, the importation whereof was contrary to ſeveral acts of parliament: this occaſioned another act of parliament in the year 1749, whereby it was enacted, that after the 1ſt of July 1749, no foreign embroidery, or gold or ſilver brocade, ſhould be imported into Great Britain upon pain of being forfeited and burnt, and the importer paying 100 l. for each piece or parcel thereof. That no perſon ſhould vend, exchange, or otherwiſe diſpoſe of any foreign embroidery, gold or ſilver thread, lace, fringe, brocade; or any other work made thereof, or of gold or ſilver wire, or plate, manufactured in foreign parts, or ſhould work up the ſame in or upon any garments or wearing apparel, upon pain that the ſame, and the

ment or other materials ſhould be forfeited and burnt, and the party forfeit 100 l. That all ſuch goods and manufactures which ſhould be ſeized, whether mixed or made up with other goods, or otherwiſe, and the apparel or other materials in or upon which the ſame ſhould be wrought or made up, ſhould be forfeited and burnt; and the dealer or maker up of the ſaid manufactures, in whoſe houſe or cuſtody the ſame ſhould be found, and which ſhould have been there by his privity, ſhould for each piece or parcel thereof forfeit 100 l. but no penalty was to be inflicted on the wearer of any ſuch goods or manufactures.

EMERALD. A precious ſtone, very green and tranſparent, being as to its hardneſs the next after the ruby. See *Gem*, *Precious Stone*, and *Diamond*.

Pliny reckons up twelve kinds of emeralds, and denominates each from the provinces or kingdoms where he ſuppoſed them to be found; as the Scythian, Bactrian, Egyptian, Perſian, and others: but the modern naturaliſts, and jewellers, only know of two kinds, the oriental and peruvian; and if we may credit Tavernier, in his treatiſe of coloured ſtones found in the Indies, inſerted in the ſecond volume of his voyages, theſe two ſhould be further reduced to one; for he maintains that there is not, nor ever was, any mine of emeralds in the Eaſt Indies; and that all thoſe found there were brought from Peru, by the way of the South Sea, which, he ſays, was a method of commerce, carried on by the Peruvians, before the diſcovery of America by the Spaniards: but as the point of ſuch commerce is not ſufficiently proved, it is more adviſeable to keep to the ancient diviſion.

The oriental emerald is harder, more brilliant and tranſparent than the Peruvian, which has generally clouds found in it: beſides, there are ſuch quantities brought from Peru, by the way of Carthagena, that they are much ſunk in value and reputation. They talk likewiſe of emeralds found in Cyprus, and even in Great Britain: but they are very inconſiderable, if, indeed, there are any true ones at all.

Some authors hold emeralds to be taken out of iron mines: and Pomet aſſures us, he had one, to which the iron ore was ſtill ſticking; but this could not be a Peruvian, becauſe there is no iron mine in the country.

The emerald is ſuppoſed to grow more and more perfect in the mine, like the ruby, and to arrive at its greenneſs by ſlow degrees: for it is the common opinion, that the emerald grows in the jaſper; and there certainly are ſome jaſpers ſo perfectly green, that many have taken them for emeralds. See *Jaſper*.

But the proper matrix, or marcaſite, of this ſtone, is the preme, which is held among the coarſer precious ſtones, being hard, tranſparent, half opake, and uſually intermixed with yellow, green, white, and blue.

The following is a curious and accurate eſtimate of the values of the different kinds of Peruvian emeralds.

Rough EMERALDS. Thoſe of the firſt and coarſeſt ſort, called plaſmes, for grinding, are worth 1 l. 7 s. ſterling the marc, or eight ounces. The demi-morillons 8 l. ſterling the marc. Good morillons from 13 to 15 l. the marc. Emeralds, larger than morillons, and called of the third colour, or ſort, are valued from 50 to 60 l. the marc. Emeralds, called of the ſecond ſort, which are in larger and finer pieces than the preceding, are worth from 65 to 75 l. the marc. Laſtly, thoſe of the firſt colour, otherwiſe called negres cartes, are worth 110 to 115 l. the marc.

EMERALDS ready cut, or poliſhed and not cut, being of good ſtone, and a fine colour, are worth,

EMERY. A ſort of metallic ſtone, found in moſt, or all, mines of metals; but chiefly thoſe of iron, copper, or gold; of which three kinds are uſually diſtinguiſhed; the Spaniſh, red, and common emery. The firſt ſort is found in the gold mines of Peru, and other provinces of Spaniſh America: it is judged a kind of marcaſite of that rich metal, being ſtreaked with little veins and ſpecks of gold; for which reaſon the King of Spain prohibits its being exported; whereby it is rendered exceeding ſcarce, to the great regret of the ſeekers of the philoſopher's ſtone, who build great hopes in the tranſmutation of this precious mineral. The red emery is found in copper mines; and the little there is of it in England comes from Sweden and Denmark. The common emery is taken out of iron mines; and is almoſt the only ſort uſed in England: the conſumption of which is very conſiderable among the armorers, cutlers, lockſmiths, glaziers, lapidaries, maſons, and other mechanics; ſome of whom uſe it to poliſh and burniſh iron, and ſteel works; others, to cut and ſcallop glaſs, marble, and precious ſtones.

The common emery is of a browniſh colour, bordering a little on red; exceeding hard, and of conſequence difficult to pulveriſe: the Engliſh are the only people that have got the art of making it into powder; which they do chiefly by means of certain mills contrived for that purpoſe; and thus ſend it in powder to their neighbours. Of the powder, the moſt ſubtile and impalpable is the beſt: as to the ſtone, it ſhould be choſe of a high colour, and as free of the rock as poſſible. Emery fuſed with lead and iron, hardens them; it increaſes and heightens the weight and colour of gold; and it is uſual to mix a little of it with the gold from Madagaſcar, which is naturally pale and ſoft.

The Engliſh, who trade greatly in this commodity, bring a great part of it from the Levant, particularly from the iſland of Naxia, where its coſts but a crown the 28 quintals, the quintal weighing 140 pounds; which is, therefore, what they uſually ballaſt all their ſhips with.

Putty of EMERY, is a kind of dirty matter, found on the lapidaries wheels, containing part of the powder of emery.

EMIR. A title of dignity, or quality, among the Turks, and Saracens; attributed to ſuch as are relations, or deſcendants, of their great prophet Mahomet: there are ſeveral emirs, or ſovereign princes, in Arabia; and it is likewiſe a title, which being joined to ſome other word, frequently denotes an office or employ; as Emir Bazar, the provoſt, or ſuperintendent of the markets, who regulates the prices of proviſions.

EMS. A river of Germany, riſing in the biſhopric of Paderborn, in the S. E. part of Weſtphalia: it firſt runs W. through the county of Ritberg; then, turning N. paſſes through the county of Tecklenburg, and the biſhopric of Munſter; and, continuing its courſe N. through the county of Embden, or Eaſt Frieſland, diſcharges itſelf into the Dollart bay, at the city of Embden.

ENAMEL, popularly *Amel*, a kind of metalline colour, by the Latins called *encauſtum*; uſed in enamelling, and painting in enamel. The baſis of enamels is the fineſt cryſtal, made of the beſt kali from Alicant, and ſand, vitrified together; to which are added tin and lead, in equal quantities, calcined by a reverberatory fire: this being the fundamental compoſition of enamels; though other metallic or mineral matters are added, to give them the colours required; as *æs uſtum* for green, and *crocus martis* for yellow.

There is a diſtinction of three kinds of enamel: the firſt intended for the counterfeiting and imitating of precious ſtones: the ſecond for painting in enamel: and the third uſed by enamellers, jewellers, and goldſmiths, on gold, ſilver, and other metals; with which laſt kind, particularly the white, the makers of the Dutch earthen-ware, or Delft, give the gloſs to their works. The enamel uſed in imitating precious ſtones, and thoſe for painting, are prepared by the workmen themſelves, employed in that art; and the enamels uſed by jewellers, goldſmiths, and enamellers, are brought from Venice and Holland: the compoſition is the ſame, in the main, in all the three kinds, all the difference conſiſting in giving the colour or tranſparency.

The enamels brought from Venice and Holland, are in little cakes of different ſizes, uſually four inches in diameter, and half an inch thick: every cake has the mark of the maker ſtruck on it with a puncheon; the moſt common marks being the name Jeſus, a ſyren, monkey, ſun, or other thing. Thoſe brought from Venice are chiefly white, ſlate-colour, ſky-blue, carnation, yellow, green, and a deep blue, called a falſe lapis: theſe ſeven are the principles of all the others uſed by jewellers, goldſmiths, and enamellers, which ariſe out of the mixture of theſe; and the white, in particular, is eſteemed the baſis of all the other ſix principal colours.

ENAMEL, is alſo to paint, colour, or japan things with glaſs, and other metalline materials, for imitating precious ſtones, and ſeveral other purpoſes.

ENAMELLER, is a perſon whoſe buſineſs conſiſts in enamelling, which is properly a kin to the buſineſs of a potter, as they uſe the ſame colours, and lay them on the ſame way; differing only in this, that the ground-work of the potter is earthen ware, but that of the enameller is metal. Copper and gold are the metals commonly uſed to enamel on; but copper moſt, as this metal can bear the greateſt heat before it is brought to flow. The enameller ſhould be a better painter than the potter, as he is more employed in pictures than the other; and the whole of enamelling-work depends on the proportion of the figures.

ENCHASE, to ſet precious ſtones, pictures, and other things, in gold, ſilver, or other metals.

ENCHASING, *Inchaſing*, or *Chaſing*. The art of enriching, and beautifying, gold, ſilver, and other metal works, by ſome deſign or figures repreſented thereon, in low relievo; which is only practiſed on hollow thin works, as watch-caſes, cane-heads, tweezer-caſes, or the like.

ENCHUYSEN. A city and port of the United Provinces, ſituated on the Zuyder ſea, in 5 deg. 10 min. of E. lon. and 52 deg. 45 min. of N. lat. See *United Provinces*.

ENDORSEMENT, or *Indorſement*, is particularly uſed in commerce for a writing on the back of a bill of exchange, by the proprietor or bearer, either thereby to transfer it to ſome other, or to render it payable to the order of ſome other, or to ſerve for an acquittance, or receipt.

The endorſement is only the name of the proprietor, or endorſer: but when the endorſement of a bill of exchange is to render it payable to another, it is called an *order*; to which it is neceſſary the endorſement be dated, and contain the name of him who paid the value thereof; and, in this caſe, the bill belongs to the perſon with whoſe name the order is filled, without any other transfer; for, without theſe conditions, the bill is judged to belong to the perſon who endorſed it.

The bearer of a bill of exchange proteſted, has a remedy againſt the endorſers for the payment of the rechange of the places where the bill was negotiated by their order; and, in caſe a bill or note is refuſed to be paid, the bearer has a remedy againſt any one of the endorſers, where there are ſeveral. See *Exchange*.

ENFRANCHISEMENT. The incorporating any man into a ſociety, or body politic: thus he that, by charter, is made denizen of England, is ſaid to be enfranchiſed; and the like is underſtood of a perſon made a citizen of London, or other city, or corporate town; becauſe he is thereby made partaker of the liberties appertaining to the corporation whereof he is enfranchiſed.

ENGIA *gulph*, or *Gulph of Engia*, lies between Achaia and the Morea, in European Turky.

ENGINA. An iſland of European Turky, ſituated in the gulph of Engia, in 24 deg. of E. lon. and 37 deg. 45 min. of N. lat. See *Turkiſh* iſlands.

ENGINE. A mechanical inſtrument, uſed to effect any thing, compoſed of wheels, ſcrews, and other parts. But the term is more particularly applied to thoſe inſtruments kept in moſt pariſh-churches, for throwing large quantities of water upon houſes, or other places, on fire, to extinguiſh the flame.

There are alſo engines for raiſing of water by fire, either for ſupplying reſervoirs, or draining mines; and water-engines, made by chain-pumps.

ENGINE *maker*, is a perſon who makes engines, which art is greatly improved of late years.

ENGLAND. See Great *Britain*.

New ENGLAND. See *Britiſh* America.

ENGLISH *ſtock*. See *Stationers* company.

ENGRAVER. A perſon whoſe buſineſs conſiſts in engraving; of which there are ſeveral kinds. There are engravers employed in cutting dies for money and medals, in making moulds to caſt metals into various figures, and in cutting ſeals; which buſineſs requires a very ſteady hand, and a quick ſight.

There are alſo copper-plate engravers, whoſe buſineſs requires a genius for drawing, a delicate hand, and a clear ſtrong ſight.

ENGRAVING, or *Graving*. The art, or act, of cutting metals and precious ſtones, by repreſenting figures, letters, and other matters thereon; that on metals being an art of modern invention; having its riſe no earlier than the 16th century; when it was diſcovered, and brought into practice, by Maſo Finiguerra, a goldſmith of Florence; though that on ſtones was well underſtood by the antients. See *Prints*.

Engraving is properly a branch of ſculpture; being divided into ſeveral branches, according to the matters it is practiſed on, and the manner of performing it. The original way of engraving on wood, is now diſtinguiſhed by the name of *cutting in wood*; that on metals with aqua fortis, is called *etching*; that by the knife, burniſher, punch, or ſcraper, *metzotinto*; that on ſtones, for tombs, and inſcriptions, *carving*, or *ſtone-cutting*; and, laſtly, that performed with the graver on metals and precious ſtones, retains alone the primitive denomination of *engraving*. See *Emboſſing*.

ENGROSSING, in matters of trade, ſignifies the buying up any commodity in the groſs; or foreſtalling the market. See *Foreſtalling*, and *Monopoly*.

ENSIGN. The flag, or ſtreamer, borne in the ſtern of a ſhip.

ENTRY, in book-keeping. See *Book-keeping*.

ENTRY, bill of. See the article *Bill* of entry.

ENTRY alſo denotes a duty, or impoſt, laid on commodities imported into, or exported out of a ſtate, either by land or ſea; theſe duties are paid according to a tariff ſettled for that purpoſe; and where the duty of entry on any commodity is not fixed by the tariff, it is paid by eſtimation; that is, in proportion to what ſome other commodity, of nearly the ſame quality and value, uſes to pay.

All merchants making entries of goods and merchandiſe, either inwards or outwards, at the cuſtom-houſe, are to be diſpatched in ſuch order as they come, and not to be put by of their turn; and officers and clerks of the cuſtoms receiving greater fees for entries, than ſuch as are eſtabliſhed by act of parliament, are to forfeit their offices, and be diſabled to hold any place in the cuſtom-houſe. See *Cuſtoms*.

In France, all merchandiſes cannot enter by all ſorts of towns, and ports, even paying the duties; but only in places particularly ſpecified, either by the ordonnances, or the arrets of council; as drugs and ſpice by Rochelle, Rouen, Calais, Bourdeaux, Lyons, and Marſeilles; horſes by Dourlens, Peronne, and Amiens; and many foreign manufactures by St. Vallery and Calais.

EPITHYME. A medicinal plant, of a very extraordinary nature, and figure; which ſoon periſhes, unleſs it meet with ſome other plant to give it nouriſhment: it is called dodder in Engliſh, and grows indifferently on all kinds of herbs; but the moſt known, and thoſe moſt uſed in medicine, are ſuch as grow on thyme, which are the proper epithymes, and thoſe on flax: however, there are two other kinds in the ſhops, the one from Venice, and the other from Candia; being both of an aromatic taſte, but that of Venice the ſtrongeſt; both being alſo reputed good for fortifying the parts, and removing the obſtructions of the viſcera.

The good choice of this plant conſiſts in being new, odorous, and not bruiſed or broken.

EPITROPUS. A kind of judge, or rather arbitrator, which the Greek Chriſtians, under the dominion of the Turks, elect, in the ſeveral cities, to terminate any commercial, or other differences, ariſing among them, and to avoid carrying them before the Turkiſh magiſtrate.

OCHA, in chronology. A term, or fixed point of time, hence the years are numbered, or accounted, obtaining fferently in different nations; becauſe, as there is no ſtronomical conſideration to render one preferable to anther, their conſtitution is purely arbitrary. That prinipally regarded among Chriſtians, is the epocha of the ativity, or incarnation, of Jeſus Chriſt; that of the Maometans, the hegira, or the flight of Mahomet from Mecca to Medina, in the year 662 after the birth of Chriſt; and that of the Jews, the creation of the world.
ee *Stile*.

UATOR, in aſtronomy and geography, a great moveble circle of the ſphere, equally diſtant from the two oles of the world. It is called the equator; becauſe hen the ſun is therein, the days and nights are equal; whence alſo it is called the equinoctial, and when drawn n maps and planiſpheres, the *equinoctial line*, or ſimply *he line*.

Every point of the equator is the diſtance of a quadrant rom the poles of the world; whence it follows, that the equator divides the ſphere into two hemiſpheres, in one of which is the northern, and in the other the ſouthern ole.

By the paſſages, or tranſits, of arches of the equator over he meridian, its equal, or mean time, is eſtimated: hence there is frequent occaſion for the converſion of degrees of the equator into time; and again, for the reconverſion of parts of time into parts of the equator.

vation, or *Altitude of the* EQUATOR, is an arch of a vertical circle, intercepted between the equator and the horizon; the elevation of the equator with that of the ole being always equal to a quadrant.

UINOCTIAL, in aſtronomy. A great and immoveable circle of the ſphere, under which the equator moves its diurnal motion: it is ordinarily confounded with the equator; but there is a difference, the equator being moveable, and the equinoctial immoveable; the equator is alſo drawn about the convex ſurface of the ſphere, but the equinoctial on the concave of the magnus orbis.

The equinoctial is conceived, by ſuppoſing a ſemi-diameter of the ſphere, produced through a point of the equator; and there, by the rotation of the ſphere about its axis, deſcribing a circle on the immoveable ſurface of the primum mobile. Whenever the ſun, in its progreſs through the ecliptic, comes to this circle, it makes equal days and nights all around the globe; as then riſing due eaſt, and ſetting due weſt, which it never does at any other time of the year: the equinoctial then is the circle which the ſun deſcribes, or appears to deſcribe, at the time of the equinoxes; that is, when the length of the day is every where equal to that of the night, which happens twice in every year.

UINOCTIAL, in geography, is called, by geographers and navigators, the line; and from this circle is the declination, or latitude, of places, accounted in degrees of the meridian. See *Line*, *Equator*, *Latitude*, and *Longitude*.

UINOCTIAL *points*, are the two points wherein the equator and ecliptic interſect each other; the one being in the firſt point of Aries, called the *vernal*; and the other being in the firſt point of Libra, called the *autumnal point*.

UIP, in a maritime ſenſe, is the ſtoring or furniſhing the crew of a ſhip with proper conveniencies and neceſſaries for proceeding on the voyage.

UIPAGE, in navigation, implies the officers, ſoldiers, ſailors, ſwabbers, and cabbin-boys, ſerving on board a ſhip, and manning her; but the term is alſo uſed for the arms, proviſions, and merchandiſe, with which the ſhip is laden; though, in this ſenſe, the word

UIPMENT is more in uſe.

RIE *lake*, lies between 80 and 87 degrees of W. lon. and between 41 and 42 degrees of N. lat. being weſt of the colony of Penſylvania in North America. It has a communication with the lake Ontario, or Frontinac, by the ſtrait of Niagara, the greateſt cataract, or fall of water, in the known world. The country between theſe lakes and the Britiſh colonies, is inhabited by the five nations of Iroquois Indians, who always oppoſed the French and their Indians of Canada; forming a good barrier to the Britiſh plantations. See *Indian* America.

ERMIN, or *Ermine*. The ſkin of an animal, which ſome will have a water-rat, others a ſort of weazle, and others an Armenian mouſe, very common in the Northern countries, but more particularly in the province of Siberia in Ruſſia.

This little animal, whoſe ſkin is very white, except the tip of the tail, which is very black, affords an exceeding rich fur; but furriers, to heighten the white, variegate it with ſpots made out of little ſcraps of the ſkin of a lamb from Lombardy, very black and ſhining.

Some authors pretend that the ermin is only white in winter; and that, towards the end of May, it reſumes its uſual colour, which inclines to a ſea-green, or red.

The Engliſh and Dutch trade chiefly in thoſe ſkins, with which they ſupply other nations.

ERMIN, is a term in the port-towns of the Levant, particularly at Smyrna, for the cuſtomhouſe-duty paid for the importation and exportation of merchandiſe. The French, for a conſiderable time, paid 5 *per cent.* duty of ermin, whilſt the Engliſh paid only three; but, in virtue of capitulations between France and the Port, renewed by M. de Nointel in 1673, this duty was alſo reduced to 3 *per cent.* in favour of the French, and all ſuch as reſort the Levant under French colours; though there is another duty, called the golden duty, which is about 4 *per cent.*

ERQUIKO. A port-town of the Red ſea, on the coaſt of Abex in Africa, ſituated in 39 deg. of E. lon. and 17 deg. of N. lat. ſubject to Turky. See *Ethiopia*.

ERRATIC *winds*. See the article *Wind*.

ERZERUM. The capital of the province of Turcomania, or Armenia, in Aſiatic Turky, ſituated in 41 deg. of E. lon. and 40 of N. lat. See *Turky*.

ESCALIN, or *Scalin*. A ſmall ſilver Dutch and Flemiſh coin, worth about $3\frac{1}{2}$ d. ſterling.

ESCAMBIO, was antiently a licence granted any one for the making a remittance, or giving a bill of exchange, to another beyond ſea; for, by the ſtatute of the 5th of Richard II. no perſon might exchange, or return money out of England, without the royal licence. See *Exchange*.

ESCAMITE. A ſort of cotton cloth, brought from the Levant by the way of Smyrna, the piece containing about 20 yards.

ESCORT. A French term, ſometimes uſed in Engliſh to denote a convoy for mercantile veſſels. See *Convoy*.

ESCU. See *Ecu*.

ESCURIAL. A magnificent palace belonging to the King of Spain, ſituated in the kingdom of Toledo, 7 leagues to the weſt of Madrid; which is frequently the reſidence of the Spaniſh monarchs; whence many of the great tranſactions of that court are dated from the Eſcurial.

ESK. A river, which forms part of the boundary between England and Scotland; and running from the north-eaſt to the ſouth-weſt, falls into Solway frith.

ESKIMAUX, ſometimes called New Britain, and Terra de Labrador. See *Britiſh* America, and *Indian* America.

ESPARTEL *Cape*, or *Cape Sparte*l. The moſt north-weſt promontory of Africa, ſituated at the entrance of the ſtreight of Gibraltar.

ESSAY. See *Aſſay*, and *Coinage*.

ESSENCE, in medicine and chemiſtry, denotes the pureſt, moſt ſubtile, and balſamic part of a body, extracted from the reſt by means of fire; of which there are a great variety, drawn from flowers, fruits, and the like, uſed on account of their agreeable ſmells and taſtes, by the apothecaries, perfumers, and people of dreſs; the principal being the eſſence of roſemary, of turpentine, of aniſe and cloves, of cinnamon, and of citron.

ESTAPLES. A port-town of France, in the province of Picardy, ſituated in 1 deg. 38 min. of E. lon. and 50 deg. 33 min. of N. lat. near the mouth of the river Canche. See *France*.

ESULA. The bark of a ſmall reddiſh root, producing green, narrow, and milky leaves, growing in gardens, fields, and high ways; which is uſed in medicine by infuſion, to purge away phlegm, ſeroſities, and melancholic humours; alſo as a ſpecific againſt the dropſy, lethargy, phrenſy, and maladies occaſioned by groſs humours.

There

There are ſeveral ſorts of the eſula; but none are either ſold, or uſed without anſwering the preſent deſcription; which, to be good, ſhould be new, reddiſh, clean, of a ſharp, and ſomewhat diſagreeable taſte. Before uſe, it is generally infuſed in vinegar; and there are extracts from it, which are held good in the dropſy.

ETHIOPIA, is one of the grand diviſions of Africa, but ſubdivided into Ethiopia ſuperior, or Upper Ethiopia; and Ethiopia inferior, or Lower Ethiopia.

Ethiopia ſuperior, contains the countries of Abyſſinia, Nubia, Abex, and Anian; being bounded by Egypt, and the deſart of Barca, on the north; by the Red ſea, and the Eaſtern ocean, on the eaſt; by Zanquebar, and Nigritia, on the ſouth; and by Nigritia, and Zaara, on the weſt; lying between 20 and 42 degrees of eaſtern longitude, and between 6 and 25 degrees of northern latitude; being 1320 miles long, and 1100 broad.

Abyſſinia, or the empire of Preſter John, is a large and populous country; though it has now ſcarce any communication with any other people but the ſubjects of the Grand Signior; the Turks having made themſelves maſters of that part of Ethiopia lying upon the Red ſea; and the reſt of it being ſurrounded by mountains, or unpaſſable deſarts.

It is in this country that the black complexion takes place; and travellers reckon up nine principalities, or provinces, in Abyſſinia, every one of them having a diſtinct ſovereign, that acknowledges, however, the Emperor of Abyſſinia for their chief lord. 1. The province of Ambara, the chief towns whereof are Ambara, the capital of Abyſſinia; and Lalibela. 2. Begamedri; the chief towns whereof are, Amadora, Alata, and Maket. 3. Dambea; the chief towns whereof are, Amba-Marjan, Dancas, and Jenda. 4. Shoa; the chief towns whereof are, Debra, Libanos, and Wenthit. 5. Gojam; the chief towns whereof are, Ledanegus, Debra, Semonah, and Selah. 6. Bugna; the chief towns whereof are, Egala, and Arguan. 7. Samen; the chief towns whereof are, Waldeba, and Toraf. 8. Gonga: And, 9. Walaka; in the two latter whereof no towns are mentioned.

The river Nile riſes in the middle of Abyſſinia, and is of great advantage to their interior commerce: there are alſo two other great rivers, called the Moraba, and Albara, which run through the country from ſouth to north, and fall into the Nile; and there is ſtill a fourth great river, called the Haouache, which, after a courſe of 600 miles to the ſouth-eaſt, falls into the Red ſea, or Arabian gulph.

This country, thus happily watered, produces plenty of corn, rice, millet, dates, grapes, flax, cotton, ſugar, ſalt, and ſulphur; and the Turks, who are maſters of the Red ſea, annually fetch great quantities of rice from Abyſſinia; particularly at the times of the great pilgrimages to Mecca, Arabia not affording proviſion ſufficient for their ſubſiſtence.

Gold, ſilver, copper, and iron, are the principal metals extracted from the mines of this vaſt region of Africa; but the three former are only merchandiſe, being not converted into coin, whereof there is no uſe in Abyſſinia, unleſs the gold reduced into plates is looked upon as a kind of money, which is occaſionally cut into ſmall pieces of the weight of half a drachm, worth about 15 d. ſterling.

Theſe gold plates are chiefly uſed for the payment of the troops, and the expences of the court; which is a modern cuſtom, the King's gold, before the end of the 17th century, being laid up in the treaſury in ingots, never to be carried out; or at leaſt, to be employed only in veſſels, and jewels, for the ſervice of the palace.

Rock ſalt, as white as ſnow, and as hard as ſtone, is uſed for ſmall money; being found in the mountain of Lafta, and thence brought into the King's warehouſes, where it is reduced into ſmall tablets of a foot long, and three inches broad, 10 of theſe tablets being worth about 2 s. 6 d. ſterling: but when they are uſed in trade, they are broken into ſmaller pieces, according to the occaſion. This ſalt is alſo employed in all the ordinary uſes of ſea-ſalt, though it is ſold weight for weight with gold; both of theſe commodities being weighed by the ſame weight, and exchanged almoſt for an equality.

With this mineral ſalt the Ethiopians alſo purchaſe pepper, ſpice, and ſome ſilk ſtuffs, which the Indians bring to the ports the former have on the Red ſea.

Cardamum, ginger, aloes, myrrh, caſſia, civet, ebony-wood, ivory, wax, honey, cotton, and cotton-cloths of different ſorts, and colours, are alſo merchandiſe brought from Abyſſinia; to which may be added ſugar, hemp, flax, and excellent wines, if theſe people had the art of preparing them; all theſe particulars growing among them, in as great an abundance, and as good in quality, as in any other part of the world.

Some are of opinion, that the coffee berry was tranſplanted from Ethiopia into Arabia, where now it is abundantly met with: but this opinion ſeems ſomewhat uncertain; it being ſcarce probable, that the plant which produces it was entirely demoliſhed among the Ethiopians, who give no cultivation to it at preſent, or at leaſt neglect it as a mercantile commodity.

The greateſt part of theſe commodities are more for foreign than inland conſumption; the trade among themſelves conſiſting moſtly in ſalt, honey, Saracen corn, grey peas, beans, citrons, oranges, lemons, and other fruits, with herbs and proviſions neceſſary for the ſupport of life. However, they have camels, oxen, ſheep, and other cattle, in great plenty: they are reported to have the largeſt emeralds in the world: but what they are moſt remarkable for, is an excellent breed of horſes, equal to thoſe of Arabia; or, as ſome conjecture, the Arabian horſes are in reality bred in Abyſſinia, where they abound in rich paſtures.

The places frequented moſtly by Abyſſinian merchants, are Arabia felix, and the Eaſt Indies, particularly Goa, Cambay, Bengal, and Sumatra.

Their moſt conſiderable ports on the Red ſea, are Mett, Azum, Zajalla, Maga, Dazo, Patea, and Brava; they had formerly Erquiko and Quaqueu; but the Turks, who poſſeſſed themſelves of theſe places towards the middle of the 17th century, engroſſed all their trade, which in ſome reſpects has ruined the Abyſſinian traffic in the other maritime towns above mentioned.

The Portugueſe are ſuppoſed to be thoſe who taught the Ethiopians what little they knew of navigation; who likewiſe, with ſome other Europeans eſtabliſhed at the Abyſſinian court, ſince the paſſage to the Indies was opened by the Cape of Good Hope, gave them ſome taſte for arts and ſciences, and ſome knowledge of commerce with ſtrangers.

Their trade by land is inconſiderable; however, ſome Abyſſinian bands reſort annually to Egypt, and particularly to Cairo, loaden with ſome gold-duſt; which they exchange for ſuch commodities of the country, or of Europe, as are neceſſary for them.

Theſe cafilas, or caravans, if a troop of 40 or 50 perſons can be ſo properly called, who unite for mutual aſſiſtance, are uſually three or four months on their journey, who, after croſſing foreſts, and almoſt impracticable mountains, make their purchaſes, or rather exchanges, and return immediately with what they have bought or bartered; though they have frequently goods on credit from the Jews and Egyptians: but it ſeems extraordinary, that perſons of ſuch intereſted views as the Jews, ſhould truſt to the fidelity of wretches, againſt whom, if they failed in their word, they could have no remedy. However, experience has proved, that this confidence was never deceived, not even by death; becauſe, if ſuch a thing ſhould happen either going or returning, the companions of their journey would preſerve the effects of the deceaſed, either for his family, or to pay off his debts at Cairo.

The other nations with whom the Abyſſinians trade by land, are the inhabitants of the kingdom of Adel, the Turks who are maſters of Erquiko and Quaqueu, the Melindeze, the people of Moſambique, and the Portugueſe eſtabliſhed on theſe coaſts.

It ſhould not be omitted, that one of the moſt conſiderable branches of the Abyſſinian trade conſiſts in ſlaves, who are eſteemed in the Indies, and Arabia, for the beſt and moſt faithful of all thoſe furniſhed by the other kingdoms of Africa; even to ſuch a degree, that the Indian and Arabian merchants employ them as commiſſioners

and factors in their commerce: beſides, they frequently, not only ſet them at liberty, but reward them very liberally for their ſervice and fidelity.

The Jews are reported to be the only weavers and ſmiths in Abyſſinia: but for other handicrafts, ſuch as carpenters, taylors, and ſhoemakers, every man breeds up his children to the trade or profeſſion he uſes himſelf; and theſe ſeveral trades, like the caſts or tribes in the Eaſt Indies, live ſeparately; nor ever intermix with any other trade or tribe, either by marriage or otherwiſe.

The ſilks, ſtuffs, calicoes, linen, and carpets, they uſe for furniture or cloathing, are received chiefly from the Turks, by the way of the Red ſea, who take the gold and emeralds of Abyſſinia in return for this merchandiſe, with ſome beautiful horſes. The brokers, or merchants, between the Turks and Abyſſinians, are Jews, Arabians, or Armenian Chriſtians: few or none of the natives travel abroad; and it is very probable the Turks would not ſuffer them, ſhould they attempt it, leſt a communication ſhould be opened again between them and other nations, who might alſo exchange their manufactures for the gold and precious ſtones of Abyſſinia.

The antients called all that they knew of Africa to the ſouthward of Egypt, Ethiopia, and the people Ethiops, on account of their dark complexions: but Ethiopia has been lately confined by ſome writers to Abyſſinia; which was once a formidable empire, ſubject to one ſovereign, who commanded the ſea-coaſt as well as the inland country: but now the Emperor of this country, commonly called Preſter John, is a prince of inconſiderable power; his territories being divided into abundance of little principalities, like Germany; the princes whereof ſcarce acknowledge a ſuperior; and, as they are ſeldom united, are by no means a match for their powerful neighbours the Turks; who therefore keep them ſhut up within the bounds of Abyſſinia, without permitting them to correſpond or traffic with the Europeans; a privilege which the Abyſſines would willingly procure, becauſe their religion is relative to that of Chriſtianity, though intermingled with Judaiſm.

Nubia may be conſidered as a part of Upper Ethiopia, and is uſually bounded by the deſarts of Barca, and Egypt, towards the north; by Abyſſinia on the eaſt, by the Lower Ethiopia on the ſouth, and Zaara on the weſt; being reported to be 1200 miles long, and 600 broad: but ſcarce any two hiſtorians, or geographers, agree in theſe matters; they ſeem to carry only conjecture with almoſt every thing they relate of Nubia, which is generally the caſe of almoſt every other inland country of Africa. Some authors affirm, that a large river riſes in Nubia, and falls into the Nile; that the country abounds in gold, muſk, ſandal-wood, and ivory; having elephants, horſes, camels, lions, and ſuch other animals, wild and tame, as are to be found in Abyſſinia: but they are ignorant whether it is a monarchy, or a commonwealth; or whether it is divided into many little kingdoms and ſtates; the laſt of which is moſt probable, becauſe they are ſo imperfectly known.

Abex, and *Aian* or *Anian*, are bounded by Egypt and Abyſſinia, towards the north and weſt; by the Red ſea, and the Eaſtern ocean, on the eaſt; and by Zanquebar on the ſouth, extending from the 5th degree of N. lat. to the 20th.

Anian lies upon, or near the Eaſtern ocean, and the Red ſea: but it is a perfect deſart, from the 5th degree of latitude to the ſtreights of Babel-mandel, or the entrance into the Red ſea, and even with thoſe ſtreights for ſeveral miles.

It contains the republic of Brava, the kingdoms of Magadoxa and Adea, the ſtate of Dancali, and ſome others.

The capital of Brava is of the ſame name, and ſituated between two arms of the river Quilmanci, where is a tolerable harbour: the town is large, and well inhabited; having a good trade in gold, ſilver, ſilk, ſtuffs, and ſome other commodities; beſides, there is a great deal of ambergreaſe found on the coaſt of Brava; but the merchants pay a tribute annually to the Portugueſe, for the protection of their trade.

Magadoxa has alſo a capital of its name; the country abounds with barley and fruit, breeding many horſes and other cattle.

Zeila is the principal town of Adea; ſome parts of the country abound with corn, fruit, and cattle; beſides which, there are gold, ivory, frankincenſe, and pepper.

Bailar is the moſt conſiderable place of Dancali, which is a port-town; but the country is every where barren, and produces nothing for the uſe of trade.

The princes of Anian are frequently at war with the Abyſſinians, many of whom they take priſoners, and ſell to the merchants of Cambaya, Aden, and other Arabs, who come to trade in their harbours, and give them in exchange coloured cloths, glaſs-beads, raiſins, and dates.

Abex lies to the north of Anian, on the weſtern ſhore of the Red ſea, ſome degrees within the ſtreights of Babel-mandel, of which the Turks are maſters; being a fruitful province, the principal parts whereof are, Suaquem, or Suaquee, and Erquiko, or Ercoco, about 150 miles diſtant from each other; where the Turks keep ſtrong garriſons, to command the country, and collect great quantities of rice and other proviſions, which they ſend over to Jeddo in Arabia, the port-town to Medina and Mecca.

ETHIOPIA *inferior*, or *Lower Ethiopia*, contains the countries of Caffraria, Monomotapa, Monomuegi, and Zanquebar; being of a very great, but uncertain extent, and inhabited by many different nations of negroes.

Caffraria, or Caffreria, is the moſt ſouthern part of Africa, lying in the form of a creſcent about the inland country of Monomotapa, and bounded by the ocean on the eaſt, ſouth, and weſt; extending itſelf from the tropic of Capricorn on the eaſt, to the moſt ſoutherly point of Africa, called *Cape d'Aquilas*, in latitude 35, running up from thence to the northward as high as the ſame tropic on the weſt-ſide of Africa; and, by ſome writers, is carried to the latitude of 15 degrees ſouth; the country being divided into two parts, that of the Hottentots, and Caffraria proper.

The country of the Hottentots, which is remarkable for having the Cape of Good Hope ſituated there, is the moſt ſouthern part of Caffraria; the country lying between 28 and 35 degrees of latitude, and between the Eaſtern and Weſtern ocean; being about 300 miles from eaſt to weſt, and about 400 from north to ſouth; the Dutch town, which has obtained the name of the Cape, lying in latitude 34 degrees 15 minutes, and in 18 degrees of longitude, to the eaſtward of London. This country was firſt diſcovered in 1493, by the Portugueſe Admiral Diaz, in his attempt to find a way to the Eaſt Indies round Africa. The Portugueſe, ſome years after, attempted to make a ſettlement there; but the inhabitants falling upon them, and there being no harbours for the ſecurity of their ſhipping againſt the violent ſtorms upon that coaſt, they relinquiſhed their deſign. The Engliſh afterwards viſited the Cape, and were diſcouraged from ſettling there in the ſame manner as the Portugueſe had been. However, the Dutch, obſerving the fertility of the country, and judging it would be of ſingular utility in ſupplying them with proviſions in their voyages to and from the Indies, fixed a colony at the Cape, about the year 1651, erected a fort, and entered into a treaty with the natives; who, for a very moderate conſideration, transferred a great part of their country to theſe republicans, where they have continued ever ſince; enlarging their territories to ſuch a degree, that they have now ſettlements upwards of 200 miles to the north and eaſt, well planted and cultivated.

The country of the Hottentots is mountainous, where the winds rage very turbulently great part of the year, making the coaſts very dangerous for navigation. Theſe winds, when the ſun is in the ſouthern ſigns, blow from the ſouth-eaſt, and are then very dangerous to ſhips coming in the Cape: when the ſun is in the northern ſigns, they blow from the north-weſt, and then are equally dangerous to the ſhips at anchor in the bay.

The Hottentot nations, inhabiting the country about this ſouthern promontory of Africa, are 16 in number, at

leaſt the Dutch are acquainted with ſo many; but it amounts almoſt to a certainty, that there are more to the northwards of theſe.

The 16 nations are, 1. the Gongeman nation; 2. the Kochaqua; 3. the Suſſaqua; 4. the Adiqua; 5. the Chirigriqua; 6. the greater and leſſer Namaqua; 7. the Attaqua; 8. the Koopman; 9. the Heſſaqua; 10. the Sonqua; 11. the Dunqua; 12. the Damaqua; 13. the Gauros, or Gauriqua; 14 the Hauteniqua; 15. the Chamtouer; and 16. the Heykom. Every Hottentot nation has its chief, or king, called konquer, whoſe authority devolves upon him by hereditary ſucceſſion: this chief has the power of making peace or war, and preſides in all their counſels, and courts of juſtice; but his authority is limited by the captains of the ſeveral kraals, or villages, which ſeem to compoſe the Hottentot ſenate.

The Hottentots are groſs idolaters; they are undoubtedly the moſt indolent generation of people inhabiting the globe; and though they are not naturally negroes, they take all imaginable care to obtain a ſooty complexion. The principal ornaments, both of men and women, are braſs or glaſs-beads, with little thin plates of braſs, and mother of pearl, which they wear in their hair, or about their ears; and they alſo make necklaces, bracelets for the arms, and girdles, of theſe braſs and glaſs beads ſtrung, wearing ſeveral ſtrings of them upon their necks, waiſts, and arms. They are extremely filthy, both in dreſs and diet; and their language principally conſiſts in inarticulate ſounds and noiſes made in their throats, which it is extremely difficult to learn, and impoſſible to imitate or expreſs in writing.

The wealth of every Hottentot conſiſts in his number of cattle, which they feed in common; becauſe they have no encloſures, nor has any ſingle man a property in any particular lands: but when a Hottentot has no cattle, he uſually lets himſelf to one of his countrymen, or preferably to a Dutchman, till he gets money ſufficient to buy a cow, or 2 or 3 ſheep. The produce of their country is very inconſiderable; and they are frequently deprived of their cattle, by the ravages of lions, tygers, leopards, and wolves, which are very numerous in this country; tho' the Hottentots have bravery enough to encounter them, and make a great deſtruction among theſe rapacious animals, which they even hunt for their diverſion.

They are too ignorant to underſtand any thing of manufactures; nor do they ever ſee any coin, except ſome ſmall pieces of money ſometimes given them by the Dutch for their wages at the Cape. Their trade is very inconſiderable; and, as they have no money among them, they truck and barter one thing for another. The poor Hottentots employ themſelves in making arms; ſuch as bows and arrows, lances and dart, bartering them with the rich for cattle, to begin the world with: others get elephants teeth, which they procure in abundance by their ſtratagems in deſtroying theſe enormous animals; and what is not uſed in making rings and ornaments for themſelves, they generally diſpoſe of to the Portugueſe, and other Europeans, who touch at Terra de natal, and other parts of the eaſtern or weſtern coaſts. The Hottentots ſell very few teeth to the Dutch, though it is manifeſt they kill abundance of elephants: however, they ſupply the Hollanders with cattle; for which they receive an exchange in wines, brandy, tobacco, or ſuch trinkets as they are fond of for ornament; though at ſo extraordinary a rate, that a Hottentot has been known to ſell an ox for a pound of tobacco, and a large ſheep for half a pound; nor ſhould it be forgot that the Hottentots find abundance of oſtriches eggs in the ſand, which they barter with the ſea-faring men that touch at the Cape, for brandy and tobacco.

The Dutch, by their eſtabliſhment at the Cape of Good Hope, the moſt conſiderable they poſſeſs upon the coaſts of Africa, have deprived all other European nations trading to the Eaſt Indies, of a commodious place of refreſhment; and have aſſured to themſelves a ſtaple, without which it is difficult to proſecute ſo tedious a navigation with any alluring hopes of ſafety and proſperity. Cape Town, their principal ſettlement, is ſituated in a valley, and contains between 2 and 300 handſome ſtone houſes, regularly laid out into ſpacious ſtreets; but thatched, and ſeldom more than one ſtory high, to avoid any fatal accidents that might happen to the inhabitants in tempeſtuous weather, by unroofing their habitations; though, as it is, they uſually receive ſome damage, when the winds ſet in eaſterly. At a little diſtance from the town, in the ſame valley, the Dutch have a noble fort or citadel, built with ſtone in form of a pentagon, which defends the landing-place: the ſoldiers in garriſon are about 200 men; and here the governor, and the principal officers of the company, have their reſpective apartments, where there are very large and commodious ſtore-houſes belonging to the government. The Dutch Eaſt India company have between 5 and 600 officers and ſervants at the Cape, beſides ſlaves, which are about 600 more: they have a fine hoſpital there, where they ſend ſick mariners that arrive in their fleets going to and coming from India: this, and the ſupplying their ſhips with freſh proviſions, are the principal advantages the Dutch yet receive by the poſſeſſion of the Cape; there being no harbours of ſecurity, or ſcarce any thing meritorious of the name of merchandiſe, beſides proviſions.

At a little diſtance from Cape Town, the Dutch have ſeveral beautiful country-ſeats, vineyards, and farms, extending far into the country, where they have planted moſt of the common European vegetables; as alſo lemons, oranges, citrons, figs, Japan apples, and an infinite variety of other fruits, all excellent in their kind, where they flouriſh more than in the reſpective climates and countries from whence they were brought. There are alſo two other great colonies, or ſettlements, belonging to the Dutch; the one called the Stellenboſt colony, and the other the Drakenſtein and Waveren colony; taking up a tract of land of near 200 miles, to the northward and eaſtward of the Cape, but intermixed with the Hottentot nations, who continue to graze their cattle upon ſuch lands as are not encloſed and cultivated by the Dutch.

The government of the Cape is adminiſtered by eight courts or councils; of which the principal is the college of policy, conſiſting of the governor, and eight of the principal officers belonging to the company, who have the direction of trade and navigation, make peace or war with the Hottentots, and have the ſupreme management of every thing conducive to the ſecurity and intereſt of the ſettlement: they alſo hold a conſtant correſpondence with the directors of the Dutch Eaſt India company in Holland, and with the Dutch governments of Batavia and Ceylon.

The Dutch Eaſt India company are reputed to be at the expence of 40,000 l. annually, in maintaining this ſettlement at the Cape, and all they receive from thence can but barely defray their charges; though it is obſervable that they do not allow their governor above 4 or 500 l. a year, and the reſt of their officers proportionably. The revenues, which repay the expences of the company, ariſe either from the tenths they reſerve on all lands they grant, or from the duties laid on the produce of the Cape, and ſuch merchandiſe as is carried thither, particularly on wine, brandy, tobacco, beer, and mum; or by the merchandiſe they themſelves annually ſend to the Cape, which yields them a profit of 75 *per cent.* The company uſually fetch the ſlaves they employ at the Cape, from the iſland of Madagaſcar, which lies a little to the eaſtward of the African continent. The government generally contract with four ſubſtantial men to furniſh the garriſon and ſhipping with beef and mutton; who are obliged to keep great numbers of ſheep and oxen always fat, to anſwer any ſudden demand upon the arrival of a fleet: ſo that there are numerous herds, both of great and ſmall cattle, in all the Dutch ſettlements, beſides thoſe that belong to the Hottentots. The ſoil at the Cape is exceeding fruitful, and gives great encouragment to the huſbandman; who finds one buſhel of wheat to yield there an increaſe of 30 or 40 buſhels; a buſhel of barley 50 or 60, and ſometimes 70; a buſhel of peaſe from 30 to 60, and a buſhel of beans from 20 to 25: they alſo rear a conſiderable ſtock of wine, called Cape wine, which is in great eſteem in Europe; and they bring moſt of the European fruits to perfection, particularly three or four

four ſorts of almond-trees, which bear fruit once in three years, and, as they have large plantations of them, yield the Dutch a conſiderable profit.

Terra de natal in Caffraria, lies on the eaſtern ſide of Africa, between the Hottentot nations on the ſouth, and the Portugueſe ſettlements of Zanquebar on the north; the natives of this country being blacker than the Hottentots, and have been taught to cloath themſelves more decently. They have alſo ſome buildings that may deſerve the name of houſes; and traffic with the Portugueſe, and other Europeans that touch on their coaſt, bringing gold and elephants teeth from the inland countries, which they barter for cloathing, ſtrong liquors, utenſils, and toys.

Is to the Caffries on the weſtern coaſt, lying between the Hottentots on the ſouth, and the Portugueſe colonies in Congo on the north, including the country of Mataman or Matapan, and extending to the 16th degree of S. lat. this is all a deſart uninhabited coaſt, where no Europeans have yet found it worth their while to ſettle colonies, or even factories; producing no article fit for commerce, or even neceſſary proviſions; and conſequently little can be known of the inhabitants.

Monomotapa, and *Monomuegi*, lying between the eaſtern and weſtern coaſt, having the Hottentots on the ſouth, and the Upper Ethiopia on the north, are alſo but very imperfectly known, on account of their interior ſituation, comprehending the kingdoms of Moſambique, Sofala, Zanquebar, and ſeveral others. However, the natives are negroes, entirely addicted to Paganiſm; who ſometimes bring their gold, elephants teeth, and oſtriches feathers, to thoſe countries adjacent to the ſea, where they are purchaſed by the natives of the coaſt, who barter them again with the Europeans: but the Portugueſe have ſome ſettlements on the coaſt of Monomotapa, though more on account of religion than trade,

The gold of Monomotapa is of two ſorts, one extracted from mines, and the other found in the ſands of rivers. It is gathered yearly in ſuch great quantities, and the merchants of Sofala make ſo rich a trade thereof, in exchange for Aſiatic and European ſtuffs, brought by the Arabs and Portugueſe, that the latter commonly call the Prince of Monomotapa the *emperor of gold*.

The Portugueſe are the only Europeans who have eſtabliſhments in the kingdom of Moſambique, and who trade there: the Arabians, however, divide it with them; though the former do their utmoſt to trouble them, that they may have it entirely to themſelves.

The Portugueſe plantations along the coaſt are conſiderable, and all defended by good forts, or at leaſt by houſes of defence; which ſerve them both as ware-houſes for trade, and for a ſafeguard againſt the natives of the country, who are equally treacherous and barbarous.

But the center of their commerce is the iſland of Moſambique, ſituated in 15 deg. of S. lat. about half a league from the continent, having a commodious and well-fortified town, which is the uſual reſidence of the governor, and the richeſt merchants.

This iſland is a place of ſtaple, and refreſhment, to the Portugueſe ſhips trading to the Indies, ſuch as the iſland of Madagaſcar was formerly to the French, what the Cape of Good Hope is now to the Dutch, and the iſland of St. Helena to the Engliſh.

The Dutch attempted twice to poſſeſs themſelves of the commerce of Moſambique, firſt in 1604, and next in 1607. But the Portugueſe, then united with the Spaniards, made ſo handſome a defence, that the Dutch fleet was obliged to retire with great loſs; though with a rich booty found in ſome Portugueſe veſſels, whereof they made themſelves maſters; a misfortune which perhaps proved advantageous to theſe new navigators of the Indies; becauſe they ſince eſtabliſhed their ſtaple at the Cape of Good Hope, which yielding to Moſambique in trade, has notwithſtanding the ſuperiority of ſituation, eſpecially for the victualling of fleets either going to or coming from the Indies.

The commerce with the inhabitants of Moſambique conſiſts in gold, which they get in the ſand of their rivers, or in mines; in ſilver, which is dug out of the earth in ſome places; in ebony, which takes a very fine poliſh, and with which their foreſts are full; in ivory, which is found there more abundantly than in any other part of Africa; in ſlaves, either taken in war, or vaſſals of the King, and great Lords, who diſpoſe of, and ſell them, as they think proper; in matts, made by the negroes, and ſent to Goa, where they are much eſteemed; laſtly, in all ſorts of refreſhments, ſuch as large cattle, Indian fowl, ſome veniſon, beer, rice, palm-wine, fruits, and garden-ſtuff.

The merchandiſes given them in exchange are Spaniſh or Canary wines, and oil, ſilks, woollen cloths, linen, and ſtuffs; as alſo coral, rough or cut, with which the Portugueſe ware-houſes along the coaſt are always abundantly ſtocked.

When the European merchandiſes arrive in Portugueſe bottoms at Moſambique, they are taxed at a certain price by the King's factor, who afterwards ſends them to Chilimani, at the mouth of the river Senna: from whence they are ſent up the river, and are ten days in the paſſage, though but five coming down.

In a ſmall Portugueſe town, in the upper part of the Senna, the Caffrarians and negroes come from the interior kingdoms, and provinces of Africa, to purchaſe, or receive on credit, the Portugueſe merchandiſe for a certain quantity of gold agreed upon, with which they never fail to return faithfully.

This trade affords uſually *cent. per cent.* being properly the Peru and Chili of the Portugueſe; gold being ſo common there, that kitchen utenſils, nails, and ſuch like things, are uſually made thereof in the countries diſtant only from the coaſts about a month's journey.

It is alſo from the iſland of Moſambique that the ſmall veſſels depart, in which the Portugueſe trade to Sofala, where they have a good fort, and pretend that the natives of that kingdom are their ſubjects.

The commerce of the other coaſt of Zanquebar, is almoſt entirely in the hands of the Portugueſe, who have a great eſtabliſhment at Melinda, the capital city, and who had even the credit to build there 17 churches, though the King is a Mahometan.

However, the natives of the country carry on among themſelves a pretty good trade, and upon their own bottoms to the Red ſea, frequently viſiting the beſt ports of Arabia.

Some of their ſhips are alſo ſeen in the Indian ſeas, particularly at Cambaya, a maritime town of the Mogul's territories; but notwithſtanding this, and though the Arabs and Indians reſort to Melinda ſometimes with merchandiſe, it is thro' the hands of the Portugueſe that all the trade properly paſſes, which is ſcarce leſs conſiderable than that of Moſambique.

Gold, ivory, ſlaves, oſtrich feathers, wax, and drugs, are the principal commodities at Melinda; which the natives exchange for copper, quickſilver, ſilks, woollen and linen cloths, ſtuffs, and ſpice.

The inhabitants are greatly civiliſed by the Portugueſe, who have prevailed on them to dreſs after the European manner: they are very intelligent in trade; and ſome of them make great profits, particularly with the Portugueſe, with whom they not only trade, but to whom they alſo ſerve as brokers, and acquire very conſiderable brokerage fees.

EU. A port-town of France, in the province of Normandy, ſituated in 1 deg. 30 min. of E. lon. and 50 deg. 41 min. of N. lat. on the Britiſh channel. See *France*.

EUPATORIUM. A large plant growing in moiſt places along rivulets, and having leaves reſembling thoſe of hemp, being of ſome uſe in phyſic.

EUPHEMIA. A port-town of Naples, ſituated in 16 deg. 32 min. of E. lon and 39 deg. of N. lat. on

EUPHEMIA *bay*, which lies on the coaſt of Naples, in the province of the further Calabria, 50 miles north-eaſt of Reggio. See *Italy*.

EUPHORBIUM. A kind of gum, brought from Africa, in little roundiſh pieces, whitiſh when new, and yellowiſh when old, very pungent to the taſte, but void of ſmell; which is uſed in pharmacy for the cure of the farcy in horſes, and as an ingredient in ſternutory powders, and in

ſeveral reſolutive plaiſters. It is formed of the juice of a tree, or rather plant, of the ſame name, pretty common in Barbary: but the ſpecies of the tree, or plant, has been greatly controverted.

EUPHRASY. A ſmall plant, growing in uncultivated, ſandy places, and on the borders of roads expoſed to the ſun. The herb is uſed with the flower as an excellent opthalmic, and cephalic; being hot, and dry, aſtringent, diſcuſſive, and its taſte ſomewhat poignant. It is principally uſed in cataracts obſcurities of the eyes, and debility of the memory. From the whole plant gathered in June, a water is extracted by diſtillation, which has a wonderful efficacy in clearing the ſight, and curing ſeveral diſorders incident to the eyes: but the powder of this plant mixed with ordinary aliments, or with an egg, which is ſwallowed or ſmoaked in a pipe, has the ſame ſalutary effects.

EUPHRATES, the fineſt river of Turky in Aſia, has two ſources to the northward of the city of Erzerum in Turcomania, in 40 degrees odd minutes of N. lat; which ſtreams are united three days journey below that city, where the river will carry ſmall veſſels; but the rocky channel renders the navigation difficult. It runs at firſt from eaſt to weſt, through the province of Turcomania, or Armenia; but then meeting with Mount Taurus, turns to the ſouthward, dividing Armenia from Natolia; then continuing its courſe ſouth-eaſt, divides Syria from Diarbeck, or Aſſyria: it afterwards paſſes through the province of Eyraca Arabic, or Chaldea; and, having united its waters with the Tigris, runs on ſouth-eaſt to the city of Baſſora, 50 miles below which it falls, by ſeveral mouths, into the gulph of Perſia.

EURIPUS, in hydrography, properly ſignifies a certain ſtreight of the ſea, between Bæotia Eubæa, in European Turky; remarkable for the tides in this channel, which are ſometimes regular, and at others irregular, according to the different quarters of the moon; and when they are irregular, they flow 13 or 14 times, and ebb as often, in 24 hours: at theſe times, the water is half an hour riſing, and three quarters of an hour falling; but when the tides are regular, they obſerve the ſame rule, according to the moon, as the tides in the ocean.

EURIPUS has ſince become a general name for all ſtreights, where the water is in great motion and agitation.

EUROPE, one of the four grand diviſions of the world, is ſituated between 10 deg. of W. and 65 deg. of E. lon. and betwen 36 and 72 degrees of N. lat. bounded by the frozen ocean on the north; by Aſia on the eaſt; by the Mediterranean ſea, which divides it from Africa, on the ſouth; and by the Atlantic ocean on the weſt; being 3000 miles long from north to ſouth, and 2500 broad from eaſt to weſt.

The grand diviſions of Europe, beginning on the weſt, are Spain, Portugal, France, Italy, Switzerland, the Netherlands, the United Provinces, Germany, Hungary, Bohemia and the other Auſtrian hereditary countries, Poland, Ruſſia, Sweden, Denmark and Norway, and Turky in Europe; beſides the iſlands of Great Britain, Ireland, and other Britiſh iſlands, Iceland, the Baltic iſlands, Sicily, Sardinia, Corſica, Majorca, Minorca, Ivica, and other iſlands in the Mediterranean.

Suppoſing the whole habitable world to be divided into 300 parts, Europe will contain of theſe 27, Aſia 101, Africa 82, and America 90; by which it appears that Europe is greatly leſs than any of the other diviſions of the globe: but, in reſpect to inhabitants, this diviſion certainly excels Africa and America, though much inferior to Aſia: however, Europe is, beyond all compariſon, the moſt happy and valuable quarter of the globe, which may ſeem a paradox, when it is conſidered that, in reſpect to riches, the gold and ſilver mines of Europe are not comparable to thoſe in the other quarters of the world; few or no precious ſtones are found in any of the European countries, neither are there any ſpices or perfumes.

At firſt theſe remarks may ſeem to deſtroy the common opinion, but when more cloſely examined they will be found to confirm it; for when it is ſaid one country is greater, more powerful, or more conſiderable, than another, it is meant in reſpect to the condition of its inhabitants; in which ſenſe it may be very ſafely affirmed of Europe: for, with regard to territory, when it is conſidered what the Spaniards, the Engliſh, the Portugueſe, the French, and the Dutch, poſſeſs in other parts of the world, it may be aſſerted that Europe is equal, if not ſuperior, to Aſia; and if it does not contain ſo many people within its own bounds, yet it may be truly ſaid to command more. As to riches, it is notorious that the European nations enjoy, in conſequence of their trade, all that nature has beſtowed upon the other parts of the world. And it may be reaſonably admitted for truth, that Europe is the happieſt, the moſt powerful, and, in reſpect of arts, arms, and trade, by far the moſt conſiderable portion of the globe.

After ſettling this point, it is natural to deſcend to thoſe general heads, whence the grandeur, and, which is of no leſs conſequence, the ſtability of the European governments ariſe, whereon the power and ſecurity of its ſeveral parts depend; which may be confined to the three heads of religion, commerce, and the union of political intereſts; from whence the general ſtate of Europe may be perfectly underſtood, a right judgment formed of the views and force of the ſeveral parties therein; and the nature of thoſe controverſies underſtood, which, from time to time ariſe among them, and which may be eaſily referred to one or other of theſe ſubjects.

1. As to *religion*; though it is certain that there are ſome Pagans in the Swediſh and Muſcovite Lapland, a vaſt multitude of Jews ſcattered through ſeveral European countries, and that the Mahommeddan religion has the ſanction of public authority in the Turkiſh dominions; yet the prevailing religion is Chriſtianity, divided into a great number of ſects, but falling under the three capital diſtinctions of the Greek church, the church of Rome, and the Proteſtants. The Chriſtians of the Greek church have for their head, whoever wears the Imperial diadem of Ruſſia: the princes of Moldavia and Walachia are alſo of this religion, and ſo are the greateſt part of the Chriſtians ſubject to the Grand Signior, beſides multitudes that are ſcattered through Hungary, Poland, Tranſylvania, and ſome parts of Germany; ſo that the people of this perſuaſion are equal in number to thoſe of the church of Rome.

As to the ſtrength and power of the Romaniſts; this is certainly very great; and the common opinion is, that it continually increaſes: but if there be any truth in this, it muſt be principally owing to their having a viſible head, the Pope, inveſted with that ſort of authority which is moſt properly calculated to ſupport and extend the tenets of religion. In computing the ſtrength of the Papiſts, it is uſual, and indeed proper, to reckon the Emperor of Germany firſt, becauſe he precedes all the princes of that communion, and adds ſomewhat to the credit of this religion, by his Imperial authority. The next Popiſh power is France, then Spain, and next Portugal; though the dominions of his Poliſh Majeſty are more extenſive than Spain and Portugal taken together: after them follow the King of Sardinia, the Pope, the princes and ſtates of Italy, with ſuch of the Swiſs cantons as are of this religion; which bring the eye back again to Germany, where the dominions of the Queen of Hungary and Bohemia, together with the Electors of Bavaria and Palatine, beſides the ſpiritual Electors, and ſome other princes and ſtates, are of the ſame community.

Of the proteſtant powers, Great Britain is certainly the moſt conſiderable: next follow Sweden, Denmark, Pruſſia; the United Provinces, with ſome of the Swiſs cantons and their confederates: then the ſubjects of the Elector of Saxony, though their prince is a papiſt; the Elector of Hanover, the Dutchy of Courland, and ſome of the leſſer princes and ſtates of Germany of this communion. According to the neareſt computation that can be made, with reſpect to territory in Germany, the proportion between papiſts and proteſtants may be as ten to eight; but, in point of number of people, the proteſtants are held to be equal: throughout the reſt of Europe, the proportion, in point of territory, is conceived to be eight to ſeven; though, as to inhabitants, there is good reaſon to believe that the proteſtants are rather more

merous than the papiſts; becauſe the proteſtant countries are inconteſtably more populous. In the North, for example, though Poland is numerouſly inhabited, yet it is certain, that one half of the people are not papiſts; and at leaſt one third of them proteſtants; whereas in Denmark or Sweden there are few or no papiſts: in Germany again, moſt of the great trading cities, though crowded with inhabitants, are proteſtants: in Italy, indeed, the papiſts are in a manner without mixture; though this is balanced by the number of people in Great Britain. But the following table may ſerve to illuſtrate this matter, and to regulate the judgment not only with reſpect to this, but with regard to ſeveral other ſubjects of importance.

The proportion of the ſeveral powers of Europe to Great Britain.

Ruſſia - -	10,13	Portugal - -	0,36
Germany -	3,53	Netherlands -	9,18
Sweden -	3,63	United Provinces	0,11
Poland -	3,39	Switzerland -	0,17
France -	1,7	Denmark - -	1,49
Spain - -	1,81	Italy - -	1,19
Turky -	3,18		

That is; the proportion between Ruſſia and Great Britain is as 10-13 to 1; or, Ruſſia is ten times as large as Great Britain, and 13 parts of 100 more: this table, at the ſame time it points out the comparative ſtrength of Great Britain to other nations, alſo ſhewing the proportions of all theſe countries to each other.

3dly, As to the commerce of Europe, it has been a thing readily purſued in every country for upwards of fifty years paſt, to which the other kingdoms were incited by the formidable appearance of the maritime powers. The French laboured with indefatigable diligence, not only to raiſe a maritime force, but to extend their trade into all parts of the world; in which they have been extremely ſucceſsful: for though the war, productive of the treaty of Utrecht, in a great meaſure ruined their navy, yet their commerce is, even at this juncture, or was at leaſt before the breaking out of the laſt war, in a more flouriſhing condition than ever. The Swedes and Danes have erected Eaſt India companies; and the Ruſſians have opened a new and advantageous traffic, as well on the Caſpian as on the Black ſea. The houſe of Auſtria ſhewed a great deſire of reviving the commerce of the Netherlands; and, when that was found impracticable, made ſome excellent regulations at Trieſte and Fiume in Italy. The Genoeſe have, within theſe few years, erected a company of aſſurance, on purpoſe to encourage their ſubjects to venture upon long voyages, and, if poſſible, to recover their old reputation as a maritime power. The king of Pruſſia has lately erected a company at Embden for trading to the Eaſt Indies: and his Daniſh Majeſty has purchaſed the ports of St. Croix and Saffia on the caſt of Morocco. Nay, even the Spaniards themſelves, who, in this reſpect, have ſlept for ſuch a number of years, have at laſt opened their eyes, erected ſome, and have under conſideration the erecting ſeveral other companies, for the encouragement and extention of trade through their European and American dominions. Trade has not only a very great influence on the particular affairs of nations ſeparately conſidered, as it is almoſt the ſole cauſe of a comparative difference in the ſtrength and forces of moſt of the European powers; but it is alſo of infinite advantage to this quarter of the globe in general; keeps the Europeans free from all apprehenſions of being overrun by thoſe barbarous empires which the mahomedan religion has eſtabliſhed in the world; and likewiſe brings in every thing rich and coſtly, every thing curious and valuable, even from the remoteſt quarters of the earth: what to trade alone is, ſtrictly ſpeaking, due that ſuperiority which the inhabitants of Europe have over thoſe of Aſia, Africa, and America: it is to commerce that the people of Europe owe their freedom and independency, their learning and arts, their extenſive colonies abroad, their prodigious riches at home; and, above all, that naval power, which ſo much ſurpaſſes any thing of the ſame kind in other parts of the world, and whatever was attempted in that way in former ages.

The trade of Europe is very advantageous both with Africa and America: but the trade with Aſia is rather prejudicial to Europe.

3dly, As to the union of political intereſts: in the firſt place, it is certainly the intereſt of every European power to ſupport the independency of each other, and to prevent any thing that has the appearance of an univerſal monarchy, or the introducing the influence of one court over the greateſt part of the reſt; or, in other words, to ſupport the balance of power; becauſe this muſt be detrimental to the whole, and prejudicial to the freedom, learning, arts, manufactures, and commerce of Europe in general. This is perceptible not only from the principles of true policy, but alſo from the unerring lights of experience: ſince it is impoſſible to aſſign a time when the European powers, in general, made ſo contemptible a figure as when the Emperor Charles V. or his ſon Philip II. were neareſt the accompliſhment of their ambitious views, and had in a manner all the other potentates at their mercy, or at their devotion. See *Balance* of Power, and *Balance* of Trade.

EUROPEAN *ocean*, or *Southern ocean*, is that part reaching from the equinoctial to the unknown antarctic lands. See *Ocean*.

EUSTACE, or *Euſtatia*, one of the leaſt of the Caribbee iſlands, in America, ſituated in 63 deg. of W. lon. and 17 deg. 32 min. of N. lat. being ſubject to the Dutch. See Dutch America, under *United* Provinces.

EUXINE, or *Black ſea*. See *Black* ſea.

EXCHANGE, or *Permutation*, is an agreement whereby one thing is trucked, bartered, or exchanged for another. The firſt commerce carried on by men was by exchange; people furniſhing each other mutually with what things they wanted: but ſuch exchanges were clogged with two conſiderable impediments: the one was the unequal value of commodities; the other the uncertainty of mutual accommodation: therefore money was invented to remove theſe inconveniencies; and, inſtead of exchanging, buying and ſelling were introduced. See *Coin*, *Commerce*, *Bartering*, and *Money*.

EXCHANGE, properly denotes the buſineſs, or trade of money, carried on between one place and another by means of bills of exchange; or giving money in one city, and receiving a bill to intitle the giver to receive the value in another city: ſo that it has been ſhortly defined to be nothing but a compenſation of value from one country to another. The exchange for money is of ſuch great antiquity, that it is reported to have been practiſed upwards of 2000 years by the Romans: and as money was originally invented to avoid the tedious carriage of commodities from one country into another; upon like conſideration, when other nations imitated the Romans in coining, exchange by bills for money was deviſed, not only to avoid the danger and adventure thereof, but alſo its troubleſome carriage, and to prevent the exportation of money.

Thus kingdoms and ſtates having coined money by their ſovereign authorities, they appointed a certain exchange for the permutation of the various coins in different countries, without any temptation of the coin; but giving *par pro pari*, or value for value, with a certain allowance to be made the exchangers for accommodating the merchants: but the common exchangers in England were thoſe conſtituted by the regal authority, who having received money there, were to remit by exchange the like ſum to be paid in another kingdom: in order to which, King Edward III. by a law made in his reign, cauſed tables to be ſet up in moſt of the general marts or ports of the kingdom, declaring the values of all or moſt of the coins of thoſe places abroad where Engliſhmen had correſpondence or commerce, and what allowances ſhould be made for having money remitted to ſuch foreign countries. Four different kinds of exchanges have been frequently practiſed abroad: for, beſides the common exchange before particularly mentioned, there was *exchange real*, when monies were paid to the exchanger, and bills were drawn without mentioning the ſpecies, but according to the value of the different coins; to be repaid the ſame in money in ſome other country, according to the price agreed upon between the officer and deliverer, to

allow or pay for the exchange of the money and loſs of time. Then there was an exchange called *dry exchange*, being unlawful and uſurious, by extraordinary proteſts of bills, drawn to be paid by an imaginary perſon; whereupon the merchant was to pay exchange and re-exchange to the banker who furniſhed the money: and a *fictitious exchange* was made uſe of to the ſame perſon; but more pernicious to the honeſt trader; which two laſt exchanges were prohibited in England, by the ſtatute of the 3d of Henry VII.
